Configuring Administrator Roles for Managing a Service Configuration

- About Privileges, on page 1
- Configuring a Role for Device Management, on page 2
- Configuring a Role for Service Graph Template Management, on page 2
- Configuring a Role for Exporting Devices, on page 2

About Privileges

You can grant privileges to the roles that you configure in the Application Policy Infrastructure Controller (APIC). Privileges determine what tasks a role is allowed to perform. You can grant the following privileges to the administrator roles:

Privilege	Description
nw-svc-policy	The network service policy privilege enables you to do the following: • Create a service graph template • Attach a service graph template to an application endpoint group (EPG) and a contract • Monitor a service graph
nw-svc-device	The network service device privilege enables you to do the following: • Create a device • Create a concrete device • Create a device context

Configuring a Role for Device Management

To enable a role to manage devices, you must grant the following privilege to that role:

- nw-svc-device

Configuring a Role for Service Graph Template Management

To enable a role to manage service graph templatess, you must grant the following privilege to that role:

- nw-svc-policy

Configuring a Role for Exporting Devices

Devices can be exported to enable sharing of devices among tenants. A tenant with the role **nw-device** can create a device. If the tenant that owns the device wants to share these with another tenant, the sharing requires the **nw-svc-devshare** privilege.

The **nw-svc-devshare** privilege allows a tenant to be able to export devices.

Note To be able to use imported devices, other tenants that have imported devices need to have the **nw-svc-policy** privilege.
