

IPv6 ACL Extensions for Hop by Hop Filtering

The IPv6 ACL Extensions for Hop by Hop Filtering feature allows you to control IPv6 traffic that might contain hop-by-hop extension headers. You can configure an access control list (ACL) to deny all hop-by-hop traffic or to selectively permit traffic based on protocol.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the Feature Information Table at the end of this document.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to <http://tools.cisco.com/ITDIT/CFN/>. An account on <http://www.cisco.com/> is not required.

Hardware Compatibility Matrix for Cisco cBR Series Routers

Note The hardware components introduced in a given Cisco IOS-XE Release are supported in all subsequent releases unless otherwise specified.

Information About IPv6 ACL Extensions for Hop by Hop Filtering

ACLs and Traffic Forwarding

IPv6 access control lists (ACLs) determine what traffic is blocked and what traffic is forwarded at device interfaces. ACLs allow filtering based on source and destination addresses, inbound and outbound to a specific interface. Use the **ipv6 access-list** command to define an IPv6 ACL, and the **deny** and **permit** commands to configure its conditions.

The IPv6 ACL Extensions for Hop by Hop Filtering feature implements RFC 2460 to support traffic filtering in any upper-layer protocol type.

How to Configure IPv6 ACL Extensions for Hop by Hop Filtering

Configuring IPv6 ACL Extensions for Hop by Hop Filtering

Procedure

| | Command or Action | Purpose |
|---------------|--|---|
| Step 1 | enable Example: Device> enable | Enables privileged EXEC mode. • Enter your password if prompted. |
| Step 2 | configure terminal Example: Device# configure terminal | Enters global configuration mode. |
| Step 3 | ipv6 access-list <i>access-list-name</i> Example: Device(config)# ipv6 access-list hbh-acl | Defines an IPv6 ACL and enters IPv6 access list configuration mode. |
| Step 4 | permit <i>protocol</i> { <i>source-ipv6-prefix</i> / <i>prefix-length</i> any host <i>source-ipv6-address</i> auth } [<i>operator</i> [<i>port-number</i>]] { <i>destination-ipv6-prefix</i> / <i>prefix-length</i> any host <i>destination-ipv6-address</i> auth } [<i>operator</i> [<i>port-number</i>]] [dest-option-type [<i>header-number</i> <i>header-type</i>]] [dscp <i>value</i>] [flow-label <i>value</i>] [fragments] [hbh] [log] [log-input] [mobility] [mobility-type [<i>mh-number</i> <i>mh-type</i>]] [reflect <i>name</i> [<i>timeout</i> <i>value</i>]] [routing] [routing-type | Sets permit conditions for the IPv6 ACL. |

| | Command or Action | Purpose |
|---------------|---|--|
| | <pre>routing-number] [sequence value] [time-range name] Example: Device(config-ipv6-acl)# permit icmp any any dest-option-type</pre> | |
| Step 5 | <pre>deny protocol { source-ipv6-prefix / prefix-length any host source-ipv6-address / auth } [operator [port-number]] { destination-ipv6-prefix / prefix-length any host destination-ipv6-address auth } [operator [port-number]] [dest-option-type [header-number header-type]] [dscp value] [flow-label value] [fragments] [hbh] [log] [log-input] [mobility] [mobility-type [mh-number mh-type]] [routing] [routing-type routing-number] [sequence value] [time-range name] [undetermined-transport] Example: Device(config-ipv6-acl)# deny icmp any any dest-option-type</pre> | Sets deny conditions for the IPv6 ACL. |
| Step 6 | <pre>end Example: Device (config-ipv6-acl)# end</pre> | Returns to privileged EXEC configuration mode. |

Configuration Example for IPv6 ACL Extensions for Hop by Hop Filtering

Example: IPv6 ACL Extensions for Hop by Hop Filtering

```
Device(config)# ipv6 access-list hbh_acl
Device(config-ipv6-acl)# permit tcp any any hbh
Device(config-ipv6-acl)# permit tcp any any
Device(config-ipv6-acl)# permit udp any any
Device(config-ipv6-acl)# permit udp any any hbh
Device(config-ipv6-acl)# permit hbh any any
Device(config-ipv6-acl)# permit any any
Device(config-ipv6-acl)# hardware statistics
Device(config-ipv6-acl)# exit

! Assign an IP address and add the ACL on the interface.

Device(config)# interface TenGigabitEthernet4/1/0
```

```

Device(config-if)# ipv6 address 1001::1/64
Device(config-if)# ipv6 traffic-filter hbh_acl in
Device(config-if)# exit
Device(config)# exit
Device# clear counters
Clear "show interface" counters on all interfaces [confirm]
Device#

! Verify the configurations.

Device# show running-config interface TenGigabitEthernet4/1/0

Building configuration...

Current configuration : 114 bytes
!
interface TenGigabitEthernet4/1/0
no switchport
ipv6 address 1001::1/64
ipv6 traffic-filter hbh_acl
end

```

Feature Information for IPv6 ACL Extensions for Hop by Hop Filtering

Use Cisco Feature Navigator to find information about platform support and software image support. Cisco Feature Navigator enables you to determine which software images support a specific software release, feature set, or platform. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn>. An account on [Cisco.com](http://www.cisco.com) is not required.

Note The table below lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Table 1: Feature Information for IPv6 ACL Extensions for Hop by Hop Filtering

| Feature Name | Releases | Feature Information |
|-------------------|------------------------------|--|
| IPv6 Access Lists | Cisco IOS-XE Release 3.15.0S | This feature was introduced on the Cisco cBR Series Converged Broadband Routers. |
