Cisco ACI with VMware NSX-T Data Center

Beginning with Cisco Application Policy Infrastructure Controller (APIC) Release 5.1(1), you can integrate VMware NSX-T Data Center with Cisco Application Centric Infrastructure (ACI).

VMware NSX-T Data Center allows administrators to provision network services for ESXi environments. VMware NSX-T Data Center uses an NSX manager; however, integration is similar to that of other virtual machine managers (VMMs).

Integrating VMware NSX-T Data Center enables administrators to use Cisco APIC to apply Cisco ACI policy inside the VMM system.

You can find information—prerequisites and procedures—in the [Cisco ACI and VMware NSX-T Integration](#) document on Cisco.com.
