

# SG350XG: PVID is Enabled when Interface Membership Type is Set to Forbidden

## Date Identified

January 19, 2016

## Date Resolved

June 14, 2016

## Product Affected

SG350XG	2.0.x	2.2.0.63

## Problem Description

The Port Virtual Local Area Network ID (PVID) is enabled on an interface when its membership type is set to Forbidden via the web-based utility of the switch. The interface functionality is not affected and the port still blocks traffic for relevant Virtual Local Area Network (VLAN).

## Resolution

This issue is fixed when you upgrade to the firmware version 2.2.0.63. To upgrade, click [here](#) for instructions.
