

Deployment Models

This chapter describes the following Cisco WebEx Social deployment models. The deployment model that is appropriate for a particular organization is based on the total number of users.

- [Small/Medium Deployment](#)
- [Large Deployment](#)

For related information about deployment options, see *Cisco WebEx Social Installation and Upgrade Guide*.

Small/Medium Deployment

The Small/Medium Deployment Model is appropriate for a deployment with a maximum of 10,000 users and a maximum of 3,000 concurrent users. It also is appropriate as a proof of concept for larger deployments.

The recommended UCS hardware for this deployment is C-Series servers. B-series servers can be used with approved storage.

Large Deployment

The Large Deployment Model is appropriate for a deployment with more than 10,000 users and 20% concurrent users.

The recommended UCS hardware for this deployment is VBlock.
