Edit Last TFTP Server on the SPA300/SPA500 Series IP Phones

Objectives

TFTP is a simple file transfer protocol. It is used to transfer small amounts of data between devices. Editing allows the user to say which server to access from the phone.

This document describes how to view the network configuration of the SPA300 and SPA 500 series IP phones using the soft key interface.

Applicable Devices

- SPA300 series IP phones
- SPA500 series IP phones

View Network Configuration

Step 1. Push the Set Up soft key.

🕒 Setup						
	1	Call History				
	2	Directory
