

# **Cisco Remote-PHY Solution Deployment**

- Design Considerations, page 1
- Network Architecture, page 2
- Network Topologies, page 2
- Network Cables, page 3

## **Design Considerations**

This section helps you prepare for deploying the Cisco Remote-PHY solution.

#### **Prerequisites**

- Ensure that a digital optical network is deployed between the Cisco GS7000 node and Cisco CMTS. The supported digital optical network is Metro Ethernet.
- Ensure that the data path is guaranteed between the Cisco CMTS and the Cisco GS7000 node.
- Reserve sufficient bandwidth for the DOCSIS traffic.
- Network must support IPv4 multicast forwarding.
- Ensure that the maximum latency is as low as possible.
- Based on the input type in the network, deploy or use the appropriate type of R-PHY device. For optical input, deploy the Cisco GS7000 node with the FRx.

1

### **Network Architecture**

The Cisco Remote-PHY solution supports the *Single Controller Sharing* architecture. In this architecture, multiple Cisco GS7000 equipments share the downstream and upstream channels of a Cisco RF line card in a cisco cBR chassis.

#### Figure 1: Single Controller Sharing Architecture

### **Network Topologies**

The Cisco Remote-PHY solution supports Ethernet Based Networking topology.

#### Linear Fiber 67 (355° M CMTS cBR8 - Core ang. CORELC COPE 10 Fage CORELC OCHE LO CORELC CORELC GE CORE LO CORE LO Linear Fiber x C10GB CORELC CORELC CORELC CORELC CORELC CORELC CORELC CORELC Q10GB (95% M \$G112 1.14 Linuar Fiber

## **Network Cables**

I

### Table 1: Cable Types Supported for the Cisco Remote-PHY Solution

Originating Device	Target Device	Cable Type	Connector Type
CMTS (Ten Gigabit Ethernet SFP+ module on the Cisco CCAP line card)	Switch	Ethernet cables	RJ-45 connector
		Copper cables	RJ-45 connector
		Optical fiber	LC Fiber-Optic connector
Switch	Cisco GS7000	Optical fiber	LC Fiber-Optic connector
