   Uploading an ISO Upgrade File to the Cisco StadiumVision Director Server 71
      Prerequisites 71
   Logging Into the CIMC Interface 72
   Verifying the Minimum CIMC Firmware Version for Cisco StadiumVision Director 73
   Launching the KVM Console 74
   Installing the ISO Upgrade Image on the Cisco StadiumVision Director Server 75
   Staging the Flash Template 77
   Deploying Global DMP Settings 77

What to Do Next 77
Preface

This document describes the requirements and tasks to install and upgrade the software for Cisco StadiumVision Director Release 3.2.

The content is intended for Cisco StadiumVision system administrators and technical field engineers who are responsible for designing and deploying Cisco StadiumVision solutions. It is expected that readers of this document are familiar with basic IP networking and Linux, have a general understanding of the sports and entertainment business, and understand the objectives and operations of live events.

Document Revision History

Table 1 lists the technical changes made to this document since it was first published.

<table>
<thead>
<tr>
<th>Date</th>
<th>Change Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>April 7, 2015</td>
<td>Added updates to the “Using the Software Manager to Upgrade Cisco StadiumVision Director Release 3.2 Software, Language Packs, and Fonts” module on page 33, including a new required task for reactivating custom fonts after upgrade.</td>
</tr>
<tr>
<td>November 17, 2014</td>
<td>The following changes were made:</td>
</tr>
<tr>
<td></td>
<td>• Removed references to obsolete Release 3.2.0-489 in the “Upgrading a Cisco StadiumVision Director Server from Release 3.1 SP2 to Release 3.2” module on page 19.</td>
</tr>
<tr>
<td></td>
<td>• The “Upgrading the DMP Firmware” module on page 41 has been revised to document the “firmware image to use,” “init.version,” and “init.build” strings to be used to specify DMP firmware version 5.4.1 RB2P for the GNU Bash fix.</td>
</tr>
<tr>
<td>July 23, 2014</td>
<td>The following changes were made:</td>
</tr>
<tr>
<td></td>
<td>• Revised the information about tested VMware vSphere versions and clarified the note about VMware licenses that are not supported in the “Hardware Prerequisites” section on page 2.</td>
</tr>
<tr>
<td></td>
<td>• Removed reference to using the Software Manager as a means for upgrade in the “Upgrading the Software From Release 3.1 SP2 to Release 3.2” section on page 22</td>
</tr>
</tbody>
</table>
### Document Organization

<table>
<thead>
<tr>
<th>Chapter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Getting Started Installing or Upgrading Cisco StadiumVision Director”</td>
<td>Provides information that you should read before you perform an initial installation or upgrade of the Cisco StadiumVision Director Release 3.2 software.</td>
</tr>
<tr>
<td>“Installing Cisco StadiumVision Director for the First Time”</td>
<td>Describes how to install the Cisco StadiumVision Director Release 3.2 software on your newly-purchased Platform 3 server hardware from a full ISO image.</td>
</tr>
<tr>
<td>“Upgrading a Cisco StadiumVision Director Server from Release 3.1 SP2 to Release 3.2”</td>
<td>Describes how to upgrade a Cisco StadiumVision Director server previously installed with Release 3.1.0-797 (SP2) to Cisco StadiumVision Director Release 3.2.</td>
</tr>
<tr>
<td>“Verifying the Upgrade”</td>
<td>Describes how to verify that the upgrade process was successful.</td>
</tr>
<tr>
<td>“Using the Software Manager to Upgrade Cisco StadiumVision Director Release 3.2 Software, Language Packs, and Fonts”</td>
<td>Describes how to upgrade a Cisco StadiumVision Director server already running Cisco StadiumVision Director 3.2 to a later release of Cisco StadiumVision Director software, as well as how to install language packs and fonts.</td>
</tr>
<tr>
<td>“Upgrading the DMP Firmware”</td>
<td>Describes how to upgrade the DMP firmware on the Cisco DMP 4310G.</td>
</tr>
<tr>
<td>“Appendix A: Post-Upgrade Checklist”</td>
<td>Provides a checklist that is useful after you upgrade your software on a Cisco StadiumVision Director server.</td>
</tr>
<tr>
<td>“Appendix B: Port Reference”</td>
<td>Identifies the ports used by Cisco StadiumVision Director.</td>
</tr>
<tr>
<td>“Appendix C: Installing Additional Hard Drives in the Platform 2 Server to Prepare for Upgrade to Release 3.2”</td>
<td>Describes how to install two additional 300 GB hard drives (SV-FRU2-HD3G=) for another RAID 1 volume in the Cisco StadiumVision Director Platform 2 Server which are required to run Cisco StadiumVision Director Release 3.2 with a minimum of 4 drives.</td>
</tr>
<tr>
<td>Chapter</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>“Appendix D: CIMC Configuration and Firmware Upgrade Guidelines on the Cisco UCS C220 Server”</td>
<td>Provides guidelines for configuring the Cisco Integrated Management Controller (CIMC) interface and performing the initial configuration, and upgrading the CIMC/BIOS firmware on the Cisco UCS C220 servers for Cisco StadiumVision Director (SV-DIR-DIRECTOR-K9, SV-PLATFORM3=).</td>
</tr>
<tr>
<td>“Appendix E: Using the TUI Upgrade Utility to Upgrade the Cisco StadiumVision Software”</td>
<td>Describes how to upgrade an existing Cisco StadiumVision Directer server to a later version, including installation of service packs. This procedure is also referred to generally as an ISO upgrade to refer to both the service pack and upgrade ISO process.</td>
</tr>
</tbody>

Getting Started Installing or Upgrading Cisco StadiumVision Director

First Published: April 21, 2014
Revised: July 23, 2014

Read this module before you perform an initial installation or upgrade of the Cisco StadiumVision Director Release 3.2 software. It includes the following topics:

- Before You Begin, page 1
- Overview of the Installation and Upgrade Process, page 4

Before You Begin

Be sure that you understand and have met the following prerequisites before you begin to install or upgrade the Cisco StadiumVision Director software:

- Refer to the Release Notes for Cisco StadiumVision Director Release 3.2 for the latest information about hardware and software requirements, changes, important notes, and caveats for your software release.

- The Cisco StadiumVision Director Platform 2 server ships with two 300 GB hard drives configured with RAID 1 mirroring for redundancy. Two additional 300 GB hard drives (SV-FRU2-HD3G=) for another RAID 1 volume in the Cisco StadiumVision Director Platform 2 Server are required to run Cisco StadiumVision Director Release 3.2 with a minimum of 4 drives.

Note

If you need to install additional hard drives in the Platform 2 server to meet the 4-drive minimum requirement to support Release 3.2, then you must perform different upgrade tasks in a certain order.

The physical installation of the additional drives must precede the upgrade to Release 3.1.0-797 (SP2), which is the required prerequisite release to upgrade to Release 3.2.

Refer to the “Upgrading a Cisco StadiumVision Director Platform 2 Server from Release 3.0 SP2 to Release 3.1” in the Cisco StadiumVision Director Software Installation and Upgrade Guide, Release 3.1.
Hardware Prerequisites

- Determine if you have compatible Cisco Digital Media Player (DMP) models and firmware versions installed. The DMP firmware image is not bundled with the Cisco StadiumVision Director software. You must download the firmware image separately from the software download center site for the Cisco Digital Media Player model. For more information about supported firmware versions, see the Release Notes for Cisco StadiumVision Director Release 3.2.

- Be sure that you have a supported browser (Google Chrome Version 31.0, Mozilla FireFox Version 26.0, and Adobe Flash Player (Version 11.9.900.170) installed for access to Cisco StadiumVision Director.

  Note  Unless specifically identified as unsupported, other browser versions might work, but their compatibility with Cisco StadiumVision Director cannot be assured.

- Verify that the Cisco StadiumVision Director server is connected to the network using the Ethernet port eth0 on the rear panel.

- To access the Cisco Integrated Management Controller (CIMC) for the software installation, the following requirements are met:
  - Your computer meets the minimum browser and Flash player requirements for Cisco StadiumVision Director, and also has Java 1.6 or later installed.
  - You have a laptop connection with access to the Cisco StadiumVision Director server network.
  - You have the IP address of the CIMC interface on the Cisco StadiumVision Director server.
  - You have the CIMC interface login credential. The default credential is admin and password.

  Note  Due to the difficulty in recovering from an interrupted installation process if the Linux shell is accidentally closed or the network drops, it is highly recommended that you use a server console connection method that does not pose a risk to the success of upgrade completion if the session breaks during upgrade. You also can use a monitor and keyboard that are directly connected to the Cisco StadiumVision Director server to log into the TUI.

To learn more about the KVM console and the CIMC interface, see the Cisco UCS C-Series Integrated Management Controller Configuration guide that corresponds to your server release at: http://www.cisco.com/en/US/products/ps10739/products_installation_and_configuration_guides_list.html

- Assess your installation environment and see the “Overview of the Installation and Upgrade Process” section on page 4 for more information and to find out what modules in this guide you should follow.

Hardware Prerequisites

You can install Release 3.2 on a Platform 2 or Platform 3 server, or use your own server to run the Cisco StadiumVision Director software. Be sure that your configuration meets the minimum system requirements in Table 1 and supports a VMware virtual machine environment.
Note
Cisco StadiumVision Director servers are meant to be physically located close to the DMPs that they operate with, such as at the remote venue edge, and communicating to the players over a LAN. For information about installation-related licensing compliance, see the “Installation Requirements for Licensing Compliance” section of the *Release Notes for Cisco StadiumVision Director Release 3.2*.

Table 1  *Minimum System Requirements for a Virtualized Environment running Cisco StadiumVision Director*

<table>
<thead>
<tr>
<th>System Component</th>
<th>Minimum Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Forward Write (fwrite) in operations per second (ops)</td>
<td>10,000</td>
</tr>
<tr>
<td>Hard Drive Capacity</td>
<td>900 GB</td>
</tr>
<tr>
<td>Note</td>
<td>The hard drives must be configured as a single logical volume. A RAID volume is strongly recommended.</td>
</tr>
<tr>
<td>Processor</td>

**VMware vSphere Tested Versions for Cisco StadiumVision Director**

Cisco StadiumVision Director has been tested with VMware vSphere version 5.1 and 5.5. Other VMware vSphere versions cannot be guaranteed to work with Cisco StadiumVision Director Release 3.2.

Note
Any VMware license that does not allow your virtual machine to be set to the minimum requirements described in Table 1 is not supported.

**Restrictions for Virtual Server Support**

Be sure that you consider the following restrictions before you configure a virtual server environment for Cisco StadiumVision Director:

- Migrating to a virtualized environment on your existing Platform 2 or Platform 3 servers is not supported. For more information, see the “Important Migration and Upgrade Notes” section of the Release Notes.

- When using a virtual server environment, Cisco Technical Support only provides support for the Cisco StadiumVision software. No support is provided for third-party hardware or the virtual OS environment installed by the customer.

- The recommended configuration is for a dual virtual server environment to support a primary and backup server using the standard Cisco StadiumVision Director backup/restore and failover tools.

- Cisco has not tested and does not provide support for any VMware tools in a Cisco StadiumVision system. If your site chooses to use backup, recovery or other tools outside of the Cisco StadiumVision Director software to manage your virtual servers, then you accept the risks and responsibility associated with securing your data.
Overview of the Installation and Upgrade Process

There are different tasks required to install or upgrade your Cisco StadiumVision Director server for software Release 3.2 depending on your current server environment:

- Upgrading from Release 3.1 SP2 to Release 3.2, page 4
- Installing on a Virtual Server with Release 3.2 for the First Time, page 5
- Installing a Platform 3 Server with Release 3.2 for the First Time, page 5
- Upgrading an Existing Cisco StadiumVision Director Server Already Running Cisco StadiumVision Director Release 3.2.0-489 or Later, page 5

Note

A full ISO installation on a Platform 2 server is not supported in Cisco StadiumVision Director Release 3.2. Only ISO upgrades are supported.

Upgrading from Release 3.1 SP2 to Release 3.2

Caution

If you need to install additional hard drives in the Platform 2 server to meet the 4-drive minimum requirement to support Release 3.2, then you must perform the upgrade in a certain order. The physical installation of the additional drives must precede the upgrade to Release 3.2, followed by extension of the RAID volume post-upgrade, and then content migration and the remainder of the upgrade verification.

The upgrade process for an existing server running Cisco StadiumVision Director Release 3.1-0-797 Service Pack 2 involves the following tasks:

- Running Proof of Play reports.
- Installing two additional hard drives to meet the 4-drive minimum requirement for Release 3.2 (as required for a Platform 2 Server).
- Performing an ISO upgrade to Cisco StadiumVision Director Release 3.2.
- Extending the Original RAID Volume to Create a Single Group (as required for the HDD expansion on a Platform 2 server).
- Upgrading DMP 4310G firmware.
- Disabling DMP failover for all DMPs.
  (Disabled is the default beginning in Cisco StadiumVision Director Release 3.1.0-787 [SP1])
- Verifying the upgrade, including validating the content migration.

For detailed information and important best practices and requirements, see the “Upgrading a Cisco StadiumVision Director Server from Release 3.1 SP2 to Release 3.2” module in this guide.
Installing on a Virtual Server with Release 3.2 for the First Time

The installation process for a virtual server running Cisco StadiumVision Director software release 3.2 for the first time involves the following tasks:

- Verify that your virtual server meets the requirements listed in Table 1.
- Install VMWare client software.

*Note*

Cisco StadiumVision Director has been tested with VMware vSphere version 5.1 and 5.5. Other VMware vSphere versions cannot be guaranteed to work with Cisco StadiumVision Director Release 3.2.

Any VMWare license that does not allow your virtual machine to be set to the minimum requirements described in Table 1 is not supported.

- Load the Cisco StadiumVision Director Release 3.2 full ISO.
- Run the installation.

Installing a Platform 3 Server with Release 3.2 for the First Time

The installation process for a new Platform 3 server running Cisco StadiumVision Director Release 3.2 for the first time involves the following tasks:

- Confirmation of CIMC/BIOS version and upgrade as required.
- Installation from CIMC of a full ISO image file that runs an installation program with configuration prompts for your network information.
- Disabling DMP failover for all DMPs.
  (Disabled is the default beginning in Cisco StadiumVision Director Release 3.1.0-787 [SP1])
- Upgrading the DMP 4310G Firmware.

For detailed information, see the “Installing Cisco StadiumVision Director for the First Time”.

Upgrading an Existing Cisco StadiumVision Director Server Already Running Cisco StadiumVision Director Release 3.2.0-489 or Later

You can upgrade an existing server already running Release 3.2.0-489 or later software version using an upgrade ISO image file available from Cisco.com and using the upgrade option from the Software Manager in the Cisco StadiumVision Director web browser interface.

For detailed information, see the “Using the Software Manager to Upgrade Cisco StadiumVision Director Release 3.2 Software, Language Packs, and Fonts”.
Installing Cisco StadiumVision Director for the First Time

First Published: April 21, 2014

This module describes how to install the Cisco StadiumVision Director Release 3.2 software on your newly-purchased Platform 3 server hardware from a full ISO image, as well as the requirements for installing Cisco StadiumVision Director on a VM (virtual machine).

Caution
New Platform 3 servers come preinstalled with a preliminary image of Cisco StadiumVision Director that is not intended for production operation. You must install the Cisco StadiumVision Director Release 3.2 software from a full ISO image (not an upgrade) that you downloaded from Cisco.com to be sure that you are running the released production version of Cisco StadiumVision Director Release 3.2.

This module includes the following topics:

- Prerequisites, page 7
- Installation Tasks, page 9
- What To Do Next, page 17

Prerequisites

Caution
Do not alter the RAID configuration prior to installation.

Refer to the Release Notes for Cisco StadiumVision Director Release 3.2 for the latest information about hardware and software requirements, changes, important notes, and caveats for your software release.

Be sure that the following requirements are met before you upgrade your server:

Platform 3 Servers

- Your new server is installed in its production location. For more information about installing your Platform 3 hardware, see the Cisco UCS C220 Server Installation and Service Guide.
- You have completed the initial server setup and configured the Cisco UCS C-Series Integrated Management Controller (CIMC) interface.
To configure the CIMC, you will need an additional IP address for the server and should be prepared to change the default login and password. Be sure that the server is configured for standalone mode with the following settings:

- DHCP—Disabled
- NIC redundancy—None
- Boot order—Virtual CD/DVD, HDD

For more information, see the “Appendix D: CIMC Configuration and Firmware Upgrade Guidelines on the Cisco UCS C220 Server” module on page 61.

- You have the network information required to configure the Ethernet connection on the Cisco StadiumVision Director server, such as:
  - IP address (IPv4 only) and network mask

  **Note** The Cisco StadiumVision Director server should be configured with a static IP address or a non-expiring DHCP lease.

  - Default gateway address
  - DNS server address
  - Hostname

- The Cisco StadiumVision Director server is connected to the network and has power.
- Power on the server and verify the boot order in the BIOS (by pressing F2 while booting) prior to installation.
- To access the Cisco Integrated Management Controller (CIMC) for the software installation, the following requirements are met:
  - Your computer meets the minimum browser and Flash player requirements for Cisco StadiumVision Director, and also has Java 1.6 or later installed.
  - You have a laptop connection with access to the Cisco StadiumVision Director server network.
  - You have the IP address of the CIMC interface on the Cisco StadiumVision Director server.
  - You have the CIMC interface login credential. The default credential is `admin` and `password`.

**Virtualized Server Environment**

Installing Cisco StadiumVision Director in a virtualized server environment includes setting up your server environment, running the full ISO for Cisco StadiumVision Director, and configuring the network. For more information see the “Hardware Prerequisites” section on page 2 and “Installing on a Virtual Server with Release 3.2 for the First Time” section on page 5 in the “Getting Started Installing or Upgrading Cisco StadiumVision Director” module on page 1.
**Installation Tasks**

This section includes the tasks to install Cisco StadiumVision Director for the first time on a Platform 3 server.

To install Cisco StadiumVision Director for the first time on a Platform 3 server, complete the following tasks:

- **Downloading the ISO Files from Cisco.com**, page 9 (required)
- **Logging Into the CIMC Interface**, page 10 (required)
- **Verifying the Minimum CIMC Firmware Version for Cisco StadiumVision Director**, page 11 (required)
- **Launching the KVM Console**, page 12 (required)
- **Mapping the Cisco StadiumVision Director ISO Image**, page 13 (required)
- **Installing the Cisco StadiumVision Director ISO Image**, page 14 (required)
- **Configuring the Network Setup**, page 14 (required)

**Downloading the ISO Files from Cisco.com**

You are eligible to obtain information about how to access the Cisco StadiumVision Director full ISO file after you have purchased the proper licensing. Contact Cisco Technical Support for information about how to download the ISO file (Table 1).

---

**Note**

Be sure that you choose the ISO for SV-DIRECTOR and not for SVD-REMOTE.

---

Table 1 shows the filename conventions used for full ISO images for the Cisco StadiumVision Director server.

<table>
<thead>
<tr>
<th>Hardware Product ID</th>
<th>Filename Convention 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>SV-PLATFORM3=</td>
<td>SV-DIRECTOR-FULL-3.2.0-nnn.x86_64.iso</td>
</tr>
<tr>
<td></td>
<td>SV-DIRECTOR-FULL-3.2.0-nnn.x86_64.iso.md5sum</td>
</tr>
</tbody>
</table>

1. “nnn” represents the build number of the image in the file.

Be sure to download the ISO files to a location where you can access them once logged into the CIMC interface.

To verify the integrity of your upgrade file from the download, you can use a command-line or GUI utility on your laptop to calculate the checksum on the .iso file. Open the .md5sum file to compare the value that you calculated with the expected value provided in the .md5sum file. The values should match. If they do not, retry the download.
Logging Into the CIMC Interface

To log into the CIMC interface, complete the following steps:

**Step 1**  
From a laptop connection with access to the Cisco StadiumVision Director server network, open a browser window and type the IP address of the CIMC interface as shown in the following example:

```
https://ip-address
```

**Step 2**  
If prompted, click **OK** to open the Java viewer.jnlp as shown in Figure 1:

![Opening viewer.jnlp File](image)

**Figure 1**  
Opening viewer.jnlp File

**Tip**  
The firmware version is also displayed in the Cisco Integrated Management Controller (CIMC) Information box on the CIMC console after you log in.

**Step 3**  
If a security dialog box displays, do the following:

a. (Optional) Select the checkbox to accept all content from Cisco.

b. Click **Yes** to accept the certificate and continue.

c. Confirm any additional security certificate exceptions.

**Step 4**  
At the CIMC login screen, note the firmware version displayed (Figure 2).

**Tip**  
The default credential is **admin** and **password**. If changed during server setup, use the password that you configured.
Installing Cisco StadiumVision Director for the First Time

Installation Tasks

Figure 2 CIMC Login Screen

Step 6 Click Log In.

Verifying the Minimum CIMC Firmware Version for Cisco StadiumVision Director

Before you begin, see the “Cisco StadiumVision Director Server Support” section of the Release Notes for Cisco StadiumVision Director Release 3.2 to find the CIMC/BIOS versions tested for the Platform 3 server.

To verify the minimum CIMC firmware version for Cisco StadiumVision Director, complete the following steps:

Step 1 Be sure that the CIMC firmware version found on the CIMC login screen or in the CIMC console is at the minimum tested version (or later) for the Cisco StadiumVision Director release.

Figure 3 shows where the firmware version is displayed on the CIMC console for both the BIOS and CIMC firmware.

Step 2 If necessary to upgrade the CIMC/BIOS firmware on the Platform 3 server, refer to “Appendix D: CIMC Configuration and Firmware Upgrade Guidelines on the Cisco UCS C220 Server” module on page 61.
Launching the KVM Console

To launch the KVM console, complete the following steps:

Step 1  From the CIMC console Actions box, click **Launch KVM Console**.

![Launch KVM Console](image)

**Tip**  You can also click the keyboard in the icon bar at the top of the console to launch the KVM console.

Step 2  If a security dialog box displays, do the following:

a.  (Optional) Select the checkbox to accept all content from Cisco.

b.  Click **Yes** to accept the certificate and continue.

Step 3  At the Cisco KVM Virtual Console confirmation box (Figure 5), do the following:

a.  (Optional) Select the checkbox to accept all content from Cisco.

b.  Click **Run**.

![Cisco Virtual KVM Console Confirmation](image)

c.  Confirm any additional security certificate exceptions.

Step 4  The KVM Console window is displayed with a login prompt. Do not log in (Figure 6).
Mapping the Cisco StadiumVision Director ISO Image

This step requires that you have downloaded the Cisco StadiumVision Director full ISO image file for the Platform 3 server from Cisco.com and it is accessible from the computer that you are using to log into the CIMC interface.

To map the Cisco StadiumVision Director ISO image, complete the following steps:

**Step 1**
From the KVM console window, click the Virtual Media tab.

**Step 2**
From the Virtual Media screen, click Add Image (Figure 7).

**Step 3**
Navigate to the location of the ISO file that you downloaded and click Open.

**Note**
CIMC can experience slow performance. If slow performance occurs, clear the browser cache.

**Step 4**
In the Client View box, mark the checkbox under the Mapped column to select the ISO source.

**Step 5**
Confirm that the Virtual CD/DVD has been added under the Virtual Media tab, Virtual CD/DVD.
Installing Cisco StadiumVision Director for the First Time

Installation Tasks

Step 6
In the Details box, double-click on Virtual CD/DVD, and observe the read bytes counter increasing (refreshes read bytes).

Step 7
Click the KVM tab and minimize the window but do not exit.

Installing the Cisco StadiumVision Director ISO Image

To install the Cisco StadiumVision Director ISO image, complete the following steps:

Step 1
In the Actions box on the CIMC console, click Power Cycle Server (Figure 8).

Figure 8 Power Cycle Server From the CIMC Console

Step 2
At the confirmation prompt, click OK.

Step 3
From the KVM console, observe the start of the installation process.

Configuring the Network Setup

To configure the network setup, complete the following steps:

Step 1
When the Linux Setup Agent window appears in the KVM console, select Network Configuration and press Enter.

Tip
The Linux Setup Agent window will be available for 60 minutes before closing. If you miss responding to the network setup as part of the ISO installation, you can go to the TUI Main Menu > System Settings > Network Settings to complete the same network configuration. However, you will also need to manually edit the hosts file, selected from the Network Settings submenu.
Step 2  In the Select Action screen (Figure 9), select **Edit Devices** and press **Enter**.

*Figure 9  Select Action Screen*

Tip  If you notice what appears to be stray characters in the Linux interface, verify that your SSH client is using the UTF-8 character set translation.

Step 3  In the Select a Device screen (Figure 10), select **eth0** and press **Enter**.

*Figure 10  Select a Device Screen*

The Ethernet Configuration screen is displayed.

Note  The Linux screen is mislabeled “Devernet Configuration.”
Step 4  
In the Ethernet Configuration screen (Figure 11), do the following:

![Devernet Configuration Screen](image)

**Figure 11  Devernet Configuration Screen**

a. Press the Tab key until the cursor is positioned on the Static IP address line.

b. Press the backspace key to go to the beginning of the line and type in the IPv4 address of the Cisco StadiumVision Director Server.

Note  
This should be a different IP address than what you configured for the CIMC interface.

c. Press the tab key to go to the Netmask line. Type the network mask for the IPv4 address.

d. (Optional) In the Default gateway IP line, type the address of the default gateway of your network.

Step 5  
When configuration of all options is complete, press the Tab key until the **Ok** button is selected and press **Enter**.

You return to the Select a Device screen.

Step 6  
Press the Tab key until the **Save** button is highlighted and press **Enter**.

You return to the Select Action screen.

Step 7  
Press the down arrow key to select the **Edit DNS configuration** option and press **Enter**.

The DNS configuration screen is displayed.

Step 8  
In the DNS configuration screen (Figure 12), select and configure the Hostname and one or more DNS Server IP addresses.

Note  
Do not use hostnames that contain periods “.” within the name.
**Installing Cisco StadiumVision Director for the First Time**

**What To Do Next**

After you have installed the Cisco StadiumVision Director software, log into the TUI and do the following:

- Configuring NTP on Cisco StadiumVision Servers and DMPs
- Configuring Multicast Ports for Cisco StadiumVision Director

See the ““Configuring Cisco StadiumVision Director Server System Settings” module of the Cisco StadiumVision Director Server Administration Guide to complete initial setup of the server.

![DNS Configuration Screen](image)

**Step 9**
Press the Tab key until the **Ok** button is selected and press **Enter**.
You return to the Select Action screen.

**Step 10**
In the Select Action screen, press the Tab key until the **Save&Quit** button is selected and press **Enter**.

---

*Cisco StadiumVision Director Software Installation and Upgrade Guide*
Upgrading a Cisco StadiumVision Director Server from Release 3.1 SP2 to Release 3.2

First Published: April 21, 2014
Revised: November 17, 2014

This module describes how to upgrade a Cisco StadiumVision Director Platform 2 server previously installed with a minimum of Release 3.1.0-797 Service Pack 2 to Cisco StadiumVision Director Release 3.2.

Caution

A Cisco StadiumVision Director system that is using language support from Release 3.1.0-797 (SP2), will lose that support if upgraded to Release 3.2. Support for other language translations must be installed as they become available as Language Packs using the new Software Manager from the Cisco StadiumVision Director main menu.

Note

Certain locales are not supported in Release 3.2, such as right-to-left languages.

Note

Language packs must be installed after upgrading to Cisco StadiumVision Director Release 3.2. See the “Installing Fonts” section on page 40 for details on installing fonts.

Contents

- Best Practices, page 20
- Prerequisites, page 21
- Upgrade Tasks, page 21
- Verifying the Upgrade, page 23
Best Practices

Before you begin upgrading a Cisco StadiumVision Director server from Release 3.1.0-797 Service Pack 2 to Release 3.2 software, consider the following best practices:

- Choose an appropriate down time to perform the upgrade on the Cisco StadiumVision Director server when there is adequate time to complete and verify the upgrade before any scheduled events and to allow time to resolve any unexpected issues that might occur.

- Refer to the Release Notes for Cisco StadiumVision Director Release 3.2 for the latest information about hardware and software requirements, changes, important notes, and caveats for your software release.

- Pay particular attention to the required hardware and software versions for other devices supporting your Cisco StadiumVision solution and be sure that you plan to upgrade those devices as needed. For example, generally only certain firmware versions are supported for the DMP hardware, or a new firmware version is needed to provide additional functionality supported by the Cisco StadiumVision Director software.

- Perform a backup and restore of the primary and secondary servers, and then promote the secondary server:
  - Perform a backup of the currently active primary server.
  - Restore the backup data onto the standby secondary server.

  Note  The config service must be running on the secondary server to do the restore.

  For more information about performing a backup and restore on a Cisco StadiumVision Server running release 3.1, see the “Backing Up and Restoring Cisco StadiumVision Director Servers” module of the Cisco StadiumVision Director Server Administration Guide, Release 3.1.

  - Promote the secondary server to active.

  For more information about promoting a secondary server to active, see the “Configuring Failover Between Redundant Cisco StadiumVision Director Servers” module of the Cisco StadiumVision Director Server Administration Guide, Release 3.1.

- Access the promoted secondary server to perform the upgrade.

- Due to the difficulty in recovering from an interrupted installation process if the Linux shell is accidentally closed or the network drops, it is highly recommended that you use a server console connection method that does not pose a risk to the success of upgrade completion if the session breaks during upgrade.

  This can be done using a monitor and keyboard that are directly connected to the Cisco StadiumVision Director server to log into the TUI, or through a remote connection with access to the Cisco StadiumVision Director network and using the CIMC interface to log into the TUI.
Prerequisites

Before the server upgrade, be sure that the following requirements are met:

- Be sure that the Cisco StadiumVision Director server meets the following minimum requirements:
  - As required for the Platform 2 server, two additional 300 GB hard drives are installed for a total of four required drives for Release 3.2. Contact your Cisco Systems sales representative for more information about how to obtain additional hard drives.
  
  For information about how to install hard drives to support Release 3.2, see “Appendix C: Installing Additional Hard Drives in the Platform 2 Server to Prepare for Upgrade to Release 3.2” module on page 53.
  
  - The software is at the minimum release level of Release 3.1.0-797 Service Pack 2. If the server is not at the minimum release level, see the “Using the TUI Upgrade Utility to Upgrade the Cisco StadiumVision Director Software” module of the Cisco StadiumVision Director Software Installation and Upgrade Guide, Release 3.1.
  
  - The Platform 2 server Unified Computing System (UCS) Server Firmware is at version 1.4(2) to avoid problems powering off the server hardware.
  
  For more information about how to verify and upgrade, see the “Upgrading the CIMC and BIOS Firmware on a Cisco StadiumVision Director Platform 2 Server” module of the Cisco StadiumVision Director Software Installation and Upgrade Guide, Release 3.0.
  
- Be sure that you have compatible Cisco Digital Media Player (DMP) models and firmware versions.
  
  For more information about DMP hardware and software requirements, see the Release Notes for Cisco StadiumVision Director Release 3.2.
  
- To access the Cisco Integrated Management Controller (CIMC) for the TUI software upgrade, the following requirements are met:
  
  - Your computer meets the minimum browser and Flash player requirements for Cisco StadiumVision Director, and also has Java 1.6 or later installed.
  
  - You have a laptop connection with access to the Cisco StadiumVision Director server network.
  
  - You have the IP address of the CIMC interface on the Cisco StadiumVision Director server.
  
  - You have the CIMC interface login credential. The default is admin/password.

Note

You also can use a monitor and keyboard that are directly connected to the Cisco StadiumVision Director server to log into the TUI.

Upgrade Tasks

To upgrade your Cisco StadiumVision Director server from Release 3.1 to 3.2, complete the following tasks:

- Running Proof of Play Reports, page 22 (as required)
- Upgrading the Software From Release 3.1 SP2 to Release 3.2, page 22 (required)
- Extending the Original RAID Volume to Create a Single Group, page 22 (as required)
- Upgrading the DMP Firmware, page 22 (required)
Running Proof of Play Reports

Before you perform the upgrade from Release 3.1 to 3.2, be sure that you have processed any outstanding Proof of Play reports. If you do not run these reports before the upgrade, the data will be lost.

For more information, see the *Cisco StadiumVision Proof of Play* module.

Upgrading the Software From Release 3.1 SP2 to Release 3.2

The upgrade from Cisco StadiumVision Director Release 3.1 to Release 3.2 is performed as an ISO upgrade using the Text Utility Interface (TUI).

For more information about how to perform the ISO upgrade, see the “Appendix E: Using the TUI Upgrade Utility to Upgrade the Cisco StadiumVision Software” module on page 67.

Extending the Original RAID Volume to Create a Single Group

This task is only required if you had to install additional hard drives to meet the minimum hard drive requirement on the Platform 2 server for Cisco StadiumVision Director Release 3.1 as described in the “Prerequisites” section on page 21.

For information about running this task, see the “Extending the Original RAID Volume to Create a Single Group” section on page 58. Return to this module after extending the RAID volume to complete the remaining upgrade tasks, including Upgrading the DMP Firmware.

Upgrading the DMP Firmware

Cisco StadiumVision Director supports DMP-4310G Version 5.4.1 Build 4544.

For more information about how to perform the upgrade, see the “Upgrading the DMP Firmware” module on page 41.

Staging the Flash Template

To be sure that any changes that might have been made to the Cisco StadiumVision Director Flash Template (.swf file) are deployed to the DMPs, complete the following steps:

**Step 1** Go to the Management Dashboard.

**Step 2** From the DMP and TV Controls dashboard drawer, navigate to and select the following command: DMP and TV Controls > DMP Install > Stage Template.

**Step 3** Select all of the DMP devices where the command should be applied.
Deploying Global DMP Settings

To apply the global MIB variable settings to all DMPs, complete the following steps:

- **Step 1** Go to the Management Dashboard.
- **Step 2** From the DMP and TV Controls dashboard drawer, navigate to and select the following command: DMP and TV Controls > Global > Global DMP Settings.
- **Step 3** Select all of the DMP devices where the command should be applied.
- **Step 4** Click the play button to run the command on the selected devices.

Verifying the Upgrade

To verify the upgrade, complete the following tasks:

- **Step 1** Complete the verification tasks as described in the “Appendix E: Using the TUI Upgrade Utility to Upgrade the Cisco StadiumVision Software” module on page 67.
- **Step 2** Use the “Appendix A: Post-Upgrade Checklist” module on page 45 to be sure that you have completed the required verification steps.
Verifying the Upgrade

First Published: April 21, 2014
Revised: June 4, 2014

This module describes how to verify that the upgrade process was successful.

To verify the upgrade, complete the following tasks:

- Clearing the Browser Cache, page 25 (mandatory)
- Importing the Security Certificate, page 26 (required)
- Logging Into Cisco StadiumVision Director, page 26 (required)
- Verifying the Control Panel and Other Menus, page 27 (required)
- Verifying that Services are Running, page 27 (required)
- Configuring the DMP 4310 Assigned VLAN Property for VLAN Compliance Check, page 28 (required)
- Verifying DMPs, Groups, and Zones in the Management Dashboard, page 29 (required)
- Verifying the Multicast Configuration, page 30 (required)
- Setting Up the Quest Venue Manager to Send Updates to Cisco StadiumVision Director Server, page 30 (required if using Quest for commerce integration)

Clearing the Browser Cache

⚠️ Caution ⚠️

It is critical that all Cisco StadiumVision Director users clear their browser cache to prevent permanent database corruption and to be sure that you are running the latest version of Cisco StadiumVision Director. Be sure to notify all users of the Cisco StadiumVision Director system to clear their browser cache before using the system after an upgrade.

To clear the browser cache in Mozilla FireFox, complete the following steps:

Step 1
From the menu bar, go to Tools > Clear Recent History.

The Clear Recent History dialog box appears.

🔧 Tip
You can also press Ctrl + Shift + Delete to open the Clear Recent History dialog box.
Verifying the Upgrade

Step 2 In the “Time range to clear:” box, select **Everything**.
Step 3 Open the Details drop-down list and select the **Cache** checkbox if it does not have a checkmark.
Step 4 Click **Clear Now**.

---

**Importing the Security Certificate**

When you access a Cisco StadiumVision Director server for the first time using Mozilla Firefox, a security certificate warning will appear. Some Cisco StadiumVision Director functionality requires that the certificate is imported.

---

**Adding a Security Exception for Mozilla Firefox**

To add the security exception for Mozilla Firefox, complete the following steps:

Step 1 When you see the warning page with the title “This Connection is Untrusted,” click the **I Understand the Risks** option.
Step 2 Click **Add Exception...**
Step 3 In the Add Security Exception dialog box, click **Confirm Security Exception**.
Step 4 Close all Mozilla Firefox windows.

You should now be able to access the Cisco StadiumVision Director server using Mozilla Firefox without any security certificate warnings.

---

**Logging Into Cisco StadiumVision Director**

To verify that the upgrade to Cisco StadiumVision Director Release 3.2 was successful, and that Cisco StadiumVision Director is up and operating, complete the following steps:

Step 1 Open a browser window and type the URL for the Cisco StadiumVision Director server, in the following sample format, where *x.x.x.x* is the IPv4 address of the Cisco StadiumVision Director server:

https://x.x.x.x/StadiumVision/login.jsp

or alternatively,

http://x.x.x.x

The Cisco StadiumVision Director login screen appears.

Step 2 Verify that Version 3.2 is displayed.

**Tip** If your window is not displaying Version 3.2, be sure that you have cleared the browser cache as describe in the “Clearing the Browser Cache” section on page 25.
Step 3 Type your Cisco StadiumVision Director administrator login credentials and click Log In.

**Note** When you first log into Cisco StadiumVision Director, the default administrator username and password is admin.

The Cisco StadiumVision Director Main Menu screen appears.

Verifying the Control Panel and Other Menus

To verify the control panel, complete the following steps:

Step 1 From the Cisco StadiumVision Director Main Menu, click Control Panel. After a few moments of loading resources, the Cisco StadiumVision Control Panel Setup screen will open in a new window.

Step 2 Confirm the version and build number of your Cisco StadiumVision Director software in the lower right corner of the Control Panel window.

**Tip** If your window is not displaying the appropriate version and build that you loaded, be sure that you have cleared the browser cache as describe in the “Clearing the Browser Cache” section on page 25.

Step 3 Verify that you can open the other Cisco StadiumVision Director screens and menus.

Verifying that Services are Running

After you upgrade, go to the Management Dashboard to verify that all of the primary Cisco StadiumVision Director services are running.

To verify that services are running, complete the following steps:

Step 1 From the Management Dashboard, expand the Service Alerts pane.

Step 2 Verify that all of the primary services—in particular the Content Management CMS Server—are in “Normal” (green) state without any service alerts.
Step 3  If the CMS server or another service in the above list is not in Normal state but should be, use the TUI services menu to restart it.

Configuring the DMP 4310 Assigned VLAN Property for VLAN Compliance Check

After you upgrade, you need to go to the Management Dashboard and change the Assigned VLAN property under Global DMP Settings for both the 4310 and 4310 v5.x.x settings according to your DMP VLAN configuration.

Configuring this property in the Management Dashboard settings for the DMP 4310s will ensure that the Dashboard value can be checked for compliance with the value being sent by the DMP:

- If all of your DMPs are located on the same VLAN (recommended)—Type the number of the VLAN and save the configuration.
- If all of your DMPs are not located on the same VLAN, or you want to bypass any VLAN compliance checking—Type “$svd_ignore” and save the configuration.

The value in the Assigned VLAN property in the Management Dashboard settings for the DMP 4310s is checked against what is being sent by the DMP, unless you have configured $svd_ignore.

Caution
DMP auto-registration support requires that the VLAN value is correctly set or “$svd_ignore” is used.

Note
You need to set a value for the Assigned VLAN property for the 4310 v5.2.3 Settings under Global DMP Settings in the Management Dashboard.

To configure the Assigned VLAN Property, complete the following steps:

Step 1  Go to the Management Dashboard, and click SV Director Configuration > System Configuration > Global DMP Settings.

Step 2  Complete both of the following steps, as shown in Figure 2:

a. Click 4310 v5.x.x Settings. Find the Assigned VLAN property. In the box, type either the VLAN number where the DMP resides, or $svd_ignore.
Verifying the Upgrade

Figure 2  Assigned VLAN Property Configuration for DMPs

**Step 3** Click the Save icon.

**Verifying DMPs, Groups, and Zones in the Management Dashboard**

**Note** Before you verify DMP status, be sure that you have set the Assigned VLAN property for your DMP 4310s so that the VLAN compliance check can be performed. For more information, see the “Configuring the DMP 4310 Assigned VLAN Property for VLAN Compliance Check” section on page 28.

To check DMPs, groups, and zones after you upgrade your software, complete the following steps:

**Step 1** Go to the Management Dashboard and verify that all of your groups, zones and DMPs are present and in the green state.

**Step 2** From the DMP and TV Controls dashboard drawer, run a Get Status on all DMPs to update Cisco StadiumVision Director’s record of DMP MAC addresses using the following dashboard command path: DMP and TV Controls > Monitoring > Get Status.

**Step 3** Run an Initial Config using the following dashboard command path: DMP and TV Controls > DMP Install > Initial Config.

**Step 4** Run Get Status to confirm that all DMPs have successfully rebooted and are in good health.

**Note** This will also update the MAC address for the DMPs.
Step 5  (Optional) Change the DMP State of healthy DMPs to “Production” using the following dashboard command path:
DMP and TV Controls > Auto Registration > Change DMP State.
Step 6  Run Get Status to check the DMP state after the change.
Step 7  Investigate any DMPs that are not in “Normal” state.

Verifying the Multicast Configuration

Cisco StadiumVision Director uses both unicast and multicast communications for DMP control-plane operation. The Cisco Connected Stadium design requires that Cisco StadiumVision Director uses the 239.193.0.0 multicast group address range.

The multicast group address for Cisco StadiumVision Director is configured in the “MulticastHostPort” registry.

For more information about multicast configuration, see the “Configuring Multicast Ports for Cisco StadiumVision Director” topic in the “Configuring the Cisco StadiumVision Director Server System Settings” module of the Cisco StadiumVision Director Server Administration Guide, Release 3.2.

To verify or configure the multicast addressing for Cisco StadiumVision Director, complete the following steps:

Step 1  From the Management Dashboard, select Tools > Advanced > Registry.
Step 2  Scroll to the “MulticastHostPort” registry key in the Parameters list and confirm the entry for the registry.
Step 3  To change the value, click on the value field and specify a multicast address in the range 239.193.0.0/24.
   Note  Be sure to use the value that is configured in your Cisco Connected Stadium network and include the :port. The recommended default is :50001.
Step 4  Click Apply.

Setting Up the Quest Venue Manager to Send Updates to Cisco StadiumVision Director Server

Note  This task is only required if you are using the Quest Point of Sale system.

The steps described in this section assume that Quest has the notification service installed and enabled.
After you upgrade, you need to set up the Quest Venue Manager to support sending updates to the Cisco StadiumVision server when menu items change.

To set up the Quest Venue Manager to send updates to the Cisco StadiumVision Director server, complete the following steps:

**Step 1** Access the Quest server.

**Step 2** Go to the C:\Program Files\Quest POS\Quest Venue Manager\Services directory.

**Step 3** Start the executable application program named “QuestInterfaceServiceManager” (Figure 3).

**Figure 3 QuestInterfaceServiceManager Application**

**Step 4** When the Quest Interface Service Manager application window opens, specify the following options (Figure 4):

a. In the Select a Service box, choose the **Quest Menu Web Service Notification**.

b. Select the **Enabled** checkbox so a checkmark appears.

c. In the URL box, enter **http://svd:8080/StadiumVision/services/TerminalUpdate**.

d. In the Poll Interval box, select **1** minute.

e. Select the **Keypad** and **PLU** update checkboxes so a checkmark appears.

f. In the Terminal Type box, select **Web Service**.
Verifying the Upgrade

Figure 4  Select a Service to Configure

Step 5  Click OK.

Step 6  Restart the windows service to implement the configuration by completing the following steps:

a. From your laptop, click Start > Run . . .

b. When the Run dialog box opens, type “services.msc”.

c. Find the Quest Interface Service and restart it (Figure 5).

Figure 5  Restart the Quest Interface Service
Using the Software Manager to Upgrade Cisco StadiumVision Director Release 3.2 Software, Language Packs, and Fonts

First Published: April 21, 2014
Revised: April 7, 2015

Note

If you are upgrading an existing Cisco StadiumVision Director server from Release 3.1 SP2 to Release 3.2, see the “Upgrading a Cisco StadiumVision Director Server from Release 3.1 SP2 to Release 3.2” module on page 19 first.

This module describes using the Cisco StadiumVision Director Software Manager to:

- Upgrade an existing server already running Cisco StadiumVision Director 3.2 to a later release of Cisco StadiumVision Director software.
- Install language packs and fonts.

This module includes the following topics:

- Best Practices, page 33
- Prerequisites, page 34
- Information About Using the Software Manager to Update Existing Cisco StadiumVision Director Software, page 35
- Upgrade Tasks, page 35
- Installing Language Packs, page 39
- Installing Fonts, page 40
- What to Do Next, page 41

Best Practices

Caution

Do not alter the RAID configuration prior to upgrade.
Before you begin upgrading an existing Cisco StadiumVision Director server, consider the following best practices:

- Choose an appropriate down time to perform the upgrade on the Cisco StadiumVision Director server when there is adequate time to complete and verify the upgrade before any scheduled events and to allow time to resolve any unexpected issues that might occur.

- Refer to the *Release Notes for Cisco StadiumVision Director Release 3.2* for the latest information about hardware and software requirements, changes, important notes, and caveats for your software release.

- Pay particular attention to the required hardware and software versions for other devices supporting your Cisco StadiumVision solution and be sure that you upgrade those devices as needed. For example, generally only certain firmware versions are supported for the DMP hardware, or a new firmware version is needed to provide additional functionality supported by the Cisco StadiumVision Director software.

- Perform a backup and restore of the primary and secondary servers:
  - Perform a backup of the currently active primary server.
  - Restore the backup data onto the standby secondary server.

  **Note** The config service must be running on the secondary server to do the restore.

For more information about performing a backup and restore on a Cisco StadiumVision Director Server, see the “Backing Up and Restoring Cisco StadiumVision Director Servers” module of the *Cisco StadiumVision Director Server Administration Guide, Release 3.2*.

- Promote the secondary server to primary.

  For more information about promoting a secondary server to primary in Release 3.2, see the “Configuring Failover Between Redundant Cisco StadiumVision Director Servers” module of the *Cisco StadiumVision Director Server Administration Guide, Release 3.2*.

- Access the promoted secondary server to perform the upgrade.

- Verify the boot order in the BIOS (by pressing F2 while booting) prior to upgrading; the virtual DVD should be the primary boot device for the Platform 3 server.

- Due to the difficulty in recovering from an interrupted installation process if the Linux shell is accidentally closed or the network drops, it is highly recommended that you use a server console connection method that does not pose a risk to the success of upgrade completion if the session breaks during upgrade.

  This can be done using a monitor and keyboard that are directly connected to the Cisco StadiumVision Director server to log into the web browser interface.

**Prerequisites**

Be sure that the following requirements are met before you upgrade your server:

- Your server is running a minimum of Cisco StadiumVision Director Release 3.2.0-489 or higher.

- If you are upgrading your server from Release 3.1, follow the tasks described in the “Upgrading a Cisco StadiumVision Director Server from Release 3.1 SP2 to Release 3.2” module in this guide.
Using the Software Manager to Upgrade Cisco StadiumVision Director Release 3.2 Software, Language Packs, and Information About Using the Software Manager to Update Existing Cisco StadiumVision Director Software

You have the IP address for the Cisco StadiumVision Director server where you want to upload the ISO upgrade image. You will need to use this information as part of the URL to access the ISO upload utility.

You have a supported browser version for Cisco StadiumVision Director. For more information about the latest supported browsers, see the Cisco StadiumVision Release Notes for Release 3.2.

Information About Using the Software Manager to Update Existing Cisco StadiumVision Director Software

After upgrading to Cisco StadiumVision Director Release 3.2, you can use the Software Manager to upgrade to later versions of Cisco StadiumVision Director. The ISO upgrade procedure for Cisco StadiumVision Director includes the following tasks:

1. Downloading an ISO service pack or upgrade file from the software download site on Cisco.com.
2. Uploading the ISO file from your laptop to the Cisco StadiumVision Director server using the upload utility through your browser.
3. Installing the ISO image using the install function in the Software Manager.

ISO Upgrade Files

You can store multiple ISO upgrade files on a Cisco StadiumVision Director server. The files will be displayed with a version number and the ISO filename in the Software Manager web browser interface for you to select which file to install.

Disk Maintenance

There is no automatic aging of ISO upgrade files, but you can delete files directly in the Software Manager. ISO files can also be deleted via the TUI: Troubleshooting > Disk Monitoring > Delete Files > Clean upgrade ISO files.

The Management Dashboard has a gauge for % Disk Utilization, or you can use the TUI to get file system usage.

Upgrade Tasks

To upgrade your Cisco StadiumVision Director server, complete the following tasks:

- Downloading ISO Upgrade Files from Cisco.com, page 36 (required)
- Uploading and Installing an ISO Upgrade File on the Cisco StadiumVision Director Server, page 37 (required)
- Reactivating Custom Fonts, page 38 (as required)
- Staging the Flash Template, page 38 (required)
- Deploying Global DMP Settings, page 39 (required)
**Downloading ISO Upgrade Files from Cisco.com**

Be sure to download the upgrade files to a location, such as a laptop computer, where you can access them for installation onto the Cisco StadiumVision Director server.

**To download an ISO upgrade file, complete the following steps:**

### Step 1
Go to the Cisco StadiumVision Director software download site at:

*Note*

This site page is also available from the Cisco StadiumVision Director product support page by clicking **Download Software > Cisco StadiumVision Director**.

### Step 2
Select the ISO upgrade or service pack file (as available), and optionally the companion MD5 checksum file, and download them.

**Table 1** shows the filename conventions used for ISO upgrades.

*Note*

Be sure that you choose the ISO for SV-DIRECTOR and *not* for SVD-REMOTE.

### Table 1 ISO Upgrade Filename Conventions

<table>
<thead>
<tr>
<th>Hardware Product ID</th>
<th>Filename Convention¹</th>
</tr>
</thead>
<tbody>
<tr>
<td>SV-DIRECTOR-K9 or</td>
<td>• SV-DIRECTOR-UPGRADE-3.2.0-nnn.x86_64.iso</td>
</tr>
<tr>
<td>SV-PLATFORM2=</td>
<td>• SV-DIRECTOR-UPGRADE-3.2.0-nnn.x86_64.iso.md5sum</td>
</tr>
<tr>
<td>SV-PLATFORM3=</td>
<td></td>
</tr>
</tbody>
</table>

¹“nnn” represents the build number of the image in the file.

You can download the files using one of the following methods:

- Download both files at one time—Select each file and click **Add to Cart**. Then at the top of the download page, click the “Download Cart (2 items)” link.
- Download each file independently—Click the **Download Now** button in the file selection box for each file.

### Step 3
(Optional) To verify the integrity of your upgrade file from the download, you can use the Software Manager UI to verify the checksum on the .iso file.

The md5 checksum is calculated by the system, and is shown on the Software Manager UI. Compare what is shown on the UI and the downloaded md5 checksum.

The values should match. If they do not, retry the download.
Uploading and Installing an ISO Upgrade File on the Cisco StadiumVision Director Server

After you have downloaded the ISO upgrade file from Cisco.com, you will use the Software Manager to both upload the file to the Cisco StadiumVision Director server and to install the upgrade image.

Prerequisites

Be sure that you know the IP address of the Cisco StadiumVision Director server where you want to upload the file, and you have a supported browser version for Cisco StadiumVision Director.

Procedure

To upload and install an ISO upgrade file on the Cisco StadiumVision Director server, complete the following steps:

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Log into Cisco StadiumVision Director as an administrator.</td>
</tr>
<tr>
<td>Step 2</td>
<td>From your browser, go to the following URL, where x.x.x.x is replaced by the IP address of the server where you want to upload the upgrade software.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Click Manage Software.</td>
</tr>
<tr>
<td>Step 4</td>
<td>From the Upgrade tab, click Upload.</td>
</tr>
</tbody>
</table>
| Step 5 | Navigate to the location of the ISO upgrade file that you downloaded from Cisco.com. Select the file that you want to upload and click Open. The file is sent to the server. When the ISO upload is complete, one of the following occurs:  
  - When the image is validated and uploaded successfully, a message is displayed stating that the ISO image has been uploaded.  
  - The image upload failed for some reason and you will need to retry the upload again. |

Caution

The upload might take several minutes. Do not refresh or reload the Software Manager page while the upload process is running. Any interruption will corrupt the ISO image being uploaded.

| Step 6 | Click the Install button (Figure 1). |
Upgrade Tasks

Using the Software Manager to Upgrade Cisco StadiumVision Director Release 3.2 Software, Language Packs, and

Step 7 The installation process begins, and status messages are displayed.
Step 8 After the installation is complete, Cisco StadiumVision services are restarted.

Reactivating Custom Fonts

If you have already installed custom fonts in Cisco StadiumVision Director Release 3.2 prior to upgrade, then you will need to reactivate those fonts from the Software Manager after you upgrade.

To reactivate custom fonts, complete the following steps:

Step 1 From the Cisco StadiumVision Director main menu, click Manage Software.
Step 2 From the Software Manager screen, click Fonts.
Step 3 Select the fonts to be activated.
Step 4 Click Activate Selected.
Step 5 Stage the Flash Template.

Staging the Flash Template

To be sure that any changes that might have been made to the Cisco StadiumVision Director Flash Template (.swf file) are deployed to the DMPs, complete the following steps:

Step 1 Go to the Management Dashboard.
Step 2 From the DMP and TV Controls dashboard drawer, navigate to the following command path: DMP and TV Controls > DMP Install > Stage Template.
Step 3 Select all of the DMP devices where the command should be applied.
Deploying Global DMP Settings

To apply the global MIB variable settings to all DMPs, complete the following steps:

Step 1  Go to the Management Dashboard.
Step 2  From the DMP and TV Controls dashboard drawer, navigate to the following command path: DMP and TV Controls > Global > Global DMP Settings.
Step 3  Select all of the DMP devices where the command should be applied.
Step 4  Click the play button to run the command on the selected devices.

Installing Language Packs

Beginning in Cisco StadiumVision Director Release 3.2, you now have increased flexibility to upload and install only the specific language(s) that you want to support through the independent installation of Language Packs as they become available for the release. The upload and installation of the language packs is performed using the new Software Manager from the Cisco StadiumVision Director main menu.

In prior Cisco StadiumVision Director releases, localization upgrades included automatic installation of all supported languages bundled as part of a service pack which no longer applies to language support in Release 3.2.

To install language packs, complete the following steps:

Step 1  Download the desired language pack from Cisco.com.
Step 2  Login into Cisco StadiumVision Director as administrator.
Step 3  From the main menu, click Manage Software.
Step 4  From the Software Manager screen, click Language Packs (Figure 2).
Using the Software Manager to Upgrade Cisco StadiumVision Director Release 3.2 Software, Language Packs, and

Installing Fonts

Step 5  Go to the downloaded Language Pack RPM, and click **Open**. The language pack is sent to the server.

Step 6  Click **Install/Upgrade** to install the language pack.

**Note**  If using a secondary Cisco StadiumVision Director server, the language pack should be installed on both the primary and secondary servers.

Installing Fonts

**Note**  Follow these guidelines to install new fonts on your system. If you have already installed custom fonts prior to upgrade, then you only need to reactivate them. See the “Reactivating Custom Fonts” section on page 38.

This section includes the following topics:

- Guidelines for Installing Fonts, page 40
- Procedure, page 41

Guidelines for Installing Fonts

Consider the following guidelines before installing fonts:

- To save system memory on the DMP, install fonts that have the minimal set of required characters.
- Cisco StadiumVision Director can support approximately 30,000 installed glyphs.
- Asian languages like Chinese (which contain more glyphs) require more memory.
- The fallback font is Arial; it will be used as the default font in cases where the widget is referencing a font that is not available.
Only True Type (.ttf) and OpenType (.otf) fonts are supported.

**Procedure**

To install fonts, complete the following steps:

**Step 1** Obtain the desired fonts.

**Note** Fonts must be TrueType (.ttf) or OpenType (.otf).

**Step 2** Login into Cisco StadiumVision Director as administrator.

**Step 3** From the main menu, click Manage Software.

**Step 4** Click on the Manage Software icon.

**Step 5** From the Software Manager screen, click Fonts (Figure 3).

**Figure 3 Fonts Tab**

Go to the downloaded font file, and click Open.

**Step 7** Click Upload.

The font file is sent to the server.

**Step 8** Click the checkbox of the font to be activated.

**Step 9** Click Activate Selected to make the font active.

**What to Do Next**

- Follow the steps in the “Verifying the Upgrade” module to verify that the upgrade process was successful.
- Use the “Appendix A: Post-Upgrade Checklist” module on page 45 to be sure that you have completed the required verification steps.
Upgrading the DMP Firmware

First Published: April 21, 2014
Revised: November 17, 2014

This module describes how to download and upgrade the DMP firmware using the Cisco StadiumVision Director Management Dashboard.

Contents

- Prerequisites, page 41
- Upgrade Tasks, page 41

Prerequisites

Before you upgrade the DMP firmware, be sure that the following requirements are met:

- Be sure that you have compatible Cisco Digital Media Player (DMP) models and firmware versions installed.
  
For more information about DMP hardware and software requirements, see the *Release Notes for Cisco StadiumVision Director Release 3.2.*

Upgrade Tasks

To upgrade the DMP firmware, complete the following tasks:

- **Downloading the DMP Firmware, page 41** (required)
- **Upgrading the DMP Firmware From the Management Dashboard, page 42** (required)
- **Disabling Failover on all DMPs, page 44** (recommended)

Downloading the DMP Firmware

The DMP firmware image is not bundled with the Cisco StadiumVision Director software. You must download the firmware image separately at the software download center site.
DMP-4310G Version 5.4.1 RB2P

To download the DMP-4310G Version 5.4.1RB2P firmware, go to the Cisco Digital Media Players product page for the Cisco DMP 4310G:

1. Click the Downloads tab and then Digital Media Player (DMP) System Upgrades.
2. Go to All Releases > 5 > 5.4.1_RB_2P.
3. Click Download to get the 5.4.1_RB2_2P_FCS_4310.fwimg file.

Upgrading the DMP Firmware From the Management Dashboard

This section provides a summary of the steps to perform to upgrade your DMP firmware. For more detailed information, see the related documentation.

To upgrade your DMP firmware, complete the following steps on each DMP as needed:

**Step 1** Go to the Management Dashboard > DMP and TV Controls > DMP Install > Firmware Upgrade.

**Step 2** Upload the firmware file to the server and upgrade the firmware for the DMP 4310Gs.

For more information, see the “Upgrading the Firmware Image” section of the Cisco StadiumVision Management Dashboard Device Configuration Commands guide.

**Step 3** Go to the Management Dashboard > SV Director Configuration > System Configuration > Auto Registration Settings. Confirm or set the following values as required:

- Enable_Auto_Registration = true
- Enable_Auto_Provisioning = true
- Firmware image to use = 5.4(1)RB(2P) (select from the dropdown box)
- Manually type the firmware init.version and init.build values according to your firmware version as follows:

  **Note** The init.version and init.build strings must match exactly with the characters and spacing shown.

  - For firmware version 5.4.1 RB2P:
    init.version = 5.4(1)RB(2P)
    init.build = Mon Oct  6 07:03:30 PDT 2014 [b4652]

  **Note** The "init.build" string there are 2 spaces between "Oct" and "6".
Upgrading the DMP Firmware

Upgrade Tasks

Step 4  Go to the Management Dashboard > SV Director Configuration > Global DMP Settings and confirm the firmware version and build date in the 4310 v5.x.x Settings as shown in Figure 1.

Figure 1  Global DMP Settings in Management Dashboard

Step 5  Configure the Assigned VLAN property under the 4310 v5.x.x as $svd_ignore or the actual VLAN number on which your DMPs reside. Do not leave blank.

Note  DMP auto-registration support requires that the VLAN value is correctly set or “$svd_ignore” is used.

You will need to set the Assigned VLAN property value for the 4310 v5.x.x Settings (Figure 2):

Figure 2  Assigned VLAN Property Configuration for DMPs

Step 6  Go to Management Dashboard > DMP and TV Controls > DMP Install > Firmware Upgrade. Select All Devices and click the Play (>) icon to run the command.

Step 7  Go to Management Dashboard > DMP and TV Controls > Global Settings > Global DMP Settings. Select All Devices and click the Play (>) icon to run the command.

Step 8  Go to Management Dashboard > DMP and TV Controls > Monitoring > Get Status. Select All Devices and click the Play (>) icon to run the command.
**Disabling Failover on all DMPs**

Note: DMP failover is disabled by default beginning in Cisco StadiumVision Director Release 3.1.0-787 (SP1).

Sometimes when a DMP is in failover mode during an event and should be displaying content, but the video content is not staged, the TV screen is black. Therefore in Cisco StadiumVision Director Release 3.0 and later releases, Cisco Systems recommends that failover for DMPs is disabled.

To disable failover on all DMPs, complete the following steps:

1. Log into Cisco StadiumVision Director as an administrator.
2. Click Management Dashboard.
3. Go to DMP and TV Controls > DMP Commands.
4. Select Update MIB.
5. Click 4310 Parameters tab.
6. In the name cell, type failover.on.
7. In the value cell, type false.
8. In the Select Devices box, select all DMPs.
9. Press the Play button to execute on selected devices.
10. Turn off failover in the global MIB settings by completing the following steps:
   a. From the Management Dashboard, go to SV Director Configuration > System Configuration > Global DMP Settings > 4310 v5.x.x Settings.
   b. Find the Enable failover property.
   c. Set the value to false.
   d. Click Save changes.
Appendix A: Post-Upgrade Checklist

The following checklist is useful after you upgrade your software on a Cisco StadiumVision Director server.

<table>
<thead>
<tr>
<th>List Item</th>
<th>Checkoff</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Complete any specific verification steps documented for your particular upgrade.</td>
<td></td>
</tr>
<tr>
<td>2. Clear the browser cache.</td>
<td></td>
</tr>
<tr>
<td><strong>Caution</strong> Notify all Cisco StadiumVision Director users about the mandatory requirement to clear their browser cache before accessing the latest Cisco StadiumVision Director software.</td>
<td></td>
</tr>
<tr>
<td>3. Verify that the Control Panel shows the Cisco StadiumVision Director version and build number that you installed.</td>
<td></td>
</tr>
<tr>
<td>4. If you are using phone control, verify that the phones work.</td>
<td></td>
</tr>
<tr>
<td>5. If using IP phones for local TV control, verify that channels can be successfully changed.</td>
<td></td>
</tr>
<tr>
<td>6. Verify that channel names and favorites are properly set.</td>
<td></td>
</tr>
<tr>
<td>7. If using suite commerce integration, verify that an order can be successfully placed using the IP phone.</td>
<td></td>
</tr>
<tr>
<td>8. Verify that all devices are properly in the nonevent_group.</td>
<td></td>
</tr>
<tr>
<td>9. Go to the Services Alert window in the Management Dashboard and make sure that all relevant services are green.</td>
<td></td>
</tr>
<tr>
<td><strong>Tip</strong> You might need to click the refresh button to be sure that all services are re-poll ed for status. If needed, you can Disable services that are not part of your installation</td>
<td></td>
</tr>
<tr>
<td>10. Verify that all DMPs and TVs in the Management Dashboard are green.</td>
<td></td>
</tr>
<tr>
<td>List Item</td>
<td>Checkoff</td>
</tr>
<tr>
<td>---------------------------------------------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td>11. Start an existing event script and validate that screens display the expected content.</td>
<td></td>
</tr>
<tr>
<td>12. Stop the event script and validate that screens are powered off.</td>
<td></td>
</tr>
<tr>
<td>13. Make a minor edit to the event script and make sure it can be saved.</td>
<td></td>
</tr>
<tr>
<td>14. Verify that you can push a new video file in the CMS to the DMPs.</td>
<td></td>
</tr>
<tr>
<td>15. If using dynamic menu boards, make a change to a menu item and verify that the change is reflected on the menu board.</td>
<td></td>
</tr>
<tr>
<td>16. If using external content integration, be sure to re-enable your data sources in the Control Panel and restart the External Content Integration application from the Management Dashboard.</td>
<td></td>
</tr>
<tr>
<td>17. Perform a server backup for the upgrade configuration.</td>
<td></td>
</tr>
<tr>
<td>18. After satisfying your site’s testing and event requirements, failback to the primary server and upgrade it to the same version of software that you validated on your secondary server.</td>
<td></td>
</tr>
<tr>
<td>For more information, see the “Configuring Failover Between Redundant Cisco StadiumVision Director Servers” module in the Cisco StadiumVision Director Server Administration Guide.</td>
<td></td>
</tr>
<tr>
<td>19. After you perform failback, be sure that you reconfigure your backup and restore environment using the Text Utility Interface (TUI).</td>
<td></td>
</tr>
<tr>
<td>20. (As needed for sites with a large volume of video content) Reduce the number of backups that are retained by the system.</td>
<td></td>
</tr>
<tr>
<td>For more information, see the “Backing Up and Restoring Cisco StadiumVision Director Servers” module in the Cisco StadiumVision Director Server Administration Guide.</td>
<td></td>
</tr>

Appendix C: Installing Additional Hard Drives in the Platform 2 Server to Prepare for Upgrade to Release 3.2

First Published: April 21, 2014

The Cisco StadiumVision Director Platform 2 server ships with two 300 GB hard drives configured with RAID 1 mirroring for redundancy. This module describes how to install two additional 300 GB hard drives (SV-FRU2-HD3G=) for another RAID 1 volume in the Cisco StadiumVision Director Platform 2 Server which are required to run Cisco StadiumVision Director Release 3.2 with a minimum of 4 drives.

Caution

If you need to install additional hard drives in the Platform 2 server to meet the 4-drive minimum requirement to support Release 3.2, then you must perform different upgrade tasks in a certain order.

The physical installation of the additional drives must precede the upgrade to Release 3.1.0-797 (SP2), which is the required prerequisite release to upgrade to Release 3.2.

Refer to the Cisco StadiumVision Director Software Installation and Upgrade Guide, Release 3.1 followed by extension of the RAID volume post-upgrade, and then content migration and the remainder of the upgrade verification.

Contents

- Prerequisites, page 53
- Installation Tasks, page 54

Prerequisites

Be sure that the following requirements are met before you upgrade your server:

- Your current CIMC/BIOS firmware version is a minimum of 1.5(1).
- You have completed running any proof of play reports.
- You have completed a backup and have a copy stored externally to the Cisco StadiumVision Director servers.
Appendix C: Installing Additional Hard Drives in the Platform 2 Server to Prepare for Upgrade to Release 3.2

Installation Tasks

You have installed Cisco StadiumVision Director Release 3.1.0-797 SP2 on your Platform 2 servers.
You have physical access to the server.
A monitor and keyboard are connected to the Cisco StadiumVision Director server.
You can log into the server at the console or over the network with SSH.
You have two new 300 GB R2 Disk Spare drives (SV-FRU2-HD3G= ) for the Platform 2 server.

Note: These hard drives are no longer generally available. If you need to obtain spare drives, contact your Cisco Systems sales representative for more information.

Installation Tasks

To install additional hard drives, complete the following tasks:

- Installing the Hard Drives Into the Server Chassis, page 54 (required)
- Creating a New Logical Volume Using the LSI MegaRAID Utility, page 55 (required)
- Extending the Original RAID Volume to Create a Single Group, page 58 (required)

Installing the Hard Drives Into the Server Chassis

This task describes how to physically install two additional 300 GB drives into the Cisco StadiumVision Director Platform 2 server.

To install the hard drives into the server chassis, complete the following steps:

Step 1 Log into the Cisco StadiumVision Director server with the “installer” credentials either directly at the console or over the network using SSH.

Note: Unless the values have been changed, the default userid is “installer” with password “cisco!123.”

Step 2 When the StadiumVision Director Configuration menu for the Text Utility Interface (TUI) appears, type m and press Enter to shut down the server.

Step 3 A message appears asking you to confirm the shutdown.

WARNING: THIS WILL SHUTDOWN THE SERVER!! Are you sure?

PRESS Y TO CONTINUE, PRESS N TO CANCEL

Type Y.

The server begins to shut down and a series of messages are displayed:

System is shutting down. You will be logged out shortly.
Broadcast message from root (pts/0) (Tue May 8 21:28:00 2012):

The system is going DOWN for system halt in 1 minute!
Appendix C: Installing Additional Hard Drives in the Platform 2 Server to Prepare for Upgrade to Release 3.2

Installation Tasks

Note
If the server reboots instead of powers down it is probably running an older firmware. For more information, see the “Upgrading the CIMC and BIOS Firmware on a Cisco StadiumVision Director Platform 2 Server”.

Step 4
Install the new 300 GB hard drives into Slot 2 and Slot 3 of the server chassis.

For information about physically installing the hard drives on the Platform 2 server, see the “Maintaining the Server” chapter of the Cisco UCS C200 Installation and Service Guide.

Creating a New Logical Volume Using the LSI MegaRAID Utility

This task creates another RAID 1 logical volume composed of the two new drives.

For more information about RAID on the Cisco StadiumVision Director Platform 2 server, such as the meaning of the beep codes, see the “RAID Controller Considerations” chapter of the Cisco UCS C200 Installation and Service Guide.

Note
It is recommended that you have a mouse or other similar device attached to the sever so that you can perform the installation steps more easily.

To create a new logical volume using the LSI MegaRAID utility, complete the following steps:

Step 1
Power on the Cisco StadiumVision Director server where you physically installed the two new hard drives.

Step 2
Press Ctrl-H to open the LSI MegaRAID utility when prompted.

Note
Be sure to press Ctrl-H when prompted by the LSI MegaRAID utility. If you miss the prompt or reach the boot menu before seeing it, press Ctrl-Alt-Del to reboot the server and try again.

Step 3
Create a new logical volume with the two new drives in a RAID 1 configuration by completing the following steps:

Note
Only drives in “Unconfigured Good” state are available for RAID configuration. New drives must show up as unconfigured before you proceed (Figure 1).
Appendix C: Installing Additional Hard Drives in the Platform 2 Server to Prepare for Upgrade to Release 3.2

Installation Tasks

Figure 1  Unconfigured Drives in Good State

- Select **Add Configuration** and click **Next** (Figure 2).

Figure 2  Add Configuration Wizard

- Select **Automatic configuration** with the **Redundancy when possible** option. Click **Next** (Figure 3).

Figure 3  Configuration Method Screen
c. The Configuration Preview screen is displayed showing the 4 hard drives in 2 drive groups. Click Accept (Figure 4).

![Accept Configuration Preview](image)

A fast disk initialization automatically begins.

d. When the screen showing initialization options is displayed, only click Back (Figure 5).

![Initialization Options—Click Back Only](image)
e. The Logical View screen shows the 4 hard drives online, including the two new drives in Slot 2 and Slot 3 (Figure 6).

Figure 6 Logical View of Hard Drives

Step 4 Exit the MegaRAID utility.

Extending the Original RAID Volume to Create a Single Group

This task describes how to extend at the OS level the original logical volume on which Cisco StadiumVision Director is installed to include the new RAID 1 volume. This will create a volume group where Cisco StadiumVision Director sees the four drives as one volume with a total of 600 GB storage.

To extend the original RAID volume to create a single group in the Release 3.2 software, complete the following steps:

Step 1 Log into the TUI by doing the following:
   a. Use a directly connected console, or use an SSH client from a laptop computer that is connected to the Cisco StadiumVision Server network to run a secure login to the secondary Cisco StadiumVision Director server using the IP address for your server.
   b. When the login prompt appears, enter the installer userid followed by the installer password at the password prompt.

Step 2 From the Main Menu, go to the StadiumVision Server Administration > Hard Drive Expansion option.

Step 3 When the following confirmation message appears, type Y if you are prepared to continue, or N to cancel.

WARNING: You will lose data that may be stored in the new drives. Do you want to continue?
PRESS Y TO CONTINUE, PRESS N TO CANCEL

Step 4 Press any key to return to the StadiumVision Server Administration menu.

Step 5 Continue to return to the Main Menu and exit the TUI.
What To Do Next

After you extend the RAID volume, return to the “Upgrading a Cisco StadiumVision Director Server from Release 3.1 SP2 to Release 3.2” to complete the upgrade tasks and perform the migration of content to the Release 3.2 CMS.
Appendix D: CIMC Configuration and Firmware Upgrade Guidelines on the Cisco UCS C220 Server

First Published: April 21, 2014

This document provides guidelines for configuring the Cisco Integrated Management Controller (CIMC) interface and performing the initial configuration, and upgrading the CIMC/BIOS firmware on the Cisco UCS C220 servers for Cisco StadiumVision Director (SV-DIR-DIRECTOR-K9, SV-PLATFORM3=).

Note
Use the information in this appendix only as a guide to the tasks that you need to perform for CIMC configuration or upgrade, but follow the procedures in the referenced Cisco UCS documents.

This section includes the following topics:
- CIMC Initial Configuration, page 61 (required)
- CIMC Firmware Upgrade Guidelines, page 63 (as required)

CIMC Initial Configuration

This section includes the following topics:
- Prerequisites, page 61
- CIMC Initial Configuration Summary, page 62

Prerequisites

Be sure that the following requirements are met before you do the CIMC initial configuration:
- You have a monitor, keyboard, and mouse that you can connect to the server.
- You have the following information for configuring the internal Cisco Integrated Management Controller (CIMC) interface:
  - You have an additional IP address for static configuration.
Tip

This is a different IP address than the IP address that you configure for the eth0 network interface on the Cisco StadiumVision server.

- You have the VLAN ID if the server will be installed on a network VLAN.
- You are prepared to change the default CIMC login password.
- You have a laptop with access to the Cisco StadiumVision network.
- Your computer meets the minimum browser and Flash player requirements for the Cisco StadiumVision server, and also has Java 1.6 or later installed.

See the release notes for your Cisco StadiumVision product and release at:

- You have a copy of or access to the following documents on Cisco.com:
  - *Cisco UCS C220 Server Installation and Service Guide*
    Familiarize yourself with the “Initial Server Setup” topic of the “Installing the Server” chapter.
  - *Cisco UCS C-Series Servers Integrated Management Controller GUI Configuration Guide, Release 1.4*
    (or the version that corresponds to your firmware release found at:
    Familiarize yourself with the “Overview” chapter, and the “Managing the Server Boot Order” section of the “Managing the Server” chapter.

**CIMC Initial Configuration Summary**

This section provides an overview of the basic tasks to be completed when performing the initial CIMC configuration in standalone mode for a Cisco StadiumVision server after you have unpacked and inspected it and prepared it for installation.

**To perform the CIMC initial configuration, complete the following tasks:**

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Configuring the CIMC Interface</strong></td>
</tr>
<tr>
<td>Note</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>During bootup, press F8 when prompted to open the BIOS CIMC Configuration Utility.</td>
</tr>
</tbody>
</table>
| Step 2 | Configure the CIMC interface with the following settings:
  - DHCP—Disabled. You must change this option to enter a static IP address.
  - CIMC IP—IPv4 address for your CIMC interface, with corresponding subnet mask.
  - VLAN—Dependent on client network.
  - Change the CIMC password. The default credential is `admin` and `password`. |
| Step 3 | Press F10 to save your configuration and reboot the server. |
### CIMC Firmware Upgrade Guidelines

This section includes the following topics:

- **Before You Begin**, page 63
- **Prerequisites**, page 64
- **CIMC/BIOS Firmware Upgrade Summary**, page 64

### Before You Begin

See the release notes for your Cisco StadiumVision product and release at:

- Find the minimum CIMC/BIOS versions tested for your Cisco StadiumVision Director (SV-DIR-DIRECTOR-K9, SV-PLATFORM3=) platform.

### Configuring the NIC Properties

**Note**: Information about configuring the NIC properties are found in the “Initial Server Setup” topic of the “Installing the Server” chapter in the *Cisco UCS C220 Server Installation and Service Guide*.

**Step 4**  
From a laptop with access to the Cisco StadiumVision network, use a browser and type the IP address that you configured for the CIMC interface to connect to the CIMC console.

**Step 5**  
Log into the CIMC console with username **admin** and the password that you configured in **Step 2**.

**Step 6**  
From the **Admin** tab, click **Network**, and go to the **Network Settings** page.  
In the NIC Properties box configure the following settings and save your changes:

- NIC mode—Dedicated
- NIC Redundancy—None

### Configuring the Server Boot Order

**Note**: The instructions for configuring the server boot order are found in the “Managing the Server Boot Order” section of the “Managing the Server” chapter of the *Cisco UCS C-Series Servers Integrated Management Controller GUI Configuration Guide, Release 1.4*

**Step 7**  
From the **Server** tab, click **BIOS**.

**Step 8**  
Configure the following boot order and save your changes:

- Virtual CD/DVD
- HDD
- From your Cisco StadiumVision platform, verify the CIMC and BIOS firmware versions in the CIMC console (Figure 1).

**Figure 1** Firmware Verification From the CIMC Console

*Note* Unless there is another reason why an upgrade has been found to be needed, no upgrade should be needed if your server firmware is at the minimum tested version (or later) for the Cisco StadiumVision release that you are running.

**Prerequisites**

Be sure that the following requirements are met before you perform a CIMC/BIOS firmware upgrade:

- You have a copy of or access to the following documents on Cisco.com:
    (or the version that corresponds to your firmware release found at: http://www.cisco.com/en/US/products/ps10739/prod_release_notes_list.html)
  - *Cisco Host Upgrade Utility Release 1.4(6) Quick Start Guide*

Familiarize yourself with all of the requirements in these documents to perform your CIMC/BIOS firmware upgrade.

- You have access to Cisco.com to download the firmware ISO file.

**CIMC/BIOS Firmware Upgrade Summary**

*Caution* Be sure to follow the requirements in the release notes and the Host Upgrade Utility (HUU) guide for your firmware, including making sure that you upgrade both the CIMC and BIOS at the same time and from the HUU ISO file.
To perform the CIMC/BIOS firmware upgrade, complete the following tasks:

<table>
<thead>
<tr>
<th>Description</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> Using the release notes for the firmware version that you need to install, find the name of the ISO file that applies to the Cisco UCS C220 server for that firmware.</td>
<td></td>
</tr>
<tr>
<td><strong>Note</strong> The release 1.4(x) firmware HUU ISO files are platform-specific.</td>
<td></td>
</tr>
<tr>
<td><strong>Step 2</strong> Follow the instructions in the Host Upgrade Utility guide:</td>
<td></td>
</tr>
<tr>
<td><strong>Note</strong> The Cisco UCS C220 server does not have a CD/DVD drive.</td>
<td></td>
</tr>
<tr>
<td>• Go to Cisco.com and download the HUU ISO file.</td>
<td></td>
</tr>
<tr>
<td>• Follow the instructions to load the ISO that you downloaded and be sure that both the CIMC and BIOS firmware are upgraded together.</td>
<td></td>
</tr>
</tbody>
</table>
Appendix E: Using the TUI Upgrade Utility to Upgrade the Cisco StadiumVision Software

First Published: April 21, 2014

This module describes how to upgrade an existing server already running Cisco StadiumVision Director, including installation of service packs. This procedure is also referred to generally as an ISO upgrade to refer to both the service pack and upgrade ISO process.

The TUI must be used to upgrade from Release 3.1 to Release 3.2. Once the 3.2 upgrade is complete, this functionality is replaced by the Software Manager.

This module includes the following topics:

- Best Practices, page 67
- Prerequisites, page 68
- Information About Using the TUI Upgrade Utility to Update an Existing Cisco StadiumVision Director Server, page 69
- Upgrade Tasks, page 69
- What to Do Next, page 77

Best Practices

⚠️ Caution

Do not alter the RAID configuration prior to upgrade.

Before you begin upgrading an existing Cisco StadiumVision Director server, consider the following best practices:

- Choose an appropriate down time to perform the upgrade on the Cisco StadiumVision Director server when there is adequate time to complete and verify the upgrade before any scheduled events and to allow time to resolve any unexpected issues that might occur.
- Refer to the Release Notes for Cisco StadiumVision Director Release 3.2 for the latest information about hardware and software requirements, changes, important notes, and caveats for your software release.
Pay particular attention to the required hardware and software versions for other devices supporting your Cisco StadiumVision solution and be sure that you upgrade those devices as needed. For example, generally only certain firmware versions are supported for the DMP hardware, or a new firmware version is needed to provide additional functionality supported by the Cisco StadiumVision Director software.

Perform a backup and restore of the primary and secondary servers:
- Perform a backup of the currently active primary server.
- Restore the backup data onto the standby secondary server.

**Note** The config service must be running on the secondary server to do the restore.

For more information about performing a backup and restore on a Cisco StadiumVision Director Server, see the “Backing Up and Restoring Cisco StadiumVision Director Servers” module of the *Cisco StadiumVision Director Server Administration Guide*.

Promote the secondary server to primary.

For more information about promoting a secondary server to primary in Release 3.2, see the “Configuring Failover Between Redundant Cisco StadiumVision Director Servers” module of the *Cisco StadiumVision Director Server Administration Guide, Release 3.2*.

Access the promoted secondary server to perform the upgrade.

Verify the boot order in the BIOS (by pressing F2 while booting) prior to upgrading; the virtual DVD should be the primary boot device for the Platform 3 server.

Due to the difficulty in recovering from an interrupted installation process if the Linux shell is accidentally closed or the network drops, it is highly recommended that you use a server console connection method that does not pose a risk to the success of upgrade completion if the session breaks during upgrade.

This can be done using a monitor and keyboard that are directly connected to the Cisco StadiumVision Director server to log into the TUI, or through a remote connection with access to the Cisco StadiumVision Director network and using the CIMC interface to log into the TUI.

### Prerequisites

Be sure that the following requirements are met before you upgrade your server:

- Your server is running a minimum of Cisco StadiumVision Director Release 3.1.0-797 or higher.
- You have the IP address for the Cisco StadiumVision Director server where you want to upload the ISO upgrade image. You will need to use this information as part of the URL to access the ISO upload utility.
- You have a supported browser version for Cisco StadiumVision Director. For more information about the latest supported browsers, see the *Cisco StadiumVision Release Notes for Release 3.2*.
- You have an installer account on the Cisco StadiumVision Director server.
- To access the Cisco Integrated Management Controller (CIMC) for the TUI software upgrade, the following requirements are met:
  - Your computer meets the minimum browser and Flash player requirements for Cisco StadiumVision Director, and also has Java 1.6 or later installed.
  - You have a laptop connection with access to the Cisco StadiumVision Director server network.
You have the IP address of the CIMC interface on the Cisco StadiumVision Director server.
You have the CIMC interface login credential. The default is admin/password.

\[ \text{Note} \quad \text{You also can use a monitor and keyboard that are directly connected to the Cisco StadiumVision Director server to log into the TUI.} \]

### Information About Using the TUI Upgrade Utility to Update an Existing Cisco StadiumVision Director Server

The ISO upgrade procedure for Cisco StadiumVision Director includes the following tasks:

1. Downloading an ISO service pack or upgrade file from the software download site on Cisco.com.
2. Uploading the ISO file from your laptop to the Cisco StadiumVision Director server using the upload utility through your browser.
3. Installing the ISO image using the upgrade utility in the Text Utility Interface (TUI).

### ISO Upgrade Files

You can store multiple ISO upgrade files on a Cisco StadiumVision Director server. The files will be displayed with a sequence number and the ISO filename in the TUI upgrade utility for you to select which file to install.

### Disk Maintenance

There is no automatic aging of ISO upgrade files, but Cisco StadiumVision Director Release 3.1 introduced a utility to delete ISO upgrade files in the TUI.

The Management Dashboard has a gauge for % Disk Utilization, or you can use the TUI to get file system usage.

### Upgrade Tasks

To upgrade your Cisco StadiumVision Director server, complete the following tasks:

- Downloading ISO Upgrade Files from Cisco.com, page 70 (required)
- Uploading an ISO Upgrade File to the Cisco StadiumVision Director Server, page 71 (required)
- Installing the ISO Upgrade Image on the Cisco StadiumVision Director Server, page 75 (required)
- Staging the Flash Template, page 77 (required)
- Deploying Global DMP Settings, page 77 (required)
- What to Do Next, page 77 (required)
Appendix E: Using the TUI Upgrade Utility to Upgrade the Cisco StadiumVision Software

Upgrade Tasks

Downloading ISO Upgrade Files from Cisco.com

Be sure to download the upgrade files to a location, such as a laptop computer, where you can access them for installation onto the Cisco StadiumVision Director server.

To download an ISO upgrade file, complete the following steps:

Step 1  
Go to the Cisco StadiumVision Director software download site at:

Note  
This site page is also available from the Cisco StadiumVision Director product support page by clicking Download Software > Cisco StadiumVision Director.

Step 2  
Select the ISO upgrade or service pack file (as available), and optionally the companion MD5 checksum file, and download them.

Table 1 shows the filename conventions used for ISO upgrades.

Note  
Be sure that you choose the ISO for SV-DIRECTOR and not for SVD-REMOTE. The TUI will verify the filenaming to be sure that the ISO that you are uploading is for SV-DIRECTOR.

### Table 1  ISO Upgrade Filename Conventions

<table>
<thead>
<tr>
<th>Hardware Product ID</th>
<th>Filename Convention</th>
</tr>
</thead>
<tbody>
<tr>
<td>SV-DIRECTOR-K9 or SV-PLATFORM2=</td>
<td>• SV-DIRECTOR-UPGRADE-3.2.0-nnn.x86_64.iso</td>
</tr>
<tr>
<td>SV-PLATFORM3=</td>
<td>• SV-DIRECTOR-UPGRADE-3.2.0-nnn.x86_64.iso.md5sum</td>
</tr>
</tbody>
</table>

"nnn" represents the build number of the image in the file.

You can download the files using one of the following methods:

- Download both files at one time—Select each file and click Add to Cart. Then at the top of the download page, click the “Download Cart (2 items)” link.
- Download each file independently—Click the Download Now button in the file selection box for each file.

Step 3  
(Optional) To verify the integrity of your upgrade file from the download, you can use a command-line or GUI utility on your laptop to calculate the checksum on the .iso file. Open the .md5sum file to compare the value that you calculated with the expected value provided in the .md5sum file.

The values should match. If they do not, retry the download.
Upload an ISO Upgrade File to the Cisco StadiumVision Director Server

After you have downloaded the ISO upgrade file from Cisco.com, you need to upload the file to the Cisco StadiumVision Director server using a URL from a browser to access the ISO uploader utility. Once you have uploaded the software to the server, then you will use the TUI to install the upgrade image.

Prerequisites

Be sure that you know the IP address of the Cisco StadiumVision Director server where you want to upload the file, and you have a supported browser version for Cisco StadiumVision Director.

To upload an ISO upgrade file to the Cisco StadiumVision Director server, complete the following steps:

Step 1: Log into Cisco StadiumVision Director as an administrator.

Step 2: From your browser, go to the following URL, where x.x.x.x is replaced by the IP address of the server where you want to upload the upgrade software (Figure 1):

http://x.x.x.x/cgi-bin/isoupload.cgi

Figure 1: ISO Updater Utility

Step 3: Click Browse (Figure 1).

Step 4: From the File Upload dialog box, navigate to the location of the ISO upgrade file that you downloaded from Cisco.com. Select the file that you want to upload and click Open.

Step 5: Click the Upload ISO button (Figure 2). The file is sent to the server.

Caution: The upload might take several minutes. Do not refresh or reload the ISO Updater page while the upload process is running. Any interruption will corrupt the ISO image being uploaded.
Logging Into the CIMC Interface

To log into the CIMC interface, complete the following steps:

Step 1 From a laptop connection with access to the Cisco StadiumVision Director server network, open a browser window and type the IP address of the CIMC interface as shown in the following example:

\[ \text{https://ip-address} \]

Step 2 If prompted, click **OK** to open the Java viewer.jnlp as shown in Figure 3:

![Figure 3 Opening viewer.jnlp File](image)

Step 3 If a security dialog box displays, do the following:
   a. (Optional) Select the checkbox to accept all content from Cisco.
   b. Click **Yes** to accept the certificate and continue.
   c. Confirm any additional security certificate exceptions.

Step 4 At the CIMC login screen, note the firmware version displayed (Figure 4).
Appendix E: Using the TUI Upgrade Utility to Upgrade the Cisco StadiumVision Software

Upgrade Tasks

Tip
The firmware version is also displayed in the Cisco Integrated Management Controller (CIMC) Information box on the CIMC console after you log in.

Step 5
From the CIMC login screen, type the username and password for the CIMC interface.

Tip
The default credential is **admin** and **password**. If changed during server setup, use the password that you configured.

Figure 4  CIMC Login Screen

Step 6
Click Log In.

Verifying the Minimum CIMC Firmware Version for Cisco StadiumVision Director

Before you begin, see the “Cisco StadiumVision Director Server Support” section of the *Release Notes for Cisco StadiumVision Director Release 3.2* to find the CIMC/BIOS versions tested for your platform.

To verify the minimum CIMC firmware version for Cisco StadiumVision Director, complete the following steps:

Step 1
Be sure that the CIMC firmware version found on the CIMC login screen or in the CIMC console is at the minimum tested version (or later) for the Cisco StadiumVision Director release.

*Figure 5* shows where the firmware version is displayed on the CIMC console for both the BIOS and CIMC firmware.
### Upgrade Tasks

**Appendix E: Using the TUI Upgrade Utility to Upgrade the Cisco StadiumVision Software**

**Upgrade Tasks**

**Figure 5** Firmware Version Verification From the CIMC Console for a Platform 3 Server

#### Note

Unless there is another reason why an upgrade has been found to be needed, no upgrade should be needed if your server firmware is at the minimum tested version (or later) for the Cisco StadiumVision release that you are running.

**Step 2**

If necessary to upgrade the CIMC/BIOS firmware on the Platform 3 server, refer to the “Appendix D: CIMC Configuration and Firmware Upgrade Guidelines on the Cisco UCS C220 Server” module.

---

## Launching the KVM Console

To launch the KVM console, complete the following steps:

**Step 1**

From the CIMC console Actions box, click **Launch KVM Console**.

**Figure 6** Launch KVM Console
Appendix E: Using the TUI Upgrade Utility to Upgrade the Cisco StadiumVision Software

Upgrade Tasks

Tip  You can also click the keyboard in the icon bar at the top of the console to launch the KVM console.

Step 2  If a security dialog box displays, do the following:
   a. (Optional) Select the checkbox to accept all content from Cisco.
   b. Click Yes to accept the certificate and continue.

Step 3  At the Cisco Virtual KVM Console confirmation box (Figure 7), do the following:
   a. (Optional) Select the checkbox to accept all content from Cisco.
   b. Click Run.

   Figure 7 Cisco Virtual KVM Console Confirmation

   c. Confirm any additional security certificate exceptions.

Step 4  The KVM Console window is displayed with a login prompt (Figure 8).

   Figure 8 Cisco KVM Virtual Console Login Screen

Installing the ISO Upgrade Image on the Cisco StadiumVision Director Server

To install the ISO upgrade image on the Cisco StadiumVision Director server, complete the following steps:

Step 1  Do one of the following to run a secure login to the Cisco StadiumVision Director server:
   - Using a directly-connected computer and KVM cable, access the console of the Cisco StadiumVision Director server.
   - Log into the CIMC and launch the virtual KVM console.

Step 2  When the login prompt appears, enter the installer userid followed by the installer password at the password prompt.

Step 3  From the Main Menu, do the following:
- **For upgrades from Release 3.1:**
  From the TUI Main Menu, go to the StadiumVision Server Administration menu. Select the Upgrade Server option (type `b` and press `Enter`) (Figure 9):

```
Main Menu > StadiumVision Server Administration
  Please choose one of the following menu options:
  a) Display Software Version
  b) Upgrade Server
  c) Format StadiumVision Director software
  d) Uninstall StadiumVision Director software
  e) Setup automatic backup configuration
  f) Re-establish StadiumVision initial configuration
  g) Create snapshot
  h) Hard drive expansion
  i) Review/journal retention policy
  j) Failover
  k) Reboot
  l) Power Off
  B or C or :) Return to prior menu
```

Step 4  When the upgrade configuration confirmation prompt appears, type `c` to continue (Figure 10):

```
Are you sure you wish to upgrade? Push R to return to main menu or C to continue.
```

Step 5  All of the ISO upgrade files that you have uploaded are displayed with a sequence number and the image name. Type the sequence number that corresponds to the image that you want to install, and press `Enter`. Figure 11 shows an example of selection of the first upgrade file for installation.

```
Are you sure you wish to upgrade? Push R to return to main menu or C to continue.
...
1. - 9V-DIRECTOR-UPGRDR-3.1.0-510.892.44.iso
Please select a file number and press enter: 1
```

The upgrade process begins.

**Caution**  Wait until the upgrade process completes. Do *not* close the terminal while the upgrade is in progress. You will get notification once the installation is complete.

Step 6  When the “Upgrade complete” message appears, press any key.

Step 7  From the StadiumVision Server Administration menu, select Reboot.
Staging the Flash Template

To be sure that any changes that might have been made to the Cisco StadiumVision Director Flash Template (.swf file) are deployed to the DMPs, complete the following steps:

Step 1
Go to the Management Dashboard.

Step 2
From the DMP and TV Controls dashboard drawer, navigate to the following command path: DMP and TV Controls > DMP Install > Stage Template.

Step 3
Select all of the DMP devices where the command should be applied.

Step 4
Click the play button to run the command on the selected devices.

Deploying Global DMP Settings

To apply the global MIB variable settings to all DMPs, complete the following steps:

Step 1
Go to the Management Dashboard.

Step 2
From the DMP and TV Controls dashboard drawer, navigate to the following command path: DMP and TV Controls > Global > Global DMP Settings.

Step 3
Select all of the DMP devices where the command should be applied.

Step 4
Click the play button to run the command on the selected devices.

What to Do Next

- Follow the steps in the “Verifying the Upgrade” module to verify that the upgrade process was successful.
- Use the “Appendix A: Post-Upgrade Checklist” module on page 45 to be sure that you have completed the required verification steps.
