DOCSIS 3.1 OFDMA Channel Configuration

This document describes how to configure the OFDMA channel on the Cisco cBR Series Converged Broadband Router.

- Hardware Compatibility Matrix for the Cisco cBR Series Routers, on page 1
- Information about OFDMA Channel Configuration, on page 2
- Configure OFDMA Channel, on page 3
- Feature Information for DOCSIS 3.1 OFDMA Channel Configuration, on page 12

Hardware Compatibility Matrix for the Cisco cBR Series Routers

Note
The hardware components that are introduced in a given Cisco IOS-XE Release are supported in all subsequent releases unless otherwise specified.

Information about OFDMA Channel Configuration

**OFDMA Channels**

DOCSIS 3.1 introduces modes for higher throughput and higher spectral efficiency while still allowing backward compatibility to DOCSIS 3.0. Orthogonal Frequency Division Multiple Access (OFDMA) channel has following features:

- Frequency-range up to 80 MHz
- Upstream spectrum 5 – 85 MHz
- 25 kHz subcarrier spacing

- OFDMA Channel-width up to 80 MHz - The Cisco IOS XE Fuji 16.7.x release supports configuration of a single 80 MHz OFDMA channel on every port of a line card.

- OFDMA Channel-width up to 96 MHz - The Cisco IOS XE 16.8.x release supports configuration of a single 96 MHz OFDMA channel on every port of a line card.
• OFDMA Upstream spectrum 5 – 85 MHz - The Cisco IOS XE Fuji 16.7.x supports a maximum frequency value of 85 Mhz for an OFDMA channel.

• OFDMA Upstream spectrum 5 – 204 MHz - The Cisco IOS XE 16.8.x extends the supported maximum frequency value of an OFDMA channel from 85 Mhz to 204 Mhz.

For a specific subcarrier spacing, the number of subcarriers on an OFDMA channel depends on the channel width.

<table>
<thead>
<tr>
<th>Channel Width</th>
<th>50 kHz</th>
<th>25 kHz</th>
</tr>
</thead>
<tbody>
<tr>
<td>48 MHz</td>
<td>960</td>
<td>1920</td>
</tr>
<tr>
<td>96 MHz</td>
<td>1920</td>
<td>3840</td>
</tr>
</tbody>
</table>

When the OFDMA is configured with SC-QAMs on the same port pair, it is recommended to configure no more than 45 MHz OFDMA per port, or 90 MHz per port pair in Cisco IOS XE Everest Release 16.6.1.

**Modulation Profile**

A globally configured OFDMA modulation profile defines modulation orders and pilot patterns for different interval usage codes (IUC). It is also used to assign parameters for initial ranging and fine ranging.

**OFDMA Channel Exclusion Band**

Ranges of frequencies can be excluded from all OFDMA channels on a port using the `ofdma-frequency-exclusion-band` command.

Exclusion and unused bands apply to OFDMA channels only. OFDMA channel never use frequencies in exclusion band. So the legacy SC-QAM channel can be placed in this band. OFDMA channel does not use frequencies in unused band set by `ofdma-frequency-unused-band` command for data traffic, but can send probes in them.

**Configure OFDMA Channel**

To know more about the commands referenced in this module, see the Cisco IOS Master Command List.

**Configuring OFDMA Controller Profile**

To configure upstream controller profile, follow the steps below:

```bash
enable
cable mod-profile-ofdma id
```
Verifying OFDMA Modulation Profile Configuration

Here is a configuration example:

```
Router# enable
Router# configure terminal
Router(config)# cable mod-profile-ofdma 466
Router(config-ofdma-mod-profile)# subcarrier-spacing 50KHz
Router(config-ofdma-mod-profile)# initial-rng-subcarrier 64
Router(config-ofdma-mod-profile)# fine-rng-subcarrier 128
Router(config-ofdma-mod-profile)# data-iuc 13 modulation 1024-QAM pilot-pattern 2
Router(config-ofdma-mod-profile)# exit
Router(config)# cable mod-profile-ofdma 423
Router(config-ofdma-mod-profile)# subcarrier-spacing 25KHz
Router(config-ofdma-mod-profile)# initial-rng-subcarrier 64
Router(config-ofdma-mod-profile)# fine-rng-subcarrier 128
Router(config-ofdma-mod-profile)# data-iuc 6 modulation 1024-QAM pilot-pattern 8
Router(config-ofdma-mod-profile)# data-iuc 10 modulation 512-QAM pilot-pattern 8
Router(config-ofdma-mod-profile)# data-iuc 12 modulation 256-QAM pilot-pattern 8
Router(config-ofdma-mod-profile)# data-iuc 13 modulation 128-QAM pilot-pattern 9
```

Subcarrier spacing must match the subcarrier spacing of each channel profile in which it is configured.

Verifying OFDMA Modulation Profile Configuration

To display the OFDMA modulation profile details, use the `show cable modulation-profile ofdma` command as shown in the example below:

```
Router# show cable modulation-profile ofdma

Mod Subc Spacing IUC type Act Preamble Bit Pilot
Spacing    subc Symbols Loading Pattern
421 25KHz 3 (IR) 64 4 16-QAM 8
461 50KHz 3 (IR) 32 4 16-QAM 1
466 50KHz 3 (IR) 64 4 1024-QAM 2
```

```
Configuring OFDMA Channel

To configure the OFDMA channel, follow the steps below:

```bash
enable
configure terminal
controller Upstream-Cable slot/subslot/port
us-channel id docsis-mode ofdma
us-channel id subcarrier-spacing value
us-channel id frequency-range start-value end-value
us-channel id modulation-profile id
us-channel id cyclic-prefix value roll-off-period value
us-channel id symbols-per-frame value
us-channel id data-iuc id band start-value end-value modulation value pilot-pattern value
```

Here is a configuration example:

```bash
Router# enable
Router# configure terminal
Router(config)# controller Upstream-Cable 1/0/4
Router(config-controller)# us-channel 12 docsis-mode ofdma
Router(config-controller)# us-channel 12 subcarrier-spacing 25KHz
Router(config-controller)# us-channel 12 frequency-range 40000000 85000000
Router(config-controller)# us-channel 12 modulation-profile 423
Router(config-controller)# us-channel 12 cyclic-prefix 640 roll-off-period 224
Router(config-controller)# us-channel 12 symbols-per-frame 9
Router(config-controller)# us-channel 12 data-iuc 9 band 50000000 60000000 modulation 512-QAM
   pilot-pattern 8
Router(config-controller)# no us-channel 12 shutdown
```
• OFDMA use us-channel range 12–15.

• Change docsis-mode to `ofdma` to enable OFDMA configuration options. These options are enabled by default on us-channel 12–15.

• It is recommended to configure no more than 4 active SC-QAMs while an OFDMA channel is present.

• A maximum of one OFDMA channel can be configured per controller. Starting from Cisco IOS XE Gibraltar 16.10.x release, two OFDMA channels—us-channel 12 and us-channel 13 can be configured per controller.

• In Cisco IOS XE Everest 16.6.x release, OFDMA channel must be placed between 40 and 85 Mhz.

• Starting from Cisco IOS XE Fuji 16.7.x release, OFDMA channel must be placed between 5 and 85 Mhz.

• Values of the options are often interdependent, changing one value may change other values or make them invalid.

• It is recommended to set subcarrier spacing and frequency range first. Frequency range must be increment of 50 kHz.

• Two OFDMA channels are supported for each fiber node.

• Two OFDMA channels are supported for each bonding group.

• A maximum of 192 Mhz OFDMA spectrum is supported for each controller pair.

---

**Verifying OFDMA Channel Configuration**

To display the OFDMA channel configuration, use the `show controllers upstream-Cable us-channel` command as shown in the example below:

```
Router# show controllers upstream-Cable 1/0/4 us-channel 12
USPHY OFDMA support: FULL

Controller 1/0/4 upstream 12 AdminState:UP OpState: UP
  ofdma mode enabled
Channel Freq Range 35.500 MHz to 79.500 MHz

**DOCSIS 3.1 OFDMA Channel Configuration**

**Verifying OFDMA Channel Configuration**
Configure Exclusion / Unused Bands

An OFDMA channel never use frequencies located in exclusion bands. OFDMA probes will be sent on frequencies located in the unused bands. Therefore exclusion bands must be used to prevent interference with SC-QAM channels. To configure the Exclusion / Unused Bands, follow the steps below:

```
enable
cfg t
cont Up-Cable slot/subslot/port
cable ofdma-frequency-exclusion-band start-value end-value
cable ofdma-frequency-unused-band start-value end-value
```

Here is a configuration example:

```
Router# enable
Router# cfg t
Router(config)# cont Up-Cable 1/0/2
Router(config-cont)# cable ofdma-frequency-exclusion-band 48000000 54200000
Router(config-cont)# cable ofdma-frequency-unused-band 50000000 52000000
Router(config-cont)# us-channel 12 docs-mode ofdma
Router(config-cont)# us-channel 12 subcarrier-spacing 25KHz
Router(config-cont)# us-channel 12 modulation-profile 423
Router(config-cont)# us-channel 12 frequency-range 45000000 70000000
Router(config-cont)# us-channel 12 cyclic-prefix 96 roll-off-period 64
Router(config-cont)# us-channel 12 symbols-per-frame 18
```

Verifying Exclusion / Unused Bands

To display the Exclusion / Unused Band configuration, use the `show controllers upstream-Cable us-channel` command as shown in the example below:

```
Router# show controllers upstream-Cable 1/0/2 us-channel 12
USPHY OFDMA support: FULL

Controller Exclusion Freq List:
{ 40.00 MHz, 44.200 MHz},
Controller Unused Freq List:
{ 50.000 MHz, 52.000 MHz},

Controller 1/0/9 upstream 12 AdminState:UP OpState: UP
ofdma mode enabled
Channel Freq Range 28.500 MHz to 69.500 MHz
Channel Subcarrier Index Range Cfg: 148, 1787 Op: 148, 1787
Channel SC0 Freq Cfg: 24.800 MHz Op: 24.800 MHz
#Excl bands: 3
( 0, 147), ( 608, 776), (1788, 4095),
```
Override OFDMA Profile Per Channel

It is possible to override the modulation and pilot pattern used by a particular IUC on a given OFDMA channel as shown with the command below.

```
enable
configure terminal
controller Upstream-Cable slot/subslot/port
us-channel id data-iuc id band start-value end-value modulation value pilot-pattern value
```

Here is a configuration example:

```
Router# enable
Router# configure terminal
Router(config)# controller Upstream-Cable 1/0/2
Router(config-controller)# us-channel 12 docsis-mode ofdma
Router(config-controller)# us-channel 12 subcarrier-spacing 25KHz
Router(config-controller)# us-channel 12 modulation-profile 423
Router(config-controller)# us-channel 12 frequency-range 28000000 70000000
Router(config-controller)# us-channel 12 cyclic-prefix 96 roll-off-period 64
Router(config-controller)# us-channel 12 symbols-per-frame 18
Router(config-controller)# us-channel 12 data-iuc 6 band 60000000 65000000 modulation 128-QAM pilot-pattern 9
Router(config-controller)# no us-channel 12 shutdown
```

Note

Override values will be removed from US channel when changing modulation profile, including when profile changes due to changes in subcarrier spacing.

Verifying Override Configuration

To display the override configuration, use the `show controllers upstream-Cable us-channel` command as shown in the example below:

```
Router# show controllers upstream-Cable 1/0/2 us-channel 12
....

Modulation Profile (ID 423, Subcarrier Spacing 25KHz)

### Apply OFDMA Upstream To Cable Interface

To associate upstream channels with a MAC domain and configure upstream bonding, follow the steps below:

```bash
enable
configure terminal
interface Cable slot/subslot/interface
cable upstream bonding-group id
upstream id
attributes value

cable bundle id
```

Here is a configuration example:

```bash
Router# enable
Router# configure terminal
Router(config)# interface Cable 1/0/4
Router(config-if)# downstream Integrated-Cable 1/0/4 rf-channel 0
Router(config-if)# downstream Integrated-Cable 1/0/4 rf-channel 16
Router(config-if)# upstream 0 Upstream-Cable 1/0/0 us-channel 0
Router(config-if)# upstream 1 Upstream-Cable 1/0/0 us-channel 1
Router(config-if)# upstream 2 Upstream-Cable 1/0/0 us-channel 2
Router(config-if)# upstream 3 Upstream-Cable 1/0/0 us-channel 3
Router(config-if)# upstream 6 Upstream-Cable 1/0/0 us-channel 12
Router(config-if)# cable upstream bonding-group 1
Router(config-upstream-bonding)# upstream 0
Router(config-upstream-bonding)# upstream 1
Router(config-upstream-bonding)# upstream 2
Router(config-upstream-bonding)# upstream 3
Router(config-upstream-bonding)# attributes 80000000
Router(config-upstream-bonding)# exit
Router(config-if)# cable upstream bonding-group 2
Router(config-upstream-bonding)# upstream 0
Router(config-upstream-bonding)# upstream 1
Router(config-upstream-bonding)# upstream 2
Router(config-upstream-bonding)# upstream 3
Router(config-upstream-bonding)# upstream 6
Router(config-upstream-bonding)# attributes 80000000
Router(config-upstream-bonding)# exit
Router(config-if)# cable bundle 1
```
Determine DOCSIS 3.1 Cable Modems and the Cable Modems Using OFDMA Upstreams

To display the DOCSIS 3.1 cable modem, use the `show cable modem docsis version d31-capable` command as shown in the example below:

```
Router# show cable modem docsis version d31-capable
MAC Address I/F MAC Reg Oper DSxUS DS RCC US State Ver Ver OFDM ID OFDMA
4800.33ea.7012 C1/0/0/UB w-online(pt) 3.1 3.1 33x4 1 5 1
203d.66ae.4169 C1/0/0/UB w-online(pt) 3.1 3.1 33x4 1 5 1
```

To display DOCSIS PHY layer information for the cable modem, use the `show cable modem phy` command as shown in the example below:

```
Router# show cable modem phy
MAC Address I/F Sid USPwr USMER Timing DSPwr DSMER Mode DOCSIS
5039.5584.5bbe C1/0/0/U0 15 38.75 ----- 2282 0.00 ----- ofdma 1.1
```

To display the cable modem using OFDMA upstream, use the `show cable modem phy` command as shown in the example below:

```
Router# show cable modem phy | include ofdma
5039.5584.5bbe C1/0/0/U0 15 38.75 ----- 2282 0.00 ----- ofdma 1.1
0895.2a9b.26f1 C1/0/0/U0 16 28.00 ----- 2146 0.00 ----- ofdma 1.1
```

To display the OFDMA channel capacity and utilization, use the `show interface cable mac-scheduler` command as shown in the example below:

```
Router# show interfaces cable 1/0/2 mac-scheduler 6
DOCSIS 1.1 MAC scheduler for Cable1/0/2/U6 : rate 279807192
Max potential performance for each configured IUC type
IUC:  6 rate: 279807192

Verifying DOCSIS 3.1 Upstream OFDMA channel bonding across DOCSIS 3.0 ATDMA channels

Starting from Cisco IOS XE Everest 16.6.1 release, DOCSIS 3.1 Upstream OFDMA channel can be bonded with DOCSIS 3.0 ATDMA channel. If the user wants to utilize non-best effort flows, it is recommended to bond the OFDMA channel with one or more ATDMA channels. But be aware that in Cisco IOS XE Everest 16.6.1 release, a maximum of 1 OFDMA channel and 4 ATDMA channels can be bonded together.

Below is an output example showing the bonding group 8 has both OFDMA (channel 12) and ATDMA channels (channel 0, 1, 2, 3).

interface Cable6/0/0
downstream Integrated-Cable 6/0/0 rf-channel 1
downstream Integrated-Cable 6/0/0 rf-channel 158
upstream 0 Upstream-Cable 6/0/0 us-channel 0
upstream 1 Upstream-Cable 6/0/0 us-channel 1
upstream 2 Upstream-Cable 6/0/0 us-channel 2
upstream 3 Upstream-Cable 6/0/0 us-channel 3
upstream 6 Upstream-Cable 6/0/0 us-channel 12
cable upstream bonding-group 1
  upstream 0
  upstream 1
  upstream 2
  upstream 3
  attributes 80000000
cable upstream bonding-group 8
  upstream 0
  upstream 1
  upstream 2
  upstream 3
  upstream 6
  attributes 80000000
cable bundle 1
cable privacy accept-self-signed-certificate
end

Feature Information for DOCSIS 3.1 OFDMA Channel Configuration

Use Cisco Feature Navigator to find information about the platform support and software image support. Cisco Feature Navigator enables you to determine which software images support a specific software release, feature set, or platform. To access Cisco Feature Navigator, go to the www.cisco.com/go/cfn link. An account on the Cisco.com page is not required.
The following table lists the software release in which a given feature is introduced. Unless noted otherwise, subsequent releases of that software release train also support that feature.

### Table 2: Feature Information for DOCSIS 3.1 OFDMA Channel Configuration

<table>
