

# Configuring Local Authentication Using LDAP

- [Configuring Local Authentication Using LDAP, on page 1](#)

## Configuring Local Authentication Using LDAP

This module provides information about configuring local authentication for Cisco Identity Based Networking Services.

### Information About Local Authentication Using LDAP

#### Local Authentication Using LDAP

Local authentication using Lightweight Directory Access Protocol (LDAP) allows an endpoint to be authenticated using 802.1X, MAC authentication bypass (MAB), or web authentication with LDAP as a backend. Local authentication in Identity-Based Networking Services also supports associating an authentication, authorization, and accounting (AAA) attribute list with the local username for wireless sessions.

## How to Configure Local Authentication Using LDAP

### Configuring Local Authentication Using LDAP

Perform this task to specify the AAA method list for local authentication and to associate an attribute list with a local username.

#### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"><li>• Enter your password if prompted.</li></ul>
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b>	Enters global configuration mode.

## Configuring MAC Filtering Support

	<b>Command or Action</b>	<b>Purpose</b>
	Device# configure terminal	
<b>Step 3</b>	<b>aaa new-model</b>  <b>Example:</b> Device(config)# aaa new-model	Enables the authentication, authorization, and accounting (AAA) access control model.
<b>Step 4</b>	<b>aaa local authentication {method-list-name   default} authorization {method-list-name   default}</b>  <b>Example:</b> Device(config)# aaa local authentication default authorization default	Specifies the method lists to use for local authentication and authorization from a LDAP server.
<b>Step 5</b>	<b>username name aaa attribute list aaa-attribute-list [password password]</b>  <b>Example:</b> Device(config)# username USER_1 aaa attribute list LOCAL_LIST password CISCO	Associates a AAA attribute list with a local username.
<b>Step 6</b>	<b>exit</b>  <b>Example:</b> Device(config)# exit	Exits global configuration mode and returns to privileged EXEC mode.

## Configuring MAC Filtering Support

Perform this task to set the RADIUS compatibility mode, the MAC delimiter, and the MAC address as the username to support MAC filtering.

### Procedure

	<b>Command or Action</b>	<b>Purpose</b>
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Device> enable	Enables privileged EXEC mode. • Enter your password if prompted.
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Device# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>aaa new-model</b>  <b>Example:</b> Device(config)# aaa new-model	Enables the authentication, authorization, and accounting (AAA) access control model.
<b>Step 4</b>	<b>aaa group server radius group-name</b>  <b>Example:</b>	Groups different RADIUS server hosts into distinct lists.

	<b>Command or Action</b>	<b>Purpose</b>
	Device(config)# aaa group server radius RAD_GROUP1	
<b>Step 5</b>	<b>subscriber mac-filtering security-mode {mac   none   shared-secret}</b>  <b>Example:</b> Device(config-sg-radius)# subscriber mac-filtering security-mode mac	Specifies the RADIUS compatibility mode for MAC filtering. <ul style="list-style-type: none"><li>• The default value is <b>none</b>.</li></ul>
<b>Step 6</b>	<b>mac-delimiter {colon   hyphen   none   single-hyphen}</b>  <b>Example:</b> Device(config-sg-radius)# mac-delimiter hyphen	Specifies the MAC delimiter for RADIUS compatibility mode. <ul style="list-style-type: none"><li>• The default value is <b>none</b>.</li></ul>
<b>Step 7</b>	<b>exit</b>  <b>Example:</b> Device(config-sg-radius)# exit	Exits server group configuration mode and returns to global configuration mode.
<b>Step 8</b>	<b>username mac-address mac [aaa attribute list aaa-attribute-list]</b>  <b>Example:</b> Device(config)# username 00-22-WP-EC-23-3C mac aaa attribute list AAA_list1	Allows a MAC address to be used as the username for MAC filtering done locally.
<b>Step 9</b>	<b>exit</b>  <b>Example:</b> Device(config)# exit	Exits global configuration mode and returns to privileged EXEC mode.

## Configuration Examples for Local Authentication Using LDAP

### Example: Configuring Local Authentication Using LDAP

The following example shows a configuration for local authentication:

```
!
username USER_1 password 0 CISCO
username USER_1 aaa attribute list LOCAL_LIST
aaa new-model
aaa local authentication EAP_LIST authorization EAP_LIST
!
```

### Example: Configuring MAC Filtering Support

The following example shows a configuration for MAC filtering:

**Example: Configuring MAC Filtering Support**

```
username 00-22-WP-EC-23-3C mac aaa attribute list AAA_list1
!
aaa new-model
aaa group server radius RAD_GROUP1
subscriber mac-filtering security-mode mac
mac-delimiter hyphen
```
