

Release Notes for Cisco Business Dashboard, Version 2.4.0

First Published: 2021-12-15

Introduction

These release notes describe the recommended practices and known issues that apply to software version 2.4.0 of Cisco Business Dashboard.

What's New in Cisco Business Dashboard Release 2.4.0

Cisco Business Dashboard release 2.4.0 introduces the following new features and changes:

- Integration with Connectwise Manage and Webex are supported, allowing for asset synchronization, event management and automation of network actions to be performed with these applications.
- New system variables are supported by Network Plug and Play configuration templates allowing the device host name and wireless country code to be set automatically. As a result of this change, a location must be specified for each network when it is created.
- The handling of Network Plug and Play system templates has been improved. System templates are now identified as system templates, and will be updated automatically during upgrades when new versions are available. However, system templates may no longer be modified by the user.
- The read-only user role has been modified so it can no longer access the Administration section of the GUI, and can no longer directly access device administration GUIs.
- A network filter option has been added for the jobs list.
- The device group parameter may now be modified on the device details page.
- The API version used to access the Cisco Software Center has been updated to version 4.
- The probe has been updated to remove any dependency on the nmap and arp-scan tools.
- Cisco Business Dashboard 2.4.0 requires Ubuntu version 20.04 (Focal Fossa).
- The northbound API has been updated to include the event subtype in the event payload.

See <https://cisco.com/go/cbd-api> for more details.

System Requirements for Cisco Business Dashboard

Cisco Business Dashboard is distributed as a virtual machine image, as an installer for use with the Ubuntu Linux distribution, and is available for Amazon Web Services (AWS) through the AWS Marketplace (<https://aws.amazon.com/marketplace>).

When running Cisco Business Dashboard on a virtual machine, your hypervisor must be one of the following:

- Microsoft Hyper-V version 10.0 or above
- Oracle VirtualBox version 6.1 or above
- VMWare—It can be one of the following:
 - ESXi version 6.0 or above
 - Fusion version 11.5 or above
 - Workstation version 15.1 or above

To run Cisco Business Dashboard under Ubuntu Linux, your environment must be running Ubuntu version 20.04.x (Focal Fossa) on a 64-bit Intel architecture platform. Cisco recommends using the Ubuntu server distribution and only installing packages required by Cisco Business Dashboard.

Table 1 lists the compute resources required for Cisco Business Dashboard based on the number of devices under management.

Table 1: Cisco Business Dashboard Compute Resource Requirements

#Device Supported	# vCPU	RAM	Disk Space
Up to 300	2	4GB	60GB
Up to 300 and integrated with external applications	4	8GB	60GB
Up to 2500	12	24GB	60GB

To run Cisco Business Dashboard in AWS, you will need an AWS account. The following AWS instances types are supported:

- c5.large—up to 300 devices under management.
- c5.xlarge—up to 300 devices and integrated with external applications.
- c5.4xlarge—up to 2500 devices under management.

Cisco Business Dashboard is administered through a web user interface. To use this interface, your browser must be one of the following:

- Apple Safari (macOS only)—2 most recent major versions
- Google Chrome version—Latest version
- Microsoft Edge version—2 most recent major versions
- Mozilla Firefox version—Latest version

Note When using Safari, check that the certificate from Cisco Business Dashboard is set to **Always Trust**. Otherwise, certain functions that depend on the use of secure websockets are expected to fail. This is a limitation of the Safari web browser.

Your network must allow all instances of Cisco Business Dashboard Probe and directly managed network devices to establish TCP connectivity with Cisco Business Dashboard. For more details on the ports and protocols used, see *Frequently Asked Questions*, in the [Cisco Business Dashboard Quick Start Guide](#).

System Requirements for Cisco Business Dashboard Probe

Cisco Business Dashboard Probe is distributed as a virtual machine image, and as installers for use with the following operating systems:

- Ubuntu Linux distribution running on a 64-bit Intel architecture platform
- Raspbian Linux distribution running on a Raspberry Pi

The Cisco Business Dashboard Probe is also available as an embedded feature of select Cisco Business products.

To run the Cisco Business Dashboard Probe as a virtual machine, your environment must meet the following requirements:

- Hypervisor:
 - Microsoft Hyper-V version 10.0 or above
 - Oracle VirtualBox version 6.1 or above
 - VMWare—It can be one of the following:
 - ESXi version 6.0 or above
 - Fusion version 11.5 or above
 - Workstation version 15.1 or above
- Virtual machine resource requirements:
 - CPU: 1x 64-bit Intel architecture
 - Memory: 512MB
 - Disk space: 10GB

To run Cisco Business Dashboard Probe under Ubuntu Linux operating system, your environment must meet the following requirements:

- Ubuntu 20.04 Focal Fossa
- CPU: 1x 64-bit Intel architecture
- Memory: 512MB
- Disk space: 10GB

To run the Cisco Business Dashboard Probe on a Raspberry Pi, your environment must meet the following requirements:

- Hardware: Raspberry Pi 3 Model B/B+ or Raspberry Pi 4 Model B

- Disk space: 5GB
- OS: Raspberry Pi OS (formally Raspbian) Buster

To run the Cisco Business Dashboard Probe as an embedded application on a Cisco Business product, you must have a supported product running a firmware version that supports the Cisco Business Dashboard Probe feature. Consult the [Cisco Business Dashboard – Device Support List](#) for details of hardware and version requirements. Also consult the administration guide for the product to determine any additional platform-specific requirements.

Cisco Business Dashboard Probe is administered through a web user interface. To use this interface, your browser must be one of the following:

- Apple Safari (macOS only)—2 most recent major versions
- Google Chrome—Latest version
- Microsoft Edge—2 most recent major versions
- Mozilla Firefox—Latest version

Cisco Business Dashboard Probe monitors and accesses the network devices that meet the following requirements:

- Must be in the same subnet as the PC that is running the Cisco Business Dashboard Probe, or be directly attached to a managed device and reachable via TCP/IP
- Must be a Cisco Business or Cisco Small Business 100 to 500 series device

Cisco Supported Devices

Cisco Business Dashboard supports Cisco Business and Cisco Small Business 100 to 500 series products. For a detailed list of devices and features supported, please refer to the [Cisco Business Dashboard - Device Support List](#).

License Requirements

Cisco Business Dashboard is a licensed application. Device licenses are required for each Cisco Business and Cisco Small Business product being managed. For more information, please refer to the [Cisco Business Dashboard Datasheet](#).

Limitations and Restrictions

The Cisco Business Dashboard limitations and restrictions are described in the following sections:

- [General Limitations](#)
- [System Backup and Restore](#)

General Limitations

- The web interface on Cisco Business Dashboard takes a few minutes to become operational after the application is started
- Depending on the size of the network, it may take the Probe several minutes to discover all devices and calculate the network topology
- Up to 50 network devices can be managed by single virtual machine or Raspberry Pi Probe instance. Refer the documentation for the product in question to identify the maximum number of devices supported by an embedded probe running on a Cisco Business network device.
- Up to 2500 devices can be managed by a single Dashboard instance
- SNMPv3 authentication keys and privacy keys must be at least 8 characters in length
- When using Safari, ensure that the certificate presented by the Cisco Business Dashboard Probe is set to **Always Trust**

System Backup and Restore

- When performing a system backup or restore, Cisco Business Dashboard will prevent you from doing any further configuration actions
- Prior to beginning a system backup or restore, the idle timeout value in **Administration > Users > User Settings** should be set to at least 30 minutes (default is 60 minutes)

Caveats

The following table lists the open caveats for Cisco Business Dashboard version 2.4.0

Table 2: Open Caveats

Caveat ID Number	Headline
CSCvc04204	Getting the duplicated entry in the credentials table for switch stack after power off the master. Workaround When the stack is stable, reboot Probe.
CSCvf49309	FindIT displays an outside WAN IP instead of the device IP on Network Plug and Play - Unclaimed Devices page. Workaround None
CSCvf49332	FindIT responses are slow when the display is over 300 hosts on the topology page. Workaround Don't display the hosts when there are that many.

Caveat ID Number	Headline
CSCvq25771	<p>The system does not sync time from the host on VirtualBox.</p> <p>Workaround</p> <p>Install VirtualBox Guest additions in the virtual machine with the command 'sudo apt-get install -y virtualbox-guest-utils' and reboot the virtual machine.</p> <p>Note The presence of VirtualBox Guest Additions in the virtual machine will prevent timesyncd from running and NTP will not function.</p>
CSCvq25807	<p>Stack switch unit configuration is missing after master recovery from offline.</p> <p>Workaround</p> <p>Manually read and accept current config or wait for the daily schedule job.</p>
CSCvq25817	<p>It doesn't show real VLAN setting info on a LAG port.</p> <p>Workaround</p> <p>Review the VLAN configuration for the LAG on the device administration GUI.</p>
CSCwa46312	<p>LetsEncrypt certificate is not imported to CBD during renewal.</p> <p>Workaround</p> <p>Manually execute "cisco-business-dashboard letsencrypt -d xxx" command to get the new certificate when certificate is close to expiry.</p>
CSCwa49066	<p>The dashboard may show incorrect VLAN configuration for the switch trunk ports.</p> <p>Workaround</p> <p>None.</p>
CSCvv18280	<p>CBD doesn't support "same SSID name" case for CBW.</p> <p>Workaround</p> <p>Change the SSID names on the CBW access point to keep it unique.</p>
CSCwa46105	<p>The Alert level event messages in Webex are incorrectly bulleted.</p> <p>Workaround</p> <p>None.</p>
CSCwa46096	<p>Severity is missing from alert level event messages in Webex</p> <p>Workaround</p> <p>None.</p>

Caveat ID Number	Headline
CSCwa46094	The ticket ID for events created in the notification board is not displayed in the Webex message. Workaround Go to ConnectWise Manage and check the ticket ID for events created in the notification board.
CSCwa46089	The tickets command in Webex returns an unsorted list. Workaround None.
CSCwa46086	The Approvals command must be issued in Webex prior to approving a ticket. Workaround None.
CSCwa46080	The firmware command must be issued in Webex prior to issuing an upgrade command. Workaround None.
CSCwa46056	The Delete devices automation ticket should only allow immediate execution. Workaround None.
CSCwa46047	Webex integration requires Connectwise Manage integration to function correctly. Workaround None.
CSCwa46682	The event rules do not match correctly when the event type contains keywords of other event types. Workaround None.

The following table lists the resolved caveats for version 2.4.0

Table 3: Resolved Caveats

Caveat ID Number	Headline
CSCwa34796	Fail to apply tag to a device for CBD running on ubuntu 20.04.
