Cisco ACI with Cisco ACI Virtual Edge

Beginning with the Cisco APIC Release 3.1(1), the Cisco Application Centric Infrastructure (ACI) supports Cisco ACI Virtual Edge. Cisco ACI Virtual Edge is a hypervisor-independent distributed service VM that leverages the native distributed virtual switch that belongs to the hypervisor. Cisco ACI Virtual Edge runs in the user space, operates as a virtual leaf, and is managed by the Cisco Application Policy Infrastructure Controller (APIC).

You can find information about Cisco ACI Virtual Edge in the following documents on [Cisco.com](#):
