New and Changed Information

New and Changed Information

The following tables provide an overview of the significant changes to this guide up to this current release. The table does not provide an exhaustive list of all changes made to the guide or of the new features up to this release.

Table 1: New Features and Changed Information for Cisco APIC Release 6.0(3)

Feature	Description	Where Documented
Rogue Endpoint Exception Support for Bridge Domains and L3Outs	You can create a global rogue/COOP exception list, which excludes a MAC address from rogue endpoint control on all the bridge domains on which the MAC address is discovered, and you can create a rogue/COOP exception list for L3Outs. You can also exclude all MAC addresses for a bridge domain or L3Out. This simplifies creating the exception list when you want to make an exception for every MAC address; you do not need to enter each address individually.	About the Rogue/COOP Exception List

Table 2: New Features and Changed Information for Cisco APIC Release 6.0(1)

Feature	Description	Where Documented
Extended Filter Entries	You can configure extended filter entries for filter groups in a SPAN session by using either the APIC GUI, NX-OS-Style CLI, or the REST API.	Management
