

# Prefix Advertisement

---

- [Prefix Advertisement, on page 1](#)

## Prefix Advertisement

This alarm rule detects when a prefix is advertised and reports if it exceeds the threshold trigger.

---

**Note** It is useful to know which of your peers may be doing something wrong (leaking route information or having some type of misconfiguration) so that you can address the problem right away. A **My Peers** rule is available for this alarm with certain [Crosswork Cloud subscriptions](#). The **My Peers** option follows BGP updates *only* from your [peers](#), whereas **All Peers** follow BGP updates from your peers *and* global peers. To configure this option, see [Add Crosswork Cloud Network Insights Policies](#).

---

### Possible Problem Detected

This alarm helps identify a route leak or unexpected change for a configured prefix.

### Relevant Alarm Rule Configurations

The following options must be configured when adding this alarm rule to a Prefix policy configuration (**External Routing Analysis > Configure > Policies > Add Policy > Prefix Policy > Add Rule > Prefix Advertisement**):

- [Thresholds](#)
