THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS REFERENCED IN THIS DOCUMENTATION ARE SUBJECT TO CHANGE WITHOUT NOTICE. EXCEPT AS MAY OTHERWISE BE AGREED BY CISCO IN WRITING, ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS DOCUMENTATION ARE PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED.

The Cisco End User License Agreement and any supplemental license terms govern your use of any Cisco software, including this product documentation, and are located at: <https://www.cisco.com/c/en/us/about/legal/cloud-and-software/software-terms.html>. Cisco product warranty information is available at <https://www.cisco.com/c/en/us/products/warranty-listing.html>. US Federal Communications Commission Notices are found here <https://www.cisco.com/c/en/us/products/us-fcc-notice.html>.

IN NO EVENT SHALL CISCO OR ITS SUPPLIERS BE LIABLE FOR ANY INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES, INCLUDING, WITHOUT LIMITATION, LOST PROFITS OR LOSS OR DAMAGE TO DATA ARISING OUT OF THE USE OR INABILITY TO USE THIS MANUAL, EVEN IF CISCO OR ITS SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Any products and features described herein as in development or available at a future date remain in varying stages of development and will be offered on a when-and-if-available basis. Any such product or feature roadmaps are subject to change at the sole discretion of Cisco and Cisco will have no liability for delay in the delivery or failure to deliver any products or feature roadmap items that may be set forth in this document.

Any Internet Protocol (IP) addresses and phone numbers used in this document are not intended to be actual addresses and phone numbers. Any examples, command display output, network topology diagrams, and other figures included in the document are shown for illustrative purposes only. Any use of actual IP addresses or phone numbers in illustrative content is unintentional and coincidental.

The documentation set for this product strives to use bias-free language. For the purposes of this documentation set, bias-free is defined as language that does not imply discrimination based on age, disability, gender, racial identity, ethnic identity, sexual orientation, socioeconomic status, and intersectionality. Exceptions may be present in the documentation due to language that is hardcoded in the user interfaces of the product software, language used based on RFP documentation, or language that is used by a referenced third-party product.

Cisco and the Cisco logo are trademarks or registered trademarks of Cisco and/or its affiliates in the U.S. and other countries. To view a list of Cisco trademarks, go to this URL: <https://www.cisco.com/c/en/us/about/legal/trademarks.html>. Third-party trademarks mentioned are the property of their respective owners. The use of the word partner does not imply a partnership relationship between Cisco and any other company. (1721R)

CHAPTER 1

Overview

This chapter contains overview information of the Cisco Nexus Dashboard Data Broker.

About Cisco Nexus Dashboard Data Broker

Visibility into application traffic has traditionally been important for infrastructure operations to maintain security, troubleshooting, and compliance and perform resource planning. With the technological advances and growth in cloud-based applications, it has become imperative to gain increased visibility into the network traffic. Traditional approaches to gain visibility into network traffic are expensive and rigid, making it difficult for managers of large-scale deployments.

Cisco Nexus Dashboard Data Broker with Cisco Nexus Switches provides a software-defined, programmable solution to aggregate copies of network traffic using Switched Port Analyzer (SPAN) or network Test Access Point (TAP) for monitoring and visibility. As opposed to traditional network taps and monitoring solutions, this packet-brokering approach offers a simple, scalable and cost-effective solution that is well-suited for customers who need to monitor higher-volume and business-critical traffic for efficient use of security, compliance, and application performance monitoring tools.

With the flexibility to use a variety of Cisco Nexus Switches and the ability to interconnect them to form a scalable topology provides the ability to aggregate traffic from multiple input TAP or SPAN ports, and replicate and forward traffic to multiple monitoring tools which may be connected across different switches. Using the Cisco NX-API agent to communicate to the switches, Cisco Nexus Dashboard Data Broker provides advance features for traffic management.

Cisco Nexus Dashboard Data Broker provides management support for multiple disjointed Cisco Nexus Dashboard Data Broker networks. You can manage multiple Cisco Nexus Dashboard Data Broker topologies that may be disjointed using the same application instance. For example, if you have 5 data centers and want to deploy an independent solution for each data center, you can manage all 5 independent deployments using a single application instance by creating a logical partition (network slice) for each monitoring network.

Note Beginning with Release 3.10.1, Cisco Nexus Data Broker (NDB) has been renamed to Cisco Nexus Dashboard Data Broker. However, some instances of NDB are present in this document, to correspond with the GUI, and installation folder structure. References of NDB/ Nexus Data Broker/ Nexus Dashboard Data Broker can be used interchangeably.

Basic Salient features of the the Cisco Nexus Dashboard Data Broker:

- Scalable topology for TAP and SPAN port aggregation.
- Robust Representational State Transfer (REST) API and a web-based GUI for performing all functions.
- Ability to replicate and forward traffic to multiple monitoring tools.
- Rules for matching monitoring traffic based on Layer 1 through Layer 4 information.
- Time-stamping using PTP.
- Packet Truncation beyond a specified number of bytes to discard the payload.
- Custom filtering of packets using User Defined Fields.
- Ability to adapt to changes in TAP/SPAN aggregate network states.
- End-to-end visibility.
- High Availability.
- Load Balancing.
- Manage multiple disjointed networks.
- Integration with ACI devices/ APIC and NX-OS devices.
- Real-time statistics for easy troubleshooting.
- Application management via IPv6.
- Security features, such as role-based access control (RBAC), and integration with an external Active Directory using RADIUS, TACACS, or LDAP for authentication, authorization, and accounting (AAA) functions.

Platform-wise support of the additional features of the Cisco Nexus Dashboard Data Broker:

Table 1: Supported Features

Feature Name	Cisco Nexus 9300(EX, FX, FX2) C93180LC-EX, C93180YC-EX, C93108TC-EX, C93108TC-FX, C93180YC-FX, C9336C-FX2, C93240YC-FX2, C93360YC-FX2
Port Channel Load Balancing	Y
MPLS Stripping	Y
MPLS Stripping- Label	N
MPLS Filtering	N
sFlow	Y
PTP/ Timestamping	Y
Jumbo MTU	Y
NetFlow	Y
Q-in-Q Tagging (for TAP and SPAN input ports)	Y
Span Destination	Y
Timestamping	Y
Packet Truncation	Y
Timestamping Strip	Y
Input Port - TAP/ SPAN	Y
Local Monitoring Tool	Y
Remote Monitoring Tool with ERSPAN support	Y
Remote Source	Y
UDF	Y
UDF v6	Y
UDE	N

Feature Name	Cisco Nexus 9500(EX, FX) C9504, C9508, C9516	Cisco Nexus 9364C, 9332C	Cisco Nexus 9300-GX 93600CD-GX 9364C-GX 9316D-GX
Local Monitoring Tool	Y	Y	Y
Remote Monitoring Tool with ERSPAN support	Y	Y	Y
Remote Source	Y	N	Y
UDF	Y	Y	Y
UDF v6	Y	Y	Y
UDE	Y	N	N
Drop ICMPv6	Y	Y	Y

Note The Cisco Nexus Series switches indicated in the above tables are recommended. For the supported NX-OS version on each of these switches, refer the Interoperability Matrix table in the release specific *Cisco Nexus Dashboard Data Broker Release Notes*. Here is the list of [Cisco Nexus Dashboard Data Broker Release Notes](#).

Limitations of Cisco Nexus Series switches:

Table 3: Limitations

Cisco Nexus Series Switch	Limitations
9364C-GX, 93600CD-GX, 9316D-GX	<ul style="list-style-type: none"> Range for QinQ VLAN on input ports is from 2 to 509. QinQ VLANs cannot be added after configuring MPLS label strip.

Prerequisites for Cisco Nexus Series Switches

Cisco Nexus Dashboard Data Broker is supported on Cisco Nexus 3000, 3100, 3200, and 9000 series switches. Before you deploy the software, you must do the following:

- Ensure that you have administrative rights to log in to the switch.
- Verify that the management interface of the switch (mgmt0) has an IP address configured using the **show running-config interface mgmt0** command.

- Ensure that the switch is in Multiple Spanning Tree (MST) mode. You can use **spanning-tree mode mst** command to enable MST mode on a switch.
- Add the VLAN range in the database that is to be used in Cisco Nexus Dashboard Data Broker for tap aggregation and inline monitoring redirection to support VLAN filtering. For example, the VLAN range is <1-3967>.
- Ensure that the spanning tree protocol is disabled for all the VLANs. You can use the **no spanning-tree vlan 1-3967** to disable spanning tree on all the VLANs.
- For the first Nexus Dashboard Data Broker deployment with NXOS version 9.2(1), ensure that the **feature nxapi** and **nxapi http port 80** commands are configured on the NDB device. If you upgrading NDB device from NXOS version I7(x) to 9.2(1), the **feature nxapi** and **nxapi http port 80** configurations are not required.

For running the NX-API mode on the Cisco Nexus Series switches, see the following pre-requisites.

Note The hardware command that is a pre-requisite for the IPv6 feature is **hardware access-list tcam region ipv6-ifacl 512 double-wide**.

Note The TCAM configurations are based on the type of filters required. You may configure multiple TCAM entries from a specific region based on the network requirement. For example, *ing-ifacl* is the TCAM region to cater MAC, IPv4, IPv6 filters in case of N93180YC-E. You may configure multiple TCAM from this region to fit more filtering ACL TCAM entries.

Device Models	NX-API Mode
Cisco Nexus 3000 Series switches	<p>Enter the following commands at the prompt:</p> <ul style="list-style-type: none"> • # hardware profile tcam region qos 0 • # hardware profile tcam region racl 0 • # hardware profile tcam region vacl 0 • # hardware profile tcam region ifacl 1024 double-wide • # hardware access-list tcam region mac-ifacl 512 • #feature nxapi • #feature lldp

Device Models	NX-API Mode
Cisco Nexus 3164Q, 3132Q switches	<p>Enter the following commands at the prompt:</p> <ul style="list-style-type: none"> • # hardware profile tcam region qos 0 • # hardware profile tcam region racl 0 • # hardware profile tcam region vacl 0 • # hardware profile tcam region ifacl 1024 double-wide • # hardware access-list tcam region mac-ifacl 512 • #feature nxapi • #feature lldp
Cisco Nexus 3172 Series switches	<p>Use the hardware profile mode tap-aggregation [l2drop] CLI command to enable tap aggregation and to reserve entries in the interface table that are needed for VLAN tagging. The l2drop option drops non-IP traffic ingress on tap interfaces.</p>
Cisco Nexus 3200 Series switches	<p>Enter the following commands at the prompt:</p> <ul style="list-style-type: none"> • # hardware access-list tcam region e-racl 0 • # hardware access-list tcam region span 0 • # hardware access-list tcam region redirect 0 • # hardware access-list tcam region vpc-convergence 0 • # hardware access-list tcam region racl-lite 256 • # hardware access-list tcam region l3qos-intra-lite 0 • # hardware access-list tcam region ifacl 256 double-wide • # hardware access-list tcam region mac-ifacl 512 • # hardware access-list tcam region ipv6-ifacl 256 • #feature nxapi • #feature lldp

Device Models	NX-API Mode
Cisco Nexus 9300 Series switches	<p>Enter the following commands at the prompt:</p> <ul style="list-style-type: none"> • # hardware access-list tcam region qos 0 • # hardware access-list tcam region vACL 0 • # hardware access-list tcam region racl 0 • # hardware access-list tcam region redirect 0 • # hardware access-list tcam region vpc-convergence 0 • # hardware access-list tcam region ifacl 1024 double-wide • # hardware access-list tcam region mac-ifacl 512 • # hardware access-list tcam region ipv6-ifacl 512 • #feature nxapi • #feature lldp • #system dot1q-tunnel transit
Cisco Nexus 9200, 9300-EX, 9336C-FX2, 93240YC-FX2, and N9K-C93360YC-FX2 switches	<p>Enter the following commands at the prompt:</p> <ul style="list-style-type: none"> • #hardware access-list tcam region ing-l2-span-filter 0 (For Cisco Nexus 93108 series switch only) • #hardware access-list tcam region ing-l3-span-filter 0 (For Cisco Nexus 93108 series switch only) • # hardware access-list tcam region ing-racl 0 • hardware access-list tcam region ing-l3-vlan-qos 0 • # hardware access-list tcam region egr-racl 0 • # hardware access-list tcam region ing-ifacl 1024 • #feature nxapi • #feature lldp • #system dot1q-tunnel transit <p>Note This command is not supported on the Nexus 9200 switches.</p>

Device Models	NX-API Mode
Cisco Nexus 9500-EX and 9500-FX Series switches (9504, 9508 and 9516)	<p>Enter the following commands at the prompt:</p> <ul style="list-style-type: none"> • # hardware access-list tcam region ing-racl 0 • # hardware access-list tcam region ing-l3-vlan-qos 0 • # hardware access-list tcam region egr-racl 0 • # hardware access-list tcam region ing-ifacl 1024 • #feature nxapi • #hardware acl tap-agg • #feature lldp • #system dot1q-tunnel transit
Cisco Nexus 9300-GX Series switches	<p>Enter the following commands at the prompt:</p> <ul style="list-style-type: none"> • # hardware access-list tcam region ing-racl 0 • # hardware access-list tcam region ing-l3-vlan-qos 0 • # hardware access-list tcam region egr-racl 0 • # hardware access-list tcam region ing-ifacl 1024 • #feature nxapi • #hardware acl tap-agg • #feature lldp • #system dot1q-tunnel transit

Supported Web Browsers

The following web browsers are supported for Cisco Nexus Dashboard Data Broker:

- Firefox 85.0 and later versions.
- Chrome 88.0 and later versions.
- Microsoft Edge 88.0 and later versions.

Note

If incompatible browsers are used, you may encounter GUI display issues for Release 3.10.

Note Enable JavaScript on your browser.

System Requirements

The following table lists the system requirements as per the deployment size:

Table 4: System Requirements per Deployment Size

Description	Small	Medium	Large
CPUs (virtual or physical)	6-core	12-core	18-core
Memory	8 GB RAM	16 GB RAM	24 GB RAM
Number of switches for TAP and SPAN aggregation	Upto 25 switches	Upto 50 switches	75 to 100 switches
Hard disk	Minimum of 40 GB of free space available on the partition on which the Data Broker software is installed.		
Operating System	A recent 64-bit Linux distribution that supports Java, preferably Ubuntu, Fedora, or Red Hat.		
Other	Java Virtual Machine 1.8.		

Guidelines and Limitations

Cisco Nexus Dashboard Data Broker runs in a Java Virtual Machine (JVM). As a Java-based application, Cisco Nexus Dashboard Data Broker can run on any x86 server. For best results, we recommend the following:

- JConsole and VisualVM that are both part of JDK are the recommended (but not required) additions for troubleshooting.
- You should not configure the same name for more than one switch in the topology to avoid unpredictable behavior in the link discovery by Cisco Nexus Dashboard Data Broker.
- The following special characters are not allowed in description field for Port Definitions, Port Groups, Connections, Redirections, Monitoring Devices, and Service Nodes: Apostrophe ('), Less Than (<), Greater Than (>), Double Quotation ("), Back Slash (\), Vertical Bar (|), and Question Mark (?).
- When the domain name is enabled in the switch, it does not reflect the change in the LLDP neighbors and the links get removed for that particular switch. The workaround for this issue is to disable the LLDP feature and then to enable it again by using **no feature lldp** and **feature lldp** CLI commands respectively.
- If Cisco Nexus 9000 Series switch is using 7.0(3)I4(1) or later version in NX-API mode and if a flow is installed using a VLAN filer, then the device goes through an IP access list and it does not match on the Layer 2 packet.

Filename Matrix

Filename Matrix for Cisco Nexus Dashboard Data Broker:

Mode of Deployment	NXOS Image	Mode	File Name
Embedded	9.3(1) to 9.3(5)	NXAPI	ndb1000-sw-app-emb-k9-release-number.zip
Centralized	9.3(1) to 9.3(5)	NXAPI	ndb1000-sw-app-k9-release-number.zip

Interoperability Matrix

For the Interoperability Matrix, see the *Cisco Nexus Dashboard Data Broker Release Notes, Release 3.10.1*.

CHAPTER 2

Logging in and Managing the Cisco Nexus Dashboard Data Broker

This chapter has details about logging in and managing the Cisco Nexus Dashboard Data Broker, and overview of the GUI.

Beginning with Release 3.10.1, Cisco Nexus Data Broker (NDB) has been renamed to Cisco Nexus Dashboard Data Broker. However, some instances of NDB are present in this document, to correspond with the GUI, and installation folder structure. References of NDB/ Nexus Data Broker/ Nexus Dashboard Data Broker can be used interchangeably.

- [Configuring High Availability Clusters](#) , on page 13
- [Logging in to Cisco Nexus Dashboard Data Broker GUI](#), on page 17
- [Changing Controller Access](#), on page 18
- [Cisco Nexus Dashboard Data Broker GUI Overview](#), on page 18
- [Syslog](#), on page 21

Configuring High Availability Clusters

Cisco Nexus Dashboard Data Broker supports high availability clustering in active/active mode with up to five controllers. To use high availability clustering with Cisco Nexus Dashboard Data Broker, you must edit the `config.ini` file for each instance of Cisco Nexus Dashboard Data Broker.

NDDDB release 3.10.4 supports 3-node clusters only.

In case of a split-brain scenario, 3-node clusters are handled as follows:

Cluster health is indicated as Yellow. A minimum of two nodes should be *up* and connected in the cluster for the cluster to be in the operational state. If not, the cluster nodes will move to a non-operational state. Override option is not available. Fix the VM and/or network link, as required.

Note IPv6 is supported in centralized Nexus Dashboard Data Broker mode only, it is not supported in Embedded mode.

Table 5: Cluster Operation Status

Cluster Indicator	Cluster Status	Recommendation
Green	Operational	<i>No recommendation as the status is operational.</i>
Yellow	Some of the cluster nodes are not available	Do not make any changes or add to the existing Nexus Dashboard Data Broker configuration.
Red	The node is isolated from the cluster.	Do not make any changes or add to the existing Nexus Dashboard Data Broker configuration. Note: For two node cluster, you need to override in any one of the cluster node only, to ensure regular operation.

Before you begin

- All IP addresses must be reachable and capable of communicating with each other.
- All switches in the cluster must connect to all of the controllers.
- All controllers must have the same HA clustering configuration information in the `config.ini` files.
- All controllers must have the same information in the `ndb/configuration/startup` directory.
- If using cluster passwords, all controllers must have the same password configured in the `ndbjgroups.xml` file.
- To mark a node as a preferred primary, add the required node IP address as the first node in the list of supernodes in the `config.ini` file. If you would prefer to always have the first node as the preferred primary, then set `enablePreferredPrimary=true` in the `config.ini` file.

To change the preferred primary node, *stop* the `ndb` controller and make the required modifications to the `config.ini` file.

If you donot wish to mark the first node as the preferred primary from the list of super nodes, then change the parameter to *false* in the `config.ini` file:

```
enablePreferredPrimary=false
```

Now, in case of a failure, and the primary node is *down*, another member node takes over as the primary node. The member node will continue to be the primary node even when the former primary node is *up*.

**Note**

The data broker controller checks for the number of configured supernodes (in the `config.ini` file), and if the number is less than three, an error is displayed indicating that 2-node cluster is not supported.

Procedure

- Step 1** Open a command window on one of the instances in the cluster.
- Step 2** Navigate to the `ndb/configuration` directory that was created when you installed the software.
- Step 3** Use any text editor to open the `config.ini` file.
- Step 4** Locate the following text:
- ```
HA Clustering configuration (semi-colon-separated IP addresses of all controllers that are part of
the cluster.)
supernodes=<ip1>;<ip2>;<ip3>;<ipn>
```
- Step 5** **Example:**
- IPv4 example.
- ```
# HA Clustering configuration (semi-colon-separated IP addresses of all controllers that are part of
the cluster.)
supernodes=10.1.1.1;10.2.1.1;10.3.1.1;10.4.1.1;10.5.1.1
```
- Example:**
- IPv6 example.
- ```
HA Clustering configuration (semi-colon-separated IP addresses of all controllers that are part of
the cluster.)
supernodes=2001:22:11::1;2001:33::44::1;2001:55:66::1
```
- Step 6** Save the file and exit the editor.
- Step 7** Repeat Step 3 through Step 7 for each instance of Cisco Nexus Dashboard Data Broker in the cluster.
- Step 8** Restart Cisco Nexus Dashboard Data Broker.

For Nexus Dashboard Data Broker cluster deployment, the expected latency between the node is three seconds, with three retries. You can configure the latency time and the number of maximum retries. See the procedure, below.

### What to do next

(Optional) Use this procedure to configure the delay time for a node and the number of retries.

1. Open a command window on one of the instances in the cluster.
2. Navigate to the `ndb` configuration directory.
3. Use any text editor to open the `ndbjgroups.xml` file.
4. Locate the following text:

```
FD timeout="3000" max_tries="3"/
```
5. Modify the *Latency Time* value and *maximum\_tries* value.
6. Save the file and exit the editor.
7. Repeat the above steps for all the instances of the cluster.

# Password Protecting High Availability Clusters

## Procedure

**Step 1** Open a command window on one of the instances in the cluster.

**Step 2** Navigate to the `ndb/configuration` directory.

**Step 3** Use any text editor to open the `ndbjgroups.xml` file.

**Step 4** Locate the following text:

```
<!-- <AUTH auth_class="org.jgroups.auth.MD5Token" auth_value="ciscoXNC" token_hash="MD5"></AUTH> -->
```

**Step 5** Remove the comments from the AUTH line.

**Example:**

```
<AUTH auth_class="org.jgroups.auth.MD5Token" auth_value="ciscoXNC" token_hash="MD5"></AUTH>
```

**Step 6** (Optional) Change the password in the `auth_value` attribute.

By default, the cluster is protected with the password "ciscoXNC". You can change this password to whatever value you want, you need make the similar changes on all machines in the cluster.

**Step 7** Save the file and exit the editor.

## Adding a Standby Node

Beginning with release 3.10.4, you can add a standby node to support a cluster. You need to append `-standby` to the IP address of the standby node to indicate the standby node while configuring the supernodes in the `config.ini` file. An example is shown here:

```
supernodes=<ip1>;<ip2>;<ip3>;<ip4>-standby
```

Release 3.10.4 supports 3-node clusters only. The cluster is said to be *fully healthy* if all the three nodes are working fine, *partially healthy* if two (out of the three nodes) are working fine. If only one node is working fine, that is, two nodes (out of the three nodes of a cluster) are *down*, then, the cluster is *unhealthy*. You need to manually `start` the standby node, which forms a cluster with the running node.

The standby node terminates automatically:

- If the running node gets terminated abruptly.
- After recovery, if the two nodes that were earlier *down* are now *up*.

### Guidelines and limitations for standby nodes

- You cannot `start` the standby node, if all the nodes in a cluster are *down*. One node needs to be running to form a cluster with the standby node.
- You cannot `start` the standby node, if the cluster is healthy (that is, if two nodes in a three node cluster are working fine).
- Ensure that the cluster is unhealthy before starting the standby node. Ensure that the nodes of the cluster are *down*, and not a disruption in connection between the nodes.

Consider a scenario wherein, node 1 and node 2 are located together and node 3 and the standby node are located together elsewhere. If nodes 1 and 2 are temporarily disconnected from node 3 and the standby node, it gives a false impression that nodes 1 and 2 are *down*, and based on this information, if the standby node is started, then the standby node and node 3 form a cluster (even when nodes 1,2 are *up*). This will lead to a configuration mismatch/ loss when the connection between node 1- node 2 and node 3-standby node is restored.

## Logging in to Cisco Nexus Dashboard Data Broker GUI

Cisco Nexus Dashboard Data Broker, release 4.0, is available as a service on Nexus Dashboard.

Use this procedure to access Nexus Dashboard Data Broker from the ND GUI.

### Before you begin

Log in to Nexus Dashboard, release 3.0(1i).

### Procedure

**Step 1** On the ND GUI, navigate to **Operate > Services > Installed Services**.

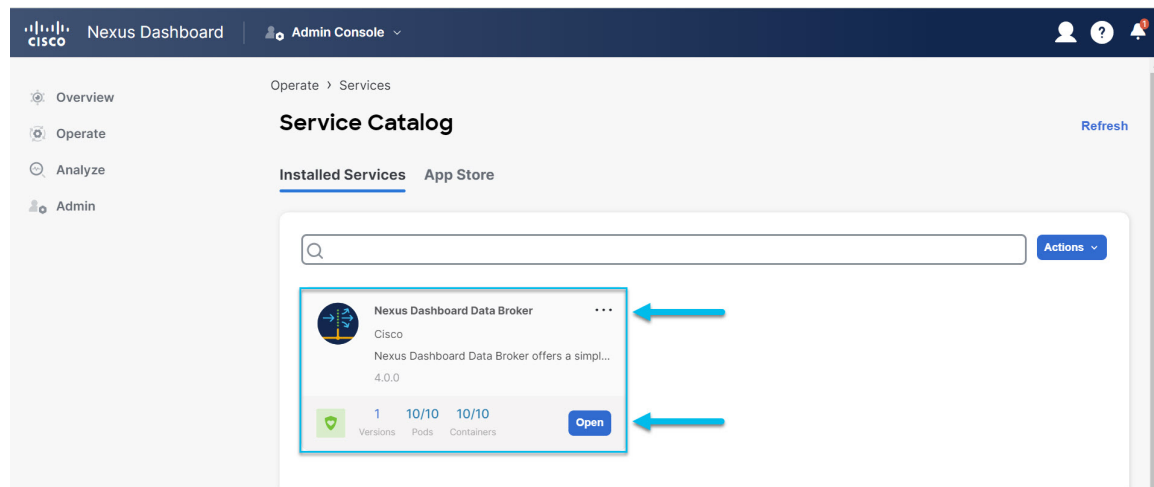

The Nexus Dashboard Data Broker service is displayed.

**Step 2** Click **Open**.

The standard Nexus Dashboard Data Broker GUI screen is displayed.

Separate login for the Nexus Dashboard Data Broker GUI is not required.

**Figure 1: Nexus Dashboard Data Broker on ND**

You can click the *three dots* to **Disable** or **Restart** Nexus Dashboard Data Broker.

# Changing Controller Access

An unencrypted (HTTP) access to the GUI and the API to the controller access is disabled by default. You cannot access the controller with the URL `http://<host>:8080`.

To change the controller access to HTTP, complete the following steps:

## Before you begin

Cisco Nexus Dashboard Data Broker is shipped with a certificate for the HTTPS connection between the Cisco Nexus Dashboard Data Broker and a browser. You can change to a different certificate.

The script **generateWebUICertificate.sh** is available in the **ndb/configuration** folder. If you execute this script, it moves the shipped certificate to **old\_keystore** and the new certificate is generated in **keystore**. On the next Cisco Nexus Dashboard Data Broker restart, this new certificate is used.

## Procedure

- Step 1** Remove the comment character from the connector for port 8080 in the `tomcat-server.xml` files in the configuration directory as displayed in the following example:

```
<Service name="Catalina">
<!--
<Connector port="8080" protocol="HTTP/1.1"
connectionTimeout="20000"
redirectPort="8443" server="Cisco NDB" enableLookups="false" />
-->
<Connector port="8443" protocol="HTTP/1.1" SSLEnabled="true"
scheme="https" secure="true"
clientAuth="false" sslProtocol="TLS"
keystoreFile="configuration/keystore"
keystorePass="ciscondb" server="Cisco NDB"
connectionTimeout="60000" enableLookups="false" />
```

- Step 2** Restart the controller.

# Cisco Nexus Dashboard Data Broker GUI Overview

The Cisco Nexus Dashboard Data Broker GUI contains the following tabs and each of these tabs are discussed in detail (as separate chapters) in the subsequent pages of this guide.

- [Dashboard](#)
- [Topology](#)
- [Devices](#)
- [Connections](#)
- [Components](#)

- [Sessions](#)
- [Statistics](#)
- [Troubleshooting](#)
- [Administration](#)

For details about the header icons, see [Header](#).

## Components of a screen of the Cisco Nexus Dashboard Data Broker

When you click a tab/ sub-tab, the current information of the tab is displayed in a table.

A typical screen representing one of the tabs of the Release 3.10.1 Cisco Nexus Dashboard Data Broker GUI is displayed here:

The screenshot shows the Cisco Nexus Dashboard Data Broker GUI. The header includes the Cisco logo, 'Nexus Data Broker', and navigation options like 'Stand-alone', 'Slice', and a 'default' dropdown. A 'Filters' section is highlighted with a blue callout '1'. Below it, a 'Filter by attributes' bar is highlighted with a blue callout '2'. The main table lists filters with columns: In Use, Default, Filter Name, Bidirectional, EtherType, Protocol, AdvancedFilter(s), Created By, and Last Modified By. The table contains six rows of default filters. A 'filter' icon is highlighted with a blue callout '3'. An 'Actions' button is highlighted with a blue callout '4'. A 'Rows' dropdown is highlighted with a blue callout '5'. A 'filter' icon is highlighted with a blue callout '6'.

<input type="checkbox"/>	In Use	Default	Filter Name	Bidirectional	EtherType	Protocol	AdvancedFilter(s)	Created By	Last Modified By
<input type="checkbox"/>	✓	✓	Default-Match-all	No	All EtherTypes (0...			admin ( Network-...	-
<input type="checkbox"/>	✓	✓	Default-Match-ARP	No	ARP (0x0806)			admin ( Network-...	-
<input type="checkbox"/>	✓	✓	Default-Match-ICMP	No	IPv6 (0x86DD)	ICMP (1)	nd-na,nd-ns,rout...	admin ( Network-...	-
<input type="checkbox"/>	✓	✓	Default-Match-ICM...	No	IPv6 (0x86DD)	ICMP (1)		admin ( Network-...	-
<input type="checkbox"/>	✓	✓	Default-Match-IP	No	IPv4 (0x0800)			admin ( Network-...	-

- 1—Name of the tab/sub-tab.
- 2—Use the *Filter by attributes* bar to filter the displayed table which has the details of the selected tab. Choose the attribute, operator and filter-value.  
You can also filter the displayed table based on the *filter* icon that appears when you hover over an element of the table.
- 3—Use the *Refresh* icon to refresh the displayed details and get the latest information about the tab/ sub-tab.
- 4—Use the *Column Customization* icon to select the columns you want to see in the displayed table.
- 5—Click the **Actions** button to see the available actions for the screen.
- 6—From the **Rows** drop-down list, select the number of rows to be displayed in the table.

# Header

This section provides an overview of the Cisco Nexus Dashboard Data Broker GUI Header (upper right corner) icons:

**Table 6: Cisco Nexus Dashboard Data Broker Header Icons**

Icon	Description
<b>Slice</b>	Displays the default slice.
<b>Figure 2: Create</b> 	Provides quick navigation to often-used configuration and administration procedures.
<b>Figure 3: Alarm</b> 	Displays the number of inconsistent NDB devices. Click the Alarm icon; you are directed to the <a href="#">Flow Management</a> tab for details.
<b>Figure 4: Help Menu-Bar</b> 	Displays the following options: <ul style="list-style-type: none"> <li>• <b>What's New</b>—displays new features for the latest release.</li> <li>• <b>Help</b>—displays online help content.</li> </ul>
<b>Figure 5: System Tools Menu-Bar</b> 	Provides the following options: <ul style="list-style-type: none"> <li>• <b>Application Properties</b>— set the TLS-related passwords.</li> <li>• <b>Northbound API</b>—takes you to the <b>Swagger</b> UI for details about Nexus Dashboard Data Broker REST APIs.</li> <li>• <b>About Nexus Dashboard Data Broker</b>—displays Nexus Dashboard Data Broker details such as, build and version.</li> </ul>
<b>Figure 6: User Profile Menu-Bar</b> 	Provides the following options: <ul style="list-style-type: none"> <li>• <b>Welcome User</b>—displays the current user of the GUI.</li> </ul>

# Syslog

In the Nexus Dashboard Data Broker server backend, you can configure the `logback.xml` file to send logs to the Syslog server. You can customize the log format as per your requirement. The logback file is located at:

`/ndb/configuration/logback.xml`

---

**Note** If the Nexus Dashboard Data Broker server(s) are running, restart the servers after the changes are made in the `logback.xml` file.

---

Sample Syslog configuration:

Add below config with respective Syslog server IP address and port number in `logback.xml` file.

```
<appender name="SYSLOG" class="ch.qos.logback.classic.net.SyslogAppender">
 <syslogHost>10.16.206.171</syslogHost>
 <facility>LOCAL7</facility>
 <port>514</port>
 <suffixPattern>[%thread] %logger %msg</suffixPattern>
</appender>
```

Append "`<appender-ref ref="SYSLOG" />`" in root as shown below,

```
<root level="error">
 <appender-ref ref="STDOUT" />
 <appender-ref ref="SYSLOG" />
 <appender-ref ref="ndb.log" />
</root>
```

After an upgrade, these configuration changes in the `logback.xml` file are lost. Ensure to check and restore the configuration manually, after upgrading the controller to a newer Nexus Dashboard Data Broker version.

## CHAPTER 3

# Configuring Cisco Nexus 9000 Series Switches

Beginning with Release 3.10.1, Cisco Nexus Data Broker (NDB) has been renamed to Cisco Nexus Dashboard Data Broker. However, some instances of NDB are present in this document, to correspond with the GUI, and installation folder structure. References of NDB/ Nexus Data Broker/ Nexus Dashboard Data Broker can be used interchangeably.

This chapter contains the following sections:

- [Guidelines and Limitations for Cisco Nexus 9000 Series Switches, on page 23](#)
- [Configuring TCAM Hardware Sizing on Cisco Nexus 9000 Series Switches, on page 24](#)
- [Enabling Cisco NX-API on Cisco Nexus 9000 Series Switches Using CLI, on page 25](#)
- [Enabling Switch Port Mode as Trunk on the Inter-switch Ports and Port Channels, on page 26](#)

## Guidelines and Limitations for Cisco Nexus 9000 Series Switches

See the following guidelines and limitations for configuring Cisco Nexus 9000 Series switches through Cisco Nexus Dashboard Data Broker.

- Cisco Nexus Dashboard Data Broker supports NX-API protocol for Cisco Nexus 9000 series family of switches.
- Tap aggregation is supported on Cisco Nexus 9500 platform switches with N9K-X9700-EX and N9K-X9700-FX line card.
- To enable tap aggregation on N9K-X9700-EX and N9K-X9700-FX line cards, configure hardware acl tap-agg globally on the Cisco Nexus 9500 switches.
- The devices that are going to be provisioned by Cisco Nexus Dashboard Data Broker are assumed to have LLDP enabled and the LLDP feature should not be disabled during the device association with Cisco Nexus Dashboard Data Broker. If the LLDP feature is disabled, there might be an inconsistency in Cisco Nexus Dashboard Data Broker that cannot be fixed without device deletion and re-addition.
- Cisco Nexus Dashboard Data Broker assumes that the device interfaces configured by the port definitions are L2 switch ports and these interfaces have device configurations as switchport trunk by default.
- Prior to deploying the Cisco Nexus 9000 Series switches for Tap/SPAN aggregation through Cisco Nexus Dashboard Data Broker with NX-API mode, the following configurations should be completed:
  - Configure the ACL TCAM region size for IPV4 port ACLs or MAC port ACLs.

- Enable NX-API feature in the switch using the **feature nxapi** command.
- Configure **switchport mode trunk** on all the inter-switch ports and the port-channels.

# Configuring TCAM Hardware Sizing on Cisco Nexus 9000 Series Switches

The TCAM configuration is based on the filtering requirement. You may need to configure multiple TCAM entries based on your filtering requirement. Complete these steps to configure a TCAM:

## SUMMARY STEPS

1. Use the **hardware access-list tcam region <region> <tcam-size>** command to configure the following TCAM regions:

## DETAILED STEPS

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	Use the <b>hardware access-list tcam region &lt;region&gt; &lt;tcam-size&gt;</b> command to configure the following TCAM regions:	<pre> NAT ACL[nat] size =      0 Ingress PACL [ing-ifacl] size = 1024 VACL [vacl] size =      0 Ingress RACL [ing-racl] size =      0 Ingress L2 QOS [ing-l2-qos] size =  256 Ingress L3/VLAN QOS [ing-l3-vlan-qos] size =      0 Ingress SUP [ing-sup] size =  512 Ingress L2 SPAN filter [ing-l2-span-filter] size =  256 Ingress L3 SPAN filter [ing-l3-span-filter] size =      0 Ingress FSTAT [ing-fstat] size =      0 span [span] size =  512 Egress RACL [egr-racl] size = 1792 Egress SUP [egr-sup] size =  256 Ingress Redirect [ing-redirect] size =  512 Egress L2 QOS [egr-l2-qos] size =      0 Egress L3/VLAN QOS [egr-l3-vlan-qos] size =      0 Ingress Netflow/Analytics [ing-netflow] size = 512 Ingress NBM [ing-nbm] size =      0 TCP NAT ACL[tcp-nat] size =      0 Egress sup control plane[egr-copp] size =      0 Ingress Flow Redirect [ing-flow-redirect] size =       0 Ingress PACL IPv4 Lite [ing-ifacl-ipv4-lite] size =      0 Ingress PACL IPv6 Lite [ing-ifacl-ipv6-lite] size =      0 MCAST NAT ACL[mcast-nat] size =      0 Ingress PACL Super Bridge [ing-pacl-sb] size = 1024 Ingress Storm Control [ing-storm-control] size =       0 </pre>

	Command or Action	Purpose
		<pre>Ingress VACL redirect [ing-vacl-nh] size = 0 Egress PACL [egr-ifacl] size = 0</pre> <p>See the <i>Cisco Nexus 9000 Series NX-OS Security Configuration Guide</i> for the step-by-step TCAM hardware sizing configuration on Cisco Nexus 9000 Series Switches.</p> <p><b>Note</b> Cisco Nexus Dashboard Data Broker in OpenFlow mode supports Ethernet MAC source and destination addresses as match capabilities only when the OpenFlow TCAM region is configured as double wide (for example, <b>hardware access-list tcam region openflow 512 double-wide</b>). If the OpenFlow TCAM region is configured as non double wide, only ether type match is supported as match capabilities.</p>

## Enabling Cisco NX-API on Cisco Nexus 9000 Series Switches Using CLI

You can now manage multiple Cisco Nexus 9000 Series switches that are connected in a topology. Cisco Nexus Dashboard Data Broker plugin can discover the switch interconnections using LLDP and update the topology services within Cisco Nexus Dashboard Data Broker. The switch interconnections can be a physical link or a port-channel interface. The topology displays only the interconnections between Cisco Nexus 9000 Series switches that are added to the NDB device list. The topology interconnection is displayed in the GUI.

Complete the following steps for enabling Cisco NX-API on Cisco Nexus 9000 Series switches:

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	Enable the management interface.	Enable the management interface on the switch.
<b>Step 2</b>	switch# <b>conf t</b>	Enter the configuration mode.
<b>Step 3</b>	switch (config) # <b>feature nxapi</b>	Enable the NX-API feature.
<b>Step 4</b>	switch (config) # <b>nxapi http port 80</b>	Configure the HTTP port.
<b>Step 5</b>	switch (config) # <b>nxapi https port 443</b>	<p>Configure the HTTPS port.</p> <p>For the step-by-step configuration information for enabling the NX-API feature on Cisco Nexus 9000 Series switches, see the <i>Cisco Nexus 9000 Series NX-OS Programmability Guide</i>.</p>

# Enabling Switch Port Mode as Trunk on the Inter-switch Ports and Port Channels

Complete the following steps to enable the switch port mode on the inter-switch ports and port-channels:

## Procedure

	Command or Action	Purpose
Step 1	switch(config)# <b>config t</b>	Enables the configuration mode.
Step 2	switch(config)# interface {{ <b>type</b> <i>slot/port</i> }}   { <i>port-channel number</i> }}	Specifies an interface to configure.
Step 3	switch(config-if)# <b>switchport mode</b> { <i>access</i>   <i>trunk</i> }	Configures the switchport mode as access or trunk on the inter-switch ports and the port-channels.
Step 4	switch(config)# <b>exit</b>	Exits the configuration mode.

## PART I

# Configuring the Cisco Nexus Dashboard Data Broker

- [Dashboard, on page 29](#)
- [Topology, on page 31](#)
- [Devices, on page 35](#)
- [Connections, on page 59](#)
- [Components, on page 71](#)
- [Sessions, on page 121](#)
- [Statistics, on page 131](#)
- [Troubleshooting, on page 137](#)
- [Administration, on page 149](#)

## CHAPTER 4

# Dashboard

---

This chapter has details about the Cisco Nexus Data Broker dashboard. The dashboard integrates information from multiple components and devices into a unified display.

Beginning with Release 3.10.1, Cisco Nexus Data Broker (NDB) has been renamed to Cisco Nexus Dashboard Data Broker. However, some instances of NDB are present in this document, to correspond with the GUI, and installation folder structure. References of NDB/ Nexus Data Broker/ Nexus Dashboard Data Broker, can be used interchangeably.

- [Dashboard, on page 29](#)

## Dashboard

The intent of **Dashboard** is to enable network and storage administrators to focus on particular areas of concern around the health and performance of Cisco Nexus Dashboard Data Broker. This information is provided as 24-hour snapshots.

From the left menu bar, choose **Dashboard**. The **Dashboard** window displays the following dashlets:

- **Status by Resources**—Status of the resources connected to the Nexus Dashboard Data Broker controller are displayed in color-coded circles. The resources are:
  - NDB Devices
  - Input Ports
  - Filters
  - Monitoring Tools
  - Connections
- **Data Handled / Received since *date***—Overall amount of data received and transmitted by the Nexus Dashboard Data Broker controller since the *indicated date*.
- **NDB Runtime**—Runtime of the current cluster.
- **NDB Last Restart**—Date and time the cluster was last restarted.

## CHAPTER 5

# Topology

---

This chapter has details of the network topology with details of the devices and connections of the Cisco Nexus Dashboard Data Broker.

Beginning with Release 3.10.1, Cisco Nexus Data Broker (NDB) has been renamed to Cisco Nexus Dashboard Data Broker. However, some instances of NDB are present in this document, to correspond with the GUI, and installation folder structure. References of NDB/ Nexus Data Broker/ Nexus Dashboard Data Broker, can be used interchangeably.

- [Topology, on page 31](#)

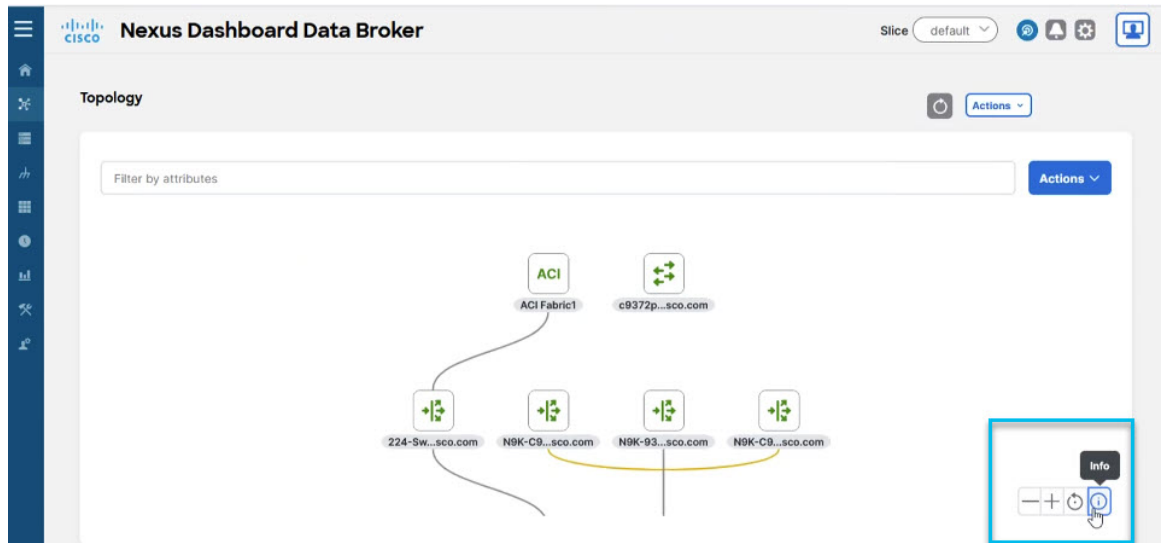

## Topology

The **Topology** tab provides an integrated view of the Cisco Nexus Dashboard Data Broker network.

Beginning with Nexus Dashboard Data Broker release 4.0, the icons used to denote the various nodes in Topology have been modified for an enhanced look and better customer experience.

The topology diagram is displayed in an hierarchical fashion. The SPAN devices (such as the ACI fabric and production switches) are presented in the first row, followed by the NDB devices. The last row is the monitoring tools. The connections between the various nodes are also indicated. Click the **Info** icon, at the bottom of the page, to display the **Topology Legend** window. The **Topology Legend** window contains the key to the icons used in the topology diagram.

Figure 7: Info icon

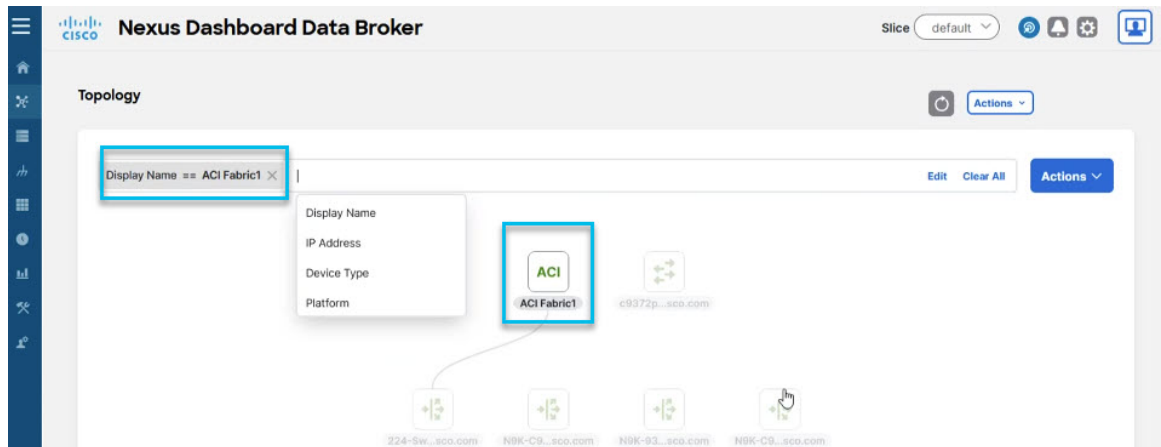

To get information about a node in brief, click (single-click) the node. Double-click the node if you want more detailed information about the node. A separate pop-up window is displayed to the right of the screen.

Use the *Filter by attributes* search bar to filter the displayed nodes of the topology. The filter parameters are: display name, IP address, device type, and platform. Based on the selected parameter, the relevant node is highlighted in the topology diagram. The format for entering the search criteria is provided in the following example:

```
Display Name == ACI Fabric1
```

Figure 8: Filter by attributes search bar

The topology diagram is presented in the default vertical view. See [Change the Topology View](#), on page 33 task for the detailed procedure to change the topology view.

**Note**

Click **Refresh** (  ) to view the latest topology.

The **Actions** button, adjacent to the **Refresh** icon, provides quick access to perform these tasks:

- **Add NDB Device**— See [Adding an NDB Device](#) for more details.
- **Add Span Device**— See [Adding a Span Device](#) , on page 50 for more details.
- **Add Monitoring Tool**—See [Adding a Monitoring Tool](#) for more details.

## Change the Topology View

The topology view is available in three layouts, the default vertical view, horizontal view and custom view. Use this procedure to customize the topology view based on your preferences.

### Procedure

- 
- Step 1** Click the **Actions** button adjacent to the *Filter by attributes* field.  
A pop-up displays the available options.
- Step 2** Click **Layout > Horizontal** to change the layout from the default vertical view to the horizontal view.  
In the horizontal view, the nodes are not displayed in an hierarchical fashion.  
If your goal is to change the layout from Vertical view to Horizontal view, you can stop here. If you need to customize the view, proceed to the next step.
- Step 3** Click **Layout**, and enable the **Edit** option to change the layout to *Custom*.  
You can now drag and re-arrange the position of the nodes.
- Step 4** Click **Layout > Save**.  
The **Custom** layout option is now added to the already-available vertical and horizontal layout options.
-

## CHAPTER 6

# Devices

---

This chapter has details about the devices of the Cisco Nexus Dashboard Data Broker.

Beginning with Release 3.10.1, Cisco Nexus Data Broker (NDB) has been renamed to Cisco Nexus Dashboard Data Broker. However, some instances of NDB are present in this document, to correspond with the GUI, and installation folder structure. References of NDB/ Nexus Data Broker/ Nexus Dashboard Data Broker, can be used interchangeably.

- [Devices, on page 35](#)

## Devices

The **Devices** tab has the following sub tabs:

- **NDB Devices**—aggregation devices managed by the NDB controller. See [NDB Devices](#) for more details.
- **Span Devices**— Switches (Nexus/ Catalyst) and controllers (Cisco APIC/ Cisco DNAC) connected to NDB. See [Span Devices, on page 48](#) for more details.
- **Tap Devices** —tap devices connected to the NDB controller. See [Tap Devices](#) for more details.
- **Device Groups**—the groups to which the NDB devices are segregated into. See [Device Groups](#) for more details.

## NDB Devices

The **NDB Devices** tab displays details of all the devices connected to the NDB controller.

A table is displayed with the following details:

*Table 7: NDB Devices*

Column Name	Description
<b>Status</b> (the first column of the table)	<p>The current status of the device connected to the NDB; indicated by color. The options are:</p> <ul style="list-style-type: none"><li>• Green—indicates that the device is operational and connected to the NDB controller.</li><li>• Red—indicates failure and the device is not connected to the NDB controller.</li><li>• Yellow—indicates that the device is connected but not ready yet. Reboot the device and wait for a few minutes for the status to turn green. Refresh and check.</li><li>• Gray—indicates that the device is in maintenance mode.</li></ul>

Column Name	Description
<b>IP Address</b>	<p>The IP address of the device.</p> <p>This field is a hyperlink. Click the IP address to view more details of the device.</p> <p>Click the <b>IP Address</b>. A new pane is displayed on the right which has more information about the device. Additional actions that can be performed from here are:</p> <ul style="list-style-type: none"> <li>• <a href="#">Edit Device</a></li> <li>• Take Device Offline</li> <li>• <a href="#">Edit Global Configuration</a></li> </ul> <p><b>Note</b> The <i>Take Device Offline</i> action is generally grayed out and is available only for devices in maintenance mode.</p> <p>You can also view the <b>Ports</b>, <b>Port Channels</b> and <b>Port Groups</b> of the device by clicking the corresponding tab. For more information about Port Channels and Groups, see <a href="#">Port Channels and Groups</a>.</p> <p>Click the <b>Details</b> icon (  ) to get additional details of the device. A new window displays the following details for the selected device:</p> <ul style="list-style-type: none"> <li>• General</li> <li>• Ports</li> <li>• Port Channel</li> <li>• Port Groups</li> <li>• Global Configuration</li> <li>• Monitor Sessions</li> <li>• Flow Statistics</li> <li>• Port Statistics</li> <li>• TCAM Resource Utilization</li> </ul> <p>Additional actions that can be performed from <b>Details</b> tab:</p> <ul style="list-style-type: none"> <li>• Trigger Global ACLs—this action identifies the non-configured interfaces of a device and attaches global ACLs to all these interfaces. It is mandatory for all interfaces of a device to be configured with global ACLs.</li> <li>• <a href="#">Add Port Channel</a></li> </ul>

Column Name	Description
<b>Device Name</b>	The device name (switch name) as indicated by the administrator while configuring the device. Device name is displayed only if the device status is green. If the status of the device is red or yellow, the device name is not displayed.
<b>Platform</b>	The device platform.
<b>Node ID</b>	The node ID of the device.
<b>Profile Name</b>	The profile of the device as configured during device addition.
<b>NX-OS</b>	The software version currently running on the device.
<b>Mode</b>	<p>The mode the switch is currently using. The options are:</p> <ul style="list-style-type: none"> <li>• <b>NDB mode</b>—indicates that the whole switch (all interfaces) is managed by the NDB controller.</li> <li>• <b>Hybrid</b>—indicates that only some interfaces in the device are managed by the NDB controller.</li> </ul> <p><b>Note</b> By default, this column is hidden. When Hybrid mode is enabled on the device during device addition, this column is displayed.</p>
<b>Port</b>	The port used by the NDB controller to communicate to the NDB device.
<b>Status Description</b>	<p>The status of the connection between the NDB device and the NDB controller. The options are:</p> <ul style="list-style-type: none"> <li>• <b>Connection succeeded</b>—indicates that the connection between the device and NDB controller is successful.</li> <li>• <b>Connection failed</b>—indicates that the connection between the device and NDB controller has failed. A reason for failure is also displayed, such as authentication failed, connection refused (incorrect port).</li> <li>• <b>Connection not ready</b>—indicates that the device reload was not successful.</li> </ul>

The following actions can be performed from the **NDB Devices** tab:

- **Add Device**—Use this to add a new device. See [Adding a Device](#) for details.
- **Rediscover Device**—Select the required device by checking the check box at the beginning of the row. Click **Actions > Rediscover Device(s)**. A pop-up appears. Click **Rediscover** to rediscover the selected devices. When you rediscover devices, the global ACLs are reattached.

---

**Note** Rediscovering a device leads to UDF, ports, global and connections reconfigurations and this results in traffic loss.

---

When there is a configuration error, use rediscover to reconfigure the device.

If you choose the rediscover action without selecting a check box, an error is displayed. You will be prompted to select a device.

- **Reconnect Device**— Select the required device by checking the check box at the beginning of the row. Click **Actions** > **Reconnect Device(s)**. A pop-up appears. Click **Reconnect** to reconnect the selected devices. The reconnect action is used to re-establish a failed connection between a device and NDB controller.

If you choose the reconnect action without selecting a check box, an error is displayed. You will be prompted to select a device.

- **Update Profile**—Use this action to add or update the profile for a device. See [Update Profile](#) for details about this task.
- **Delete Device**—Select the required device by checking the check box which is available at the beginning of the row. Click **Actions** > **Delete Device(s)**. A pop-up window displays two options:
  - **Delete**—Use this option to delete the device from the NDB controller while retaining the device configuration.

---

**Note** From release 3.10.5, when you delete a device, the TLS information is retained in the controller. If you want to use the same certificates, then, when you add the device again, on the **Confirm Add Device** pop-up window, select **No** to use the existing certificates and enter the TLS port. If you select **Yes**, then, the existing certificates are deleted and new ones are created.

---

- **Purge and Delete**—Use this option to delete the device and also remove device configuration from the NDB controller.

If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a device.

---

**Note** If a device is not reachable and disconnects from the NDB controller, the NDB controller tries to locate and connect to the device after every 30 seconds.

---

Global deny ACLs are automatically added to all non-configured interfaces (Edge SPAN/TAP, Packet Truncation, Remote Source, and Local and Remote Monitor) on a device. By default, Global Deny ACL feature is enabled on all the devices. You can disable the Global Deny ACL feature by setting the `configure.global.acls` parameter to false in the `config.ini` file. Ensure that you restart NDB after making changes in the configuration file.

## Adding a Device

Use this procedure to add a device to NDB controller.

Beginning with Nexus Dashboard Data Broker release 3.10.5, it is mandatory to configure the TLS certificates using the GUI. The required steps for TLS configuration is part of the **Add Device** screen. The CLI method for TLS is no longer supported.

### Before you begin

Before adding a device to the NDB controller, do the following:

- Enable NXAPI on the device using the **feature nxapi** command.
- Use the Device Prerequisites option, if you are adding a device for the first time to the NDB controller.

#### Note

Check the release-specific *Cisco Nexus Dashboard Data Broker Release Notes*, to see the supported Cisco Nexus Series switches and the supported NX-OS versions.

## Procedure

- Step 1** Navigate to **Devices > NDB Devices**.
- Step 2** From the **Actions** drop down menu, select **Add Device**.
- Step 3** In the **Add Device** dialog box, enter the following details:

**Table 8: Add Device**

Field	Description
<b>General</b>	
<b>IP Address/ Hostname</b>	<p>Enter the name or IP address of the device. To add multiple devices, add the hostnames or IP Addresses separated with a comma.</p> <p>To enable TLS, it is mandatory to enter the Hostname (fully qualified hostname which includes the domain name).</p>

Field	Description
<b>Username/ Profile</b>	<p>Select either <b>Username</b> or <b>Profile</b>.</p> <p>If you click <b>Username</b>, the following fields are displayed:</p> <ul style="list-style-type: none"> <li>• <b>Username</b>—Enter the switch username to login to the device.</li> <li>• <b>Password</b>—Enter the switch password.</li> </ul> <p>If you click <b>Profile</b>, the following fields are displayed:</p> <ul style="list-style-type: none"> <li>• <b>Profile</b>—From the <b>Select Profile</b> drop-down list, select a profile.</li> </ul> <p><b>Note</b> You can associate multiple switches to a profile. The profile configuration is applied to all the member switches.</p>
<b>Connection Type</b>	Select the Connection Type from the drop- down list. Currently, only NX-API is supported.
<b>Port</b>	<p>Enter the device communication port. Use port 80 for NX-API over HTTP and 443 for HTTPS.</p> <p>For TLS configuration, provide a port number to configure the port as a TLS port.</p>
<b>Device Prerequisites</b>	<p>Click the gray button to enable Device Prerequisites. The bar turns blue and the button moves to the right. The following check boxes appear:</p> <ul style="list-style-type: none"> <li>• <b>Interface Commands</b>—By default, this check-box is checked. Device Prerequisites automatically executes a set of default interface commands.</li> <li>• <b>Reboot</b>—Check the check-box to reboot the device before it gets added to NDB.</li> <li>• <b>TCAM</b>—Check the check-box to set a TCAM value. Select <b>Default</b> or <b>Scale</b>. A memory of 1024 or 2048 is allocated, respectively.</li> </ul>

Field	Description
Transport Layer Security (TLS)	<p>Enable TLS to set the TLS parameters. Hover over the info icon (i), a pop-up window is displayed. Click the link to <b>Update TLS Passwords</b>.</p> <p><b>Note</b> It is mandatory to enter the TLS passwords at this stage, if you are adding a device with TLS for the first time. If you have already added the passwords earlier, then, you need not add them here again. Passwords can be added in the <b>Update TLS Passwords</b> screen. Click the gear icon in the <i>Header</i>.</p> <p>The displayed fields are discussed in the subsequent procedure, <a href="#">Configure Transport Layer Security</a> , on page 42.</p>

**Step 4** Click **Add Device**.

**Note**

Global ACLs are automatically added to all the interfaces on a device. By default, Global ACLs are enabled for a device. To manage Global ACLs, you need to add the `configure.global.acls` parameter in the `config.ini` file. Set the `configure.global.acls` parameter to *false* and restart the device to disable Global ACLs on the device.

During the process of device addition, feature tap aggregation is enabled.

## Configure Transport Layer Security

This procedure is part of the Adding A Device procedure discussed in the Devices chapter.

Beginning with NDDDB release 3.10.5, the Transport Layer Security (TLS) configuration can be performed as part of the Add Device screen. The steps detailed here are for configuring TLS.

### Before you begin

Ensure that you have domain name configured on the switch using the **ip domain-name** command for each NDB switch that acts as the Fully Qualified Domain Name (FQDN) for the switch. For example:

```
conf t
ip domain-name cisco.com
hostname N9k-117
end
```

The FQDN for the switch is configured to N9K-117.cisco.com.

Configure these TLS passwords:

- Truststore password
- Keystore password
- PEM passphrase (optional for self-signed TLS)
- Challenge password (optional for self-signed TLS)

## Procedure

**Step 1** Navigate to **NDB Devices > Actions > Add Device**.

**Step 2** After entering the device details, enable the **Transport Layer Security** option.

### Note

You will not be able to enable the TLS option if the prerequisite TLS passwords as mentioned in the *Before you begin* section are not configured. However, you can enter these passwords at this stage as well; enter the passwords in the **Update TLS Passwords** pop-up screen and click **Save**. When you are onboarding a device for the first time, it is recommended to change all the four passwords from the default value to the custom value.

**Step 3** Select either the **Self-signed** or **Third-party** option.

**Step 4** Enter the following details, these are used for generating the certificates:

- Enter the **Country** name.
- Enter the **State** name.
- Enter the **Locality** name.
- Enter the **Organization** name.
- Enter the **Organization Unit** name.
- Enter a valid **Email ID**.
- Enter the **Validity Period** (in days). This field is applicable only for the **Self-signed** option.
- Enable the **Secure Certificate** to encrypt the private key. This field is applicable only for the **Third-party** option.

**Step 5** Click **Generate CSR and Add Device**(third-party certificate) or **Add Device** (self-signed certificate).

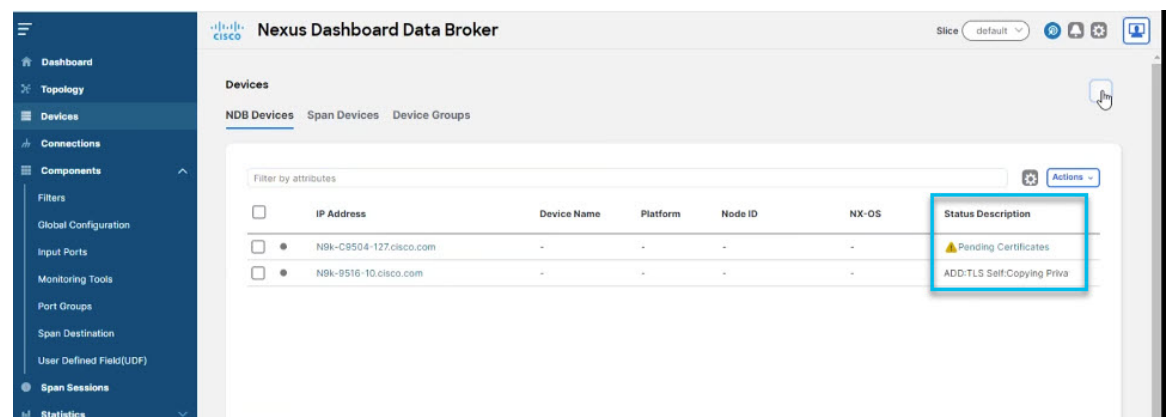

(self-signed certificate)The NDB devices screen is displayed which shows all the available NDB devices.

(third-party certificate) see the subsequent section, *What to do Next*.

## What to do next

For third-party TLS, you will need to upload the **Pending Certificates**.

**Figure 9: Adding Pending Certificates**

Click the **Pending Certificates** link displayed in the Status Description column.

Depending on the tier of the CA you choose, you can get up to three certificates (certificate chain) for each CSR. This means you get three certificates (root, intermediate and domain) from CA for each NDB switch. You need to check with CA to identify each type of certificate. Certificate naming convention might be different for different certifying authorities. For example: test-root-ca-2048.cer (root), test-ssl-ca.cer (intermediate), N9K-117.cisco.com.cer (domain).

When you submit the request to the third party certification authority, follow the relevant procedures and get the three (certificate) files.

**Note** The supported format for the certificates is .PEM.

## Editing a Device

Use this procedure to edit a device.

### Before you begin

Create one or more devices.

### Procedure

- Step 1** Navigate to **Devices > NDB Devices**.
- Step 2** In the displayed table, click an **IP Address**.  
A new pane is displayed on the right.
- Step 3** Click **Actions** and select **Edit Device**.
- Step 4** In the **Edit Device** dialog box, the current device information is displayed. Modify these fields, as required:

*Table 9: Edit Device*

Field	Description
<b>General</b>	
<b>IP Address/ Hostname</b>	The current IP address of the device. This field cannot be edited.

Field	Description
<b>Username/ Profile</b>	<p>Select either <b>Username</b> or <b>Profile</b>.</p> <p>If you click <b>Username</b>, the following fields are displayed:</p> <ul style="list-style-type: none"> <li>• <b>Username</b>— Username used to login to the device is displayed; you can edit this field.</li> <li>• <b>Password</b>—Enter the password for the username.</li> </ul> <p>If you click <b>Profile</b>, the following fields are displayed:</p> <ul style="list-style-type: none"> <li>• <b>Profile</b>—From the <b>Select Profile</b> drop-down list, select a profile.</li> </ul> <p><b>Note</b> You can associate multiple switches to a profile. The profile configuration is applied to all the member switches.</p>
<b>Connection Type</b>	<p>Select the Connection Type from the drop down menu. Currently, only NXAPI is supported.</p>
<b>Port</b>	<p>Enter the device communication port. Use port 80 for NX-API over HTTP and 443 for HTTPS.</p>
<b>Device Prerequisites</b>	<p>Click the gray button to enable Device Prerequisites. The bar turns blue and the button moves to the right. The following check boxes appear:</p> <ul style="list-style-type: none"> <li>• <b>Interface Commands</b>—By default, this check box is checked. Device Prerequisites automatically executes a set of default interface commands.</li> <li>• <b>Reboot</b>—Check the check box to reboot the device before it gets added to NDB.</li> <li>• <b>TCAM</b>—Check the check box to set a TCAM value. Select <b>Default</b> or <b>Scale</b>. A memory of 1024 or 2048 is allocated, respectively.</li> </ul> <p>For more information about Device Prerequisites, see <a href="#">Device Prerequisites</a>, on page 47.</p>

**Step 5** Click **Save**.

## Updating Device Profile

Use this procedure to assign (associate) a profile to a device or update the profile for a device.

### Before you begin

Create one or more profiles.

## Procedure

**Step 1** Navigate to **Devices > NDB Devices**.

**Step 2** From the **Actions** drop-down menu, select **Assign/ Update Profile**.

**Step 3** In the **Assign/ Update Profile** dialog box, enter the following details:

*Table 10: Assign/ Update Profile*

Field	Description
<b>General</b>	
<b>Profile</b>	Select a <b>Profile</b> from the drop down menu.
<b>Connection Type</b>	The default NXAPI connection type is displayed.

**Step 4** Click **Assign/ Update Profile**.

## Adding a Port Channel

Use this procedure to add a port channel.

See [Port Channels and Groups](#) for more information about port channels.

## Procedure

**Step 1** Navigate to **Devices > NDB Devices**.

**Step 2** Click an **IP Address** and select the Details icon.

**Step 3** In the **Add Port Channel** dialog box, enter the following details:

*Table 11: Add Port Channel*

Field	Description
<b>General</b>	
<b>ID</b>	Enter a name for the port channel.
<b>Description</b>	Enter a description for the port channel.
<b>Port</b>	Click <b>Select Port</b> . Select the required check boxes and click <b>Select</b> .

**Step 4** Click **Add Port Channel**.

## Device Prerequisites

Nexus Dashboard Data Broker pushes basic configuration to a newly added device. Ensure NX-API is enabled on the new device for Nexus Dashboard Data Broker to push prerequisite configuration successfully. Manual configuration of the NX-API devices to make it ready for Nexus Dashboard Data Broker is not required.

Device Prerequisites can be configured when you add or edit a device, or when you add or change profile to a device. See [Adding a Device, on page 40](#) and/or [Editing a Device, on page 44](#).

Following configurations are pushed into the new switch by Nexus Dashboard Data Broker:

- While onboarding an NDB device, without following STP pre-requisites (when independent links or port channels are connected to NDB devices), you need to manually configure the **switchport mode trunk** and **spanning-tree bpduguard enable** commands.
- TCAM configurations based on the device platform
- MST mode is enabled on the Spanning Tree
- Basic VLAN configuration
- Feature tap aggregation is enabled.
- LLDP feature is enabled (only for the centralized mode).

Device is rebooted after all the configurations are successfully pushed by Nexus Dashboard Data Broker. The device reboot is required because of the TCAM configurations. The reboot is supported from NX-OS 9.2(3) and above.

## Port Channels and Port Groups

### Port Channels

A port channel is an aggregation of multiple physical interfaces that creates a logical interface. You can bundle up to 8 individual active links into a port channel to provide increased bandwidth and redundancy. If a member port within a port channel fails, the traffic previously carried over the failed link switches to the remaining member ports within the port channel. Port channeling also load balances traffic across these physical interfaces. The port channel stays operational as long as at least one physical interface within the port channel is operational.

You create a port channel by bundling compatible interfaces. You can configure and run either static port channels or ports channels running the Link Aggregation Control Protocol (LACP). Any configuration changes that you apply to the port channel are applied to each member interface of that port channel. For example, if you configure Spanning Tree Protocol (STP) parameters on the port channel, the Cisco NX-OS applies those parameters to each interface in the port channel.

You can use static port channels, with no associated protocol, for a simplified configuration. For more efficient use of the port channel, you can use the Link Aggregation Control Protocol (LACP), which is defined in IEEE 802.3ad. When you use LACP, the link passes protocol packets.

### Port Groups

Ports of a device (or different devices) can be grouped together to form a port group. The port groups can be a combination of the edge-span and the edge-tap ports across different switches. Selecting individual ports of a port group is disabled when using a port group.

## Symmetric and Non-Symmetric Load Balancing

You can configure symmetric load balancing and enable MPLS tag stripping on the Cisco Nexus 9000 Series switches using NX-API configuration mode, from the Cisco Nexus Data Broker GUI and the REST API interfaces.

The following table lists the symmetric and non-symmetric load balancing options:

Configuration Type	Hashing Configuration	Platforms	Options
Symmetric	SOURCE_DESTINATION	Nexus 9000 Series (all), N3K-C3164xx, N3K-C32xx	IP, IP-GRE, IP-L4PORT, IP-L4PORT-VLAN, IP-VLAN, L4PORT, MAC
		REST API	IP, IP-GRE, PORT, MAC, IP-ONLY,PORT-ONLY
Non-symmetric	SOURCE, DESTINATION	Nexus 9000 Series (all), N3K-C3164xx, N3K-C32xx	IP, IP-GRE, IP-L4PORT, IP-L4PORT-VLAN, IP-VLAN, L4PORT, MAC
		REST API	IP, IP-GRE, PORT, MAC

## Span Devices

Switch port Analyzer (SPAN) is an efficient and high performance traffic monitoring system. It duplicates the network traffic and routes the packets to an the analyzer for monitoring. SPAN is used for troubleshooting connectivity issues and calculating network utilization, and performance monitoring. You can add, edit, remove, and rediscover a device to SPAN using Nexus Dashboard Data Broker.

Beginning with Cisco Nexus Dashboard Data Broker Release, 3.10.1, Cisco Catalyst 9300 Series Switches are supported as a production switch. For details of Catalyst switches, see *relevant Cisco documentation on Cisco.com*.

**Note** Catalyst series switches 9300-24UB have been qualified for Release 3.10.1. Supported IOS XE versions are, 16.09.05 and above.

Catalyst switches can be directly onboarded and managed using the Nexus Dashboard Data Broker GUI. Catalyst switches can also be onboarded using Cisco DNA Center (Cisco DNAC). See [Integrating Cisco Nexus Dashboard Data Broker with Cisco DNA Center](#), on page 53.

The **Span Devices** tab displays details of the devices connected to the SPAN.

Select **Controllers** or **Production Switches** to see the details.

- **Controllers**—networks or devices connected to the Nexus Dashboard Data Broker controller via Cisco APIC or Cisco DNAC.

- **Production Switches**—standalone Nexus or Catalyst switches connected to the Nexus Dashboard Data Broker controller.

Table 12: Controllers

Column	Description
<b>Active IP</b>	<p>Active IP address of the controller. Click the IP address and a new pane is displayed on the right. Additional actions that can be performed from here are:</p> <ul style="list-style-type: none"> <li>• <a href="#">Editing a Span Device, on page 51</a></li> </ul> <p>Current IP address of the Cisco APIC/ Cisco DNAC controller communicating with the Nexus Dashboard Data Broker controller.</p> <p>Click the IP address and a new pane is displayed on the right side with more details.</p> <p>For Cisco DNAC controllers, the template names that Nexus Dashboard Data Broker installs on Cisco DNAC are displayed. The templates are:</p> <ul style="list-style-type: none"> <li>• NDB Monitor Session Deletion</li> <li>• NDB Monitor Session Creation</li> </ul>
<b>Username</b>	Username currently logged in to the controller .
<b>Name</b>	Name of the controller.
<b>Primary IP Address</b>	Primary IP address of the controller.
<b>Secondary IP Address</b>	(Only for APIC) Secondary IP address of the controller .
<b>Tertiary IP Address</b>	(Only for APIC) Tertiary IP address of the controller.

Table 13: Production Switches

Column	Description
<b>Active IP</b>	<p>Active IP address of the device.</p> <p>Click the IP address and a new pane is displayed on the right. Additional actions that can be performed from here are:</p> <ul style="list-style-type: none"> <li>• <a href="#">Editing a Span Device, on page 51</a></li> </ul>
<b>Username</b>	Username currently logged in to the device.
<b>Platform</b>	Platform of the device.

The following actions can be performed from the **Span Devices** tab:

- **Add Span Device**—Use this to add a new span device. See [Adding a Span Device , on page 50](#) for details.
- **Rediscover Span Device**—Select the required device by checking the check box at the beginning of the row. Click **Actions** > **Rediscover Span Device**. A pop-up window is displayed. Click **Rediscover** to rediscover the selected devices.

Use the **Rediscover Span Device** option to re-establish the connection between the Nexus Dashboard Data Broker controller and the Span device(s).

If you choose the rediscover action without selecting a check box, an error is displayed. You will be prompted to select a device.

- **Delete Span Device**—Select the required device by checking the check box which is available at the beginning of the row. Click **Actions** > **Delete Span Device**.

If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a device.

## Adding a Span Device

Use this procedure to add a device to SPAN.

### Procedure

- Step 1** Navigate to **Devices** > **Span Devices**.
- Step 2** From the **Actions** drop down list, select **Add Span Device**.
- Step 3** In the **Add Span Device** dialog box, enter the following details:

*Table 14: Add Span Device*

Field	Description
<b>General</b>	Select <b>Controller</b> or <b>Production Switch</b> . A controller can be a Cisco APIC or Cisco DNAC. A Production Switch (PS) can be a Nexus or a Catalyst switch.  The options available for each are discussed in the rows, below.
Fields displayed for <b>Controller</b> :	
<b>Controller Type</b>	Select a controller type from the drop down list. The options are: <ul style="list-style-type: none"> <li>• Cisco APIC</li> <li>• Cisco DNAC</li> </ul>
<b>IP Address/ Hostname</b>	Enter the IP address for the controller.
<b>IP Address (Secondary)</b>	(Optional; only for APIC) Enter a secondary IP address for the controller.

Field	Description
<b>IP Address (Tertiary)</b>	(Optional; only for APIC) Enter a tertiary IP address for the controller.
<b>Username</b>	Enter a username.
<b>Password</b>	Enter the required password for authentication.
<b>Cisco DNAC Name</b>	(Only for Cisco DNAC) Enter a name for the Cisco DNAC. This name is used for identification by the Nexus Dashboard Data Broker controller.
Fields displayed for <b>Production Switch</b> :	
<b>Address</b>	IP address of the Nexus or Catalyst switch.
<b>Platform Type</b>	Select from the drop down list. The options are: <ul style="list-style-type: none"> <li>• Nexus</li> <li>• Catalyst</li> </ul>
<b>Port</b>	The device communication port. Enter a port number for Nexus switches.  If you have selected the <b>Platform Type</b> as Catalyst, the default port value of 22 is displayed. Communication to catalyst switches is via SSH.
<b>Username</b>	Enter a username for the device.
<b>Password</b>	Enter the required password to authenticate the username.
<b>Enable Password</b>	(Only for Catalyst switches) Enter the required password.  <b>Note</b> If the switch is not in enable mode, then enter the password.

**Step 4** Click **Add Span Device**.

After a Cisco DNAC controller is successfully added as a span device, Nexus Dashboard Data Broker installs the required projects and templates on the Cisco DNAC controller. You can check the created projects and templates under *Template Editor* on the Cisco DNAC.

## Editing a Span Device

Use this procedure to edit parameters for a Span device.

**Before you begin**

Create one or more Span devices.

## Procedure

- Step 1** Navigate to **Devices > Span Devices**.
- Step 2** In the displayed table, click an **IP Address**.  
A new pane is displayed on the right.
- Step 3** Click **Actions** and select **Edit Span Device**.
- Step 4** In the **Edit Span Device** dialog box, the current span device information is displayed. Modify these fields, as required:

*Table 15: Edit Span Device*

Field	Description
<b>General</b>	This field can not be edited. If you have selected a <b>Controller</b> or <b>Production Switch</b> , earlier, that selection can not be changed. However, the parameters for these can be edited and they are discussed in the rows, below.
Fields displayed for <b>Controller</b> :	
<b>Controller Type</b>	The earlier selected controller type. This field can not be edited.
<b>IP Address/ Hostname</b>	The primary IP address of the controller . This field can not be edited.
<b>IP Address (Secondary)</b>	(Only for APIC) Enter a secondary IP address for the APIC device.
<b>IP Address (Tertiary)</b>	(Only for APIC) Enter a tertiary IP address for the APIC device.
<b>Username</b>	Username for the controller.
<b>Password</b>	Enter the required password for authentication.
<b>Cisco DNAC Name</b>	(Only for Cisco DNAC) Name of the Cisco DNAC. This name is used for identification by the Nexus Dashboard Data Broker controller.
Fields displayed for <b>Production Switch</b> :	
<b>Address</b>	IP address of the Nexus or Catalyst switch.
<b>Platform Type</b>	The earlier selected platform type. This field can not be edited.
<b>Port</b>	The device communication port.  The port number is 80 for Nexus switches and 22 for Catalyst switches.
<b>Username</b>	Username for the device.
<b>Password</b>	Enter the required password to authenticate the username.

Field	Description
Enable Password	(Only for Catalyst switches) Enter the required password to enable the switch.

**Step 5** Click **Save**.

## Integrating Cisco Nexus Dashboard Data Broker with Cisco DNA Center

Cisco Digital Network Architecture Center (Cisco DNAC) is a powerful network controller and management dashboard that lets you take charge of your network.

For details about Cisco DNAC, see *relevant Cisco DNAC documentation*.

The Cisco DNAC controller can be integrated with Nexus Dashboard Data Broker. SPAN session configurations on the Catalyst switches are managed from the Nexus Dashboard Data Broker UI. Nexus Dashboard Data Broker creates a separate Project and Template(s) on Cisco DNAC while onboarding. Nexus Dashboard Data Broker shares the ports details of the Catalyst switches to Cisco DNAC. Based on the templates, Cisco DNAC creates SPAN sessions on the Catalyst switches.

Examples of Nexus Dashboard Data Broker templates on the Cisco DNAC controller:

```
monitor session $sessionNumber source $sourceType $sources $direction
monitor session $sessionNumber destination interface $destinationInterfaces
```

REST APIs are used for communication between the Nexus Dashboard Data Broker controller and Cisco DNAC.

## Tap Devices

Cisco Nexus Dashboard Data Broker supports Cisco Nexus 3550-F L1 series switch as a Tap device. A Tap device is a device that makes a copy of network data but does not alter the data. Traffic from the Tap device reaches the Cisco Nexus Dashboard Data Broker for further processing.

**Table 16: Tap Devices**

Column	Description
IP Address	IP address of the tap device.
Device Name	Name of the device.
Platform	Platform of the tap device.
Node ID	The unique ID of the tap device used for identification by the Nexus Dashboard Data Broker controller.
Profile Name	Associated profile name.  If the <b>Profile</b> option was not selected while creating a tap device, no information is displayed here.
Version	The software version of the tap device.

Column	Description
<b>Status Description</b>	<p>The status of the connection between the Nexus Dashboard Data Broker controller and the tap device. The available options are:</p> <ul style="list-style-type: none"> <li>• Successfully connected—successful connection</li> <li>• Authentication failure—incorrect credentials of the tap device</li> <li>• Connection timed-out—tap device not reachable within a period of time.</li> <li>• No route to host—wrong IP address of the tap device</li> <li>• Invalid response from device—incorrect device (any other device besides Cisco Nexus 3550-L1)</li> </ul>

The following actions can be performed from the **Tap Devices** tab:

- **Add Tap Device**—Use this to add a new tap device. See [Adding a Tap Device, on page 54](#) for details.
- **Assign/ Update Profile**—Use this action to add or update the profile for a tap device. See *Update Profile* for details about this task.
- **Reconnect Tap Device(s)**— Select the required device by checking the check box at the beginning of the row. Click **Actions > Reconnect Tap Device(s)**. A pop-up appears. Click **Reconnect** to reconnect the selected tap devices. Use this option when you see a *Connection Timed Out* error between the tap device and Nexus Dashboard Data Broker controller.
- **Delete Tap Device**—Select the required tap device by checking the check box which is available at the beginning of the row. Click **Actions > Delete Device(s)**. You have two options:
  - **Delete**—disconnects the tap device from the Nexus Dashboard Data Broker controller.
  - **Purge and Delete**—disconnects the tap device from the Nexus Dashboard Data Broker controller and deletes associated configurations from the Nexus Dashboard Data Broker controller.

## Adding a Tap Device

Use this procedure to add Cisco Nexus 3550-F L1 as a tap device. The minimum supported software version is 1.15.0.

### Before you begin

- Enable HTTP on the tap device, using **configure http enable**.
- Ensure there are no pre-existing configurations on the tap device.

## Procedure

- Step 1** Navigate to **Devices > Tap Devices**.
- Step 2** From the **Actions** drop down list, select **Add Tap Device**.
- Step 3** In the **Add Tap Device** dialog box, enter the following details:

*Table 17: Add Tap Device*

Field	Description
<b>IP Address/ Hostname</b>	Enter the IP address of the tap device.
You can choose to add a tap device by either using the username of the device or using an associated profile. Select <b>Username</b> or <b>Profile</b> and fill in the relevant fields.	
<b>Username</b>	
<b>Username</b>	Enter a username to login to the device.
<b>Password</b>	Enter the password for the username.
<b>Profile</b>	
<b>Profile</b>	Select a profile from the drop-down list.
<b>Connection Type</b>	This field is read-only. The default value (REST) is displayed.

- Step 4** Click **Add Tap Device**.

## Device Groups

The **Device Groups** tab displays details of the device groups. A table is displayed with the following details:

*Table 18: Device Groups*

Column Name	Description
<b>Group</b>	<p>The device group name.</p> <p>This field is a hyperlink. Click the group name and a new pane is displayed on the right that has the list of devices included in the group. Additional actions that can be performed from here are:</p> <ul style="list-style-type: none"> <li>• <a href="#">Editing a Device Group</a></li> </ul>
<b>Devices</b>	The number of devices in the device group.

The following actions can be performed from the **Device Groups** tab:

- **Add Device Group**—Use this to add a new device group. See [Adding a Device Group](#).
- **Delete Device Group**—Select the required device group by checking the check box which is available at the beginning of the row. Click **Actions > Delete Device Group(s)**. The selected device group(s) are deleted. If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a device group.

## Adding a Device Group

Use this procedure to add a new device group.

### Procedure

- Step 1** Navigate to **Devices > Device Groups**.
- Step 2** From the **Actions** drop down menu, select **Add Device Group**.
- Step 3** In the **Add Device Group** dialog box, enter the following details:

Table 19: Add Device Group

Field	Description
<b>General</b>	
<b>Device Group Name</b>	Enter a name for the device group.
<b>Devices</b>	<p>Click <b>Select Device(s)</b>.</p> <p>The <b>Select Device</b> dialog box opens. Check the check box corresponding to the device(s) you want to add to the group. Click <b>Select</b>.</p> <p><b>Note</b> Check if the device is already part of another group; if yes, the device is removed from the previous group and added to the new group.</p>

- Step 4** Click **Add Device Group**.

## Editing a Device Group

Use this procedure to edit a device group.

### Before you begin

Add one or more device groups.

## Procedure

- Step 1** Navigate to **Devices > Device Groups**.
- Step 2** Click a **Device Group** name.  
A new pane is displayed on the right.
- Step 3** Click **Action > Edit Device Group**.  
Enter the following details, in the displayed window.

*Table 20: Edit Device Group*

Field	Description
<b>General</b>	
<b>Device Group Name</b>	Device group name. This field cannot be edited.
<b>Devices</b>	<p>The devices which are currently part of the device group are displayed. You can delete devices from a group. To add more devices to the group, click <b>Select Device(s)</b>.</p> <p>The <b>Select Device</b> dialog box opens. Check the check box corresponding to the device(s) you want to add to the group. Click <b>Select</b>.</p> <p><b>Note</b> Check if the device is already part of another group; if yes, the device is removed from the previous group and added to the new group.</p>

- Step 4** Click **Save**.

## CHAPTER 7

# Connections

This chapter has details about the connections of the Cisco Nexus Dashboard Data Broker.

Beginning with Release 3.10.1, Cisco Nexus Data Broker (NDB) has been renamed to Cisco Nexus Dashboard Data Broker. However, some instances of NDB are present in this document, to correspond with the GUI, and installation folder structure. References of NDB/ Nexus Data Broker/ Nexus Dashboard Data Broker can be used interchangeably.

- [Connections, on page 59](#)
- [User Connections, on page 59](#)
- [Default Connections, on page 69](#)

## Connections

The **Connections** tab has the following subtabs:

- **User Connections**—user-defined connections to manage traffic between an input port and monitoring tool port. See [User Connections](#) for more details.
- **Default Connections**—by default, ingress traffic on the input ports is denied, until a user-defined connection is defined. See [Default Connections](#) for more details.

## User Connections

The **User Connections** tab displays details of all the user-defined connections between input port(s) (with or without filters) and monitoring tool port(s).

A table with the following details is displayed:

Table 21: User Connections

Column Name	Description
Connection Name	<p>The name of the connection.</p> <p>This field is a hyperlink. Click the name of the connection. A new pane is displayed on the right which has more information about the connection. You can view the topology of the connection in either <b>Deployment View</b> or <b>Network View</b>.</p> <p>Additional actions that can be performed here:</p> <ul style="list-style-type: none"> <li>• <b>Edit Connection</b>—Select this action to edit a connection. See <a href="#">Edit Connection</a> for details.</li> <li>• <b>Clone Connection</b>—Select this action to clone a connection. See <a href="#">Edit Connection</a> for details. Cloning a connection is similar to editing a connection.</li> </ul> <p>Click the <b>Details</b> icon (  ) to get additional details of the connection. A new window displays the following details for the selected connection:</p> <ul style="list-style-type: none"> <li>• General</li> <li>• Deployment View</li> <li>• Network View</li> <li>• Flow Statistics</li> <li>• Port Statistics</li> </ul>
Type	<p>Type of connection. The options are:</p> <ul style="list-style-type: none"> <li>• Normal— here, the connection applies filters on the input ports and redirects traffic to the monitoring tool.</li> <li>• Auto Priority— here, the connection redirects the traffic to the monitoring tool based on the set auto-priority number. For more details, see <a href="#">Auto Priority, on page 69</a>.</li> </ul>
Applied Filters	<p>The number of <b>Allow</b> and <b>Drop</b> filters applied to the connection. Matching traffic is either dropped or allowed based on the selection.</p> <p>This field is a hyperlink. Click the displayed number and a new pane opens on the right. A list of all the filters applied to the connection is displayed.</p>

Column Name	Description
<b>Input Port/ Input Port Groups</b>	<p>The number of input ports and/or input port groups of the connection.</p> <p>This field is a hyperlink. Click the displayed number and a new pane opens on the right. A list of sources (production devices from which traffic reaches the Nexus Dashboard Data Broker controller) and ports applicable to the connection is displayed.</p>
<b>Monitoring Tools/ Monitoring Tools Group</b>	<p>The number of monitoring tools and/or monitoring tool groups of the connection.</p> <p>This field is a hyperlink. Click the displayed number and a new pane opens on the right. A list of monitoring tools applicable to the connection is displayed.</p>
<b>Description</b>	Description of the connection.
<b>Created By</b>	User who created the connection.
<b>Last Modified By</b>	User who last modified the connection.
<b>Status Description</b>	<p>The status of the connection between the input port and monitoring tool port. The status description gets auto-refreshed based on the latest status.</p> <p>You can also click the <i>Refresh</i> icon, , to get the latest status.</p>

A color coded circle and a lock are displayed at the beginning of each row. The factors impacting the status of a connection are— operational and administration state of the source ports, operational state and administration state of the monitoring tools and the sessions involved in the connection.

- A green circle indicates that the connection is successful.
- A red circle indicates that the connection has failed.
- A yellow circle indicates the connection is partially successful; one or more input port(s) and monitoring tools have errors.
- A gray circle indicates that the connection is not operational; check the state of all the input ports and monitoring tools.

The lock symbol indicates that the connection is locked and unauthorized modification of the connection parameters is not allowed. Only the user (or administrator) who has created the connection or the user who has locked the connection can make required changes. You can lock a connection while adding a connection.

The following actions can be performed from the **User Connections** tab:

- **Add Connection**—Select this action to add a new connection. See [Add Connection](#) for details about this task.

- **Delete Connection**—Select the required connection(s) by checking the check box which is at the beginning of the row. Click the **Actions** button and, select **Delete Connection**. The selected connection(s) are deleted. If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a connection.
- **Toggle Install**—Select the required connection(s) by checking the check box which is at the beginning of the row. Click the **Actions** button, select **Toggle Install** to install a connection. **Toggle Install** will install/ uninstall connection(s) on the NDB devices but the connection configuration will not be deleted from the Nexus Dashboard Data Broker controller.

If you choose the toggle install action without selecting a check box, an error is displayed. You will be prompted to select a connection.

You can disable deny ACL on all the ISL interfaces by setting the **configure.global.acls** parameter to false in the **config.ini** file. Ensure that you restart Nexus Dashboard Data Broker after making changes in the configuration file.

You can disable Global deny ACL or ISL deny ACL during the CLI upgrade or configuration upload by using the CLI upgrade command and setting the **configure.global.acls** parameter to false in the **config.ini** file. For example:

```
configure.global.acls=false
```

## Adding a Connection

Use this procedure to add a connection. A connection establishes a link between the input ports (with filters) of a device to the monitoring tool ports of the device.

### Before you begin

Complete these tasks:

- Define a filter for the connection
- Configure a monitoring tool (recommended)
- Configure an edge port (recommended)

Follow these restrictions and usage guidelines for creating a connection:

- Configure QinQ VLAN to add a new connection with auto priority across devices (with multiple hops).
- You can configure only one connection with auto priority for each input port/port group.

### Procedure

- 
- Step 1** Navigate to **Connections > User Connections**.
- Step 2** From the **Actions** drop-down list, select **Add Connection**.
- Step 3** In the **Add Connection** dialog box, enter the following details:

Table 22: Add Connection

Field	Description
Connection Name	Enter the connection name.
Description	Enter a description for the connection.
Priority	<p>Enter the priority you want to set for the connection. By default, priority level is 100. Range is from 2 to 10000. Higher the number, greater the priority. For example, 200 indicates higher priority when compared to 100.</p> <p>Incoming traffic from the ports is matched based on priority. If two connections have the same inputs ports and same filters, traffic takes the connection with the higher priority.</p> <p><b>Note</b> By default, Edit is enabled for the Cisco NDB administrator role.</p>
Lock Connection	<p>Click the gray button to lock the connection. The gray button turns blue and moves to the right indicating that locking is enabled.</p> <p>Locking a connection prevents unauthorized changes to a connection.</p>
AutoPriority	<p>Click the gray button to enable auto priority. The gray button turns blue and moves to the right indicating that AutoPriority is enabled.</p> <p>When <b>AutoPriority</b> is enabled, the <b>Priority</b> field is disabled. NDB automatically assigns a priority for a connection based on certain criteria (monitoring tools and filters).</p> <p>Auto priority provides flexibility to map filters to multiple monitoring tools in a connection. For more details, see <a href="#">Auto Priority, on page 69</a>.</p>
Connection Topology	Here, you can define <b>Input Port(s)</b> , <b>Filter(s)</b> and <b>Monitoring Tools(s)</b> for a connection.

Field	Description
<b>Input Port</b>	<p>Select an input port for the connection.</p> <p>Click <b>Select Input Port(s)/ Group</b>. Select either <b>Input Port</b> or <b>Input Port Group</b>.</p> <p>If you select <b>Input Port</b>, a list of devices is displayed.</p> <ol style="list-style-type: none"> <li>To select a device, check the corresponding check box. Based on the selected device, the available ports of the device are displayed.</li> <li>To select a port, check the corresponding check box. Details of the selected port(s) are displayed on the right. The current status of the port is displayed by a color-coded circle.</li> </ol> <p><b>Note</b> Click <b>Add Input Port</b> to add an input port for the selected device. For the detailed procedure, see <i>Adding an Input Port</i> in the <b>Components</b> chapter.</p> <ol style="list-style-type: none"> <li>Click <b>Select</b> to include the selected source port(s) as part of the connection.</li> </ol> <p>If you select <b>Input Port Group</b>, a list of port groups is displayed.</p> <ol style="list-style-type: none"> <li>To select a port group, check the corresponding check box. Details of the selected port group(s) are displayed on the right. The current status of the port group is indicated by a color-coded circle.</li> </ol> <p><b>Note</b> Click <b>Add Input Port Group</b> to add an input port group. For the detailed procedure, see <i>Adding an Input Port</i> in the <b>Components</b> chapter.</p> <p>.</p> <ol style="list-style-type: none"> <li>Click <b>Select</b> to include the selected source port group(s) as part of the connection.</li> </ol>

Field	Description
Filter	<p>Click <b>Select Filter(s)</b>.</p> <p><b>a.</b> To select a filter, check the corresponding check box. Details of the selected filter(s) are displayed on the right. More than one filter can be selected. You can either choose to use the <b>Allow</b> or <b>Deny</b> behavior for a filter. Allow enables the traffic from the input ports to pass through; deny drops the traffic from the input ports.</p> <p><b>Note</b> Click <b>Add Filter</b> to add a filter. For the detailed procedure, see <a href="#">Adding a Filter</a>.</p> <p><b>b.</b> Click <b>Select</b> to include the selected filter(s) as part of the connection.</p> <p><b>Note</b> This field is disabled if <b>AutoPriority</b> is enabled.</p>

Field	Description
Monitoring Tools	<p>The <b>Select Monitoring Tool(s)/ Group</b> option is displayed if AutoPriority is not enabled.</p> <p>Click <b>Select Monitoring Tool(s)/ Group</b> . Select either <b>Monitoring Tool</b> or <b>Tool Group</b>.</p> <p>If you select <b>Monitoring Tool</b>, a list of monitoring tools is displayed.</p> <ol style="list-style-type: none"> <li>To select a monitoring tool, check the corresponding check box. The details of the monitoring tool are displayed on the right, with the current status of the monitoring tool. The status is indicated by color coded circles.</li> </ol> <p><b>Note</b> Click <b>Add Monitoring Tool</b> to add a monitoring tool. For the detailed procedure, see <a href="#">Adding a Monitoring Tool</a>.</p> <ol style="list-style-type: none"> <li>Click <b>Select</b> to include the monitoring tool(s) as part of the connection.</li> </ol> <p>If you select <b>Tool Group</b>, a list of monitoring tool groups is displayed.</p> <ol style="list-style-type: none"> <li>To select a tool group, check the corresponding check box. Details of the selected tool group(s) are displayed on the right. The current status of the tool group is indicated by a color coded circle.</li> </ol> <p><b>Note</b> Click <b>Add Monitoring Tool Group</b> to add a monitoring tool group. For the detailed procedure, see <a href="#">Adding a Monitoring Tool Group</a>.</p> <ol style="list-style-type: none"> <li>Click <b>Select</b> to include the selected tool group(s) as part of the connection.</li> </ol> <p>The <b>Select Monitoring Tool and Filter Pair</b> option is displayed if AutoPriority is enabled.</p> <ol style="list-style-type: none"> <li>Select one or more monitoring tool(s) and filter(s).</li> <li>Click <b>Select</b>.</li> </ol>

**Step 4** Click **Add Connection** to add the connection or **Install Connection** to add and deploy the connection on the NDB device.

If the data broker detects two connections having the same Q-in-Q VLAN (while adding a new connection or modifying an existing one), merging the connections is possible. After clicking **Add Connection** or **Install Connection**, a pop-up window is displayed. Click **Yes** to merge the two connections.

## Editing or Cloning a Connection

Use this procedure to edit or clone a connection.

Editing a connection means changing the parameters of an existing connection.

Cloning a connection means creating a new connection with identical parameters of an existing connection, and then, changing the required parameters. Ensure to change the name of the connection before saving it.

### Before you begin

Create one or more connections.

### Procedure

**Step 1** Navigate to **Connections > User Connections**.

**Step 2** In the displayed table, click a **Connection Name**.

A new pane is displayed on the right.

**Step 3** Click **Actions** and select **Edit Connection**.

To clone a connection, select **Clone Connection**.

**Step 4** In the **Edit Connection** or **Clone Connection** dialog box, the current connection information is displayed. Modify these fields, as required:

*Table 23: Edit Connection/ Clone Connection*

Field	Description
Connection Name	Connection name.
Description	Description of the connection.
Priority	The current priority of the connection.
Lock Connection	Click the gray button to lock the connection. The gray button turns blue and moves to the right indicating that locking is enabled.  Locking a connection prevents unauthorized changes to a connection.
Auto Priority	If <b>Auto Priority</b> was not enabled while adding a connection, then this field is disabled.
Connection Topology	Here, you can define <b>Input Port(s)</b> , <b>Filter(s)</b> and <b>Monitoring Tools(s)</b> for a connection.

Field	Description
<b>Input Port</b>	<p>The current input port(s) included in the connection are displayed. Click the cross mark adjacent to an input port to delete the port from the connection. To edit the input ports, click <b>Select Input Port(s)/ Group</b>. Select either <b>Input Port</b> or <b>Input Port Group</b>.</p> <p>If you select <b>Input Port</b>, a list of devices is displayed.</p> <ol style="list-style-type: none"> <li>To select a device, check the corresponding check box. Based on the selected device, the available ports of the device are displayed.</li> <li>To select a port, check the corresponding check box. Details of the selected port(s) are displayed on the right.</li> <li>Click <b>Select</b> to include the selected source port(s) as part of the connection.</li> </ol> <p>If you select <b>Input Port Group</b>, a list of port groups is displayed.</p> <ol style="list-style-type: none"> <li>To select a port group, check the corresponding check box. Details of the selected port group(s) are displayed on the right.</li> <li>Click <b>Select</b> to include the selected source port group(s) as part of the connection.</li> </ol>
<b>Filter</b>	<p>The current filter(s) included in the connection are displayed. Click the cross mark adjacent to a filter to delete the filter from the connection. To edit filters, click <b>Select Filter(s)</b>.</p> <ol style="list-style-type: none"> <li>To select a filter, check the corresponding check box. Details of the selected filter(s) are displayed on the right. More than one filter can be selected.</li> <li>Click <b>Select</b> to include the selected filter(s) as part of the connection.</li> </ol>

Field	Description
Monitoring Tools	<p>The current monitoring tool(s) or tool group(s) included in the connection are displayed. Click the cross mark adjacent to a monitoring tool or tool group to delete it from the connection. To edit any of these, click <b>Select Monitoring Tool(s)/ Group</b> . Select either <b>Monitoring Tool</b> or <b>Tool Group</b>.</p> <p>If you select <b>Monitoring Tool</b>, a list of monitoring tools is displayed.</p> <ol style="list-style-type: none"> <li>To select a monitoring tool, check the corresponding check box. The details of the monitoring tool are displayed on the right, with the current status of the monitoring tool. The status is indicated by color coded circles.</li> <li>Click <b>Select</b> to include the monitoring tool(s) as part of the connection.</li> </ol> <p>If you select <b>Tool Group</b>, a list of monitoring tool groups is displayed.</p> <ol style="list-style-type: none"> <li>To select a tool group, check the corresponding check box. Details of the selected tool group(s) are displayed on the right. The current status of the tool group is indicated by a color coded circle.</li> <li>Click <b>Select</b> to include the selected tool group(s) as part of the connection.</li> </ol>

**Step 5** Click **Save**.

## Auto Priority

Auto priority provides flexibility to map filters to multiple destination devices in a connection. The priority of a connection with Auto-Priority is set to the value configured in the `config.ini` file. You can configure the `connection.autopriority.priorityValue` attribute in the `config.ini` file with a priority value to be used for all the new connections with auto-priority. The connection information lists the allowed filters along with the destination devices.

## Default Connections

The **Default Connections** tab displays details of the default Nexus Dashboard Data Broker connections. Default deny rules are system-configured on the input ports, monitoring tools and packet truncation ports. This means, by default, traffic received on the input ports is denied, until a user defined connection is configured.

By default, deny ACL is enabled on all the Inter Switch Links (ISL) interfaces causing all the traffic in the ISL interfaces to be dropped if there is no connection installed. The following connections are installed on the ISL interfaces:

- Default-Deny-ISL-*device\_name* connection with Default-Deny-All, Default-Deny-MPLS, and Default-Deny-ARP filters. This connection is supported on all the types of switches in NXAPI mode.

- Default-Deny-ISL-ICMP-*device\_name* connection with Default-Deny-ICMP and Default-Deny-ICMP-All filters. This connection is supported on Nexus 9200, 9300EX, 9300FX, 9500EX, and 9500FX switches in NXAPI mode.
- You can manage this feature using the `mm.addDefaultISLDenyRules` attribute in `config.ini` file. By default, the `mm.addDefaultISLDenyRules` attribute is not present in `config.ini` file. To disable this feature, you need to add the `mm.addDefaultISLDenyRules` attribute to `config.ini` file and set it to `false` and restart the device. For example:

```
mm.addDefaultISLDenyRules = false
```

A table is displayed with the following details:

**Table 24: Default Connections**

Column Name	Description
<b>Connection Name</b>	<p>The default connection name.</p> <p>This field is a hyperlink. Click the name of the connection. A new pane is displayed on the right which has more information about the connection.</p> <p>The following actions can be performed here:</p> <ul style="list-style-type: none"> <li>• <b>Clone Connection</b>—Select this action to clone a connection. See <a href="#">Edit Connection</a> for details. Cloning a connection is similar to editing a connection.</li> </ul> <p><b>Note</b> Default connections cannot be edited.</p>
<b>Drop Filters</b>	<p>The number of drop filters for the connection.</p> <p>Drop filters on NDB drop the matching traffic.</p>
<b>Input / Monitoring Ports</b>	The number of input or monitoring ports.
<b>Description</b>	Description of the connection.

## CHAPTER 8

# Components

This chapter has details about the components of the Cisco Nexus Dashboard Data Broker.

Beginning with Release 3.10.1, Cisco Nexus Data Broker (NDB) has been renamed to Cisco Nexus Dashboard Data Broker. However, some instances of NDB are present in this document, to correspond with the GUI, and installation folder structure. References of NDB/ Nexus Data Broker/ Nexus Dashboard Data Broker can be used interchangeably.

- [Filters, on page 71](#)
- [Global Configuration, on page 83](#)
- [Input Ports , on page 92](#)
- [Monitoring Tools, on page 101](#)
- [Port Groups, on page 108](#)
- [Span Destination, on page 113](#)
- [User Defined Field, on page 115](#)

## Filters

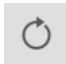

The **Filters** tab displays details of all the filters available on the Nexus Dashboard Data Broker controller. The tab provides information of the filtering criteria (used in a connection) for the incoming traffic.

The default filters include the following protocols for packet filtering:

- Default-match-all
- Default-match-IP
- Default-match-ARP
- Default-match-MPLS ( unicast and multicast)
- Default-match-ICMP
- Default-match-ICMP-All

A table is displayed with the following details:

Table 25: Filters

Column Name	Description
<b>In Use</b>	A green tick mark indicates that the filter is in use, in a connection.
<b>Filter</b>	<p>The filter name.</p> <p>Click <b>Filter</b>. A new pane is displayed on the right which has more information about the filter. The following additional actions can be performed from here:</p> <p><b>Note</b> Default filters cannot be edited.</p>
<b>Bidirectional</b>	<p>If a filter is bidirectional, a <b>Yes</b> is displayed; else a <b>No</b> is displayed.</p> <p>If a filter is marked bidirectional, incoming and outgoing traffic is filtered at the same port.</p>
<b>Ethertype</b>	Layer 2 ethertype of the filter.
<b>Protocol</b>	Layer 3 protocol used by the filter.
<b>Advanced Filter(s)</b>	The advanced filters associated with the filter.
<b>Created By</b>	The user who created the filter.
<b>Last Modified By</b>	The user who last modified the filter.
<b>Status Description</b>	<p>The current status of the filter. The status description gets auto-refreshed based on the latest status.</p> <p>You can also click the <i>Refresh</i> icon, , to get the latest status.</p>

The following actions can be performed from the **Filters** tab:

- **Add Filter**—Use this to add a new filter. See details about this task.
- **Delete Filter**—Select the filter(s) to be deleted by checking the check box which is available at the beginning of the row and then click **Actions > Delete Filter(s)**. The selected filter(s) is deleted. If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a filter.

## Adding a Filter

Use this procedure to add a filter. The incoming traffic is matched based on the parameters defined in a filter.

## Procedure

- Step 1** Navigate to **Components > Filters**.
- Step 2** From the **Actions** drop down menu, select **Add Filter**.
- Step 3** In the **Add Filter** dialog box, enter the following details:

*Table 26: Add Filter*

Field	Description
<b>Filter Name</b>	Enter a name for the filter.
<b>Bidirectional</b>	Check this box if you want the filter to capture bidirectional traffic information, that is, from a source IP, source port, or source MAC address to a destination IP, destination port, or destination MAC address, and from a destination IP, destination port, or destination MAC to a source IP, source port, or source MAC address.

Field	Description
Layer 2	<p>The options displayed for using Layer 2 filtering are:</p> <ul style="list-style-type: none"> <li>• <b>Ethernet Type</b>—Select the Ethernet Type from the drop-down list. The options are: <ul style="list-style-type: none"> <li>• IPv4</li> <li>• IPv6</li> <li>• LLDP</li> <li>• MPLS</li> <li>• ARP</li> <li>• All Ethernet Types</li> </ul> </li> <li>• <b>Predefined Ethernet Types</b>— If you choose this option, all predefined Ethernet types contained in the <code>config.ini</code> file are associated with the rule, and you should not configure any other parameters.</li> <li>• <b>Enter Ethernet Type</b>—If you choose this option, enter the ethernet type in hexadecimal format.</li> <li>• <b>VLAN Identification Number</b>—Enter the VLAN ID for the Layer 2 traffic. You can enter a single VLAN ID, a range of VLAN ID values, or comma-separated VLAN ID values and VLAN ID ranges. Maximum value is 4095.</li> <li>• <b>VLAN Priority</b>—Enter the VLAN priority for the traffic. VLAN Priority is matched for Layer 2 traffic only.</li> <li>• <b>Source MAC Address</b>—Enter the MAC address of the source device. MAC addresses are matched for Layer 2 traffic only.</li> <li>• <b>Destination MAC Address</b>—Enter the MAC address of the destination device. MAC addresses are matched for Layer 2 traffic only.</li> <li>• <b>MPLS Label Value</b>—Enter the MPLS value for Label 1, Label 2, Label 3, Label 4.  The <b>MPLS Label Value</b> fields are displayed only if the <b>Ethernet Type</b> is set to MPLS. The MPLS label values are matched.</li> </ul>

Field	Description
<b>Layer 3</b> To enable options for Layer 3, choose <b>IPv4</b> or <b>IPv6</b> as <b>Ethertype</b> under the Layer 2 tab.	

Field	Description
	<p>The options displayed for Layer 3 filtering are:</p> <ul style="list-style-type: none"> <li>• Source IP Address—Enter the Source IP address of the Layer 3 traffic. This can be one of the following: <ul style="list-style-type: none"> <li>• The host IP address in the standard IPv4 or IPv6 format</li> <li>• An IPv4 or IPv6 address range</li> <li>• Combination of an address range and standard IP addresses; example: 10.1.1.1, 10.1.1.2-10.1.1.5</li> <li>• Comma-separated discontinuous IP addresses; example: 10.1.1.1, 10.1.1.2, 10.1.1.5</li> </ul> <p><b>Note</b> If you configure a range of Layer 3 source IP addresses, you cannot configure ranges of Layer 4 source or destination ports.</p> <p>If you configure a range of Layer 3 source IP addresses, you cannot configure ranges of Layer 2 VLAN identifiers.</p> </li> <li>• Destination IP Address—Enter the Destination IP address of the Layer 3 traffic. This can be one of the following: <ul style="list-style-type: none"> <li>• The host IP address in the standard IPv4 or IPv6 format</li> <li>• An IPv4 or IPv6 address range</li> <li>• Combination of an address range and standard IP addresses; example: 10.1.1.1, 10.1.1.2-10.1.1.5</li> <li>• Comma-separated discontinuous IP addresses; example: 10.1.1.1, 10.1.1.2, 10.1.1.5</li> </ul> <p><b>Note</b> If you configure a range of Layer 3 source IP addresses, you cannot configure ranges of Layer 4 source or destination ports.</p> <p>If you configure a range of Layer 3 source IP addresses, you cannot configure ranges of Layer 2 VLAN identifiers.</p> </li> <li>• L4 Protocol—Select a Layer 4 protocol from the drop down list or enter a <b>Protocol Number</b>.</li> <li>• Advanced Filter—Click the button to enable advanced filtering and check the check-boxes to select the required options. For details about the options pertaining to Advanced Filters, see <a href="#">Advanced Filters</a>.</li> <li>• Custom Filter—Click the button to enable custom filtering using User Defined Fields (UDF). Click <b>Select UDFs</b> and select a filter in the <b>Select Custom Filters</b> window. The</li> </ul>

Field	Description
	<p>UDFs created using <a href="#">Adding a UDF</a> are displayed here.</p> <p>The selected UDF(s) are displayed in a table. Enter the following details for the selected UDF:</p> <ul style="list-style-type: none"><li>• Value—is the value to be matched in decimal notation (0-65535). E.g. if you want to match 0x0806 enter 2054 which is 0x0806 in decimal notation.</li><li>• Mask—is the mask to be applied to the value for matching purposes. E.g. to exactly match 2054 (0x0806) enter 65535 (0xffff), to match 2048-2063 (0x0800-0x080f) use 65520 (0xffff0).</li></ul> <p><b>Note</b> When the monitoring tool port is on an ISL device, it is mandatory to select <b>Add Default UDF for inner vlan</b> checkbox. Ensure the input port has Q-in-Q configured.</p>

Field	Description
<p><b>Layer 4</b></p> <p>To enable options for Layer 4, choose <b>IPv4</b> or <b>IPv6</b> as <b>Ethertype</b> under the Layer 2 tab and choose <b>TCP</b> or <b>UDP</b> as <b>L4 Protocol</b> under the Layer 3 tab.</p>	<p>The options displayed for Layer 4 filtering are:</p> <ul style="list-style-type: none"> <li>• Source Port—Select the source port from the drop down list. The options are: <ul style="list-style-type: none"> <li>• FTP (Data)</li> <li>• FTP (Control)</li> <li>• SSH</li> <li>• Telnet</li> <li>• HTTP</li> <li>• HTTPS</li> </ul> </li> <li>• Enter Source Port—Enter the source port. You can enter comma separated single port numbers or a range of source port numbers. <p><b>Note</b> If you enter a range of Layer 4 source ports, you cannot configure ranges of Layer 3 IP addresses or Layer 2 VLAN identifiers.</p> </li> <li>• Destination Port—Select the destination port from the drop down list. The options are: <ul style="list-style-type: none"> <li>• FTP (Data)</li> <li>• FTP (Control)</li> <li>• SSH</li> <li>• Telnet</li> <li>• HTTP</li> <li>• HTTPS</li> </ul> </li> <li>• Enter Destination Port—Enter the source port. You can enter comma separated single port numbers or a range of source port numbers. <p><b>Note</b> If you enter a range of Layer 4 destination ports, you cannot configure ranges of Layer 2 VLAN identifiers or Layer 3 IP addresses.</p> </li> </ul>
<b>Layer 7</b>	Not supported.

**Note**

For Custom Filtering: You can add upto four UDFs for a filter. UDF option is enabled for IPv4 and IPv6 ethertypes.

**Step 4** Click **Add Filter** to add the filter.

## Editing or Cloning a Filter

Use this procedure to edit or clone a filter.

Editing a filter means changing the parameters of an existing filter.

Cloning a filter means creating a new filter with the same parameters of an existing filter and making the required changes to the filter parameters. Ensure to change the name of the filter before saving it.

**Note** Default filters cannot be edited.

### Before you begin

Add one or more filters.

### Procedure

**Step 1** Navigate to **Components > Filters**.

**Step 2** In the displayed table, click a **Filter**.

A new pane is displayed on the right.

**Step 3** Click **Actions** and select **Clone Filter**.

**Step 4** In the **Clone Filter** or **Edit Filter** dialog box, the current filter information is displayed. Modify these fields, as required:

*Table 27: Edit/ Clone Filter*

Field	Description
<b>Filter Name</b>	Name of the filter.
<b>Bidirectional</b>	Check this box if you want the filter to capture bidirectional traffic information, that is, from a source IP, source port, or source MAC address to a destination IP, destination port, or destination MAC address, and from a destination IP, destination port, or destination MAC to a source IP, source port, or source MAC address.

Field	Description
Layer 2	<p>The options displayed while using Layer 2 are:</p> <ul style="list-style-type: none"> <li>• Ethernet Type—Select the Ethernet Type from the drop-down list. The options are: <ul style="list-style-type: none"> <li>• IPv4</li> <li>• IPv6</li> <li>• LLDP</li> <li>• MPLS</li> <li>• ARP</li> <li>• All Ethernet Types</li> </ul> </li> <li>• Predefined Ethernet Types— If you choose this option, all predefined Ethernet types contained in the <code>config.ini</code> file are associated with the rule, and you should not configure any other parameters.</li> <li>• Enter Ethernet Type—If you choose this option, enter the ethernet type in hexadecimal format.</li> <li>• VLAN Identification Number—Enter the VLAN ID for the Layer 2 traffic. You can enter a single VLAN ID, a range of VLAN ID values, or comma-separated VLAN ID values and VLAN ID ranges. Maximum value is 4095.</li> <li>• VLAN Priority—Enter the VLAN priority for the traffic. VLAN Priority is matched for Layer 2 traffic only.</li> <li>• Source MAC Address—Enter the MAC address of the source device. MAC addresses are matched for Layer 2 traffic only.</li> <li>• Destination MAC Address—Enter the MAC address of the destination device. MAC addresses are matched for Layer 2 traffic only.</li> <li>• MPLS Label Value—Enter the MPLS value for Label 1, Label 2, Label 3, Label 4.  The <b>MPLS Label Value</b> fields are displayed only if the <b>Ethernet Type</b> is set to MPLS. The MPLS label values are matched.</li> </ul>

Field	Description
<p><b>Layer 3</b></p> <p>To enable options for Layer 3, choose <b>IPv4</b> or <b>IPv6</b> as <b>Ethertype</b> under the Layer 2 tab.</p>	<p>The options displayed while using Layer 3 are:</p> <ul style="list-style-type: none"> <li>• Source IP Address—Enter the Source IP address of the Layer 3 traffic. This can be one of the following: <ul style="list-style-type: none"> <li>• The host IP address in the standard IPv4 or IPv6 format</li> <li>• An IPv4 or IPv6 address range</li> <li>• Combination of an address range and standard IP addresses; example: 10.1.1.1, 10.1.1.2-10.1.1.5</li> <li>• Comma-separated discontinuous IP addresses; example: 10.1.1.1, 10.1.1.2, 10.1.1.5</li> </ul> </li> </ul> <p><b>Note</b> If you configure a range of Layer 3 source IP addresses, you cannot configure ranges of Layer 4 source or destination ports.</p> <p>If you configure a range of Layer 3 source IP addresses, you cannot configure ranges of Layer 2 VLAN identifiers.</p> <ul style="list-style-type: none"> <li>• Destination IP Address—Enter the Destination IP address of the Layer 3 traffic. This can be one of the following: <ul style="list-style-type: none"> <li>• The host IP address in the standard IPv4 or IPv6 format</li> <li>• An IPv4 or IPv6 address range</li> <li>• Combination of an address range and standard IP addresses; example: 10.1.1.1, 10.1.1.2-10.1.1.5</li> <li>• Comma-separated discontinuous IP addresses; example: 10.1.1.1, 10.1.1.2, 10.1.1.5</li> </ul> </li> </ul> <p><b>Note</b> If you configure a range of Layer 3 source IP addresses, you cannot configure ranges of Layer 4 source or destination ports.</p> <p>If you configure a range of Layer 3 source IP addresses, you cannot configure ranges of Layer 2 VLAN identifiers.</p> <ul style="list-style-type: none"> <li>• L4 Protocol—Select a Layer 4 protocol from the drop down list.</li> <li>• Advanced Filter—Click the button to enable advanced filtering and check the check-boxes to select the required options. For more details about Advanced Filters, see <a href="#">Advanced Filters</a>.</li> <li>• Custom Filter—Click the button to enable custom filtering using User Defined Fields (UDF). Click <b>Select UDFs</b> and select a filter in the <b>Select Custom Filters</b> window.</li> </ul>

Field	Description
<p><b>Layer 4</b></p> <p>To enable options for Layer 4, choose <b>IPv4</b> or <b>IPv6</b> as <b>Ethertype</b> under the Layer 2 tab and choose <b>TCP</b> or <b>UDP</b> as <b>L4 Protocol</b> under the Layer 3 tab.</p>	<p>The options displayed while using Layer 4 are:</p> <ul style="list-style-type: none"> <li>• Source Port—Select the source port from the drop down list. The options are: <ul style="list-style-type: none"> <li>• FTP (Data)</li> <li>• FTP (Control)</li> <li>• SSH</li> <li>• Telnet</li> <li>• HTTP</li> <li>• HTTPS</li> </ul> </li> <li>• Enter Source Port—Enter the source port. You can enter comma separated single port numbers or a range of source port numbers. <p><b>Note</b> If you enter a range of Layer 4 source ports, you cannot configure ranges of Layer 3 IP addresses or Layer 2 VLAN identifiers.</p> </li> <li>• Destination Port—Select the destination port from the drop down list. The options are: <ul style="list-style-type: none"> <li>• FTP (Data)</li> <li>• FTP (Control)</li> <li>• SSH</li> <li>• Telnet</li> <li>• HTTP</li> <li>• HTTPS</li> </ul> </li> <li>• Enter Destination Port—Enter the source port. You can enter comma separated single port numbers or a range of source port numbers. <p><b>Note</b> If you enter a range of Layer 4 destination ports, you cannot configure ranges of Layer 2 VLAN identifiers or Layer 3 IP addresses.</p> </li> </ul>
<b>Layer 7</b>	Not supported.

**Step 5** Click **Save**.

## Advanced Filters

Advanced filtering provides multiple options to filter (permit or deny) the traffic based on Ethernet type and attributes such as Acknowledgment, FIN, Fragments, PSH, RST, SYN, DSCP, Precedence, TTL, packet-length, and NVE. Advanced filtering is available for the following Ethernet types and options:

**Table 28: Advanced Filtering Support**

Data Type	Supported Options
IPv4	DSCP, Fragment, Precedence, and TTL
IPv4 with TCP	Acknowledgment, DSCP, Fragment, FIN, Precedence, PSH, RST, SYN, and TTL
IPv4 with UDP	DSCP, Fragment, Precedence, and TTL
IPv6	DSCP and Fragment
IPv6 with TCP	Acknowledgment, DSCP, Fragment, FIN, PSH, RST, and SYN
IPv6 with UDP	DSCP and Fragment

**Note** Advanced Filtering is available only for NX-API on Cisco Nexus 9000 platform.

The Time to Live (TTL) attributes range from 0 to 255. For Nexus 9200 devices, the maximum value of TTL that can be set is 3. For rest of the Nexus 9000 series devices, the maximum TTL value can be 3 for NX-OS version 7.0(3)I6(1) and above. For NXOS versions 7.0(3)I4(1) and below, you can configure any value within the range.

### Limitations for using Advanced Filtering

While configuring Advanced Filters, you cannot:

- Configure DSCP and precedence together.
- Configure fragments and ACK or SYN or FIN or PSH or RST together.
- Configure fragments and port numbers with UDP and IPv4 or IPv6 combination.
- Configure precedence and HTTP methods with IPv4 and TCP combination.

## Global Configuration

The **Global Configuration** tab displays the devices connected to the Nexus Dashboard Data Broker controller. New devices added to the Nexus Dashboard Data Broker controller are displayed here by default.

**Note** Only *Connected* devices (connection status indicated in green) are displayed here. If a device is added to the Nexus Dashboard Data Broker controller, but is *not connected* (connection status indicated in red), then, that device is not displayed here. To check the status of a device, see [NDB Devices](#).

A table with the following details is displayed:

**Table 29: Global Configuration**

Column Name	Description
<b>Device</b>	The device name.  This is a hyperlink, click the <b>Device</b> name to get the global configuration details of the device.
<b>Loadbalancing</b>	Displays the type of load balancing. The options are: <ul style="list-style-type: none"> <li>• Symmetric</li> <li>• Non-symmetric</li> </ul>
<b>PTP</b>	Displays if PTP is enabled or not. The options are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
<b>Jumbo MTU</b>	The Jumbo MTU size for the device.  Jumbo MTU is the maximum MTU that can be configured for a device.
<b>MPLS Strip</b>	Displays if MPLS stripping is enabled or not on the device. The options are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
<b>MPLS Filter</b>	Displays if MPLS filtering on the device, is enabled or not. The options are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>
<b>Netflow</b>	Displays if Netflow on the device, is enabled or not. The options are: <ul style="list-style-type: none"> <li>• Enabled</li> <li>• Disabled</li> </ul>

The following actions can be performed from the **Global Configuration** tab:

- **Edit Global Configuration**—For details of the procedure, see [Editing Global Configuration for a Device, on page 85](#).

## Editing Global Configuration for a Device

Use this procedure to edit global configuration for a device. You can make global changes to the parameters of a device. For example, the Jumbo MTU value set here, defines the MTU value for an input port of the device.

When a device is created, some basic configurations are created and some default values are set. Use this procedure to change or add one or more parameters for a device.

### Before you begin

Create one or more devices. Check the status of the device.

### Procedure

- Step 1** Navigate to **Components > Global Configuration**.
- Step 2** Select a device by checking the check box at the beginning of the row.
- Step 3** From the **Actions** drop down menu, select **Edit Global Configuration**.
- Step 4** In the **Edit Global Configuration** dialog box, enter the following details:

*Table 30: Edit Global Configuration*

Field	Description
<b>General</b>	
<b>Device</b>	The device name is displayed based on your earlier selection.
<b>Load Balancing Type Configuration</b>	Select <b>Symmetric</b> or <b>Non-symmetric</b> from the drop-down list. For details about load balancing, see <a href="#">Symmetric and Non-Symmetric Load Balancing</a> , on page 48.
<b>Hashing Configuration</b>	Select a hashing configuration from the drop-down list. The displayed drop-down list is dynamic and depends on the selected load balancing type.
<b>Hashing Type</b>	Select a hashing type from the drop-down list.
<b>MPLS Configuration</b>	

Field	Description
<b>MPLS Strip Type Configuration</b>	<p>Click the gray button to enable MPLS strip type configuration. The button turns blue and moves to the right.</p> <p>All the MPLS packets from the input ports are stripped of the MPLS header.</p> <p><b>Note</b> On Cisco Nexus 9300-GX Series switches, MPLS strip feature works only after switch reload.</p>
<b>Label Age</b>	<p>Set the time period after which the MPLS labels will age out. This field is available only for select devices.</p> <p>Supported platforms are the following Cisco Nexus Series switches - 93128TX, 3172, 3164, 3232, 3132C-Z.</p>
<b>Enable MPLS Filter Configuration</b>	<p>Click the gray button to enable MPLS filter configuration. The button turns blue and moves to the right.</p> <p>MPLS filter configuration enabled here, is applied to the input port of the device.</p>
<b>sFlow Configuration</b>	
<b>Enable sFlow</b>	<p>Click the gray button to enable Sampled Flow (sFlow). The button turns blue and moves to the right.</p> <p>For details about sFlow, see <a href="#">Sampled Flow</a> , on page 92.</p> <p>Enter the following details:</p> <ul style="list-style-type: none"> <li>• <b>Agent IP Address</b>— Enter the agent ip address.</li> <li>• <b>Select VRF</b>—Select a VRF from the drop-down list.</li> <li>• <b>Collector IP Address</b> —Enter an IP address for the collector port.</li> <li>• <b>Collector UDP Port</b> —Enter the UDP port for the sFlow collector.</li> <li>• <b>Counter Poll Interval</b>—Enter a poll interval value for sFlow.</li> <li>• <b>Max Datagram Size</b>—Enter the maximum datagram size.</li> <li>• <b>Max Sampled Size</b>—Enter the maximum sampled size.</li> <li>• <b>Sampling Rate</b> —Enter the data sampling rate.</li> <li>• <b>Data Sources</b>—Click <b>Select Ports</b> and select the ports by checking the required check boxes and click <b>Add</b>.</li> </ul> <p><b>Note</b> To verify sflow configuration on a device, use the <b>show sflow</b> command.</p>

Field	Description
<b>PTP Configuration</b>	
<b>Enable PTP</b>	<p>Click the gray button to enable PTP and receive updates from the master. The button turns blue and moves to the right.</p> <p>PTP enabled here is used for timestamping in the inputs ports and monitoring tools.</p> <p>For details about PTP, see <a href="#">Precision Time Protocol, on page 91</a>.</p> <p>The following fields are displayed:</p> <ul style="list-style-type: none"> <li>• <b>Source IP Address</b>— Enter the source IP address for receiving PTP updates.</li> <li>• <b>Ports</b>—Click <b>Select Ports</b> and check the check boxes to select the required ports to which the PTP source IP is connected.</li> </ul> <p><b>Note</b> You need to enable PTP for all the devices in the network to ensure PTP clock time synchronization.</p>
<b>Jumbo MTU Configuration</b>	
<b>MTU Value</b>	<p>Enter MTU value; range is 1502 to 9216. Jumbo MTU sets the maximum MTU value the device can accept.</p> <p>MTU size for traffic is typically 1500. To receive traffic with MTU more than 1500, enable this. The MTU value defined here is applied on the incoming traffic on the input ports of a device.</p> <p>Click <b>Reset to Default</b> to set the MTU value to the default value of 1500.</p> <p><b>Note</b> MTU value must be an even number, in the specified range.</p>
<b>Netflow Configuration</b>	
<b>Enable Netflow</b>	<p>Click the gray button to enable netflow. The button turns blue and moves to the right.</p> <p>For details about Netflow, see <a href="#">Netflow, on page 92</a>.</p> <p>To define the Netflow parameters, complete the following configurations (in the specified order):</p> <ul style="list-style-type: none"> <li>• <a href="#">Adding a Record for NetFlow, on page 88</a></li> <li>• <a href="#">Adding an Exporter for NetFlow, on page 89</a></li> <li>• <a href="#">Adding a Monitor for NetFlow, on page 90</a></li> </ul> <p>To complete the NetFlow configuration, associate the NetFlow Monitor to an input port. See <a href="#">Adding an Input Port, on page 94</a>.</p>

**Step 5** Click **Save**.

## Adding a Record for NetFlow

Use this procedure to create a NetFlow record.

A flow record defines the keys that NetFlow uses to identify packets and other fields of interest that NetFlow gathers for the flow. The flow record determines the size of the data to be collected for a flow. The key fields are specified with the *match* keyword.

### Procedure

- Step 1** Navigate to **Components > Global Configuration**.
- Step 2** Select a device by checking the check box at the beginning of the row.
- Step 3** From the **Actions** drop down menu, select **Edit Global Configuration**.
- Step 4** In the **Edit Global Configuration** dialog box, click the gray button to **Enable Netflow**.
- Step 5** Click **Add Record** and enter the following details:

**Table 31: Add Record**

Field	Description
<b>Name</b>	Name of the record.
<b>Description</b>	Description for the record.
<b>Collect</b>	<p>Define the collection parameters.</p> <p>Check the corresponding check box to enable collection based on one or more of the following parameters:</p> <ul style="list-style-type: none"> <li>• Counter Bytes</li> <li>• Counter Packets</li> <li>• IP Version</li> <li>• Transport TCP Flags</li> <li>• System Uptime First</li> <li>• System Uptime Last</li> </ul>
<b>Match</b>	<p>Define the match parameters.</p> <p>The options available are <b>Layer 2</b> and <b>Layer 3/4</b>. Click either of them to select the match parameters. These parameters are discussed in the subsequent rows.</p>

Field	Description
<b>Layer 2</b>	<p>Check the check box to enable one or more matching Layer 2 parameters.</p> <ul style="list-style-type: none"> <li>• Mac Source Address</li> <li>• Mac Destination Address</li> <li>• Ethertype</li> <li>• VLAN</li> </ul>
<b>Layer 3/4</b>	<p>Check the check box to enable one or more matching Layer 3 and/or Layer 4 parameters.</p> <ul style="list-style-type: none"> <li>• IP Protocol</li> <li>• IP TOS</li> <li>• Transport Source Port</li> <li>• Transport Destination Port</li> <li>• IPv4 Source Address</li> <li>• IPv4 Destination Address</li> <li>• IPv6 Source Address</li> <li>• IPv6 Destination Address</li> <li>• IPv6 Flow Label</li> <li>• IPv6 Options</li> </ul>

**Step 6** Click **Add Record**.

## Adding an Exporter for NetFlow

Use this procedure to create a NetFlow exporter. The flow exporter configuration defines the export parameters for a flow and specifies reachability information for the remote NetFlow Collector.

A flow exporter contains network layer and transport layer details for the NetFlow export packet.

### Procedure

- Step 1** Navigate to **Components > Global Configuration**.
- Step 2** Select a device by checking the check box at the beginning of the row.
- Step 3** From the **Actions** drop down menu, select **Edit Global Configuration**.
- Step 4** In the **Edit Global Configuration** dialog box, click the gray button to **Enable Netflow**.

**Step 5** Click **Add Exporter** and enter the following details:

*Table 32: Add Exporter*

Field	Description
<b>Name</b>	Name of the exporter.
<b>Description</b>	Description of the exporter.
<b>Destination</b>	Export destination IP address. Check the corresponding check box to enable collection based on one or more of the following parameters:
<b>Source</b>	Source IP address. Interface on the device through which the flow cache reaches the destination.
<b>UDP Port</b>	UDP port where the NetFlow collector is listening for NetFlow packets. The range is from 1 to 65535.
<b>DSCP</b>	The differentiated services codepoint value. The range is from 0 to 63.
<b>Version</b>	The NetFlow export version. This field cannot be changed. <b>Note</b> Cisco NX-OS supports the Version 9 export format.
<b>Option Exporter</b>	Flow exporter statistics resend timer. The range is from 1 to 86400 seconds.
<b>Template Data Timeout</b>	Template data resend timer. The range is from 1 to 86400 seconds.

**Step 6** Click **Add Exporter**.

## Adding a Monitor for NetFlow

Use this procedure to create a NetFlow monitor.

You can create a flow monitor and associate it with a flow record and a flow exporter. All of the flows that belong to a monitor use the associated flow record to match on the different fields, and the data is exported to the specified flow exporter.

### Before you begin

Complete the following configurations:

- Adding a record
- Adding an exporter

## Procedure

- Step 1** Navigate to **Components > Global Configuration**.
- Step 2** Select a device by checking the check box at the beginning of the row.
- Step 3** From the **Actions** drop down menu, select **Edit Global Configuration**.
- Step 4** In the **Edit Global Configuration** dialog box, click the gray button to **Enable Netflow**.
- Step 5** Click **Add Monitor** and enter the following details:

*Table 33: Add Monitor*

Field	Description
<b>Name</b>	Name of the monitor.
<b>Description</b>	Description of the monitor.
<b>Record</b>	Click <b>Select Record</b> . In the <b>Select Record</b> window, choose a record by clicking the corresponding radio button. The details of the selected record are displayed on the right. Click <b>Select</b> .
<b>Exporter</b>	Click <b>Select Exporter</b> . In the <b>Select Exporter</b> window, choose an exporter by selecting the corresponding check box. The details of the selected exporter are displayed on the right. Click <b>Select</b> .  <b>Note</b> You can select a maximum of two flow exporters for a monitor

- Step 6** Click **Add Monitor**.

## Precision Time Protocol

Precision Time Protocol (PTP) devices include ordinary clocks, boundary clocks, and transparent clocks. Non-PTP devices include ordinary network switches, routers, and other infrastructure devices. A PTP system can consist of a combination of PTP and non-PTP devices.

PTP is a distributed protocol that specifies how real-time PTP clocks in the system synchronize with each other. These clocks are organized into a master-member synchronization hierarchy with the grandmaster clock, the clock at the top of the hierarchy, determining the reference time for the entire system. Synchronization is achieved by exchanging PTP timing messages, with the members using the timing information to adjust their clocks to the time of their master in the hierarchy. PTP operates within a logical scope called a PTP domain.

PTP is a time synchronization protocol for nodes distributed across a network. Its hardware timestamp feature provides excellent accuracy.

**Note** After PTP is configured, the default PTP configuration is synchronized with all the ISL ports of the corresponding device.

See [Editing Global Configuration for a Device, on page 85](#) for configuring PTP.

## Netflow

NetFlow identifies packet flows for ingress IP packets and provides statistics based on these packet flows. NetFlow does not require any change to either the packets themselves or to any networking device.

In order to provide enough free space to monitor flows, the ing-netflow TCAM region is carved to 512 by default on Cisco Nexus 9300-FX platform switches. If more space is required, use the **hardware access-list tcam region ing-netflow size** command to modify the size of this TCAM region, using a multiple of 512.

Netflow is supported on the following platforms:

- Cisco Nexus 9300 switches—9300-FX, FX2, EX
- Cisco Nexus 9500 switches—9500-FX, EX

See [Editing Global Configuration for a Device, on page 85](#) for configuring Netflow.

For more information about Netflow, see *Cisco Nexus 9000 Series NX-OS System Management Configuration Guide*.

## Sampled Flow

You can manage Sampled Flow (sFlow) on Nexus Dashboard Data Broker that are based on NX-API. sFlow allows you to monitor real-time traffic in data networks that contain switches and routers. It uses the sampling mechanism in the sFlow agent software on switches and routers to monitor traffic and to forward the sample data to the central data collector.

See [Editing Global Configuration for a Device, on page 85](#) for configuring sFlow.

## Input Ports

The **Input Ports** tab displays details of the inputs ports on the NDB devices.

When an Edge-SPAN or an Edge-TAP or an Remote Source Edge-SPAN port is defined in the NX-API mode of configuration, the **spanning-tree bpdudfilter enable** command is automatically configured in the interface mode on the ports to filter the BPDU packets. This configuration is applicable for all Cisco Nexus 3000 and 9000 Series switches.

Ensure to configure the **spanning-tree bpdudfilter enable** command on all the inter-switch ports for Cisco Nexus series switches.

A table with the following details is displayed:

Table 34: Input Ports

Column Name	Description
<b>Device</b>	<p>The device on which the input port is configured.</p> <p>This field is a hyperlink. Click the Device name to view more information about the device. For details and procedures, see <a href="#">Devices, on page 35</a> chapter.</p>
<b>Port</b>	<p>The port of the device that is configured as an input port.</p> <p>This field is a hyperlink. Click a <b>Port</b> to view more details of the port. Additional actions that can be performed from here are:</p> <ul style="list-style-type: none"> <li>• <i>Editing an Input Port</i></li> <li>• Remove Configuration—the port is removed as an input port for the device.</li> </ul>
<b>In Use</b>	A green tick mark indicates that the input port is in use.
<b>Configuration</b>	The configuration information of the input port (based on the parameters set during <a href="#">Adding an Input Port, on page 94</a> ).
<b>Type</b>	<p>Port type. The displayed options are:</p> <ul style="list-style-type: none"> <li>• Edge port-SPAN</li> <li>• Edge port-TAP</li> <li>• Remote Source Edge-SPAN</li> <li>• Packet Truncation</li> </ul>
<b>Span Destination/ Tap Name</b>	<p>Details of the span destination which is connected to the input port.</p> <ul style="list-style-type: none"> <li>• If the port is connected to a production switch, then <i>PS</i>, followed by the device ID and the connected interface is displayed.</li> <li>• If the port is connected to a Cisco APIC/ or Cisco DNAC controller, then for APIC, the DN value is displayed with the pod and path details. For Cisco DNAC, <i>Cisco DNAC</i> followed by the Catalyst device ID and interface is displayed.</li> <li>• If the port is connected to a Tap device, the tap configuration name is displayed.</li> </ul>
<b>Created By</b>	The user who created the the input port.
<b>Modified By</b>	The user who last modified the input port.

The following actions can be performed from the **Input Ports** tab:

- **Add Input Port** —Use this to add a new input port. See [Adding an Input Port, on page 94](#) for details about this task.
- **Delete Input Port** —Select the required input port by checking the check box which is available at the beginning of the row. Click **Actions > Delete Input Port(s)**. The selected port(s) is deleted.

**Note** *In Use* input ports cannot be deleted.

If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a device.

## Adding an Input Port

Use this procedure to create an input port.

Input port of a device is the port through which traffic enters the packet broker network and is directed to the monitoring tool.

### Before you begin

Add one or more devices.

Some of the input port parameters are defined at the device-level using the **Global Configuration** tab. To define these parameters (listed below), see [Editing Global Configuration](#).

- PTP
- Netflow
- MPLS Filtering
- Jumbo MTU

### Procedure

- Step 1** Navigate to **Components > Input Port Configuration**.
- Step 2** From the **Actions** drop-down list, select **Add Input Port**.
- Step 3** In the **Add Input Port** dialog-box, enter the following details:

*Table 35: Add Input Port*

Field	Description
General	

Field	Description
<b>Device</b>	To select a device on which the input port is being configured. Click <b>Select Device</b> . From the <b>Select Device</b> window, select a radio button and choose a device. Click <b>Select</b> .
<b>Port(s)</b>	To select a port to be configured as the input port. Click <b>Select Port</b> . From the <b>Select Port</b> window, select the required port(s). Click <b>Select</b> .
<b>Port Type</b>	Select from the drop-down list to define the input port type. The options are: <ul style="list-style-type: none"> <li>• <b>Edge Port - SPAN</b> —creates an edge-port for incoming traffic from a configured session of the production switch .</li> <li>• <b>Edge Port- TAP</b>—creates an edge port for incoming traffic from a physical device on an ISL.</li> <li>• <b>Remote Source Edge - SPAN</b> —creates an edge-port for incoming traffic from a configured remote session of the production switch.</li> </ul>
<b>Port Description</b>	Enter a description for the port.
<b>VLAN ID (QinQ Supported)</b>	<p>The port is configured as dot1q to preserve any production VLAN information. The VLAN ID is used to identify the port that the traffic is coming from.</p> <p>Q-in-Q VLAN is mandatory on all input ports in an ISL connection. After an upgrade to Release 3.10.5, the connections created in the previous releases are available, but if you need to modify/clone any of the connections created earlier, adding Q-in-Q VLAN is mandatory, else you will not be able to save your changes to the updated connection.</p> <p><b>Note</b> After an interface is configured with Q-in-Q, do not configure VLAN filters for the Q-in-Q configured interface.</p> <p>Production port has be enabled for Q-in-Q and a unique VLAN should be assigned for each production port. This VLAN should not overlap with any production VLAN numbers.</p>
<b>Block-Tx</b>	<p>Check the check-box to block the traffic that is being transmitted from the input ports.</p> <p><b>Note</b> Only unicast and multicast traffic is blocked.</p>

Field	Description
<b>Drop ICMP v6 Neighbour Solicitation</b>	<p>Check the check-box to drop all ICMP traffic.</p> <p>By default, all the ICMP traffic is blocked for Edge-SPAN and Edge-TAP port types for Nexus 9300-EX and 9200 Series switches. For the rest of Nexus 9000 Series switches, user has to manually enable this feature to deny or block all the ICMP traffic.</p>
<b>Block IGMPv3</b>	<p>Check the check-box to drop all IGMPv3 traffic.</p> <p>The deny rule for IGMPv3 traffic is enabled.</p>
<b>Enable Timestamp Tagging</b>	<p>Check the check-box to append the timestamp tag on packets using the Timestamp Tagging feature.</p> <p>For Nexus 9300-EX and 9200 series switches, this feature is applicable for Edge-SPAN and Edge-TAP ports. To configure Timestamp Tagging feature, ensure that PTP feature is enabled on the device. You need to enable Timestamp tagging on monitoring device and edge ports. If Timestamp Tagging feature is not configured on either side of the connection, Edge-SPAN/Edge-TAP and Monitor Devices, the packets are not tagged with timestamp.</p> <p><b>Note</b> If PTP is not enabled for the device using Global Configuration, then this option is grayed out.</p>
<b>Enable MPLS Filtering</b>	<p>Check the check-box to enable MPLS filtering.</p> <p><b>Note</b> If MPLS filtering is not enabled for the device using Global Configuration, then this option is grayed out.</p>
<b>Apply Jumbo MTU</b>	<p>Check the check-box to enable the set Jumbo MTU value on this port.</p> <p><b>Note</b> If Jumbo MTU is not configured for the device using Global Configuration, then this option is grayed out.</p>
<b>Netflow Monitor</b>	<p>Select an option from the drop-down list. The monitor names created at the Global Configuration level are listed here.</p> <p><b>Note</b> If NetFlow is not enabled for the device using Global Configuration, then this option is grayed out.</p>

The fields displayed for each **Port Type** are discussed below.

- a) (Only for **Port Type**—Edge Port-SPAN) Enter the following details:

Field	Description
<b>Destination Device Type</b>	<p>This is the source for the input ports (Span Destination).</p> <p>Select the required option from the drop down list. The options are:</p> <ul style="list-style-type: none"> <li>• Controller</li> <li>• Production Switch</li> </ul> <p>The options for each of the above are discussed in the subsequent rows.</p>
<b>Controller</b>	Click <b>Select Controller</b> . Select <b>(Cisco) ACI</b> or <b>(Cisco) DNAC</b> .
<p>Fields for <b>Destination Device Type: Controller &gt; ACI</b></p> <p>While selecting the interfaces (discussed below), if you do not find the latest pod, node and its interfaces in the displayed options, click the <b>Refresh Fabric</b> button. This action will fetch the latest pod, node and its interfaces from the ACI Fabric.</p> <p><b>Note</b> You must add an APIC/ ACI device before you configure SPAN destination.</p>	
<b>Span Destination Name</b>	Enter a name for Span Destination.
<b>Pod</b>	Select a pod.
<b>Node</b>	Select a node.
<b>Port</b>	Select a port.
<b>MTU</b>	Set an MTU value for the span destination of APIC.
Fields for <b>Destination Device Type: Controller &gt; (Cisco) DNAC</b>	
<b>Span Destination Name</b>	Enter a name for Span Destination.
<b>Span Destination Port</b>	Click <b>Select Span Destination Port</b> and select a Catalyst switch and port(s).
<p>Fields for <b>Destination Device Type: Production Switch</b></p> <p><b>Note</b> You must add a Nexus or a Catalyst device before you configure SPAN destination.</p>	
<b>Span Destination Device</b>	Click <b>Select Device</b> and select a device.
<b>Span Destination Port</b>	Click <b>Select Port</b> and select a port.

b) (Only for **Port Type**—Edge Port-TAP) Enter the following details:

Field	Description
<b>Tap Configuration Name</b>	Select a tap configuration from the drop down list.
<b>Tap Configuration Type</b>	<p>Select the port of the NDB device which will receive the mirrored traffic from the tap device.</p> <p>The displayed options are based on the selected <b>Tap Configuration Name</b> details. If you have selected to tap either/both the mirror ports during the Tap configuration, the corresponding NDB Edge Port-Tap ports are displayed.</p>

- c) (Only for **Port Type**—Remote Source Edge-SPAN) Enter the following details:

**Note**

You can configure a maximum of four Remote Source Edge-SPAN ports, to receive traffic from a remote source.

Field	Description
<b>Remote Input Termination Session</b>	
<b>ERSPAN ID</b>	<p>Enter an ERSPAN ID. Range is from 1 to 1023.</p> <p>The ERSPAN id entered here is matched with the source session id in the remote source.</p>
<b>Use Loopback Interface</b>	Check the check-box to use a loopback interface.
<b>Loopback</b>	<p>Click <b>Select Loopback</b> to select a loopback interface. If there are no configured loopback interfaces, click <b>Add Loopback</b>. See <a href="#">Configuring Loopback</a>.</p> <p>Use a loopback interface to have more than one remote input port. Traffic from an L3 interface reaches the loopback interface and from there the session destination port. If the first remote source edge span input port was created with a loopback, then the following Remote Source Edge-SPAN ports must also be configured with the same loopback interface. If the first remote source edge span input port was created without a loopback, then the following Remote Source Edge-SPAN ports must also be configured without a loopback interface.</p>
<b>Session Destination</b>	Click <b>Select Destination Port</b> and select a destination port (on the NDB device).
<b>Remote Input Session</b>	
<b>Remote Input Port</b>	<p>Click <b>Remote Input Port</b> and select a remote input port (on the NDB device).</p> <p><b>Note</b> Only one remote input port can be configured for the traffic reaching the Remote Source Edge-SPAN ports. If you have configured a loopback interface, then, the remote input ports can be different for each of the Remote Source Edge-SPAN ports.</p>

Field	Description
<b>IP Address</b>	<p>Enter an IP address. IP address entered here is the IP address of the remote source port to which the packets reach over L3 network.</p> <p>You need to enter this value only when configuring the first Remote Source Edge-SPAN port. For the next three ports that you configure, this field is grayed out as the same IP address is applied to all the four sessions with Remote Source Edge-SPAN ports.</p>
<b>Destination Device Type</b>	<p>Select the device type from the drop down list.</p> <p>For Remote Source Edge-SPAN ports, the supported destination type is ACI.</p>
<b>Span Destination ACI Fabric</b>	Click <b>Select ACI Fabric</b> and select an ACI fabric.
<b>Span Destination Name</b>	Enter a name for the span destination.
<b>Tenant</b>	Click <b>Select Tenant</b> to select a tenant.
<b>Application Profile</b>	Click <b>Select Application Profile</b> to select an application profile.
<b>EPG</b>	Click <b>Select EPG</b> to select an EPG.
<b>Source IP Address</b>	Enter the source IP address. This IP address is the base IP address of the IP subnet of the source packets.
<b>Destination IP Address</b>	<p>This field is automatically populated.</p> <p>The IP address populated here is the same address that you entered as the IP address of the <b>Remote Input Port</b>.</p> <p><b>Note</b> For APIC/ ACI devices, this is the destination port (remote input port), and hence called destination IP.</p>
<b>Flow ID</b>	<p>This field is automatically populated.</p> <p>Flow ID is the flow identifier of the SPAN packet. It is matched with the ERSPAN ID earlier specified for the Remote Source Edge-SPAN port.</p>
<b>TTL</b>	Enter a TTL value. Default value is 64 hops.
<b>DSCP</b>	Select a DSCP value from the drop-down list.
<b>MTU</b>	Enter an MTU value for the span destination port. Range is from 64 to 9216.

**Step 4** Click **Add Input Port**.

## Packet Truncation

Packet truncation involves discarding bytes from a packet starting at a specified byte position. All the data after the specified byte position is discarded. Packet truncation is required when the main information of interest is in the header of a packet or in the initial part of the packet.

**Note** Packet truncation is supported for unicast traffic (not supported for multicast traffic).

*Table 36: Support for Packet Truncation*

EX Chassis	FX Chassis	Nexus 9364C, Nexus 9332C	Nexus 9336C-FX2	EOR switches with -EX or -FX LCs
MTU size range is 320 to 1518 bytes	MTU size range is 64 to 1518 bytes	MTU size range is 64 to 1518 bytes	MTU size range is 64 to 1518 bytes	Depends on LC

## Configuring Loopback

Use this procedure to configure a loopback for the Remote source edge span input port.

### Procedure

**Step 1** Navigate to **Inputs Ports > Actions > Add Input Ports**.

**Step 2** Select **Port Type** as Remote Source Edge Span Port and select the **Use Loopback Interface** check-box to select a loopback interface.

**Step 3** Click **Configure Loopback** to create a new loopback interface.

In the **Configure Loopback** dialog-box, enter the following details:

*Table 37: Configure Loopback*

Field	Description
<b>General</b>	
<b>Loopback Id</b>	Enter a loopback ID.
<b>IP Address</b>	Enter the loopback IP address.

**Step 4** Click **Configure Loopback**.

# Monitoring Tools

The **Monitoring Tools** tab displays details of the monitoring tool ports of NDB devices. Traffic from the monitoring tool port of an NDB device is directed to the monitoring tool.

A table with the following details is displayed:

*Table 38: Monitoring Tools*

Column Name	Description
Status	<p>Status is defined using two columns.</p> <p>First column indicates the traffic on the monitoring tool.</p> <ul style="list-style-type: none"><li>• Green—indicates that the monitoring tool is currently carrying traffic.</li><li>• Yellow—indicates that the monitoring tool is currently not carrying traffic.</li></ul> <p>Second column indicates the status of the link between the monitoring tool port and monitoring tool. If the link between the monitoring tool port and the monitoring tool is up, then it is green in colour.</p> <ul style="list-style-type: none"><li>• Green—indicates that the link is up and running.</li><li>• Red—indicates that the link is down.</li><li>• Yellow—indicates that the link is administratively down.</li></ul>
Monitoring Tool	<p>The monitoring tool name.</p> <p>This field is a hyperlink. Click the <b>Monitoring Tool</b> name. A new pane is displayed on the right which has more details about the monitoring tool. The following additional actions can be performed from here:</p> <ul style="list-style-type: none"><li>• <a href="#">Editing a Monitoring Tool, on page 106</a></li></ul>
Port	<p>Monitoring tool port (with the device).</p> <p>Click the <b>Port</b> name to get more details of the port. The following additional actions can be performed from here:</p> <ul style="list-style-type: none"><li>• <a href="#">Editing a Monitoring Tool, on page 106</a></li></ul>

Column Name	Description
Type	The type of monitoring tool. The options are: <ul style="list-style-type: none"> <li>Local Monitoring Tool—port that resides on the NDB device in the local network (L2 port).</li> <li>Remote Monitoring Tool—port that resides outside the local network and is reachable over L3 network.</li> </ul>
In Use	If the monitoring tool port is in use, a <i>green tick mark</i> is displayed; else it is left blank.
Packet Truncation	If packet truncation is enabled on the monitoring tool port, a <i>green tick mark</i> is displayed; else it is left blank.
Block Rx	If incoming traffic from the monitoring tool to the monitoring tool port (on the NDB device) is blocked, then <b>Yes</b> is displayed.
Created By	The user who created the monitoring tool.
Last Modified By	The user who last modified the monitoring tool.
Status Description	The current status of the monitoring tool. The status description gets auto-refreshed based on the latest status.  You can also click the <i>Refresh</i> icon,  , to get the latest status.

The following actions can be performed from the **Monitoring Tools** tab:

- **Add Monitoring Tool**—Use this to add a new monitoring device. See [Adding a Monitoring Tool](#) for details about this task.
- **Delete Monitoring Tool(s)**—Select the required device by checking the check box which is available at the beginning of the row. The selected device(s) are deleted. Click **Actions** > **Delete Monitoring Tool(s)**. If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a device.

**Note** An *In use* monitoring tool cannot be deleted.

## Adding a Monitoring Tool

Use this procedure to add a monitoring tool port. You can create a:

- Local Monitoring Tool—a port that resides on the NDB device in the local network (L2 port).

- Remote Monitoring Tool—a port that resides outside the local network and reachable over L3 network.

You can create a packet truncation port (used to block the ingress traffic) to be associated with the monitoring tool which is the egress port for a packet.

### Before you begin

#### Restrictions:

- You cannot use more than one remote delivery port per switch per connection.
- Remote monitoring tool involving inter switched links is restricted to only one connection per ISL.
- If the monitoring tool is used with a packet truncation interface, then, ensure that the status of the packet truncation port is Administratively Up (green icon) and that the other end of the link is not connected to any NDB device. To change the port Layer 2 status to Up, you need to connect to another non-NDB device create a loopback using a third party loopback fiber optic.

**Note** You can configure a maximum of four monitoring tools with packet truncation on a switch.

## Procedure

- Step 1** Navigate to **Components > Monitoring Tools**.
- Step 2** From the **Actions** drop-down list, select **Add Monitoring Tool**.
- Step 3** In the **Add Monitoring Tool** dialog box, enter the following details:

*Table 39: Add Monitoring Tool*

Field	Description
<b>General</b>	
<b>Monitoring Tool Name</b>	Enter a name for the monitoring tool name.
<b>Device Name</b>	Click <b>Select Device</b> . From the displayed list of devices, select a device using the radio button. The device details are displayed on the right.  The monitoring tool port resides on this device.  Click <b>Select Device</b> .
<b>Port</b>	Click <b>Select Port</b> . In the <b>Select Interface</b> window that opens, select a port by using the radio button. The displayed interfaces depends on the selected device.  Click <b>Select</b> .  The selected port is marked as the monitoring tool port. The traffic is redirected to the monitoring tool from here.

Field	Description
<b>Port Description</b>	Enter a description for the port.
<b>Local Monitor Tool</b>	<p>Select the radio button to select a local monitor device. By selecting this option, a monitoring device is from the local network.</p> <p>The following options are displayed for local monitor device (discussed in detail in the rows below):</p> <ul style="list-style-type: none"> <li>• Block Rx</li> <li>• Block ICMPv6 Neighbour Solicitation</li> <li>• Enable Timestamp Tagging</li> <li>• Packet Truncation</li> <li>• Enable Timestamp Strip</li> <li>• Apply Jumbo MTU</li> </ul>
<b>Block Rx</b>	<p>Blocks traffic from the monitoring tool (to the monitoring tool port on the NDB device). This option is selected by default. You can turn this option off by unchecking the check box.</p> <p><b>Note</b> Rx traffic is blocked using Unidirectional Ethernet for Cisco N9K-95xx switches with N9K-X97160YC-EX line card (NX-OS 9.3(3) or later).</p>
<b>Block ICMPv6 Neighbour Solicitation</b>	<p>Blocks ICMP traffic from the monitoring tool (to the monitoring tool port on the NDB device). This option is selected by default. You can turn this option off by unchecking the check box.</p> <p>Supported on Nexus 9300-EX and 9200 switches. For the rest of Nexus 9000 Series switches, user has to manually enable this feature to deny or block all the ICMP traffic.</p>
<b>Block IGMPv3</b>	<p>Check the check-box to drop all IGMPv3 traffic.</p> <p>The deny rule for IGMPv3 traffic is enabled.</p>
<b>Enable Timestamp Tagging</b>	<p>Check the check box to enable timestamp tagging. A timestamp tag is appended to all the outgoing packets of the monitoring tool port.</p> <p>You can configure this feature on a single device or multiple devices.</p> <p>To configure timestamp tagging, ensure that PTP is enabled on the device. You need to enable timestamp tagging on the monitoring device(s) and edge ports. If timestamp tagging is not configured on either side of the connection, Edge-SPAN/Edge-TAP and the monitor tools, then packets are not tagged with timestamp.</p>

Field	Description
<b>Packet Truncation</b>	<p>Check the check box to enable packet truncation and enter the MTU size.</p> <p>Packet truncation discards bytes from an incoming packet based on the MTU size. This is done in order to send only the the required traffic to the monitoring tool port. This is achieved by redirecting the traffic from the input port to the packet truncation port. The truncated packets from the packet tuncation port reach the monitoring tool.</p> <p>To set a packet truncation port, click <b>Select Packet Truncation Port</b>. See <i>Adding a Truncation Port</i> procedure.</p>
<b>Enable Timestamp Strip</b>	Check the check box to enable timestamp strip. This removes the timestamp tag from the source packets.
<b>Apply Jumbo MTU</b>	<p>Check the check box to enable jumbo MTU.</p> <p>Jumbo MTU sets a bigger packet size for the device. Enable <b>Jumbo MTU</b> in <b>Global Configuration</b> to apply the set Jumbo MTU size for a port of the device.</p>
<b>Remote Monitor Tool</b>	<p>Select the radio button to select a remote monitor device. By selecting this option, a monitoring device from a remote network is enabled.</p> <p>The following options are displayed for remote monitor device (discussed in detail in the rows below):</p> <ul style="list-style-type: none"> <li>• Block Rx</li> <li>• Interface IP</li> <li>• Destination IP</li> <li>• ERSPAN ID</li> </ul>
<b>Interface IP</b>	IP address to be assigned to the monitoring tool port.
<b>Destination IP</b>	IP Address where ERSPAN terminates and should be reachable from the selected port.
<b>ERSPAN ID</b>	<p>Enter ERSPAN id; range is 1 to 1023.</p> <p>You can use a device outside the network as a monitoring device using the Encapsulated Remote Switch Port Analyzer (ERSPAN) Source Session feature for Cisco Nexus 9300 FX and EX series switches.</p>

**Step 4** Click **Add Monitoring Tool**.

## Editing a Monitoring Tool

Use this procedure to edit the parameters of a monitoring tool.

### Before you begin

Add one or more monitoring tools.

### Procedure

**Step 1** Navigate to **Components > Monitoring Tools**.

**Step 2** In the displayed table, click a **Monitoring Tool** name.

A new pane is displayed on the right.

**Step 3** Click **Actions** and select **Edit Monitoring Tool**.

**Step 4** In the **Edit Monitoring Tool** dialog box, the current information of the monitoring tool is displayed. Modify these fields, as required:

*Table 40: Edit Monitoring Tool*

Field	Description
<b>General</b>	
<b>Monitoring Tool Name</b>	Monitoring tool name is displayed; this cannot be edited.
<b>Device Name</b>	The device on which the monitoring tool port resides.
<b>Port</b>	The monitoring tool port.
<b>Port Description</b>	Enter a description for the port.
<b>Local Monitor Tool</b>	<p>Select the radio button to select a local monitor device. By selecting this option, a monitoring device is from the local network.</p> <p>The following options are displayed for local monitor device (discussed in detail in the rows below):</p> <ul style="list-style-type: none"> <li>• Block Rx</li> <li>• Block ICMPv6 Neighbour Solicitation</li> <li>• Enable Timestamp Tagging</li> <li>• Packet Truncation</li> <li>• Enable Timestamp Strip</li> <li>• Apply Jumbo MTU</li> </ul>

Field	Description
<b>Block Rx</b>	<p>Blocks traffic from the monitoring tool (to the monitoring tool port on the NDB device). This option is selected by default. You can turn this option off by unchecking the check box.</p> <p><b>Note</b> Rx traffic is blocked using Unidirectional Ethernet for Cisco N9K-95xx switches with N9K-X97160YC-EX line card (NX-OS 9.3(3) or later).</p>
<b>Block ICMPv6 Neighbour Solicitation</b>	<p>Blocks ICMP traffic from the monitoring tool (to the monitoring tool port on the NDB device). This option is selected by default. You can turn this option off by unchecking the check box.</p> <p>Supported on Nexus 9300-EX and 9200 switches. For the rest of Nexus 9000 Series switches, user has to manually enable this feature to deny or block all the ICMP traffic.</p>
<b>Enable Timestamp Tagging</b>	<p>Check the check box to enable timestamp tagging. A timestamp tag is appended to all the outgoing packets of the monitoring tool port.</p> <p>You can configure this feature on a single device or multiple devices.</p> <p>To configure timestamp tagging, ensure that PTP is enabled on the device. You need to enable timestamp tagging on the monitoring device(s) and edge ports. If timestamp tagging is not configured on either side of the connection, Edge-SPAN/Edge-TAP and the monitor tools, then packets are not tagged with timestamp.</p>
<b>Packet Truncation</b>	<p>Check the check box to enable packet truncation and enter the MTU size. If a packet truncation port was not configured during the addition of the monitoring tool, the <b>Select Packet Truncation Port</b> is disabled.</p>
<b>Enable Timestamp Strip</b>	<p>Check the check box to enable timestamp strip. This removes the timestamp tag from the source packets.</p>
<b>Apply Jumbo MTU</b>	<p>Check the check box to enable jumbo MTU.</p> <p>Jumbo MTU sets a bigger packet size for the device. Enable <b>Jumbo MTU</b> in <b>Global Configuration</b> to apply the set Jumbo MTU size for a port of the device.</p>

Field	Description
<b>Remote Monitor Tool</b>	<p>Select the radio button to select a remote monitor device. By selecting this option, a monitoring device from a remote network is enabled.</p> <p>The following options are displayed for remote monitor device (discussed in detail in the rows below):</p> <ul style="list-style-type: none"> <li>• Block Rx</li> <li>• Interface IP</li> <li>• Destination IP</li> <li>• ERSPAN ID</li> </ul>
<b>Interface IP</b>	IP address to be assigned to the monitoring tool port.
<b>Destination IP</b>	IP Address where ERSPAN terminates and should be reachable from the selected port.
<b>ERSPAN ID</b>	<p>Enter ERSPAN id; range is 1 to 1023.</p> <p>You can use a device outside the network as a monitoring device using the Encapsulated Remote Switch Port Analyzer (ERSPAN) Source Session feature for Cisco Nexus 9300 FX and EX series switches.</p>

**Step 5** Click **Save**.

## Port Groups

The **Port Groups** tab has the following subtabs:

- **Input Port Group**—input ports of a device (or across devices) are grouped together to form an input port group. See [Input Port Group](#) for more details.
- **Monitoring Tool Group**—monitoring tool ports of a device (or across devices) are grouped together to form a monitoring tool group. See [Monitoring Tool Group](#) for more details.

## Input Port Group

Input ports of a device (or different devices) are grouped together to form a port group. Port groups can be a combination of the edge-span and the edge-tap ports across different devices. While creating a connection, instead of choosing input ports separately, you can select more than one input port simultaneously by grouping them.

A table with the following details is displayed:

Table 41: Input Port Group

Column Name	Description
<b>Input Port Group Name</b>	Input port group name.  This field is a hyperlink. Click the <b>Input Port Group Name</b> . A new pane is displayed on the right which provides more information about the input port group. Additional tasks that can be performed from here are: <ul style="list-style-type: none"><li>• <a href="#">Edit Input Port Group</a></li></ul>
<b>Description</b>	Description of the input port group.
<b>Associated Connections</b>	The connection(s) associated with the group.
<b>Member(s)</b>	The number of member input ports of the group.
<b>Created By</b>	User who created the group.
<b>Last Modified By</b>	User who last modified the group.

The following actions can be performed from the **Input Port Group** tab:

- **Add Input Port Group**—Use this to add a new input port group. See [Adding an Input Port Group](#) for details about this task.
- **Delete Input Port Group(s)**—Select the input port group(s) to be deleted by checking the check box which is available at the beginning of the row and then click **Actions > Delete Input Port Group**. The selected input port group(s) is deleted. If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select an input port group.

## Adding an Input Port Group

Use this procedure to create an input port group.

While creating a connection, instead of choosing input ports separately, you can select more than one input port simultaneously by grouping them.

### Before you begin

Create one or more devices.

### Procedure

- 
- Step 1** Navigate to **Components > Port Groups > Input Port Group**.
  - Step 2** From the **Actions** drop-down list, select **Add Input Port Group**.
  - Step 3** In the **Add Input Port Group** dialog box, enter the following details:

Table 42: Add Input Port Group

Field	Description
<b>General</b>	
<b>Group Name</b>	Enter a name for the input port group.
<b>Description</b>	Enter a description for the group.
<b>Select Node</b>	From the <i>All Nodes</i> box, select a device by clicking a radio button.
<b>Choose Port(s)</b>	Ports that are configured as inputs ports, are displayed. Click a port to select it. You can click <b>Add All</b> to select all the (input) ports of a device.
<b>Selected Port(s)</b>	The selected ports are populated here. These are the ports which will be part of the group. If you want to delete a port, click the cross-mark (x) displayed next to the port. You can click <b>Remove All</b> to delete all the selected ports.

**Step 4** Click **Add Input Port Group**.

## Editing an Input Port Group

Use this procedure to edit the parameters of an input port group.

### Before you begin

Create one or more input port groups.

### Procedure

**Step 1** Navigate to **Components > Port Groups > Input Port Group**.

**Step 2** In the displayed table, click an **Input Port Group** name.

A new pane is displayed on the right.

**Step 3** Click **Actions** and select **Edit Input Port Group**.

**Step 4** In the **Edit Input Port Group** dialog box, the current information of the group is displayed. Modify these fields, as required:

Table 43: Edit Input Port Group

Field	Description
<b>General</b>	
<b>Group Name</b>	Input port group name.

Field	Description
Description	Description of the group.
Select Node	From the <i>All Nodes</i> box, select a device by clicking a radio button.
Choose Port(s)	Ports configured as input ports, are displayed. Click a port to select it. You can click <b>Add All</b> to select all the ports of a device.
Selected Port(s)	The selected ports are populated here. These are the ports which will be part of the group. If you want to delete a port, click the cross-mark (x) displayed next to the port. You can click <b>Remove All</b> to delete all the selected ports.

**Step 5** Click **Save**.

## Monitoring Tool Group

Monitoring tool ports grouped together across devices form a monitoring tool group.

A table with the following details is displayed:

**Table 44: Monitoring Tool Group**

Column Name	Description
Monitoring Tool Group Name	Monitoring tool group name.  This field is a hyperlink. Click the <b>Monitoring Tool Group Name</b> . A new pane is displayed on the right which provides more information about the monitoring tool group. Additional tasks that can be performed from here are: <ul style="list-style-type: none"> <li>• <a href="#">Editing a Monitoring Tool Group</a></li> </ul>
Description	Description of the monitoring tool group.
Associated Connections	Connections using the monitoring tool group.
Member(s)	The number of member monitoring tool ports of the group.
Created By	User who created the group.
Last Modified By	User who last modified the group.

The following actions can be performed from the **Monitoring Tool Group** tab:

- **Add Monitoring Tool Group**—Use this to add a new monitoring tool group. See [Adding a Monitoring Tool Group](#) for details about this task.

- **Delete Monitoring Tool Group(s)**—Select the tool group(s) to be deleted by checking the check box which is available at the beginning of the row and then click **Actions > Delete Monitoring Tool Group(s)**. The selected tool group(s) is deleted. If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a tool group.

## Adding a Monitoring Tool Group

Use this procedure to create a monitoring tool group.

### Before you begin

Create one or more monitoring tools.

### Procedure

- Step 1** Navigate to **Components > Port Groups > Monitoring Tool Group**.
- Step 2** From the **Actions** drop-down list, select **Add Monitoring Tool Group**.
- Step 3** In the **Add Monitoring Tool Group** dialog box, enter the following details:

*Table 45: Add Monitoring Tool Group*

Field	Description
<b>General</b>	
<b>Group Name</b>	Enter a name for the monitoring tool group.
<b>Description</b>	Enter a description for the group.
<b>Select Node</b>	From the <i>All Nodes</i> box, select a device by clicking a radio button.
<b>Choose Port(s)</b>	Ports that are configured as monitoring tool ports, are displayed. Click a port to select it. You can click <b>Add All</b> to select all the (monitoring) ports of a device.
<b>Selected Port(s)</b>	The selected ports are populated here. These are the ports which will be part of the group. If you want to delete a port, click the cross-mark (x) displayed next to the port. You can click <b>Remove All</b> to delete all the selected ports.

- Step 4** Click **Add Monitoring Tool Group**.

## Editing a Monitoring Tool Group

Use this procedure to edit the parameters of a monitoring tool group.

**Before you begin**

Create one or more monitoring tool groups.

**Procedure**

**Step 1** Navigate to **Components > Port Groups > Monitoring Tool Group**.

**Step 2** In the displayed table, click a **Monitoring Tool Group** name.

A new pane is displayed on the right.

**Step 3** Click **Actions** and select **Edit Monitoring Tool Group**.

**Step 4** In the **Edit Monitoring Tool Group** dialog box, the current information of the group is displayed. Modify these fields, as required:

*Table 46: Edit Monitoring Tool Group*

Field	Description
<b>General</b>	
<b>Group Name</b>	Name of the monitoring tool group.
<b>Description</b>	Description for the group.
<b>Select Node</b>	From the <i>All Nodes</i> box, select a device by clicking a radio button.
<b>Choose Port(s)</b>	Ports that are configured as monitoring tool ports, are displayed. Click a port to select it. You can click <b>Add All</b> to select all the (monitoring) ports of a device.
<b>Selected Port(s)</b>	The selected ports are populated here. These are the ports which will be part of the group. If you want to delete a port, click the cross-mark (x) displayed next to the port. You can click <b>Remove All</b> to delete all the selected ports.

**Step 5** Click **Save**.

## Span Destination

The **Span Destination** tab displays details of the span ports connected to the input ports of NDB devices. Span destination is the traffic source (from ACI or NX-OS device) for the input ports. An L2 span destination (local) is created on an edge span port and an L3 span destination (remote) is created on a remote edge span port.

A table with the following details is displayed:

Table 47: Span Destination

Column Name	Description
Name	Name of the span destination port.
Destinations	Indicates if the span destination is on a Cisco ACI/ APIC.
Input Port	Input port of the NDB device which is connected to the span destination.
Input Port Type	Input port type. The options are: <ul style="list-style-type: none"> <li>• Edge-SPAN port</li> <li>• Remote Source Edge-SPAN port</li> </ul>
Span Device	Span device (traffic source). The options are: <ul style="list-style-type: none"> <li>• Cisco APIC/ ACI</li> <li>• Nexus switch (production switch)</li> </ul>
Created By	The user who created the span destination.
Last Modified By	The user who last modified the span destination.
Status Description	<p>The current status of the span destination. The status description gets auto-refreshed based on the latest status.</p> <p>You can also click the <i>Refresh</i> icon, , to get the latest status.</p>

The following actions can be performed from the **Span Destinations** tab:

- **Delete Span Destination(s)**—Select the span destination to be deleted by checking the check box which is available at the beginning of the row and then click **Actions > Delete Span Destination(s)**. The selected span destination is deleted. If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a span destination.

**Note** For adding a Span Destination, see [Adding an Input Port, on page 94](#) procedure. A span destination (on an ACI/ NX-OS device) is connected to the input port of an NDB device. You can add a SPAN destination only after either an ACI/ NX-OS device has been successfully added to the network.

For APIC SPAN destination, when you configure an input port as an Edge-SPAN port and the port is connected to the ACI side, you can select the pod, the node, and the port from the ACI side and set the port as SPAN destination. For NX-OS (production switch) SPAN destination, when you configure an input port as an

Edge-SPAN port and the port is connected to an NX-OS device, select a node and port on the NX-OS device, and set the port as SPAN destination.

## User Defined Field

The **User Defined Field (UDF)** tab displays details of UDFs on NDB devices.

A UDF enables you to filter packets based on an offset value. An offset value in a packet can be matched within 128 bytes.

By default, Nexus Dashboard Data Broker controller generates two UDFs named *udfInnerVlan* and *udfInnerVlanv6*, used to match the inner VLAN in the ISL ports.

**Table 48: UDF Support Matrix**

UDF Ethertype	Platform
IPv4	Cisco Nexus 9200 and 9300 series switches
IPv6	Cisco Nexus 93xx EX/FX , 95xx EX/FX , 92xx series switches

**Table 49: Qualifying Regions for UDF**

Platform	UDF Qualifying TCAM Region
Cisco Nexus 9200, 9300-EX/9300-FX and 9500-EX/9500-FX series switches	ing-ifacl
Other platforms	ifacl

A table with the following details is displayed:

**Table 50: User Defined Field**

Column Name	Description
<b>UDF</b>	The UDF name.  This field is a hyperlink. Click the UDF name and a new pane is displayed on the right with more details of the UDF. Additional tasks that can be performed from here are: <ul style="list-style-type: none"><li><a href="#">Editing or Cloning a User Defined Field.</a></li></ul>
<b>Type</b>	Displays <b>IPv4</b> or <b>IPv6</b> .
<b>Keyword</b>	Displays <b>Packet-Start</b> or <b>Header</b> .
<b>In Use</b>	A green tick-mark indicates that the UDF is currently in use.

Column Name	Description
Offset	The set offset value.
Length	Length (number of bytes) in a packet that are matched.
Devices	Number of devices a UDF is applied on.
Created By	User who created the UDF.
Last Modified By	User who last modified the UDF.

The following actions can be performed from the **User Defined Field** tab:

- **Add UDF**—Use this to add a new UDF. See [Adding a UDF](#) for details about this task.
- **Delete UDF(s)**—Select a UDF by checking the check box which is available at the beginning of the row. Click **Actions** > **Delete UDF(s)**.

If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a UDF.

**Note** Any change in a UDF definition requires device reboot.

## Adding a User Defined Field

Use this procedure to add a user defined field.

Some protocols are not supported by default in some NX-OS devices. To support filtering of packets on these devices, use UDFs.

**Note** UDF can match a maximum of two offset bytes. To filter three consecutive bytes in a packet, we need to stack the UDFs. Create two UDFs, one after the other using the NDB GUI. The second UDF is called the stacking UDF.

### Procedure

- Step 1** Navigate to **Components** > **User Defined Field**.
- Step 2** From the **Actions** drop down list, select **Add UDF**.
- Step 3** In the **Add UDF** dialog box, enter the following details:

*Table 51: Add UDF*

Field	Description
UDF Name	Name of the UDF.

Field	Description
Type	<p>Select from the drop down list. The options are:</p> <ul style="list-style-type: none"> <li>• IPv4</li> <li>• IPv6</li> </ul>
Keyword	<p>Select from the drop down list. The options are:</p> <ul style="list-style-type: none"> <li>• Header</li> <li>• Packet-Start</li> </ul> <p>If the <b>Header</b> option is selected, the Inner (Offset base from inner/outer header) and L3/L4 (Offset base from L3/L4 header) is enabled. If <b>Packet-Start</b> is selected, the offset base starts from the packet.</p>
Header	<p>Select from the drop down list. The options are:</p> <ul style="list-style-type: none"> <li>• Inner</li> <li>• Outer</li> </ul> <p>This field is enabled only when the selected keyword is <b>Header</b>. Enables you to select the base offset value from the inner or outer Header.</p>
Layer	<p>Select from the drop down list. The options are:</p> <ul style="list-style-type: none"> <li>• Layer 3</li> <li>• Layer 4</li> </ul> <p>This field is enabled only when the selected keyword is <b>Header</b>. Enables you to specify if the offset start value is from Layer 3 or Layer 4.</p>
Offset	<p>Set the byte <b>Offset</b> value; range is from 0 to 127.</p> <p>Filtering of packets is done based on the set offset value in UDF, packets are matched from the set offset value.</p>
Length	<p>Length (number of bytes) of a packet that are matched; range is from 1 to 2.</p> <p>The length depends on the offset value, if it is set to 1; then one byte starting with the set offset byte is matched.</p>
Devices	<p>Device on which the UDF is being created.</p> <p>Click <b>Select Devices</b>.</p> <p>In the <b>Select Device(s)</b> window, select a device and click <b>Select Device(s)</b>.</p>

**Step 4** Click **Add UDF**.

The created UDF is used as a *custom filter* while creating filters for a connection. See [Adding a Filter](#) for details.

**Note**

The icon for UDF is yellow in color immediately after it is created. After you reboot the device, if the UDF is successfully installed, the UDF icon color changes to green, else it changes to red.

## Editing or Cloning a User Defined Field

Use this procedure to edit or clone a user defined field.

Editing a UDF means changing the parameters of an existing UDF.

Cloning a UDF means a new UDF is created with the same parameters as an existing UDF. You can change the parameters as required.

**Before you begin**

Create one or more user defined fields.

**Procedure**

**Step 1** Navigate to **Components > User Defined Field**.

**Step 2** In the displayed table, click a **UDF**.

A new pane is displayed on the right.

**Step 3** Click **Actions** and select **Clone UDF** or **Edit UDF**.

**Step 4** In the **Clone UDF** or **Edit UDF** dialog box, the current UDF information is displayed. Modify these fields, as required:

**Table 52: Edit UDF**

Field	Description
<b>UDF Name</b>	Name of the UDF. This field cannot be changed.
<b>Type</b>	The type selected during UDF creation. This field cannot be changed.
<b>Keyword</b>	Select from the drop down list. The options are: <ul style="list-style-type: none"> <li>• Header</li> <li>• Packet-Start</li> </ul>
<b>Header</b>	The Header selected during UDF creation. This field cannot be changed.

Field	Description
Layer	The Layer selected during UDF creation. This field cannot be changed.
Offset	Set the byte <b>Offset</b> value; range is from 0 to 127. Filtering of packets is done based on the set offset value in UDF, packets are matched from the set offset value.
Length	Length (number of bytes) of a packet that are matched; range is from 1 to 2. The length depends on the offset value, if it is set to 1; then one byte starting with the set offset byte is matched.
Devices	Device on which the UDF is currently applied on. You can delete the UDF from the current device or apply the UDF on more devices. Click <b>Select Devices</b> . In the <b>Select Device(s)</b> window, select a device and click <b>Select Device(s)</b> . <b>Note</b> You can not delete an <i>In-use</i> UDF from a device.

**Step 5** Click **Save**.

---

## CHAPTER 9

# Sessions

This chapter has details of the sessions created on the Cisco Nexus Dashboard Data Broker.

Beginning with Release 3.10.1, Cisco Nexus Data Broker (NDB) has been renamed to Cisco Nexus Dashboard Data Broker. However, some instances of NDB are present in this document, to correspond with the GUI, and installation folder structure. References of NDB/ Nexus Data Broker/ Nexus Dashboard Data Broker can be used interchangeably.

- [Span Sessions, on page 121](#)

## Span Sessions

The **Span Sessions** tab displays details of the span sessions of the Nexus Dashboard Data Broker controller.

A span session is the link between the span destination of span devices, and the input port of an NDB device. A span session is partially outside the Nexus Dashboard Data Broker network, and defines the path of the packets from the span destination to the monitoring tool port.

A table is displayed with the following details:

**Table 53: Span Sessions**

Column Name	Description
Status	<p>The status of a SPAN session depends on the operational status of the session in the device/ controller and the status of the connection attached to it. Click the displayed status icon to view the details of the session and connection. The factors impacting session status are—span destination, source (production switch/ controller), input port, monitoring tool port, ISL links(if any).</p> <p>The available statuses are:</p> <ul style="list-style-type: none"><li>• Green—session is successful</li><li>• Yellow—session is partially successful</li><li>• Red—session has failed</li><li>• Gray—session has not been installed</li></ul>

Column Name	Description
Span Session	Span session name.  This field is a hyperlink. Click the <b>SPAN session</b> name and a new pane is displayed on the right. The following additional actions can be performed here: <ul style="list-style-type: none"> <li>• <a href="#">Editing or Cloning a Span Session, on page 126</a></li> </ul>
IP Address	IP address of the span session source (span device).
Span Sources	The number of source ports for the span session.  <b>Note</b> In case of VLAN, the source ports are EPGs on the ACI device.
Span Destination	The number of span destination(s) for the session.  <b>Note</b> Only ACI devices can have multiple SPAN destinations. If there are more than one span destination, then, internal sessions are created. These internal sessions are created based on the availability of source ports.  Nexus devices support only one span destination per session.
Connection	Name(s) of connection(s) associated to the span session.
Created By	User who created the span session.
Last Modified By	User who last modified the span session.

The following actions can be performed from the **Span Sessions** tab:

- **Add Span Session**—Use this action to add a span session, see [Adding a Span Session, on page 123](#).
- **Synchronize Span Session / Destination**—Use this action to synchronize the information on the production switch (Nexus / Catalyst) or controller (Cisco APIC/ Cisco DNAC) with the Nexus Dashboard Data Broker controller. In case the span session information is deleted /removed on the switch or controller, this action synchronizes span destination configuration and span session configuration on the switch or controller with the configuration on the Nexus Dashboard Data Broker controller.
- **Toggle Install**—Use this action to install/ uninstall a span session. You can install a span session on the switch (Nexus / Catalyst) / controller or uninstall a span session without removing it from the Nexus Dashboard Data Broker controller. The SPAN session is uninstalled from the switch/ controller, but remains saved on the Nexus Dashboard Data Broker controller for future use.
- **Delete Span Session(s)**—Select the span session to be deleted by checking the check box which is available at the beginning of the row and then click **Actions > Delete Span Session(s)**. The selected

span session is deleted. If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a span session.

## Adding a Span Session

Use this procedure to add a span session.

**Note** You can add a maximum of 4 active span sessions for a Nexus switch.  
You can add a maximum of 8 active span sessions for a Catalyst switch.

### Before you begin

Add a controller / production switch before setting up a span session.

### Procedure

- Step 1** Navigate to **Sessions > Span Sessions**.
- Step 2** From the **Actions** drop-down list, select **Add Span Session**.
- Step 3** In the **Add Span Session** dialog box, enter the following details:

*Table 54: Add Span Session*

Field	Description
Span Session Name	Enter a name for the span session.
Span Sources	Select a Span Source. Select <b>Production Switch</b> or <b>Controller</b> . Each of these have a unique set of fields, which are discussed in the subsequent rows.
<b>Span Source: Controller</b>	
Controller	Click <b>Select Controller</b> , and choose either <b>Cisco ACI</b> or <b>Cisco DNAC</b> .  For creating a span source for Nexus devices that are part of the ACI network, select <b>Cisco ACI</b> . For creating a span source for catalyst switches, select <b>Cisco DNAC</b> .

Field	Description
<b>Leaf Ports</b>	<p>(Only for ACI Controller)</p> <p>While selecting the pod, node and its interfaces, if you do not find the latest details in the displayed options, click the <b>Refresh Fabric</b> button. This action will fetch the latest pod, node and its interfaces from the ACI Fabric.</p> <p>Select <b>Leaf Ports</b> to add a leaf port to capture the traffic from multiple leaf ports.</p> <p>Click <b>Select Leaf Ports</b>. In the <b>Select Leaf Port(s)</b> window that is displayed, select a <b>Pod</b>. The devices in the selected pod are displayed. Select a <b>Device</b> and <b>Port(s)</b> of the device.</p>
<b>EPG/ AAEP</b>	<p>(Only for ACI Controller)</p> <p>While selecting the EPG/ AAEP, if you do not find the latest EPG/ AAEP in the displayed options, click the <b>Refresh Fabric</b> button. This action will fetch the latest details from the ACI fabric.</p> <p>Select <b>EPG/ AAEP</b> to add an EPG/ AAEP source.</p> <p>Click <b>Select EPG/ AAEP</b>. In the <b>Select EPG/ AAEP</b> window that is displayed, select a <b>Tenant</b>, <b>Profile</b>, <b>EPG</b> and <b>EPG Members</b>. The displayed EPG members are Dynamic, Static, AAEP. When you select, Dynamic or Static, the member details are displayed on the right. When you select <b>AAEP</b> as an EPG Member, in the <b>Select AAEP</b> column, select an AAEP.</p> <p><b>Note</b> EPG interfaces work only when all the ports are within the same leaf switch.</p> <p>If an EPG is spread across multiple switches, select the corresponding SPAN destination on all the leaf switches.</p>
<b>Interface</b>	<p>(Only for Cisco DNAC)</p> <p>Click <b>Select Interface</b> and select a Catalyst switch and interface.</p>
<b>VLAN</b>	<p>(Only for Cisco DNAC)</p> <p>Enter a VLAN id.</p>
<b>Span Source: Production Switch</b>	
<b>Interface</b>	<p>Click <b>Select Interface(s)</b> . and select a <b>Device</b> and <b>Port(s)</b>.</p> <p>The selected device and port(s) are used in the session.</p>

Field	Description
VLAN	<p>Click <b>Select Production Switch</b> and select a device. Enter a VLAN ID.</p> <p>The device matching the VLAN ID is used in the session.</p>
Direction	<p>Indicates traffic for the session source port of the device.</p> <p>Select from one of these options:</p> <ul style="list-style-type: none"> <li>• Incoming</li> <li>• Outgoing</li> <li>• Both</li> </ul>
SPAN Destination	<p>Click <b>Select SPAN Destination</b> and select the span destination port. The fields displayed are based on your earlier <b>Span Sources</b> selection.</p> <p><b>Note</b> The Span Destination port was earlier created using <a href="#">Adding an Input Port, on page 94</a> procedure.</p> <p>If directly connected to the NDB device, select a local span destination, else select remote span destination. Remote span destination is applicable only for Nexus switches.</p> <p>To install ACI SPAN session, Nexus Dashboard Data Broker controller lists the SPAN destination(s) created in ACI.</p> <p>To install Nexus SPAN session, Nexus Dashboard Data Broker controller lists the SPAN destination(s) created for the Nexus devices.</p> <p>To install a Catalyst SPAN session, Nexus Dashboard Data Broker controller lists the SPAN destination(s) created for the Catalyst switch.</p>
Apply Connection	<p>Select a connection for the session.</p> <p>You can associate an existing connection to the span session or create a new connection for the span session.</p> <p><b>Note</b> All span destinations which are part of a session should be a part of a connection too, to direct traffic to the monitoring tool.</p> <p>Click the button to enable addition of a connection to the span session. Click <b>Select Connection</b> and select a connection from the <b>Select Connection</b> window.</p>

**Note**  
For EPG:

- For EPG selection, if an EPG is selected, by default, the Nexus Dashboard Data Broker controller listens for the changes in the statically or dynamically configured interfaces of the selected EPG. If there is any change, it is applied to the SPAN session. The web socket connection is not secured with the certificates. To disable the event listening, add `enableWebSocketHandle=false` in the `config.ini` file under `ndb/configuration` folder.
- When new EPG members are added in APIC, if there is no SPAN destination on the leaf switch that matches the newly added EPG member as part of the configured SPAN session, Nexus Dashboard Data Broker ignores this event and the new EPG member are not shown in Nexus Dashboard Data Broker.

**Note**

For SPAN Destination:

Ensure that each leaf switch in the SPAN source has at least one corresponding SPAN destination.

- Step 4** Click **Add Span Session** to add the created span session, without installing it on the production switch or controller. Click **Install Span Session** to save and install the created span session on the production switch or controller.

## Editing or Cloning a Span Session

Use this procedure to edit or clone a span session.

Editing a span session means changing some of the parameters of an existing span session.

Cloning a span session means creating a new span session with identical parameters of an existing span session, with required modifications. Ensure to change the name of the span session before saving it.

**Before you begin**

Add one or more span sessions.

**Procedure**

- Step 1** Navigate to **Sessions > Span Sessions**.
- Step 2** In the displayed table, click a **Session**.  
A new pane is displayed on the right.
- Step 3** Click **Actions** and select **Edit Span Session** or **Clone Span Session**.  
Edit the displayed parameters in the table.

*Table 55: Edit Span Session*

Field	Description
Span Session Name	Span session name is displayed. This field can not be edited.
Span Sources	The earlier selected span source is indicated. The span source can not be changed.

Field	Description
<b>Span Source: Controller</b>	
<b>Controller</b>	<p>Click <b>Select Controller</b>, and choose either <b>(Cisco) ACI</b> or <b>(Cisco) DNAC</b>.</p> <p>For creating a span source for Nexus devices that are part of the ACI network, select <b>(Cisco) ACI</b>. For creating a span source for catalyst switches, select <b>(Cisco) DNAC</b>.</p>
<b>Leaf Ports</b>	<p>(Only for ACI Controller)</p> <p>Select <b>Leaf Ports</b> to add a leaf port to capture the traffic from multiple leaf ports.</p> <p>Click <b>Select Leaf Ports</b>. In the <b>Select Leaf Port(s)</b> window that is displayed, select a <b>Pod</b>. The devices in the selected pod are displayed. Select a <b>Device</b> and <b>Port(s)</b> of the device.</p>
<b>EPG/ AAEP</b>	<p>(Only for ACI Controller)</p> <p>Select <b>EPG/ AAEP</b> to add an EPG/ AAEP source.</p> <p>Click <b>Select EPG/ AAEP</b>. In the <b>Select EPG/ AAEP</b> window that is displayed, select a <b>Tenant</b>, <b>Profile</b>, <b>EPG</b> and <b>EPG Members</b>. The displayed EPG members are Dynamic, Static, AAEP. When you select, Dynamic or Static, the member details are displayed on the right. When you select <b>AAEP</b> as an EPG Member, in the <b>Select AAEP</b> column, select an AAEP.</p> <p><b>Note</b> EPG interfaces work only when all the ports are within the same leaf switch.</p> <p>If an EPG is spread across multiple switches, select the corresponding SPAN destination on all the leaf switches.</p>
<b>Interface</b>	<p>(Only for Cisco DNAC)</p> <p>Click <b>Select Interface</b> and select a Catalyst switch and interface.</p>
<b>VLAN</b>	<p>(Only for Cisco DNAC)</p> <p>Enter a VLAN id.</p>
<b>Span Source: Production Switch</b>	
<b>Interface</b>	<p>The interfaces selected earlier while adding a span session are displayed. You can add or delete these interfaces.</p> <p>Click <b>Select Interface(s)</b> . and select a <b>Device</b> and <b>Port(s)</b>. The selected device and port(s) are used in the session.</p>

Field	Description
VLAN	<p>Click <b>Select Production Switch</b> and select a device. Enter a VLAN ID.</p> <p>The device matching the VLAN ID is used in the session.</p>
Direction	<p>Indicates traffic for the session source port of the device.</p> <p>Select from one of these options:</p> <ul style="list-style-type: none"> <li>• Incoming</li> <li>• Outgoing</li> <li>• Both</li> </ul>
SPAN Destination	<p>Click <b>Select SPAN Destination</b> and select the span destination port. The fields displayed are based on your earlier <b>Span Sources</b> selection.</p> <p><b>Note</b> The Span Destination port was earlier created using <a href="#">Adding an Input Port, on page 94</a> procedure.</p> <p>If directly connected to the NDB device, select a local span destination, else select remote span destination. Remote span destination is applicable only for Nexus switches.</p> <p>To install ACI SPAN session, Nexus Dashboard Data Broker controller lists the SPAN destination(s) created in ACI.</p> <p>To install Nexus SPAN session, Nexus Dashboard Data Broker controller lists the SPAN destination(s) created for the NX-OS devices.</p> <p>To install a Catalyst SPAN session, Nexus Dashboard Data Broker controller lists the SPAN destination(s) created for the Catalyst switch.</p>
Apply Connection	<p>Select a connection for the session.</p> <p>You can associate an existing connection to the span session or create a new connection for the span session.</p> <p><b>Note</b> All span destinations which are part of a session should be a part of a connection too, to direct traffic to the monitoring tool.</p> <p>Click the button to enable addition of a connection to the span session. Click <b>Select Connection</b> and select a connection from the <b>Select Connection</b> window.</p>

**Step 4** Click **Save**.

---

## CHAPTER 10

# Statistics

This chapter has details about the statistics of the connections and components of the Cisco Nexus Dashboard Data Broker.

Beginning with Release 3.10.1, Cisco Nexus Data Broker (NDB) has been renamed to Cisco Nexus Dashboard Data Broker. However, some instances of NDB are present in this document, to correspond with the GUI, and installation folder structure. References of NDB/ Nexus Data Broker/ Nexus Dashboard Data Broker can be used interchangeably.

- [Connections, on page 131](#)
- [Filters, on page 131](#)
- [Flows, on page 132](#)
- [Input Ports, on page 133](#)
- [TCAM Resource Utilization, on page 133](#)
- [Monitoring Tools, on page 134](#)
- [Ports, on page 134](#)

## Connections

The **Connections** tab displays a list of connections configured on the Nexus Dashboard Data Broker controller.

A table with the following details is displayed:

Column Name	Description
<b>Connection</b>	The connection name.  This field is a hyperlink; click a <b>Connection</b> name to get more information about the connection. For related actions, see the <a href="#">Connections</a> section.
<b>Packet Count</b>	The aggregate traffic volume shown in packets for the connection.

## Filters

The **Filters** tab displays filters that are used in connections.

A table with the following details is displayed:

Column Name	Description
<b>Filter</b>	The filter name.  This is hyperlink; click the <b>Filter</b> name for more details about the filter. For related actions, see the <a href="#">Filters</a> section.
<b>Packet Count</b>	The aggregate traffic volume shown in packets for the filter.

## Flows

The **Flows** tab displays device flows for NDB devices.

Click **Select Device** to select an NDB device for which the flow statistics will be fetched. If you want to fetch the flow statistics for another device, click **Change Device**.

A table with the following details is displayed:

Column Name	Description
<b>In Port</b>	The input port(s) from which the traffic is matched.
<b>DL Src</b>	The source MAC address to be matched for the incoming traffic.
<b>DL Dst</b>	The destination MAC address to be matched for the incoming traffic.
<b>DL Type</b>	The ethernet type to be matched for the incoming traffic. For example, <b>IPv4</b> or <b>IPv6</b> is used for all IP traffic types.
<b>DL VLAN</b>	The VLAN ID to be matched for the incoming traffic.
<b>VLAN PCP</b>	The VLAN priority to be matched for the incoming traffic.
<b>NW Src</b>	The IPv4 or IPv6 source address for the incoming traffic.
<b>NW Dst</b>	The IPv4 or IPv6 destination address for the incoming traffic.
<b>NW Proto</b>	The network protocol to be matched for the incoming traffic. For example, "6" indicates the TCP protocol.
<b>TP Src</b>	The source port associated with the network protocol to be matched for the incoming traffic.

Column Name	Description
<b>TP Dst</b>	The destination port associated with the network protocol to be matched for the incoming traffic.
<b>Packet Count</b>	The aggregate traffic volume shown in packets that match the specified flow connection.

## Input Ports

The **Input Ports** tab displays the packet count details for the input ports of the NDB devices.

A table with the following details is displayed:

Column Name	Description
<b>Input Ports</b>	The input port with the device name.  Click the <b>Input Port</b> to get more details of the input port. For related actions, see the <a href="#">Input Ports</a> , on page 92 section.
<b>Packet Count</b>	The aggregate traffic volume shown in packets for the input port.

## TCAM Resource Utilization

The **TCAM Resource Utilization** tab displays TCAM resource utilization details for NDB devices.

A table with the following details is displayed:

*Table 56: TCAM Resource Utilization*

Column Name	Description
<b>Device</b>	The device name.  This field is a hyperlink; click the <b>Device</b> name for more details of the device. For related actions, see the <a href="#">Devices</a> section.
<b>Utilization</b>	The utilization pattern, indicated by colours. <ul style="list-style-type: none"> <li>• Green—indicates that the TCAM utilization is optimum.</li> <li>• Orange—indicates that the TCAM utilization is within the range.</li> <li>• Red—indicates that the TCAM utilization is nearing the full limit.</li> </ul>

## Monitoring Tools

The **Monitoring Tools** tab displays the monitoring tool ports connected to the NDB controller.

A table with the following details is displayed:

Column Name	Description
<b>Monitoring Tools</b>	The monitoring tool name.  This field is a hyperlink; click the monitoring tool name for more details. For related actions, see the <a href="#">Monitoring Tools</a> section.
<b>TX Packets</b>	The number of packets transmitted by the monitoring tool port.

## Ports

The **Ports** tab displays the statistics for ports of an NDB device.

Click **Select Device** to fetch the port details of the selected device. Click **Change Device** to select another device.

A table with the following details is displayed:

Column Name	Description
<b>Port</b>	The interface of the device for which the statistics are displayed.  This is hyperlink; click the port for more details.
<b>Rx Pkts</b>	The number of received packets on the port.
<b>Tx Pkts</b>	The number of transmitted packets on the port.
<b>Rx Bytes</b>	The number of received bytes on the port.
<b>Tx Bytes</b>	The number of transmitted bytes on the port.
<b>Rx Rate (kbps)</b>	The rate of receiving packets.
<b>Tx Rate (kbps)</b>	The rate of transmitting packets.
<b>Rx Drops</b>	The rate at which packets are dropped at the port (Rx).
<b>Tx Drops</b>	The rate at which packets are dropped at the port (Tx).
<b>Rx Errs</b>	Errors at the port while receiving packets.
<b>Tx Errs</b>	Errors at the port while transmitting packets.

Column Name	Description
Rx Frame Errs	Frame errors at the port while receiving packets.
Rx OverRu	Overrun errors at the port while receiving packets.

Click **Actions** > **Clear Ports** to clear the statistics data of the selected device.

# CHAPTER 11

## Troubleshooting

This chapter has troubleshooting details of the Cisco Nexus Dashboard Data Broker.

Beginning with Release 3.10.1, Cisco Nexus Data Broker (NDB) has been renamed to Cisco Nexus Dashboard Data Broker. However, some instances of NDB are present in this document, to correspond with the GUI, and installation folder structure. References of NDB/ Nexus Data Broker/ Nexus Dashboard Data Broker can be used interchangeably.

- [Audit Log, on page 137](#)
- [Flow Management, on page 138](#)
- [JSON Export/ Import , on page 142](#)
- [Purge Device, on page 144](#)
- [RMA, on page 144](#)
- [Tech Support, on page 145](#)

## Audit Log

The **Audit Log** tab displays a record of activities or actions performed on the Nexus Dashboard Data Broker controller.

**Note** Read-only actions are not recorded.

A table is displayed with the following details:

*Table 57: Audit Log*

Column Name	Description
Date & Time	The date and time of activity.
Module Name	Module on which the event occurred.  This is based on an internal mapping of modules, for example- logging in and logging out is part of the Security Module.

Column Name	Description
<b>Slice</b>	<p>Slice pertaining to an action/ event.</p> <p>Some actions are not slice-relevant and they are left blank.</p> <p>Examples for slice-dependent actions- components, connections , sessions, statistics.</p>
<b>User</b>	User responsible for the action/ event.
<b>Action</b>	Description of the action performed by the user.
<b>Resource</b>	Object on which the action was performed.
<b>Description</b>	<p>The result of the performed action. The available options are:</p> <ul style="list-style-type: none"> <li>• Failure (with description)</li> <li>• Success</li> </ul>
<b>Origin</b>	<p>Nexus Dashboard Data Broker controller on which the action was performed.</p> <p><b>Note</b> For Standalone Nexus Dashboard Data Broker controller, 127.0.0.1 is displayed.</p>
<b>Mode</b>	<p>Mode in which the action was performed.</p> <p><b>Note</b> For Release 3.10, only Centralized mode is supported.</p>

The following actions can be performed from the **Audit Log** tab:

- **Fetch Records**—Use this to set the number of audit logs that will be displayed.

Click **Actions** > **Fetch Records** and enter a value for the **Record Count** field. Click **Fetch**. The **Audit Log** table is loaded accordingly.

## Flow Management

The **Flow Management** tab enables you to view inconsistent connections and device flows and manage the inconsistent flows. You can view and download the details, which can be used for debugging.

The **Flow Management** tabs contains the following subtabs:

- **Consistency Check**—displays inconsistencies for NX-API based devices. The inconsistencies are automatically triggered if there is an ACL/ ACE mismatch with the NDB database. See [Consistency Check](#) for more details.

- **Connection Flows**—displays details of the ACLs and ACEs generated for a connection. See [Connection Flows](#) for more details.
- **Device Flows**—displays details of the ACLs and ACEs generated for a device. See [Devices Flows](#) for more details.

## Consistency Check

The **Consistency Check** tab displays inconsistencies for NX-API based devices. The inconsistencies are automatically triggered if there is an ACL/ ACE mismatch with the Nexus Dashboard Data Broker database.

The *Alarm* icon (  ) in the header displays the number of devices that have inconsistencies.

A table is displayed with the following details:

**Table 58: Consistency Check**

Column Name	Description
<b>Device</b>	<p>Device name.</p> <p>This field is an hyperlink. Click the <b>Device</b> name and a new pane is displayed on the right. For details about devices, see <a href="#">Devices</a>.</p>
<b>Inconsistent Controller Flows</b>	<p>The inconsistent controller flows.</p> <p>This field is an hyperlink. Click the number indicated and a new pane is displayed on the right with a list of ACLs and their ACEs. The following actions can be performed from here:</p> <ul style="list-style-type: none"> <li>• <b>Fix Flows</b>—Select the required check-boxes and click <b>Fix Flows</b>. The selected flows (ACEs) are fixed and the number displayed in the <b>Inconsistent Controller Flows</b> column is updated accordingly.</li> <li>• <b>Export All</b>—Select this option to get a copy of the flows listed as ACLs and ACEs. A <code>.csv</code> file is downloaded to your local machine. This is useful for debugging.</li> </ul>

Column Name	Description
<b>Inconsistent Device Flows</b>	<p>The inconsistent or stale flows for a device; indicates the missing ACLs and ACEs in the device when compared to the controller flows.</p> <p>This field is an hyperlink. Click the number indicated and a new pane is displayed on the right with a list of ACLs and their ACEs. The following actions can be performed from here:</p> <ul style="list-style-type: none"> <li>• <b>Fix Flows</b>—Select the required check-boxes and click <b>Fix Flows</b>. The selected flows (ACEs) are fixed and the number displayed in the <b>Inconsistent Controller Flows</b> column is updated accordingly.</li> <li>• <b>Export All</b>—Select this option to get a copy of the flows listed as ACLs with their ACEs. A <code>.csv</code> file is downloaded to your local machine. This is useful for debugging.</li> </ul>
<b>Non NDB Flows</b>	<p>The number of ACLs present in the device. ACLs can be the default device ACLs or can be added manually.</p> <p>This field is an hyperlink. Click the number indicated and a new pane is displayed on the right with a list of ACLs and their ACEs. The following actions can be performed from here:</p> <ul style="list-style-type: none"> <li>• <b>Fix Flows</b>—Select the required check-boxes and click <b>Fix Flows</b>. The selected flows (ACEs) are fixed and the number displayed in the <b>Inconsistent Controller Flows</b> column is updated accordingly.</li> <li>• <b>Export All</b>—Select this option to get a copy of the flows listed as ACLs with their ACEs. A <code>.csv</code> file is downloaded to your local machine. This is useful for debugging.</li> </ul>

**Note** ACLs which are Nexus Dashboard Data Broker-generated are indicated with a *ndb\_* prefix. Non-NDB flows are indicated by the respective component.

The following actions can be performed from the **Consistency Check** tab:

- **Check Controller Flows**—Select a device and click **Check Controller Flows**. A new pane is displayed on the right with the ACLs and ACEs.
- **Check Device Flows**—Select a device and click **Check Device Flows**. A new pane is displayed on the right with the ACLs and ACEs.

- **View non-NDB Flows**—Select a device and click **View non-NDB Flows**. A new pane is displayed on the right with the ACLs and ACEs.

## Connections Flows

The **Connections Flows** tab provides details of the ACLs and ACEs generated for a connection.

A table is displayed with the following details:

*Table 59: Connections Flows*

Column Name	Description
<b>Connection</b>	<p>Connection name.</p> <p>This field is a hyperlink. Click the <b>Connection</b> name and a new pane is displayed on the right with details of the connection. For information about the actions that can be performed here, see <a href="#">Connections</a> chapter.</p>
<b>Flows</b>	<p>Number of flows (ACEs) for the connection (can be across devices).</p> <p>This field is hyperlink. Click the displayed number and a new pane is displayed on the right. The connection name is displayed, followed by the ACL and the ACEs that it contains. Actions that can be performed from here are:</p> <ul style="list-style-type: none"> <li>• <b>Export All</b>—Select this option to get a copy of the flows listed as ACLs with their ACEs. A <code>.csv</code> file is downloaded to your local machine.</li> </ul>

The following actions can be performed from the **Connection Flows** tab:

- **Check Connection Flows**—Select a connection and click **Check Connection Flows**. A new pane is displayed on the right. The connection name is displayed, followed by the ACL and the ACEs that it contains. Actions that can be performed from here are:
  - **Export All**—Select this option to get a copy of the flows listed as ACLs with their ACEs. A `.csv` file is downloaded to your local machine.

## Device Flows

The **Device Flows** tab provides details of the ACLs and ACEs generated for a device.

A table is displayed with the following details:

Table 60: Device Flows

Column Name	Description
Device	<p>Device name.</p> <p>This field is a hyperlink. Click the <b>Device</b> name and a new pane is displayed on the right with details of the device. For information about the actions that can be performed here, see <a href="#">Devices</a> chapter.</p>
Flows	<p>Number of flows (ACEs) for the device (can be across connections and all ports of the device).</p> <p>This field is a hyperlink. Click the displayed number and a new pane is displayed on the right. The connection name is displayed, followed by the ACL and the ACEs that it contains. Actions that can be performed from here are:</p> <ul style="list-style-type: none"> <li>• <b>Export All</b>—Select this option to get a copy of the flows listed as ACLs with their ACEs. A <code>.csv</code> file is downloaded to your local machine.</li> </ul>

The following actions can be performed from the **Device Flows** tab:

- **Check Device Flows**—Select a device and click **Check Device Flows**. A new pane is displayed on the right. The device name is displayed, followed by the ACL and the ACEs that it contains. Actions that can be performed from here are:
  - **Export All**—Select this option to get a copy of the flows listed as ACLs with their ACEs. A `.csv` file is downloaded to your local machine.

## JSON Export/ Import

The **JSON Export/ Import** tab enables you to export and import the device configuration in JSON file format. The configuration file includes information about the connected as well as disconnected devices with all the configuration information (except for port-channel).

The **JSON Export/ Import** tab contains the following subtabs:

- **Export**—enables you to export configurations from Nexus Dashboard Data Broker controller (to your local machine). See [Export](#) for more details.
- **Import**—enables you to import configurations into the Nexus Dashboard Data Broker controller. See [Import](#) for more details.

## Export

The **Export** tab enables you export configurations from the Nexus Dashboard Data Broker controller.

A table with the following details is displayed:

Table 61: Export

Column Name	Description
<b>ID</b>	Serial number of the device.
<b>Name</b>	Name of the device.
<b>IP Address</b>	IP address of the device.
<b>Type</b>	Type of the device. The options are: <ul style="list-style-type: none"> <li>• NX—NDB device connected to NX-API device.</li> <li>• PS—NDB device connected to production switch (NX-OS).</li> <li>• AC—NDB device connected to ACI device.</li> </ul>
<b>Status</b>	The status of the device.

The following actions can be performed from the **JSON Export/ Import > Export** tab:

- **Export Configuration**—Click **Actions > Export Configuration** to export a JSON configuration to your local machine. Select the **Connections** check-box to include the connections of a device while exporting. Click **Export**.

## Import

The **Import** tab enables you to import configurations in to the Nexus Dashboard Data Broker controller.

A table with the following details is displayed:

Table 62: Import

Column Name	Description
<b>ID</b>	Serial number of the device.
<b>Exported Device Name</b>	Name of the device from which the configuration was exported.
<b>IP Address</b>	IP address of the device.
<b>Type</b>	Type of the device. The options are: <ul style="list-style-type: none"> <li>• NX—NDB device connected to NX-API device.</li> <li>• PS—NDB device connected to production switch (NX-OS).</li> <li>• AC—NDB device connected to ACI device.</li> </ul>
<b>Status</b>	Status of the import action. The options are- success, failure, partial, in progress, abort.

Column Name	Description
Description	Description of the success/ failure status.

The following actions can be performed from the **JSON Export/ Import > Import** tab:

- **Import Configuration**—Click **Actions > Import Configuration** and select a JSON file from your local machine and click **Upload**. You can also *drag and drop* to upload a JSON file.
- **Apply Configuration**—Click **Actions > Apply Configuration**. The **Edit Device** screen is displayed. Enter the details of the device on which you intend to apply the configuration. Click **Apply and Check Compatibility**. The **Compatibility Matrix** screen is displayed. If both the devices are compatible, the status is indicated in green. Click **Apply**.

The status of this action is indicated in the **Import** table.

- **Delete Import**—Click **Actions > Delete Import** to delete an imported configuration.

## Purge Device

The **Purge Device** tab displays details of deleted NDB devices. Deleting a device only removes it from the Nexus Dashboard Data Broker controller but the device configuration is retained, while purging a device deletes a device and also removes the device configuration from the Nexus Dashboard Data Broker controller.

A table is displayed with the following details:

**Table 63: Purge Device**

Column Name	Description
Node ID	Node ID of the device connected to Nexus Dashboard Data Broker controller.
Device	Device name.
IP Address	IP address of the device.

Use the *Filter by attributes* bar to filter the table based on displayed device group details. Choose the attribute, operator and filter-value.

The following actions can be performed from the **Purge Device** tab:

- **Purge Device(s)**—Select the required devices by checking the check box which is available at the beginning of the row; click **Purge Device(s)**.

This is useful for removing the stale device configurations from the database.

## RMA

The Return Material Authorization (**RMA**) tab displays a list of devices that have been deleted and awaiting replacement. This feature maps the configuration from the RMA device to the new device.

A table is displayed with the following details:

**Table 64: RMA**

Column Name	Description
<b>Existing Node ID</b>	The node ID of the (deleted) NDB device.
<b>Node Name</b>	Device name.
<b>Serial Number</b>	Serial number of the device.
<b>IP Address</b>	IP address of the device.

The following actions can be performed from the **RMA** tab:

- **Replace Node ID**— Select a Node ID by checking the check box. Click **Actions > Replace Node ID**. In the pop-up window that appears, enter the **Serial Number** and click **Replace**. The selected device is replaced with the device with the new serial number.

**Note**

To get the serial number for a NX-API device, use **show module** command for non-modular chassis (look for Serial-Num in the output) or use **show hardware** command for modular chassis switches (look for serial number under Switch hardware ID information in the output).

## Tech Support

The **Tech Support** tab displays details of the tech support jobs created on the Nexus Dashboard Data Broker controller.

For more details about Tech Support [About Tech Support, on page 147](#).

A table is displayed with the following details:

**Table 65: Tech Support**

Column Name	Description
<b>Job ID</b>	<p>Job id created for a Tech Support job.</p> <p>This field is a hyperlink. Click the <b>Job ID</b> to view more details of the job. Click <b>Actions &gt; Download</b> to download the details of the job to your local machine.</p> <p>The <b>Download and Delete</b> option downloads the details of the job to your local machine and then deletes it from the Nexus Dashboard Data Broker controller.</p>

Column Name	Description
<b>Job Type</b>	The Operation Type of the job. The options are: <ul style="list-style-type: none"> <li>• Basic</li> <li>• Advanced</li> </ul>
<b>Status</b>	Status of the tech support job. The available statuses are: <ul style="list-style-type: none"> <li>• Success— job is successfully completed.</li> <li>• Partial— job is partially successful. For eg, if multiple devices were selected, then, may be the failure has occurred on one of the selected devices.</li> <li>• Failure— job is not successful.</li> <li>• In progress— job is currently in progress.</li> <li>• Created— job is ready for execution, but is in a queue.</li> <li>• Stop— job was created but was not allowed to complete.</li> </ul>

The following actions can be performed from the **Tech Support** tab:

- **Trigger Job** — Use this to trigger a tech support job. See [Trigger Tech Support, on page 146](#) for more details.
- **Re-trigger Job** —Select a check box next and click **Actions > Re-trigger Job** to re-trigger a job. *In Progress* and *Created* jobs cannot be re-triggered. The Tech Support log files are replaced with the latest set of files, after a retriggered job is successful.
- **Stop Job**—Select a check box and click **Actions > Stop Job** to stop an ongoing job. Only *In Progress* and *Created* jobs can be stopped.
- **Delete Job**—Select a check box and click **Actions > Delete Job** to delete a job. An *In Progress* job cannot be deleted.

**Note** Multiple eligible jobs can be removed/stopped/re-triggered at a time.

## Trigger Tech Support

Use this procedure to trigger a tech support job.

### Before you begin

Ensure that one or more devices are connected to Nexus Dashboard Data Broker and the AUX mode is disabled.

Ensure to have a minimum available space of 64 MB in the device; else, the operation fails and a *No Enough Space* error is displayed.

## Procedure

**Step 1** Navigate to **Troubleshooting > Tech Support**.

**Step 2** Click **Actions > Trigger Job**.

**Step 3** In the **Trigger Tech Support** dialog box, enter the following details:

*Table 66: Trigger Tech Support*

Field	Description
<b>Trigger Settings</b>	
<b>Device</b>	The device for which you need to collect data. Click <b>Select Device</b> to select a device.
<b>Operation Type</b>	Select <b>Basic</b> or <b>Advanced</b> . The <code>show commands</code> for each of these options is listed.

**Step 4** Click **Add** to collect the outputs of the `show commands`.

### Note

The following folders are by default downloaded besides the Tech Support folder – configuration folder, configuration start up folder and general logs. This enables the tech support team to get all the information together and results in faster analysis.

## About Tech Support

The tech support for NX-API devices feature enables you to collect information from one or more switches in one attempt, instead of collecting data separately from each switch. This is useful during debugging as all the relevant logs are readily available and can be downloaded.

Tech support data collection from switches can be performed in two modes:

- Basic mode– contains a limited set of show commands.
- Advanced mode–contains a wider set of show commands:

## CHAPTER 12

# Administration

This chapter has details about the profiles and users of the Cisco Nexus Dashboard Data Broker.

Beginning with Release 3.10.1, Cisco Nexus Data Broker (NDB) has been renamed to Cisco Nexus Dashboard Data Broker. However, some instances of NDB are present in this document, to correspond with the GUI, and installation folder structure. References of NDB/ Nexus Data Broker/ Nexus Dashboard Data Broker can be used interchangeably.

- [AAA](#) , on page 149
- [Backup/ Restore](#), on page 152
- [Transport Layer Security](#) , on page 156
- [Cluster](#), on page 156
- [Profile](#), on page 157
- [Slices](#), on page 159
- [System Information](#), on page 162
- [User Management](#), on page 162

## AAA

The **AAA** tab displays details of the AAA servers available on the Nexus Dashboard Data Broker. For more details about AAA servers, see [About AAA Servers](#), on page 152.

A table with the following details is displayed:

Column Name	Description
Server Address	The IP address of the AAA server.
Protocol	The protocol running on the server. The options are: <ul style="list-style-type: none"><li>• TACACS</li><li>• RADIUS+</li><li>• LDAP</li></ul>

The following actions can be performed from the **AAA** tab:

- **Add Server**—Use this to add a new AAA server. See [Adding an AAA Server](#), on page 150 for the detailed procedure.

- **Delete Server**—Select the server(s) to be deleted by checking the check box which is available at the beginning of the row and then click **Actions > Delete AAA Server**. The selected server(s) is deleted. If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a server.

## Adding an AAA Server

Use this procedure to add an AAA server.

### Procedure

- Step 1** Navigate to **Administration > AAA**.
- Step 2** From the **Actions** drop down menu, select **Add AAA Server**.
- Step 3** In the **Add AAA Server** dialog box, enter the following details:

*Table 67: Add AAA Server*

Field	Description
<b>General</b>	
<b>Protocol</b>	Choose a protocol for the AAA server. <ul style="list-style-type: none"> <li>• Radius</li> <li>• LDAP</li> <li>• TACACS</li> </ul> The fields relevant for each option are discussed below.
<b>Protocol: Radius</b>	
<b>Server Address</b>	Server IP address or domain name.
<b>Secret</b>	Secret configured on the AAA server.
<b>Protocol: LDAP</b>	
<b>Server Address</b>	Server IP address or domain name.
<b>Port</b>	Communication port for the AAA server.

Field	Description
User RDN	<p>Enter the Relative Distinguished Name (RDN) , used to authenticate with the LDAP server.</p> <p>User hierarchy defined in the LDAP server. Example: While configuring LDAP in AAA, consider the following hierarchy (defined in LDAP), for user “cn=admin,ou=People,dc=ndb,dc=local”, user RDN should be “ou=People,dc=ndb,dc=local”. After NDB is configured with LDAP, then to login, only the <i>cn</i> value has to be provided for the username. In this case, username is “admin”.</p>
Role Attribute	<p>Enter the role attribute which is the LDAP authorization attribute for users.</p> <p>Role Attribute can be any attribute in LDAP for the DN.</p> <p>For example, let <i>sn</i> be the defined role-attribute in the local LDAP server. So, for <i>admin user</i> in NDB, you can have “network-admin” as a value for the <i>sn</i> attribute.</p> <p>When NDB contacts the LDAP sever with the Role Attribute and User RDN and <i>admin user</i>, LDAP returns the <i>sn</i> value ("network-admin") as authentication.</p>
Role Type Mapping	<p>Click the button to enable Default setting. A list of <b>Role Mapping</b> values are displayed. If you have enabled <b>Default</b>, then, the following are the existing mapped values:</p> <ul style="list-style-type: none"> <li>• network-admin—<i>network-admin</i></li> <li>• network-operator—<i>network-operator</i></li> <li>• application-user—<i>application-user</i></li> <li>• slice-user—<i>slice-user</i></li> </ul> <p>Disable <b>Default</b>, to provide custom mapping of roles with values defined in LDAP. Select a role from the drop down list in the <b>Role Mapping</b> column, and enter a value defined in LDAP in the <b>Role Type Mapping</b> column.</p> <p>Click <b>Add Row</b> to add more Role Type Mapping rows.</p>
Timeout	Enter the wait time by which the LDAP server should respond.
Protocol: TACACS+	
Server Address	TACACS+ server address.
Secret	Secret configured on the TACACS+ server.
Username	Username to login to the server.

Field	Description
<b>Password</b>	Password to login to the server.
<b>Check Server</b>	Click <b>Check Server</b> to check if the server is reachable and the authentication credentials are valid.

**Note**

It is not recommended to change the admin password of the ndb controller when the user management of the ndb controller is performed through TACACS or AAA.

**Step 4** Click **Add AAA Server** to add the server.

**What to do next**

If you chose RADIUS as the protocol for the AAA server, you need to configure user authentication for RADIUS.

**Configuring User Authentication for RADIUS Server**

User authorization on a RADIUS server must conform to the Cisco Attribute-Value (av-pair) format. In the RADIUS server, configure the Cisco av-pair attribute for a user as follows:

```
shell:roles="Network-Admin Slice-Admin"
```

## About AAA Servers

AAA enables the security appliance to determine who the user is (authentication), what the user can do (authorization), and what the user did (accounting). Cisco Nexus Dashboard Data Broker uses Remote Authentication Dial-In User Service (RADIUS) or Terminal Access Controller Access-Control System Plus (TACACS+) to communicate with an AAA server.

AAA server supports remote authentication and authorization. To authenticate each user, Cisco Nexus Dashboard Data Broker uses both the login credentials and an attribute-value (AV) pair. An AV pair assigns the authorized role for the user as part of the user administration. After successful authentication, the Cisco AV pair is returned to Cisco Nexus Dashboard Data Broker for resource access authorization.

## Backup/ Restore

The following actions can be performed from the **Backup/ Restore** tab:

- **Backup Locally**—Configuration is backed up on your local machine.
- **Restore Locally**—In the **Restore Locally** window that appears, click **Choose a file** to select a file from your local machine to restore the configuration.

Select the **Restore** check-box if you want Nexus Dashboard Data Broker to re-configure the configurations of the device, from the uploaded backup after Nexus Dashboard Data Broker is restarted. The following configurations are reconfigured:

- Global Configurations

- Port Configurations
- UDF
- Connections

**Note** Backup/Restore is supported only for Nexus Dashboard Data Broker releases 3.10.4 and 4.0, which means that restoration is supported from release 3.10.4 to release 4.0 or release 4.0 to 4.0.

If you are restoring a 4.0 release backup, the TLS truststore and keystore files are automatically part of the backup. For upgrade from release 3.10.4 to 4.0, you need to upload the truststore and keystore files when prompted and then click **Restore**. While the restoration is in progress, a banner is displayed which reads, *Restore is in progress, do not refresh.*

## Schedule of Backups

The **Schedule of Backups** tab displays details of the scheduled backups for the Nexus Dashboard Data Broker controller.

A table with the following details is displayed:

**Table 68: Backup**

Column Name	Description
<b>Start Date</b>	The start date for the backup.
<b>Start Time</b>	The start time for the backup.
<b>End Date</b>	The end date for the backup.
<b>Pattern</b>	The backup pattern. Options are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> </ul>
<b>Occurrences</b>	Number of occurrences based on the selected pattern.

The following actions can be performed from the **Backup** tab:

- **Schedule Backup**—Use this to schedule a backup. See [Scheduling Backup, on page 154](#) .
- **Backup Locally**—Configuration is backed up on your local machine.
- **Restore Locally**—In the **Restore Locally** window that appears, choose a file from your local machine to restore the configuration.

Select the **Restore** check-box if you want Nexus Dashboard Data Broker to re-configure the configurations of the device, from the uploaded backup after Nexus Dashboard Data Broker is restarted. The following configurations are reconfigured:

- Global Configurations
- Port Configurations
- UDF
- Connections

The **Restore** check-box is applicable only for configuration downloaded from NDB Release 3.8 and above.

## Scheduling Backup

Use this procedure to schedule a backup.

It is always recommended to take a backup before upgrading to the next Nexus Dashboard Data Broker version.

### Procedure

- Step 1** Navigate to **Administration > Backup / Restore**.
- Step 2** From the **Actions** drop-down list, select **Schedule Backup**.
- Step 3** In the **Schedule Backup** dialog box, enter the following details:

*Table 69: Schedule Backup*

Field	Description
<b>Schedule</b>	
<b>Start Date</b>	Enter the start date for the backup.
<b>Start Time</b>	Enter the start time for the backup.
<b>Repeat</b>	<p>Select one of the options:</p> <ul style="list-style-type: none"> <li>• <b>Daily</b>—the backup operation occurs daily.</li> <li>• <b>Weekly</b>—the backup operation occurs on the selected day of the week, every week.</li> <li>• <b>Monthly</b>—the backup operation starts on the selected date every month.</li> </ul> <p><b>Note</b> Check the <b>Last Day</b> check-box for the backup to be performed till the end of the selected month.</p>

Field	Description
<b>End</b>	Select one of the options to stop the backup process: <ul style="list-style-type: none"> <li>• <b>No End Date</b>—continue taking back up.</li> <li>• <b>End Date</b>—continue taking backup till the specified end date.</li> <li>• <b>Occurrences</b>—takes backup based on the number selected in the <b>Number of Occurrences</b> field.</li> </ul>
<b>Enable</b>	The <b>Enable</b> check box is selected by default. Leave the check box checked, to enable the backup per the schedule.

**Step 4** Click **Schedule**.

## Backups

The **Backups** tab displays the backup information.

The information displayed here is based on the schedule generated using [Scheduling Backup](#). A table with the following details is displayed:

Column Name	Description
<b>Item</b>	Time of backup.
<b>Cluster Backup Status</b>	Cluster backup status of the Nexus Dashboard Data Broker controller. Options are: <ul style="list-style-type: none"> <li>• Success</li> <li>• Failure</li> </ul>
<b>Description</b>	Description of the backup.
<b>Restore Triggers</b>	Timestamp when the restore backup was triggered.

The following actions can be performed from the **Backups** tab:

- **Backup to NDB Server**—Backup is created at the specified time in the NDB server. After you select this option, the backup details appear in the **Backups** tab.
- **Restore Backup**—The selected backup is restored on the Nexus Dashboard Data Broker controller. It is recommended to always choose the latest backup for restoration. If you choose an old backup, there could be connection failures based on recent topology changes.

**Note** Restart the Nexus Dashboard Data Broker controller after restoring a backup.

- **Delete Backup**—Select the backup(s) to be deleted by checking the check box which is available at the beginning of the row and then click **Actions > Delete Backup(s)**.

## Transport Layer Security

From release 3.10.5, you can enable Transport Layer Security (TLS) using the GUI. If you already have the KeyStore and TrustStore which have the certificates, then, see the [Upload TLS files, on page 156](#) procedure.

### Upload TLS files

Use this procedure to sync your existing KeyStore and TrustStore files with the data broker controller.

#### Before you begin

Keep the KeyStore and TrustStore files ready.

#### Procedure

- 
- Step 1** Navigate to **Administration > TLS > Actions > Upload TLS Files**.
- Step 2** On the **Enable Transport Layer Security** screen that is displayed, enter the following:
- Enable method: you can upload from a server or from a local path.
  - KeyStore: drag and drop the KeyStore file.
  - Password: enter the password for the KeyStore file.
  - TrustStore: drag and drop the TrustStore file.
  - Password: enter the password for the TrustStore file.
- Step 3** Click **Save**.
- 

## Cluster

The **Cluster** tab displays details of the clusters available on the Nexus Dashboard Data Broker controller. Nexus Dashboard Data Broker supports high availability clustering in active/active mode with up to five controllers in a cluster.

A table with the following details is displayed:

Column Name	Description
Controller	The IP address of the controller.
Type	Displayed options are either <b>Primary</b> or <b>Member</b> .

**Note** For the backup and upload features to work properly, all the servers in the cluster should be stopped and then they should be restarted. You should not configure any functionality during this time. Once the upload configuration is done, you should not configure anything from any other nodes in the cluster as it might lead to inconsistencies in the data.

**Note** After a backup is uploaded, all the instances of the cluster should be shut down and the server on which the backup is uploaded should be started first.

## Profile

The **Profiles** tab displays details of the profiles available on the Nexus Dashboard Data Broker controller. A profile allows you to manage multiple devices associated to an Nexus Dashboard Data Broker controller. You can attach multiple devices to a profile.

The profile configuration is applied to all the member switches.

A table with the following details is displayed:

Column Name	Description
Profile Name	Name of the profile.
User Name	User name that created the profile.

Use the *Filter by attributes* bar to filter the table based on displayed filter details. Choose the attribute, operator and filter-value.

The following actions can be performed from the **Profiles** tab:

- **Add Profile**—Use this to add a new profile. See *Add Profile* for details about this task.
- **Delete Profile**—Select the required profile(s) by checking the check box which is at the beginning of the row and then click **Delete Profile**. The selected profile(s) are deleted. If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a profile.

**Note** A profile which is in use cannot be deleted.

## Adding a Profile

Use this procedure to add a new profile.

### Procedure

- Step 1** Navigate to **Administration > Profile**.
- Step 2** From the **Actions** drop down menu, select **Add Profile**.
- Step 3** In the **Add Profile** dialog box, enter the following details:

*Table 70: Add Profile*

Field	Description
<b>Profile Name</b>	Enter a profile name.
<b>Username</b>	Enter a user name to login to the device.
<b>Password</b>	Enter a password for the username.  Passwords must be between 8 and 256 characters long, contain uppercase and lowercase characters, have at least one numeric character, and have at least one non-alphanumeric character.

- Step 4** Click **Add Profile** to create the profile.

## Editing a Profile

Use ths procedure to edit a profile.

**Note** When you edit a profile, devices that are using the profile will be reconnected.

### Before you begin

Create one or more profiles.

### Procedure

- Step 1** Navigate to **Administration > Profiles**.
- Step 2** In the displayed table, click a **Profile Name**.  
A new pane is displayed on the right.
- Step 3** Click **Actions** and select **Edit Profile**.
- Step 4** In the **Edit Profile** dialog box, the current profile information is displayed. Modify these fields, as required:

Table 71: Edit Profile

Field	Description
Profile Name	Profile name is displayed and can not be changed.
Username	Enter a username to login to the device.
Password	Enter a password for the username.  Passwords must be between 8 and 256 characters long, contain uppercase and lowercase characters, have at least one numeric character, and have at least one non-alphanumeric character.

**Step 5** Click **Save** to edit the profile.

## Slices

The **Slices** tab displays details of the slices available on the Nexus Dashboard Data Broker.

Slicing enables you to partition a network into many logical networks. For more information, see [About Slices, on page 161](#).

To view a different network partition, switch the slice using the **Slice** button in the header. As part of the initial Nexus Dashboard Data Broker build, one slice is available and is called the **Default** slice. The following configurations can be performed only on the default slice of the Nexus Dashboard Data Broker controller:

- Adding a new device
- Editing global configurations for devices
- Changing profiles for users
- Changing the parameters for users and associated roles
- Fixing inconsistent device and connection flows

A table with the following details is displayed:

Column Name	Description
Slice	Name of the slice.  This field is a hyperlink. Click the <b>Slice</b> name and a new pane is displayed on the right. Additional actions that can be performed from here: <ul style="list-style-type: none"><li>• <a href="#">Editing a Slice</a></li></ul>
Configured Port(s)	Ports of a device (or different devices) that are currently part of the slice.

Column Name	Description
Available Port(s)	Ports of a device (or different devices) that are currently not part of the slice, but can be added to the slice.

You can perform the following actions from the **Slices** tab:

- **Add Slice**—For details about this action, see [Adding a Slice](#).
- **Delete Slice**—Select the slices to be deleted and click **Actions > Delete Slice(s)**. If you choose the delete action, without selecting a check box, an error is displayed and you will be prompted to select a slice.

# Adding a Slice

Use this procedure to add a slice.

**Note** A device can be a part of multiple slices; a port can be a part of only one slice at any given time.

## Before you begin

Clear all port configurations and connections of a device which is already a part of the default slice, before adding the ports of a device to a new slice.

## Procedure

- Step 1** Navigate to **Administration > Slices**.
- Step 2** From the **Actions** drop down menu, select **Add Slice**.
- Step 3** In the **Add Slice** dialog box, enter the following details:

Table 72: Add Slice

Field	Description
<b>General</b>	
Slice Name	Enter a name for the slice.
Port	Click <b>Select Ports</b> and in the <b>Select Ports</b> window, select the device and required ports.  <b>Note</b> Ensure to have all the ports of a device on the same slice.

- Step 4** Click **Add Slice** to create the slice.

**Note**

After a new slice is added, the default slice is in *read-only* mode. If an active port configuration and/or connection is present on the default slice, then, it is rendered unavailable.

The devices added to a slice are displayed in the slice. For example, if device D1 is added to slice S1, and if the device goes into maintenance mode (or failed state or not ready state), the device is no longer displayed on S1, but is displayed on the default slice.

---

## Editing a Slice

Use this procedure to edit a slice.

### Before you begin

Delete the port configurations for a port before deleting the port from a slice.

### Procedure

**Step 1** Navigate to **Administration > Slices**.

**Step 2** Click a **Slice** name. A new window opens on the right.

**Step 3** Click **Action > Edit Slice**.

The **Edit Slice** window is displayed.

**Step 4** Make required changes in the **Edit Slice** window. The following details are displayed:

**Table 73: Edit Slice**

Field	Description
<b>General</b>	
<b>Slice Name</b>	Name for the slice. This field cannot be changed.
<b>Port</b>	The ports that are part of the slice are listed. You can delete / add as required.

**Step 5** Click **Save**.

---

## About Slices

Slices enables you to partition networks into many logical networks. This feature allows you to create multiple disjoint networks and assign different roles and access levels to each one. Each logical network can be assigned to departments, groups of individuals, or applications. Multiple disjoint networks can be managed using the Cisco Nexus Dashboard Data Broker application.

Slices are created based on the following criteria:

- **Network devices**—The devices that can be used in the slice. Network devices can be shared between slices.
- **Network device interfaces**—The device interfaces that can be used in the slice. Network device interfaces can be shared between slices.

Slices must be created by a Cisco Nexus Dashboard Data Broker user with the Network Administrator role. After creation, the slices can be managed by a user with the Slice Administrator role.

## System Information

The **System Information** tab displays all the information about the Nexus Dashboard Data Broker controller and the Nexus Dashboard Data Broker controller host. The information is available under two headings:

- **NDB Information** —includes information such as Installation Type, Current Build Number, Previous Build number, etc.
- **System Information**—includes information such as Total Memory, Physical Memory, Used Memory, Free Memory of the Nexus Dashboard Data Broker controller host.

## User Management

The **User Management** tab has the following subtabs:

- **Users**—users of Nexus Dashboard Data Broker controller. See [Users](#) for more details.
- **Roles**—roles that the users are assigned to. See [Roles](#) for more details.
- **Groups**—device groups that the ports are assigned to. See [Groups](#) for more details.

## Users

The **Users** tab displays the details of the users of the Nexus Dashboard Data Broker controller.

A table with the following details is displayed:

Column Name	Description
User	<p>The login name of the user.</p> <p>This field is a hyperlink. Click <b>User</b> and a new pane is displayed on the right. The following additional actions can be performed from here:</p> <ul style="list-style-type: none"> <li>• <a href="#">Change Password</a></li> <li>• <a href="#">Change Role</a></li> <li>• <b>Delete User</b></li> </ul> <p><b>Note</b> If you are logged in as the default <i>admin</i> user, the <b>Delete User</b> and <b>Change Role</b> options are not available. If you have logged in using TACACS, the <b>Change Password</b> option is not available.</p>
Role	The role of the user that was assigned while creating the user.

The following actions can be performed from the **Users** tab:

- **Add User**—Use this to add a new user. See [Adding a User](#) for details about this task.
- **Delete User**—Select the user(s) to be deleted by checking the check box which is available at the beginning of the row and then click **Delete User**. The selected user(s) are deleted. If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a user.

## Adding a User

Use this procedure to add a new user.

### Before you begin

Create role(s) that the new user can be assigned to.

### Procedure

- Step 1** Navigate to **Administration > User Management > Users**.
- Step 2** From the **Actions** drop down menu, select **Add User**.
- Step 3** In the **Add User** dialog box, enter the following details:

*Table 74: Add User*

Field	Description
Username	Enter the user name.

Field	Description
<b>Password</b>	Enter a password for the user.  Passwords must be between 8 and 256 characters long, contain uppercase and lowercase characters, have at least one numeric character, and have at least one non-alphanumeric character.
<b>Verify Password</b>	Verify the password by re-entering it.
<b>Choose User Type</b>	Select one of the options: <ul style="list-style-type: none"> <li>• <b>Regular User</b>—can login to the NDB controller without a slice (default slice).</li> <li>• <b>Slice User</b>—has access only to a specific slice.</li> </ul>
<b>Select Slice</b> This field is applicable only when the User Type is <b>Slice User</b> .	Select a slice from the drop-down list. The created user has access only to the selected slice.
<b>Set Role</b> This field is applicable only when the User Type is <b>Regular User</b> .	Click <b>Select Role</b> . In the <b>Select Role</b> dialog box that opens, check the check box for the role(s) you want to assign to the user. The role details are displayed on the right side. Click <b>Select</b> to assign the role. You can assign more than one role to a user.  The available role options are: <ul style="list-style-type: none"> <li>• <b>Network Admin</b>—Provides full administrative privileges to all applications.</li> <li>• <b>Network Operator</b>—Provides read-only privileges to all applications.</li> </ul>

**Step 4** Click **Add User** to add the user.

**Note**

After creating a user, you can change the password, but you cannot change the roles assigned to the user.

## Changing Password for a User

Use this procedure to change the password for a user.

**Before you begin**

Create one or more users.

## Procedure

**Step 1** Navigate to **Administration > User Management > Users**.

**Step 2** Click a **User** name. A new window opens on the right.

**Step 3** Click **Action > Change Password**.

The **Change Password** window is displayed.

**Step 4** Make required changes in the **Change Password** window. The following details are displayed:

*Table 75: Change Password*

Field	Description
<b>General</b>	
<b>User Name</b>	Name of the user. This field cannot be changed.
<b>Current Password</b>	Enter the current password for the username. <b>Note</b> This field is displayed only for <i>admin</i> user.
<b>Password</b>	Enter the new password.
<b>Verify Password</b>	Enter the new password again.

**Step 5** Click **Change Password**.

## Changing Role for a User

Use this procedure to change the role of a user.

### Before you begin

Create one or more users.

## Procedure

**Step 1** Navigate to **Administration > User Management > Users**.

**Step 2** Click a **User** name. A new window opens on the right.

**Step 3** Click **Action > Change Role**.

The **Change Role** window is displayed.

**Step 4** Make required changes in the **Change Role** window. The following details are displayed:

Table 76: Change Role

Field	Description
<b>General</b>	
<b>User Name</b>	Name of the user. This field cannot be changed.
<b>Choose User Type</b>	Select either <b>Regular User</b> or <b>Slice User</b> .
<b>Select Slice</b>	Select an option from the drop down list.  This option is displayed only if your User Type selection was <b>Slice User</b> .
<b>Select Role</b>	Click <b>Select Role</b> and the <b>Select Role</b> window is displayed. Choose a role using the radio button and click <b>Select</b> .  This option is displayed only if your User Type selection was <b>Regular User</b> .

**Step 5** Click **Save**.

## Roles

The **Roles** tab displays details of the roles available on the Nexus Dashboard Data Broker controller. The default roles are:

- Network-Admin
- Network-Operator

A table is displayed with the following details:

Column Name	Description
<b>Role</b>	The name of the role.  The displayed name is a hyperlink. Click the <b>Role</b> name, a new pane is displayed on the right. Additional actions that can be performed from here are: <ul style="list-style-type: none"> <li>• <a href="#">Assigning a Group</a></li> </ul>

Column Name	Description
<b>Level</b>	<p>The level assigned to the role. The following levels are available:</p> <ul style="list-style-type: none"> <li>• <b>App-Administrator</b>— Has full access to all data broker resources but the App-Administrator cannot add NXAPI or production devices into Nexus Dashboard Data Broker because Administration tab is not available in Nexus Dashboard Data Broker for App-Administrator role .</li> <li>• <b>App-User</b>—Has access to create, edit, clone, or delete connections and redirections that are assigned to his resource group and resources that are created by another user with similar permissions. An App-User can only view Edge-SPAN, Tap, Monitoring device, and Production ports.</li> </ul> <p>An App-User can view resources that are created by another user with similar permissions in Toplogy page of Nexus Dashboard Data Broker. But, you can not configure Edge-SPAN or Connections created by another App-User.</p> <ul style="list-style-type: none"> <li>• <b>App-Operator</b>—Has access for read-only operations.</li> </ul>
<b>Group</b>	The group assigned to the role.

The following actions can be performed from the **Roles** tab:

- **Add Role**—Use this to add a new role. See [Add Role](#) for details about this task.
- **Delete Role**—Select the roles to be deleted by checking the check box which is available at the beginning of the row and then click **Delete Role** from the **Actions** menu. If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a role.

**Note** Default roles cannot be deleted.

## Adding a Role

Use this procedure to add a role and associate the role to a group.

### Before you begin

Create one or more groups to associate a role.

## Procedure

**Step 1** Navigate to **Administration > User Management > Roles**.

**Step 2** From the **Actions** drop down menu, select **Add Role**.

**Step 3** In the **Add Role** dialog box, enter the following details:

*Table 77: Add Role*

Field	Description
<b>Role Name</b>	Enter the role name.
<b>Select Level</b>	Select a level from the drop-down list.

**Step 4** Click **Add** to add the role.

## Assigning a Group to a Role

Use this procedure to assign a group to a role. This enables the role to access only the ports in the assigned group.

### Before you begin

Add one or more groups.

## Procedure

**Step 1** Navigate to **Administration > User Management > Roles**.

**Step 2** Click a **Role** name in the displayed table.

A new pane is displayed on the right.

**Step 3** Click **Action > Assign Group**.

Enter the following details:

*Table 78: Assign Group*

Field	Description
<b>Role Name</b>	Role name. This field cannot be edited.
<b>Select Level</b>	Level of the role. This field cannot be edited.
<b>Set Group</b>	Click <b>Select Group</b> and select a group in the <b>Select Group</b> window that is displayed.

**Step 4** Click **Assign**.

## Groups

The **Groups** tab displays details of the port groups. The default group is:

- allPorts

A group can be a group of ports of one device or across many devices.

A table with the following details is displayed:

Column Name	Description
<b>Group</b>	The name of the group.  The displayed name is a hyperlink. Click the name to see more details of the group.
<b>Ports</b>	The number of ports assigned to the group.

The following actions can be performed from the **Groups** tab:

- **Add Group**—Use this to add a new group. See [Add Group](#) for details.
- **Delete Group**—Select the groups to be deleted by checking the check box which is available at the beginning of the row and then click **Delete Group** from the **Actions** menu. If you choose the delete action without selecting a check box, an error is displayed. You will be prompted to select a group.

**Note** Default group(s) cannot be deleted.

## Adding a Group

Use this procedure to create a new group.

A group is created for defining access to port(s) for a user. A group is assigned to a role; a user is associated to a role.

### Procedure

- Step 1** Navigate to **Administration > User Management > Groups**.
- Step 2** From the **Actions** drop down menu, select **Add Group**.
- Step 3** In the **Add Group** dialog box, enter the following details:

Table 79: Add Group

Field	Description
Group Name	Enter the group name.
Selected Port(s)	Click <b>Select Ports</b> . In the <b>Select Ports</b> dialog box that opens, check the check box to assign port(s) to the group. The port details are displayed on the right side. Click <b>Select</b> to assign the port.

**Step 4** Click **Add Group** to add the group.

---
