Introduction

This document describes the compatibility between Cisco Unified Attendant Console Standard (CUACS) with Cisco Unified Communications Manager (CUCM) and a Microsoft Windows machine. It does not provide information in regards to installation. Refer to the Release Notes and Install Guide in order to learn about all the requirements before server installation.

Prerequisites

Requirements

Cisco recommends that you have knowledge of CUCM and CUAC.

Components Used

This document is not restricted to specific software and hardware versions.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, ensure that you understand the potential impact of any command.

How to Use the Matrix

Look for the CUACS version that you run on the Y-axis in the table. Check for the supported CUCM version on the X-axis. In the tables X means supported.
