

IPv6 Access Control Lists

Access lists determine what traffic is blocked and what traffic is forwarded at device interfaces and allow filtering of traffic based on source and destination addresses, and inbound and outbound traffic to a specific interface. Standard IPv6 ACL functionality was extended to support traffic filtering based on IPv6 option headers and optional, upper-layer protocol type information for finer granularity of control. Standard IPv6 ACL functionality was extended to support traffic filtering based on IPv6 option headers and optional, upper-layer protocol type information for finer granularity of control.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the Feature Information Table at the end of this document.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to <http://tools.cisco.com/ITDIT/CFN/>. An account on <http://www.cisco.com/> is not required.

Hardware Compatibility Matrix for Cisco cBR Series Routers

Note The hardware components introduced in a given Cisco IOS-XE Release are supported in all subsequent releases unless otherwise specified.

Table 1: Hardware Compatibility Matrix for the Cisco cBR Series Routers

Cisco CMTS Platform	Processor Engine	Interface Cards
Cisco cBR-8 Converged Broadband Router	<p>Cisco IOS-XE Release 3.15.0S and Later Releases</p> <p>Cisco cBR-8 Supervisor :</p> <ul style="list-style-type: none"> • PID—CBR-CCAP-SUP-160G • PID—CBR-CCAP-SUP-60G¹ • PID—CBR-SUP-8X10G-PIC 	<p>Cisco IOS-XE Release 3.15.0S and Later Releases</p> <p>Cisco cBR-8 CCAP Line Cards:</p> <ul style="list-style-type: none"> • PID—CBR-LC-8D30-16U30 • PID—CBR-LC-8D31-16U30 • PID—CBR-RF-PIC • PID—CBR-RF-PROT-PIC <p>Cisco cBR-8 Downstream PHY Modules:</p> <ul style="list-style-type: none"> • PID—CBR-D30-DS-MOD • PID—CBR-D31-DS-MOD <p>Cisco cBR-8 Upstream PHY Modules:</p> <ul style="list-style-type: none"> • PID—CBR-D30-US-MOD

¹ Effective with Cisco IOS-XE Release 3.17.0S, CBR-CCAP-SUP-60G supports 8 cable line cards. The total traffic rate is limited to 60Gbps, the total number of downstream service flow is limited to 72268, and downstream unicast low-latency flow does not count against the limits.

Information About IPv6 Access Control Lists

Access Control Lists for IPv6 Traffic Filtering

The standard ACL functionality in IPv6 is similar to standard ACLs in IPv4. Access lists determine what traffic is blocked and what traffic is forwarded at device interfaces and allow filtering based on source and destination addresses, inbound and outbound to a specific interface. Each access list has an implicit deny statement at the end. IPv6 ACLs are defined and their deny and permit conditions are set using the **ipv6 access-list** command with the **deny** and **permit** keywords in global configuration mode.

IPv6 extended ACLs augments standard IPv6 ACL functionality to support traffic filtering based on IPv6 option headers and optional, upper-layer protocol type information for finer granularity of control (functionality similar to extended ACLs in IPv4).

IPv6 Packet Inspection

The following header fields are used for IPv6 inspection: traffic class, flow label, payload length, next header, hop limit, and source or destination IP address. For further information on and descriptions of the IPv6 header fields, see RFC 2474.

Access Class Filtering in IPv6

Filtering incoming and outgoing connections to and from the device based on an IPv6 ACL is performed using the **ipv6 access-class** command in line configuration mode. The **ipv6 access-class** command is similar to the **access-class** command, except the IPv6 ACLs are defined by a name. If the IPv6 ACL is applied to inbound traffic, the source address in the ACL is matched against the incoming connection source address and the destination address in the ACL is matched against the local device address on the interface. If the IPv6 ACL is applied to outbound traffic, the source address in the ACL is matched against the local device address on the interface and the destination address in the ACL is matched against the outgoing connection source address. We recommend that identical restrictions are set on all the virtual terminal lines because a user can attempt to connect to any of them.

How to Configure IPv6 Access Control Lists

Configuring IPv6 Traffic Filtering

Creating and Configuring an IPv6 ACL for Traffic Filtering

Note IPv6 ACLs on the Cisco cBR router do not contain implicit permit rules. The IPv6 neighbor discovery process uses the IPv6 network-layer service; therefore, to enable IPv6 neighbor discovery, you must add IPv6 ACLs to allow IPv6 neighbor discovery packets to be sent and received on an interface. In IPv4, the Address Resolution Protocol (ARP), which is equivalent to the IPv6 neighbor discovery process, uses a separate data-link-layer protocol; therefore, by default IPv4 ACLs implicitly allow ARP packets to be sent and received on an interface.

Procedure

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	configure terminal Example: Router# configure terminal	Enters global configuration mode.
Step 3	ipv6 access-list <i>access-list-name</i> Example: Router(config)# ipv6 access-list outbound	Defines an IPv6 ACL, and enters IPv6 access list configuration mode. <ul style="list-style-type: none"> • The <i>access-list name</i> argument specifies the name of the IPv6 ACL. IPv6 ACL names cannot contain a space or quotation mark, or begin with a numeral.

	Command or Action	Purpose
Step 4	<p>Do one of the following:</p> <ul style="list-style-type: none"> • permit protocol { <i>source-ipv6-prefix/prefix-length</i> any host <i>source-ipv6-address</i> } [<i>operator</i> [<i>port-number</i>]] { <i>destination-ipv6-prefix</i> / <i>prefix-length</i> any host <i>destination-ipv6-address</i> } [operator [<i>port-number</i>]] [dest-option-type [<i>doh-number</i> <i>doh-type</i>]] [dscp <i>value</i>] [flow-label <i>value</i>] [fragments] [log] [log-input] [mobility] [mobility-type [<i>mh-number</i> <i>mh-type</i>]] [routing] [routing-type <i>routing-number</i>] [sequence <i>value</i>] [time-range <i>name</i>] • • • deny protocol { <i>source-ipv6-prefix</i> / <i>prefix-length</i> any host <i>source-ipv6-address</i> } [<i>operator</i> <i>port-number</i>]] { <i>destination-ipv6-prefix/prefix-length</i> any host <i>destination-ipv6-address</i> } [<i>operator</i> [<i>port-number</i>]] [dest-option-type [<i>doh-number</i> <i>doh-type</i>]] [dscp <i>value</i>] [flow-label <i>value</i>] [fragments] [log] [log-input] [mobility] [mobility-type [<i>mh-number</i> <i>mh-type</i>]] [routing] [routing-type <i>routing-number</i>] [sequence <i>value</i>] [time-range <i>name</i>] [undetermined-transport <p>Example:</p> <pre>Router(config-ipv6-acl)# permit tcp 2001:DB8:0300:0201::/32 eq telnet any</pre> <p>Example:</p> <p>Example:</p> <p>Example:</p> <pre>Router(config-ipv6-acl)# deny tcp host 2001:DB8:1::1 any log-input</pre>	Specifies permit or deny conditions for an IPv6 ACL.

Applying the IPv6 ACL to an Interface

Procedure

	Command or Action	Purpose
Step 1	enable Example: Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 3	interface <i>type number</i> Example: Device(config)# interface TenGigabitEthernet4/1/0	Specifies the interface type and number, and enters interface configuration mode.
Step 4	ipv6 traffic-filter <i>access-list-name</i> {in out} Example: Device(config-if)# ipv6 traffic-filter outbound out	Applies the specified IPv6 access list to the interface specified in the previous step.

Controlling Access to a vty

Creating an IPv6 ACL to Provide Access Class Filtering

Procedure

	Command or Action	Purpose
Step 1	enable Example: Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 3	ipv6 access-list <i>access-list-name</i> Example:	Defines an IPv6 ACL, and enters IPv6 access list configuration mode.

	Command or Action	Purpose
	Device(config)# ipv6 access-list cisco	
Step 4	<p>Do one of the following:</p> <ul style="list-style-type: none"> • permit protocol { <i>source-ipv6-prefix/prefix-length</i> any host <i>source-ipv6-address</i> } [<i>operator</i> [<i>port-number</i>]] { <i>destination-ipv6-prefix / prefix-length</i> any host <i>destination-ipv6-address</i> } [<i>operator</i> [<i>port-number</i>]] [dest-option-type [<i>doh-number</i> <i>doh-type</i>]] [dscp <i>value</i>] [flow-label <i>value</i>] [fragments] [log] [log-input] [mobility] [mobility-type [<i>mh-number</i> <i>mh-type</i>]] [routing] [routing-type <i>routing-number</i>] [sequence <i>value</i>] [time-range <i>name</i>] • deny protocol { <i>source-ipv6-prefix / prefix-length</i> any host <i>source-ipv6-address</i> } [<i>operator</i> [<i>port-number</i>]] { <i>destination-ipv6-prefix/prefix-length</i> any host <i>destination-ipv6-address</i> } [<i>operator</i> [<i>port-number</i>]] [dest-option-type [<i>doh-number</i> <i>doh-type</i>]] [dscp <i>value</i>] [flow-label <i>value</i>] [fragments] [log] [log-input] [mobility] [mobility-type [<i>mh-number</i> <i>mh-type</i>]] [routing] [routing-type <i>routing-number</i>] [sequence <i>value</i>] [time-range <i>name</i>] [undetermined-transport] <p>Example:</p> <pre>Device(config-ipv6-acl)# permit ipv6 host 2001:DB8:0:4::32 any</pre> <p>Example:</p> <pre>Device(config-ipv6-acl)# deny ipv6 host 2001:DB8:0:6::6 any</pre>	Specifies permit or deny conditions for an IPv6 ACL.

Applying an IPv6 ACL to the Virtual Terminal Line

Procedure

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.

	Command or Action	Purpose
	Example: Device> enable	<ul style="list-style-type: none"> Enter your password if prompted.
Step 2	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 3	line [aux console tty vty] line-number [ending-line-number] Example: Device(config)# line vty 0 4	Identifies a specific line for configuration and enters line configuration mode. <ul style="list-style-type: none"> In this example, the vty keyword is used to specify the virtual terminal lines for remote console access.
Step 4	ipv6 access-class ipv6-access-list-name { in out } Example: Device(config-line)# ipv6 access-class cisco in	Filters incoming and outgoing connections to and from the device based on an IPv6 ACL.

Configuration Examples for IPv6 Access Control Lists

Example: Verifying IPv6 ACL Configuration

In this example, the **show ipv6 access-list** command is used to verify that IPv6 ACLs are configured correctly:

```
Device> show ipv6 access-list

IPv6 access list inbound
  permit tcp any any eq bgp (8 matches) sequence 10
  permit tcp any any eq telnet (15 matches) sequence 20
  permit udp any any sequence 30

IPv6 access list Virtual-Access2.1#427819008151 (per-user)
  permit tcp host 2001:DB8:1::32 eq bgp host 2001:DB8:2::32 eq 11000 sequence 1
  permit tcp host 2001:DB8:1::32 eq telnet host 2001:DB8:2::32 eq 11001 sequence 2
```

Example: Creating and Applying an IPv6 ACL

The following example shows how to restrict HTTP access to certain hours during the day and log any activity outside of the permitted hours:

```
Device# configure terminal
```

Example: Controlling Access to a vty

```
Device(config)# time-range lunchtime
Device(config-time-range)# periodic weekdays 12:00 to 13:00
Device(config-time-range)# exit
Device(config)# ipv6 access-list INBOUND
Device(config-ipv6-acl)# permit tcp any any eq www time-range lunchtime
Device(config-ipv6-acl)# deny tcp any any eq www log-input
Device(config-ipv6-acl)# permit tcp 2001:DB8::/32 any
Device(config-ipv6-acl)# permit udp 2001:DB8::/32 any
Device(config-ipv6-acl)# end
```

Example: Controlling Access to a vty

In the following example, incoming connections to the virtual terminal lines 0 to 4 are filtered based on the IPv6 access list named acl1:

```
ipv6 access-list acl1
 permit ipv6 host 2001:DB8:0:4::2/32 any
!
line vty 0 4
 ipv6 access-class acl1 in
```

Feature Information for IPv6 Access Control Lists

Use Cisco Feature Navigator to find information about platform support and software image support. Cisco Feature Navigator enables you to determine which software images support a specific software release,

feature set, or platform. To access Cisco Feature Navigator, go to <http://tools.cisco.com/ITDIT/CFN/>. An account on <http://www.cisco.com/> is not required.

Note The below table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Table 2: Feature Information for IPv6 Access Control Lists

Feature Name	Releases	Feature Information
IPv6 Access Lists	Cisco IOS-XE Release 3.15	This feature was introduced on the Cisco cBR Series Converged Broadband Router s.
