# Dynamic Bonding Group

This document describes how to configure Dynamic Bonding Group that helps manage resource of all downstream bonding groups by automatically creating bonding groups.

Your software release may not support all the features that are documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. The Feature Information Table at the end of this document provides information about the documented features and lists the releases in which each feature is supported.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to http://tools.cisco.com/ITDIT/CFN/. An account on http://www.cisco.com/ is not required.

# Hardware Compatibility Matrix for the Cisco cBR Series Routers

**Note** The hardware components that are introduced in a given Cisco IOS-XE Release are supported in all subsequent releases unless otherwise specified.

*Table 1: Hardware Compatibility Matrix for the Cisco cBR Series Routers*

| Cisco CMTS Platform | Processor Engine | Interface Cards |
|---|---|---|

# Information About Dynamic Bonding Group

Dynamic Bonding Group (DBG) helps manage the resource of all downstream bonding groups, including automatically creating and reclaiming the downstream bonding groups.

# Overview of Dynamic Bonding Group

To reduce the effort required in configuring and managing RCC, the DBG feature implements the automatic creating and reclaiming of the downstream bonding groups. DBG creates the bonding group automatically depending on the channel's load usage. With DBG, the modem is assigned the downstream bonding group

without any static RCC configuration. The load balancing feature leverages DBG to balance traffic among all channels. DBG also accommodates primary channel and CM capacity distributions automatically.

DBG also accommodates primary channel and CM capacity distributions automatically.

Dynamic Bonding Group supports the following:

- Support 896 bonding groups per CLC for CBR-CCAP-LC-40G and CBR-CCAP-LC-40G-R cards.

- Support creating DBGs and reclaiming DBG.

- Support DOCSIS 3.0 and DOCSIS 3.1 channel types.

- Support DOCSIS 3.0 and DOCSIS 3.1 load balance.

- Supports DBG interoperation — Modem registration and load balancing.

- Enhance dynamic load balance — Fixed primary channel movement.

- Enhance raider FPGA SQF — Fairness in channel utilization.

# How to configure Dynamic Bonding Group

## Enable Dynamic Bonding Group

To enable DBG, run the following commands:

```
ROUTER# config t
Enter configuration commands, one per line. End with CNTL/Z.
ROUTER(config)# cable dynamic-bonding-group
ROUTER(config)# end
ROUTER#
ROUTER#
ROUTER# show run
ROUTER# show running-config | in dynamic-bonding
cable dynamic-bonding-group
```

## Enable DS-Resiliency and Configure Resiliency Bonding Group

To make sure that the modem remains w-online with maximum downstream capability when several rf channels are impaired, enable ds-resiliency feature by running the following commands:

```
Router# config t
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)# cable resiliency ds-bonding
Router(config)# end
Router#
Router# show running-config | in resiliency
cable resiliency ds-bonding
Router#
Router# config t
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)# interface wideband-Cable 3/0/1:30
Router(config-if)# cable ds-resiliency
Wideband-Cable3/0/1:30 is set to WB resiliency bonding group.
Remove any existing bundle and rf-channel configuration.
```

```
Router(config-if)#end
Router#
Router#show running-config interface wideband-Cable 3/0/1:30
Building configuration...
Current configuration : 61 bytes
!
interface Wideband-Cable3/0/1:30
cable ds-resiliency
end
```

## Enable ACFE

Enable ACFE feature to make sure that modem registration is not blocked because of QoS failures:

```
Router# config t
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)# cable acfe enable
Router(config)# end
Router# show running-config | in acfe
cable acfe enable
```

# Configure Interface Mac-Domain and Fiber-Node

**Note**  The recommended size of service group is 32 or 48. The recommended primary channel distribution is one primary channel for contiguous four channels, such as 0, 4, 8, 12, 16, 20, 24, 28 and so on.

To set up interface mac-domain and fiber-node, run the following commands:

```
Router# show running-config interface c3/0/1
Building configuration...
Current configuration : 963 bytes
!
interface Cable3/0/1
downstream Integrated-Cable 3/0/1 rf-channel 0
downstream Integrated-Cable 3/0/1 rf-channel 4
downstream Integrated-Cable 3/0/1 rf-channel 8

# Enable Load Balancing for DOCSIS 3.0 and DOCSIS 3.1

To enable DOCSIS load balancing, run the cable load-balance docsis-enable command. When DOCSIS load balancing is enabled, run the cable load-balance docsis30-enable command to enable load balancing for DOCSIS 3.0 and DOCSIS 3.1.

**Note** The **cable load-balance docsis30-enable** command enables load balancing for DOCSIS 3.0 and DOCSIS 3.1.

# Enable DOCSIS 3.0 and DOCSIS 3.1 Static Load Balance

To balance the load of primary channels, enable static load balance by running the following commands:

```
ROUTER# config t
Enter configuration commands, one per line. End with CNTL/Z.
ROUTER(config)# cable load-balance docsis30-enable static
ROUTER(config)# end
ROUTER# show cable load-balance

```

# Enable Dynamic Load Balance and Fixed-Primary Channel Movement

**Note** To reduce service outage while enabling dynamic load balancing, enable fixed primary channel movement.

To balance the load of all of downstream channels based on utilization, enable dynamic load balance by running the following commands:

```
Router# config t
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)# cable load-balance docsis30-enable dynamic downstream
Router(config)# end
Router#
Router# show cable load-balance

```

# Verifying Dynamic Bonding Group Configuration

To verify that the DBGs are created:

Check the modem's primary wideband interface by using the **show cable modem wideband channel** command:

```
Router# show cable modem 4800.33ee.ebee wideband channel
MAC Address      IP Address      I/F        MAC       DSxUS    Primary
                                            State              WB
4800.33ee.ebee   30.132.15.246   C3/0/1/UB  w-online  32x2     Wi3/0/1:3
Router# scm 4800.33ee.ebee ver
```

Check the modem's downstream tuner capability by using the **show cable modem verbose | in DS Tuner** command.

```
Router# show cable modem 4800.33ee.ebee verbose | in DS Tuner
DS Tuner Capability : 32
```

Check the related RCC by using the **show cable mac-domain rcc** command:

```
Router# show cable mac-domain c3/0/1 rcc
RCC-ID   RCP              RCs MD-DS-SG  CMs  WB/RCC-TMPL       D3.0    D3.1
32 00 00 00 00 00 00  8    0       11   WB (Wi3/0/1:1)     Y        Y
33 00 00 00 00 00 00  32   0       6    WB (Wi3/0/1:3)     Y        Y
34 00 00 00 00 00 00  8    0       7    WB (Wi3/0/1:2)     Y  Y
35 00 00 00 00 00 00  8    0       7    WB (Wi3/0/1:4)     Y  Y
36 00 00 00 00 00 00  8    0       7    WB (Wi3/0/1:5)     Y  Y
```

Check the dynamically created bonding groups, use the **show cable dynamic-bonding-group summary** command as shown in the example below:

```
Router# show cable dynamic-bonding-group summary
Dynamic bonding group: Enable
BG ID BG Name   BG Size CMs ServFlows Create Time       Create Client      BG State
RFid list
24834 Wi3/0/1:1 8     11  11        Sep 14 14:36:35.194 MODEM_ONLINE       OPERATIONAL
24832-24839
24836 Wi3/0/1:3 32    6   6         Sep 14 14:43:24.144 MODEM_ONLINE       OPERATIONAL
24832-24863
24835 Wi3/0/1:2 8     7   7         Sep 14 17:20:37.115 MODEM_ONLINE       OPERATIONAL
24840-24847
24837 Wi3/0/1:4 8     7   7         Sep 14 17:21:37.723 STATIC_LOAD_BALANCE OPERATIONAL
24856-24863
24838 Wi3/0/1:5 8     7   7         Sep 14 17:21:39.761 STATIC_LOAD_BALANCE OPERATIONAL
24848-24855
```

*Table 2: Dynamic Bonding Group States*

| | |
|---|---|
| CREATE_WAITING_SUP | Line card sends request to create DBG and waits for SUP to create the bonding group. |
| HOLD | DBG is created from SUP, or bonding group reverts from reclaim to ready for use. |
| OPERATIONAL | If modem is used on the bonding group after the HOLD state times out, the DBG state changes to OPERATIONAL. |
| RECLAIM_HOLD | Ready for reclaim. If no modem is used on the bonding group or match the reclaim in two minutes, the bonding group is reclaimed. The DBG state changes to RECLAIM_HOLD. |
| RECLAIM_MODEM_MOVING | Ready for reclaim. The modem is moved out of the bonding group. |
| RECLAIM_WAITING_SUP | Line card sends DBG reclaim request and waits for SUP to reclaim the BG. |

To show the detailed channel list information of dynamic bonding group, use the **show derived-config interface wideband** command.

```
Router# show derived-config interface wideband-Cable 3/0/1:1
Building configuration...
Derived configuration: 113 bytes
```

```
!
interface Wideband-Cable3/0/1:1
  cable bundle 255
  cable rf-channels channel-list 0-7 bandwidth-percent 1
end
```

Check the usage of bonding group resource by using the **show cable dynamic-bonding-group quota summary | slot | controller** command.

```
Router# show cable dynamic-bonding-group quota controller 3/0/1
slot/subslot/ctrlr: 3/0/1
Total BG number: 128
Used BG number (static/dynamic): 6(1/5) Available BG number: 122
Available BG list port: 0, 6-29, 31-127
```

**Note** 128 BGs can be configured on one controller, but only 896 BGs are supported per CLC. All controllers share the 896 BG resources.

Check the reclaimed bonding group by using the **show cable dynamic-bonding-group reclaim-history summary** command:

```
Router# show cable dynamic-bonding-group reclaim-history summary
BG ID BG Name  BG Size Create Time    Create Client Reclaim Time    Reclaim Client RFid
list
24835 Wi3/0/1:2 16      Sep 14 14:40:27 MODEM_ONLINE  Sep 14 14:44:27 DBG_INTERNAL
24832-2484
```

# Verifying Static Load Balancing Configuration

To verify if static load balancing is configured:

Check the load of all primary channels by using the **show cable load-balance docsis-group fn 1 md cable load | in In** command.

```
Router# show cable load-balance docsis-group fn 1 md c3/0/1 load | in In
Interface        State   Group      Utilization Rsvd NBCM WB/UB Weight
In3/0/1:0(573 MHz)  initial 2147557888 0%(0%/0%)   0%   0    17    37
In3/0/1:4(597 MHz)  initial 2147557888 0%(0%/0%)   0%   0    17    37
In3/0/1:8(621 MHz)  initial 2147557888 0%(0%/0%)   0%   0    13    37
In3/0/1:12(645 MHz) initial 2147557888 0%(0%/0%)   0%   0    13    37
In3/0/1:16(669 MHz) initial 2147557888 0%(0%/0%)   0%   0    13    37
In3/0/1:20(693 MHz) initial 2147557888 0%(0%/0%)   0%   0    13    37
In3/0/1:24(717 MHz) initial 2147557888 0%(0%/0%)   0%   0    13    37
In3/0/1:28(741 MHz) initial 2147557888 0%(0%/0%)   0%   0    13    37
```

This command output lists all primary channels and shows the number of cable modems used with these channels. NBCM is the number of narrow band modems used with a channel while WBCM (WB/UB) is the number of wideband modems used with a channel. The total number of WBCMs should be balanced among all the channels.

The difference between the total number of WBCMs used with any two channels is smaller or equal to the threshold load minimum. The default value of the threshold load minimum is 5.

Check the load of all rf channels by using the **show cable load-balance docsis-group fn 1 md rfch-util** command.

```
Router# show cable load-balance docsis-group fn 1 md c3/0/1 rfch-util
Interface  Pstate Pending-In Pending-Out Throughput(Kbps) Util NBCM WBCM

```

This command lists the load information about the primary and secondary channels. WBCM is the number of wideband modems used with a channel.

Check the cable modem's internal state in load balancing using the **show cable load-balance docsis-group fn 1 md modem-list wideband** command.

```
Router# show cable load-balance docsis-group fn 1 md c3/0/1 modem-list wideband

*Table 3: Cable Modem States*

| CM state | Description |
|---|---|
| LB_CM_STATIC_READY | Modem is ready for static load balance movement. |
| LB_CM_STATIC_MOVING | Modem is in movement triggered via static LB. |
| LB_CM_HOLD_EXPIRE_IN | Modem is in hold for the next movement. The default hold time is 600 seconds. |
| LB_CM_DYANMIC_READY | Modem is ready for dynamic load balance movement. |
| LB_CM_DYANMIC_MOVING | Modem is in movement triggered via dynamic LB. |
| LB_CM_DISABLED | Modem is not ready for movement. If the modem failure movement count reaches max-failure threshold, then set the modem in LB_CM_DISABLED to avoid further movement. |

# Verifying Dynamic Load Balancing Configuration

Check the utilization of all rf channels by using **show cable load-balance docsis-group fn 320 md rfch-util** command.

```
Router# show cable load-balance docsis-group fn 320 md c3/0/0 rfch-util
Interface Pstate  Pending-In  Pending-Out  Throughput(Kbps)  Util  NBCM  WBCM
Do3/0/0:0  up     No          No           11754             31%   0     308

The traffic among all rf channels is considered balanced when the difference between any two rf channel utilization is under the threshold load. The default value of threshold load is 10%.

To check the potential target bonding group for each of the source bonding group, use the **show cable load-balance docsis-group fn md cable target dbg** and the **show cable load-balance docsis-group fn md target wide command.**

```
Router# show cable load-balance docsis-group fn 320 md c3/0/0 target dbg
Interface    Bg-Id    Size    Group         Target
Wi3/0/0:0    24577    4       2147557695

```

If no target bonding groups are displayed, no bonding groups are created to balance traffic among rf channels.

A sample output with DOCSIS 3.1 modems with configured threshold of 14% is shown below. For utilization based load balancing to start on DOCSIS 3.1 modems, the OFDM channel must be 100% utilized and traffic must flow on SC-QAM. The utilization based load balancing balances the traffic flowing on the SC-QAM channels in a D31 modem.

# Feature Information for Dynamic Bonding Group

Use Cisco Feature Navigator to find information about the platform support and software image support. Cisco Feature Navigator enables you to determine which software images support a specific software release, feature set, or platform. To access Cisco Feature Navigator, go to the https://cfnng.cisco.com/ link. An account on the Cisco.com page is not required.

✎

**Note**     The following table lists the software release in which a given feature is introduced. Unless noted otherwise, subsequent releases of that software release train also support that feature.

*Table 4: Feature Information for for Dynamic Bonding Group*

| Feature Name | Releases | Feature Information |
|---|---|---|
| Dynamic Bonding Group | Cisco IOS XE Fuji 16.7.1 | This feature was introduced on the Cisco cBR Series Converged Broadband Routers. |
