Upstream Interface Configuration

This document describes how to configure the upstream interfaces on the Cisco cBR Series Converged Broadband Router .

Finding Feature Information

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the Feature Information Table at the end of this document.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to http://tools.cisco.com/ITDIT/CFN/. An account on http://www.cisco.com/ is not required.

Hardware Compatibility Matrix for Cisco cBR Series Routers

Note The hardware components introduced in a given Cisco IOS-XE Release are supported in all subsequent releases unless otherwise specified.

Table 1: Hardware Compatibility Matrix for the Cisco cBR Series Routers

Cisco CMTS Platform	Processor Engine	Interface Cards
Cisco cBR-8 Converged Broadband Router	**Cisco IOS-XE Release 3.15.0S and Later Releases** Cisco cBR-8 Supervisor : • PID—CBR-CCAP-SUP-160G • PID—CBR-CCAP-SUP-60G[1] • PID—CBR-SUP-8X10G-PIC	**Cisco IOS-XE Release 3.15.0S and Later Releases** Cisco cBR-8 CCAP Line Cards: • PID—CBR-LC-8D30-16U30 • PID—CBR-LC-8D31-16U30 • PID—CBR-RF-PIC • PID—CBR-RF-PROT-PIC Cisco cBR-8 Downstream PHY Modules: • PID—CBR-D30-DS-MOD • PID—CBR-D31-DS-MOD Cisco cBR-8 Upstream PHY Modules: • PID—CBR-D30-US-MOD

[1] Effective with Cisco IOS-XE Release 3.17.0S, CBR-CCAP-SUP-60G supports 8 cable line cards. The total traffic rate is limited to 60Gbps, the total number of downstream service flow is limited to 72268, and downstream unicast low-latency flow does not count against the limits.

Information About Upstream Interface Configuration

Upstream Channel Management

Upstream Channel Management (UCM) is responsible for the physical (PHY) layer configuration and resource management of upstream channels in the Cisco cBR Series Converged Broadband Router .

Upstream Controller

An upstream port represents a physical upstream RF connector on a cable line card, connected to one or more fiber nodes. An upstream RF port is a container of upstream RF channels, which imposes constraints on both topology and spectrum for the group of RF channels contained in the physical port. An upstream RF port also represents the RF front-end hardware component on a cable line card including the connector, variable gain adjustment (VGA), and A/D converter. This is directly connected to a set of upstream physical channel receivers. The number of upstream physical channels per port is thus constrained by the number of receivers accessible to the port.

Upstream Channel

An upstream RF channel represents DOCSIS physical layer operation on a single upstream center frequency with a particular channel width. It is contained by a single physical port on the CMTS line card hardware.

Upstream Resource Management

The upstream resource management (URM) feature is primarily responsible for the maintenance of the relationship between a physical upstream connector on the line card and the upstream RF channels received on that connector.

How to Configure Upstream Interfaces

This section contains the following:

Configuring the Cisco CMTS Manually Using Configuration Mode

Connect a console terminal to the console port on the I/O controller. When asked if you want to enter the initial dialog, answer **no** to go into the normal operating mode of the router. After a few seconds the user EXEC prompt (**Router>**) appears.

Configuring the Modulation Profile and Assigning to an Upstream Channel

Procedure

	Command or Action	Purpose
Step 1	**enable** **Example:** `Router> enable`	Enables privileged EXEC mode. Enter your password if prompted.
Step 2	**configure terminal** **Example:** `Router# configure terminal`	Enters global configuration mode.
Step 3	**cable modulation-profile** *profile mode_of_oper qam_profile* **Example:** `Router(config)# cable modulation-profile 23 tdma qam-16`	Creates a preconfigured modulation profile, where the burst parameters are set to their default values for each burst type.
Step 4	**Controller Upstream-Cable** *slot/subslot/port* **Example:** `Router(config)# Controller Upstream-Cable 7/0/0`	Enters the controller interface configuration mode.

		Command or Action	**Purpose**
Step 5		**us-channel** *n* **modulation-profile** *primary-profile-number* [*secondary-profile-number*] [*tertiary-profile-number*] **Example:** `Router(config-if)#cable upstreamus-channel 0 modulation-profile 23`	Assigns up to three modulation profiles to an upstream port.
Step 6		**end** **Example:** `Router(config-controller)# end`	Exits controller configuration submode and returns to privileged EXEC mode.

Configuring the Upstream Channel with PHY Layer

Procedure

		Command or Action	**Purpose**
Step 1		**enable** **Example:** `Router> enable`	Enables privileged EXEC mode. Enter your password if prompted.
Step 2		**configure terminal** **Example:** `Router# configure terminal`	Enters global configuration mode.
Step 3		**controller upstream-cable** *slot*/*subslot*/*port* **Example:** `Router(config)# controller upstream-cable 1/0/0`	Specifies the controller interface line card and enters upstream controller config configuration submode.
Step 4		**us-channel** *rf-channel* **frequency** *freq-val* **Example:** `Router(config-controller)# us-channel 1 frequency 20000000`	Assigns frequency to an RF channel on a controller interface.
Step 5		**us-channel** *rf-channel* **docsis-mode** *mode* **Example:** `Router(config-controller)# us-channel 1 docsis-mode tdma`	Assigns DOCSIS mode to an RF channel on a controller interface.
Step 6		**us-channel** *rf-channel* **channel-width** *value* **Example:**	Assigns channel width in Hertz to an RF channel on a controller interface.

	Command or Action	Purpose
	Router(config-controller)# **us-channel 1 channel-width 3200000**	
Step 7	**us-channel** *rf-channel* **modulation-profile** *profile*	Assigns modulation profile to an RF channel on a controller interface.
	Example:	
	Router(config-controller)# **us-channel 1 modulation-profile 21**	
Step 8	**no us-channel** *rf-channel* **shutdown**	Enables the upstream channel.
	Example:	
	Router(config-controller)# **no us-channel 1 shutdown**	
Step 9	**end**	Exits upstream controller configuration submode and returns to privileged EXEC mode.
	Example:	
	Router(config-controller)# **end**	

Associating Upstream Channels with a MAC Domain and Configuring Upstream Bonding

Procedure

	Command or Action	Purpose
Step 1	**enable**	Enables privileged EXEC mode.
	Example:	Enter your password if prompted.
	Router> **enable**	
Step 2	**configure terminal**	Enters global configuration mode.
	Example:	
	Router# **configure terminal**	
Step 3	**interface cable** *slot*/*subslot*/*cable-interface-index*	Specifies the cable interface line card on a Cisco CMTS router.
	Example:	
	Router(config)# **interface cable 7/0/0**	
Step 4	**downstream integrated-cable** *slot*/*subslot*/*port* **rf-channel** *rf-chan* [**upstream** *grouplist*]	Associates a set of upstream channels to the integrated downstream channels.
	Example:	
	Router(config-if)# **downstream integrated-cable 7/0/0 rf-channel 3 upstream 3**	

	Command or Action	Purpose

Step 5	**upstream** *md-us-chan-id* **upstream-cable** *slot/subslot/port* **us-channel** *rf-channel*
	
	Example:
	
	`Router(config-if)# upstream 0`
	`upstream-cable 7/0/0 us-channel 0`
		Associates a set of physical upstream channels with the Mac Domain.

Step 6	**cable upstream bonding-group** *id*
	
	Example:
	
	`Router(config-if)# cable upstream`
	`bonding-group 200`
		Creates the upstream bonding group on the specified cable interface and enters upstream bonding configuration submode.

Step 7	**upstream** *number*
	
	Example:
	
	`Router(config-upstream-bonding)# upstream`
	`1`
		Adds an upstream channel to the upstream bonding group.
		
		Starting from Cisco IOS-XE 3.18.0S release, maximum of 16 upstream channels can be configured for each MAC Domain, which are divided into two groups:
		
		• Group 1: upstream channel 0-7
		• Group 2: upstream channel 8-15
		
		The **upstream bonding-group** should include all the upstream channels either from Group 1 or Group 2 only.

Step 8	**attributes** *value*
	
	Example:
	
	`Router(config-upstream-bonding)#`
	`attributes eeeeeeee`
		Modifies the attribute value for the specified upstream bonding group.

Step 9	**end** **Example:** `Router(config-upstream-bonding)# end`	Exits upstream bonding configuration submode and returns to privileged EXEC mode.

Configuration Examples

Upstream Channel with PHY Layer Configuration Example

```
...
us-channel 0 frequency 20000000
us-channel 0 channel-width 3200000 3200000
us-channel 0 power-level 0
us-channel 0 docsis-mode tdma
us-channel 0 minislot-size 2
us-channel 0 modulation-profile 21
no us-channel 0 shutdown
...
```

Upstream Channels with a MAC Domain Configuration Example

```
...
interface Cable8/0/0
downstream Modular-Cable 8/0/0 rf-channel 0
upstream 0 Upstream-Cable 8/0/0 us-channel 0
upstream 1 Upstream-Cable 8/0/0 us-channel 1
cable mtc-mode
cable upstream bonding-group 1
  upstream 0
  upstream 1
  attributes 80000000

...
```

Feature Information for Upstream Interface Configuration on the Cisco cBR Router

Use Cisco Feature Navigator to find information about platform support and software image support. Cisco Feature Navigator enables you to determine which software images support a specific software release, feature set, or platform. To access Cisco Feature Navigator, go to http://tools.cisco.com/ITDIT/CFN/. An account on http://www.cisco.com/ is not required.

Note The below table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Table 2: Feature Information for Upstream Interface Configuration

Feature Name	Releases	Feature Information
Upstream Interface Configuration	Cisco IOS-XE 3.15.0S	This feature was integrated into the Cisco cBR Series Converged Broadband Router .
