**Command Mode**

- /exec

# show ip lisp

```
show { ip | ipv6 } lisp [ database ] [ vrf { <vrf-name> | <vrf-known-name> } ]
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                  |
| ip                    | Display IP information                           |
| ipv6                  | Display IPv6 information                         |
| lisp                  | LISP show commands                               |
| database              | (Optional) Show EID-prefixes configured for site |
| vrf                   | (Optional) Display information for vrf           |
| <i>vrf-name</i>       | (Optional) VRF name                              |
| <i>vrf-known-name</i> | (Optional) Known VRF name                        |

## Command Mode

- /exec

# show ip lisp data-cache

```
show ip lisp data-cache [ <eid> ] [ vrf { <vrf-name> | <vrf-known-name> } ]
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                    |
| ip                    | Display IP information                             |
| lisp                  | LISP show commands                                 |
| data-cache            | Display EID-to-RLOC data cache mapping in this ITR |
| <i>eid</i>            | (Optional) Display mapping for IP destination EID  |
| vrf                   | (Optional) Display per-VRF information             |
| <i>vrf-name</i>       | (Optional) VRF name                                |
| <i>vrf-known-name</i> | (Optional) Known VRF name                          |

## Command Mode

- /exec

## show ip lisp locator-hash

```
{ { show ip lisp locator-hash { <eid-prefix> | { <source-eid> <dest-eid> } } [ vrf { <vrf-name> |
<vrf-known-name> } ] } | { show ipv6 lisp locator-hash { <eid-prefix6> | { <source-eid6> <dest-eid6> } } [
vrf { <vrf-name> | <vrf-known-name> } ] } }
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information               |
| ip                    | Display IP information                        |
| ipv6                  | Display IPv6 information                      |
| lisp                  | LISP show commands                            |
| locator-hash          | Display source and dest locators for EID pair |
| <i>source-eid</i>     | Source IPv4 endpoint identifier (EID)         |
| <i>dest-eid</i>       | Destination IPv4 endpoint identifier (EID)    |
| <i>eid-prefix</i>     | Display exact match for IP EID-prefix entry   |
| vrf                   | (Optional) Display information for vrf        |
| <i>vrf-name</i>       | (Optional) VRF name                           |
| <i>vrf-known-name</i> | (Optional) Known VRF name                     |

### Command Mode

- /exec

# show ip lisp map-cache

```
{ { show ip lisp map-cache [ <eid> | <eid-prefix> | detail ] [ vrf { <vrf-name> | <vrf-known-name> } ] } } | {
show ipv6 lisp map-cache [ <eid6> | <eid-prefix6> | detail ] [ vrf { <vrf-name> | <vrf-known-name> } ] } }
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                        |
| ip                    | Display IP information                                 |
| ipv6                  | Display IPv6 information                               |
| lisp                  | LISP show commands                                     |
| map-cache             | Display EID-to-RLOC cache mapping in this ITR          |
| vrf                   | (Optional) Display information for vrf                 |
| <i>vrf-name</i>       | (Optional) VRF name                                    |
| <i>vrf-known-name</i> | (Optional) Known VRF name                              |
| <i>eid</i>            | (Optional) Display mapping for IP destination EID      |
| <i>eid-prefix</i>     | (Optional) Display exact match for IP EID-prefix entry |
| detail                | (Optional) Display entire map-cache in long format     |

## Command Mode

- /exec

# show ip lisp statistics

```
show { ip | ipv6 } lisp statistics [ vrf { <vrf-name> | <vrf-known-name> } ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                   |
| ip                    | Display IP information                            |
| ipv6                  | Display IPv6 information                          |
| lisp                  | LISP show commands                                |
| statistics            | Display global LISP statistics                    |
| vrf                   | (Optional) Display statistics information for vrf |
| <i>vrf-name</i>       | (Optional) VRF name                               |
| <i>vrf-known-name</i> | (Optional) Known VRF name                         |

## Command Mode

- /exec

# show ip lisp translate-cache

```
{ show ip lisp translate-cache [ <nrEID> ] } | { show ipv6 lisp translate-cache [ <nrEID6> ] }
```

## Syntax Description

|                 |  |
|-----------------|--|
| show            | Show running system information                    |
| ip              | Display IP information                             |
| ipv6            | Display IPv6 information                           |
| lisp            | LISP show commands                                 |
| translate-cache | Display configured translation cache               |
| <i>nrEID</i>    | (Optional) IPv4 address of inside non-routable EID |
| <i>nrEID6</i>   | (Optional) IPv6 address of inside non-routable EID |

## Command Mode

- /exec

# show ip load-sharing

```
show ip load-sharing [ __readonly__ { <univer-id-ran-seed> [ <l3-msg-load> ] [ <l34-msg-load> ] [
<dest-addr-load> ] [ <src-dst-ip-gre> ] [ <bad-load> ] [ <gre-outer-hash> ] [ <concatenation> ] [ <rotate> ] [

## Command Mode

- /exec

# show ip local policy

```
show ip local policy [ vrf { <vrf-name> | <vrf-known-name> | all } ] [ __readonly__ { TABLE_pbr [ <interface> ] [ <rmap> ] [ <status> ] [ <vrf_name> ] } ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information             |
| ip                    | Display IP information                      |
| local                 | IP local options                            |
| policy                | Policy routing                              |
| vrf                   | (Optional) Display per-VRF information      |
| <i>vrf-name</i>       | (Optional) VRF name                         |
| <i>vrf-known-name</i> | (Optional) Known VRF name                   |
| all                   | (Optional) Display information for all VRFs |
| __readonly__          | (Optional)                                  |
| TABLE_pbr             | (Optional)                                  |
| <i>interface</i>      | (Optional)                                  |
| <i>rmap</i>           | (Optional)                                  |
| <i>status</i>         | (Optional)                                  |
| <i>vrf_name</i>       | (Optional)                                  |

## Command Mode

- /exec

# show ip logging

```
show ip logging [ hash ] [ __readonly__ ]
```

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information           |
| ip           | Display IP information                    |
| logging      | Display IP policy logging table           |
| hash         | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| __readonly__ | (Optional)                                |

## Command Mode

- /exec

## show ip mbgp

```
show ip { mbgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] | { bgp [ vrf {
<vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [ { ipv4 { unicast | multicast } | all }
] } } { route-map { <rmap-name> | <rmap-name> } | filter-list { <fltrlist-name> | <test_pol_name> } | {
community-list { <commlist-name> | <test_pol_name> } | extcommunity-list { <extcommlist-name> |
<test_pol_name> } } [ exact-match ] } [ vrf { <vrf-name> | <vrf-known-name> |
ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                                 |
| ip                      | Display IP information  |
| bgp                     | Display BGP status and configuration                            |
| mbgp                    | Display MBGP status and configuration                           |
| vrf                     | (Optional) Virtual Router Context                               |
| <i>vrf-name</i>         | (Optional) VRF name   |
| <i>vrf-known-name</i>   | (Optional) Known VRF name                                       |
| route-map               | Display routes matching the route-map                           |
| <i>rmap-name</i>        | Route-map name  |
| <i>rmap-name</i>        | Known route-map name  |
| filter-list             | Display routes matching the filter-list                         |
| <i>fltrlist-name</i>    | Name of filter-list   |
| community-list          | Display routes matching the community-list                      |
| extcommunity-list       | Display routes matching the extcommunity-list                   |
| <i>commlist-name</i>    | Name of community-list  |
| <i>extcommlist-name</i> | Name of extcommunity-list                                       |
| <i>test_pol_name</i>    | An existing test-list policy                                    |
| ipv4                    | (Optional) Display BGP information for IPv4 address family      |
| unicast                 | (Optional) Display BGP information for unicast address family   |
| multicast               | (Optional) Display BGP information for multicast address family |
| all                     | (Optional) Display BGP information for all address families     |
| exact-match             | (Optional) Exact match of the communities                       |

**Command Mode**

- /exec

# show ip mbgp

```
show ip { mbgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] | { bgp [ vrf {
<vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [ { ipv4 { unicast | multicast | mdt } |
all } ] } } [ <ip-addr> [ <ip-mask> [ longer-prefixes ] ] | <ip-prefix> [ longer-prefixes ] ] [ vrf { <vrf-name>
| <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                                    |
| ip                    | Display IP information   |
| bgp                   | Display BGP status and configuration                               |
| mbgp                  | Display MBGP status and configuration                              |
| vrf                   | (Optional) Virtual Router Context                                  |
| <i>vrf-name</i>       | (Optional) VRF name  |
| <i>vrf-known-name</i> | (Optional) Known VRF name  |
| <i>ip-addr</i>        | (Optional) Display one particular network from the BRIB in detail  |
| <i>ip-mask</i>        | (Optional) Mask for one particular prefix in the BRIB              |
| <i>ip-prefix</i>      | (Optional) Display one particular prefix from the BRIB in detail   |
| longer-prefixes       | (Optional) Display route and more specific routes                  |
| ipv4                  | (Optional) Display BGP information for IPv4 address family         |
| unicast               | (Optional) Display BGP information for unicast address family      |
| multicast             | (Optional) Display BGP information for multicast address family    |
| mdt                   | (Optional) Display BGP information for multicast distribution tree |
| all                   | (Optional) Display BGP information for all address families        |

## Command Mode

- /exec

# show ip mbgp community

```
show ip { mbgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] | { bgp [ vrf {
<vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [ { ipv4 { unicast | multicast } | all }
] ] } community { <regexp-str> | { { <comm-id> | <wellknown-id> } + [ exact-match ] } } [ vrf { <vrf-name>
| <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                 |
| ip                    | Display IP information  |
| bgp                   | Display BGP status and configuration                            |
| mbgp                  | Display MBGP status and configuration                           |
| ipv4                  | (Optional) Display BGP information for IPv4 address family      |
| unicast               | (Optional) Display BGP information for unicast address family   |
| multicast             | (Optional) Display BGP information for multicast address family |
| vrf                   | (Optional) Virtual Router Context                               |
| <i>vrf-name</i>       | (Optional) VRF name   |
| <i>vrf-known-name</i> | (Optional) Known VRF name                                       |
| all                   | (Optional) Display BGP information for all address families     |
| community             | Display routes matching the BGP communities                     |
| <i>regexp-str</i>     | Regular expression to match the communities                     |
| <i>comm-id</i>        | BGP community value   |
| <i>wellknown-id</i>   | BGP wellknown community   |
| exact-match           | (Optional) Exact match of the communities                       |

## Command Mode

- /exec

## show ip mbgp dampening

```
show ip { mbgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] | { bgp [ vrf {
<vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [ { ipv4 { unicast | multicast } | all }
] } } dampening { dampened-paths [ regexp <regexp-str> ] | flap-statistics | parameters | history-paths [ regexp
<regexp-str> ] } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                   |
| ip                    | Display IP information  |
| bgp                   | Display BGP status and configuration                              |
| mbgp                  | Display MBGP status and configuration                             |
| vrf                   | (Optional) Virtual Router Context                                 |
| <i>vrf-name</i>       | (Optional) VRF name   |
| <i>vrf-known-name</i> | (Optional) Known VRF name   |
| dampening             | Display dampening info  |
| dampened-paths        | Display all dampened paths  |
| flap-statistics       | Display flap statistics for routes                                |
| parameters            | Display dampening parameters                                      |
| history-paths         | Display all history paths   |
| ipv4                  | (Optional) Display BGP information for IPv4 address family        |
| unicast               | (Optional) Display BGP information for unicast address family     |
| multicast             | (Optional) Display BGP information for multicast address family   |
| all                   | (Optional) Display BGP information for all address families       |
| regexp                | (Optional) Display routes matching the AS path regular expression |
| <i>regexp-str</i>     | (Optional) Regular expression to match the AS paths               |

### Command Mode

- /exec

## show ip mbgp extcommunity

```
show ip { mbgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] | { bgp [ vrf {
<vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [ { ipv4 { unicast | multicast } | all }
] } } extcommunity { <regexp-str> | { { 4byteas-generic { transitive <ext-comm-gen-trans> | non-transitive
<ext-comm-gen-nontrans> } } + [ exact-match ] } } [ vrf { <vrf-name> | <vrf-known-name> |
ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information                                 |
| ip                           | Display IP information  |
| bgp                          | Display BGP status and configuration                            |
| mbgp                         | Display MBGP status and configuration                           |
| ipv4                         | (Optional) Display BGP information for IPv4 address family      |
| unicast                      | (Optional) Display BGP information for unicast address family   |
| multicast                    | (Optional) Display BGP information for multicast address family |
| vrf                          | (Optional) Virtual Router Context                               |
| <i>vrf-name</i>              | (Optional) VRF name   |
| <i>vrf-known-name</i>        | (Optional) Known VRF name                                       |
| all                          | (Optional) Display BGP information for all address families     |
| extcommunity                 | Display routes matching the BGP extcommunities                  |
| 4byteas-generic              | Generic extended community                                      |
| transitive                   | Transitive extcommunity   |
| non-transitive               | Non-Transitive extcommunity                                     |
| <i>regexp-str</i>            | Regular expression to match the extcommunities                  |
| <i>ext-comm-gen-trans</i>    | Extcommunity number aa4:nn format                               |
| <i>ext-comm-gen-nontrans</i> | Extcommunity number aa4:nn format                               |
| exact-match                  | (Optional) Exact match of the extcommunities                    |

### Command Mode

- /exec

## show ip mbgp flap-statistics

```
show ip { mbgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] | { bgp [ vrf {
<vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [ { ipv4 { unicast | multicast } | all }
] } } flap-statistics [ <ip-prefix> | <ip-addr> [ <ip-mask> ] ] [ vrf { <vrf-name> | <vrf-known-name> |
ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                 |
| ip                    | Display IP information  |
| bgp                   | Display BGP status and configuration                            |
| mbgp                  | Display MBGP status and configuration                           |
| vrf                   | (Optional) Virtual Router Context                               |
| <i>vrf-name</i>       | (Optional) VRF name   |
| <i>vrf-known-name</i> | (Optional) Known VRF name                                       |
| flap-statistics       | Display route flap statistics                                   |
| <i>ip-prefix</i>      | (Optional) Display flap statistics for one prefix               |
| <i>ip-addr</i>        | (Optional) Display flap statistics for one network              |
| <i>ip-mask</i>        | (Optional) Network mask   |
| ipv4                  | (Optional) Display BGP information for IPv4 address family      |
| unicast               | (Optional) Display BGP information for unicast address family   |
| multicast             | (Optional) Display BGP information for multicast address family |
| all                   | (Optional) Display BGP information for all address families     |

### Command Mode

- /exec

# show ip mbgp neighbors

```
show ip { mbgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] | { bgp [ vrf {
<vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [ { ipv4 { unicast | multicast } | all }
] ] } neighbors { [ { <neighbor-id> | <ipv6-neighbor-id> } [ routes [ advertised | received | dampened ] |
advertised-routes | received-routes | paths | flap-statistics ] ] | <neighbor-prefix-id> | <ipv6-neighbor-prefix-id>
| <neighbor-interface> } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

## Syntax Description

|                           |   |
|---------------------------|---|
| show                      | Show running system information                                       |
| ip                        | Display IP information  |
| bgp                       | Display BGP status and configuration                                  |
| mbgp                      | Display MBGP status and configuration                                 |
| vrf                       | (Optional) Virtual Router Context                                     |
| <i>vrf-name</i>           | (Optional) VRF name   |
| <i>vrf-known-name</i>     | (Optional) Known VRF name   |
| neighbors                 | Display all configured BGP neighbors                                  |
| <i>neighbor-id</i>        | (Optional) Display one particular BGP neighbor                        |
| <i>neighbor-prefix-id</i> | Display details for a prefix peering                                  |
| <i>neighbor-interface</i> | Display details for BGP interface peering                             |
| ipv4                      | (Optional) Display BGP information for IPv4 address family            |
| unicast                   | (Optional) Display BGP information for unicast address family         |
| multicast                 | (Optional) Display BGP information for multicast address family       |
| all                       | (Optional) Display BGP information for all address families           |
| routes                    | (Optional) Display all routes advertised/received to/from peer        |
| advertised                | (Optional) Display all routes advertised to this peer                 |
| received                  | (Optional) Display all routes received from this peer                 |
| dampened                  | (Optional) Display all dampened routes received from this peer        |
| advertised-routes         | (Optional) Display all the routes advertised to this peer             |
| received-routes           | (Optional) Display all the routes received from this peer             |
| flap-statistics           | (Optional) Display flap statistics for routes received from this peer |
| paths                     | (Optional) Display AS paths learned from this peer                    |

**Command Mode**

- /exec

## show ip mbgp nexthop-database

```
show ip { mbgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] | { bgp [ vrf {
<vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [ { ipv4 { unicast | multicast } | all }
] } } nexthop-database [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                 |
| ip                    | Display IP information  |
| bgp                   | Display BGP status and configuration                            |
| mbgp                  | Display MBGP status and configuration                           |
| vrf                   | (Optional) Virtual Router Context                               |
| <i>vrf-name</i>       | (Optional) VRF name   |
| <i>vrf-known-name</i> | (Optional) Known VRF name                                       |
| nexthop-database      | Display nexthop database  |
| ipv4                  | (Optional) Display BGP information for IPv4 address family      |
| unicast               | (Optional) Display BGP information for unicast address family   |
| multicast             | (Optional) Display BGP information for multicast address family |
| all                   | (Optional) Display BGP information for all address families     |

### Command Mode

- /exec

## show ip mbgp nexthop

```
show ip { mbgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] | bgp [ vrf {
<vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [ ipv4 { unicast | multicast } ] } nexthop
<ipnexthop> [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                 |
| ip                    | Display IP information  |
| bgp                   | Display BGP status and configuration                            |
| mbgp                  | Display MBGP status and configuration                           |
| vrf                   | (Optional) Virtual Router Context                               |
| <i>vrf-name</i>       | (Optional) VRF name   |
| <i>vrf-known-name</i> | (Optional) Known VRF name                                       |
| nexthop               | Display routes matching the nexthop                             |
| <i>ipnexthop</i>      | Nexthop address   |
| ipv4                  | (Optional) Display BGP information for IPv4 address family      |
| unicast               | (Optional) Display BGP information for unicast address family   |
| multicast             | (Optional) Display BGP information for multicast address family |

### Command Mode

- /exec

## show ip mbgp prefix-list

```
show ip { mbgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] | { bgp [ vrf {
<vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [ ipv4 { unicast | multicast } ] } }
prefix-list { <prfxlist-name> | <test_pol_name> } [ vrf { <vrf-name> | <vrf-known-name> |
ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                 |
| ip                    | Display IP information  |
| bgp                   | Display BGP status and configuration                            |
| mbgp                  | Display MBGP status and configuration                           |
| vrf                   | (Optional) Virtual Router Context                               |
| <i>vrf-name</i>       | (Optional) VRF name   |
| <i>vrf-known-name</i> | (Optional) Known VRF name                                       |
| prefix-list           | Display routes matching the prefix-list                         |
| <i>prfxlist-name</i>  | Name of prefix-list   |
| <i>test_pol_name</i>  | An existing test-list policy                                    |
| ipv4                  | (Optional) Display BGP information for IPv4 address family      |
| unicast               | (Optional) Display BGP information for unicast address family   |
| multicast             | (Optional) Display BGP information for multicast address family |

### Command Mode

- /exec

## show ip mbgp received-paths

```
show ip { mbgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] | { bgp [ vrf {
<vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [ { ipv4 { unicast | multicast } | all }
] } } received-paths [ private ] [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                 |
| ip                    | Display IP information  |
| bgp                   | Display BGP status and configuration                            |
| mbgp                  | Display MBGP status and configuration                           |
| vrf                   | (Optional) Virtual Router Context                               |
| <i>vrf-name</i>       | (Optional) VRF name   |
| <i>vrf-known-name</i> | (Optional) Known VRF name                                       |
| received-paths        | Display paths stored for soft-reconfig                          |
| ipv4                  | (Optional) Display BGP information for IPv4 address family      |
| unicast               | (Optional) Display BGP information for unicast address family   |
| multicast             | (Optional) Display BGP information for multicast address family |
| all                   | (Optional) Display BGP information for all address families     |
| private               | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                       |

### Command Mode

- /exec

|                             |   |
|-----------------------------|---|

# show ip msdp count

```
show ip msdp count [ <asn> ] [ vrf { <vrf-name> | <vrf-known-name> | all } ] [ __readonly__ [ TABLE_vrf
[ <out-vrf> ] [ <total-cnt> ] [ TABLE_asn [ <out-asn> ] [ <src-cnt> ] [ <grp-cnt> ] ] ] ] ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information             |
| ip                    | Display IP information                      |
| msdp                  | Display MSDP status and configuration       |
| count                 | Display SA cache counters                   |
| <i>asn</i>            | (Optional) AS number                        |
| vrf                   | (Optional) Display per-VRF information      |
| <i>vrf-name</i>       | (Optional) VRF name                         |
| <i>vrf-known-name</i> | (Optional) Known VRF name                   |
| all                   | (Optional) Display information for all VRFs |
| __readonly__          | (Optional)                                  |

### Command Mode

- /exec

# show ip sla twamp standards

```
show ip sla twamp standards [ __readonly__ [ { TABLE_twamp-standards <twamp-standard-feature>
<twamp-standard-org> <twamp-standard> } ] ]
```

## Syntax Description

|                               |   |
|-------------------------------|---|
| show                          |   |
| ip                            |   |
| sla                           |   |
| twamp                         |   |
| standards                     |   |
| <i>__readonly__</i>           | (Optional)  |
| TABLE_twamp-standards         | (Optional) twamp standards for each supported feature |
| <i>twamp-standard-feature</i> | (Optional)  |
| <i>twamp-standard-org</i>     | (Optional)  |
| <i>twamp-standard</i>         | (Optional)  |

## Command Mode

- /exec

## show ip ssh source-interface

```
show ip ssh source-interface [ vrf { <vrf-name> | <vrf-known-name> } ] [ __readonly__ [ { TABLE_ipsshvrf
<vrfname> <ifname> } ] ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information              |
| ip                    | Display IP information                       |
| ssh                   | Display SSH client information               |
| source-interface      | Display source interface information         |
| vrf                   | (Optional) Display per-VRF information       |
| <i>vrf-name</i>       | (Optional) VRF name                          |
| <i>vrf-known-name</i> | (Optional) Known VRF name                    |
| <i>__readonly__</i>   | (Optional)                                   |
| TABLE_ipsshvrf        | (Optional) source interface of ssh given vrf |
| <i>vrfname</i>        | (Optional) vrfname                           |
| <i>ifname</i>         | (Optional) ifname                            |

### Command Mode

- /exec

# show ip ssh source-interface vrf all

```
show ip ssh source-interface vrf all [ __readonly__ [ { TABLE_ipssh <vrfname> <ifname> } ] ]
```

## Syntax Description

|                  |                                      |
|------------------|--------------------------------------|
| show             | Show running system information      |
| ip               | Display IP information               |
| ssh              | Display SSH client information       |
| source-interface | Display source interface information |
| vrf              | Display per-VRF information          |
| all              | Display entries for all vrfs         |
| __readonly__     | (Optional)                           |
| TABLE_ipssh      | (Optional) source interface of ssh   |
| <i>vrfname</i>   | (Optional) vrfname                   |
| <i>ifname</i>    | (Optional) ifname                    |

## Command Mode

- /exec

## show ip static-route

```
show ip static-route [ multicast ] [ internal ] [ track-table ] [ vrf { <vrf-name> | <vrf-known-name> | all } ] [
__readonly__ [ <count> <unres-count> ] [ TABLE_vrf_all { <cntxt_name> <cntxt_id> [ TABLE_each_vrf

| <i>is-thrtld</i>             | (Optional) Throttled                 |

**Command Mode**

- /exec

## show ipv6 adjacency aggregate-prefix

```
show ipv6 adjacency aggregate-prefix [ [ vlan <vlan-id> ] [ summary ] [ vrf { <vrf-name> | <vrf-known-name>
| all } ] ] [ __readonly__ [ TABLE_vlan <vlan-id> { <ipv6-agg-prefix-vlan-count> | <ipv6-agg-prefix>
<ref-count> } ] <ipv6-agg-prefix-total-count> ]
```

### Syntax Description

|                                    |   |
|------------------------------------|---|
| show                               | Show running system information               |
| ipv6                               | Display IPv6 information                      |
| adjacency                          | Display adjacency table                       |
| aggregate-prefix                   | aggregate-prefix PT info                      |
| vlan                               | (Optional) Vlan id                            |
| <i>vlan-id</i>                     | (Optional) Vlan                               |
| summary                            | (Optional) Show aggregate-prefix summary      |
| vrf                                | (Optional) Display per-VRF information        |
| <i>vrf-name</i>                    | (Optional) VRF name                           |
| <i>vrf-known-name</i>              | (Optional) Known VRF name                     |
| all                                | (Optional) Display ARP entries for all vrfs   |
| __readonly__                       | (Optional)                                    |
| <i>ipv6-agg-prefix-total-count</i> | (Optional) ipv6 aggregate-prefix total count  |
| TABLE_vlan                         | (Optional) TABLR vlan                         |
| <i>vlan-id</i>                     | (Optional) vlan id                            |
| <i>ipv6-agg-prefix-vlan-count</i>  | (Optional) show ipv6 aggregate-prefix summary |
| <i>ipv6-agg-prefix</i>             | (Optional) Ipv6 aggregate prefix              |
| <i>ref-count</i>                   | (Optional) reference-hop count                |

### Command Mode

- /exec

## show ipv6 adjacency subnet-prefix

```
show ipv6 adjacency subnet-prefix [ [ vlan <vlan-id> ] [ summary ] [ vrf { <vrf-name> | <vrf-known-name>
| all } ] ] [ __readonly__ [ TABLE_vlan <vlan-id> { <ipv6-subnet-prefix-vlan-count> | <ipv6-subnet-prefix>
<agg-len> <nh-count> } ] <ipv6-subnet-prefix-total-count> ]
```

### Syntax Description

|                                       |   |
|---------------------------------------|---|
| show                                  | Show running system information             |

## show ipv6 bgp

```
show ipv6 { bgp | mbgp } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [
<ipv6-prefix> [ longer-prefixes ] ] [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234
} ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                   |
| ipv6                  | Display BGP information for IPv6 address family   |
| bgp                   | Display BGP status and configuration              |
| mbgp                  | Display MBGP status and configuration             |
| vrf                   | (Optional) Virtual Router Context                 |
| <i>vrf-name</i>       | (Optional) VRF name                               |
| <i>vrf-known-name</i> | (Optional) Known VRF name                         |
| longer-prefixes       | (Optional) Display route and more specific routes |

### Command Mode

- /exec

## show ipv6 bgp

```
show ipv6 { bgp | mbgp } { route-map { <rmap-name> | <rmap-name> } | prefix-list { <prfxlist-name> |
<test_pol_name> } | filter-list { <fltrlist-name> | <test_pol_name> } | community-list { <commlist-name> |
<test_pol_name> } | extcommunity-list { <extcommlist-name> | <test_pol_name> } [ exact-match ] }
```

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                 |
| ipv6                    | Display BGP information for IPv6 address family |
| bgp                     | Display BGP status and configuration            |
| mbgp                    | Display MBGP status and configuration           |
| route-map               | Display routes matching the route-map           |
| <i>rmap-name</i>        | Route-map name                                  |
| <i>rmap-name</i>        | Known route-map name                            |
| prefix-list             | Display routes matching the prefix-list         |
| <i>prfxlist-name</i>    | Name of prefix-list                             |
| filter-list             | Display routes matching the filter-list         |
| <i>fltrlist-name</i>    | Name of filter-list                             |
| community-list          | Display routes matching the community-list      |
| <i>commlist-name</i>    | Name of community-list                          |
| extcommunity-list       | Display routes matching the extcommunity-list   |
| <i>extcommlist-name</i> | Name of extcommunity-list                       |
| <i>test_pol_name</i>    | An existing test-list policy                    |
| exact-match             | (Optional) Exact match of the communities       |

### Command Mode

- /exec

## show ipv6 bgp community

```
show ipv6 { bgp | mbgp } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
community { <regex-str> | { { <comm-id> | <wellknown-id> } + [ exact-match ] } } [ vrf { <vrf-name> |
<vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                 |
| bgp                   | Display BGP status and configuration            |
| mbgp                  | Display MBGP status and configuration           |
| ipv6                  | Display BGP information for IPv6 address family |
| vrf                   | (Optional) Virtual Router Context               |
| <i>vrf-name</i>       | (Optional) VRF name                             |
| <i>vrf-known-name</i> | (Optional) Known VRF name                       |
| community             | Display routes matching the BGP communities     |
| <i>regex-str</i>      | Regular expression to match the communities     |
| <i>comm-id</i>        | BGP community value                             |
| <i>wellknown-id</i>   | BGP wellknown community                         |
| exact-match           | (Optional) Exact match of the communities       |

### Command Mode

- /exec

## show ipv6 bgp dampening

```
show ipv6 { bgp | mbgp } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
dampening { dampened-paths [ regexp <regexp-str> ] | history-paths [ regexp <regexp-str> ] | parameters |
flap-statistics } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                   |
| bgp                   | Display BGP status and configuration                              |
| mbgp                  | Display MBGP status and configuration                             |
| vrf                   | (Optional) Virtual Router Context                                 |
| <i>vrf-name</i>       | (Optional) VRF name   |
| <i>vrf-known-name</i> | (Optional) Known VRF name   |
| dampening             | Display dampening info  |
| parameters            | Display dampening parameters                                      |
| dampened-paths        | Display all dampened paths  |
| history-paths         | Display all history paths   |
| flap-statistics       | Display flap statistics for routes                                |
| ipv6                  | Display BGP information for IPv6 address family                   |
| regexp                | (Optional) Display routes matching the AS path regular expression |
| <i>regexp-str</i>     | (Optional) Regular expression to match the AS paths               |

### Command Mode

- /exec

## show ipv6 bgp extcommunity

```
show ipv6 { bgp | mbgp } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
extcommunity { <regex-str> | { { 4byteas-generic { transitive <ext-comm-gen-trans> | non-transitive
<ext-comm-gen-nontrans> } } + [ exact-match ] } } [ vrf { <vrf-name> | <vrf-known-name> |
ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information                 |
| ipv6                         | Display BGP information for IPv6 address family |
| bgp                          | Display BGP status and configuration            |
| mbgp                         | Display MBGP status and configuration           |
| vrf                          | (Optional) Virtual Router Context               |
| <i>vrf-name</i>              | (Optional) VRF name                             |
| <i>vrf-known-name</i>        | (Optional) Known VRF name                       |
| extcommunity                 | Display routes matching the BGP extcommunities  |
| 4byteas-generic              | Generic extended community                      |
| transitive                   | Transitive extcommunity                         |
| non-transitive               | Non-Transitive extcommunity                     |
| <i>regex-str</i>             | Regular expression to match the extcommunities  |
| <i>ext-comm-gen-trans</i>    | Extcommunity number aa4:nn format               |
| <i>ext-comm-gen-nontrans</i> | Extcommunity number aa4:nn format               |
| exact-match                  | (Optional) Exact match of the extcommunities    |

### Command Mode

- /exec

## show ipv6 bgp flap-statistics

```
show ipv6 { bgp | mbgp } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
flap-statistics [ <ipv6-prefix> ] [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                 |
| bgp                   | Display BGP status and configuration            |
| mbgp                  | Display MBGP status and configuration           |
| vrf                   | (Optional) Virtual Router Context               |
| <i>vrf-name</i>       | (Optional) VRF name                             |
| <i>vrf-known-name</i> | (Optional) Known VRF name                       |
| flap-statistics       | Display route flap statistics                   |
| ipv6                  | Display BGP information for IPv6 address family |

### Command Mode

- /exec

# show ipv6 bgp neighbors

```
show ipv6 { bgp | mbgp } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
neighbors { [ { <neighbor-id> | <ipv6-neighbor-id> } [ routes [ advertised | received | dampened ] |
advertised-routes | paths | received-routes | flap-statistics ] ] | <neighbor-prefix-id> | <ipv6-neighbor-prefix-id>
} [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

## Syntax Description

|                           |   |
|---------------------------|---|
| show                      | Show running system information                                       |
| bgp                       | Display BGP status and configuration                                  |
| mbgp                      | Display MBGP status and configuration                                 |
| neighbors                 | Display all configured BGP neighbors                                  |
| vrf                       | (Optional) Virtual Router Context                                     |
| <i>vrf-name</i>           | (Optional) VRF name   |
| <i>vrf-known-name</i>     | (Optional) Known VRF name   |
| <i>neighbor-id</i>        | (Optional) Display one particular BGP neighbor                        |
| <i>neighbor-prefix-id</i> | Display details for a prefix peering                                  |
| ipv6                      | Display BGP information for IPv6 address family                       |
| routes                    | (Optional) Display all routes advertised/received to/from peer        |
| advertised                | (Optional) Display all routes advertised to this peer                 |
| received                  | (Optional) Display all routes received from this peer                 |
| dampened                  | (Optional) Display all dampened routes received from this peer        |
| advertised-routes         | (Optional) Display all the routes advertised to this peer             |
| received-routes           | (Optional) Display all the routes received from this peer             |
| flap-statistics           | (Optional) Display flap statistics for routes received from this peer |
| paths                     | (Optional) Display AS paths learned from this peer                    |

## Command Mode

- /exec

## show ipv6 bgp nexthop-database

```
show ipv6 { bgp | mbgp } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
nexthop-database [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                 |
| bgp                   | Display BGP status and configuration            |
| mbgp                  | Display MBGP status and configuration           |
| vrf                   | (Optional) Virtual Router Context               |
| <i>vrf-name</i>       | (Optional) VRF name                             |
| <i>vrf-known-name</i> | (Optional) Known VRF name                       |
| nexthop-database      | Display nexthop database                        |
| ipv6                  | Display BGP information for IPv6 address family |

### Command Mode

- /exec

# show ipv6 bgp nexthop

```
show ipv6 { bgp | mbgp } nexthop <ipv6nexthop>
```

## Syntax Description

|         |   |
|---------|---|
| show    | Show running system information                 |
| ipv6    | Display BGP information for IPv6 address family |
| bgp     | Display BGP status and configuration            |
| mbgp    | Display MBGP status and configuration           |
| nexthop | Display routes matching the nexthop             |

## Command Mode

- /exec

## show ipv6 bgp received-paths

```
show ipv6 { bgp | mbgp } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
received-paths [ private ] [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                 |
| ipv6                  | Display BGP information for IPv6 address family |
| bgp                   | Display BGP status and configuration            |
| mbgp                  | Display MBGP status and configuration           |
| vrf                   | (Optional) Virtual Router Context               |
| <i>vrf-name</i>       | (Optional) VRF name                             |
| <i>vrf-known-name</i> | (Optional) Known VRF name                       |
| received-paths        | Display paths stored for soft-reconfig          |
| private               | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED       |

### Command Mode

- /exec

# show ipv6 bgp regexp

```
show ipv6 { bgp | mbgp } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] regexp  
<regexp-str> [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                        |
| bgp                   | Display BGP status and configuration                   |
| mbgp                  | Display MBGP status and configuration                  |
| vrf                   | (Optional) Virtual Router Context                      |
| <i>vrf-name</i>       | (Optional) VRF name                                    |
| <i>vrf-known-name</i> | (Optional) Known VRF name                              |
| ipv6                  | Display BGP information for IPv6 address family        |
| regexp                | Display routes matching the AS path regular expression |
| <i>regexp-str</i>     | Regular expression to match the AS paths               |

## Command Mode

- /exec

# show ipv6 bgp summary

```
show ipv6 { bgp | mbgp } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
summary [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                 |
| bgp                   | Display BGP status and configuration            |
| mbgp                  | Display MBGP status and configuration           |
| vrf                   | (Optional) Virtual Router Context               |
| <i>vrf-name</i>       | (Optional) VRF name                             |
| <i>vrf-known-name</i> | (Optional) Known VRF name                       |
| summary               | Display summarized information of BGP state     |
| ipv6                  | Display BGP information for IPv6 address family |

## Command Mode

- /exec

# show ipv6 client

```
show ipv6 client [ <client-name> ] [ __readonly__ { TABLE_ipv6_client { <cli-name> <cli-stat> <cli-pid>
<cli-ext-pid> [ <protocol> ] <pib-index> <cli-uuid> <rou-vrf> <rou-flg> <ctrl-sap> <data-sap> <ipc-ctrl-mq>
<ipc-ctrl-fail> <ipc-data-mq> <ipc-data-fail> [ <if-ext-ind> ] [ <recv-fn> <recv-hex> ] } } ]
```

## Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information                         |
| ipv6                 | Display IPv6 information                                |
| client               | Display clients registered with the IPv6 process        |
| <i>client-name</i>   | (Optional) Display information for a single IPv6 client |
| <i>__readonly__</i>  | (Optional)  |
| TABLE_ipv6_client    | (Optional) IPV6 client table                            |
| <i>cli-name</i>      | (Optional) client name                                  |
| <i>cli-stat</i>      | (Optional) client state                                 |
| <i>cli-pid</i>       | (Optional) client pid                                   |
| <i>cli-ext-pid</i>   | (Optional) client ext-pid                               |
| <i>protocol</i>      | (Optional) ipv6 client protocol                         |
| <i>pib-index</i>     | (Optional) client pib-index                             |
| <i>cli-uuid</i>      | (Optional) client uuid                                  |
| <i>rou-vrf</i>       | (Optional) client route vrf                             |
| <i>rou-flg</i>       | (Optional) client route flag                            |
| <i>ctrl-sap</i>      | (Optional) client control sap                           |
| <i>data-sap</i>      | (Optional) client data sap                              |
| <i>ipc-ctrl-mq</i>   | (Optional) client ipc control message queue             |
| <i>ipc-ctrl-fail</i> | (Optional) client ipc control fail                      |
| <i>ipc-data-mq</i>   | (Optional) client ipc data message queue                |
| <i>ipc-data-fail</i> | (Optional) client ipc data fail                         |
| <i>if-ext-ind</i>    | (Optional) client if ext indes                          |
| <i>recv-fn</i>       | (Optional) client receive fn name                       |
| <i>recv-hex</i>      | (Optional) receive-hexadecimal address                  |

**Command Mode**

- /exec

## show ipv6 dhcp guard policy

```
show ipv6 dhcp guard policy [ <pname> ] [ __readonly__ { TABLE_dhcp_guard_policy <name> <role> [ <target> ] [ <max_pref> ] [ <min_pref> ] [ <match_src_list> ] [ <match_prefix_list> ] } ]
```

### Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information               |
| ipv6                     | Show the IPv6 features of the system          |
| <i>pname</i>             | (Optional) Policy name for dhcp guard feature |
| <i>__readonly__</i>      | (Optional)                                    |
| TABLE_dhcp_guard_policy  | (Optional) IPv6 DHCP guard policy             |
| <i>name</i>              | (Optional) Policy Name                        |
| <i>role</i>              | (Optional) Role                               |
| <i>target</i>            | (Optional) Target                             |
| <i>max_pref</i>          | (Optional) Max preference                     |
| <i>min_pref</i>          | (Optional) Min preference                     |
| <i>match_src_list</i>    | (Optional) Source Address Match Access List   |
| <i>match_prefix_list</i> | (Optional) Prefix List Match Prefix List      |

### Command Mode

- /exec

## show ipv6 dhcp relay

```
show ipv6 dhcp relay [ interface <intf-range> ] [ __readonly__ [ <relay_service_enable>
<v6_global_smart-relay_enable> [ <gbl_src_intf> ] <relay_vpn_enable> <relay_option79_state>
<relay_cisco_option_enable> ] [ TABLE_intf <interface-name> [ <intf_src_intf> ] <intf_header> [
TABLE_addr <relay_address> <dst_intf> <vrf_name> ] ] <v6_smart_relay_intfs_hdr> [ TABLE_intf
<v6_smart_relay_enabled_intfs> ] ]
```

### Syntax Description

|                                     |   |
|-------------------------------------|---|
| show                                | Show running system information                                 |
| ipv6                                | Show the IPv6 features of the system                            |
| dhcp                                | Show DHCPv6   |
| relay                               | DHCPv6 relay address of the interface                           |
| interface                           | (Optional) DHCPv6 relay address of the interface                |
| <i>intf-range</i>                   | (Optional) interface  |
| <i>__readonly__</i>                 | (Optional) Read only  |
| <i>relay_service_enable</i>         | (Optional) is dhcpv6 relay service enabled                      |
| <i>v6_global_smart-relay_enable</i> | (Optional)  |
| <i>gbl_src_intf</i>                 | (Optional) interface name                                       |
| <i>relay_vpn_enable</i>             | (Optional) is dhcpv6 relay insertion of vpn sub options enabled |
| <i>relay_option79_state</i>         | (Optional) is dhcp relay option79 state                         |
| <i>relay_cisco_option_enable</i>    | (Optional) is dhcpv6 relay cisco option enabled                 |
| TABLE_intf                          | (Optional)  |

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                         |
| ipv6                  | Show the IPv6 features of the system                    |
| dhcp                  | Show information about DHCPv6                           |
| relay                 | DHCPv6 Relay  |
| statistics            | Statistics related to DHCPv6                            |
| interface             | (Optional) input interface                              |
| <i>intf</i>           | (Optional) interface                                    |
| server-ip             | (Optional) Server address                               |
| use-vrf               | (Optional) server address VRF membership                |
| <i>vrf-name</i>       | (Optional) VRF name                                     |
| interface             | (Optional) Destination interface for the server address |
| <i>dest-interface</i> | (Optional) Destination interface                        |
| <i>__readonly__</i>   | (Optional) Read only                                    |
| <i>msg_stats_hdr</i>  | (Optional) dhcpv6 message statistics header             |
| <i>msg_type_str</i>   | (Optional) dhcpv6 message type                          |

|                               |                                     |
|-------------------------------|-------------------------------------|
| <i>rx_pkts</i>                | (Optional) dhcpv6 received packets  |
| <i>tx_pkts</i>                | (Optional) dhcpv6 forwarded packets |
| <i>drops</i>                  | (Optional) dhcpv6 packet drops      |
| <i>msg_type_str_advertise</i> | (Optional)                          |
| <i>rx_pkts_advertise</i>      | (Optional)                          |
| <i>tx_pkts_advertise</i>      | (Optional)                          |
| <i>drops_advertise</i>        | (Optional)                          |
| <i>msg_type_str_request</i>   | (Optional)                          |
| <i>rx_pkts_request</i>        | (Optional)                          |
| <i>tx_pkts_request</i>        | (Optional)                          |
| <i>drops_request</i>          | (Optional)                          |
| <i>msg_type_str_confirm</i>   | (Optional)                          |
| <i>rx_pkts_confirm</i>        | (Optional)                          |
| <i>tx_pkts_confirm</i>        | (Optional)                          |

| <i>drop_bad_context</i>             | (Optional)                              |
| <i>drop_opt_insert_fail</i>         | (Optional)                              |
| <i>drop_server_direct_reply</i>     | (Optional)                              |
| <i>drop_no_ipv6_addr</i>            | (Optional)                              |
| <i>drop_intf_error</i>              | (Optional)                              |
| <i>drop_vpn_disabled</i>            | (Optional)                              |
| <i>drop_ipv6_extn_hdrs_presence</i> | (Optional)                              |
| <i>drop_mct_drop</i>                | (Optional) drops through mct            |

### Command Mode

- /exec

# show ipv6 fragments

```
show ipv6 fragments [ <source-addr> ] [ __readonly__ [ TABLE_ipv6_frag [ TABLE_ipv6_each_q {
<ipv6-src> <ipv6-dest> <frag-id> <frag-off> <m-flag> <nxt-header> <pay-load> <expires> } ] ] ]
```

## Syntax Description

|                   |   |
|-------------------|---|
| show              | Show running system information           |
| ipv6              | Display IPv6 information                  |
| fragments         | Display queued fragments                  |
| __readonly__      | (Optional)                                |
| TABLE_ipv6_frag   | (Optional) IPV6 fragment table            |
| TABLE_ipv6_each_q | (Optional) IPV6 each fragment queue table |
| <i>frag-id</i>    | (Optional) fragment id                    |
| <i>frag-off</i>   | (Optional) fragment offset                |
| <i>m-flag</i>     | (Optional) m flag                         |
| <i>nxt-header</i> | (Optional) next header                    |
| <i>pay-load</i>   | (Optional) fargment payload               |
| <i>expires</i>    | (Optional) expiry time                    |

## Command Mode

- /exec

# show ipv6 icmp

```
show ipv6 icmp { adjacency | neighbor | sync-entries } [ <interface> ] [ detail ] [ vrf { <vrf-name> |
<vrf-known-name> | all } ] [ __readonly__ { <icmpv6-vrftype> <icmpv6-cxt-name> } [ TABLE_icmpv6_all_int
{ TABLE_icmpv6_one_int { <icmpv6-ipv6-addr> <time-stamp-icmpv6> <icmpv6-mac> <icmpv6-state>
<icmpv6-short-name> [ <phy-int-short-name> ] } } ] ] ]
```

## Syntax Description

|                           |   |
|---------------------------|---|
| show                      | Show running system information               |
| ipv6                      | Display IPv6 information                      |
| icmp                      | Display ICMPv6 information                    |
| adjacency                 | Show IPv6 dynamic learnt adjacency entry      |
| neighbor                  | Show IPv6 dynamic learnt neighbor entry       |
| sync-entries              | Show IPv6 table learnt only due to table sync |
| <i>interface</i>          | (Optional) Interface name to display          |
| detail                    | (Optional) Display detailed information       |
| vrf                       | (Optional) Display per-VRF information        |
| <i>vrf-name</i>           | (Optional) VRF name                           |
| <i>vrf-known-name</i>     | (Optional) Known VRF name                     |
| all                       | (Optional) Display information for all VRFs   |
| <i>__readonly__</i>       | (Optional)                                    |
| <i>icmpv6-vrftype</i>     | (Optional)                                    |
| <i>icmpv6-cxt-name</i>    | (Optional)                                    |
| TABLE_icmpv6_all_int      | (Optional)                                    |
| TABLE_icmpv6_one_int      | (Optional)                                    |
| <i>time-stamp-icmpv6</i>  | (Optional)                                    |
| <i>icmpv6-mac</i>         | (Optional)                                    |
| <i>icmpv6-state</i>       | (Optional)                                    |
| <i>icmpv6-short-name</i>  | (Optional)                                    |
| <i>phy-int-short-name</i> | (Optional)                                    |

## Command Mode

- /exec

## show ipv6 icmp global traffic

```
show ipv6 { icmp | nd } global traffic [ __readonly__ [ { TABLE_icmpv6_global_stat [ <st-total> ] [ <rv-total> ] [ <st-err> ] [ <rv-err> ] [ <st-int-drp-cnt> ] [ <rv-int-drp-cnt> ] [ <st-adj-nt-recov-am-ha> ] [ <rv-adj-nt-recov-am-ha> ] [ <st-pkt-allow-inv-ttl-vpc> ] [ <rv-pkt-allow-inv-ttl-vpc> ] [ <st-drp-src-mac-own> ] [ <rv-drp-src-mac-own> ] [ <st-drp-tgt-ip-not-own> ] [ <rv-drp-tgt-ip-not-own> ] [ <st-drp-src-ip-not-own> ] [ <rv-drp-src-ip-not-own> ] [ <st-dest-unreach> ] [ <rv-dest-unreach> ] [ <st-admin-prohibit> ] [ <rv-admin-prohibit> ] [ <st-time-exceed> ] [ <rv-time-exceed> ] [ <st-para-pbms> ] [ <rv-para-pbms> ] [ <st-echo-req> ] [ <rv-echo-req> ] [ <st-echo-reply> ] [ <rv-echo-reply> ] [ <st-redirect> ] [ <rv-redirect> ] [ <st-pkt-too-big> ] [ <rv-pkt-too-big> ] [ <st-rtr-adver> ] [ <rv-rtr-adver> ] [ <st-rtr-solicit> ] [ <rv-rtr-solicit> ] [ <st-nei-adver> ] [ <rv-nei-adver> ] [ <st-nei-solicit> ] [ <rv-nei-solicit> ] [ <fast-path-pkts> ] [ <fastpath-disable> ] [ <ign-fastpath-pkts> ] [ <dup-rtr-ra-recvd> ] [ <rv-dup-rtr-ra-recvd> ] } ] ] ]
```

### Syntax Description

|                                 |   |
|---------------------------------|---|
| show                            | Show running system information                           |
| ipv6                            | Display IPv6 information                                  |
| icmp                            | Display ICMPv6 information                                |

## show ipv6 icmp l2 statistics

```
show ipv6 { icmp | nd } l2 statistics [ interface <interface> ] [ __readonly__ [ TABLE_intf { <intf_name>
<l2_stats> } ] ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                     |
| ipv6                | Display IPv6 information                            |
| icmp                | Display ICMPv6 information                          |
| nd                  | ICMPv6 Neighbor Discovery commands                  |
| interface           | (Optional) Interface for which l2 stats to be shown |
| l2                  | Display ND info for layer-2 interface               |
| statistics          | Display ND statistics for layer 2 interface         |
| <i>interface</i>    | (Optional) interface                                |
| <i>__readonly__</i> | (Optional)  |
| TABLE_intf          | (Optional) Layer 2 Interface name                   |
| <i>intf_name</i>    | (Optional) Interface name                           |
| <i>l2_stats</i>     | (Optional) layer 2 ND stats on given interface      |

### Command Mode

- /exec

## show ipv6 icmp nd local-proxy stats

```
show ipv6 icmp nd local-proxy stats { <vlan-interface> [ <interface> ] } [ __readonly__ [ TABLE_vlan {
<vlan-name> [ TABLE_intf { <intf-name> <current-count> [ TABLE_hourly_stats { <hrs> <hrs-str> <stats>
} ] } ] } ] }
```

### Syntax Description

|                       |                                    |
|-----------------------|------------------------------------|
| show                  | Show running system information    |
| ipv6                  | Display IPv6 information           |
| icmp                  | Display ICMPv6 information         |
| nd                    | ICMPv6 Neighbor Discovery commands |
| local-proxy           | show nd local proxy stats          |
| stats                 | statistics                         |
| <i>vlan-interface</i> | vlan interface                     |
| <i>interface</i>      | (Optional) interface               |
| <i>__readonly__</i>   | (Optional)                         |
| TABLE_vlan            | (Optional)                         |

### Syntax Description

|   |   |
|---|---|
| show  | Show running system information   |
| ipv6  | Display IPv6 information  |
| icmp  | Display ICMPv6 information  |
| vpc-statistics                              | Show vPC global statistics  |
| __readonly__                                | (Optional)  |
| TABLE_icmpv6_vpc_stats                      | (Optional) icmpv6 Vpc statistics  |
| <i>icmpv6-pro-drp-pull-disable</i>          | (Optional) icmpv6 protocol drop pull disable                            |
| <i>icmpv6-pro-drp-push-msg-disable</i>      | (Optional) icmpv6 protocol drop push message disable                    |
| <i>icmpv6-pro-ign-snd-pull-disabe</i>       | (Optional) icmpv6 protocol ignore send pull disable                     |
| <i>icmpv6-ign-snd-push-disable</i>          | (Optional) icmpv6 ignore send push disable                              |
| <i>icmpv6-drp-im-fail</i>                   | (Optional) icmpv6 drop im fail  |
| <i>icmpv6-drp-mcecm-fail</i>                | (Optional) MCECM api failed while processing CFS payload                |
| <i>icmpv6-drp-invalid-pc-iod</i>            | (Optional) Invalid MCT port-channel iod while processing CFS payload    |
| <i>icmpv6-drp-pt-lookup-fail</i>            | (Optional) PT lookup failed while processing CFS payload                |
| <i>icmpv6-drp-resp-fail-no-mct</i>          | (Optional) invalid MCT iod while processing CFS payload                 |
| <i>icmpv6-drp-resp-fail</i>                 | (Optional) response failed while processing CFS payload                 |
| <i>icmpv6-vpc-id-ifindx-sending-pushmsg</i> | (Optional) Unable to retrieve VPC id ifindex while sending push message |

|  |  |
|--|--|
| <i>icmpv6-vpc-id-proc-cfs-payload</i>          | (Optional) Unable to retrieve ifindex from vpc id  |
| <i>icmpv6-vpc-id-periodic-sync</i>             | (Optional) unable to retrieve vpc id ifindex for periodic sync                                   |
| <i>icmpv6-vpc-id-cfs-payload-periodic-sync</i> | (Optional) unable to retrieve ifindex from vpc id while processing cfs payload for periodic sync |
| <i>icmpv6-resp-sent</i>                        | (Optional) Response sent via CFSOE   |
| <i>icmpv6-resp-rcvd</i>                        | (Optional) Response received via CFSOE   |

| <i>icmpv6-rcvd-msg</i>                         | (Optional) Received message via CFSOE  |
| <i>icmpv6-send-fail</i>                        | (Optional) Send message failed via CFSOE   |
| <i>icmpv6-cfs-rel-dlvry-fail</i>               | (Optional) MCECM send api failed via CFSOE   |
| <i>icmpv6-cfs-rel-dmrvy-suc</i>                | (Optional) Send message succeeded via CFSOE  |
| <i>icmpv6-drp-pt-add-fail</i>                  | (Optional) PT add failed while processing offlist database                                       |
| <i>icmpv6-drp-no-mem</i>                       | (Optional) Memory alloc failed while processing offlist database                                 |
| <i>icmpv6-drp-tmr-cre-fail</i>                 | (Optional) Timer create failed while processing offlist database                                 |
| <i>icmpv6-drp-add-adj-fail</i>                 | (Optional) Adjacency addition failed while processing offlist database                           |
| <i>icmpv6-off-drp-pt-lookup-fail</i>           | (Optional) PT lookup failed while processing offlist database                                    |
| <i>icmpv6-dont-drp-vlan-mismat</i>             | (Optional) VLAN mismatch while processing offlist database                                       |
| <i>icmpv6-drp-svi-invalid</i>                  | (Optional) SVI is invalid while processing offlist database                                      |
| <i>icmpv6-dont-drop-sv-down</i>                | (Optional) SVI is down while processing offlist database   |
| <i>icmpv6-drp-mct-down</i>                     | (Optional) MCT is down while processing offlist database   |
| <i>icmpv6-drp-ctxt-invalid</i>                 | (Optional) Ctxt_type is invalid while processing offlist database                                |
| <i>icmpv6-drp-vrf-invalid</i>                  | (Optional) VRF is invalid while processing offlist database                                      |
| <i>icmpv6-drp-l3addr-invalid</i>               | (Optional) IP address is invalid while processing offlist database                               |
| <i>icmpv6-drp-l3addr-sanity-fail</i>           | (Optional) IP address sanity failed while processing offlist database                            |
| <i>icmpv6-drp-mac-sanity-fail</i>              | (Optional) MAC address sanity failed while processing offlist database                           |
| <i>icmpv6-own-rtr-mac</i>                      | (Optional) Our own router mac while processing offlist database                                  |
| <i>icmpv6-drp-own-ipv6addr</i>                 | (Optional) Our own ip address while processing offlist database                                  |
| <i>icmpv6-drp-own-vipv6add</i>                 | (Optional) Our own virtual ip address while processing offlist database                          |
| <i>icmpv6-drp-adj-fail</i>                     | (Optional) Create adjacency failed while processing offlist database                             |

|                                      |   |
|--------------------------------------|---|
| <i>icmpv6-drp-subnet-mismatch</i>    | (Optional) Subnet mismatch while processing offlist database                    |
| <i>icmpv6-drp-adj-exist</i>          | (Optional) Entry exists while processing offlist database                       |
| <i>icmpv6-dont-drp-ip-not-enable</i> | (Optional) IPv6 not enabled on interface while processing offlist database      |
| <i>icmpv6-drp-total-cnt</i>          | (Optional) Total drop count while processing offlist database                   |
| <i>icmpv6-dont-drop-total-cnt</i>    | (Optional) Total don't drop count while processing offlist database             |
| <i>icmpv6-add-adj</i>                | (Optional) Total adjacency additions in offlist database                        |
| <i>icmpv6-del-adj</i>                | (Optional) Total adjacency deletions in offlist database                        |
| <i>icmpv6-adj-already-exist</i>      | (Optional) Total adjacencies ignored as they already exists in offlist database |

**Command Mode**

- /exec

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                             |
| ipv6                  | Display IPv6 information                                    |
| interface             | Display IPv6 related interface information                  |
| brief                 | (Optional) Display summary of IPv6 status and configuration |
| include-secondary     | (Optional) Display summary of all IPv6 addresses            |
| <i>interface</i>      | (Optional) Interface name to display                        |
| detail                | (Optional) Display detailed IPv6 interface information      |
| vrf                   | (Optional) Display per-VRF information                      |
| <i>vrf-name</i>       | (Optional) VRF name   |
| <i>vrf-known-name</i> | (Optional) Known VRF name                                   |
| all                   | (Optional) Display all VRFs                                 |
| __readonly__          | (Optional)  |
| TABLE_addr            | (Optional)  |

## show ipv6 lisp data-cache

show ipv6 lisp data-cache [ <eid> ] [ vrf { <vrf-name> | <vrf-known-name> } ]

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                     |
| ipv6                  | Display IPv6 information                            |
| lisp                  | LISP show commands                                  |
| data-cache            | Display EID-to-RLOC data cache mapping in this ITR  |
| <i>eid</i>            | (Optional) Display mapping for IPv6 destination EID |
| vrf                   | (Optional) Display per-VRF information              |
| <i>vrf-name</i>       | (Optional) VRF name                                 |
| <i>vrf-known-name</i> | (Optional) Known VRF name                           |

### Command Mode

- /exec

# show ipv6 local policy

```
show ipv6 local policy [ vrf { <vrf-name> | <vrf-known-name> | all } ] [ __readonly__ { TABLE_pbr [
<interface> ] [ <rmap> ] [ <status> ] [ <vrf_name> ] } ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information             |
| ipv6                  | Display IPv6 information                    |
| local                 | IPv6 local options                          |
| policy                | Policy routing                              |
| vrf                   | (Optional) Display per-VRF information      |
| <i>vrf-name</i>       | (Optional) VRF name                         |
| <i>vrf-known-name</i> | (Optional) Known VRF name                   |
| all                   | (Optional) Display information for all VRFs |
| <i>__readonly__</i>   | (Optional)                                  |
| TABLE_pbr             | (Optional)                                  |
| <i>interface</i>      | (Optional)                                  |
| <i>rmap</i>           | (Optional)                                  |
| <i>status</i>         | (Optional)                                  |
| <i>vrf_name</i>       | (Optional)                                  |

## Command Mode

- /exec

## show ipv6 mld global traffic

```
show ipv6 [ icmp ] mld global traffic [ __readonly__ [ { TABLE_icmpv6_mld_stat <st-v1-queries>
<rv-v1-queries> <st-v2-queries> <rv-v2-queries> <st-v1-reports> <rv-v1-reports> <st-v2-reports>
<rv-v2-reports> <st-v1-leaves> <rv-v1-leaves> } ] ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                      |
| ipv6                  | Display IPv6 information                             |
| icmp                  | (Optional) Display ICMPv6 information                |
| mld                   | Display Multicast Listener Discovery information     |
| global                | Show ICMPv6 global variables                         |
| traffic               | Display ICMPv6 software processed traffic statistics |
| __readonly__          | (Optional)   |
| TABLE_icmpv6_mld_stat | (Optional) ICMPv6 MLD Statistics                     |
| <i>st-v1-queries</i>  | (Optional) V1 Queries sent                           |
| <i>rv-v1-queries</i>  | (Optional) V1 Queries received                       |
| <i>st-v2-queries</i>  | (Optional) V2 Queries sent                           |
| <i>rv-v2-queries</i>  | (Optional) V2 Queries received                       |
| <i>st-v1-reports</i>  | (Optional) V1 Reports sent                           |
| <i>rv-v1-reports</i>  | (Optional) V1 Reports received                       |
| <i>st-v2-reports</i>  | (Optional) V2 Reports sent                           |
| <i>rv-v2-reports</i>  | (Optional) V2 Reports received                       |
| <i>st-v1-leaves</i>   | (Optional) V1 Leaves sent                            |
| <i>rv-v1-leaves</i>   | (Optional) V1 Leaves received                        |

### Command Mode

- /exec

## show ipv6 mld groups

```
show ipv6 [ icmp ] mld groups [ { <source> [ <group> ] } | { <group> [ <source> ] } ] [ <interface> ] [
summary ] [ vrf { <vrf-name> | <vrf-known-name> | all } ] [ __readonly__ [ TABLE_vrf [ <if-name> ] [

## show ipv6 mld snooping lookup-mode

```
show ipv6 mld snooping lookup-mode [ vlan <vlan> | bridge-domain <bdid> ] [ __readonly__ [ <configured> ] [ <operational> ] [ TABLE_vlan [ <vlan-id> ] [ <lookup> ] ] ]
```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                  |
| ipv6                | Display IPv6 information                         |
| mld                 | Display Multicast Listener Discovery information |
| snooping            | MLD Snooping information                         |
| lookup-mode         | MLD Snooping lkup mode information               |
| vlan                | (Optional) Display VLAN information              |
| <i>vlan</i>         | (Optional) Specify VLAN                          |
| bridge-domain       | (Optional) Display BD information                |
| <i>bdid</i>         | (Optional) Specify BD                            |
| <i>__readonly__</i> | (Optional)                                       |
| <i>configured</i>   | (Optional)                                       |
| <i>operational</i>  | (Optional)                                       |
| TABLE_vlan          | (Optional)                                       |
| <i>vlan-id</i>      | (Optional)                                       |
| <i>lookup</i>       | (Optional)                                       |

### Command Mode

- /exec

## show ipv6 mld snooping mrouter

```
show ipv6 mld snooping mrouter [ otv ] [ vlan <vlan> | bridge-domain <bdid> ] [ detail ] [ __readonly__
TABLE_vlan <vlan-id> TABLE_intf <if-name> <static> <dynamic> <vpc> <fabricpath-core-port>
<co-learned> <user-configured> <learnt-by-peer> <uptime> <expires> <internal> ]
```

### Syntax Description

|                             |  |
|-----------------------------|--|
| show                        | Show running system information                      |
| ipv6                        | Display IPv6 information                             |
| mld                         | Display Multicast Listener Discovery information     |
| snooping                    | MLD Snooping information                             |
| mrouter                     | Display multicast routers detected                   |
| otv                         | (Optional) MLD Snooping OTV information              |
| vlan                        | (Optional) Display VLAN multicast router information |
| <i>vlan</i>                 | (Optional) Specify VLAN                              |
| bridge-domain               | (Optional) Display BD multicast router information   |
| <i>bdid</i>                 | (Optional) Specify BD                                |
| detail                      | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED            |
| <i>__readonly__</i>         | (Optional)   |
| TABLE_vlan                  | (Optional)   |
| <i>vlan-id</i>              | (Optional)   |
| TABLE_intf                  | (Optional)   |
| <i>if-name</i>              | (Optional)   |

| <i>expires</i>              | (Optional)   |
| <i>static</i>               | (Optional)   |
| <i>dynamic</i>              | (Optional)   |
| <i>internal</i>             | (Optional)   |
| <i>vpc</i>                  | (Optional)   |
| <i>fabricpath-core-port</i> | (Optional)   |
| <i>co-learned</i>           | (Optional)   |

|                        |            |
|------------------------|------------|
| <i>user-configured</i> | (Optional) |
| <i>learnt-by-peer</i>  | (Optional) |

**Command Mode**

- /exec

# show ipv6 mld snooping otv vlan brief

show ipv6 mld snooping otv vlan brief [ \_\_readonly\_\_ <vlan-id> ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                  |
| ipv6           | Display IPv6 information                         |
| mld            | Display Multicast Listener Discovery information |
| snooping       | MLD Snooping information                         |
| otv            | MLD Snooping OTV information                     |
| vlan           | Display VLAN/BD information                      |
| brief          | Brief output                                     |
| __readonly__   | (Optional)                                       |
| <i>vlan-id</i> | (Optional)                                       |

## Command Mode

- /exec

# show ipv6 mld snooping pw vlan brief

show ipv6 mld snooping pw vlan brief [ \_\_readonly\_\_ <vlan-id> ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                  |
| ipv6           | Display IPv6 information                         |
| mld            | Display Multicast Listener Discovery information |
| snooping       | MLD Snooping information                         |
| pw             | MLD Snooping PW information                      |
| vlan           | Display VLAN/BD information                      |
| brief          | Brief output                                     |
| __readonly__   | (Optional)                                       |
| <i>vlan-id</i> | (Optional)                                       |

## Command Mode

- /exec

## show ipv6 mld snooping querier

```
show ipv6 mld snooping querier [ vlan <vlan> | bridge-domain <bidid> ] [ detail ] [ __readonly__ [ TABLE_vlan
<vlan-id> <qa> <qv> [ <expires> ] <qiod> <qname> <int> [ <last_member_query_count> ] [

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                        |
| ipv6                  | Display IPv6 information                               |
| vrf                   | (Optional) Display per-VRF information                 |
| <i>vrf-name</i>       | (Optional) VRF name                                    |
| <i>vrf-known-name</i> | (Optional) Known VRF name                              |
| all                   | (Optional) Display information for all VRFs            |
| mroute                | Display IP multicast routing table                     |
| summary               | (Optional) Display route counts and packet rates       |
| shared-tree           | (Optional) Display route for *,G entries               |
| source-tree           | (Optional) Display route for S,G entries               |
| software-forwarded    | (Optional) Display software switched route counts only |
| rpf-failed            | (Optional) Display RPF failure statistics              |
| rp                    | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED              |
| sr                    | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED              |
| mofrr                 | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED              |

|                      |  |
|----------------------|--|
| count                | (Optional) Display route counts only         |
| bitfield             | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED    |
| detail               | (Optional) Display detailed route attributes |
| flags                | (Optional) Display detailed route attributes |

| <i>dns-server</i>                  | (Optional) dns server   |
| <i>dns-addr</i>                    | (Optional) dns address  |
| <i>infinite-seq-no</i>             | (Optional) infinite sequence number                                   |

**Command Mode**

- /exec

## show ipv6 nd raguard policy

```
show ipv6 nd raguard policy [ <name> ] [ __readonly__ { TABLE_raguard_policy <policy> [ <port_type>
] <device_role> [ <min_hop_limit> ] [ <max_hop_limit> ] [ <mgd_conf_flag> ] [ <other_conf_flag> ] [
<rtr_pref_max> ] [ <ra_prefix_list> ] [ <ipv6_acl> ] [ { TABLE_raguard_targets <target> <target_type>
<target_policy> <feature> <target_range> } ] } ]
```

### Syntax Description

|                        |   |
|------------------------|---|
| <i>name</i>            | (Optional) Policy name for feature RA guard |
| <i>__readonly__</i>    | (Optional)                                  |
| TABLE_raguard_policy   | (Optional) IPv6 RA guard policy             |
| <i>policy</i>          | (Optional) Policy Name                      |
| <i>port_type</i>       | (Optional) Port type                        |
| <i>device_role</i>     | (Optional) Device role                      |
| <i>min_hop_limit</i>   | (Optional) Minimum hop limit                |
| <i>max_hop_limit</i>   | (Optional) Minimum hop limit                |
| <i>mgd_conf_flag</i>   | (Optional) Check managed config flag        |
| <i>other_conf_flag</i> | (Optional) Check other config flag          |
| <i>rtr_pref_max</i>    | (Optional) Router-preference maximum        |
| <i>ra_prefix_list</i>  | (Optional) Match RA prefix list             |
| <i>ipv6_acl</i>        | (Optional) Match IPv6 access list           |
| TABLE_raguard_targets  | (Optional) RA Guard Targets table           |
| <i>target</i>          | (Optional) Target Name                      |
| <i>target_type</i>     | (Optional) Target Type                      |
| <i>target_policy</i>   | (Optional) Policy Name                      |
| <i>feature</i>         | (Optional) Feature                          |
| <i>target_range</i>    | (Optional) Target Range                     |

### Command Mode

- /exec

# show ipv6 neighbor binding

```
show ipv6 neighbor binding [ { { vlan <vlanid> [ details ] } | { { address { <ipv6-addr> | all } } { interface <intfid> vlan <vlanid> [ details ] } }
```

## Syntax Description

|               |                                      |
|---------------|--------------------------------------|
| <i>intfid</i> | (Optional) [details]                 |
| show          | Show running system information      |
| ipv6          | Show the IPv6 features of the system |
| <i>vlanid</i> | (Optional) Vlan number               |

## Command Mode

- /exec

# show ipv6 neighbor binding mac

```
show ipv6 neighbor binding mac <macaddr> { interface <intfid> vlan <vlanid> [ details ] |
```

## Syntax Description

|                |                                      |
|----------------|--------------------------------------|
| <i>intfid</i>  | [details]                            |
| show           | Show running system information      |
| ipv6           | Show the IPv6 features of the system |
| <i>macaddr</i> | 48-bit hardware address              |
| <i>vlanid</i>  | Vlan number                          |

## Command Mode

- /exec

## show ipv6 neighbor static

```
show ipv6 neighbor static [ interface <interface> ] [ __readonly__ [ TABLE_i6_nei { <nei-ipv6> <nei-mac>
<nei-iod> <nei-if-iod> } ] [ <tot-nei-ent> ] [ TABLE_nei_cnt { <nei-ipv6-tot> <nei-mac-tot> <nei-iod-tot>
<nei-if-iod-tot> } ] ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                       |
| ipv6                  | Display IPv6 information                              |
| neighbor              | Show IPv6 neighbor entry                              |
| static                | Displays only static neighbors                        |
| interface             | (Optional) Display IPv6 related interface information |
| <i>interface</i>      | (Optional) Interface name to display                  |
| <i>__readonly__</i>   | (Optional)  |
| TABLE_i6_nei          | (Optional) ipv6 neighbor table                        |
| <i>nei-mac</i>        | (Optional) neighbor mac address                       |
| <i>nei-iod</i>        | (Optional) neighbor iod                               |
| <i>nei-if-iod</i>     | (Optional) neighbor interface iod                     |
| <i>tot-nei-ent</i>    | (Optional) total neighbor entries                     |
| TABLE_nei_cnt         | (Optional) neighbor count table                       |
| <i>nei-mac-tot</i>    | (Optional) neighbor mac address                       |
| <i>nei-iod-tot</i>    | (Optional) neighbor iod                               |
| <i>nei-if-iod-tot</i> | (Optional) neighbor physical interface iod            |

### Command Mode

- /exec

## show ipv6 pim df

```
show ipv6 pim df [ <rp-or-group> ] [ vrf { <vrf-name> | <vrf-known-name> | all } ] [ internal ] [ __readonly__
[ TABLE_ctx [ <out-context> ] [ TABLE_rp [ <rp-addr> ] [ <df-ordinal> ] [ <df-bits> ] [ <df-bits-count> ]
[ <metric-pref> ] [ <metric> ] [ TABLE_grange [ <grange-grp> ] [ <grange-masklen> ] ] [ TABLE_iod [
<if-name> ] [ <df-winner> ] [ <df-state> ] [ <winner-metric-pref> ] [ <winner-metric> ] [ <uptime> ] [ <is-rpf>
] ] ] ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information             |

## show ipv6 pim vrf

```
show ipv6 pim vrf [ { <vrf-name> | <vrf-known-name> | all } ] [ detail | internal ] [ __readonly__ {
TABLE_context <out-context> <context-id> <count> <table-id> <bfd> <mvpn> [ <strict_rfc_compliant> ]
[ <global-mcast-bndry> ] } ]
```

### Syntax Description

|                             |  |
|-----------------------------|--|
| show                        | Show running system information                    |
| ipv6                        | Display IPv6 information                           |
| pim                         | Display PIM6 status and configuration              |
| vrf                         | Display per-VRF information                        |
| <i>vrf-name</i>             | (Optional) VRF name                                |
| <i>vrf-known-name</i>       | (Optional) Known VRF name                          |
| all                         | (Optional) Display all VRFs PIM6 is configured for |
| detail                      | (Optional) Display detailed information            |
| internal                    | (Optional) VRF related internal information        |
| __readonly__                | (Optional)   |
| TABLE_context               | (Optional)   |
| <i>out-context</i>          | (Optional)   |
| <i>context-id</i>           | (Optional)   |
| <i>table-id</i>             | (Optional)   |
| <i>count</i>                | (Optional)   |
| <i>bfd</i>                  | (Optional)   |
| <i>mvpn</i>                 | (Optional)   |
| <i>strict_rfc_compliant</i> | (Optional)   |
| <i>global-mcast-bndry</i>   | (Optional)   |

### Command Mode

- /exec

# show ipv6 policy

```
show ipv6 policy [ vrf { <vrf-name> | <vrf-known-name> | all } ] [ __readonly__ { TABLE_pbr [ <interface> ] [ <rmap> ] [ <status> ] [ <vrf_name> ] } ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information             |
| ipv6                  | Display IPv6 information                    |
| policy                | Policy routing                              |
| vrf                   | (Optional) Display per-VRF information      |
| <i>vrf-name</i>       | (Optional) VRF name                         |
| <i>vrf-known-name</i> | (Optional) Known VRF name                   |
| all                   | (Optional) Display information for all VRFs |
| __readonly__          | (Optional)                                  |
| TABLE_pbr             | (Optional)                                  |
| <i>interface</i>      | (Optional)                                  |
| <i>rmap</i>           | (Optional)                                  |
| <i>status</i>         | (Optional)                                  |
| <i>vrf_name</i>       | (Optional)                                  |

## Command Mode

- /exec

## show ipv6 prefix-list

```
show ipv6 prefix-list { [ detail | summary ] [ <ipv6-pfl-name> | <ipv6-pfl-cfg-name> ] } | { { <ipv6-pfl-name>
| <ipv6-pfl-cfg-name> } seq <seq-no> } | { { <ipv6-pfl-name> | <ipv6-pfl-cfg-name> } <prefix> [ first-match
| longer ] } } [ __readonly__ TABLE_ipv6_pfl <name> <seq> <action> <rule> ]
```

### Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information           |
| ipv6                     | Display IPv6 information                  |

| summary                  | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| prefix-list              | List IPv6 prefix lists                    |
| <i>ipv6-pfl-name</i>     | (Optional) Name of prefix-list            |
| <i>ipv6-pfl-cfg-name</i> | (Optional) Known prefix-list name         |
| seq                      | Sequence number                           |
| <i>seq-no</i>            | Sequence number                           |
| first-match              | (Optional) Find the first match           |
| longer                   | (Optional) Find the more specific entries |
| <i>__readonly__</i>      | (Optional)                                |
| TABLE_ipv6_pfl           | (Optional)                                |
| <i>name</i>              | (Optional)                                |
| <i>seq</i>               | (Optional)                                |
| <i>action</i>            | (Optional)                                |
| <i>rule</i>              | (Optional)                                |

### Command Mode

- /exec

## show ipv6 process

```
show ipv6 process [ vrf { <vrf-name> | <vrf-known-name> | all } ] [ __readonly__ [ TABLE_ipv6_all {
<cnxt-name> <cnxt-id> } ] [ TABLE_ipv6 { <ipv6-vrf> <ipv6-vrf-id> <auto-disc> <auto-add> <sta-disc>
<sta-def> [ <ipv6-unreach> } ] [ TABLE_iod { <iod-val> <iod-ifind> } ] [ TABLE_ipv6_nxt { <ipv6-nxt>
} ] ] ] ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information        |
| ipv6                  | Display IPv6 information               |
| process               | Display IPv6 global information        |
| vrf                   | (Optional) Display per-VRF information |
| <i>vrf-name</i>       | (Optional) VRF name                    |
| <i>vrf-known-name</i> | (Optional) Known VRF name              |
| all                   | (Optional) Display all VRFs            |
| <i>__readonly__</i>   | (Optional)                             |
| TABLE_ipv6_all        | (Optional) IPV6 process table          |
| <i>cnxt-name</i>      | (Optional) context name                |
| <i>cnxt-id</i>        | (Optional) context name                |
| TABLE_ipv6            | (Optional) ipv6 table                  |
| <i>ipv6-vrf</i>       | (Optional) vrf name                    |
| <i>ipv6-vrf-id</i>    | (Optional) vrf id                      |
| <i>auto-disc</i>      | (Optional) auto discard                |
| <i>auto-add</i>       | (Optional) auto add                    |
| <i>sta-disc</i>       | (Optional) static discard              |
| <i>sta-def</i>        | (Optional) static def                  |
| <i>ipv6-unreach</i>   | (Optional) ipv6 unreachable            |
| TABLE_iod             | (Optional) IOD table                   |
| <i>iod-val</i>        | (Optional) iod value                   |
| <i>iod-ifind</i>      | (Optional) iod if index                |
| TABLE_ipv6_nxt        | (Optional) ipv6 next hop table         |

**Command Mode**

- /exec

# show ipv6 raguard statistics

```
show ipv6 raguard statistics [ interface <intf-range> ] [ __readonly__ <msg_stats_hdr> [ <intf2> ] [ <rx_pkts> ] [ <drop_count> ] ]
```

## Syntax Description

|                      |                                       |
|----------------------|---------------------------------------|
| show                 | Show running system information       |
| ipv6                 | Show the IPv6 features of the system  |
| raguard              | IPV6 raguard                          |
| statistics           | RA packet drop count                  |
| interface            | (Optional) Raguard enabled interfaces |
| <i>intf-range</i>    | (Optional) interface                  |
| <i>__readonly__</i>  | (Optional) Read only                  |
| <i>msg_stats_hdr</i> | (Optional)                            |
| <i>intf2</i>         | (Optional) interface name             |
| <i>rx_pkts</i>       | (Optional)                            |
| <i>drop_count</i>    | (Optional)                            |

## Command Mode

- /exec

## show ipv6 rip policy statistics redistribute

```
show ipv6 rip [ instance <inst> ] policy statistics redistribute { bgp <as> | { eigrp | isis | <src-rip> | ospfv3 |
lisp } <tag> | direct | static } [ vrf { <vrf-name> | <vrf-known-name> | all } ] [ __readonly__ [ TABLE_asn

## show isis ssn

```
show isis [ <isis-tag> ] [ vrf { <vrf-name> | <vrf-known-name> | all } ] ssn <interface> [ vrf { <vrf-name> | <vrf-known-name> | all } ] [ __readonly__ { TABLE_process_tag <process-tag-out> <snn-if-name> [ { TABLE_ssn <snn-level> <snn-psnp-eligible> <snn-next-psnp> <snn-dbase_hdr> } ] } ]
```

### Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information                |
| isis                     | Display IS-IS status and configuration         |
| <i>isis-tag</i>          | (Optional) Routing process tag                 |
| vrf                      | (Optional) Display per-VRF information         |
| <i>vrf-name</i>          | (Optional) VRF name                            |
| <i>vrf-known-name</i>    | (Optional) Known VRF name                      |
| all                      | (Optional) Display information for all VRFs    |
| ssn                      | Display IS-IS Send-Sequence-Number information |
| <i>interface</i>         | IS-IS interface                                |
| __readonly__             | (Optional)                                     |
| TABLE_process_tag        | (Optional)                                     |
| <i>process-tag-out</i>   | (Optional)                                     |
| <i>snn-if-name</i>       | (Optional)                                     |
| TABLE_ssn                | (Optional)                                     |
| <i>snn-level</i>         | (Optional)                                     |
| <i>snn-psnp-eligible</i> | (Optional)                                     |
| <i>snn-next-psnp</i>     | (Optional)                                     |
| <i>snn-dbase_hdr</i>     | (Optional)                                     |

### Command Mode

- /exec

## show isis statistics

```
show isis [ <isis-tag> ] [ vrf { <vrf-name> | <vrf-known-name> | all } ] statistics [ <interface> ] [ vrf {
<vrf-name> | <vrf-known-name> | all } ] [ __readonly__ [ { TABLE_interface_set [ <stat-if-out> ] [
<process-tag-out> ] [ <vrf-name-out> ] [ <stat-if-name-out> ] [ <stat-spf-calc-out> ] [ <stat-lsp-sourced-out>
] [ <stat-lsp-refresh-out> ] [ <stat-lsp-purge-out> ] [ <stat-dis-elections-out> } ] ] ]
```

### Syntax Description

|                               |   |
|-------------------------------|---|
| show                          | Show running system information             |
| isis                          | Display IS-IS status and configuration      |
| <i>isis-tag</i>               | (Optional) Routing process tag              |
| vrf                           | (Optional) Display per-VRF information      |
| <i>vrf-name</i>               | (Optional) VRF name                         |
| <i>vrf-known-name</i>         | (Optional) Known VRF name                   |
| all                           | (Optional) Display information for all VRFs |
| statistics                    | Display IS-IS protocol statistics           |
| <i>interface</i>              | (Optional) IS-IS interface                  |
| <i>__readonly__</i>           | (Optional)                                  |

- /exec

# show keystore

```
show keystore [ __readonly__ { TABLE_sksd_state_entries <index> <handle> } <keystore_type>
<keystore_ver> <fw_panic> <fw_resets> <rx_fifo_underruns> <rx_timeouts> <rx_bad_checksums>
<rx_bad_fragment_lengths> <keystore_corruption> ]
```

## Syntax Description

|                                |  |
|--------------------------------|--|
| keystore                       | keystore stats                                 |
| <i>__readonly__</i>            | (Optional)                                     |
| TABLE_sksd_state_entries       | (Optional) Displays handles of the keys stored |
| <i>index</i>                   | (Optional) Index value                         |
| <i>handle</i>                  | (Optional) Handle Name                         |
| <i>keystore_type</i>           | (Optional) Type of storage h/w or s/w          |
| <i>keystore_ver</i>            | (Optional) Version                             |
| <i>fw_panic</i>                | (Optional) Number of panics                    |
| <i>fw_resets</i>               | (Optional) Number of Resets                    |
| <i>rx_fifo_underruns</i>       | (Optional) Rx FIFO Underruns                   |
| <i>rx_timeouts</i>             | (Optional) Number of Rx timeouts               |
| <i>rx_bad_checksums</i>        | (Optional) Number of Bad Checksums             |
| <i>rx_bad_fragment_lengths</i> | (Optional) Bad fragment lengths received       |
| <i>keystore_corruption</i>     | (Optional) Number of corruptions detected      |

## Command Mode

- /exec

# show kim inconsistency

show kim inconsistency

## Syntax Description

|               |                                 |
|---------------|---------------------------------|
| show          | Show running system information |
| kim           | Display KIM information         |
| inconsistency | KIM inconsistency               |

## Command Mode

- /exec

# show kubernetes containers

show kubernetes containers [ brief | interface <if\_name> | mgmt0 ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information           |
| kubernetes     | Show kubernetes                           |
| containers     | containers                                |
| brief          | (Optional) Show brief information         |
| interface      | (Optional) Interface name                 |
| <i>if_name</i> | (Optional) Physical interface             |
| mgmt0          | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |

## Command Mode

- /exec

## show l2 mroute

```
show { l2 | fabricpath } mroute { [ vdc-omf ] { [ resolved ] } | [ vlan <vlanid> ] { { [ omf ] | [ flood ] } | [ source
{ <srcaddr> | <v6srcaddr> | <macsrcaddr> } ] [ group { <groupaddr> | <v6groupaddr> | <macgroupaddr> }
] } [ resolved ] [ ftag <ftag-id> ] [ hex ] } } [ __readonly__ [ <hex2> ] { TABLE_gr [ <ftag> ] <vlan_id> [ {
<v4src> <v4grp> <macgrp> | <v6src> <v6grp> <macsrc> } ] [ <omf> | <flood> ] <rt-uptime> <owners>
<num_nh> TABLE_nh { <nh_if> | <nh_sw> } [ <stale> ] [ <exclude> ] [ <svi> ] <flags> <nh-uptime>
<owner> <rt_type> | <done> | <start> } ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                     |
| l2                  | Layer2 information  |
| fabricpath          | fabricpath information  |
| mroute              | Show multicast route database                                       |
| vdc-omf             | (Optional) Display vdc omf route                                    |
| vlan                | (Optional) Show information for a vlan                              |
| omf                 | (Optional) Show catch-all entry consisting of mroute ports          |
| flood               | (Optional) Display vlan flood route                                 |
| ftag                | (Optional) Show ftag number   |
| source              | (Optional) Show (s, g) source IP address                            |
| group               | (Optional) Show group address                                       |
| hex                 | (Optional) Display switch-ids in hex                                |
| <i>vlanid</i>       | (Optional) Vlan value   |
| <i>ftag-id</i>      | (Optional) ftag id  |
| <i>groupaddr</i>    | (Optional) Group address  |
| <i>macgroupaddr</i> | (Optional) MAC Group address  |
| <i>srcaddr</i>      | (Optional) Source address   |
| <i>macsrcaddr</i>   | (Optional) MAC source address                                       |
| resolved            | (Optional) Resolve switchid nexthops into the underlying interfaces |
| __readonly__        | (Optional) Read Only  |
| <i>hex2</i>         | (Optional)  |
| TABLE_gr            | (Optional)  |

|                  |  |
|------------------|--|
| <i>vlan_id</i>   | (Optional) VLAN                                  |
| <i>rt-uptime</i> | (Optional) Time route was created                |
| <i>num_nh</i>    | (Optional) Number of next-hops                   |
| <i>owners</i>    | (Optional) Owners                                |
| <i>v4src</i>     | (Optional) IPv4 Multicast traffic source         |
| <i>v4grp</i>     | (Optional) IPv4 Multicast Group address          |
| <i>macsrc</i>    | (Optional) MAC Multicast traffic source          |
| <i>macgrp</i>    | (Optional) MAC Multicast Group address           |
| <i>ftag</i>      | (Optional) ftag id                               |
| <i>omf</i>       | (Optional) Is OMF route                          |
| <i>flood</i>     | (Optional) Is flood to vlan route                |
| TABLE_nh         | (Optional)                                       |
| <i>nh_if</i>     | (Optional) The next hop interface                |
| <i>nh_sw</i>     | (Optional) The next hop switch id                |
| <i>owner</i>     | (Optional) Owner                                 |
| <i>flags</i>     | (Optional) flags                                 |
| <i>nh-uptime</i> | (Optional) Time nexthop was created              |
| <i>rt_type</i>   | (Optional) Route type                            |
| <i>stale</i>     | (Optional) Is stale                              |
| <i>exclude</i>   | (Optional) exclude from post routing replication |
| <i>svi</i>       | (Optional) SVI interface                         |
| <i>done</i>      | (Optional) Done displaying route data            |
| <i>start</i>     | (Optional) Print header                          |

**Command Mode**

- /exec

## show l2 multicast ftag

```
show { l2 | fabricpath } multicast ftag [ <ftag-id> ] [ __readonly__ TABLE_topo <id> <topo_config>
TABLE_ftag <ftag> <topo_id> <config> ]
```

### Syntax Description

|                     |                                    |
|---------------------|------------------------------------|
| show                | Show running system information    |
| l2                  | Layer2 information                 |
| fabricpath          | fabricpath information             |
| multicast           | Multicast information              |
| ftag                | ftag number                        |
| <i>ftag-id</i>      | (Optional) ftag id                 |
| <i>__readonly__</i> | (Optional) Read Only               |
| TABLE_topo          | (Optional)                         |
| <i>id</i>           | (Optional) topo id                 |
| <i>topo_config</i>  | (Optional) program ftag star route |
| TABLE_ftag          | (Optional)                         |
| <i>ftag</i>         | (Optional) ftag                    |
| <i>topo_id</i>      | (Optional) topo id                 |
| <i>config</i>       | (Optional) ftag config             |

### Command Mode

- /exec

## show l2 multicast trees

```
show { l2 | fabricpath } multicast trees [ topo <topo-id> ] [ ftag <ftag-id> ] [ hex ] [ __readonly__ [ <hex2>
] ] { TABLE_swid <ftag> <topo_id> <sw_id> <rt-uptime> <owners> <num_nh> TABLE_nh [ <preferred> ]
{ <nh_if> | <nh_sw> } [ <stale> ] <distance> <nh-uptime> <owner> <flags> <rt_type> | <start> | <done> }
]
```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information            |
| l2                  | Layer2 information                         |
| fabricpath          | fabricpath information                     |
| multicast           | Multicast information                      |
| trees               | Show the broadcast/multicast tree database |
| topo                | (Optional) Show topo instance              |
| ftag                | (Optional) Show ftag number                |
| hex                 | (Optional) Display switch-ids in hex       |
| <i>topo-id</i>      | (Optional) topo id                         |
| <i>ftag-id</i>      | (Optional) ftag id                         |
| <i>__readonly__</i> | (Optional) Read Only                       |
| <i>hex2</i>         | (Optional)                                 |
| TABLE_swid          | (Optional)                                 |
| <i>sw_id</i>        | (Optional) switch id                       |
| <i>topo_id</i>      | (Optional) topo id                         |
| <i>ftag</i>         | (Optional) ftag id                         |
| <i>rt-uptime</i>    | (Optional) Time route was created          |
| <i>num_nh</i>       | (Optional) Number of next-hops             |
| <i>owners</i>       | (Optional) Owners                          |
| TABLE_nh            | (Optional)                                 |
| <i>preferred</i>    | (Optional) Is preferred interface          |
| <i>nh_if</i>        | (Optional) The next hop interface          |
| <i>nh_sw</i>        | (Optional) The next hop switch id          |

|                  |                                     |
|------------------|-------------------------------------|
| <i>owner</i>     | (Optional) Owner                    |
| <i>flags</i>     | (Optional) flags                    |
| <i>rt_type</i>   | (Optional) Route type               |
| <i>nh-uptime</i> | (Optional) Time nexthop was created |
| <i>distance</i>  | (Optional) admin distance           |
| <i>stale</i>     | (Optional) Is stale                 |
| <i>start</i>     | (Optional)                          |
| <i>done</i>      | (Optional)                          |

**Command Mode**

- /exec

## show l2 route

```
show { l2 | fabricpath } route [ topology { <topo_val> [ switchid <switchid> ] | all } | switchid <switchid> ]
[ detail | hex ] + [ __readonly__ <line_marker> <is_hex> { TABLE_route <topo_id> <ftag_value> <swid>
<sswid> <num_paths> { TABLE_path <path_str> <admin_distance> <metric> <time> <time_detail> <uuid>
} } ]
```

### Syntax Description

|                       |                                   |
|-----------------------|-----------------------------------|
| show                  | Show running system information   |
| l2                    | Layer2 information                |
| fabricpath            | fabricpath information            |
| route                 | Show FabricPath route information |
| topology              | (Optional) topology               |
| <i>topo_val</i>       | (Optional) topology value         |
| switchid              | (Optional) switchid               |
| <i>switchid</i>       | (Optional) switchid value         |
| all                   | (Optional) all topologies         |
| detail                | (Optional) detail                 |
| hex                   | (Optional) display in hex         |
| <i>__readonly__</i>   | (Optional) Read Only              |
| <i>line_marker</i>    | (Optional) line marker            |
| <i>is_hex</i>         | (Optional) print in hex           |
| TABLE_route           | (Optional) Route delimiter        |
| <i>topo_id</i>        | (Optional) topo-id value          |
| <i>ftag_value</i>     | (Optional) ftag value             |
| <i>swid</i>           | (Optional) switch-id              |
| <i>sswid</i>          | (Optional) sub-switch id          |
| <i>num_paths</i>      | (Optional) num of paths           |
| TABLE_path            | (Optional) Path delimiter         |
| <i>path_str</i>       | (Optional) paths                  |
| <i>admin_distance</i> | (Optional) admin distance         |

|                    |                        |
|--------------------|------------------------|
| <i>metric</i>      | (Optional) metric      |
| <i>time</i>        | (Optional) time        |
| <i>time_detail</i> | (Optional) time_detail |
| <i>uuid</i>        | (Optional) uuid        |

**Command Mode**

- /exec

## show l2rib clients

```
show l2rib clients [ <client_id> ] [ __readonly__ TABLE_l2rib_clients <client-id> <uuid> <process-suffix> ]
```

### Syntax Description

|                            |                                  |
|----------------------------|----------------------------------|
| show                       | Show running system information  |
| l2rib                      | Layer 2 routing information base |
| clients                    | L2RIB Clients                    |
| <i>client_id</i>           | (Optional) Enter Client ID       |
| <i>__readonly__</i>        | (Optional)                       |
| <i>TABLE_l2rib_clients</i> | (Optional) L2RIB Clients Table   |
| <i>client-id</i>           | (Optional) Client ID             |
| <i>uuid</i>                | (Optional) Process ID            |
| <i>process-suffix</i>      | (Optional) Process Name Suffix   |

### Command Mode

- /exec

## show l2rib producers

```
show l2rib producers [ { topology | mac | mac-ip | ead | pl | imet | flood-list | startup-route | peerid | es |
topo-child-attr } [ static | local | bgp | vxlan | hmm | arp | ofa | lisp ] ] [ detail ] [ __readonly__
TABLE_l2rib_producers <prod-name> <prod-id> <client-id> <obj-type> <admin-dist> <purge-time> <state>
[ <prod-flags> ] ]
```

### Syntax Description

|                 |                                      |
|-----------------|--------------------------------------|
| show            | Show running system information      |
| l2rib           | Layer 2 routing information base     |
| producers       | L2RIB Producers                      |
| detail          | (Optional) Detailed information      |
| topology        | (Optional) Filter on Topology        |
| mac             | (Optional) Filter on MAC             |
| mac-ip          | (Optional) Filter on MAC-IP          |
| ead             | (Optional) Filter on Ethernet-AD     |
| pl              | (Optional) Filter on Path List       |
| imet            | (Optional) Filter on IMET Route      |

|---------------------------|-----------------------|

**Command Mode**

- /exec

# show lacp issu-impact

```
show lacp issu-impact [ __readonly__ TABLE_interface <interface> [ <failed_interface> ] [ <intf_issu_ready> ] ]
```

## Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                 |
| lacp                    | Show LACP information                           |
| issu-impact             | Check for ISSU readiness                        |
| __readonly__            | (Optional)                                      |
| TABLE_interface         | (Optional) Port-channel issu-impact member list |
| <i>interface</i>        | (Optional) Port-channel Member                  |
| <i>failed_interface</i> | (Optional) ISSU failed interface                |
| <i>intf_issu_ready</i>  | (Optional) interfaces ready for issu            |

## Command Mode

- /exec

## show lacp neighbor

```
show lacp neighbor [ interface <if0> ] [ __readonly__ TABLE_interface <interface> TABLE_member <port>
<partner-system-id> <partner-port-num> <partner-age> <partner-flags> <partner-port-priority>
<partner-oper-key> <partner-port-state> ]
```

### Syntax Description

|                              |                                   |
|------------------------------|-----------------------------------|
| show                         | Show running system information   |
| lacp                         | LACP protocol                     |
| neighbor                     | LACP interface neighbor           |
| interface                    | (Optional) Specify a port-channel |
| <i>if0</i>                   | (Optional)                        |
| <i>__readonly__</i>          | (Optional)                        |
| TABLE_interface              | (Optional) Port channel table     |
| <i>interface</i>             | (Optional) Port channel           |
| TABLE_member                 | (Optional) Member port info       |
| <i>port</i>                  | (Optional) Member port            |
| <i>partner-system-id</i>     | (Optional) Partner System ID      |
| <i>partner-port-num</i>      | (Optional) Partner Port Number    |
| <i>partner-age</i>           | (Optional) Partner age            |
| <i>partner-flags</i>         | (Optional) Partner flags          |
| <i>partner-port-priority</i> | (Optional) Partner Port Priority  |
| <i>partner-oper-key</i>      | (Optional) Partner oper key       |
| <i>partner-port-state</i>    | (Optional) Partner port state     |

### Command Mode

- /exec

# show lacp port-channel

```
show lacp port-channel [ interface <if0> ] [ __readonly__ TABLE _interface <interface> <aggr-mac-address>
<local-system-priority> <local-system-id> <local-admin-key> <local-oper-key> <partner-system-priority>

| <i>system-mac</i>      | (Optional) System mac address      |

## Command Mode

- /exec

# show lcnd dot1x address

show lcnd dot1x address { <macaddr> | all }

## Syntax Description

|                |                                       |
|----------------|---------------------------------------|
| show           | Show running system information       |
| lcnd           | LCND information                      |
| dot1x          | Dot1x information                     |
| address        | Address in lcnd auth_db               |
| <i>macaddr</i> | MAC address                           |
| all            | Display all addresses in lcnd auth_db |

## Command Mode

- /exec

# show lcmd dot1x port

show lcmd dot1x port <portnum>

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| lcmd           | LCND information                |
| dot1x          | Dot1x information               |
| port           | Port number                     |
| <i>portnum</i> | Port number                     |

## Command Mode

- /exec

# show lcmd stats interface

show lcmd stats interface <interface>

## Syntax Description

|                  |   |
|------------------|---|
| show             | Show running system information           |
| lcmd             | lcmd                                      |
| stats            | statistics                                |
| interface        | get interface related stats at lcmd level |
| <i>interface</i> | Interface name to display                 |

## Command Mode

- /exec

# show ldap-search-map

```
show ldap-search-map [ __readonly__ { number_of_search_maps <search_map_count> } [
TABLE_ldap_searchmaps [ <map_name> <map_baseDN> <map_attr> <map_filter> ] ] ]
```

## Syntax Description

|                              |   |
|------------------------------|---|
| <i>__readonly__</i>          | (Optional)  |
| <i>number_of_search_maps</i> | (Optional) Total number of search maps configured |
| <i>search_map_count</i>      | (Optional) Ldap Search map count                  |
| TABLE_ldap_searchmaps        | (Optional) Ldap search map configuration          |
| <i>map_name</i>              | (Optional) Search map name                        |
| <i>map_baseDN</i>            | (Optional) Ldap base DN                           |
| <i>map_attr</i>              | (Optional) Search map attribute                   |
| <i>map_filter</i>            | (Optional) Ldap Search filter                     |
| show                         | Show running system information                   |
| ldap-search-map              | Show LDAP configuration information               |

## Command Mode

- /exec

## show ldap-server

```
show ldap-server [ __readonly__ { global_timeout <g_timeout> } { global_port <g_port> } { global_deadtime
<g_deadtime> } { total_number_of_server <g_servers_count> } { TABLE_ldap_hosts <ldap_host>

| <code>h_referral_disable</code>     | (Optional) Ldap host referral chasing disable    |
| <code>show</code>                   | Show running system information                  |
| <code>ldap-server</code>            | Show LDAP configuration information              |

### Command Mode

- /exec

## show ldap-server groups

```
show ldap-server groups [ __readonly__ { total_number_of_groups <total_groups_count> } { TABLE_groups
<g_name> <g_vrf> <g_mode> <is_bind_and_search> <g_append_with_baseDN> <g_compare_or_bind>
<g_cmp_passwd_attr> [ <user-server-group> ] [ <Cert-DN-match> ] <auth_mechanism> [ TABLE_g_servers
<g_server> <g_port> <g_timeout> ] [ <g_search_map> ] } ]
```

### Syntax Description

|                               |   |
|-------------------------------|---|
| show                          | Show running system information                       |
| ldap-server                   | Show LDAP configuration information                   |
| groups                        | Show LDAP server group configuration information      |
| <i>__readonly__</i>           | (Optional)  |
| <i>total_number_of_groups</i> | (Optional) Total number of Ldap groups configured     |
| <i>total_groups_count</i>     | (Optional) Ldap group count                           |
| TABLE_groups                  | (Optional) LDAP Group information                     |
| <i>g_name</i>                 | (Optional) Ldap group name                            |
| <i>g_vrf</i>                  | (Optional) LDAP group vrf                             |
| <i>g_mode</i>                 | (Optional) LDAP group mode                            |
| <i>is_bind_and_search</i>     | (Optional) Ldap Authentication bind or search         |
| <i>g_append_with_baseDN</i>   | (Optional) LDAP baseDN append information             |
| <i>g_compare_or_bind</i>      | (Optional) LDAP bind or compare                       |
| <i>g_cmp_passwd_attr</i>      | (Optional) LDAP compare password attribute            |
| <i>user-server-group</i>      | (Optional) Ldap server group validation               |
| <i>Cert-DN-match</i>          | (Optional) Ldap group CERT-DN match                   |
| <i>auth_mechanism</i>         | (Optional) Ldap server group authentication mechanism |
| TABLE_g_servers               | (Optional) LDAP group server information              |
| <i>g_server</i>               | (Optional) LDAP group host                            |
| <i>g_port</i>                 | (Optional) LDAP group host port                       |
| <i>g_timeout</i>              | (Optional) LDAP griup host timeout                    |
| <i>g_search_map</i>           | (Optional) LDAP group search map                      |

### Command Mode

- /exec

## show ldap-server statistics

```
show ldap-server statistics <host0> [ __readonly__ { <server_state> [ <clock_time> { monitoring_statistics
<time_in_pstate> <ndead> <tt_in_dstate> } ] } { { auth_statistics <auth_failed_transactions>
<auth_succ_transactions> <auth_req_sent> <auth_req_timedout> <auth_resp_no_match>
<auth_resp_not_processed> <auth_resp_error> } [ acct_statistics <acct_failed_transactions>
<acct_succ_transactions> <acct_req_sent> <acct_req_timedout> <acct_resp_no_match>
<acct_resp_not_processed> <acct_resp_error> ] } ]
```

### Syntax Description

|                                 |   |
|---------------------------------|---|
| show                            | Show running system information                                   |
| ldap-server                     | Show LDAP configuration information                               |
| statistics                      | Show LDAP statistics  |
| <i>host0</i>                    | DNS name or IP address  |
| <i>__readonly__</i>             | (Optional)  |
| <i>server_state</i>             | (Optional) Show state of server                                   |
| <i>clock_time</i>               | (Optional) Show clock time in terms of hours, minutes and seconds |
| <i>monitoring_statistics</i>    | (Optional) Monitoring Statistics                                  |
| <i>time_in_pstate</i>           | (Optional) Time in previous state                                 |
| <i>ndead</i>                    | (Optional) Number of times dead                                   |
| <i>tt_in_dstate</i>             | (Optional) Total time in dead state                               |
| <i>auth_statistics</i>          | (Optional) Authentication Statistics                              |
| <i>acct_statistics</i>          | (Optional) Accounting Statistics                                  |
| <i>auth_failed_transactions</i> | (Optional) Authentication: Failed transactions                    |
| <i>auth_succ_transactions</i>   | (Optional) Authentication: Successful transactions                |
| <i>auth_req_sent</i>            | (Optional) Authentication: Requests sent                          |
| <i>auth_req_timedout</i>        | (Optional) Authentication: Requests timedout                      |
| <i>auth_resp_no_match</i>       | (Optional) Authentication: Responses with no matching requests    |
| <i>auth_resp_not_processed</i>  | (Optional) Authentication: Responses not processed                |
| <i>auth_resp_error</i>          | (Optional) Authentication: Responses containing errors            |
| <i>acct_failed_transactions</i> | (Optional) Accounting: Failed transactions                        |
| <i>acct_succ_transactions</i>   | (Optional) Accounting: Successful transactions                    |

|                                |  |
|--------------------------------|--|
| <i>acct_req_sent</i>           | (Optional) Accounting: Requests sent                       |
| <i>acct_req_timeout</i>        | (Optional) Accounting: Requests timeout                    |
| <i>acct_resp_no_match</i>      | (Optional) Accounting: Responses with no matching requests |
| <i>acct_resp_not_processed</i> | (Optional) Accounting: Responses not processed             |
| <i>acct_resp_error</i>         | (Optional) Accounting: Responses containing errors         |

**Command Mode**

- /exec

# show license

```
show license [ __readonly__ { [ <lic_file_name> <lic_file_contents> ] + } ]
```

## Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information            |
| license                  | show the contents of all the license files |
| <i>__readonly__</i>      | (Optional) Read only                       |
| <i>lic_file_name</i>     | (Optional) Name of the license file        |
| <i>lic_file_contents</i> | (Optional) License file contents           |

## Command Mode

- /exec

## show license all

```
show license all [ __readonly__ { utility_info <utility_status> } { smart_status_info <smart_status> } {
data_privacy_info <sending_hostname> <callhome_hostname> <license_hostname> <version_privacy> } {

| <i>common_name</i>     | (Optional) Certificate common name         |
| <i>sudi_list</i>       | (Optional) Sudi llist info                 |

### Command Mode

- /exec

# show license data conversion

show license data conversion

## Syntax Description

|            |  |
|------------|--|
| show       | Show running system information            |
| license    | Show the contents of all the license files |
| data       | Show data for device led conversions       |
| conversion | Smart license conversion related commands  |

## Command Mode

- /exec

# show license eventlog

show license eventlog

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information            |
| license  | Show the contents of all the license files |
| eventlog | Event log                                  |

## Command Mode

- /exec

# show license history message

show license history message

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information            |
| license | Show the contents of all the license files |
| history | Show license history information           |
| message | Show license messaging history information |

## Command Mode

- /exec

# show license host-id

```
show license host-id [ __readonly__ { <host_id> } ]
```

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                  |
| license        | Show the contents of all the license files       |
| host-id        | Show unique id for this host for licensing       |
| __readonly__   | (Optional) Read only                             |
| <i>host_id</i> | (Optional) unique id for this host for licensing |

## Command Mode

- /exec

## show license status

```
show license status [ __readonly__ { utility_info <utility_status> } { smart_status_info <smart_status> } {
data_privacy_info <sending_hostname> <callhome_hostname> <license_hostname> <version_privacy> } {

**Command Mode**

- /exec

# show license summary

```
show license summary [ __readonly__ [ TABLE_smart_feat_info { <license_name> <feature_name> <count> <status> } ] ]
```

## Syntax Description

|                                    |  |
|------------------------------------|--|
| <code>show</code>                  | Show running system information            |
| <code>license</code>               | Show the contents of all the license files |
| <code>summary</code>               | Smart license agent summary                |
| <code>__readonly__</code>          | (Optional) Read only                       |
| <code>TABLE_smart_feat_info</code> | (Optional)                                 |
| <code>license_name</code>          | (Optional) License name                    |
| <code>feature_name</code>          | (Optional) Feature name                    |
| <code>count</code>                 | (Optional) Feature usage count             |
| <code>status</code>                | (Optional) Feature status                  |

## Command Mode

- /exec

# show license tech support

show license tech support

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information            |
| license | Show the contents of all the license files |
| tech    | Gather information for troubleshooting     |
| support | Gather information for troubleshooting     |

## Command Mode

- /exec

# show license tech support

show license tech support

## Syntax Description

|         |  |
|---------|--|
| show    | show commands                          |
| license | Display licensing information          |
| tech    | Gather information for troubleshooting |
| support | Gather information for troubleshooting |

## Command Mode

- /exec

## show license udi

```
show license udi [ __readonly__ { local_udi [ <local_pid> ] <local_sn> } [ TABLE_udiList <role> <pid>
<sn> ] ]
```

### Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information            |
| license          | Show the contents of all the license files |
| udi              | device udi                                 |
| __readonly__     | (Optional) Read only                       |
| local_udi        | (Optional) Local device information        |
| <i>local_pid</i> | (Optional) Local product identifier        |
| <i>local_sn</i>  | (Optional) Device serial number            |
| TABLE_udiList    | (Optional) All device identifiers          |
| <i>role</i>      | (Optional) Device role                     |
| <i>pid</i>       | (Optional) Device product identifier       |
| <i>sn</i>        | (Optional) Device serial number            |

### Command Mode

- /exec

## show license usage

```
show license usage [ { detail | <license-feature> } ] [ __readonly__ { [ [ TABLE_show_lic_usage {
<feature_name> <lic_installed> <count> <status> <expiry_date> <comments> } ] { [ <application_name> ]
+ } ] ] [ <auth_status> [ TABLE_show_smart_lic_usage { <smart_feature_name> <smart_description>
<smart_count> <smart_version> <smart_status> <enforcement_type> <license_type> } ] ] ] ]
```

### Syntax Description

|                            |  |
|----------------------------|--|
| show                       | Show running system information                      |
| license                    | show the contents of all the license files           |
| usage                      | Show license usage table                             |
| detail                     | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED            |
| <i>license-feature</i>     | (Optional) Show usage of this license package        |
| <i>__readonly__</i>        | (Optional) Read only                                 |
| TABLE_show_lic_usage       | (Optional) License usage                             |
| <i>feature_name</i>        | (Optional) Name of the feature                       |
| <i>lic_installed</i>       | (Optional) Is the license installed?                 |
| <i>count</i>               | (Optional) License count                             |
| <i>status</i>              | (Optional) License status                            |
| <i>expiry_date</i>         | (Optional) Expiry date of the license                |
| <i>comments</i>            | (Optional) License comments                          |
| <i>application_name</i>    | (Optional) Name of the application using the license |
| <i>auth_status</i>         | (Optional) Brief about smart license usage           |
| TABLE_show_smart_lic_usage | (Optional) Smart License usage                       |
| <i>smart_feature_name</i>  | (Optional) Name of the feature                       |
| <i>smart_description</i>   | (Optional) Description of the entitlement            |
| <i>smart_count</i>         | (Optional) License count                             |
| <i>smart_version</i>       | (Optional) License version                           |
| <i>smart_status</i>        | (Optional) License status                            |
| <i>enforcement_type</i>    | (Optional) Enforcement type                          |
| <i>license_type</i>        | (Optional) License type                              |

**Command Mode**

- /exec

# show license version

show license version [ *\_\_readonly\_\_* { <version> } ]

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information            |
| license             | Show the contents of all the license files |
| version             | Smart License version                      |
| <i>__readonly__</i> | (Optional) Read only                       |
| <i>version</i>      | (Optional) smart agent version info        |

## Command Mode

- /exec

# show line

```
show line [ __readonly__ <speed> <databits> <stopbits> <parity> <modem_in> <modem_init_str> <stat> [
TABLE_ps_output <ps> ] [ <speed_aux> <databits_aux> <stopbits_aux> <parity_aux> <modem_in_aux>
<modem_init_str_aux> <hw_fc_aux> <stat_aux> [ TABLE_ps_output_aux <ps_aux> ] ] ]
```

## Syntax Description

|                           |   |
|---------------------------|---|
| show                      | Show running system information           |
| line                      | Show the line configuration               |
| __readonly__              | (Optional)                                |
| TABLE_ps_output           | (Optional) Process info for console login |
| TABLE_ps_output_aux       | (Optional) Process info for com1 login    |
| <i>speed</i>              | (Optional) Port speed(baud)               |
| <i>databits</i>           | (Optional) Bits per byte                  |
| <i>stopbits</i>           | (Optional) Bits                           |
| <i>parity</i>             | (Optional) Parity                         |

| <i>modem_init_str</i>     | (Optional) Modem Init-String              |
| <i>stat</i>               | (Optional) Statistics                     |
| <i>ps</i>                 | (Optional) Login process                  |
| <i>speed_aux</i>          | (Optional) Port speed(baud)               |
| <i>databits_aux</i>       | (Optional) Bits per byte                  |
| <i>stopbits_aux</i>       | (Optional) Bits                           |
| <i>parity_aux</i>         | (Optional) Parity                         |
| <i>modem_in_aux</i>       | (Optional) Modem In                       |
| <i>modem_init_str_aux</i> | (Optional) Modem Init-String              |
| <i>hw_fc_aux</i>          | (Optional) Hardware Flowcontrol           |
| <i>stat_aux</i>           | (Optional) Statistics                     |
| <i>ps_aux</i>             | (Optional) Login process                  |

## Command Mode

- /exec

# show line console

```
show line console [ __readonly__ <speed> <databits> <stopbits> <parity> <modem_in> <modem_init_str>
<stat> [ TABLE_ps_output <ps> ] ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information           |
| line                  | Show the line configuration               |
| console               | Show console line configurations          |
| __readonly__          | (Optional)                                |
| TABLE_ps_output       | (Optional) Process info for console login |
| <i>speed</i>          | (Optional) Port speed(baud)               |
| <i>databits</i>       | (Optional) Bits per byte                  |
| <i>stopbits</i>       | (Optional) Bits                           |
| <i>parity</i>         | (Optional) Parity                         |
| <i>modem_in</i>       | (Optional) Modem In                       |
| <i>modem_init_str</i> | (Optional) Modem Init-String              |
| <i>stat</i>           | (Optional) Statistics                     |
| <i>ps</i>             | (Optional) Login process                  |

## Command Mode

- /exec

# show line console connected

show line console connected [ \_\_readonly\_\_ <output> ]

## Syntax Description

|               |   |
|---------------|---|
| show          | Show running system information                         |
| line          | Show the line configuration                             |
| console       | Show console line configurations                        |
| connected     | Show whether the line is currently connected physically |
| __readonly__  | (Optional)  |
| <i>output</i> | (Optional) output string                                |

## Command Mode

- /exec

# show line console user-input-string

```
show line console user-input-string [ __readonly__ <input> ]
```

## Syntax Description

|                   |                                  |
|-------------------|----------------------------------|
| show              | Show running system information  |
| line              | Show the line configuration      |
| console           | Show console line configurations |
| user-input-string | Show user-input init string      |
| __readonly__      | (Optional)                       |
| <i>input</i>      | (Optional) user input string     |

## Command Mode

- /exec

# show lisp ddt

```
show lisp ddt [ vrf { <vrf-name> | <vrf-known-name> } ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information         |
| lisp                  | LISP show commands                      |
| ddt                   | LISP Delegated Database Tree (LISP-DDT) |
| vrf                   | (Optional) Display information for vrf  |
| <i>vrf-name</i>       | (Optional) VRF name                     |
| <i>vrf-known-name</i> | (Optional) Known VRF name               |

## Command Mode

- /exec

## show lisp ddt queue

```
show lisp ddt queue [ [ instance-id <iid> ] { <eid> | <eid6> } ] [ vrf { <vrf-name> | <vrf-known-name> } ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                    |
| lisp                  | LISP show commands                                 |
| ddt                   | LISP Delegated Database Tree (LISP-DDT)            |
| queue                 | Display LISP-DDT Map-Request queue in Map-Resolver |
| instance-id           | (Optional) Show instance-ID summary display        |
| <i>iid</i>            | (Optional) Instance-ID for EID-prefix              |
| <i>eid</i>            | (Optional) IPv4 EID address                        |
| vrf                   | (Optional) Display information for vrf             |
| <i>vrf-name</i>       | (Optional) VRF name                                |
| <i>vrf-known-name</i> | (Optional) Known VRF name                          |

### Command Mode

- /exec

## show lisp ddt referral-cache

```
{ show lisp ddt referral-cache [ [ instance-id <iid> ] { <eid> | <eid6> } ] [ vrf { <vrf-name> | <vrf-known-name> } ] ] | { show lisp ddt referral-cache { ms-ack | ms-referral | node-referral | ms-not-registered | delegation-hole | not-authoritative } [ vrf { <vrf-name> | <vrf-known-name> } ] }
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                   |
| lisp                  | LISP show commands                                |
| ddt                   | LISP Delegated Database Tree (LISP-DDT)           |
| referral-cache        | Display LISP-DDT referral cache                   |
| instance-id           | (Optional) Show instance-ID summary display       |
| <i>iid</i>            | (Optional) Instance-ID for EID-prefix             |
| <i>eid</i>            | (Optional) IPv4 EID address                       |
| ms-ack                | Referral cache entries to map-servers             |
| ms-referral           | Referral cache entries from parent of map-servers |
| node-referral         | Referral cache entries from parent of DDT-nodes   |
| ms-not-registered     | Referral cache entries from map-servers           |
| delegation-hole       | Referral cache entries from any DDT-node          |
| not-authoritative     | Referral cache entries from any DDT-node          |
| vrf                   | (Optional) Display information for vrf            |
| <i>vrf-name</i>       | (Optional) VRF name                               |
| <i>vrf-known-name</i> | (Optional) Known VRF name                         |

### Command Mode

- /exec

# show lisp dynamic-eid

```
{ show lisp dynamic-eid { summary | { [ <dyn-eid-name> ] [ detail ] } } [ vrf { <vrf-name> | <vrf-known-name> } ] }
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                     |
| lisp                  | LISP show commands                                  |
| dynamic-eid           | Display dynamic-EIDs configured and discovered      |
| summary               | One-line summary display of discovered dynamic-EIDs |
| <i>dyn-eid-name</i>   | (Optional) Display a single dynamic-EID             |
| vrf                   | (Optional) Display information for vrf              |
| <i>vrf-name</i>       | (Optional) VRF name                                 |
| <i>vrf-known-name</i> | (Optional) Known VRF name                           |
| detail                | (Optional) Display discovered dynamic-EIDs          |

## Command Mode

- /exec

# show lisp elp

```
show lisp elp [ vrf { <vrf-name> | <vrf-known-name> } ]
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                |
| lisp                  | LISP show commands                             |
| elp                   | Display LISP Explicit Locator Paths configured |
| vrf                   | (Optional) Display information for vrf         |
| <i>vrf-name</i>       | (Optional) VRF name                            |
| <i>vrf-known-name</i> | (Optional) Known VRF name                      |

## Command Mode

- /exec

## show lisp negative-prefix

```
show lisp negative-prefix { <eid> | <eid6> } [ vrf { <vrf-name> | <vrf-known-name> } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information               |
| lisp                  | LISP show commands                            |
| negative-prefix       | Compute negative-prefix for hole in EID space |
| <i>eid</i>            | IPv4 EID address                              |
| vrf                   | (Optional) Display information for vrf        |
| <i>vrf-name</i>       | (Optional) VRF name                           |
| <i>vrf-known-name</i> | (Optional) Known VRF name                     |

### Command Mode

- /exec

## show lisp proxy-itr

```
show lisp proxy-itr [ vrf { <vrf-name> | <vrf-known-name> } ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information        |
| lisp                  | LISP show commands                     |
| proxy-itr             | Display discovered proxy-ITRs (PITRs)  |
| vrf                   | (Optional) Display information for vrf |
| <i>vrf-name</i>       | (Optional) VRF name                    |
| <i>vrf-known-name</i> | (Optional) Known VRF name              |

### Command Mode

- /exec

# show lisp site

```
{ show lisp site [ { { <eid> | <eid6> } [ instance-id <iid> ] } | { { <eid-prefix> | <eid-prefix6> } [ instance-id <iid> ] } | <site-name> ] [ detail ] [ vrf { <vrf-name> | <vrf-known-name> } ] }
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                        |
| lisp                  | LISP show commands                                     |
| site                  | Display Map-Server site EID-prefixes configured        |
| vrf                   | (Optional) Display information for vrf                 |
| <i>vrf-name</i>       | (Optional) VRF name                                    |
| <i>vrf-known-name</i> | (Optional) Known VRF name                              |
| <i>eid</i>            | (Optional) Display mapping for IP destination EID      |
| <i>eid-prefix</i>     | (Optional) Display exact match for IP EID-prefix entry |
| instance-id           | (Optional) Instance EID-prefix registered in           |
| <i>iid</i>            | (Optional) Instance-ID value                           |
| <i>site-name</i>      | (Optional) Display a single site                       |
| detail                | (Optional) Display allowed registered locator sources  |

## Command Mode

- /exec

# show lisp site instance-id

```
{ show lisp site instance-id [ <iid> ] [ vrf { <vrf-name> | <vrf-known-name> } ] }
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                            |
| lisp                  | LISP show commands   |
| site                  | Display Map-Server site EID-prefixes configured            |
| instance-id           | Show instance-ID summary display                           |
| <i>iid</i>            | (Optional) Show detail for entries of a single Instance-ID |
| vrf                   | (Optional) Display information for vrf                     |
| <i>vrf-name</i>       | (Optional) VRF name  |
| <i>vrf-known-name</i> | (Optional) Known VRF name                                  |

## Command Mode

- /exec

# show lldp all

show lldp all [ *\_\_readonly\_\_* *TABLE\_lldp\_all* <*intf\_desc*> <*lldp\_tx*> <*lldp\_rx*> <*lldp\_dcbx*> ]

## Syntax Description

|                       |                                      |
|-----------------------|--------------------------------------|
| show                  | Show running system information      |
| lldp                  | Show lldp Protocol information       |
| all                   | Show all interfaces in lldp database |
| <i>__readonly__</i>   | (Optional) Read only                 |
| <i>TABLE_lldp_all</i> | (Optional) output of show lldp all   |
| <i>intf_desc</i>      | (Optional) Interface desc            |
| <i>lldp_tx</i>        | (Optional) lldp tx status            |
| <i>lldp_rx</i>        | (Optional) lldp rx status            |
| <i>lldp_dcbx</i>      | (Optional) lldp dcbx status          |

## Command Mode

- /exec

## show lldp dcbx interface

```
show lldp dcbx interface <if_in> [ __readonly__ <if_out> <cfg_proto> <det_proto> [ <l_op_ver> <l_max_ver>
<l_seq_no> <l_ack_no> ] [ <l_feature> <l_feat_len> <l_cfg> ] + [ <p_op_ver> <p_max_ver> <p_seq_no>
<p_ack_no> ] [ <p_tlv_type> <p_tlv_ctrl> <p_tlv_len> <p_tlv_value> ] + ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                 |
| lldp                | Show information about lldp                     |
| dcbx                | Show dcbx information                           |
| interface           | Show lldp interface information                 |
| <i>if_in</i>        | Enter interface                                 |
| <i>__readonly__</i> | (Optional)                                      |
| <i>if_out</i>       | (Optional) Interface ID                         |
| <i>cfg_proto</i>    | (Optional) Configured DCBX Protocol             |
| <i>det_proto</i>    | (Optional) DCBX Protocol detected               |
| <i>l_op_ver</i>     | (Optional) local dcbx control operation version |
| <i>l_max_ver</i>    | (Optional) local dcbx control maximum version   |
| <i>l_seq_no</i>     | (Optional) local dcbx control seq no            |
| <i>l_ack_no</i>     | (Optional) local dcbx control ack no            |
| <i>l_feature</i>    | (Optional) local feature                        |
| <i>l_feat_len</i>   | (Optional) Local Feature Length                 |
| <i>l_cfg</i>        | (Optional) local feature config                 |
| <i>p_op_ver</i>     | (Optional) peer dcbx control operation version  |
| <i>p_max_ver</i>    | (Optional) peer dcbx control maximum version    |
| <i>p_seq_no</i>     | (Optional) peer dcbx control seq no             |
| <i>p_ack_no</i>     | (Optional) peer dcbx control ack no             |
| <i>p_tlv_type</i>   | (Optional) peer TLV type field                  |
| <i>p_tlv_ctrl</i>   | (Optional) peer TLV control info                |
| <i>p_tlv_len</i>    | (Optional) Peer TLV Length                      |
| <i>p_tlv_value</i>  | (Optional) peer TLV value field                 |

**Command Mode**

- /exec

# show lldp entry

```
show lldp entry [ <sys-name> ] [ __readonly__ { <neigh_hdr> } { TABLE_entry <chassis_type> <chassis_id>
<port_type> <port_id> <l_port_id> <port_desc> <sys_name> <sys_desc> <ttl> <capability>
<mgmt_addr_type> <mgmt_addr> <mgmt_addr_ipv6_type> <mgmt_addr_ipv6> <vlan_id> } { <neigh_count>
} ]
```

## Syntax Description

|                            |   |
|----------------------------|---|
| show                       | Show running system information         |
| lldp                       | Show information about lldp             |
| entry                      | Show lldp entry information             |
| <i>sys-name</i>            | (Optional) WORD Peer's System name      |
| <i>__readonly__</i>        | (Optional)                              |
| <i>neigh_hdr</i>           | (Optional)                              |
| TABLE_entry                | (Optional) Table Entry                  |
| <i>chassis_type</i>        | (Optional) Chassis ID type              |
| <i>chassis_id</i>          | (Optional) Chassis ID                   |
| <i>port_type</i>           | (Optional) Port ID type                 |
| <i>port_id</i>             | (Optional) Port ID                      |
| <i>l_port_id</i>           | (Optional) Port ID                      |
| <i>port_desc</i>           | (Optional) Port description             |
| <i>sys_name</i>            | (Optional) System name                  |
| <i>sys_desc</i>            | (Optional) System description           |
| <i>ttl</i>                 | (Optional) Time to live                 |
| <i>capability</i>          | (Optional) Capability                   |
| <i>mgmt_addr_type</i>      | (Optional) Management Address type      |
| <i>mgmt_addr</i>           | (Optional) Management Address           |
| <i>mgmt_addr_ipv6_type</i> | (Optional) IPV6 Management Address type |
| <i>mgmt_addr_ipv6</i>      | (Optional) IPV6 Management Address      |
| <i>vlan_id</i>             | (Optional) Vlan ID                      |
| <i>neigh_count</i>         | (Optional)                              |

**Command Mode**

- /exec

## show lldp interface

```
show lldp interface <if0> [ __readonly__ <interface> <tx_en> <rx_en> <dcbx_en> <port_mac> [ <tlv_type>
<tlv_len> [ <tlv_value> ] ] + [ <l_op_ver> <l_max_ver> <l_seq_no> <l_ack_no> [ <l_feature> <l_cfg_len>

| <i>mgmt_addr</i>      | (Optional) Management Address                             |
| <i>neigh_count</i>    | (Optional)  |

### Command Mode

- /exec

# show lldp poe interface

```
show lldp poe { interface <if0> } [ __readonly__ <power-type> <power-source> <power-priority>
<power-requested> <power-allocated> ]
```

## Syntax Description

|                        |                                 |
|------------------------|---------------------------------|
| show                   | Show running system information |
| lldp                   | Show lldp protocol information  |
| poe                    | Power over Ethernet             |
| interface              | Show lldp interface information |
| <i>if0</i>             | Interface name                  |
| <i>__readonly__</i>    | (Optional)                      |
| <i>power-type</i>      | (Optional) Power Type           |
| <i>power-source</i>    | (Optional) Power Source         |
| <i>power-priority</i>  | (Optional) Power Priority       |
| <i>power-requested</i> | (Optional) Requested Power      |
| <i>power-allocated</i> | (Optional) Allocated Power      |

## Command Mode

- /exec

## show lldp portid-subtype

```
show lldp portid-subtype [ __readonly__ <portid_subtype> ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                 |
| lldp                  | Show information about lldp                     |
| portid-subtype        | Show lldp portid-subtype                        |
| __readonly__          | (Optional)                                      |
| <i>portid_subtype</i> | (Optional) portid-subtype for LLDP TLV and MIBs |

### Command Mode

- /exec

## show lldp timers

```
show lldp timers [ __readonly__ <ttl> <reinit> <tx_interval> <tx_delay> <hold_mplier> <notification_interval> ]
```

### Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information                         |
| lldp                         | Show information about lldp                             |
| timers                       | Show lldp timers  |
| <i>__readonly__</i>          | (Optional)  |
| <i>ttl</i>                   | (Optional) Time to Live for lldp info                   |
| <i>reinit</i>                | (Optional) Interface reinit timer                       |
| <i>tx_interval</i>           | (Optional) Wait interval between successive transmit    |
| <i>tx_delay</i>              | (Optional) Delay between successive frame transmissions |
| <i>hold_mplier</i>           | (Optional) Hold multiplier for ttl                      |
| <i>notification_interval</i> | (Optional) Notification interval for SNMP trap          |

### Command Mode

- /exec

## show lldp tlv-select

```
show lldp tlv-select [ __readonly__ <management-address-v4> <management-address-v6> <port-description>
<port-vlan> <power-management> <four-wire-power-management> <system-capabilities>
<system-description> <system-name> <dcbxp-cin-cee> [ <dcbxp-cn> ] [ <dcbxp-ets-cfg> ] [ <dcbxp-ets-reco>
] [ <dcbxp-pfc-cfg> ] [ <dcbxp-app-pri> ] [ <dcbxp-app-vlan> ] ]
```

### Syntax Description

|                                   |   |
|-----------------------------------|---|
| show                              | Show running system information             |
| lldp                              | Show information about lldp                 |
| tlv-select                        | Show lldp tlv-select                        |
| <i>__readonly__</i>               | (Optional)                                  |
| <i>management-address-v4</i>      | (Optional) Management address v4            |
| <i>management-address-v6</i>      | (Optional) Management address v6            |
| <i>port-description</i>           | (Optional) Port description                 |
| <i>port-vlan</i>                  | (Optional) Port vlan                        |
| <i>power-management</i>           | (Optional) IEEE 802.3 DTE Power via MDI TLV |
| <i>four-wire-power-management</i> | (Optional) Cisco 4-Wire Power via MDI TLV   |
| <i>system-capabilities</i>        | (Optional) System capabilities              |
| <i>system-description</i>         | (Optional) System description               |
| <i>system-name</i>                | (Optional) System name                      |
| <i>dcbxp-cin-cee</i>              | (Optional) DCBXP CIN or CEE                 |
| <i>dcbxp-cn</i>                   | (Optional) DCBXP Congestion Notification    |
| <i>dcbxp-ets-cfg</i>              | (Optional) DCBXP ETS Configuration          |
| <i>dcbxp-ets-reco</i>             | (Optional) DCBXP ETS Recommendation         |
| <i>dcbxp-pfc-cfg</i>              | (Optional) DCBXP PFC Configuration          |
| <i>dcbxp-app-pri</i>              | (Optional) DCBXP Application Priorities     |
| <i>dcbxp-app-vlan</i>             | (Optional) DCBXP Application VLAN's         |

### Command Mode

- /exec

# show lldp traffic

```
show lldp traffic [ __readonly__ <tx_cnt> <aged_cnt> <rx_cnt> <rx_err> <disc_cnt> <unrecognized_tlv>
<flap_cnt> ]
```

## Syntax Description

|                         |                                   |
|-------------------------|-----------------------------------|
| show                    | Show running system information   |
| lldp                    | Show information about lldp       |
| traffic                 | Show lldp counters                |
| <i>__readonly__</i>     | (Optional)                        |
| <i>tx_cnt</i>           | (Optional) Transmit count         |
| <i>aged_cnt</i>         | (Optional) Aged out count         |
| <i>rx_cnt</i>           | (Optional) Received count         |
| <i>rx_err</i>           | (Optional) Received error count   |
| <i>disc_cnt</i>         | (Optional) Disconnect count       |
| <i>unrecognized_tlv</i> | (Optional) Unrecognized TLV count |
| <i>flap_cnt</i>         | (Optional) flap count             |

## Command Mode

- /exec

# show lldp traffic interface

```
show lldp traffic interface <if> [ __readonly__ <interface> <tx_cnt> <aged_cnt> <rx_cnt> <rx_err> <disc_cnt>
<unrecognized_tlv> <flap_cnt> ]
```

## Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information            |
| lldp                    | Show information about lldp                |
| traffic                 | Show lldp counters                         |
| interface               | Show lldp traffic counters on an interface |
| <i>if</i>               | Enter interface                            |
| <i>__readonly__</i>     | (Optional)                                 |
| <i>interface</i>        | (Optional) Interface ID                    |
| <i>tx_cnt</i>           | (Optional) Transmit count                  |
| <i>aged_cnt</i>         | (Optional) Aged out count                  |
| <i>rx_cnt</i>           | (Optional) Received count                  |
| <i>rx_err</i>           | (Optional) Received error count            |
| <i>disc_cnt</i>         | (Optional) Disconnect count                |
| <i>unrecognized_tlv</i> | (Optional) Unrecognized TLV count          |
| <i>flap_cnt</i>         | (Optional) flap count                      |

## Command Mode

- /exec

## show lldp traffic interface all

```
show lldp traffic interface all [ __readonly__ TABLE_lldp_traffic_interface <interface> <tx_cnt> <aged_cnt>
<rx_cnt> <rx_err> <disc_cnt> <unrecognized_tlv> <flap_cnt> ]
```

### Syntax Description

|                                     |  |
|-------------------------------------|--|
| show                                | Show running system information            |
| lldp                                | Show information about lldp                |
| traffic                             | Show lldp counters                         |
| interface                           | Show lldp traffic counters on an interface |
| all                                 | Get status for all interfaces              |
| <i>__readonly__</i>                 | (Optional)                                 |
| <i>TABLE_lldp_traffic_interface</i> | (Optional) LLDP traffic interface table    |
| <i>interface</i>                    | (Optional) Interface ID                    |
| <i>tx_cnt</i>                       | (Optional) Transmit count                  |
| <i>aged_cnt</i>                     | (Optional) Aged out count                  |
| <i>rx_cnt</i>                       | (Optional) Received count                  |
| <i>rx_err</i>                       | (Optional) Received error count            |
| <i>disc_cnt</i>                     | (Optional) Disconnect count                |
| <i>unrecognized_tlv</i>             | (Optional) Unrecognized TLV count          |
| <i>flap_cnt</i>                     | (Optional) flap count                      |

### Command Mode

- /exec

# show locator-led status

```
show locator-led status [ __readonly__ { TABLE_loc_led_stat <component> <status> } ]
```

## Syntax Description

|                    |                                 |
|--------------------|---------------------------------|
| show               | Show running system information |
| locator-led        | blink locator led on device     |
| status             | status                          |
| __readonly__       | (Optional)                      |
| TABLE_loc_led_stat | (Optional)                      |
| <i>component</i>   | (Optional)                      |
| <i>status</i>      | (Optional)                      |

## Command Mode

- /exec

# show logging

show logging

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |

## Command Mode

- /exec

# show logging console

show logging console

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| console | Show console logging configuration                 |

## Command Mode

- /exec

# show logging dropcount

show logging dropcount

## Syntax Description

|           |                                    |
|-----------|------------------------------------|
| show      | logging dropcount                  |
| logging   | Show logging drop count of syslogs |
| dropcount | Show logging dropcount             |

## Command Mode

- /exec

# show logging history

show logging history

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| history | Show logging history configuration                 |

## Command Mode

- /exec

## show logging info

```
show logging info [ __readonly__ { <console_status> [ <console_severity> ] } { <monitor_status> [
<monitor_severity> ] } { <linecard_status> [ <linecard_severity> ] } { <log_timestamp> } [ {
<source_interface_status> } [ <source_interface_intf> | <source_interface_intf_index> <source_interface_error>
] ] { <server_status> [ { TABLE_logserver <server> <forwarding> <severity> <facility> <vrf> <port> [
<transport> ] } ] } { <origin_id_status> } [ <origin_id> ] ] [ [ <logflash_status> ] [ <logflash_severity> ] [
<logflash_threshold> ] ] { <logfile_status> [ <logfile_name> <logfile_severity> <logfile_size> ] } { {
TABLE_facility <fac_name> <def_level> <cur_level> } { <fac_info> } } ]
```

### Syntax Description

|                                |  |
|--------------------------------|--|
| show                           | Show running system information                    |
| logging                        | Show logging configuration and contents of logfile |
| info                           | Show logging configuration                         |
| <i>__readonly__</i>            | (Optional)   |
| <i>console_status</i>          | (Optional) console logging status                  |
| <i>console_severity</i>        | (Optional) console logging level                   |
| <i>monitor_status</i>          | (Optional) monitor logging status                  |
| <i>monitor_severity</i>        | (Optional) monitor logging level                   |
| <i>linecard_status</i>         | (Optional) linecard logging status                 |
| <i>linecard_severity</i>       | (Optional) linecard logging level                  |
| <i>log_timestamp</i>           | (Optional) timestamp unit                          |
| <i>source_interface_status</i> | (Optional) source-interface logging status         |
| <i>source_interface_intf</i>   | (Optional) source-interface interface              |
| <i>server_status</i>           | (Optional) logging server status                   |
| TABLE_logserver                | (Optional) output of show logging server           |
| <i>transport</i>               | (Optional) remote server transport                 |
| <i>origin_id_status</i>        | (Optional) origin-id status                        |
| <i>origin_id</i>               | (Optional) origin-id                               |
| <i>logflash_status</i>         | (Optional) logflash status                         |
| <i>logflash_severity</i>       | (Optional) logflash level                          |
| <i>logflash_threshold</i>      | (Optional) logflash threshold percentage           |
| <i>logfile_status</i>          | (Optional) logfile status                          |

|                |   |
|----------------|---|
| TABLE_facility | (Optional) output of show logging level(facility) |
| fac_info       | (Optional) level info                             |

**Command Mode**

- /exec

## show logging ip access-list cache

```
show logging ip access-list cache [ detail ] [ __readonly__ <disp_flags> <sgt> <src_ip> <dst_ip> <src_port>
<dst_port> <if_index> <proto> <hit_cnt> <acl_name> <acl_num> <acl_permit> <acl_ingress> <acl_type>
<acl_appl_if_index> <acl_fltr_hit_cnt> ]
```

### Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information                           |
| logging                  | logging information                                       |
| ip                       | IP configuration  |
| access-list              | Access-list   |
| cache                    | logging   |
| detail                   | (Optional) Show additional details about entries in cache |
| <i>__readonly__</i>      | (Optional)  |
| <i>disp_flags</i>        | (Optional) Display flags                                  |
| <i>sgt</i>               | (Optional) SGT  |
| <i>src_ip</i>            | (Optional) Source IP                                      |
| <i>dst_ip</i>            | (Optional) Dest IP  |

| <i>dst_port</i>          | (Optional) Dest port                                      |
| <i>if_index</i>          | (Optional) Interface                                      |
| <i>proto</i>             | (Optional) Protocol                                       |
| <i>hit_cnt</i>           | (Optional) Hits   |
| <i>acl_name</i>          | (Optional) ACL Name                                       |
| <i>acl_num</i>           | (Optional) ACL Number                                     |
| <i>acl_permit</i>        | (Optional) ACL Permit                                     |
| <i>acl_ingress</i>       | (Optional) ACL Ingress                                    |
| <i>acl_type</i>          | (Optional) ACL Filter Type                                |
| <i>acl_appl_if_index</i> | (Optional) ACL Applied Interface                          |
| <i>acl_fltr_hit_cnt</i>  | (Optional) ACL Filter Count                               |

### Command Mode

- /exec

# show logging ip access-list status

show logging ip access-list status [ *\_\_readonly\_\_* <num\_entries> <seconds> <num\_packets> ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information           |
| logging             | logging information                       |
| ip                  | IP configuration                          |
| access-list         | Access-list                               |
| status              | ACLLOG status                             |
| <i>__readonly__</i> | (Optional)                                |
| <i>num_entries</i>  | (Optional) Max flows                      |
| <i>seconds</i>      | (Optional) Log-update interval in seconds |
| <i>num_packets</i>  | (Optional) threshold                      |

## Command Mode

- /exec

# show logging last

show logging last <i0>

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| last      | Show last few lines of logfile                     |
| <i>i0</i> | Enter number of lines to display                   |

## Command Mode

- /exec

# show logging level

```
show logging level [ { auth | authpriv | cron | daemon | ftp | kernel | local0 | local1 | local2 | local3 | local4 |
local5 | local6 | local7 | lpr | mail | news | syslog | user | uucp } ] [ __readonly__ { TABLE_facility <fac_name>
<def_level> <cur_level> } ]
```

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                                |
| logging      | Show logging configuration and contents of logfile             |
| level        | Show facility logging configuration                            |
| auth         | (Optional) Show Authorization System logging configuration     |
| authpriv     | (Optional) Show Authorization (Private) logging configuration  |
| cron         | (Optional) Show Cron/at facility logging configuration         |
| daemon       | (Optional) Show System daemons logging configuration           |
| ftp          | (Optional) Show File Transfer System logging configuration     |
| kernel       | (Optional) Show kernel logging configuration                   |
| local0       | (Optional) Show Local use daemons logging configuration        |
| local1       | (Optional) Show Local use daemons logging configuration        |
| local2       | (Optional) Show Local use daemons logging configuration        |
| local3       | (Optional) Show Local use daemons logging configuration        |
| local4       | (Optional) Show Local use daemons logging configuration        |
| local5       | (Optional) Show Local use daemons logging configuration        |
| local6       | (Optional) Show Local use daemons logging configuration        |
| local7       | (Optional) Show Local use daemons logging configuration        |
| lpr          | (Optional) Show Line Printer System logging configuration      |
| mail         | (Optional) Show Mail System logging configuration              |
| news         | (Optional) Show USENET news logging configuration              |
| syslog       | (Optional) Show Internal Syslog Messages logging configuration |
| user         | (Optional) Show user process logging configuration             |
| uucp         | (Optional) Show Unix-to-Unix copy system logging configuration |
| __readonly__ | (Optional)   |

|                  |                             |
|------------------|-----------------------------|
| <i>fac_name</i>  | (Optional) facility names   |
| TABLE_facility   | (Optional)                  |
| <i>def_level</i> | (Optional) default severity |
| <i>cur_level</i> | (Optional) current severity |

**Command Mode**

- /exec

# show logging level

show logging level

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |

## Command Mode

- /exec

# show logging level aaa

show logging level aaa

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| aaa     | Show aaa logging configuration                     |

## Command Mode

- /exec

# show logging level acl

show logging level acl

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| acl     | Show acl logging configuration                     |

## Command Mode

- /exec

# show logging level aclog

show logging level aclog

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| aclog   | Show aclog logging configuration                   |

## Command Mode

- /exec

# show logging level aclmgr

show logging level aclmgr

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| aclmgr  | Show aclmgr logging configuration                  |

## Command Mode

- /exec

# show logging level adbm

show logging level adbm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| adbm    | Show adbm logging configuration                    |

## Command Mode

- /exec

# show logging level adjmgr

show logging level adjmgr

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| adjmgr  | Show adjmgr logging configuration                  |

## Command Mode

- /exec

# show logging level amt

show logging level amt

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| amt     | Show amt logging configuration                     |

## Command Mode

- /exec

# show logging level arp

show logging level arp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| arp     | Show arp logging configuration                     |

## Command Mode

- /exec

# show logging level ascii-cfg

show logging level ascii-cfg

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| ascii-cfg | Show ascii-cfg logging configuration               |

## Command Mode

- /exec

# show logging level assoc\_mgr

show logging level assoc\_mgr

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| assoc_mgr | Show Association Manager Logging Configuration     |

## Command Mode

- /exec

# show logging level backup

show logging level { backup | flexlink }

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| backup   | Show Switchport Backup logging level               |
| flexlink | Show Switchport Backup logging level               |

## Command Mode

- /exec

# show logging level bfd

show logging level bfd

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| bfd     | Show bfd logging configuration                     |

## Command Mode

- /exec

# show logging level bgp

show logging level bgp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| bgp     | Show BGP logging configuration                     |

## Command Mode

- /exec

# show logging level bloggerd

show logging level bloggerd

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| bloggerd | Show BloggerD logging configuration                |

## Command Mode

- /exec

# show logging level bootvar

show logging level bootvar

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| bootvar | Show bootvar logging configuration                 |

## Command Mode

- /exec

# show logging level callhome

show logging level callhome

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| callhome | Show callhome logging configuration                |

## Command Mode

- /exec

# show logging level capability

show logging level capability

## Syntax Description

|            |  |
|------------|--|
| show       | Show running system information                    |
| logging    | Show logging configuration and contents of logfile |
| level      | Show facility logging configuration                |
| capability | Show capability logging configuration              |

## Command Mode

- /exec

# show logging level cdp

show logging level cdp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| cdp     | Show CDP logging configuration                     |

## Command Mode

- /exec

# show logging level cert\_enroll

show logging level cert\_enroll

## Syntax Description

|             |  |
|-------------|--|
| show        | Show running system information                    |
| logging     | Show logging configuration and contents of logfile |
| level       | Show facility logging configuration                |
| cert_enroll | Show Cert-enroll logging configuration             |

## Command Mode

- /exec

# show logging level cfs

show logging level cfs

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |

## Command Mode

- /exec

# show logging level clis

show logging level clis

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| clis    | Show CLIS logging configuration                    |

## Command Mode

- /exec

# show logging level clk\_mgr

show logging level clk\_mgr

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| clk_mgr | Show clock manager logging configuration           |

## Command Mode

- /exec

# show logging level confcheck

show logging level confcheck

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| confcheck | Show confcheck logging configuration               |

## Command Mode

- /exec

# show logging level copp

show logging level copp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| copp    | Show copp logging configuration                    |

## Command Mode

- /exec

# show logging level core-dmon

show logging level core-dmon

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| core-dmon | Show core daemon logging configuration             |

## Command Mode

- /exec

# show logging level cts

show logging level cts

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| cts     | Show cts logging configuration                     |

## Command Mode

- /exec

# show logging level device-alias

show logging level device-alias

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                    |
| logging      | Show logging configuration and contents of logfile |
| level        | Show facility logging configuration                |
| device-alias | Show device-alias logging configuration            |

## Command Mode

- /exec

# show logging level dhclient

show logging level dhclient

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| dhclient | Show syslog level for dhcp client                  |

## Command Mode

- /exec

# show logging level dhcp\_snoop

show logging level dhcp\_snoop

## Syntax Description

|            |  |
|------------|--|
| show       | Show running system information                    |
| logging    | Show logging configuration and contents of logfile |
| level      | Show facility logging configuration                |
| dhcp_snoop | Show DHCP snoop logging configuration              |

## Command Mode

- /exec

# show logging level diagnostic diag\_port\_lb

show logging level diagnostic diag\_port\_lb

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                    |
| logging      | Show logging configuration and contents of logfile |
| level        | Show facility logging configuration                |
| diagnostic   | Diagnostic commands                                |
| diag_port_lb | Show diagmgr logging configuration                 |

## Command Mode

- /exec

# show logging level diagnostic diagclient

show logging level diagnostic diagclient

## Syntax Description

|            |  |
|------------|--|
| show       | Show running system information                    |
| logging    | Show logging configuration and contents of logfile |
| level      | Show facility logging configuration                |
| diagnostic | Diagnostic commands                                |
| diagclient | Show diagclient logging configuration              |

## Command Mode

- /exec

# show logging level diagnostic diagmgr

show logging level diagnostic diagmgr

## Syntax Description

|            |  |
|------------|--|
| show       | Show running system information                    |
| logging    | Show logging configuration and contents of logfile |
| level      | Show facility logging configuration                |
| diagnostic | Diagnostic commands                                |
| diagmgr    | Show diagmgr logging configuration                 |

## Command Mode

- /exec

# show logging level dot1x

show logging level dot1x

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| dot1x   | Show dot1x logging configuration                   |

## Command Mode

- /exec

# show logging level dpvm

show logging level dpvm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |

## Command Mode

- /exec

# show logging level ecp

show logging level ecp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information        |
| logging | Modify message logging facilities      |
| level   | Facility parameter for syslog messages |
| ecp     | Set syslog filter level for ECP        |

## Command Mode

- /exec

# show logging level eigrp

show logging level eigrp [ <eigrp-ptag> ]

## Syntax Description

|                   |  |
|-------------------|--|
| show              | Show running system information                    |
| logging           | Show logging configuration and contents of logfile |
| level             | Show facility logging configuration                |
| eigrp             | Show EIGRP logging configuration                   |
| <i>eigrp-ptag</i> | (Optional) Process tag                             |

## Command Mode

- /exec

# show logging level eltm

show logging level eltm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| eltm    | Show eltm logging configuration                    |

## Command Mode

- /exec

# show logging level epbr

show logging level epbr

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| epbr    | Show epbr logging configuration                    |

## Command Mode

- /exec

# show logging level epp

show logging level epp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| epp     | Show epp logging configuration                     |

## Command Mode

- /exec

# show logging level ethdstats

show logging level ethdstats

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| ethdstats | Show delta statistics logging configuration        |

## Command Mode

- /exec

# show logging level ethpm

show logging level ethpm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ethpm   | Show ethpm logging configuration                   |

## Command Mode

- /exec

# show logging level evb

show logging level evb

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information        |
| logging | Modify message logging facilities      |
| level   | Facility parameter for syslog messages |
| evb     | Set syslog filter level for EVB        |

## Command Mode

- /exec

# show logging level evmc

show logging level evmc

## Syntax Description

|         |                                     |
|---------|-------------------------------------|
| show    | Show running system information     |
| logging | Show message logging facilities     |
| level   | Show facility logging configuration |
| evmc    | Show level for evmc syslog messages |

## Command Mode

- /exec

# show logging level evmed

show logging level evmed

## Syntax Description

|         |                                      |
|---------|--------------------------------------|
| show    | Show running system information      |
| logging | Show message logging facilities      |
| level   | Show facility logging configuration  |
| evmed   | Show level for evmed syslog messages |

## Command Mode

- /exec

# show logging level evms

show logging level evms

## Syntax Description

|         |                                     |
|---------|-------------------------------------|
| show    | Show running system information     |
| logging | Show message logging facilities     |
| level   | Show facility logging configuration |
| evms    | Show level for evms syslog messages |

## Command Mode

- /exec

# show logging level fabric forwarding

show logging level fabric forwarding

## Syntax Description

|            |   |
|------------|---|
| show       | Show running system information                         |
| logging    | Modify message logging facilities                       |
| level      | Facility parameter for syslog messages                  |
| fabric     | Fabric  |
| forwarding | Fabric Forwarding Protocol: Host Mobility Manager (HMM) |

## Command Mode

- /exec

# show logging level fabricpath isis

show logging level fabricpath isis

## Syntax Description

|            |  |
|------------|--|
| show       | Show running system information                    |
| logging    | Show logging configuration and contents of logfile |
| level      | Show facility logging configuration                |
| fabricpath | Show fabricpath logging configuration              |
| isis       | Show ISIS logging configuration                    |

## Command Mode

- /exec

# show logging level fabricpath switch-id

show logging level fabricpath switch-id

## Syntax Description

|            |  |
|------------|--|
| show       | Show running system information                    |
| logging    | Show logging configuration and contents of logfile |
| level      | Show facility logging configuration                |
| fabricpath | fabricpath information                             |
| switch-id  | show fabricpath switch-id logging configuration    |

## Command Mode

- /exec

# show logging level fc2d

show logging level fc2d

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |

## Command Mode

- /exec

# show logging level fcdomain

show logging level fcdomain

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| fcdomain | Show fcdomain logging configuration                |

## Command Mode

- /exec

# show logging level fcns

show logging level fcns

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| fcns    | Show fcns logging configuration                    |

## Command Mode

- /exec

# show logging level fcoe\_mgr

show logging level fcoe\_mgr

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| fcoe_mgr | Show fcoe_mgr logging configuration                |

## Command Mode

- /exec

# show logging level fcs

show logging level fcs

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |

## Command Mode

- /exec

# show logging level fdmi

show logging level fdmi

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| fdmi    | Show fdmi logging configuration                    |

## Command Mode

- /exec

# show logging level feature-mgr

show logging level feature-mgr

## Syntax Description

|             |  |
|-------------|--|
| show        | Show running system information                    |
| logging     | Show logging configuration and contents of logfile |
| level       | Show facility logging configuration                |
| feature-mgr | Show feature manager logging configuration         |

## Command Mode

- /exec

# show logging level flogi

show logging level flogi

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| flogi   | Show flogi logging configuration                   |

## Command Mode

- /exec

# show logging level fs-daemon

show logging level fs-daemon

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| fs-daemon | Show fs-daemon logging configuration               |

## Command Mode

- /exec

# show logging level fspf

show logging level fspf

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |

## Command Mode

- /exec

# show logging level fsync\_mgr

show logging level fsync\_mgr

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| fsync_mgr | Frequency Synchronization Manager                  |

## Command Mode

- /exec

# show logging level gpixm

show logging level gpixm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| gpixm   | Show global-pixm logging configuration             |

## Command Mode

- /exec

# show logging level hardware-telemetry

show logging level hardware-telemetry

## Syntax Description

|                    |  |
|--------------------|--|
| show               | Show running system information                    |
| logging            | Show logging configuration and contents of logfile |
| level              | Show facility logging configuration                |
| hardware-telemetry | Show hardware-telemetry logging configuration      |

## Command Mode

- /exec

# show logging level hsrp

show logging level hsrp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| hsrp    | Show HSRP logging configuration                    |

## Command Mode

- /exec

# show logging level icam

show logging level icam

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| icam    | Show icam logging configuration                    |

## Command Mode

- /exec

# show logging level igmp

show logging level [ ip ] igmp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ip      | (Optional) Display IP information                  |
| igmp    | Show igmp logging configuration                    |

## Command Mode

- /exec

# show logging level im

show logging level im

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| im      | Show im logging configuration                      |

## Command Mode

- /exec

# show logging level imp

show logging level imp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| imp     | Show imp logging configuration                     |

## Command Mode

- /exec

# show logging level interface-vlan

show logging level interface-vlan

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                    |
| logging        | Show logging configuration and contents of logfile |
| level          | Show facility logging configuration                |
| interface-vlan | Show interface-vlan logging configuration          |

## Command Mode

- /exec

# show logging level ip sla responder

show logging level ip sla responder

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| ip        |  |
| sla       | Service Level Agreement (SLA)                      |
| responder | Show sla-responder logging configuration           |

## Command Mode

- /exec

# show logging level ip sla sender

show logging level ip sla sender

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ip      |  |
| sla     | Service Level Agreement (SLA)                      |
| sender  | Show sla-sender logging configuration              |

## Command Mode

- /exec

# show logging level ip sla twamp-server

show logging level ip sla twamp-server

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                    |
| logging      | Show logging configuration and contents of logfile |
| level        | Show facility logging configuration                |
| ip           |  |
| sla          | Service Level Agreement (SLA)                      |
| twamp-server | Show sla-twamp-server logging configuration        |

## Command Mode

- /exec

# show logging level ipconf

show logging level ipconf [ ipv6 ]

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ipconf  | Show ipconf logging configuration                  |
| ipv6    | (Optional) Show ipv6 Conf logging configuration    |

## Command Mode

- /exec

# show logging level ipfib

show logging level ipfib

## Syntax Description

|         |         |
|---------|---------|
| show    | show    |
| logging | logging |
| level   | level   |
| ipfib   | ipfib   |

## Command Mode

- /exec

# show logging level ipqos

show logging level ipqos

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |

## Command Mode

- /exec

# show logging level ipv6 icmp

show logging level ipv6 icmp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ipv6    | Configure IPv6 features                            |
| icmp    | Show icmpv6 logging configuration                  |

## Command Mode

- /exec

# show logging level ipv6 mfwd

show logging level ipv6 mfwd

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ipv6    | Display IPv6 information                           |
| mfwd    | Show MCASTFWD v6 logging configuration             |

## Command Mode

- /exec

# show logging level ipv6 pim

show logging level ipv6 pim

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ipv6    | Display IPv6 information                           |
| pim     | Show pim6 logging configuration                    |

## Command Mode

- /exec

# show logging level iscm

show logging level iscm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| iscm    | Show iscm logging configuration                    |

## Command Mode

- /exec

# show logging level iscm

show logging level iscm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| iscm    | Show iscm logging configuration                    |

## Command Mode

- /exec

# show logging level isis

show logging level isis

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| isis    | Show ISIS logging configuration                    |

## Command Mode

- /exec

# show logging level l2fm

show logging level l2fm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| l2fm    | Show l2fm logging configuration                    |

## Command Mode

- /exec

# show logging level l3vm

show logging level l3vm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| l3vm    | Show L3VM logging configuration                    |

## Command Mode

- /exec

# show logging level lacp

show logging level lacp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| lacp    | Show lacp logging configuration                    |

## Command Mode

- /exec

# show logging level ldap

show logging level ldap

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ldap    | Show ldap logging configuration                    |

## Command Mode

- /exec

# show logging level lim

show logging level lim

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| lim     | Show lim logging configuration                     |

## Command Mode

- /exec

# show logging level lisp

show logging level lisp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| lisp    | Show lisp logging configuration                    |

## Command Mode

- /exec

# show logging level lldp

show logging level lldp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| lldp    | Show LLDP logging configuration                    |

## Command Mode

- /exec

# show logging level m2rib

show logging level m2rib

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| m2rib   | Show M2RIB logging configuration                   |

## Command Mode

- /exec

# show logging level mfdm

show logging level mfdm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| mfdm    | Show mfdm logging configuration                    |

## Command Mode

- /exec

# show logging level mfwd

show logging level { mfwd | mcastfwd }

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| mfwd     | Show MCASTFWD logging configuration                |
| mcastfwd | Show MCASTFWD logging configuration                |

## Command Mode

- /exec

# show logging level mld

show logging level [ ipv6 ] mld

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ipv6    | (Optional) Display IPv6 information                |
| mld     | Show MLD logging configuration                     |

## Command Mode

- /exec

# show logging level mmode

show logging level mmode

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| mmode   | Show maintenance mode logging configuration        |

## Command Mode

- /exec

# show logging level module

show logging level module

## Syntax Description

|         |   |
|---------|---|
| show    | Show running system information                     |
| logging | Show logging configuration and contents of logfile  |
| level   | Show facility logging configuration                 |
| module  | Show module(linecard) manager logging configuration |

## Command Mode

- /exec

# show logging level monitor

show logging level monitor

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| monitor | Show monitor logging configuration                 |

## Command Mode

- /exec

# show logging level mpls manager

show logging level mpls manager

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| mpls    | Show MPLS logging configuration                    |
| manager | Show MPLS manager logging configuration            |

## Command Mode

- /exec

# show logging level mpls switching

show logging level mpls switching

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| mpls      | Show MPLS logging configuration                    |
| switching | Show mpls switching logging configuration          |

## Command Mode

- /exec

# show logging level msdp

show logging level [ ip ] msdp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ip      | (Optional) Display IP information                  |
| msdp    | Show msdp logging configuration                    |

## Command Mode

- /exec

# show logging level mvsh

show logging level mvsh

## Syntax Description

|         |                                     |
|---------|-------------------------------------|
| show    | Show commands                       |
| logging | Show message logging facilities     |
| level   | Show message logging facilities     |
| mvsh    | Show level for mvsh syslog messages |

## Command Mode

- /exec

# show logging level nat

show logging level nat

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| nat     | Show NAT logging configurarion                     |

## Command Mode

- /exec

# show logging level nbm

show logging level nbm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| nbm     | Show Non Blocking Multicast logging configuration  |

## Command Mode

- /exec

# show logging level netstack

show logging level netstack

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| netstack | Show netstack logging configuration                |

## Command Mode

- /exec

# show logging level nfm

show logging level nfm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| nfm     | Show NFM logging configuration                     |

## Command Mode

- /exec

# show logging level nfm

show logging level nfm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| nfm     | Show NFM logging configuration                     |

## Command Mode

- /exec

# show logging level ngmvpn

show logging level ngmvpn

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ngmvpn  | Show ngmvpn logging configuration                  |

## Command Mode

- /exec

# show logging level ngoam

show logging level ngoam

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ngoam   | Show ngoam logging level                           |

## Command Mode

- /exec

# show logging level npv

show logging level npv

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| npv     | Show npv logging configuration                     |

## Command Mode

- /exec

# show logging level ntp

show logging level ntp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ntp     | Show NTP logging settings.                         |

## Command Mode

- /exec

# show logging level nve

show logging level nve

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| nve     | Show NVE logging configuration                     |

## Command Mode

- /exec

# show logging level nxsdk

show logging level nxsdk

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information        |
| logging | Modify message logging facilities      |
| level   | Facility parameter for syslog messages |
| nxsdk   | NXOS SDK                               |

## Command Mode

- /exec

# show logging level ofm

show logging level ofm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information        |
| logging | Modify message logging facilities      |
| level   | Facility parameter for syslog messages |
| ofm     | Show ofm logging settings              |

## Command Mode

- /exec

# show logging level openflow

show logging level openflow

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| openflow | Show OpenFlow agent logging configuration          |

## Command Mode

- /exec

# show logging level ospf

show logging level ospf

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ospf    | Show OSPF logging configuration                    |

## Command Mode

- /exec

# show logging level ospfv3

show logging level ospfv3

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ospfv3  | Display OSPFv3 status and configuration            |

## Command Mode

- /exec

# show logging level otv isis

show logging level otv isis

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| otv     | Show OTV ISIS logging configuration                |
| isis    | Show OTV ISIS logging configuration                |

## Command Mode

- /exec

# show logging level pfstat

show logging level pfstat

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| pfstat  | Show pfstat logging configuration                  |

## Command Mode

- /exec

# show logging level pie

show logging level pie

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| pie     | Show pie logging configuration                     |

## Command Mode

- /exec

# show logging level pim

show logging level [ ip ] pim

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ip      | (Optional) Display IP information                  |
| pim     | Show pim logging configuration                     |

## Command Mode

- /exec

# show logging level pixm

show logging level pixm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| pixm    | Show vdc-local-pixm logging configuration          |

## Command Mode

- /exec

# show logging level pktmgr

show logging level pktmgr

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| pktmgr  | Show pktmgr logging configuration                  |

## Command Mode

- /exec

# show logging level platform

show logging level platform

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| platform | Show platform logging configuration                |

## Command Mode

- /exec

# show logging level plcmgr

show logging level plcmgr

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |

## Command Mode

- /exec

# show logging level pltfm\_config

show logging level pltfm\_config

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                    |
| logging      | Show logging configuration and contents of logfile |
| level        | Show facility logging configuration                |
| pltfm_config | Show pltfm_config logging configuration            |

## Command Mode

- /exec

# show logging level plugin

show logging level plugin

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| plugin  | Show plugin logging configuration                  |

## Command Mode

- /exec

# show logging level poed

show logging level poed

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| poed    | Show PoE Daemon Logging Configuration              |

## Command Mode

- /exec

# show logging level port-channel

show logging level port-channel

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                    |
| logging      | Show logging configuration and contents of logfile |
| level        | Show facility logging configuration                |
| port-channel | Show port-channel logging configuration            |

## Command Mode

- /exec

# show logging level port-profile

show logging level port-profile

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                    |
| logging      | Show logging configuration and contents of logfile |
| level        | Show facility logging configuration                |
| port-profile | Show syslog level for port-profile                 |

## Command Mode

- /exec

# show logging level port-resources

show logging level port-resources

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                    |
| logging        | Show logging configuration and contents of logfile |
| level          | Show facility logging configuration                |
| port-resources | Show port-resources logging configuration          |

## Command Mode

- /exec

# show logging level port-security

show logging level port-security

## Syntax Description

|               |  |
|---------------|--|
| show          | Show running system information                    |
| logging       | Show logging configuration and contents of logfile |
| level         | Show facility logging configuration                |
| port-security | Show port-security logging configuration           |

## Command Mode

- /exec

# show logging level port

show logging level port

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| port    | Show port logging configuration                    |

## Command Mode

- /exec

# show logging level private-vlan

show logging level private-vlan

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                    |
| logging      | Show logging configuration and contents of logfile |
| level        | Show facility logging configuration                |
| private-vlan | Show interface-vlan logging configuration          |

## Command Mode

- /exec

# show logging level ptp

show logging level ptp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ptp     | Show ptp logging configuration                     |

## Command Mode

- /exec

# show logging level radius

show logging level radius

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| radius  | Show radius logging configuration                  |

## Command Mode

- /exec

# show logging level rdl

show logging level rdl

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |

## Command Mode

- /exec

# show logging level res\_mgr

show logging level res\_mgr

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| res_mgr | Show res_mgr logging configuration                 |

## Command Mode

- /exec

# show logging level rib

show logging level rib

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| rib     | Show rib logging configuration                     |

## Command Mode

- /exec

# show logging level rip

show logging level rip

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| rip     | Show RIP logging configuration                     |

## Command Mode

- /exec

# show logging level routing ipv6 multicast

show logging level routing ipv6 multicast

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| routing   | Display routing information                        |
| ipv6      | Display IPv6 information                           |
| multicast | Display multicast information                      |

## Command Mode

- /exec

# show logging level routing multicast

show logging level routing [ ip | ipv4 ] multicast

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| routing   | Display routing information                        |
| ip        | (Optional) Display IP information                  |
| ipv4      | (Optional) Display IP information                  |
| multicast | Display multicast information                      |

## Command Mode

- /exec

# show logging level rpm

show logging level rpm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| rpm     | Show RPM logging configuration                     |

## Command Mode

- /exec

# show logging level rscn

show logging level rscn

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| rscn    | Show RSCN logging configuration                    |

## Command Mode

- /exec

# show logging level sal

show logging level sal

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| sal     | Show SAL logging configuration                     |

## Command Mode

- /exec

# show logging level san-port-channel

show logging level san-port-channel

## Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information                    |
| logging          | Show logging configuration and contents of logfile |
| level            | Show facility logging configuration                |
| san-port-channel | Show san-port-channel logging configuration        |

## Command Mode

- /exec

# show logging level san-port-channel

show logging level san-port-channel

## Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information                    |
| logging          | Show logging configuration and contents of logfile |
| level            | Show facility logging configuration                |
| san-port-channel | Show san-port-channel logging configuration        |

## Command Mode

- /exec

# show logging level scheduler

show logging level scheduler

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| scheduler | Show scheduler logging configuration               |

## Command Mode

- /exec

# show logging level scsi-target

show logging level scsi-target

## Syntax Description

|             |  |
|-------------|--|
| show        | Show running system information                    |
| logging     | Show logging configuration and contents of logfile |
| level       | Show facility logging configuration                |
| scsi-target | Show scsi-target logging configuration             |

## Command Mode

- /exec

# show logging level security

show logging level security

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| security | Show security logging configuration                |

## Command Mode

- /exec

# show logging level segment-routing

show logging level segment-routing

## Syntax Description

|                 |  |
|-----------------|--|
| show            | Show running system information                    |
| logging         | Show logging configuration and contents of logfile |
| level           | Show facility logging configuration                |
| segment-routing | Show SR logging configuration                      |

## Command Mode

- /exec

# show logging level session-mgr

show logging level session-mgr

## Syntax Description

|             |  |
|-------------|--|
| show        | Show running system information                    |
| logging     | Show logging configuration and contents of logfile |
| level       | Show facility logging configuration                |
| session-mgr | Show session-mgr logging configurarion             |

## Command Mode

- /exec

# show logging level sflow

show logging level sflow

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| sflow   | Show sFlow logging configuration                   |

## Command Mode

- /exec

# show logging level smm

show logging level smm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| smm     | Show Shared Memory Manager logging configuration   |

## Command Mode

- /exec

# show logging level snmpd

show logging level snmpd

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| snmpd   | Show SNMP logging configuration                    |

## Command Mode

- /exec

# show logging level snmpmib\_proc

show logging level snmpmib\_proc

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                    |
| logging      | Show logging configuration and contents of logfile |
| level        | Show facility logging configuration                |
| snmpmib_proc | Show snmpmib_proc logging configuration            |

## Command Mode

- /exec

# show logging level spanning-tree

show logging level spanning-tree

## Syntax Description

|               |  |
|---------------|--|
| show          | Show running system information                    |
| logging       | Show logging configuration and contents of logfile |
| level         | Show facility logging configuration                |
| spanning-tree | Show spanning-tree logging configuration           |

## Command Mode

- /exec

# show logging level spm

show logging level spm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| spm     | Show spm logging configuration                     |

## Command Mode

- /exec

# show logging level stripcl

show logging level stripcl

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| stripcl | Show stripcl logging configuration                 |

## Command Mode

- /exec

# show logging level sync

show logging level sync

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| sync    | Show sync logging configuration                    |

## Command Mode

- /exec

# show logging level sysmgr

show logging level sysmgr

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| sysmgr  | Show sysmgr logging configuration                  |

## Command Mode

- /exec

# show logging level tacacs

show logging level tacacs

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| tacacs  | Show tacacs+ logging configuration                 |

## Command Mode

- /exec

# show logging level telemetry

show logging level telemetry

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| telemetry | Show telemetry logging level                       |

## Command Mode

- /exec

# show logging level template\_manager

show logging level template\_manager

## Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information                    |
| logging          | Show logging configuration and contents of logfile |
| level            | Show facility logging configuration                |
| template_manager | Show template manager logging configuration        |

## Command Mode

- /exec

# show logging level track

show logging level track

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| track   | Show track logging configuration                   |

## Command Mode

- /exec

# show logging level tunnel-encryption

show logging level tunnel-encryption

## Syntax Description

|                   |  |
|-------------------|--|
| show              | Show running system information                      |
| logging           | Show logging configuration and contents of logfile   |
| level             | Show facility logging configuration                  |
| tunnel-encryption | Show tunnel encryption manager logging configuration |

## Command Mode

- /exec

# show logging level tunnel

show logging level tunnel

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| tunnel  | Show tunnel logging settings                       |

## Command Mode

- /exec

# show logging level u2rib

show logging level u2rib

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| u2rib   | Show U2RIB logging configuration                   |

## Command Mode

- /exec

# show logging level u6rib

show logging level u6rib

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| u6rib   | Show U6RIB logging configuration                   |

## Command Mode

- /exec

# show logging level udd

show logging level udd

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| udd     | Show udd logging configuration                     |

## Command Mode

- /exec

# show logging level ufdm

show logging level ufdm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| ufdm    | Show ufdm logging configuration                    |

## Command Mode

- /exec

# show logging level urib

show logging level urib

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| urib    | Show URIB logging configuration                    |

## Command Mode

- /exec

# show logging level vdc\_mgr

show logging level vdc\_mgr

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| vdc_mgr | Show vdc manager logging configuration             |

## Command Mode

- /exec

# show logging level virtual-service

show logging level virtual-service

## Syntax Description

|                 |  |
|-----------------|--|
| show            | Show running system information                    |
| logging         | Show logging configuration and contents of logfile |
| level           | Show facility logging configuration                |
| virtual-service | Show virtualization manager logging configuration  |

## Command Mode

- /exec

# show logging level vlan\_mgr

show logging level vlan\_mgr

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| vlan_mgr | Show vlan manager logging configuration            |

## Command Mode

- /exec

# show logging level vmm

show logging level vmm

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| vmm     | Show vmm logging configuration                     |

## Command Mode

- /exec

# show logging level vmtracker

show logging level vmtracker

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| level     | Show facility logging configuration                |
| vmtracker | Show vmtracker logging configuration               |

## Command Mode

- /exec

# show logging level vpc

show logging level vpc

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| vpc     | Show vPC logging configuration                     |

## Command Mode

- /exec

# show logging level vrrp-cfg

show logging level vrrp-cfg

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| vrrp-cfg | Show vrrp-cfg logging configuration                |

## Command Mode

- /exec

# show logging level vrrp-eng

show logging level vrrp-eng

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| level    | Show facility logging configuration                |
| vrrp-eng | Show vrrp-eng logging configuration                |

## Command Mode

- /exec

# show logging level vrrpv3

show logging level vrrpv3

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| vrrpv3  | level for vrrpv3 configuration                     |

## Command Mode

- /exec

# show logging level vsan

show logging level vsan

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| vsan    | Show vsan logging configuration                    |

## Command Mode

- /exec

# show logging level vshd

show logging level vshd

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |

## Command Mode

- /exec

# show logging level vtp

show logging level vtp

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| vtp     | Show vtp logging configuration                     |

## Command Mode

- /exec

# show logging level wwn

show logging level wwn

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |
| wwn     | Show wwn logging configuration                     |

## Command Mode

- /exec

# show logging level xbar

show logging level xbar

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |

## Command Mode

- /exec

# show logging level zone

show logging level zone

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| level   | Show facility logging configuration                |

## Command Mode

- /exec

# show logging logfile

show logging logfile

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| logfile | Show contents of logfile                           |

## Command Mode

- /exec

# show logging logfile duration

show logging logfile duration <s1>

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                      |
| logging   | Show logging configuration and contents of logfile   |
| logfile   | Show contents of logfile                             |
| duration  | show messages from logfile of last given duration    |
| <i>s1</i> | Enter hour, minutes, seconds of duration as HH:MM:SS |

## Command Mode

- /exec

# show logging logfile last-index

show logging logfile last-index

## Syntax Description

|            |   |
|------------|---|
| show       | Show running system information                         |
| logging    | Show logging configuration and contents of logfile      |
| logfile    | Show contents of logfile                                |
| last-index | Show the sequence-number of the last message in logfile |

## Command Mode

- /exec

# show logging logfile start-seqn

show logging logfile start-seqn <i0> [ end-seqn <i1> ]

## Syntax Description

|            |  |
|------------|--|
| show       | Show running system information  |
| logging    | Show logging configuration and contents of logfile                     |
| logfile    | Show contents of logfile   |
| start-seqn | Show messages from logfile from a given start-sequence-number          |
| <i>i0</i>  | Enter starting sequence number   |
| end-seqn   | (Optional) Show messages from logfile from a given end-sequence-number |
| <i>i1</i>  | (Optional) Enter ending sequence number                                |

## Command Mode

- /exec

## show logging logfile start-time

show logging logfile start-time <i0> <s0> <i1> <s1> [ end-time <i2> <s2> <i3> <s3> ]

### Syntax Description

|            |  |
|------------|--|
| show       | Show running system information                                |
| logging    | Show logging configuration and contents of logfile             |
| logfile    | Show contents of logfile                                       |
| start-time | Show messages from logfile from a given start-time             |
| <i>i0</i>  | Enter year in YYYY format                                      |
| <i>s0</i>  | Enter Month as Jan, Feb, Mar, ..., Oct, Nov, or Dec            |
| <i>i1</i>  | Enter day of month in dd format                                |
| <i>s1</i>  | Enter hour, minutes, seconds as HH:MM:SS                       |
| end-time   | (Optional) Show messages from logfile up to a given end-time   |
| <i>i2</i>  | (Optional) Enter year in YYYY format                           |
| <i>s2</i>  | (Optional) Enter Month as Jan, Feb, Mar, ..., Oct, Nov, or Dec |
| <i>i3</i>  | (Optional) Enter day of month in dd format                     |
| <i>s3</i>  | (Optional) Enter hour, minutes, seconds as HH:MM:SS            |

### Command Mode

- /exec

# show logging loopback

show logging loopback

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information                    |
| logging  | Show logging configuration and contents of logfile |
| loopback | Show logging loopback configuration                |

## Command Mode

- /exec

# show logging module

show logging module

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| module  | Show module(linecard) logging configuration        |

## Command Mode

- /exec

# show logging monitor

show logging monitor

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| monitor | Show monitor logging configuration                 |

## Command Mode

- /exec

# show logging nvram

```
show logging nvram [ [ { last <i0> } ] [ __readonly__ [ <error> ] [ { TABLE_nvram <log> } ] ] ]
```

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                    |
| logging      | Show logging configuration and contents of logfile |
| nvram        | Show NVRAM log                                     |
| last         | (Optional) Show last few lines of nvram log        |
| <i>i0</i>    | (Optional) Enter number of lines to display        |
| __readonly__ | (Optional)   |
| <i>error</i> | (Optional) error message                           |
| TABLE_nvram  | (Optional) nvram log prints                        |
| <i>log</i>   | (Optional) single log line                         |

## Command Mode

- /exec

## show logging onboard

```
show logging onboard [ card-first-power-on | card-boot-history | <common_options> | endtime <s0> [ {
<common_options> | error-stats [ port <i0> ] } ] | error-stats [ port1 <i1> ] | module <module> [
<common_options> | endtime1 <s1> [ { <common_options> | error-stats [ port3 <i3> ] } ] | error-stats [ port4
<i4> ] | starttime <s2> [ { <common_options> | endtime2 <s3> [ { <common_options> | error-stats [ port6
<i6> ] } ] | error-stats [ port7 <i7> ] } ] | card-first-power-on | card-boot-history ] | obfl-logs | starttime1 <s4>
[ { <common_options> | endtime3 <s5> [ { <common_options> | error-stats [ port8 <i8> ] } ] | error-stats [
port9 <i9> ] } ] | credit-loss [ module <module> [ last <last_no> { minutes | hours | days } ] | last <last_no>
{ minutes | hours | days } ] | flow-control { pause-count [ module <module> [ last <last_no> { minutes | hours
| days } ] | last <last_no> { minutes | hours | days } ] | pause-events [ module <module> [ last <last_no> {
minutes | hours | days } ] | last <last_no> { minutes | hours | days } ] | request-timeout [ module <module> ]
| timeout-drops [ module <module> [ port10 <i10> [ last <last_no> { minutes | hours | days } ] | last <last_no>
{ minutes | hours | days } ] | last <last_no> { minutes | hours | days } } ] }
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                           |
| logging               | Show logging configuration and contents of logfile        |
| onboard               | Show OBFL information                                     |
| card-first-power-on   | (Optional) show card first power on information           |
| card-boot-history     | (Optional) show card boot history                         |
| endtime               | (Optional) Show OBFL logs till end time mm/dd/yy-HH:MM:SS |
| <i>s0</i>             | (Optional) End time format - mm/dd/yy-HH:MM:SS            |
| error-stats           | (Optional) Show OBFL error statistics                     |
| port                  | (Optional) Show OBFL error statistics for a port          |
| <i>i0</i>             | (Optional)  |
| <i>common_options</i> | (Optional) give the options                               |
| port1                 | (Optional) Show OBFL error statistics for a port          |
| <i>i1</i>             | (Optional)  |
| module                | (Optional) Show OBFL information for Module               |
| <i>module</i>         | (Optional) Enter module number                            |
| endtime1              | (Optional) Show OBFL logs till end time mm/dd/yy-HH:MM:SS |
| <i>s1</i>             | (Optional) End time format - mm/dd/yy-HH:MM:SS            |
| port3                 | (Optional) Show OBFL error statistics for a port          |
| <i>i3</i>             | (Optional)  |

|                 |   |
|-----------------|---|
| port4           | (Optional) Show OBFL error statistics for a port            |
| <i>i4</i>       | (Optional)  |
| starttime       | (Optional) Show OBFL logs from start time mm/dd/yy-HH:MM:SS |
| <i>s2</i>       | (Optional) Start time format - mm/dd/yy-HH:MM:SS            |
| endtime2        | (Optional) Show OBFL logs till end time mm/dd/yy-HH:MM:SS   |
| <i>s3</i>       | (Optional) End time format - mm/dd/yy-HH:MM:SS              |
| port6           | (Optional) Show OBFL error statistics for a port            |
| <i>i6</i>       | (Optional)  |
| port7           | (Optional) Show OBFL error statistics for a port            |
| <i>i7</i>       | (Optional)  |
| starttime1      | (Optional) Show OBFL logs from start time mm/dd/yy-HH:MM:SS |
| <i>s4</i>       | (Optional) Start time format - mm/dd/yy-HH:MM:SS            |
| endtime3        | (Optional) Show OBFL logs till end time mm/dd/yy-HH:MM:SS   |
| <i>s5</i>       | (Optional) End time format - mm/dd/yy-HH:MM:SS              |
| port8           | (Optional) Show OBFL error statistics for a port            |
| <i>i8</i>       | (Optional)  |
| port9           | (Optional) Show OBFL error statistics for a port            |
| <i>i9</i>       | (Optional)  |
| obfl-logs       | (Optional) Show OBFL Tech Support Log.                      |
| timeout-drops   | (Optional) Show OBFL Timeout Drops logs                     |
| port10          | (Optional) Show OBFL statistics per port basis              |
| <i>i10</i>      | (Optional)  |
| credit-loss     | (Optional) Show OBFL Credit Loss logs                       |
| last            | (Optional) Show last min/hour/day logs                      |
| <i>last_no</i>  | (Optional) Duration in min/hrs/day                          |

| starttime          | Show OBFL logs from start time mm/dd/yy-HH:MM:SS          |
| <i>s2</i>          | Start time format - mm/dd/yy-HH:MM:SS                     |
| endtime2           | (Optional) Show OBFL logs till end time mm/dd/yy-HH:MM:SS |
| <i>s3</i>          | (Optional) End time format - mm/dd/yy-HH:MM:SS            |
| starttime1         | Show OBFL logs from start time mm/dd/yy-HH:MM:SS          |
| <i>s4</i>          | Start time format - mm/dd/yy-HH:MM:SS                     |
| endtime3           | (Optional) Show OBFL logs till end time mm/dd/yy-HH:MM:SS |
| <i>s5</i>          | (Optional) End time format - mm/dd/yy-HH:MM:SS            |
| <i>dc3_options</i> | (Optional) dc3 options                                    |

## Command Mode

- /exec

# show logging onboard kernel-trace

show logging onboard kernel-trace

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                    |
| logging      | Show logging configuration and contents of logfile |
| onboard      | Show OBFL information                              |
| kernel-trace | Show OBFL Kernel Trace                             |

## Command Mode

- /exec

# show logging origin-id

show logging origin-id

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| origin-id | Show logging origin id configuration               |

## Command Mode

- /exec

# show logging pending-diff

show logging pending-diff

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                    |
| logging      | Show logging configuration and contents of logfile |
| pending-diff | server address pending configuration diff          |

## Command Mode

- /exec

# show logging pending

show logging pending

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| pending | server address pending configuration               |

## Command Mode

- /exec

# show logging rate-limit

show logging rate-limit

## Syntax Description

|            |  |
|------------|--|
| show       | Show running system information                    |
| logging    | Show logging configuration and contents of logfile |
| rate-limit | Show rate limit configuration                      |

## Command Mode

- /exec

# show logging rfc-strict

show logging rfc-strict

## Syntax Description

|            |  |
|------------|--|
| show       | Show running system information                    |
| logging    | Show logging configuration and contents of logfile |
| rfc-strict | Show RFC to which messages are compliant           |

## Command Mode

- /exec

# show logging server

```
show logging server [ __readonly__ [ <server_status> ] [ { TABLE_logserv <server> <forwarding> <severity>
<facility> <vrf> <port> [ <transport> ] } ] ]
```

## Syntax Description

|                            |  |
|----------------------------|--|
| <code>show</code>          | Show running system information                    |
| <code>logging</code>       | Show logging configuration and contents of logfile |
| <code>server</code>        | Show server logging configuration                  |
| <code>__readonly__</code>  | (Optional)   |
| <code>server_status</code> | (Optional) logging server configured               |
| <code>TABLE_logserv</code> | (Optional) output of show logging server           |
| <code>server</code>        | (Optional) remote server address                   |
| <code>forwarding</code>    | (Optional) remote server forwarding                |
| <code>severity</code>      | (Optional) remote server severity                  |
| <code>facility</code>      | (Optional) remote server facility                  |
| <code>vrf</code>           | (Optional) remote server vrf                       |
| <code>port</code>          | (Optional) remote server port                      |
| <code>transport</code>     | (Optional) remote server transport                 |

## Command Mode

- /exec

# show logging session status

show logging session status

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| session | Show logging session status                        |
| status  | Show logging session status                        |

## Command Mode

- /exec

# show logging source-interface

show logging source-interface

## Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information                    |
| logging          | Show logging configuration and contents of logfile |
| source-interface | Show logging source-interface configuration        |

## Command Mode

- /exec

# show logging status

show logging status

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                    |
| logging | Show logging configuration and contents of logfile |
| status  | Show logging status                                |

## Command Mode

- /exec

# show logging timestamp

show logging timestamp

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                    |
| logging   | Show logging configuration and contents of logfile |
| timestamp | Show logging timestamp configuration               |

## Command Mode

- /exec

# show login on-failure log

show login on-failure log [ \_\_readonly\_\_ [ <status> ] ]

## Syntax Description

|               |   |
|---------------|---|
| show          | show  |
| login         | login   |
| on-failure    | authentication failure                              |
| log           | Log   |
| __readonly__  | (Optional)  |
| <i>status</i> | (Optional) login on failure log enabled or disabled |

## Command Mode

- /exec

# show login on-successful log

show login on-successful log [ \_\_readonly\_\_ [ <status> ] ]

## Syntax Description

|               |  |
|---------------|--|
| show          | show   |
| login         | login  |
| on-successful | authentication successful                              |
| log           | Log  |
| __readonly__  | (Optional)   |
| <i>status</i> | (Optional) login on successful log enabled or disabled |

## Command Mode

- /exec

**show login on-successful log**

## show mac-list

```
show mac-list { [ { <maclist-name> | <maclist-cfg-name> } [ { seq <seq_no> | { <mac_addr> [ <mac_mask> ] } } ] ] } [ __readonly__ TABLE_mac_list <name> <seq> <action> <rule> ]
```

### Syntax Description

|                         |                                 |
|-------------------------|---------------------------------|
| show                    | Show running system information |
| mac-list                | Show mac-lists                  |
| <i>maclist-name</i>     | (Optional) Name of mac-list     |
| <i>maclist-cfg-name</i> | (Optional) Known mac-list name  |
| seq                     | (Optional) Sequence number      |
| <i>seq_no</i>           | (Optional) Sequence number      |
| <i>mac_addr</i>         | (Optional) MAC address          |
| <i>mac_mask</i>         | (Optional) MAC mask             |
| <i>__readonly__</i>     | (Optional)                      |
| TABLE_mac_list          | (Optional)                      |
| <i>name</i>             | (Optional)                      |
| <i>seq</i>              | (Optional)                      |
| <i>action</i>           | (Optional)                      |
| <i>rule</i>             | (Optional)                      |

### Command Mode

- /exec

## show mac address-table

```
show mac address-table <module> [ count ] [ static | dynamic | secure ] [ { [ address1 <mac-addr> | { switch-id
<swid> [ sub-switch-id <sswid> ] } | vlan1 <id> | [ vdc1 <vdc> | <e-vdc> ] | fe1 <feid> ] + } | { [ address
<mac-addr> | interface <interface-name> | vlan <id> | [ vdc <vdc> | <e-vdc> ] | fe <feid> ] + } } [ hex ] [
__readonly__ <entrycount> <l2entry> <header> <pi_e> <age> <rm> <ifname> <sec> <ntfy> <type> ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | show                                      |
| mac                   | MAC configuration commands                |
| address-table         | MAC Address Table                         |
| <i>module</i>         | Module Number                             |
| count                 | (Optional) Number of entries              |
| static                | (Optional) Display Static Entries         |
| dynamic               | (Optional) Display Dynamic Entries        |
| secure                | (Optional) Display Secure Entries         |
| address               | (Optional) address                        |
| address1              | (Optional) address                        |
| <i>mac-addr</i>       | (Optional) MAC Address                    |
| switch-id             | (Optional) Remote Switch ID               |
| <i>swid</i>           | (Optional) Switch ID                      |
| sub-switch-id         | (Optional) Remote Sub Switch ID           |
| <i>sswid</i>          | (Optional) Sub Switch ID                  |
| interface             | (Optional) Interface                      |
| <i>interface-name</i> | (Optional) Interface name                 |
| vlan                  | (Optional) VLAN                           |
| vlan1                 | (Optional) VLAN                           |
| <i>id</i>             | (Optional) VLAN ID                        |
| vdc                   | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| vdc1                  | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| <i>vdc</i>            | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |

|                     |   |
|---------------------|---|
| <i>e-vdc</i>        | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| <i>fe</i>           | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| <i>fel</i>          | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| <i>feid</i>         | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| <i>hex</i>          | (Optional) display swid/sswid/lid in hex  |
| <i>__readonly__</i> | (Optional)                                |
| <i>header</i>       | (Optional) Header                         |
| <i>pi_e</i>         | (Optional) Primary Interface of EARL      |
| <i>age</i>          | (Optional) Last seen age in seconds       |
| <i>rm</i>           | (Optional) RM                             |
| <i>ifname</i>       | (Optional) interface name as string       |
| <i>sec</i>          | (Optional) secure                         |
| <i>ntfy</i>         | (Optional) notify                         |
| <i>entrycount</i>   | (Optional) Number of L2 entries           |
| <i>l2entry</i>      | (Optional) L2 Entry String                |
| <i>type</i>         | (Optional) MAC type - Static or Dynamic   |

**Command Mode**

- /exec

## show mac address-table

```
show mac address-table [ static | dynamic | secure ] [ local ] [ { [ address1 <mac-addr> | { switch-id <swid>
[ sub-switch-id <sswid> ] } | vlan1 <id> ] + } | { [ address <mac-addr> | interface <interface-name> | vlan
<id> ] + } | { [ address2 <mac-addr> | interface1 <interface-name> | vni <vni-id> | [ peer-ip <peer-ipv4> |
peer-ipv6 <peer-ipv6> ] ] + } | { [ address3 <mac-addr> | interface2 <interface-name> | vni1 <vni-id> | es {
<esid-opt1> | <esid-opt2> | all } ] + } ] [ __readonly__ [ { TABLE_mac_address
<disp_mac_addr><disp_type><disp_vlan> [ <disp_is_static> ]
<disp_age><disp_is_secure><disp_is_ntfy><disp_port> } ] ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | show  |
| mac                   | MAC configuration commands  |
| address-table         | MAC Address Table   |
| static                | (Optional) Display Static Entries   |
| dynamic               | (Optional) Display Dynamic Entries  |
| secure                | (Optional) Display Secure Entries   |
| local                 | (Optional) Display MAC Entries Learned Locally and Not on the Overlay/VXLAN |
| address               | (Optional) address  |

- /exec

## show mac address-table aging-time

show mac address-table aging-time [ *\_\_readonly\_\_* <age\_str> <age> ]

### Syntax Description

|                     |                            |
|---------------------|----------------------------|
| show                | show                       |
| mac                 | MAC configuration commands |
| address-table       | MAC Address Table          |
| aging-time          | Configured/default age     |
| <i>__readonly__</i> | (Optional)                 |
| <i>age_str</i>      | (Optional) Age info        |
| <i>age</i>          | (Optional) Age time        |

### Command Mode

- /exec

## show mac address-table count

```
show mac address-table count [ static | dynamic | secure ] [ local ] [ { [ interface <interface-name> | switch-id
<swid> [ sub-switch-id <sswid> ] } | vlan <id> ] + } | { [ interface1 <interface-name> | vni <vni-id> | [ peer-ip
<peer-ipv4> | peer-ipv6 <peer-ipv6> ] ] + } ] [ __readonly__ TABLE-macaddtblcount [ <id-out> ] [ <count_str>
] [ <dyn_cnt> ] [ <otv_cnt> ] [ <rvtep_static_cnt> ] [ <static_cnt> ] [ <secure_cnt> ] [ <total_cnt> ] ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | show  |
| mac                   | MAC configuration commands  |
| address-table         | MAC Address Table   |
| count                 | Number of MAC entries   |
| static                | (Optional) Display Static Entries   |
| dynamic               | (Optional) Display Dynamic Entries  |
| secure                | (Optional) Display Secure Entries   |
| local                 | (Optional) Display MAC Entries Learned Locally and Not on the Overlay/VXLAN |
| vlan                  | (Optional) VLAN   |
| <i>id</i>             | (Optional) VLAN ID  |
| interface             | (Optional) Interface  |

|                         |  |
|-------------------------|--|
| TABLE-macaddtblcount    | (Optional) MAC Address Dynamic Count Table |
| <i>id-out</i>           | (Optional) MAC Address Table VLAN ID       |
| <i>count_str</i>        | (Optional) Count info                      |
| <i>total_cnt</i>        | (Optional) Total count                     |
| <i>dyn_cnt</i>          | (Optional) Dynamic count                   |
| <i>otv_cnt</i>          | (Optional) OTV count                       |
| <i>static_cnt</i>       | (Optional) Static count                    |
| <i>rvtep_static_cnt</i> | (Optional) RVTEP Static count              |
| <i>secure_cnt</i>       | (Optional) Secure count                    |

**Command Mode**

- /exec

## show mac address-table count es

```
show mac address-table count es { <es-id> | <es-id2> | all } [ __readonly__ { [ <es-id> ] [ <count> ] [
TABLE_macaddtblcount <es-idx> <es-count> ] } ]
```

### Syntax Description

|                      |  |
|----------------------|--|
| show                 | show   |
| mac                  | MAC configuration commands                             |
| address-table        | MAC Address Table                                      |
| count                | Number of MAC entries                                  |
| es                   | EVPN Remote ESID                                       |
| <i>es-id</i>         | EE:EE:EE:EE:EE:EE:EE:EE:EE:EE ESID                     |
| <i>es-id2</i>        | EEEE.EEEE.EEEE.EEEE.EEEE ESID                          |
| all                  | all ESIs   |
| __readonly__         | (Optional)   |
| <i>es-id</i>         | (Optional) Specific ESID                               |
| <i>count</i>         | (Optional) Number of entries for specific ESID         |
| TABLE_macaddtblcount | (Optional) Display all ESID and its count in mac table |
| <i>es-idx</i>        | (Optional) ESID  |
| <i>es-count</i>      | (Optional) Number of entries                           |

### Command Mode

- /exec

## show mac address-table limit

show mac address-table limit { all | system | vlan | interface } [ \_\_readonly\_\_ <limit\_str> <limit> ]

### Syntax Description

|                  |                              |
|------------------|------------------------------|
| show             | show                         |
| mac              | MAC configuration commands   |
| address-table    | MAC Address Table            |
| limit            | Configured/default mac limit |
| __readonly__     | (Optional)                   |
| <i>limit_str</i> | (Optional) Limit info        |
| <i>limit</i>     | (Optional) Mac limit         |
| all              | Display Mac Limit All        |
| system           | System-wide                  |
| vlan             | VLAN                         |
| interface        | Interface                    |

### Command Mode

- /exec

## show mac address-table limit user-defined

show mac address-table limit user-defined [ *\_\_readonly\_\_* <*user\_cnt*> <*fhrp\_cnt*> ]

### Syntax Description

|                     |   |
|---------------------|---|
| show                | show  |
| mac                 | MAC configuration commands  |
| address-table       | MAC Address Table   |
| limit               | mac limit   |
| user-defined        | limit the number of unique mac addresses used on any type of L3 interface |
| <i>__readonly__</i> | (Optional)  |
| <i>user_cnt</i>     | (Optional) user defined mac limit   |
| <i>fhrp_cnt</i>     | (Optional) fhrp limit   |

### Command Mode

- /exec

# show mac address-table loop-detect

show mac address-table loop-detect [ \_\_readonly\_\_ <port\_loop\_detect> ]

## Syntax Description

|                         |  |
|-------------------------|--|
| show                    | show   |
| mac                     | MAC configuration commands   |
| address-table           | MAC  |
| loop-detect             | Display Action for Mac Loop Detection                                      |
| __readonly__            | (Optional)   |
| <i>port_loop_detect</i> | (Optional) Display Port Down Action Mac Loop Detect is enabled or disabled |

## Command Mode

- /exec

## show mac address-table multicast

```
show mac address-table multicast [ vlan <vlan> | bridge-domain <bdid> ] [ __readonly__ [ TABLE_mac [
<vlan-id> ] [ <mac-addr> ] [ <type> ] [ <age> ] [ TABLE_oif [ <oifs> ] ] ] ] ]
```

### Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| mac                 | MAC configuration commands      |
| address-table       | MAC Address Table               |
| multicast           | mcast mac OIF Static Entry      |
| vlan                | (Optional) VLAN                 |
| <i>vlan</i>         | (Optional) VLAN                 |
| bridge-domain       | (Optional) BD                   |
| <i>bdid</i>         | (Optional) BD                   |
| <i>__readonly__</i> | (Optional)                      |
| TABLE_mac           | (Optional)                      |
| <i>vlan-id</i>      | (Optional)                      |
| <i>mac-addr</i>     | (Optional)                      |
| <i>type</i>         | (Optional)                      |
| <i>age</i>          | (Optional)                      |
| TABLE_oif           | (Optional)                      |
| <i>oifs</i>         | (Optional)                      |

### Command Mode

- /exec

## show mac address-table notification mac-move

```
show mac address-table notification mac-move [ __readonly__ TABLE_mac_notif <disp_mm_status>
<disp_mm_triggers> <disp_macs_added> <disp_macs_moved> <disp_macs_moved_border>
<disp_macs_removed> ]
```

### Syntax Description

|                               |  |
|-------------------------------|--|
| show                          | show   |
| mac                           | MAC configuration commands                                   |
| address-table                 | MAC Address Table  |
| notification                  | Display Notification Information                             |
| mac-move                      | Mac Move Notification  |
| <i>__readonly__</i>           | (Optional) Read Only   |
| <i>TABLE_mac_notif</i>        | (Optional) Mac address notification table                    |
| <i>disp_mm_status</i>         | (Optional) Mac Move Status                                   |
| <i>disp_mm_triggers</i>       | (Optional) # of triggers                                     |
| <i>disp_macs_added</i>        | (Optional) Number of MACs added since system bring up        |
| <i>disp_macs_removed</i>      | (Optional) Number of MACs removed since system bring up      |
| <i>disp_macs_moved</i>        | (Optional) Number of MACs moved since system bring up        |
| <i>disp_macs_moved_border</i> | (Optional) Number of MACs moved border since system bring up |

### Command Mode

- /exec

## show macsec mka

```
show macsec mka [ summary ] [ __readonly__ [ <macsec_status> ] [ TABLE_mka_summary <ifname>
<status> <cipher> <keyserver> <policy> <keychain> <fallback_keychain> ] ]
```

### Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information                   |
| macsec                   | Show MACSEC information                           |
| mka                      | Show MKA information                              |
| summary                  | (Optional) Show MKA summary information           |
| __readonly__             | (Optional)  |
| <i>macsec_status</i>     | (Optional) Macsec status                          |
| TABLE_mka_summary        | (Optional)  |
| <i>ifname</i>            | (Optional) Interface                              |
| <i>status</i>            | (Optional) MACSEC Session status                  |
| <i>cipher</i>            | (Optional) Operational MACSEC Cipher-suite        |
| <i>keyserver</i>         | (Optional) Is this acting as interface key-server |
| <i>policy</i>            | (Optional) MACSEC Policy applied to interface     |
| <i>keychain</i>          | (Optional) Keychain associated with interface     |
| <i>fallback_keychain</i> | (Optional) Keychain associated with interface     |

### Command Mode

- /exec

|                                |   |

| <i>TABLE_reset_reason</i> | (Optional)                               |
| <i>rr_bitmap</i>          | (Optional) reset reason bitmap           |
| <i>reset_reason</i>       | (Optional) system reset reason           |

### Command Mode

- /exec

# show maintenance profile

```
show maintenance profile [ <mode> ] [ __readonly__ TABLE_profile <name> [ TABLE_cfg <cfg> ] ]
```

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| maintenance         | maintenance                     |
| profile             | maintenance profile             |
| <i>mode</i>         | (Optional)                      |
| <i>__readonly__</i> | (Optional)                      |
| TABLE_profile       | (Optional)                      |
| <i>name</i>         | (Optional) profile name         |
| TABLE_cfg           | (Optional)                      |
| <i>cfg</i>          | (Optional) profile config       |

## Command Mode

- /exec

# show maintenance snapshot-delay

```
show maintenance snapshot-delay [ __readonly__ <delay> ]
```

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information        |
| maintenance    | maintenance                            |
| snapshot-delay | after_maintenance snapshot delay value |
| __readonly__   | (Optional)                             |
| <i>delay</i>   | (Optional) delay value in seconds      |

## Command Mode

- /exec

# show maintenance timeout

show maintenance timeout [ \_\_readonly\_\_ <timeout> ]

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| maintenance    | maintenance                     |
| timeout        | timeout value                   |
| __readonly__   | (Optional)                      |
| <i>timeout</i> | (Optional) timeout value        |

## Command Mode

- /exec

# show mcast

show mcast [ vsan <i0> ]

## Syntax Description

|           |                                 |
|-----------|---------------------------------|
| show      | Show running system information |
| vsan      | (Optional) Enter VSAN           |
| <i>i0</i> | (Optional) VSAN id              |

## Command Mode

- /exec

# show module

```
show module [ { <module> } | { <s0> [ <santa-cruz-range> ] } | { fabric [ <module> ] } ] [ __readonly__ {

```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information         |
| monitor               | Show Ethernet SPAN information          |
| session               | Show session info                       |
| all                   | All sessions                            |
| <i>session_number</i> |   |
| warp                  | warp session                            |
| range                 | Specify a range                         |
| <i>session_range</i>  |   |
| brief                 | (Optional) Brief information            |
| drops                 | (Optional) show drop count              |
| <u>__readonly__</u>   | (Optional) Read only                    |
| TABLE_session         | (Optional) show monitor                 |
| <i>session_number</i> | (Optional) session number               |
| <i>description</i>    | (Optional) Session Description          |
| <i>type</i>           | (Optional) Session type                 |
| <i>version</i>        | (Optional) Erspan source version: v2/v3 |
| <i>state</i>          | (Optional) State                        |
| <i>state_reason</i>   | (Optional) State reason                 |
| <i>err_desc</i>       | (Optional) Error Description            |

|                           |  |
|---------------------------|--|
| <i>flow_id</i>            | (Optional) erspan-id                           |
| <i>switch_id</i>          | (Optional) erspan_switch-id                    |
| <i>erspan_granularity</i> | (Optional) ERSPAN Type III Granularity         |
| <i>vrf_name</i>           | (Optional) ERSPAN session VRF                  |
| <i>acl_name</i>           | (Optional) ERSPAN session ACL                  |
| <i>erspan_ttl</i>         | (Optional) ERSPAN TTL Value                    |
| <i>erspan_dscp</i>        | (Optional) ERSPAN DSCP Value                   |
| <i>header_type</i>        | (Optional) ERSPAN Header Type                  |
| <i>span_mtu</i>           | (Optional) SPAN MTU value                      |
| <i>span_sampling</i>      | (Optional) SPAN sampling range                 |
| <i>ip_filter</i>          | (Optional) IP filter value                     |
| <i>dst_ip</i>             | (Optional) ERSPAN destination IP               |
| <i>dst_ipv6</i>           | (Optional) ERSPAN destination IPv6             |
| <i>origin_ip</i>          | (Optional) ERSPAN origin IP at source router   |
| <i>origin_ipv6</i>        | (Optional) ERSPAN origin IPv6 at source router |
| <i>src_ip</i>             | (Optional) ERSPAN source IP                    |
| <i>src_ipv6</i>           | (Optional) ERSPAN source IPv6                  |
| <i>control_pkt_filter</i> | (Optional) Control packet filter value         |
| TABLE_sources_rx          | (Optional) ingress intf table                  |
| <i>sources_rx</i>         | (Optional) List of ingress sources             |
| TABLE_sources_tx          | (Optional) egress intf table                   |
| <i>sources_tx</i>         | (Optional) List of egress sources              |
| TABLE_sources_both        | (Optional) bi-direction intf table             |
| <i>sources_both</i>       | (Optional) List of sources in both directions  |
| <i>source_vlans_rx</i>    | (Optional) Source ingress vlan                 |
| <i>source_vsans_rx</i>    | (Optional) Source ingress vsan                 |
| <i>source_vlans_tx</i>    | (Optional) Source egress vlan                  |
| <i>source_vlans_both</i>  | (Optional) Source vlans in both directions     |
| <i>tree-id</i>            | (Optional) proxy layer2 gateway source tree-id |

|                            |   |
|----------------------------|---|
| <i>switchid</i>            | (Optional) proxy layer2 gateway source switchid                   |
| <i>filter_vlans</i>        | (Optional) Filter vlans   |
| <i>destinations</i>        | (Optional) List of destinations                                   |
| <i>acl_destinations</i>    | (Optional) List of interfaces that wont work for acl capture      |
| <i>rate_limit_cap</i>      | (Optional) List of modules that support Rate Limit                |
| <i>mtu_capability</i>      | (Optional) List of modules that support MTU                       |
| <i>sampling_capability</i> | (Optional) List of modules that support Sampling                  |
| <i>mcbe</i>                | (Optional) List all modules that support multicast best effort    |
| <i>l3_egress_span</i>      | (Optional) List of modules that support L3 Multicast Egress SPAN  |
| <i>erspan_acl</i>          | (Optional) List of modules that support ERSPAN ACL filtering      |
| <i>erspan_v3_cap</i>       | (Optional) List of modules that support erspan version3           |
| <i>erspan_v2_cap</i>       | (Optional) List of modules that support erspan version2           |
| <i>erspan_gran_cap</i>     | (Optional) List of modules that support the granularity set       |
| <i>fex_ingress_intf</i>    | (Optional) List of fex interfaces that wont work for ingress span |
| <i>erspan_egress_if</i>    | (Optional) Egress interface for ERSPAN SRC session                |
| <i>sources_rx_2</i>        | (Optional) List of ingress sources                                |
| <i>marker_time_intv</i>    | (Optional) Marker packet interval                                 |
| <i>marker_pkt_count</i>    | (Optional) Marker packet count                                    |
| <i>marker_pkt_fail</i>     | (Optional) Marker packet fail count                               |
| <i>drops</i>               | (Optional) Drop count   |
| <i>inactive</i>            | (Optional) Session is inactive                                    |

**Command Mode**

- /exec

# show mpls extended-ecmp

show mpls extended-ecmp

## Syntax Description

|               |                                 |
|---------------|---------------------------------|
| show          | Show running system information |
| mpls          | MPLS routing ECMP mode          |
| extended-ecmp | extended-ecmp mode (default)    |

## Command Mode

- /exec

## show mpls forwarding statistics

```
show mpls forwarding statistics [ interface { <interface> | all } ] [ __readonly__ { TABLE_mpls_stats [
<intf_name> ] <mpls_packets_sent> <mpls_bytes_sent> <mpls_packets_received> <mpls_bytes_received>
<mpls_packets_forwarded> <mpls_bytes_forwarded> <mpls_packets_originated> <mpls_bytes_originated>
<mpls_packets_consumed> <mpls_bytes_consumed> <mpls_packets_input_dropped>
<mpls_bytes_input_dropped> <mpls_packets_output_dropped> <mpls_bytes_output_dropped> } ]
```

### Syntax Description

|                                    |   |

```

### Syntax Description

|                        |  |
|------------------------|--|
| show                   | Show running system information                        |
| mpls                   | Display MPLS status and configuration                  |
| ip                     | MPLS IP information                                    |
| bindings               | Show the MPLS IP Label Information Base (LIB)          |
| vrf                    | (Optional) VRF Routing/Forwarding instance information |
| <i>vrf-name</i>        | (Optional) VPN Routing/Forwarding instance name        |
| <i>vrf-known-name</i>  | (Optional) Known VRF name                              |
| all                    | (Optional) Display LIB information in all VRFs         |
| generic                | (Optional) Display generic labels                      |
| <i>prefix</i>          | (Optional) Destination prefix                          |
| <i>mask</i>            | (Optional) Destination prefix mask                     |
| <i>mask-length</i>     | (Optional) Mask length                                 |
| <i>prefix-mask</i>     | (Optional) Destination prefix/mask                     |
| longer-prefix          | (Optional) Include longer matches                      |
| neighbor               | (Optional) Display labels from LDP neighbor            |
| <i>addr</i>            | (Optional) IP adjacency address                        |
| local                  | (Optional) Display only locally assigned labels        |
| local-label            | (Optional) Match locally assigned label values         |
| <i>local-label</i>     | (Optional) Locally assigned label value                |
| local-to               | (Optional) Label range                                 |
| <i>local-label-max</i> | (Optional) Locally assigned label value                |

|                           |  |
|---------------------------|--|
| remote-label              | (Optional) Match remotely assigned label values                |
| <i>remote-label</i>       | (Optional) Remotely assigned label value                       |
| remote-to                 | (Optional) Label range   |
| <i>remote-label-max</i>   | (Optional) Remotely assigned label value                       |
| advertisement-prefix-list | (Optional) Show advertisement prefix lists                     |
| detail                    | (Optional) Show detailed information                           |
| __readonly__              | (Optional) Read Only   |
| TABLE_bnd                 | (Optional) Show bindings or tib summary for a vrf              |
| <i>ldp_ctx</i>            | (Optional) LDP context   |
| <i>llaf</i>               | (Optional) Local label filtering spec                          |
| TABLE_bnd_acl_list        | (Optional) Show advertisement access lists for default vrf     |
| <i>oldstyle</i>           | (Optional) Oldstyle assignment of prefix acls to entries       |
| <i>prefix_acl</i>         | (Optional) Prefix acl  |
| <i>peer_acl</i>           | (Optional) Peer acl  |
| TABLE_bnd_rec             | (Optional) Show bindings in a vrf                              |
| <i>lib_addr</i>           | (Optional) LIB entry IP address                                |
| <i>lib_mask</i>           | (Optional) LIB entry mask                                      |
| <i>lcl_bnd_rev</i>        | (Optional) Local binding revision for lib entry                |
| <i>no_route</i>           | (Optional) Displays if no route present for lib entry          |
| <i>chkpt</i>              | (Optional) Checkpoint state for lib entry                      |
| <i>local_label</i>        | (Optional) Local label   |
| <i>withdraw</i>           | (Optional) Displays if label withdrawn or label withdraw sent  |
| TABLE_bnd_remote          | (Optional) Remote bindings                                     |
| <i>remote_lsr</i>         | (Optional) Remote binding label switched route for lib entry   |
| <i>remote_label</i>       | (Optional) Remote label for lib entry                          |
| <i>rem_lbl_in_use</i>     | (Optional) Displays if out label is in use                     |
| <i>stale_gr</i>           | (Optional) Displays if stale GR binding for lib entry          |
| <i>advert_acl_pending</i> | (Optional) Displays if advert acl action pending for lib entry |
| <i>peer_acl</i>           | (Optional) Advertisement acl: Peer acl name for lib entry      |

|                     |  |
|---------------------|--|
| <i>prefix_acl</i>   | (Optional) Advertisement acl: Prefix acl name for lib entry            |
| TABLE_bnd_peer_list | (Optional) Show list of peers to which local label has been advertised |
| <i>peer_ident</i>   | (Optional) Peer to which local label has been advertised               |

**Command Mode**

- /exec

## show mpls ip bindings summary

```
show mpls ip bindings summary [ __readonly__ { TABLE_bnd [ <total_prefixes> ] [ <assigned_bindings>
] [ <local_bindings> ] [ <rem_bindings> ] [ <total_rt_info> ] [ <current_prev_lbl_entries> ] [
<total_prev_lbl_entries> ] [ <current_prev_lbl_queues> ] [ <total_prev_lbl_queues> ] } ]
```

### Syntax Description

|                                 |  |
|---------------------------------|--|
| show                            | Show running system information  |
| mpls                            | Display MPLS status and configuration                                    |
| ip                              | MPLS IP information  |
| bindings                        | Show the MPLS IP Label Information Base (LIB)                            |
| summary                         | Show summary information   |
| <i>__readonly__</i>             | (Optional) Read Only   |
| <i>TABLE_bnd</i>                | (Optional) Show bindings or tib summary for a vrf                        |
| <i>total_prefixes</i>           | (Optional) Total number of prefixes                                      |
| <i>assigned_bindings</i>        | (Optional) Total number of assigned bindings                             |
| <i>total_rt_info</i>            | (Optional) Total tib route info allocated                                |
| <i>local_bindings</i>           | (Optional) Total number of locally assigned bindings                     |
| <i>rem_bindings</i>             | (Optional) Total number of remote bindings                               |
| <i>current_prev_lbl_entries</i> | (Optional) Current number of previous tib remote label entries allocated |
| <i>total_prev_lbl_entries</i>   | (Optional) Total number of previous tib remote label entries allocated   |
| <i>current_prev_lbl_queues</i>  | (Optional) Current number of previous tib remote label queues allocated  |
| <i>total_prev_lbl_queues</i>    | (Optional) Total number of previous tib remote label queues allocated    |

### Command Mode

- /exec

# show mpls ip ttl

```
show mpls ip ttl [ __readonly__ TABLE_mpls_ip_ttl <prop_or_exp> [ <forwarded> ] [ <local> ] [ <exp_count> ] ]
```

## Syntax Description

|                          |                                       |
|--------------------------|---------------------------------------|
| show                     | Show running system information       |
| mpls                     | Display MPLS status and configuration |
| ip                       | Display IP information                |
| ttl                      | TTL related information               |
| <i>__readonly__</i>      | (Optional)                            |
| <i>TABLE_mpls_ip_ttl</i> | (Optional)                            |
| <i>prop_or_exp</i>       | (Optional)                            |
| <i>forwarded</i>         | (Optional)                            |
| <i>local</i>             | (Optional)                            |
| <i>exp_count</i>         | (Optional)                            |

## Command Mode

- /exec

# show mpls label range

```
show mpls label range [ __readonly__ <dynamic-min> <dynamic-max> [ <static-min> <static-max> ] [
<srgb-min> <srgb-max> ] ]
```

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| mpls                | MPLS configuration commands     |
| label               | Label properties                |
| range               | Label range                     |
| <i>__readonly__</i> | (Optional)                      |
| <i>dynamic-min</i>  | (Optional)                      |
| <i>dynamic-max</i>  | (Optional)                      |
| <i>static-min</i>   | (Optional)                      |
| <i>static-max</i>   | (Optional)                      |
| <i>srgb-min</i>     | (Optional)                      |
| <i>srgb-max</i>     | (Optional)                      |

## Command Mode

- /exec

# show mpls load-sharing

```
show mpls load-sharing [ __readonly__ TABLE_mpls_load_sharing [ <label-ip> ] [ <label-only> ] ]
```

## Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information        |
| mpls                    | MPLS information                       |
| load-sharing            | Show mpls load sharing options         |
| __readonly__            | (Optional)                             |
| TABLE_mpls_load_sharing | (Optional) Table for MPLS Load Sharing |
| <i>label-ip</i>         | (Optional) Label IP load sharing       |
| <i>label-only</i>       | (Optional) Label only load sharing     |

## Command Mode

- /exec

## show mpls oam echo statistics

```
show mpls oam echo statistics [ summary ] [ __readonly__ <rq_sent> <rq_timeout> <rq_unsent> <rq_rcvd>
<rx_sent> <rx_unsent> <rx_rcvd> <rc_zero> <rc_one> <rc_two> <rc_three> <rc_four> <rc_five> <rc_six>
<rc_seven> <rc_eight> <rc_nine> <rc_ten> <rc_eleven> <rc_twelve> <rc_thirteen> <rc_fourteen>
<summary_flag> ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information           |
| mpls                | Display MPLS status and configuration     |
| oam                 | Display OAM information                   |
| echo                | Echo request information                  |
| statistics          | Detailed Echo packet statistics           |
| summary             | (Optional) Echo packet statistics summary |
| <i>__readonly__</i> | (Optional)                                |
| <i>rq_sent</i>      | (Optional) Requests sent                  |
| <i>rq_timeout</i>   | (Optional) Requests timeout               |
| <i>rq_unsent</i>    | (Optional) Requests unsent                |
| <i>rq_rcvd</i>      | (Optional) Requests received              |
| <i>rx_sent</i>      | (Optional) Replies sent                   |
| <i>rx_unsent</i>    | (Optional) Replies unsent                 |
| <i>rx_rcvd</i>      | (Optional) Replies received               |
| <i>rc_zero</i>      | (Optional) Return code zero               |
| <i>rc_one</i>       | (Optional) Return code one                |
| <i>rc_two</i>       | (Optional) Return code two                |
| <i>rc_three</i>     | (Optional) Return code three              |
| <i>rc_four</i>      | (Optional) Return code four               |
| <i>rc_five</i>      | (Optional) Return code five               |
| <i>rc_six</i>       | (Optional) Return code six                |
| <i>rc_seven</i>     | (Optional) Return code seven              |
| <i>rc_eight</i>     | (Optional) Return code eight              |

|                     |                                 |
|---------------------|---------------------------------|
| <i>rc_nine</i>      | (Optional) Return code nine     |
| <i>rc_ten</i>       | (Optional) Return code ten      |
| <i>rc_eleven</i>    | (Optional) Return code eleven   |
| <i>rc_twelve</i>    | (Optional) Return code twelve   |
| <i>rc_thirteen</i>  | (Optional) Return code thirteen |
| <i>rc_fourteen</i>  | (Optional) Return code fourteen |
| <i>summary_flag</i> | (Optional) Summary flag         |

**Command Mode**

- /exec

## show mpls static binding

```
show mpls static binding [ vrf { <vrf-name> | <vrf-known-name> } ] { { ipv4 [ <prefix> { <mask> |
<mask-length> } | <prefix-mask> ] [ local | remote ] [ nexthop <addr> ] [ inconsistency ] [ lsp <slb_name> ]
} | { ipv6 [ <ipv6-prefix> ] [ local | remote ] [ ipv6-nexthop <ipv6-addr> ] [ inconsistency ] } | all [ inconsistency
] } [ __readonly__ [ TABLE_slb [ <slb_name> ] [ <slb_prefix> ] [ <slb_mask> ] <slb_vrf> <slb_inlabel> [

**Command Mode**

- /exec

# show ngoam interface statistics

```
show ngoam interface statistics [ __readonly__ [ TABLE_stats { <interface-name> <tx> <rx> } <statistics-end> ] ]
```

## Syntax Description

|                       |  |
|-----------------------|--|
| TABLE_stats           | (Optional) interface statistics table            |
| <i>interface-name</i> | (Optional) interface namestring                  |
| <i>tx</i>             | (Optional) ngoam probe transmit on the interface |
| <i>rx</i>             | (Optional) ngoam probe receive on the interface  |
| show                  | Show running system information                  |
| ngoam                 | ngoam  |
| interface             | probe packet interface                           |
| statistics            | ngoam probe interface statistics                 |
| __readonly__          | (Optional) Read Only                             |
| <i>statistics-end</i> | (Optional) statistics table end marker           |

## Command Mode

- /exec

## show ngoam loop-detection status

```
show ngoam loop-detection status [ vlan <vlan-range> [ port <port-range> ] ] [ history ] [ __readonly__
<top-line> [ TABLE_loopdetection_status { <vlanId> <portId> <state> <numLoops> <loopDetectedTime>
<loopClearedTime> } ] ]
```

### Syntax Description

|                            |  |
|----------------------------|--|
| show                       | Show running system information                                    |
| ngoam                      | Configure ngoam  |
| loop-detection             | Configure sld  |
| status                     | show blocked/recovering state loops                                |
| vlan                       | (Optional) ngoam loop-detection vlan                               |
| port                       | (Optional) ngoam loop-detection port                               |
| history                    | (Optional) show history of loops detected                          |
| <i>vlan-range</i>          | (Optional) vlan range max span 1024, Example: 2000-3000,400,500    |
| <i>port-range</i>          | (Optional) Interface for loop detection                            |
| <i>__readonly__</i>        | (Optional) Read Only   |
| TABLE_loopdetection_status | (Optional) Loop detection status table                             |
| <i>vlanId</i>              | (Optional) Vlan id of loop detected                                |
| <i>portId</i>              | (Optional) Port name of loop detected                              |
| <i>state</i>               | (Optional) Port status   |
| <i>loopDetectedTime</i>    | (Optional) Loop detection time stamp                               |
| <i>loopClearedTime</i>     | (Optional) Loop Cleared time stamp                                 |
| <i>numLoops</i>            | (Optional) Number of times loop detected for given vlanid and port |
| <i>top-line</i>            | (Optional) Placeholder for printing the status header              |

### Command Mode

- /exec

## show ngoam loop-detection summary

```
show ngoam loop-detection summary [ __readonly__ [ TABLE_loopdetection_summary { <enable>
<periodic_probe_interval> <port_recovery_interval> <numVlans> <numPorts> <numLoops>
<numPortsBlocked> <numVlansDisabled> <numPortsDisabled> <totalProbesSent> <totalProbesReceived>
<nextProbeTime> <nextRecoveryTime> } ] ]
```

### Syntax Description

|                                    |  |
|------------------------------------|--|
| show                               | Show running system information                                |
| ngoam                              | Configure ngoam  |
| loop-detection                     | Show loop detection  |
| summary                            | ngoam loop detection summary                                   |
| <i>__readonly__</i>                | (Optional) Read Only   |
| <i>TABLE_loopdetection_summary</i> | (Optional) Loop detection summary table                        |
| <i>enable</i>                      | (Optional) Loop detection enable                               |
| <i>periodic_probe_interval</i>     | (Optional) Loop detection probe interval                       |
| <i>port_recovery_interval</i>      | (Optional) Loop detection port recovery time                   |
| <i>numVlans</i>                    | (Optional) Number of vlan Loop detection is active monitoring  |
| <i>numPorts</i>                    | (Optional) Number of ports Loop detection is active monitoring |
| <i>numLoops</i>                    | (Optional) Number of loops detected                            |
| <i>numPortsBlocked</i>             | (Optional) Number of ports blocked by the loop detection       |
| <i>numVlansDisabled</i>            | (Optional) Number of VLANs,loop detection has disabled         |
| <i>numPortsDisabled</i>            | (Optional) Number of ports,loop detection has disabled         |
| <i>totalProbesSent</i>             | (Optional) Total number of probes sent                         |
| <i>totalProbesReceived</i>         | (Optional) Total number of probes received                     |
| <i>nextProbeTime</i>               | (Optional) Next probe window start time                        |
| <i>nextRecoveryTime</i>            | (Optional) Next recovery window start time                     |

### Command Mode

- /exec

# show ngoam loopback

```

| dbdump                      | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |

**Command Mode**

- /exec

# show npiv status

show npiv status

## Syntax Description

|        |   |
|--------|---|
| show   | Show running system information         |
| npiv   | Show information about the npiv feature |
| status | Show the status of the npiv feature     |

## Command Mode

- /exec

## show npv external-interface-usage

```
show npv external-interface-usage [ server-interface <if0> ] [ __readonly__ { TABLE_intf_usage <svr_intf>
<ext_intf> } ]
```

### Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information                                |
| npv                      | Show information about NPV                                     |
| external-interface-usage | Show external interface usage by server interfaces             |
| server-interface         | (Optional) Show external interface usage by a server interface |
| <i>if0</i>               | (Optional)   |
| __readonly__             | (Optional) Read Only   |
| TABLE_intf_usage         | (Optional) External Interfaces Usage Table                     |
| <i>svr_intf</i>          | (Optional) Server Interface                                    |
| <i>ext_intf</i>          | (Optional) External Interface                                  |

### Command Mode

- /exec

# show npv flogi-table

```
show npv flogi-table [ { interface <iif0> | vsan <iid> } ] [ __readonly__ [ [ TABLE_flogi <svr_intf> <vsan_id>
<fcid> <pwwn> <ext_intf> <nwwn> ] [ <flogi_count> ] ] ]
```

## Syntax Description

|                    |   |
|--------------------|---|
| show               | Show running system information   |
| npv                | Show information about NPV  |
| flogi-table        | Show information about FLOGI sessions                                   |
| interface          | (Optional) Show information about FLOGI sessions for a server interface |
| <i>if0</i>         | (Optional)  |
| vsan               | (Optional) Show information about FLOGI sessions for a VSAN             |
| <i>id</i>          | (Optional)  |
| __readonly__       | (Optional) Read Only  |
| TABLE_flogi        | (Optional) FLOGI Table  |
| <i>svr_intf</i>    | (Optional) Server Interface   |
| <i>vsan_id</i>     | (Optional) VSAN ID  |
| <i>fcid</i>        | (Optional) FLOGI FCID   |
| <i>pwwn</i>        | (Optional) The PWWN   |
| <i>ext_intf</i>    | (Optional) External Interface   |
| <i>nwwn</i>        | (Optional) The NWWN   |
| <i>flogi_count</i> | (Optional) Total FLOGI Count  |

## Command Mode

- /exec

## show npv status

```
show npv status [ vsan <i0> ] [ __readonly__ [ [ <npiv_status> ] [ <load_balance> ] [ { TABLE_extintf
<ext_intf> [ <ext_vsan> ] [ <ext_fcid> ] <ext_state> [ { TABLE_vsan <vsan_vsan> <vsan_state> [ <vsan_fcid>
] } ] ] ] <ext_intf_count> [ { TABLE_svrntf <svr_intf> <svr_vsan> <svr_state> } ] <svr_intf_count> ] ]
```

### Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                |
| npv            | Show information about NPV                     |
| status         | Show NPV status                                |
| vsan           | (Optional) Show NPV status for a specific VSAN |
| i0             | (Optional)                                     |
| __readonly__   | (Optional) Read Only                           |
| npiv_status    | (Optional) NPIV enable/disable status          |
| load_balance   | (Optional) disruptive load balance status      |
| TABLE_extintf  | (Optional) External Interfaces Table           |
| ext_intf       | (Optional) External Interface                  |
| ext_vsan       | (Optional) External Interface VSAN             |
| ext_fcid       | (Optional) External Interface FCID             |
| ext_state      | (Optional) External Interface State            |

| vsan_vsan      | (Optional) External Interface VSAN             |
| vsan_state     | (Optional) VSAN State                          |
| vsan_fcid      | (Optional) VSAN FCID                           |
| ext_intf_count | (Optional) External Interface count            |
| TABLE_svrntf   | (Optional) Server Interfaces Table             |
| svr_intf       | (Optional) Server Interface                    |
| svr_vsan       | (Optional) Server Interface VSAN               |
| svr_state      | (Optional) Server Interface State              |
| svr_intf_count | (Optional) Server Interface count              |

### Command Mode

- /exec

# show npv traffic-map

```
show npv traffic-map [ server-interface <if0> ] [ __readonly__ [ { TABLE_traffic_map <svr_intf> <ext_intf>
} ] ]
```

## Syntax Description

|                   |  |
|-------------------|--|
| show              | Show running system information                                      |
| npv               | Show information about NPV   |
| traffic-map       | Show information about Traffic Map                                   |
| server-interface  | (Optional) Show information about Traffic map for a server interface |
| <i>if0</i>        | (Optional)   |
| __readonly__      | (Optional) Read Only   |
| TABLE_traffic_map | (Optional) Traffic Map Table   |
| <i>svr_intf</i>   | (Optional) Server Interface  |
| <i>ext_intf</i>   | (Optional) External Interface  |

## Command Mode

- /exec

## show ntp access-groups

```
show ntp access-groups [ __readonly__ [ <matchall> ] [ { TABLE_accessgroups <accesslist> [ <type> } ] ]
```

### Syntax Description

|                    |                                 |
|--------------------|---------------------------------|
| show               | Show running system information |
| ntp                | Show NTP information            |
| access-groups      | Display NTP access groups       |
| __readonly__       | (Optional)                      |
| <i>matchall</i>    | (Optional) matchall             |
| TABLE_accessgroups | (Optional) accessgroups         |
| <i>accesslist</i>  | (Optional) accesslist           |
| <i>type</i>        | (Optional) type                 |

### Command Mode

- /exec

# show ntp authentication-keys

```
show ntp authentication-keys [ __readonly__ [ { TABLE_authkeys <Authkey> [ <MD5String> ] } ] ]
```

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| ntp                 | Show NTP information            |

```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information          |
| ntp                 | Show NTP information                     |
| peer-status         | Show the status for all the server/peers |
| <i>__readonly__</i> | (Optional)                               |
| <i>totalpeers</i>   | (Optional) totalpeers                    |
| TABLE_peersstatus   | (Optional) peersstatus                   |
| <i>syncmode</i>     | (Optional) peermode                      |
| <i>remote</i>       | (Optional) remote addr                   |
| <i>local</i>        | (Optional) local addr                    |
| <i>st</i>           | (Optional) stratum                       |
| <i>poll</i>         | (Optional) ntp poll                      |
| <i>reach</i>        | (Optional) reach                         |
| <i>delay</i>        | (Optional) delay                         |
| <i>vrf</i>          | (Optional) vrf name                      |

### Command Mode

- /exec

# show ntp peers

```
show ntp peers [ __readonly__ [ { TABLE_peers <PeerIPAddress> <serv_peer> <conf_flag> } ] ]
```

## Syntax Description

|                      |                                  |
|----------------------|----------------------------------|
| show                 | Show running system information  |
| ntp                  | Show NTP information             |
| peers                | Show all the peers.              |
| __readonly__         | (Optional)                       |
| TABLE_peers          | (Optional) peers                 |
| <i>PeerIPAddress</i> | (Optional) peer Ip addr          |
| <i>serv_peer</i>     | (Optional) server or peer        |
| <i>conf_flag</i>     | (Optional) configured or dynamic |

## Command Mode

- /exec

# show ntp rts-update

show ntp rts-update [ \_\_readonly\_\_ [ <rtsupdate> ] ]

## Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information        |
| ntp              | Show NTP information                   |
| rts-update       | Show if the RTS update is enabled      |
| __readonly__     | (Optional)                             |
| <i>rtsupdate</i> | (Optional) rts update enabled/disabled |

## Command Mode

- /exec

# show ntp session status

```
show ntp session status [ __readonly__ [ <session_status> ] ]
```

## Syntax Description

|                       |                                 |
|-----------------------|---------------------------------|
| show                  | Show running system information |
| ntp                   | Show NTP information            |
| session               | Show the session information    |
| status                | Show the session status         |
| <i>__readonly__</i>   | (Optional)                      |
| <i>session_status</i> | (Optional) last session status  |

## Command Mode

- /exec

# show ntp source-interface

show ntp source-interface [ \_\_readonly\_\_ [ <sourceinterface> ] ]

## Syntax Description

|                        |                                 |
|------------------------|---------------------------------|
| show                   | Show running system information |
| ntp                    | Show NTP information            |
| source-interface       | Source interface configured     |
| __readonly__           | (Optional)                      |
| <i>sourceinterface</i> | (Optional) source interface     |

## Command Mode

- /exec

# show ntp source

```
show ntp source [ __readonly__ [ { TABLE_sourceip <sourceip> } ] ]
```

## Syntax Description

|                 |                                 |
|-----------------|---------------------------------|
| show            | Show running system information |
| ntp             | Show NTP information            |
| source          | Source IP address configured    |
| __readonly__    | (Optional)                      |
| TABLE_sourceip  | (Optional) source ip table      |
| <i>sourceip</i> | (Optional) source ip addr       |

## Command Mode

- /exec

## show ntp statistics

```
show ntp statistics [ { io } | [ local ] | [ memory ] | peer { ipaddr { <ipv4_0> | <ipv6_1> } | name <s0> } } [
__readonly__ [ { <iotimesincereset> <ioreceivebuffers> <iofreereceivebuffers> <iousedreceivebuffers>
<iolowwaterrefills> <iodroppedpackets> <ioignoredpackets> <ioreceivedpackets> <iopacketsent>
<iopacketsnotsent> <iointerruptshandled> <ioreceivedbyint> } ] [ { <localsystemuptime> <localtimesincereset>
<localoldversionpackets> <localnewversionpackets> <localunknownversionnumber> <localbadpacketformat>
<localpacketsprocessed> <localbadauthentication> [ <localpacketsrejected> } ] [ { <memtimesincereset>
<memtotalpeermemory> <memfreepeermemory> <memcallstofindpeer> <memnewpeerallocations>
<mempeerdemobilizations> <memhashtablecounts> } ] [ { <peeripremotehost> <peeriplocalinterface>
<peeriptimelastreceived> <peeriptimeuntilnextsend> <peeripreachabilitychange> <peerippacketsent>
<peerippacketsreceived> <peeripbadauthentication> <peeripbogusorigin> <peeripduplicate>
<peeripbaddispersion> <peeripbadreferencetime> <peeripcandidateorder> } ] [ { <peernameremotehost>
<peernamelocalinterface> <peernametimelastreceived> <peernametimeuntilnextsend>
<peernamereachabilitychange> <peernamepacketsent> <peernamepacketsreceived>
<peernamebadauthentication> <peernamebogusorigin> <peernameduplicate> <peernameduplicate>
<peernamebaddispersion> <peernamebadreferencetime> <peernamecandidateorder> } ] ] ]
```

### Syntax Description

|                             |   |
|-----------------------------|---|
| show                        | Show running system information                                 |
| ntp                         | Show NTP information  |
| statistics                  | Show the NTP statistics   |
| io                          | (Optional) Show the input-output statistics.                    |
| local                       | (Optional) Show the counters maintained by the local NTP.       |
| memory                      | (Optional) Show the statistics counters related to memory code. |
| peer                        | Show the per-peer statistics counter of a peer.                 |
| ipaddr                      | Peer's IP address   |
| <i>ipv4_0</i>               |   |
| name                        | Peer's Name   |
| <i>s0</i>                   |   |
| <i>__readonly__</i>         | (Optional)  |
| <i>iotimesincereset</i>     | (Optional) time since reset                                     |
| <i>ioreceivebuffers</i>     | (Optional) receive buffers                                      |
| <i>iofreereceivebuffers</i> | (Optional) free receive buffers                                 |
| <i>iousedreceivebuffers</i> | (Optional) used receive buffers                                 |
| <i>iolowwaterrefills</i>    | (Optional) low water refills                                    |

|                                  |                                     |
|----------------------------------|-------------------------------------|
| <i>iodroppedpackets</i>          | (Optional) dropped packets          |
| <i>ioignoredpackets</i>          | (Optional) ignored packets          |
| <i>ioreceivedpackets</i>         | (Optional) received packets         |
| <i>iopacketsent</i>              | (Optional) packets sent             |
| <i>iopacketsnotsent</i>          | (Optional) packets not sent         |
| <i>iointerruptshandled</i>       | (Optional) interrupts handled       |
| <i>ioreceivedbyint</i>           | (Optional) received by int          |
| <i>localsystemuptime</i>         | (Optional) system up time           |
| <i>localtimesincereset</i>       | (Optional) time since reset         |
| <i>localoldversionpackets</i>    | (Optional) old version packets      |
| <i>localnewversionpackets</i>    | (Optional) new version packets      |
| <i>localunknownversionnumber</i> | (Optional) unknown version number   |
| <i>localbadpacketformat</i>      | (Optional) bad packet format        |
| <i>localpacketsprocessed</i>     | (Optional) packets processed        |
| <i>localbadauthentication</i>    | (Optional) bad authentication       |
| <i>localpacketsrejected</i>      | (Optional) packets rejected         |
| <i>memtimesincereset</i>         | (Optional) time since reset         |
| <i>memtotalpeermemory</i>        | (Optional) total peer memory        |
| <i>memfreepeermemory</i>         | (Optional) free peer memory         |
| <i>memcallstofindpeer</i>        | (Optional) calls to find peer       |
| <i>memnewpeerallocations</i>     | (Optional) new peer allocations     |
| <i>mempeerdemobilizations</i>    | (Optional) peer demobilizations     |
| <i>memhashtablecounts</i>        | (Optional) hash table counts        |
| <i>peeripremotehost</i>          | (Optional) peeripremotehost         |
| <i>peeriplocalinterface</i>      | (Optional) peeriplocalinterface     |
| <i>peeriptimelastreceived</i>    | (Optional) peeriptimelastreceived   |
| <i>peeriptimeuntilnextsend</i>   | (Optional) peeriptimeuntilnextsend  |
| <i>peeripreachabilitychange</i>  | (Optional) peeripreachabilitychange |
| <i>peerippacketsent</i>          | (Optional) peerippacketsent         |

|                                    |  |
|------------------------------------|--|
| <i>peerippacketsreceived</i>       | (Optional) peerippacketsreceived       |
| <i>peeripbadauthentication</i>     | (Optional) peeripbadauthentication     |
| <i>peeripbogusorigin</i>           | (Optional) peeripbogusorigin           |
| <i>peeripduplicate</i>             | (Optional) peeripduplicate             |
| <i>peeripbaddispersion</i>         | (Optional) peeripbaddispersion         |
| <i>peeripbadreferencetime</i>      | (Optional) peeripbadreferencetime      |
| <i>peeripcandidateorder</i>        | (Optional) peeripcandidateorder        |
| <i>peername remotehost</i>         | (Optional) peername remotehost         |
| <i>peername localinterface</i>     | (Optional) peername localinterface     |
| <i>peername timelastreceived</i>   | (Optional) peername timelastreceived   |
| <i>peername timeuntilnextsend</i>  | (Optional) peername timeuntilnextsend  |
| <i>peername reachabilitychange</i> | (Optional) peername reachabilitychange |
| <i>peername packetsent</i>         | (Optional) peername packetsent         |
| <i>peername packetsreceived</i>    | (Optional) peername packetsreceived    |
| <i>peername badauthentication</i>  | (Optional) peername badauthentication  |
| <i>peername bogusorigin</i>        | (Optional) peername bogusorigin        |
| <i>peername duplicate</i>          | (Optional) peername duplicate          |
| <i>peername baddispersion</i>      | (Optional) peername baddispersion      |
| <i>peername badreferencetime</i>   | (Optional) peername badreferencetime   |
| <i>peername candidateorder</i>     | (Optional) peername candidateorder     |

### Command Mode

- /exec

# show ntp status

```
show ntp status [ __readonly__ [ <distribution> ] [ <operational_state> ] ]
```

## Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information          |
| ntp                      | Show NTP information                     |
| status                   | Show the NTP distribution status         |
| <i>__readonly__</i>      | (Optional)                               |
| <i>distribution</i>      | (Optional) distribution enabled/disabled |
| <i>operational_state</i> | (Optional) last operation status         |

## Command Mode

- /exec

# show ntp trusted-keys

```
show ntp trusted-keys [ __readonly__ [ { TABLE_trustkeys <key> } ] ]
```

## Syntax Description

|                 |                                 |
|-----------------|---------------------------------|
| show            | Show running system information |
| ntp             | Show NTP information            |
| trusted-keys    | Display trusted keys            |
| __readonly__    | (Optional)                      |
| TABLE_trustkeys | (Optional) trusted keys         |
| <i>key</i>      | (Optional) trusted key          |

## Command Mode

- /exec

## show nve adjacency mpls

```
show nve adjacency mpls [ __readonly__ TABLE_nve_mpls_adj [ { <peer-ip> | <peer-ipv6> } <evi> <label-sr>
<learn-mask> <pending-state> <adj-state> ] ]
```

### Syntax Description

|                           |   |
|---------------------------|---|
| show                      | Display NVE information                     |
| nve                       | Configure NVE information                   |
| adjacency                 | Downstream Adjacencies                      |
| mpls                      | Segment routing                             |
| <i>__readonly__</i>       | (Optional)                                  |
| <i>TABLE_nve_mpls_adj</i> | (Optional) xml schema for sr nve parameters |
| <i>peer-ip</i>            | (Optional) Peer IP address v4               |
| <i>evi</i>                | (Optional) EVI value                        |
| <i>label-sr</i>           | (Optional) SR Label                         |
| <i>learn-mask</i>         | (Optional) Learn mask for the peer          |
| <i>pending-state</i>      | (Optional) Peer adjacency pending state     |
| <i>adj-state</i>          | (Optional) Peer adjacency state             |

### Command Mode

- /exec

## show nve bfd neighbors

```
show nve bfd neighbors [ __readonly__ [ TABLE_nve_bfd_neighbors <if-name> [ { <neighbor-vtep-ip>
<neighbor-inner-ip> <neighbor-inner-mac> <neighbor-cc-state> } ] ] ]
```

### Syntax Description

|                                |  |
|--------------------------------|--|
| show                           | Display NVE information                            |
| nve                            | Configure NVE information                          |
| bfd                            | BFD  |
| neighbors                      | neighbors  |
| <i>__readonly__</i>            | (Optional)   |
| <i>TABLE_nve_bfd_neighbors</i> | (Optional) BFD neighbors schema                    |
| <i>if-name</i>                 | (Optional) if-name                                 |
| <i>neighbor-vtep-ip</i>        | (Optional) Remote VTEP IP address                  |
| <i>neighbor-inner-ip</i>       | (Optional) Remote VTEP Inner IP address            |
| <i>neighbor-inner-mac</i>      | (Optional) Remote VTEP Inner MAC address           |
| <i>neighbor-cc-state</i>       | (Optional) Remote VTEP vPC consistency check state |

### Command Mode

- /exec

## show nve core-links

```
show nve core-links [ __readonly__ [ TABLE_core_link <if-name> [ { <if-state> } ] ] ]
```

### Syntax Description

|                 |   |
|-----------------|---|
| show            | Display NVE information                       |
| nve             | Configure NVE information                     |
| core-links      | Core-links                                    |
| __readonly__    | (Optional)                                    |
| TABLE_core_link | (Optional) xml schema for show nve core-links |
| <i>if-name</i>  | (Optional) core-link interface name           |
| <i>if-state</i> | (Optional) core-link interface oper state     |

### Command Mode

- /exec

|                             |  |
|-----------------------------|--|
| <i>config-status</i>        | (Optional) config state                          |
| <i>df-list</i>              | (Optional) List of router-ips in DF list         |
| <i>es-rt-added</i>          | (Optional) ES route added to L2RIB               |
| <i>ead-rt-added</i>         | (Optional) EAD routes added to L2RIB             |
| <i>ead-evi-rt-timer-age</i> | (Optional) EAD/EVI route advertisement timer age |
| <i>sh-esi</i>               | (Optional) Split-horizon ESI                     |

**Command Mode**

- /exec

# show nve evi

show nve evi [ *\_\_readonly\_\_* *TABLE\_nve\_evi* [ *<evi>* *<sw-bd>* *<label-sr>* *<oper-state>* *<evi-state>* ] ]

## Syntax Description

|                      |                                    |
|----------------------|------------------------------------|
| show                 | Display NVE information            |
| nve                  | Configure NVE information          |
| evi                  | Ethernet Virtual Identifier        |
| <i>__readonly__</i>  | (Optional)                         |
| <i>TABLE_nve_evi</i> | (Optional) xml schema for nve evis |
| <i>evi</i>           | (Optional) EVI value               |
| <i>sw-bd</i>         | (Optional) VLAN information        |
| <i>label-sr</i>      | (Optional) SR Label                |
| <i>oper-state</i>    | (Optional) EVI up or down          |
| <i>evi-state</i>     | (Optional) EVI state               |

## Command Mode

- /exec

|  |  |
|--|--|
| <i>adv-vmac</i>                                | (Optional) advertise virtual rmac              |
| <i>nve-flags</i>                               | (Optional) nve-flags                           |
| <i>nve-if-handle</i>                           | (Optional) interface handle                    |
| <i>src-if-holddown-tm</i>                      | (Optional) hold down time                      |
| <i>src-if-holdup-tm</i>                        | (Optional) hold up time                        |

| <i>vni-sw-bd</i>    | (Optional) vni-sw-bd      |
| <i>flags</i>        | (Optional) flags          |

## Command Mode

- /exec

# show nve vxlan-params

show nve vxlan-params [ \_\_readonly\_\_ <vxlan-port> ]

## Syntax Description

|                   |                           |
|-------------------|---------------------------|
| show              | Display NVE information   |
| nve               | Configure NVE information |
| vxlan-params      | VxLAN Parameters          |
| __readonly__      | (Optional)                |
| <i>vxlan-port</i> | (Optional) vxlan-params   |

## Command Mode

- /exec

# show nxapi-server logs

show nxapi-server logs

## Syntax Description

|              |                                 |
|--------------|---------------------------------|
| show         | Show running system information |
| nxapi-server | Show NX-API Server              |
| logs         | Show NX-API Server logs         |

## Command Mode

- /exec

# show nxapi

```
show nxapi [ __readonly__ <nxapi_status> <timeout> [ configuration_error <c_error> ] [ <http_port> ] [ <https_port> <ssl_issuer> <ssl_enddate> ] ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                       |
| nxapi               | Show nxapi status                                     |
| __readonly__        | (Optional)  |
| <i>nxapi_status</i> | (Optional) NX-API enabled status                      |
| <i>timeout</i>      | (Optional) Time in minutes until session expires      |
| configuration_error | (Optional) config syntax error                        |
| <i>c_error</i>      | (Optional) config syntax error                        |
| <i>http_port</i>    | (Optional) Configured HTTP port                       |
| <i>https_port</i>   | (Optional) Configured HTTPS port                      |
| <i>ssl_issuer</i>   | (Optional) Issuer information for current certificate |
| <i>ssl_enddate</i>  | (Optional) Expiration date of current certificate     |

# show param-list

```
show param-list [ param-list-name <plistname> ] [ show-instance ] [ __readonly__ TABLE_param_list
<param_list_name> [ <param_list_var> ] [ <param_list_type> ] [ TABLE_instance <param_instance_name>
[ <param_instance_var> ] [ <param_instance_val> ] ] ]
```

## Syntax Description

|                            |  |
|----------------------------|--|
| show                       | Show running system information              |
| param-list                 | Show param-list                              |
| param-list-name            | (Optional) param list name                   |
| <i>plistname</i>           | (Optional) Enter the name of the param-list  |
| show-instance              | (Optional) show instances for the param list |
| <i>__readonly__</i>        | (Optional)                                   |
| TABLE_param_list           | (Optional)                                   |
| <i>param_list_name</i>     | (Optional) Parameter List Name               |
| <i>param_list_var</i>      | (Optional) Parameter Name                    |
| <i>param_list_type</i>     | (Optional) Param Type                        |
| TABLE_instance             | (Optional)                                   |
| <i>param_instance_name</i> | (Optional) Instance Name                     |
| <i>param_instance_var</i>  | (Optional) Instance Variable Name            |
| <i>param_instance_val</i>  | (Optional) Instance Variable Value           |

## Command Mode

- /exec

# show password secure-mode

```
show password secure-mode [ __readonly__ { secure_mode <secure_mode_status> } ]
```

## Syntax Description

|                           |  |
|---------------------------|--|
| show                      | Show running system information              |
| password                  | Password for the user                        |
| secure-mode               | secure mode for changing passwords           |
| __readonly__              | (Optional)                                   |
| secure_mode               | (Optional) run time status about xml         |
| <i>secure_mode_status</i> | (Optional) Run time status about secure mode |

## Command Mode

- /exec

# show password strength-check

```
show password strength-check [ __readonly__ { operation_status <o_status> } ]
```

## Syntax Description

|                  |   |
|------------------|---|
| show             | Show running system information                               |
| password         | Password for the user   |
| strength-check   | Strength check of password                                    |
| __readonly__     | (Optional)  |
| operation_status | (Optional) run-time information about password strength-check |
| <i>o_status</i>  | (Optional) operational status of password strength check      |

## Command Mode

- /exec

# show pie broker

show pie broker { clients | subscriptions | timers | events | event-stats }

## Syntax Description

|               |                                    |
|---------------|------------------------------------|
| show          | Show running system information    |
| pie           | Show information about pie         |
| broker        | Show information about broker      |
| clients       | Show information about pie clients |
| subscriptions | Show subscriptions                 |
| timers        | Show all timers                    |
| events        | Show all events                    |
| event-stats   | Show event stats                   |

## Command Mode

- /exec

# show pie envmon

```
show pie envmon { psu { all | <psuid> } | fan | sensor | cpu-usage | mem-usage } [ detail ] [ count <num_events> ]
```

## Syntax Description

|                   |  |
|-------------------|--|
| show              | Show running system information                  |
| pie               | Show information about pie                       |
| envmon            | Show environment monitoring insights information |
| psu               | Show power-supply insights                       |
| all               | Show all PSU insights                            |
| <i>psuid</i>      |  |
| fan               | Show fan insights                                |
| sensor            | Show sensor insights                             |
| cpu-usage         | Show cpu usage insights                          |
| mem-usage         | Show memory usage insights                       |
| detail            | (Optional) Show insights details                 |
| count             | (Optional) Show N number of events               |
| <i>num_events</i> | (Optional) 0 -- Unlimited   N -- num of events   |

## Command Mode

- /exec

# show pie eventdb

```
show pie eventdb { all | link-flaps | link-down | link-flap-rca | link-down-rca | ssd-cur | ssd-overall | dom |
dom_db | dom_xthres | cpu-usage [ insights ] | mem-usage [ insights ] | psu [ insights ] | fan [ insights ] | sensor
[ insights ] } [ detail ] [ count <num_events> ]
```

## Syntax Description

|                   |  |
|-------------------|--|
| show              | Show running system information                |
| pie               | Show information about pie                     |
| eventdb           | Show pie events from eventdb                   |
| all               | Show all classes of events                     |
| link-flaps        | Show link-flap events                          |
| link-down         | Show link-down events                          |
| link-flap-rca     | Show link-flap rca                             |
| link-down-rca     | Show link-down rca                             |
| ssd-cur           | Show SSD Current Stat events                   |
| ssd-overall       | Show SSD Overall Stat events                   |
| dom               | Show xcvr dom                                  |
| dom_db            | Show xcvr dom DB                               |
| dom_xthres        | Show xcvr dom xthres                           |
| cpu-usage         | Show cpu usage events                          |
| insights          | (Optional) Show insights events                |
| mem-usage         | Show memory usage events                       |
| psu               | Show power-supply events                       |
| fan               | Show fan events                                |
| sensor            | Show sensor events                             |
| detail            | (Optional) Show event details                  |
| count             | (Optional) Show N number of events             |
| <i>num_events</i> | (Optional) 0 -- Unlimited   N -- num of events |

## Command Mode

- /exec

# show pie eventid

show pie eventid <eventid>

## Syntax Description

|                |                                     |
|----------------|-------------------------------------|
| show           | Show running system information     |
| pie            | Show information about pie          |
| eventid        | Show information about this eventid |
| <i>eventid</i> | event id                            |

## Command Mode

- /exec

# show pie interface

show pie interface <iface> { link-flap-rca | link-down-rca | transceiver-insights } [ detail ]

## Syntax Description

|                      |                                 |
|----------------------|---------------------------------|
| show                 | Show running system information |
| pie                  | Show information about pie      |
| interface            | Interface events                |
| <i>iface</i>         | interface                       |
| link-flap-rca        | Show link-flap events           |
| link-down-rca        | Show link-down reason           |
| transceiver-insights | Show optics health              |
| detail               | (Optional) Show event details   |

## Command Mode

- /exec

## show platform vnic info

```
show platform vnic info [ __readonly__ <scheme> <total-vnics> <vnics-mapped> <vnics-unmapped>
<mgmt-int-device> <mgmt-int-mac> { TABLE_linecard_info <module> <module-vnics> } ]
```

### Syntax Description

|                            |  |
|----------------------------|--|
| show                       | Show running system information                    |
| platform                   | Platform specific commands                         |
| vnic                       | Virtual Network Interface Card                     |
| info                       | Show general VNIC information                      |
| <i>__readonly__</i>        | (Optional)   |
| <i>TABLE_linecard_info</i> | (Optional)   |
| <i>scheme</i>              | (Optional) VNIC scheme                             |
| <i>total-vnics</i>         | (Optional) Total number of VNICs                   |
| <i>vnics-mapped</i>        | (Optional) Total number of VNICs mapped            |
| <i>vnics-unmapped</i>      | (Optional) Total number of VNICs unmapped          |
| <i>mgmt-int-device</i>     | (Optional) Management interface                    |
| <i>mgmt-int-mac</i>        | (Optional) Management interface                    |
| <i>module</i>              | (Optional) Module                                  |
| <i>module-vnics</i>        | (Optional) Number of VNICs mapped to this linecard |

### Command Mode

- /exec

# show platform vnic mapped

```
show platform vnic mapped [ module <module-num> ] [ __readonly__ { TABLE_interface_info
<nxos-interface> <mac-address> <vnic> } ]
```

## Syntax Description

|                       |                                  |
|-----------------------|----------------------------------|
| show                  | Show running system information  |
| platform              | Platform specific commands       |
| vnic                  | Virtual Network Interface Card   |
| mapped                | Show mapped interfaces           |
| __readonly__          | (Optional)                       |
| TABLE_interface_info  | (Optional)                       |
| module                | (Optional) Enter a module number |
| <i>nxos-interface</i> | (Optional) NXOS interface        |
| <i>mac-address</i>    | (Optional) VNIC MAC-address      |
| <i>vnic</i>           | (Optional) VNIC mapping          |
| <i>module-num</i>     | (Optional) enter a module number |

## Command Mode

- /exec

## show pmap-int-br interface br

```
show pmap-int-br interface br [ __readonly__ { [ TABLE_ifvlanstr <if-vlan-str> <if-status> [ <in-pmap-qos>
] [ <out-pmap-qos> ] [ <in-pmap-que> ] [ <out-pmap-que> ] ] } ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                             |
| pmap-int-br         | Show policy maps  |
| interface           | Show service policy on interface                            |
| br                  | Brief report of all policies attached to interfaces         |
| TABLE_ifvlanstr     | (Optional) all interfaces xml sessions                      |
| <i>if-vlan-str</i>  | (Optional) ifindex or vlan id: xml key                      |
| <i>__readonly__</i> | (Optional)  |
| <i>if-status</i>    | (Optional) Interface/vlan status [active/inactive]: xml key |
| <i>in-pmap-qos</i>  | (Optional) Input QoS Policy-map name: xml key               |
| <i>out-pmap-qos</i> | (Optional) output QoS Policy-map name: xml key              |
| <i>in-pmap-que</i>  | (Optional) Input Que Policy-map name: xml key               |
| <i>out-pmap-que</i> | (Optional) Output Que Policy-map name: xml key              |

### Command Mode

- /exec

# show pmap-int

```
show pmap-int { interface [ <i>iface-list</i> ] [ input | output ] [ type <qos-or-q> ] [ detail ] |
```

## Syntax Description

|                   |   |
|-------------------|---|
| show              | Show running system information               |
| pmap-int          | Show policy maps                              |
| interface         | Show service policy on interface              |
| <i>iface-list</i> | (Optional) List of Interface                  |
| input             | (Optional) Input Service policy               |
| output            | (Optional) Output Service policy              |
| type              | (Optional) Type of policy                     |
| <i>qos-or-q</i>   | (Optional)                                    |
| detail            | (Optional) Detailed QoS or Queuing statistics |

## Command Mode

- /exec

# show pnp lease

show pnp lease

## Syntax Description

|       |                                 |
|-------|---------------------------------|
| show  | Show running system information |
| pnp   | Plug and Play                   |
| lease | Show PnP lease information      |

## Command Mode

- /exec

# show pnp posix\_pi configs

show pnp posix\_pi configs

## Syntax Description

|          |                                 |
|----------|---------------------------------|
| show     | Show running system information |
| pnp      | Plug and Play                   |
| posix_pi | Posix PnP PI agent              |
| configs  | Posix PnP PI configuration      |

## Command Mode

- /exec

# show pnp posix\_pi tech-support

show pnp posix\_pi tech-support

## Syntax Description

|              |                                 |
|--------------|---------------------------------|
| show         | Show running system information |
| pnp          | Plug and Play                   |
| posix_pi     | Posix PnP PI agent              |
| tech-support | Technical Support               |

## Command Mode

- /exec

# show pnp profiles

show pnp profiles

## Syntax Description

|          |                                 |
|----------|---------------------------------|
| show     | Show running system information |
| pnp      | Plug and Play                   |
| profiles | Show POSIX PnP Profile          |

## Command Mode

- /exec

# show pnp status

show pnp status

## Syntax Description

|        |                                 |
|--------|---------------------------------|
| show   | Show running system information |
| pnp    | Plug and Play                   |
| status | Show POSIX PnP Status           |

## Command Mode

- /exec

# show pnp summary

show pnp summary

## Syntax Description

|         |                                 |
|---------|---------------------------------|
| show    | Show running system information |
| pnp     | Plug and Play                   |
| summary | Show POSIX PnP Summary          |

## Command Mode

- /exec

# show pnp version

show pnp version

## Syntax Description

|         |                                 |
|---------|---------------------------------|
| show    | Show running system information |
| pnp     | Plug and Play                   |
| version | Show POSIX PnP Version          |

## Command Mode

- /exec

# show policy-map

```
show policy-map [ { [ type qos ] [ <pmap-name-qos> ] } | { type queuing [ <pmap-name-que> ] } ] [

| <i>pmap-name-out</i>  | (Optional) Policy-map name  |
| <i>desc</i>           | (Optional) Description string                                       |
| <i>nq-desc</i>        | (Optional) Description xstring                                      |
| <i>cmap-name</i>      | (Optional) Class-map name   |
| <i>nq-xpmap-name</i>  | (Optional) Policy-map xname   |
| <i>nq-xcmap-name</i>  | (Optional) Class-map xname  |
| <i>cos-list</i>       | (Optional) List of class-of-service values                          |
| <i>qos-group-list</i> | (Optional) List of qos-group values                                 |
| <i>protocol</i>       | (Optional) protocol   |
| <i>timeout</i>        | (Optional) timeout value  |
| <i>pfc-cos-list</i>   | (Optional) List of class-of-service values                          |
| <i>cc</i>             | (Optional) congestion control protocol                              |
| <i>thresh-units</i>   | (Optional) Units of threshold - pkts/bytes/kbytes/mbytes/ms/us/perc |
| <i>drop-prob</i>      | (Optional) Drop Probability at Maximum Threshold value              |
| <i>iod</i>            | (Optional) IOD value  |
| <i>mtu</i>            | (Optional) MTU value  |
| <i>set-cos</i>        | (Optional) Set CoS value  |
| <i>dpp</i>            | (Optional) Dynamic Packet Prioritization Class                      |

|                           |  |
|---------------------------|--|
| <i>dctcp-threshold</i>    | (Optional) DCTCP threshold in bytes                              |
| <i>queue-limit</i>        | (Optional) Queue size for the class                              |
| <i>pfc_rx_only</i>        | (Optional) Pause receive only mode is enabled                    |
| <i>xqos-or-q</i>          | (Optional)   |
| <i>serv-pol-type</i>      | (Optional) Type of service policy referred to                    |
| <i>serv-pol-name</i>      | (Optional) Name of policy-map referred to within this policy-map |
| <i>type-spec</i>          | (Optional) Type of policy-map specified or not                   |
| <i>type-cmap-spec</i>     | (Optional) Type of class-map specified or not                    |
| <i>inner</i>              | (Optional) Specifies if tunnel or inner keywords are mentioned   |
| <i>dlb-disable</i>        | (Optional) Disable Dynamic Load Balancing                        |
| <i>cos</i>                | (Optional) IEEE 802.1Q Class of Service value                    |
| <i>exp-val-imposition</i> | (Optional) MPLS EXP value of type imposition                     |
| <i>exp-val-topmost</i>    | (Optional) MPLS EXP value of type topmost                        |
| <i>dscp</i>               | (Optional) DSCP in IP(v4) and IPv6 packets                       |
| <i>dscp-enum</i>          | (Optional)   |
| <i>prec</i>               | (Optional) Precedence in IP(v4) and IPv6 packets                 |
| <i>prec-enum</i>          | (Optional)   |
| <i>disc-class</i>         | (Optional) Discard class   |
| <i>qos-group</i>          | (Optional) Qos-group   |
| <i>tmap-from</i>          | (Optional)   |
| <i>tmap-to</i>            | (Optional)   |
| <i>tmap-name</i>          | (Optional) Table map name  |
| <i>ptmap-from</i>         | (Optional)   |
| <i>ptmap-to</i>           | (Optional)   |
| <i>ptmap-name</i>         | (Optional) Table map name  |
| <i>avg-rate-type</i>      | (Optional) Specifies if average shape rate is specified          |
| <i>rate-units</i>         | (Optional) Units of rate - bps, kbps, mbps, gbps, ms, us         |
| <i>min-rate-type</i>      | (Optional) Specifies if minimum shape rate is specified          |
| <i>min-rate-units</i>     | (Optional) Units of rate - bps, kbps, mbps, gbps, ms, us         |

|                               |   |
|-------------------------------|---|
| <i>max-rate-type</i>          | (Optional) Specifies if maximum shape rate is specified                 |
| <i>max-rate-units</i>         | (Optional) Units of rate - bps, kbps, mbps, gbps, ms, us                |
| <i>cir-rate-units</i>         | (Optional) Units of rate - bps, kbps, mbps, gbps, ms, us, pps           |
| <i>pir-rate-units</i>         | (Optional) Units of rate - bps, kbps, mbps, gbps, ms, us, pps           |
| <i>prio-level</i>             | (Optional) Priority if specified  |
| <i>qlim-param-type</i>        | (Optional) Type of parameter for qlim - cos/prec/dscp/disc class/qosgrp |
| <i>qlim-param-val</i>         | (Optional) Parameter value for qlimit                                   |
| <i>qlim-size</i>              | (Optional) Queue size for qlimit  |
| <i>size-units</i>             | (Optional) Units of queue size - pkts/bytes/kbytes/mbytes/ms/us/perc    |
| <i>rdet-size-units</i>        | (Optional) Units of queue size - pkts/bytes/kbytes/mbytes/ms/us/perc    |
| <i>rdet-nonecn-size-units</i> | (Optional) Units of queue size - pkts/bytes/kbytes/mbytes/ms/us/perc    |
| <i>afd-size-units</i>         | (Optional) Units of queue size - bytes/kbytes/mbytes                    |
| <i>bc-size-units</i>          | (Optional) Units of queue size - pkts/bytes/kbytes/mbytes/ms/us/perc    |
| <i>be-size-units</i>          | (Optional) Units of queue size - pkts/bytes/kbytes/mbytes/ms/us/perc    |
| <i>qlim-enum-spec</i>         | (Optional) Whether qlimit parameter is specified in enum or not         |
| <i>rdet-mode</i>              | (Optional) Random-detect mode   |
| <i>rdet-nonecn-mode</i>       | (Optional) Random-detect non-ecn mode                                   |
| <i>rdet-agg</i>               | (Optional) Are the params for aggregate flow                            |
| <i>rdet-values</i>            | (Optional) List of class-of-service values for random-detect            |
| <i>rdet-drop-prob</i>         | (Optional) Random-detect drop probability                               |
| <i>rdet-weight</i>            | (Optional) Random-detect queue length weight                            |
| <i>rdet-cap-average</i>       | (Optional) Random-detect cap-average                                    |
| <i>rdet-ecn</i>               | (Optional) Random-detect ECN  |
| <i>rdet-burst-opt</i>         | (Optional) Random-detect burst optimized                                |
| <i>rdet-mesh-opt</i>          | (Optional) Random-detect mesh optimized                                 |
| <i>rdet-nonecn-drop-prob</i>  | (Optional) Random-detect non-ecn drop probability                       |
| <i>afd-mode</i>               | (Optional) AFD mode   |
| <i>afd-values</i>             | (Optional) List of class-of-service values for AFD                      |
| <i>afd-ecn</i>                | (Optional) AFD ECN  |

|                              |   |
|------------------------------|---|
| <i>pause</i>                 | (Optional) Pause value                          |
| <i>nq-pause</i>              | (Optional) NQ Pause value                       |
| <i>priority-group-number</i> | (Optional) Priority group value                 |
| <i>bw-units</i>              | (Optional) Bandwidth units                      |
| <i>rem-bw-units</i>          | (Optional) Remaining bandwidth units            |
| <i>rem-bw-rate</i>           | (Optional) Remaining bandwidth rate             |
| <i>agg-policer-name</i>      | (Optional) Aggregate policer name               |
| <i>cir-spec</i>              | (Optional) Is CIR keyword specified             |
| <i>bc-spec</i>               | (Optional) Is Committed Burst keyword specified |
| <i>be-spec</i>               | (Optional) Is Extended Burst keyword specified  |
| <i>cnf-col-cmap</i>          | (Optional) Conforming color class-map name      |
| <i>exc-col-cmap</i>          | (Optional) Exceeding color class-map name       |
| <i>enum-spec</i>             | (Optional) Is DSCP or PREC enum value specified |
| <i>cnf-act</i>               | (Optional) Conform action (Police)              |
| <i>exc-act</i>               | (Optional) Exceed action (Police)               |
| <i>vio-act</i>               | (Optional) Violate action (Police)              |
| <i>set-type</i>              | (Optional) Type of set in police action         |
| <i>set-val</i>               | (Optional) Value of set type in police action   |
| <i>ooo</i>                   | (Optional) Out-of-Order                         |
| <i>burst-detect-enable</i>   | (Optional) Burst detect feature is enabled      |

### Command Mode

### Syntax Description

|                    |  |
|--------------------|--|
| show               | Show running system information                |
| policy-map         | Show policy maps                               |
| type               | (Optional) Type of the policy-map              |
| system             | Active policy in the system                    |
| network-qos        | (Optional) type network-qos                    |
| qos                | (Optional) type qos                            |
| input2             | (Optional) input policy                        |
| queuing            | (Optional) type queuing                        |
| input              | (Optional) input policy                        |
| output             | (Optional) output policy                       |
| __readonly__       | (Optional)                                     |
| <i>display-all</i> | (Optional) Display all network-qos policy-maps |
| TABLE_xpmap        | (Optional) all xpmap xml sessions              |
| <i>xpmap-name</i>  | (Optional) Policy-map name                     |

|                         |   |
|-------------------------|---|
| TABLE_xcmap             | (Optional) all xcmap xml sessions                                   |
| <i>xcmap-name</i>       | (Optional) Class-map name   |
| TABLE_xmatch            | (Optional) all match xml sessions                                   |
| <i>xmatch-key</i>       | (Optional) match count: xml key                                     |
| <i>xcos-list</i>        | (Optional) List of class-of-service values                          |
| <i>xqos-group-list</i>  | (Optional) List of qos-group values                                 |
| <i>xprotocol</i>        | (Optional) xprotocol  |
| TABLE_xaction           | (Optional) all network-qos actions                                  |
| <i>xaction-key</i>      | (Optional) network-qos actions count: xml key                       |
| TABLE_pmap              | (Optional) all pmap xml sessions                                    |
| <i>pmap-key</i>         | (Optional) Policy-map name: xml key                                 |
| TABLE_cmap              | (Optional) all cmap xml sessions                                    |
| <i>cmap-key</i>         | (Optional) Class-map name: xml key                                  |
| TABLE_action            | (Optional) all actions  |
| <i>action-key</i>       | (Optional) Actions count: xml key                                   |
| TABLE_match             | (Optional) all match xml sessions                                   |
| <i>match-key</i>        | (Optional) match count: xml key                                     |
| TABLE_rdet              | (Optional) all WRED sessions  |
| TABLE_afd               | (Optional) all AFD sessions   |
| <i>stat-en-dis-enum</i> | (Optional)  |
| <i>in-or-out</i>        | (Optional)  |
| <i>yqos-or-q</i>        | (Optional)  |
| <i>stat-status-enum</i> | (Optional)  |
| <i>desc</i>             | (Optional) Description string                                       |
| <i>thresh-units</i>     | (Optional) Units of threshold - pkts/bytes/kbytes/mbytes/ms/us/perc |
| <i>drop-prob</i>        | (Optional) Drop Probability at Maximum Threshold value              |
| <i>pause</i>            | (Optional) Pause value  |
| <i>pfc-cos-list</i>     | (Optional) List of class-of-service values                          |
| <i>pfc_rx_only</i>      | (Optional) Pause receive only mode enabled                          |

|                              |  |
|------------------------------|--|
| <i>timeout</i>               | (Optional) timeout value                                       |
| <i>cc</i>                    | (Optional) congestion control protocol                         |
| <i>iod</i>                   | (Optional) IOD value   |
| <i>mtu</i>                   | (Optional) MTU value   |
| <i>set-cos</i>               | (Optional) Set CoS value                                       |
| <i>dpp</i>                   | (Optional) Dynamic Packet Prioritization Class                 |
| <i>queue-limit</i>           | (Optional) Queue size for the class                            |
| <i>protocol-name</i>         | (Optional) protocol name                                       |
| <i>protocol</i>              | (Optional) protocol  |
| <i>dctcp-threshold</i>       | (Optional) DCTCP threshold in bytes                            |
| <i>cos-list</i>              | (Optional) List of class-of-service values                     |
| <i>dscp-list</i>             | (Optional) List of DSCP values                                 |
| <i>exp-value-top</i>         | (Optional) List of MPLS exp values                             |
| <i>qos-group</i>             | (Optional) QoS Group Value                                     |
| <i>qos-group-list</i>        | (Optional) List of qos-group values                            |
| <i>options</i>               | (Optional) match-first option                                  |
| <i>pmap-name</i>             | (Optional) Policy-map name                                     |
| <i>pmap-inner-outer</i>      | (Optional) Inner or Outer policy-map                           |
| <i>serv-pol-return-inout</i> | (Optional) Inner or Outer policy-map                           |
| <i>cmap-name</i>             | (Optional) Class-map name                                      |
| <i>xqos-or-q</i>             | (Optional)   |
| <i>match-opts</i>            | (Optional) Type of match in class-map                          |
| <i>match-cmap-xqos-or-q</i>  | (Optional)   |
| <i>match-cmap-opts</i>       | (Optional) Type of match in class-map                          |
| <i>not</i>                   | (Optional) Negate this match result                            |
| <i>inner</i>                 | (Optional) Specifies if tunnel or inner keywords are mentioned |
| <i>cos-list</i>              | (Optional) List of class-of-service values                     |
| <i>match-cmap-name</i>       | (Optional) class-map name                                      |
| <i>serv-pol-type</i>         | (Optional) Type of service policy referred to                  |

|                         |   |
|-------------------------|---|
| <i>serv-pol-name</i>    | (Optional) Name of policy-map referred to within this policy-map        |
| <i>set-inner</i>        | (Optional) Specifies if tunnel or inner keywords are mentioned          |
| <i>cos</i>              | (Optional) IEEE 802.1Q Class of Service value                           |
| <i>rate-units</i>       | (Optional) Units of rate - bps, kbps, mbps, gbps, ms, us                |
| <i>min-rate-type</i>    | (Optional) Specifies if minimum shape rate is specified                 |
| <i>min-rate-units</i>   | (Optional) Units of rate - bps, kbps, mbps, gbps, ms, us                |
| <i>max-rate-type</i>    | (Optional) Specifies if maximum shape rate is specified                 |
| <i>max-rate-units</i>   | (Optional) Units of rate - bps, kbps, mbps, gbps, ms, us                |
| <i>prio-level</i>       | (Optional) Priority if specified  |
| <i>qlim-param-type</i>  | (Optional) Type of parameter for qlim - cos/prec/dscp/disc class/qosgrp |
| <i>qlim-param-val</i>   | (Optional) Parameter value for qlimit                                   |
| <i>qlim-size</i>        | (Optional) Queue size for qlimit  |
| <i>size-units</i>       | (Optional) Units of queue size - pkts/bytes/kbytes/mbytes/ms/us/perc    |
| <i>qlim-enum-spec</i>   | (Optional) Whether qlimit parameter is specified in enum or not         |
| <i>rdet-size-units</i>  | (Optional) Units of queue size - pkts/bytes/kbytes/mbytes/ms/us/perc    |
| <i>afd-size-units</i>   | (Optional) Units of queue size - bytes/kbytes/mbytes                    |
| <i>bw-units</i>         | (Optional) Bandwidth units  |
| <i>rem-bw-units</i>     | (Optional) Remaining bandwidth units                                    |
| <i>rem-bw-rate</i>      | (Optional) Remaining bandwidth rate                                     |
| <i>rdet-values</i>      | (Optional) List of class-of-service values for random-detect            |
| <i>rdet-agg</i>         | (Optional) Are the params for aggregate flow                            |
| <i>rdet-mode</i>        | (Optional) Random-detect mode   |
| <i>rdet-drop-prob</i>   | (Optional) Random-detect drop probability                               |
| <i>rdet-weight</i>      | (Optional) Random-detect queue length weight                            |
| <i>rdet-cap-average</i> | (Optional) Random-detect cap-average                                    |
| <i>rdet-ecn</i>         | (Optional) Random-detect ECN  |
| <i>rdet-burst-opt</i>   | (Optional) Random-detect burst optimized                                |
| <i>rdet-mesh-opt</i>    | (Optional) Random-detect mesh optimized                                 |
| <i>afd-mode</i>         | (Optional) AFD mode   |

|                    |  |
|--------------------|--|
| <i>afd-values</i>  | (Optional) List of class-of-service values for afd |
| <i>afd-ecn</i>     | (Optional) AFD ECN                                 |
| <i>pause</i>       | (Optional) Pause value                             |
| <i>slot-num</i>    | (Optional) the slot number                         |
| <i>agg-forward</i> | (Optional) prints out aggregate forward            |
| TABLE_slot         | (Optional) all slot xml sessions                   |
| <i>slot-key</i>    | (Optional) slot count: xml key                     |

**Command Mode**

- /exec

## show policy-map type network-qos

```
show policy-map type network-qos [ <pmap-name-nq> ] [ __readonly__ { [ <display-all> ] [ TABLE_xpmap
<xpmap-name> [ <desc> ] [ TABLE_xcmap <xcmap-name> [ TABLE_xmatch <xmatch-key> [ <xcos-list>
] [ <xqos-group-list> ] [ <xprotocol> ] ] [ TABLE_action <action-key> [ <cos-list> ] [ <qos-group-list> ] [
<protocol> ] [ <pause> <timeout> <size-in-bytes> <xoff-bytes> <xon-bytes> ] [ <pfc-cos-list> ] [
<pfc_rx_only> ] [ <cc> ] [ <thresh-units> ] [ <min-thresh> ] [ <max-thresh> ] [ <drop-prob> ] [ <iod> ] [
<mtu> ] [ <set-cos> ] [ <dpp> ] [ <dctcp-threshold> ] [ <queue-limit> ] ] ] ] }
```

### Syntax Description

|                        |  |
|------------------------|--|
| show                   | Show running system information                |
| policy-map             | Show policy maps                               |
| type                   | Type of the policy-map                         |
| <i>pmap-name-nq</i>    | (Optional) Policy-map name                     |
| network-qos            | type network-qos                               |
| <i>__readonly__</i>    | (Optional)                                     |
| <i>display-all</i>     | (Optional) Display all network-qos policy-maps |
| TABLE_xpmap            | (Optional) all xpmap xml sessions              |
| <i>xpmap-name</i>      | (Optional) Policy-map name                     |
| TABLE_xcmap            | (Optional) all xcmap xml sessions              |
| <i>xcmap-name</i>      | (Optional) Class-map name                      |
| TABLE_xmatch           | (Optional) all match xml sessions              |
| <i>xmatch-key</i>      | (Optional) match count: xml key                |
| <i>xcos-list</i>       | (Optional) List of class-of-service values     |
| <i>xqos-group-list</i> | (Optional) List of qos-group values            |
| <i>xprotocol</i>       | (Optional) xprotocol                           |
| TABLE_action           | (Optional) all actions                         |
| <i>action-key</i>      | (Optional) Actions count: xml key              |
| <i>desc</i>            | (Optional) Description string                  |
| <i>cos-list</i>        | (Optional) List of class-of-service values     |
| <i>qos-group-list</i>  | (Optional) List of qos-group values            |
| <i>protocol</i>        | (Optional) protocol                            |

|                        |   |
|------------------------|---|
| <i>pause</i>           | (Optional) Pause value  |
| <i>timeout</i>         | (Optional) timeout value  |
| <i>pfc-cos-list</i>    | (Optional) List of class-of-service values                          |
| <i>cc</i>              | (Optional) congestion control protocol                              |
| <i>thresh-units</i>    | (Optional) Units of threshold - pkts/bytes/kbytes/mbytes/ms/us/perc |
| <i>drop-prob</i>       | (Optional) Drop Probability at Maximum Threshold value              |
| <i>iod</i>             | (Optional) IOD value  |
| <i>mtu</i>             | (Optional) MTU value  |
| <i>set-cos</i>         | (Optional) Set CoS value  |
| <i>dpp</i>             | (Optional) Dynamic Packet Prioritization Class                      |
| <i>dctcp-threshold</i> | (Optional) DCTCP threshold in bytes                                 |
| <i>queue-limit</i>     | (Optional) Queue size for the class                                 |
| <i>pfc_rx_only</i>     | (Optional) Pause receive only mode is enabled                       |

**Command Mode**

- /exec

# show port-channel capacity

show port-channel capacity [ *\_\_readonly\_\_* <total> <used> <free> <percentage\_used> ]

## Syntax Description

|                        |  |
|------------------------|--|
| show                   | Show running system information        |
| port-channel           | Show port-channel information          |
| capacity               | Capacity information                   |
| <i>__readonly__</i>    | (Optional)                             |
| <i>total</i>           | (Optional) Total resource              |
| <i>used</i>            | (Optional) Used resource               |
| <i>free</i>            | (Optional) Free resource               |
| <i>percentage_used</i> | (Optional) Used resource in percentage |

## Command Mode

- /exec

# show port-channel compatibility-parameters

show port-channel compatibility-parameters [ *\_\_readonly\_\_* { *TABLE\_compatibility* <parameter> <description> } + ]

## Syntax Description

|                            |   |
|----------------------------|---|
| show                       | Show running system information             |
| port-channel               | Show port-channel information               |
| compatibility-parameters   | Show compatibility parameters               |
| <i>__readonly__</i>        | (Optional)                                  |
| <i>TABLE_compatibility</i> | (Optional) Port-channel compatibility table |
| <i>parameter</i>           | (Optional) Compatibility parameter          |
| <i>description</i>         | (Optional) Parameter description            |

## Command Mode

- /exec

# show port-channel database

```
show port-channel database [ interface <if0> ] [ __readonly__ TABLE_interface <interface>
<last-membership-update> <total-ports> <total-up-ports> [ <first_operational-port> ] <age-of-channel> [
<time-since-last-bundle> ] [ <last-bundled-member> ] [ <time-since-last-unbundle> ] [
<last-unbundled-member> ] [ { TABLE_member <port> <mode> <port-status> } ] [ <protocol> ] ]
```

## Syntax Description

|                                 |  |
|---------------------------------|--|
| show                            | Show running system information            |
| port-channel                    | Show port-channel information              |
| database                        | Show port-channel database                 |
| interface                       | (Optional) Specify a port-channel          |
| <i>if0</i>                      | (Optional)                                 |
| <i>__readonly__</i>             | (Optional)                                 |
| TABLE_interface                 | (Optional) Port-channel table              |
| <i>interface</i>                | (Optional) Port channel                    |
| <i>mode</i>                     | (Optional) channel-group mode              |
| <i>last-membership-update</i>   | (Optional) Last membership update          |
| <i>total-ports</i>              | (Optional) Total number of member ports    |
| <i>total-up-ports</i>           | (Optional) Total number of UP member ports |
| <i>first_operational-port</i>   | (Optional) First operational port          |
| TABLE_member                    | (Optional) Member ports info               |
| <i>port</i>                     | (Optional) Member port                     |
| <i>port-status</i>              | (Optional) Member port status              |
| <i>age-of-channel</i>           | (Optional) Age of port channel             |
| <i>time-since-last-bundle</i>   | (Optional) Time since last port bundled    |
| <i>last-bundled-member</i>      | (Optional) Last bundled member port        |
| <i>time-since-last-unbundle</i> | (Optional) Time since last port un-bundled |
| <i>last-unbundled-member</i>    | (Optional) Last unbundled member port      |
| <i>protocol</i>                 | (Optional) Port channel protocol           |

## Command Mode

- /exec

# show port-channel fast-convergence

show port-channel fast-convergence [ \_\_readonly\_\_ { port-channel fast-convergence <fastconvergence> } ]

## Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information                         |
| port-channel           | Configure port channel parameters                       |
| fast-convergence       | Show port-channel fast-convergence status               |
| __readonly__           | (Optional)  |
| <i>fastconvergence</i> | (Optional) port channel fast convergence enable/disable |

## Command Mode

- /exec

## show port-channel load-balance

```
show port-channel load-balance { [ module <module> ] | { fex { all } } } [ __readonly__ [ <sys-cfg> ] + [ <sys-cfg-sel> ] [ { <module-cfg> } ] + <non-ip-val> <non-ip-sel> <ipv4-val> <ipv4-sel> [ <ipv6-val> ] [ <ipv4-encap> ] { TABLE_mod_configs [ <mod-number> ] <mod-non-ip-val> <mod-non-ip-sel> <mod-ipv4-val> <mod-ipv4-sel> [ <mod-ipv4-encap> ] } ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                    |
| port-channel          | Show port-channel information                      |
| load-balance          | Show port-channel load balance                     |
| module                | (Optional) slot                                    |
| <i>module</i>         | (Optional) Specify a module number                 |
| fex                   | FEX devices  |
| all                   | Display all configured FEX port-channel LB         |
| <u>__readonly__</u>   | (Optional)   |
| <i>sys-cfg</i>        | (Optional) system wide load balance configuraton   |
| <i>sys-cfg-sel</i>    | (Optional) system config                           |
| <i>module-cfg</i>     | (Optional) per module load balance configuraton    |
| <i>non-ip-val</i>     | (Optional) load balance setting for non-ip traffic |
| <i>non-ip-sel</i>     | (Optional) non ip select                           |
| <i>ipv4-val</i>       | (Optional) load balance setting for ipv4 traffic   |
| <i>ipv4-sel</i>       | (Optional) ip select                               |
| <i>ipv6-val</i>       | (Optional) load balance setting for ipv6 traffic   |
| <i>ipv4-encap</i>     | (Optional) encapsulation                           |
| TABLE_mod_configs     | (Optional) module configurations                   |
| <i>mod-number</i>     | (Optional) module number                           |
| <i>mod-non-ip-val</i> | (Optional) load balance setting for non-ip traffic |
| <i>mod-non-ip-sel</i> | (Optional) non ip select                           |
| <i>mod-ipv4-val</i>   | (Optional) load balance setting for ipv4 traffic   |
| <i>mod-ipv4-sel</i>   | (Optional) ip select                               |

|                       |                          |
|-----------------------|--------------------------|
| <i>mod-ipv4-encap</i> | (Optional) encapsulation |
|-----------------------|--------------------------|

**Command Mode**

- /exec

## show port-channel load-balance forwarding-path1 interface src-interface

```
show port-channel load-balance forwarding-path1 interface <ch-id> src-interface <src-if> { vlan <vlan-id> |
src-mac <src-mac> | dst-mac <dst-mac> | src-ip <src-ip> | dst-ip <dst-ip> | src-ipv6 <src-ipv6> | dst-ipv6

| loadbalance-algorithm  | (Optional) load balance algorithm                     |
| <i>algorithm</i>       | (Optional) load balance algorithm                     |
| outgoing-port-id       | (Optional) outgoing port-id                           |
| <i>port</i>            | (Optional) outgoing port-id                           |

### Command Mode

- /exec

## show port-channel load-balance hardware forwarding-path interface source

```
show port-channel load-balance hardware forwarding-path { interface <ch-id> | hgig } { source-interface
<if-id> } { vlan <vlan-id> | src-mac <src-mac> | dst-mac <dst-mac> | src-ip <src-ip> | dst-ip <dst-ip> | src-ipv6
<src-ipv6> | dst-ipv6 <dst-ipv6> | l4-src-port <l4-src-port> | l4-dst-port <l4-dst-port> | ethertype <ethertype>
| protocol <prot> } + [ module <module> | fex <fex-range> | hgig-tgid <tgid> ] [ __readonly__ {
loadbalance-algorithm <algorithm> } { outgoing-port-id <port> } ]
```

### Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information                |
| port-channel     | Configure port channel parameters              |
| load-balance     | Show port-channel load balance                 |
| hardware         | ASIC hardware based information                |
| forwarding-path  | Packet forwarding information                  |
| interface        | Specify a port-channel number                  |
| <i>ch-id</i>     | Port-Channel name                              |
| hgig             | Higig hashing result (only with RTAG7)         |
| source-interface | Source interface - Required paramter           |
| <i>if-id</i>     | Interface name                                 |
| vlan             | VLAN of the ingress packet i.e. when available |
| <i>vlan-id</i>   |  |
| src-mac          | Source MAC Address                             |
| <i>src-mac</i>   | Source MAC address                             |
| dst-mac          | Destination MAC Address                        |
| <i>dst-mac</i>   | Destination MAC address                        |
| src-ip           | Source IPv4 address                            |
| <i>src-ip</i>    | Source IP address in format i.i.i.i            |
| dst-ip           | Destination IPv4 address                       |
| <i>dst-ip</i>    | Destination IP address in format i.i.i.i       |
| src-ipv6         | Source IPv6 address                            |
| dst-ipv6         | Destination IPv6 address                       |

|                       |                                   |
|-----------------------|-----------------------------------|
| l4-src-port           | Source L4 port                    |
| <i>l4-src-port</i>    | Source L4 port                    |
| l4-dst-port           | Destination l4 port               |
| <i>l4-dst-port</i>    | Destination L4 port               |
| ethertype             | Ethertype of the packet stream    |
| <i>ethertype</i>      |                                   |
| protocol              | Protocol                          |
| <i>prot</i>           |                                   |

| <i>module</i>         | (Optional)                        |
| fex                   | (Optional) FEX devices            |
| <i>fex-range</i>      | (Optional) FEX device range       |
| hgig-tgid             | (Optional) Hgig #                 |
| <i>tgid</i>           | (Optional)                        |
| __readonly__          | (Optional)                        |
| loadbalance-algorithm | (Optional) load balance algorithm |
| <i>algorithm</i>      | (Optional) load balance algorithm |
| outgoing-port-id      | (Optional) outgoing port-id       |
| <i>port</i>           | (Optional) outgoing port-id       |

**Command Mode**

- /exec

## show port-channel rbh-distribution

```
show port-channel rbh-distribution [ interface <if0> ] [ __readonly__ TABLE_channel <chan-id> <port> {
<rbh> } + <num_of_buckets> ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information             |
| port-channel          | Show port-channel information               |
| rbh-distribution      | Show RBH distribution for member ports      |
| interface             | (Optional) Specify a port-channel interface |
| <i>if0</i>            | (Optional)                                  |
| <i>__readonly__</i>   | (Optional)                                  |
| TABLE_channel         | (Optional) Port-channel table               |
| <i>chan-id</i>        | (Optional) Channel ID                       |
| <i>port</i>           | (Optional) Member port                      |
| <i>num_of_buckets</i> | (Optional) Channel ID                       |
| <i>rbh</i>            | (Optional) Channel ID                       |

### Command Mode

- /exec

# show port-channel scale-fanout

show port-channel scale-fanout [ \_\_readonly\_\_ { port-channel high-density <scalefanout> } ]

## Syntax Description

|                    |  |
|--------------------|--|
| show               | Show running system information  |
| port-channel       | Configure port channel parameters  |
| scale-fanout       | Enable/disable port-channel scale-fanout when ports span more than 16 ASIC units |
| __readonly__       | (Optional)   |
| high-density       | (Optional) port channel high density   |
| <i>scalefanout</i> | (Optional) port channel scale fanout enable/disable                              |

## Command Mode

- /exec

## show port-channel summary

```
show port-channel [ extended-list ] summary [ interface <if0> | controller ] [ __readonly__ TABLE_channel
<group> <port-channel> <layer> <status> <type> <prtcl> [ { TABLE_member <port> <port-status> } ] ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                     |
| port-channel        | Show port-channel information                       |
| extended-list       | (Optional) Show port-channels from extended range   |
| summary             | Show port-channel summary                           |
| interface           | (Optional) Specify a port-channel                   |
| <i>if0</i>          | (Optional)  |
| controller          | (Optional) Show controller configured port-channels |
| __readonly__        | (Optional)  |
| TABLE_channel       | (Optional) Port-channel table                       |
| <i>group</i>        | (Optional) Channel group number                     |
| <i>port-channel</i> | (Optional) Port channel                             |
| <i>type</i>         | (Optional) Channel type                             |
| <i>prtcl</i>        | (Optional) Channel protocol                         |
| <i>status</i>       | (Optional) Channel status                           |
| <i>layer</i>        | (Optional) Channel layer info                       |
| TABLE_member        | (Optional) Member table                             |
| <i>port</i>         | (Optional) Member port                              |
| <i>port-status</i>  | (Optional) Member port status                       |

### Command Mode

- /exec

# show port-channel traffic

```
show port-channel traffic [ interface <if0> ] [ __readonly__ TABLE_channel <chanId> <port> <rx-ucst>
<tx-ucst> <rx-mcst> <tx-mcst> <rx-bcst> <tx-bcst> ]
```

## Syntax Description

|                |                                      |
|----------------|--------------------------------------|
| show           | Show running system information      |
| port-channel   | Show port-channel information        |
| traffic        | Show port-channel traffic statistics |
| __readonly__   | (Optional)                           |
| interface      | (Optional) Specify a port-channel    |
| <i>if0</i>     | (Optional)                           |
| TABLE_channel  | (Optional) Port-channel table        |
| <i>chanId</i>  | (Optional) Channel ID                |
| <i>port</i>    | (Optional) Member port               |
| <i>rx-ucst</i> | (Optional) Received unicast          |
| <i>tx-ucst</i> | (Optional) Transmitted unicast       |
| <i>rx-mcst</i> | (Optional) Received multicast        |
| <i>tx-mcst</i> | (Optional) Transmitted multicast     |
| <i>rx-bcst</i> | (Optional) Received broadcast        |
| <i>tx-bcst</i> | (Optional) Transmitted broadcast     |

## Command Mode

- /exec

# show port-channel usage

```
show port-channel usage [ __readonly__ <total-channel-number-used> { <used-range-low> [ <used-range-hi>
] } + { <unused-range-low> [ <unused-range-hi> ] } + ]
```

## Syntax Description

|                                  |   |
|----------------------------------|---|
| show                             | Show running system information               |
| port-channel                     | Show port-channel information                 |
| usage                            | Show port-channel number usage                |
| <i>__readonly__</i>              | (Optional)                                    |
| <i>total-channel-number-used</i> | (Optional) Total used number of port-channels |
| <i>used-range-low</i>            | (Optional) Used range low end value           |
| <i>used-range-hi</i>             | (Optional) Used range high end value          |
| <i>unused-range-low</i>          | (Optional) Un-used range low end value        |
| <i>unused-range-hi</i>           | (Optional) Un-used range high end value       |

## Command Mode

- /exec

# show port-license

```
show port-license [ __readonly__ <consumed_port_licenses> [ TABLE_portlicense <interface> <cookie>
<port_activation_license> ] ]
```

## Syntax Description

|                                |                                   |
|--------------------------------|-----------------------------------|
| show                           | Show running system information   |
| port-license                   | Show port license information     |
| <i>__readonly__</i>            | (Optional)                        |
| <i>consumed_port_licenses</i>  | (Optional) Consumed port licenses |
| TABLE_portlicense              | (Optional) port and licenses      |
| <i>interface</i>               | (Optional) interface name         |
| <i>cookie</i>                  | (Optional) cookie                 |
| <i>port_activation_license</i> | (Optional) license state          |

## Command Mode

- /exec

# show port-profile

```
show port-profile [ name <all_profile_name> ] [ __readonly__ TABLE_port_profile_all <profile_name> [

| <i>portgrp</i>      | (Optional) VMware Portgroup         |
| <i>pprole</i>       | (Optional) Port-profile Role        |
| <i>port_binding</i> | (Optional) Port-binding             |

**Command Mode**

- /exec

## show port-profile brief

```
show port-profile brief [ __readonly__ { TABLE_port_profile [ <profile_name> ] [ <type> ] [ <status> ] [
<profile_cfg_cnt> ] [ <eval_cfg_cnt> ] [ <intf_cnt> ] [ <inherit_cnt> ] [ <header_flag> ] } { TABLE_intf_count
[ <intf_type> ] [ <intf_count> ] [ <tot_header_flag> ] } ]
```

### Syntax Description

|                        |                                 |
|------------------------|---------------------------------|
| show                   | Show running system information |
| port-profile           | Show port-profile               |
| brief                  | Brief info about profiles       |
| <i>__readonly__</i>    | (Optional)                      |
| <i>profile_name</i>    | (Optional)                      |
| TABLE_port_profile     | (Optional)                      |
| <i>type</i>            | (Optional)                      |
| <i>status</i>          | (Optional)                      |
| <i>profile_cfg_cnt</i> | (Optional)                      |
| <i>eval_cfg_cnt</i>    | (Optional)                      |
| <i>intf_cnt</i>        | (Optional)                      |
| <i>inherit_cnt</i>     | (Optional)                      |
| <i>header_flag</i>     | (Optional)                      |
| TABLE_intf_count       | (Optional)                      |
| <i>intf_type</i>       | (Optional)                      |
| <i>intf_count</i>      | (Optional)                      |
| <i>tot_header_flag</i> | (Optional)                      |

### Command Mode

- /exec

# show port-profile expand-interface

```
show port-profile expand-interface [ name <all_profile_name> ] [ __readonly__ TABLE_port_profile
<profile_name> [ TABLE_interface <intf> [ <intf_cfg> ] + ] ]
```

## Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information              |
| port-profile            | Show port-profile                            |
| expand-interface        | Active profile config applied in a interface |
| name                    | (Optional) port-profile name                 |
| <i>all_profile_name</i> | (Optional) Enter the name of the profile     |
| <i>__readonly__</i>     | (Optional)                                   |
| TABLE_port_profile      | (Optional)                                   |
| <i>profile_name</i>     | (Optional)                                   |
| TABLE_interface         | (Optional)                                   |
| <i>intf</i>             | (Optional)                                   |
| <i>intf_cfg</i>         | (Optional)                                   |

## Command Mode

- /exec

## show port-profile sync-status

```
show port-profile sync-status [ interface <intfname> ] [ __readonly__ <intf> + [ <inherit> ] <status> + [
<sync_status> ] [ <cached_cmds> ] [ <errors> ] [ <recovery> ] ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information           |
| port-profile        | Show port-profile                         |
| sync-status         | Interfaces out-of-sync with port-profiles |
| interface           | (Optional) Interface name                 |
| <i>intfname</i>     | (Optional) Name of interface              |
| <i>__readonly__</i> | (Optional)                                |
| <i>intf</i>         | (Optional)                                |
| <i>status</i>       | (Optional)                                |
| <i>inherit</i>      | (Optional)                                |
| <i>sync_status</i>  | (Optional)                                |
| <i>cached_cmds</i>  | (Optional)                                |
| <i>errors</i>       | (Optional)                                |
| <i>recovery</i>     | (Optional)                                |

### Command Mode

- /exec

## show port-profile usage

```
show port-profile usage [ name <all_profile_name> ] [ __readonly__ TABLE_port_profile <profile_name>
[ TABLE_interface <interface> ] ]
```

### Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information          |
| port-profile            | Show port-profile                        |
| usage                   | List of interfaces inherited a profile   |
| name                    | (Optional) port-profile name             |
| <i>all_profile_name</i> | (Optional) Enter the name of the profile |
| <i>__readonly__</i>     | (Optional)                               |
| TABLE_port_profile      | (Optional)                               |
| TABLE_interface         | (Optional)                               |
| <i>profile_name</i>     | (Optional)                               |
| <i>interface</i>        | (Optional)                               |

### Command Mode

- /exec

# show port-security

```
show port-security [ __readonly__ [ <total_addr> ] [ <max_sys_limit> ] [ { TABLE_eth_port_sec_interfaces
<secure_port> <port_state> <max_secure_addr> <security_violation> <security_action> <current_addr>
<num_val> <num_elems> <cmdid_show_index> } ] ]
```

## Syntax Description

|                               |  |
|-------------------------------|--|
| port-security                 | Show secure port information                           |
| <i>__readonly__</i>           | (Optional)   |
| <i>total_addr</i>             | (Optional) Total number of secured MAC addresses       |
| <i>max_sys_limit</i>          | (Optional) Maximum allowed MACs excluding one per port |
| TABLE_eth_port_sec_interfaces | (Optional) Displays the secured interfaces             |
| <i>secure_port</i>            | (Optional) Interface Index                             |
| <i>port_state</i>             | (Optional) Port security enabled or disabled           |
| <i>max_secure_addr</i>        | (Optional) Maximum number of secured MAC addresses     |
| <i>security_violation</i>     | (Optional) Number of security violations               |
| <i>security_action</i>        | (Optional) Security Action Shutdown/Restrict/Protect   |
| <i>current_addr</i>           | (Optional) Number of secured MAC addresses             |
| <i>num_val</i>                | (Optional) Number of Values                            |
| <i>num_elems</i>              | (Optional) Number of Elements                          |
| <i>cmdid_show_index</i>       | (Optional) Index for the Interfaces                    |

## Command Mode

- /exec

## show port-security address

```
show port-security address [ __readonly__ [ <total_addr> ] [ <max_sys_limit> ] [ {
TABLE_eth_port_sec_mac_addrs <if_index> <vlan_id> <type> <mac_addr> <remain_age> <remote_learnt>
<remote_aged> <num_elems> <cmd_addr_index> } ] ]
```

### Syntax Description

|                              |  |
|------------------------------|--|
| port-security                | Show secure port information                           |
| address                      | Show secure address                                    |
| <i>__readonly__</i>          | (Optional)   |
| <i>total_addr</i>            | (Optional) Total number of secured MAC addresses       |
| <i>max_sys_limit</i>         | (Optional) Maximum allowed MACs excluding one per port |
| TABLE_eth_port_sec_mac_addrs | (Optional) Displays the secured MAC addresses          |
| <i>if_index</i>              | (Optional) Interface index                             |
| <i>vlan_id</i>               | (Optional) vlan id                                     |
| <i>type</i>                  | (Optional) static/sticky/dyanmic MAC address           |
| <i>mac_addr</i>              | (Optional) mac address                                 |
| <i>remain_age</i>            | (Optional) Remaining age                               |
| <i>remote_learnt</i>         | (Optional) Remotely learnt                             |
| <i>remote_aged</i>           | (Optional) Remotely Aged Out                           |
| <i>num_elems</i>             | (Optional) Number of Elements                          |
| <i>cmd_addr_index</i>        | (Optional) Index for the interface address             |

### Command Mode

- /exec

## show port-security address interface

```
show port-security address interface <interface-id> [ __readonly__ { TABLE_eth_port_sec_mac_addr
<if_index> <vlan_id> <type> <mac_addr> <remain_age> <remote_learnt> <remote_aged> <num_elems>
<cmd_addr_index> } [ <total_addr> ] [ <max_sys_limit> ] [ <first> ] ]
```

### Syntax Description

|                             |  |
|-----------------------------|--|
| port-security               | Show secure port information                           |
| address                     | Show secure address                                    |
| interface                   | Show secure interface                                  |
| <i>interface-id</i>         | ethernet   |
| <i>__readonly__</i>         | (Optional)   |
| TABLE_eth_port_sec_mac_addr | (Optional) Displays the secured MAC addresses          |
| <i>if_index</i>             | (Optional) Interface index                             |
| <i>vlan_id</i>              | (Optional) vlan id                                     |
| <i>type</i>                 | (Optional) static/sticky/dyanmic MAC address           |
| <i>mac_addr</i>             | (Optional) mac address                                 |
| <i>remain_age</i>           | (Optional) Remaining age                               |
| <i>remote_learnt</i>        | (Optional) Remotely learnt                             |
| <i>remote_aged</i>          | (Optional) Remotely Aged Out                           |
| <i>num_elems</i>            | (Optional) Number of Elements                          |
| <i>cmd_addr_index</i>       | (Optional) Index for the interface address             |
| <i>total_addr</i>           | (Optional) Total number of secured MAC addresses       |
| <i>max_sys_limit</i>        | (Optional) Maximum allowed MACs excluding one per port |
| <i>first</i>                | (Optional) To identify the first entry                 |

### Command Mode

- /exec

## show port-security interface

```
show port-security interface <interface-id> [ __readonly__ <port_status> <config_port_security>
<oper_port_security> <violation_mode> <aging_time> <aging_type> <max_mac_addr> <total_sec_addrs>
<conf_num_addrs> <num_sticky_addrs> <trap_count> ]
```

### Syntax Description

|                             |  |
|-----------------------------|--|
| <code>port-security</code>  | Show secure port information                               |
| <code>interface</code>      | Show secure interface                                      |
| <i>interface-id</i>         | ethernet   |
| <code>__readonly__</code>   | (Optional)   |
| <i>port_status</i>          | (Optional) Secure Up/Down                                  |
| <i>config_port_security</i> | (Optional) Port Security configuration is Enabled/Disabled |
| <i>oper_port_security</i>   | (Optional) Port Security is Operationally Enabled/Disabled |
| <i>violation_mode</i>       | (Optional) Shutdown/Restrict/Protect                       |
| <i>aging_time</i>           | (Optional) Aging time in minutes                           |
| <i>aging_type</i>           | (Optional) Absolute/Inactivity                             |
| <i>max_mac_addr</i>         | (Optional) Configured Maximum                              |
| <i>total_sec_addrs</i>      | (Optional) Total number of secured MAC addresses           |
| <i>conf_num_addrs</i>       | (Optional) Number of configured MAC addresses              |
| <i>num_sticky_addrs</i>     | (Optional) Number of sticky MAC addresses                  |
| <i>trap_count</i>           | (Optional) Trap Count                                      |

### Command Mode

- /exec

# show port-security state

show port-security state [ \_\_readonly\_\_ <status> ]

## Syntax Description

|               |                               |
|---------------|-------------------------------|
| port-security | Port security related command |
| state         | port security state           |
| __readonly__  | (Optional)                    |
| <i>status</i> | (Optional) show port-security |

## Command Mode

- /exec

# show port led-status module

show port <port\_num> led-status module <module>

## Syntax Description

|                 |                                 |
|-----------------|---------------------------------|
| show            | Show running system information |
| port            | port                            |
| <i>port_num</i> | port number                     |
| led-status      | led-status of the port          |
| module          | module                          |
| <i>module</i>   | module number                   |

## Command Mode

- /exec

# show port naming

show port naming

## Syntax Description

|        |                                 |
|--------|---------------------------------|
| show   | Show running system information |
| port   | Show port information           |
| naming | Show port naming information    |

## Command Mode

- /exec

# show postcard-telemetry exporter

```
show postcard-telemetry exporter [ name ] [ <exportername> ] [ __readonly__ <exporter> <description>
<dest> <vrf> <vrf_id> <vrf_resolved> <dest_udp> <source_intf> <source_ip> <seq_num> ]
```

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information              |
| postcard-telemetry  | Show POSTCARD information                    |
| exporter            | Show POSTCARD Exporter Configuration         |
| name                | (Optional) Show a specific POSTCARD Exporter |
| <i>exportername</i> | (Optional) Specify an exporter               |
| <i>__readonly__</i> | (Optional)                                   |
| <i>exporter</i>     | (Optional)                                   |
| <i>description</i>  | (Optional)                                   |
| <i>dest</i>         | (Optional)                                   |
| <i>vrf</i>          | (Optional)                                   |
| <i>vrf_id</i>       | (Optional)                                   |
| <i>vrf_resolved</i> | (Optional)                                   |
| <i>dest_udp</i>     | (Optional)                                   |
| <i>source_intf</i>  | (Optional)                                   |
| <i>source_ip</i>    | (Optional)                                   |
| <i>seq_num</i>      | (Optional)                                   |

## Command Mode

- /exec

# show postcard-telemetry flow-profile

```
show postcard-telemetry flow-profile [ name ] [ <flow-profilename> ] [ __readonly__ <flow-profile>
<description> <age> <latency> ]
```

## Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information                  |
| postcard-telemetry      | Show POSTCARD information                        |
| flow-profile            | Show POSTCARD flow Profile Configuration         |
| name                    | (Optional) Show a specific POSTCARD flow Profile |
| <i>flow-profilename</i> | (Optional) Specify an flow Profile               |
| <i>__readonly__</i>     | (Optional)                                       |
| <i>flow-profile</i>     | (Optional)                                       |
| <i>description</i>      | (Optional)                                       |
| <i>age</i>              | (Optional)                                       |
| <i>latency</i>          | (Optional)                                       |

## Command Mode

- /exec

# show postcard-telemetry monitor

```
show postcard-telemetry monitor [ name ] [ <monitorname> [ cache [ detailed ] ] ] [ __readonly__ <monitor>
<use_count> <description> <event> <exporter> <bucket_id> <src_addr> <dest_addr> <watchlist> ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information             |
| postcard-telemetry  | Show POSTCARD information                   |
| monitor             | Show Monitor Configuration                  |
| name                | (Optional) Show a specific POSTCARD Monitor |
| <i>monitorname</i>  | (Optional) Specify a monitor                |
| cache               | (Optional) Flow monitor cache contents      |
| detailed            | (Optional) Show the entire cache contents   |
| <i>__readonly__</i> | (Optional)                                  |
| <i>monitor</i>      | (Optional)                                  |
| <i>use_count</i>    | (Optional)                                  |
| <i>description</i>  | (Optional)                                  |
| <i>event</i>        | (Optional)                                  |
| <i>exporter</i>     | (Optional)                                  |
| <i>bucket_id</i>    | (Optional)                                  |
| <i>src_addr</i>     | (Optional)                                  |
| <i>dest_addr</i>    | (Optional)                                  |
| <i>watchlist</i>    | (Optional)                                  |

## Command Mode

- /exec

# show postcard-telemetry queue-profile

```
show postcard-telemetry queue-profile [ name ] [ <queue-profilename> ] [ __readonly__ <queue-profile>
<description> <depth> <latency> ]
```

## Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information                   |
| postcard-telemetry       | Show POSTCARD information                         |
| queue-profile            | Show POSTCARD Queue Profile Configuration         |
| name                     | (Optional) Show a specific POSTCARD Queue Profile |
| <i>queue-profilename</i> | (Optional) Specify an Queue Profile               |
| <i>__readonly__</i>      | (Optional)  |
| <i>queue-profile</i>     | (Optional)  |
| <i>description</i>       | (Optional)  |
| <i>depth</i>             | (Optional)  |
| <i>latency</i>           | (Optional)  |

## Command Mode

- /exec

# show postcard-telemetry sessions

show postcard-telemetry sessions [ <monitorname> ] [ \_\_readonly\_\_ <monitor> ]

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| postcard-telemetry  | Show POSTCARD information       |
| sessions            | Show Session Configuration      |
| <i>monitorname</i>  | (Optional) Specify a monitor    |
| <i>__readonly__</i> | (Optional)                      |
| <i>monitor</i>      | (Optional)                      |

## Command Mode

- /exec

## show postcard-telemetry watchlist

```
show postcard-telemetry watchlist [ name ] [ { <watchlistname> } ] [ __readonly__ <watchlist> <use_count>
<description> <num_aces> <ace_seq_num> <ace_action> <ace_type> <ace_sip> <ace_sip_len> <ace_dip>
<ace_dip_len> ]
```

### Syntax Description

|                      |  |
|----------------------|--|
| show                 | Show running system information                                  |
| postcard-telemetry   | Show POSTCARD information  |
| watchlist            | Show watchlist Configuration                                     |
| name                 | (Optional) Show the configuration for a specific POSTCARD Record |
| <i>watchlistname</i> | (Optional) Specify a watchlist                                   |
| <i>__readonly__</i>  | (Optional)   |
| <i>watchlist</i>     | (Optional)   |
| <i>use_count</i>     | (Optional)   |
| <i>description</i>   | (Optional)   |
| <i>num_aces</i>      | (Optional)   |
| <i>ace_seq_num</i>   | (Optional)   |
| <i>ace_action</i>    | (Optional)   |
| <i>ace_type</i>      | (Optional)   |
| <i>ace_sip</i>       | (Optional)   |
| <i>ace_sip_len</i>   | (Optional)   |
| <i>ace_dip</i>       | (Optional)   |
| <i>ace_dip_len</i>   | (Optional)   |

### Command Mode

- /exec

# show power inline

```
show power inline <if0> [ __readonly__ { TABLE_intf_info <intf_name> <admin> <oper> <supp_pwr>
<del_pwr> <device> <class> <max> } ]
```

## Syntax Description

|                     |                                  |
|---------------------|----------------------------------|
| show                | Show running system information  |
| power               | Power over Ethernet              |
| <i>if0</i>          |                                  |
| <i>__readonly__</i> | (Optional)                       |
| TABLE_intf_info     | (Optional) Interface information |
| <i>intf_name</i>    | (Optional) Interface name        |
| <i>admin</i>        | (Optional) Port mode             |
| <i>oper</i>         | (Optional) Oper mode             |
| <i>supp_pwr</i>     | (Optional) Supplied power        |
| <i>del_pwr</i>      | (Optional) delivered power       |
| <i>device</i>       | (Optional) Device information    |
| <i>class</i>        | (Optional) POE Class             |
| <i>max</i>          | (Optional) Max power             |

## Command Mode

- /exec

# show power inline

```
show power inline [ __readonly__ { TABLE_fex_info <module_id> <avail_pwr> <used_pwr> <rem_pwr>
} { TABLE_intf_info <intf_name> <admin> <oper> <supp_pwr> <del_pwr> <device> <class> <max> } ]
```

## Syntax Description

|                  |                                  |
|------------------|----------------------------------|
| show             | Show running system information  |
| power            | Power over Ethernet              |
| __readonly__     | (Optional)                       |
| TABLE_fex_info   | (Optional) FEX information       |
| <i>module_id</i> | (Optional) FEX id                |
| <i>avail_pwr</i> | (Optional) Available power       |
| <i>used_pwr</i>  | (Optional) Used power            |
| <i>rem_pwr</i>   | (Optional) Free power            |
| TABLE_intf_info  | (Optional) Interface information |
| <i>intf_name</i> | (Optional) Interface name        |
| <i>admin</i>     | (Optional) Port mode             |
| <i>oper</i>      | (Optional) Oper mode             |
| <i>supp_pwr</i>  | (Optional) Supplied power        |
| <i>del_pwr</i>   | (Optional) delivered power       |
| <i>device</i>    | (Optional) Device information    |
| <i>class</i>     | (Optional) POE Class             |
| <i>max</i>       | (Optional) Max power             |

## Command Mode

- /exec

# show power inline detail

```
show power inline <inf> detail [ __readonly__ { TABLE_intf_detail <intf> <power_mode> <oper_status>
<device_det> <dev_type> <ieee_class> <disc_mech> <police_action> <interface_pri> <power_admin_value>
<power_drawn_src> <power_avail_dev> <consump_at_port> <power_drawn_dev> <absent_count>
<over_curr_count> <short_curr_count> <inv_sign_count> <power_denied_count> <four_pair_support>
<spare_pair_support> } ]
```

## Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information                               |
| power                    | Power over Ethernet   |
| <i>inf</i>               |   |
| detail                   | PoE details   |
| __readonly__             | (Optional)  |
| TABLE_intf_detail        | (Optional) Interface Details                                  |
| <i>intf</i>              | (Optional) Interface  |
| <i>power_mode</i>        | (Optional) Inline Power Mode                                  |
| <i>oper_status</i>       | (Optional) Operational status                                 |
| <i>device_det</i>        | (Optional) Device Detected status                             |
| <i>dev_type</i>          | (Optional) Device Type  |
| <i>ieee_class</i>        | (Optional) IEEE Class   |
| <i>disc_mech</i>         | (Optional) Discovery mechanism used/configured                |
| <i>police_action</i>     | (Optional) Policer action                                     |
| <i>interface_pri</i>     | (Optional) Interface Priority                                 |
| <i>power_admin_value</i> | (Optional) Admin value  |
| <i>power_drawn_src</i>   | (Optional) Power drawn from the source                        |
| <i>power_avail_dev</i>   | (Optional) Power available to the device                      |
| <i>consump_at_port</i>   | (Optional) Measured at the port                               |
| <i>power_drawn_dev</i>   | (Optional) Maximum Power drawn by the device since powered on |
| <i>absent_count</i>      | (Optional) Absent Counter                                     |
| <i>over_curr_count</i>   | (Optional) Over Current Counter                               |
| <i>short_curr_count</i>  | (Optional) Short Current Counter                              |

|                           |                                      |
|---------------------------|--------------------------------------|
| <i>inv_sign_count</i>     | (Optional) Invalid Signature Counter |
| <i>power_denied_count</i> | (Optional) Power Denied Counter      |
| <i>four_pair_support</i>  | (Optional) Four-Pair PoE Supported   |
| <i>spare_pair_support</i> | (Optional) Spare Pair Power Enabled  |

**Command Mode**

- /exec

# show power inline police

```
show power inline police [ __readonly__ { TABLE_police <intf_name> <admin> <oper> <admin_police>
<oper_police> <cutoff_pwr> <oper_pwr> } ]
```

## Syntax Description

|                     |                                    |
|---------------------|------------------------------------|
| show                | Show running system information    |
| power               | Power over Ethernet                |
| police              | Show per-port policing             |
| <i>__readonly__</i> | (Optional)                         |
| <i>TABLE_police</i> | (Optional) Police information      |
| <i>intf_name</i>    | (Optional) Interface name          |
| <i>admin</i>        | (Optional) Port mode               |
| <i>oper</i>         | (Optional) Oper mode               |
| <i>admin_police</i> | (Optional) Configured admin police |
| <i>oper_police</i>  | (Optional) Current police          |
| <i>cutoff_pwr</i>   | (Optional) Cutoff power            |
| <i>oper_pwr</i>     | (Optional) Oper power              |

## Command Mode

- /exec

# show power inline priority

show power inline priority [ *\_\_readonly\_\_* { *TABLE\_priority* <intf\_name> <admin> <oper> <priority> } ]

## Syntax Description

|                       |                                      |
|-----------------------|--------------------------------------|
| show                  | Show running system information      |
| power                 | Power over Ethernet                  |
| priority              | Show per-port priority               |
| <i>__readonly__</i>   | (Optional)                           |
| <i>TABLE_priority</i> | (Optional) Port priority information |
| <i>intf_name</i>      | (Optional) Interface name            |
| <i>admin</i>          | (Optional) Port mode                 |
| <i>oper</i>           | (Optional) Oper mode                 |
| <i>priority</i>       | (Optional) port priority             |

## Command Mode

- /exec

# show processes

```
show processes [ __readonly__ { [ TABLE_processes <pid> <state> <pc> <start_cnt> <tty> <p_type>
<process> ] } ]
```

## Syntax Description

|                  |                                    |
|------------------|------------------------------------|

| processes        | Show processes                     |
| __readonly__     | (Optional)                         |
| TABLE_processes  | (Optional) all process information |
| <i>pid</i>       | (Optional) process id              |
| <i>state</i>     | (Optional) process state           |
| <i>pc</i>        | (Optional) pc register             |
| <i>start_cnt</i> | (Optional) TBD                     |
| <i>tty</i>       | (Optional) TBD                     |
| <i>p_type</i>    | (Optional) process type            |
| <i>process</i>   | (Optional) process name            |

## Command Mode

- /exec

## show processes cpu

```
show processes cpu [ sort ] [ __readonly__ { [ TABLE_process_cpu <pid> <runtime> <invoked> <usecs>
<onesech> <process> ] [ <user_percent> ] [ <kernel_percent> ] [ <idle_percent> ] [ <fivesec_percent> ] [
<fivesec_intr_percent> ] [ <onemin_percent> ] [ <fivemin_percent> ] } ]
```

### Syntax Description

|                             |  |
|-----------------------------|--|
| show                        | Show running system information  |
| processes                   | Show processes   |
| cpu                         | Show processes CPU Info  |
| sort                        | (Optional) Show processes CPU Info (Sorted by Cpu Util with time base) |
| __readonly__                | (Optional)   |
| TABLE_process_cpu           | (Optional) all process memory  |
| <i>pid</i>                  | (Optional) process id  |
| <i>runtime</i>              | (Optional) Runtime   |
| <i>invoked</i>              | (Optional) Invoked   |
| <i>usecs</i>                | (Optional) usecs   |
| <i>onesech</i>              | (Optional) fivesec   |
| <i>process</i>              | (Optional) name of the process   |
| <i>user_percent</i>         | (Optional) user  |
| <i>kernel_percent</i>       | (Optional) kernel  |
| <i>idle_percent</i>         | (Optional) idle  |
| <i>fivesec_percent</i>      | (Optional) five seconds cpu percent                                    |
| <i>fivesec_intr_percent</i> | (Optional) five seconds interrupt percent                              |
| <i>onemin_percent</i>       | (Optional) one minute cpu percent                                      |
| <i>fivemin_percent</i>      | (Optional) five minute cpu percent                                     |

### Command Mode

- /exec

# show processes cpu history

show processes cpu history

## Syntax Description

|           |                                 |
|-----------|---------------------------------|
| show      | Show running system information |
| processes | Show processes                  |
| cpu       | Show processes CPU Info         |
| history   | Show processes CPU Util History |

## Command Mode

- /exec

## show processes cpu history data

show processes cpu history data [ *\_\_readonly\_\_* { [ *TABLE\_processes\_cpu\_history* <*cpu\_avg\_sec*> ] } ]

### Syntax Description

|                                    |  |
|------------------------------------|--|
| show                               | Show running system information                |
| processes                          | Show processes                                 |
| cpu                                | Show processes CPU Info                        |
| history                            | Show processes CPU Util History                |
| data                               | Display the CPU util as data, instead of graph |
| <i>__readonly__</i>                | (Optional)                                     |
| <i>TABLE_processes_cpu_history</i> | (Optional) 60 sec cpu history                  |
| <i>cpu_avg_sec</i>                 | (Optional) cpu avg for a sec                   |

### Command Mode

- /exec

## show processes cpu module

```
show processes cpu module <i0> [ __readonly__ { [ TABLE_process_cpu <pid> <runtime> <invoked>
<usecs> <oneseq> <process> ] [ <user_percent> ] [ <kernel_percent> ] [ <idle_percent> ] [ <fivesec_percent>
] [ <fivesec_intr_percent> ] [ <onemin_percent> ] [ <fivemin_percent> ] } ]
```

### Syntax Description

|                             |   |
|-----------------------------|---|
| show                        | Show running system information           |
| processes                   | Show processes                            |
| cpu                         | Show processes CPU Info                   |
| module                      | processes CPU Info                        |
| <i>i0</i>                   | module number                             |
| <i>__readonly__</i>         | (Optional)                                |
| <i>TABLE_process_cpu</i>    | (Optional) all process memory             |
| <i>pid</i>                  | (Optional) process id                     |
| <i>runtime</i>              | (Optional) Runtime                        |
| <i>invoked</i>              | (Optional) Invoked                        |
| <i>usecs</i>                | (Optional) usecs                          |
| <i>oneseq</i>               | (Optional) oneseq                         |
| <i>process</i>              | (Optional) name of the process            |
| <i>user_percent</i>         | (Optional) user                           |
| <i>kernel_percent</i>       | (Optional) kernel                         |
| <i>idle_percent</i>         | (Optional) idle                           |
| <i>fivesec_percent</i>      | (Optional) five seconds cpu percent       |
| <i>fivesec_intr_percent</i> | (Optional) five seconds interrupt percent |
| <i>onemin_percent</i>       | (Optional) one minute cpu percent         |
| <i>fivemin_percent</i>      | (Optional) five minute cpu percent        |

### Command Mode

- /exec

# show processes log

```
show processes log [ __readonly__ { [ TABLE_processes_log <vdc> <process> <pid> <normal_exit> <stack>
<core> <create_time> ] } ]
```

## Syntax Description

|                     |                                     |
|---------------------|-------------------------------------|
| show                | Show running system information     |
| processes           | Show processes                      |
| log                 | Show information about process logs |
| <i>__readonly__</i> | (Optional)                          |
| TABLE_processes_log | (Optional) all processes log        |
| <i>vdc</i>          | (Optional) vdc                      |
| <i>process</i>      | (Optional) vdc process name         |
| <i>pid</i>          | (Optional) pid                      |
| <i>normal_exit</i>  | (Optional) process exit             |
| <i>stack</i>        | (Optional) stack                    |
| <i>core</i>         | (Optional) core                     |
| <i>create_time</i>  | (Optional) log create time          |

## Command Mode

- /exec

# show processes log details

```
show processes log details [ __readonly__ { line_in_log_detail <line_in_file> } ]
```

## Syntax Description

|                           |                                     |
|---------------------------|-------------------------------------|
| show                      | Show running system information     |
| processes                 | Show processes                      |
| log                       | Show information about process logs |
| details                   | Show detail of all logs with stack  |
| <i>__readonly__</i>       | (Optional)                          |
| <i>line_in_log_detail</i> | (Optional)                          |
| <i>line_in_file</i>       | (Optional) each line                |

## Command Mode

- /exec

# show processes log pid

```
show processes log pid <i0> [ __readonly__ { TABLE_line_in_log_pid <line_in_file> } ]
```

## Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information               |
| processes                    | Show processes                                |
| log                          | Show information about process logs           |
| pid                          | Show detail log info about a specific process |
| <i>i0</i>                    | pid of the process                            |
| <i>__readonly__</i>          | (Optional)                                    |
| <i>TABLE_line_in_log_pid</i> | (Optional)                                    |
| <i>line_in_file</i>          | (Optional) each line                          |

## Command Mode

- /exec

## show processes log vdc-all

```
show processes log vdc-all [ __readonly__ { [ TABLE_processes_log_vdc_all <vdc> <process> <pid>
<normal_exit> <stack> <core> <create_time> ] } ]
```

### Syntax Description

|                             |  |
|-----------------------------|--|
| TABLE_processes_log_vdc_all | (Optional) all processes log vdc all             |
| show                        | Show running system information                  |
| processes                   | Show processes                                   |
| log                         | Show information about process logs              |
| vdc-all                     | Show information about process logs in all vdc's |
| __readonly__                | (Optional)                                       |
| vdc                         | (Optional) vdc process name                      |
| process                     | (Optional) vdc process name                      |
| pid                         | (Optional) process id                            |
| normal_exit                 | (Optional) process exit                          |
| stack                       | (Optional) stack                                 |
| core                        | (Optional) core                                  |
| create_time                 | (Optional) log create time                       |

### Command Mode

- /exec

# show processes memory

```
show processes memory [ __readonly__ { TABLE_process_memory <mem_pid> <mem_alloc> <mem_limit>
<mem_used> <stack_base_ptr> <process> } ]
```

## Syntax Description

|                       |                                   |
|-----------------------|-----------------------------------|
| show                  | Show running system information   |
| processes             | Show processes                    |
| memory                | Show processes Memory Info        |
| <i>__readonly__</i>   | (Optional)                        |
| TABLE_process_memory  | (Optional) all process memory     |
| <i>mem_pid</i>        | (Optional) process id             |
| <i>mem_alloc</i>      | (Optional) allocated memory       |
| <i>mem_limit</i>      | (Optional) memory limit           |
| <i>mem_used</i>       | (Optional) memory used            |
| <i>stack_base_ptr</i> | (Optional) stack and base pointer |
| <i>process</i>        | (Optional) name of the process    |

## Command Mode

- /exec

# show processes memory physical

```
show processes memory physical [ __readonly__ { TABLE_process_physical_memory <processid> <virtual>
<physical> <rss> <processname> } ]
```

## Syntax Description

|                               |  |
|-------------------------------|--|
| show                          | Show running system information        |
| processes                     | Show processes                         |
| memory                        | Show processes Memory Info             |
| physical                      | Show processes physical Memory         |
| __readonly__                  | (Optional)                             |
| TABLE_process_physical_memory | (Optional) all process physical memory |
| <i>processid</i>              | (Optional) process id                  |
| <i>virtual</i>                | (Optional) virtual allocated memory    |
| <i>physical</i>               | (Optional) physical memory used        |
| <i>rss</i>                    | (Optional) rss memory                  |
| <i>processname</i>            | (Optional) name of the process         |

## Command Mode

- /exec

## show processes memory shared

```
show processes memory shared [ detail | dynamic ] [ __readonly__ TABLE_process_tag [ <process-tag-out>
] [ <process-memory-share-dynamic-component-str> ] [ <process-memory-share-dynamic-shared-memory-str>

<process-memory-share-total-shm-size> ] [ <process-memory-share-total-shm-used> ] [
<process-memory-share-total-shm-avail> ] ] ]
```

### Syntax Description

|   |   |
|---|---|
| show  | Show running system information                                     |
| processes   | Display process information   |
| memory  | Display memory information  |
| shared  | Display shared memory info  |
| detail  | (Optional) Display shared memory in bytes instead of default kbytes |
| dynamic   | (Optional) Display details of dynamic shared memory segments        |
| __readonly__  | (Optional)  |
| TABLE_process_tag                                     | (Optional)  |
| <i>process-tag-out</i>                                | (Optional)  |
| <i>process-memory-share-dynamic-component-str</i>     | (Optional)  |
| <i>process-memory-share-dynamic-shared-memory-str</i> | (Optional)  |
| <i>process-memory-share-dynamic-current-size-str</i>  | (Optional)  |

|  |            |
|--|------------|
| <i>process-memory-share-dynamic-max-size-str</i> | (Optional) |
| <i>process-memory-share-dynamic-used-str</i>     | (Optional) |
| <i>process-memory-share-component-str</i>        | (Optional) |
| <i>process-memory-share-shared-memory-str</i>    | (Optional) |
| <i>process-memory-share-size-str</i>             | (Optional) |
| <i>process-memory-share-used-str</i>             | (Optional) |
| <i>process-memory-share-available-str</i>        | (Optional) |
| <i>process-memory-share-ref-str</i>              | (Optional) |
| <i>process-memory-share-byte-set-address-str</i> | (Optional) |
| <i>process-memory-share-byte-set-count-str</i>   | (Optional) |
| <i>process-memory-share-address-str</i>          | (Optional) |
| <i>process-memory-share-kbytes-1-str</i>         | (Optional) |
| <i>process-memory-share-kbytes-2-str</i>         | (Optional) |
| <i>process-memory-share-kbytes-3-str</i>         | (Optional) |
| <i>process-memory-share-count-str</i>            | (Optional) |
| TABLE_SMMITEM                                    | (Optional) |

**Command Mode**

- /exec

# show processes vdc

```
show processes vdc <e-vdc2> [ __readonly__ { TABLE_processes_vdc <pid> <state> <pc> <start_cnt> <tty>
<p_type> <process> } ]
```

## Syntax Description

|                            |                                       |
|----------------------------|---------------------------------------|
| show                       | Show running system information       |
| processes                  | Show processes                        |
| vdc                        | Show processes in vdc                 |
| <i>e-vdc2</i>              | Enter Virtual Device Context <vdc-id> |
| <i>__readonly__</i>        | (Optional) Read only                  |
| <i>TABLE_processes_vdc</i> | (Optional) All process information    |
| <i>pid</i>                 | (Optional) PID of process             |
| <i>state</i>               | (Optional) State of process           |
| <i>pc</i>                  | (Optional) PC in which process exists |
| <i>start_cnt</i>           | (Optional) TBD                        |
| <i>tty</i>                 | (Optional) TBD                        |
| <i>p_type</i>              | (Optional) Type of Process            |
| <i>process</i>             | (Optional) Process Name               |

## Command Mode

- /exec

## show processes vdc cpu

```
show processes vdc <e-vdc2> cpu [ __readonly__ [ TABLE_process_vdc_cpu <pid> <runtime> <invoked>
<usecs> <oneseq> <process> ] [ <user_percent> ] [ <kernel_percent> ] [ <idle_percent> ] [ <fivesec_percent>
] [ <fivesec_intr_percent> ] [ <onemin_percent> ] [ <fivemin_percent> ] ]
```

### Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information           |
| processes                    | Show processes                            |
| vdc                          | Show processes in vdc                     |
| <i>e-vdc2</i>                | Enter Virtual Device Context <vdc-id>     |
| cpu                          | Show processes CPU Info                   |
| <i>__readonly__</i>          | (Optional) Readonly table for cpu log     |
| <i>TABLE_process_vdc_cpu</i> | (Optional) All cpu process logs of vdc    |
| <i>pid</i>                   | (Optional) PID of process                 |
| <i>runtime</i>               | (Optional) Runtime                        |
| <i>invoked</i>               | (Optional) Invoked                        |
| <i>usecs</i>                 | (Optional) uSecs                          |
| <i>oneseq</i>                | (Optional) fivesec                        |
| <i>process</i>               | (Optional) Name of process                |
| <i>user_percent</i>          | (Optional) user                           |
| <i>kernel_percent</i>        | (Optional) kernel                         |
| <i>idle_percent</i>          | (Optional) idle                           |
| <i>fivesec_percent</i>       | (Optional) five seconds cpu percent       |
| <i>fivesec_intr_percent</i>  | (Optional) five seconds interrupt percent |
| <i>onemin_percent</i>        | (Optional) one minute cpu percent         |
| <i>fivemin_percent</i>       | (Optional) five minute cpu percent        |

### Command Mode

- /exec

## show processes vdc log

```
show processes vdc <e-vdc2> log [ __readonly__ { [ TABLE_processes_vdc_log <vdc> <process> <pid>
<normal_exit> <stack> <core> <create_time> ] } ]
```

### Syntax Description

|                                |   |
|--------------------------------|---|
| show                           | Show running system information               |
| processes                      | Show processes                                |
| vdc                            | Show processes in vdc                         |
| <i>e-vdc2</i>                  | Enter Virtual Device Context <vdc-id>         |
| log                            | Show information about process logs           |
| <i>__readonly__</i>            | (Optional) Read only table                    |
| <i>TABLE_processes_vdc_log</i> | (Optional) Table for log of all VDC Processes |
| <i>pid</i>                     | (Optional) PID of process                     |
| <i>vdc</i>                     | (Optional) VDC Number                         |
| <i>process</i>                 | (Optional) Process name                       |
| <i>normal_exit</i>             | (Optional) Normal Exit status                 |
| <i>stack</i>                   | (Optional) Stack                              |
| <i>core</i>                    | (Optional) Core                               |
| <i>create_time</i>             | (Optional) Time stamp of log                  |

### Command Mode

- /exec

# show processes vdc log details

show processes vdc <e-vdc2> log details

## Syntax Description

|               |                                       |
|---------------|---------------------------------------|
| show          | Show running system information       |
| processes     | Show processes                        |
| vdc           | Show processes in vdc                 |
| <i>e-vdc2</i> | Enter Virtual Device Context <vdc-id> |
| log           | Show information about process logs   |
| details       | Show detail of all logs with stack    |

## Command Mode

- /exec

# show processes vdc log pid

show processes vdc <e-vdc2> log pid <i1>

## Syntax Description

|               |   |
|---------------|---|
| show          | Show running system information               |
| processes     | Show processes                                |
| vdc           | Show processes in vdc                         |
| <i>e-vdc2</i> | Enter Virtual Device Context <vdc-id>         |
| log           | Show information about process logs           |
| pid           | Show detail log info about a specific process |
| <i>i1</i>     | pid of the process                            |

## Command Mode

- /exec

## show processes vdc memory

```
show processes vdc <e-vdc2> memory [ __readonly__ { [ TABLE_process_memory <mem_pid> <mem_alloc>
<mem_limit> <mem_used> <stack_base_ptr> <process> ] [ <sum_mem_malloced> ] } ]
```

### Syntax Description

|                       |                                       |
|-----------------------|---------------------------------------|
| show                  | Show running system information       |
| processes             | Show processes                        |
| vdc                   | Show processes in vdc                 |
| <i>e-vdc2</i>         | Enter Virtual Device Context <vdc-id> |
| memory                | Show processes Memory Info            |
| <i>__readonly__</i>   | (Optional)                            |
| TABLE_process_memory  | (Optional) all process memory         |
| <i>mem_pid</i>        | (Optional) process id                 |
| <i>mem_alloc</i>      | (Optional) allocated memory           |
| <i>mem_limit</i>      | (Optional) memory limit               |
| <i>mem_used</i>       | (Optional) memory used                |
| <i>stack_base_ptr</i> | (Optional) stack and base pointer     |
| <i>process</i>        | (Optional) name of the process        |

### Command Mode

- /exec

# show pss debug

show pss debug

## Syntax Description

|       |                                 |
|-------|---------------------------------|
| show  | Show running system information |
| pss   | display pss information         |
| debug | display pss debug configuration |

## Command Mode

- /exec

# show ptp brief

```
show ptp brief [ __readonly__ <gptp-flag> [ TABLE_ptp <ptp-ifindex> <state> [ <dot1as-capable> ] ]
<ptp-end> ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| ptp                   | Precision Time Protocol (IEEE 1588) Subsystem |
| brief                 | port states in brief                          |
| __readonly__          | (Optional) Read Only                          |
| <i>gptp-flag</i>      | (Optional) GPTP mode                          |
| TABLE_ptp             | (Optional) ptp table                          |
| <i>ptp-ifindex</i>    | (Optional) ptp ifindex                        |
| <i>state</i>          | (Optional) BMC state                          |
| <i>dot1as-capable</i> | (Optional) Dot1AS capable                     |
| <i>ptp-end</i>        | (Optional) End of table                       |

## Command Mode

- /exec

# show ptp clock

```
show ptp clock [ __readonly__ <clock-id> <domain-id> <num-ports> <priority1> <priority2> <class>
<accuracy> <scaled-log-variance> <offset-from-master> <mean-path-delay-to-master> <steps-removed>
<device-type> <encap> <slave-clock-oper> <master-clock-oper> <src-ip> <src-ipv6> <slave-only> [
<correction-threshold> ] [ <mean-path-delay-threshold> ] [ <gmTimeBaseIndicator> ] [
<last_gm_phase_change> ] [ <master_cum_scaled_rate_offset> ] [ <scaled_last_gm_freq_change> ] [
<cum_scaled_rate_offset> ] <local-clock-time> [ <bs-status> ] <clock-state> [ <asymmetric-delay-direction>
] [ <asymmetric-delay-value> ] ]
```

## Syntax Description

|                                  |  |
|----------------------------------|--|
| ptp                              | Precision Time Protocol (IEEE 1588) Subsystem                          |
| clock                            | Set local clock attributes   |
| <i>__readonly__</i>              | (Optional) Read only   |
| <i>domain-id</i>                 | (Optional) Domain Id   |
| <i>clock-id</i>                  | (Optional) Clock Id  |
| <i>priority1</i>                 | (Optional) Priority 1  |
| <i>priority2</i>                 | (Optional) Priority 2  |
| <i>num-ports</i>                 | (Optional) Number of PTP ports   |
| <i>class</i>                     | (Optional) Class   |
| <i>accuracy</i>                  | (Optional) Clock accuracy  |
| <i>scaled-log-variance</i>       | (Optional) scaled log variance   |
| <i>offset-from-master</i>        | (Optional) Offset from master  |
| <i>mean-path-delay-to-master</i> | (Optional) mean path delay to master                                   |
| <i>steps-removed</i>             | (Optional) Steps removed   |
| <i>device-type</i>               | (Optional) Device Type   |
| <i>encap</i>                     | (Optional) Encapsulation   |
| <i>src-ip</i>                    | (Optional) IPv4 address (A.B.C.D) of source (in layer-3 encapsulation) |
| <i>slave-clock-oper</i>          | (Optional) Slave clock operation                                       |
| <i>master-clock-oper</i>         | (Optional) Master clock operation                                      |
| <i>slave-only</i>                | (Optional) Slave-only mode   |
| <i>correction-threshold</i>      | (Optional) correction-threshold  |
| <i>mean-path-delay-threshold</i> | (Optional) mean-path-delay threshold                                   |

|                                      |   |
|--------------------------------------|---|
| <i>gmTimeBaseIndicator</i>           | (Optional) time base indicator for current GM                 |
| <i>last_gm_phase_change</i>          | (Optional) time difference of current and previous GM         |
| <i>master_cum_scaled_rate_offset</i> | (Optional) cumulative scaled rate offset received from master |
| <i>scaled_last_gm_freq_change</i>    | (Optional) scaled last GM frequency change                    |
| <i>cum_scaled_rate_offset</i>        | (Optional) cumulative scaled rate offset                      |
| <i>local-clock-time</i>              | (Optional) Local clock time                                   |
| <i>bs-status</i>                     | (Optional) Broadsync status enable/disable                    |
| <i>clock-state</i>                   | (Optional) PTP clock state                                    |
| <i>asymmetric-delay-direction</i>    | (Optional) PTP asymmetric delay direction                     |
| <i>asymmetric-delay-value</i>        | (Optional) PTP asymmetric delay compensation time(ns)         |

**Command Mode**

- /exec

## show ptp clock foreign-masters record

```
show ptp clock foreign-masters record [ interface <if0> ] [ __readonly__ [ TABLE_ptp <interface-name>
<clock-id> <priority1> <priority2> <class> <accuracy> <scaled-log-variance> <steps-removed> <is-gm> ]
<ptp-end> ]
```

### Syntax Description

|                            |   |
|----------------------------|---|
| ptp                        | Precision Time Protocol (IEEE 1588) Subsystem |
| clock                      | Set local clock attributes                    |
| foreign-masters            | foreign-masters                               |
| record                     | record  |
| <i>if0</i>                 | (Optional)                                    |
| <i>__readonly__</i>        | (Optional) Read only                          |
| <i>TABLE_ptp</i>           | (Optional) ptp table                          |
| <i>interface-name</i>      | (Optional) interface name                     |
| <i>clock-id</i>            | (Optional) Clock Id                           |
| <i>priority1</i>           | (Optional) Priority 1                         |
| <i>priority2</i>           | (Optional) Priority 2                         |
| <i>class</i>               | (Optional) Class                              |
| <i>accuracy</i>            | (Optional) Clock accuracy                     |
| <i>scaled-log-variance</i> | (Optional) scaled log variance                |
| <i>steps-removed</i>       | (Optional) Steps removed                      |
| <i>is-gm</i>               | (Optional) Is Grandmaster                     |
| <i>ptp-end</i>             | (Optional) End of table                       |

### Command Mode

- /exec

# show ptp corrections

```
show ptp corrections [ entries <val> ] [ __readonly__ <ptp-header> [ TABLE_ptp <intf-name> <sup-time>
<correction-val> <mean-path-delay> ] <ptp-end> ]
```

## Syntax Description

|                             |  |
|-----------------------------|--|
| <code>ptp</code>            | Precision Time Protocol (IEEE 1588) Subsystem  |
| <code>__readonly__</code>   | (Optional) Read Only                           |
| <code>corrections</code>    | Display last few corrections                   |
| <code>entries</code>        | (Optional) Latest entries to display           |
| <code>val</code>            | (Optional) Number of latest entries to display |
| <code>ptp-header</code>     | (Optional) Start of table                      |
| <code>TABLE_ptp</code>      | (Optional) ptp table                           |
| <code>intf-name</code>      | (Optional) interface name                      |
| <code>sup-time</code>       | (Optional) sup time                            |
| <code>correction-val</code> | (Optional) correction value                    |
| <code>ptp-end</code>        | (Optional) End of table                        |

## Command Mode

- /exec

## show ptp cost

```
show ptp cost [ interface <if0> ] [ __readonly__ [ TABLE_ptp <ptp-ifindex> <cost> ] <ptp-end> ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| <i>ptp</i>          | Precision Time Protocol (IEEE 1588) Subsystem |
| <i>cost</i>         | port costs                                    |
| <i>if0</i>          | (Optional)                                    |
| <i>__readonly__</i> | (Optional) Read Only                          |
| <i>TABLE_ptp</i>    | (Optional) ptp table                          |
| <i>ptp-ifindex</i>  | (Optional) ptp ifindex                        |
| <i>cost</i>         | (Optional) cost                               |
| <i>ptp-end</i>      | (Optional) End of table                       |

### Command Mode

- /exec

## show ptp counters interface

```
show ptp counters { interface <if0> | all } [ { detail | ipv4 <ip> | ipv6 <ip6> } ] [ __readonly__ [ TABLE_ptp
<interface_name> [ <accepted-ip> ] <tx-announce-pkts> <rx-announce-pkts> <tx-sync-pkts> <rx-sync-pkts>
<tx-follow-up-pkts> <rx-follow-up-pkts> <tx-delay-req-pkts> <rx-delay-req-pkts> <tx-delay-resp-pkts>
<rx-delay-resp-pkts> <tx-pdelay-req-pkts> <rx-pdelay-req-pkts> <tx-pdelay-resp-pkts> <rx-pdelay-resp-pkts>
<tx-pdelay-follow-up-pkts> <rx-pdelay-follow-up-pkts> [ <tx-mgmt-pkts> ] [ <rx-mgmt-pkts> ] [ <tx-sig-pkts>
] [ <rx-sig-pkts> ] ] <ptp-end> ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| ptp                   | Precision Time Protocol (IEEE 1588) Subsystem |
| __readonly__          | (Optional) Read Only                          |
| counters              | Display PTP packet counters                   |
| interface             | Enter the port interface                      |
| all                   | Displays all information                      |
| <i>if0</i>            |   |
| detail                | (Optional) Show detail                        |
| ipv4                  | (Optional) IPv4 address for the stat info     |
| <i>ip</i>             | (Optional) IPv4 address (A.B.C.D)             |

# show radius-cfs

show radius-cfs [ *\_\_readonly\_\_* [ *<distr\_status>* ] [ *<session\_status>* ] [ *<session\_db>* ] [ *<merge\_status>* ] ]

## Syntax Description

|                       |                                       |
|-----------------------|---------------------------------------|
| show                  | Show running system information       |
| radius-cfs            | Show radius cfs state                 |
| <i>__readonly__</i>   | (Optional)                            |
| <i>distr_status</i>   | (Optional) radius distribution status |
| <i>session_status</i> | (Optional) current session status     |
| <i>session_db</i>     | (Optional) status of session db       |
| <i>merge_status</i>   | (Optional) radius merge status        |

## Command Mode

- /exec

## show radius-server

```
show radius-server [ __readonly__ [ <global_secretKey> ] { <global_timeout> <retransmissionCount>
<global_deadtime> } [ <global_source_intf> ] [ <global_idle_time> ] { [ <global_testUsername> ] [
<global_testPassword> ] } { <server_count> } [ TABLE_server <server_ip> [ <auth_port> ] [ <acct_port> ]
[ <secretKey> ] [ <timeout> ] [ <retries> ] ] [ { <host0> <auth_port> <acct_port> <shared_key>
<idle_time><test_username> <test_password> } + ] ]
```

### Syntax Description

|                            |   |
|----------------------------|---|
| show                       | Show running system information                                   |
| radius-server              | Show RADIUS configuration information                             |
| <i>__readonly__</i>        | (Optional)  |
| <i>global_secretKey</i>    | (Optional) Global shared secret                                   |
| <i>global_timeout</i>      | (Optional) Global timeout for radius                              |
| <i>retransmissionCount</i> | (Optional) Retransmission count when there is no server response  |
| <i>global_deadtime</i>     | (Optional) Global deadtime  |
| <i>global_source_intf</i>  | (Optional) Radius global source interface                         |
| <i>global_idle_time</i>    | (Optional) Radius global idle-time for server monitoring          |
| <i>global_testUsername</i> | (Optional) Username of global test parameters                     |
| <i>global_testPassword</i> | (Optional) Password of global test parameters                     |
| <i>server_count</i>        | (Optional) Total number of radius servers configured              |
| TABLE_server               | (Optional)  |
| <i>server_ip</i>           | (Optional) Ip address of the server                               |
| <i>auth_port</i>           | (Optional) Authentication port used for this server               |
| <i>acct_port</i>           | (Optional) Accounting Port used for this server                   |
| <i>secretKey</i>           | (Optional) Shared secret between the server and the radius client |
| <i>timeout</i>             | (Optional) Timeout for this radius server                         |
| <i>retries</i>             | (Optional) Retry count for individual servers                     |
| <i>host0</i>               | (Optional) DNS name or IP address                                 |
| <i>auth_port</i>           | (Optional) RADIUS server's port for authentication                |
| <i>acct_port</i>           | (Optional) RADIUS server's port for accounting                    |
| <i>shared_key</i>          | (Optional) RADIUS shared secret                                   |

|                      |  |
|----------------------|--|
| <i>test_password</i> | (Optional) User password in test packets |
|----------------------|--|

**Command Mode**

- /exec

## show radius-server

```
show radius-server { <host> } [ __readonly__ { <host1> } [ <authen_port> ] [ <account_port> ] [ <share_key> ] [ <timeout> ] [ <retries> ] [ <secure_radius> ] [ <aid> ] <idle_tim> <test_user_name> <test_pwd> ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                    |
| radius-server         | Show RADIUS configuration information              |
| <i>host</i>           | DNS name or IP address                             |
| <i>__readonly__</i>   | (Optional)   |
| <i>host1</i>          | (Optional) DNS name or IP address                  |
| <i>authen_port</i>    | (Optional) RADIUS server's port for authentication |
| <i>account_port</i>   | (Optional) RADIUS server's port for accounting     |
| <i>timeout</i>        | (Optional) radius server timeout                   |
| <i>retries</i>        | (Optional) radius server retry count               |
| <i>secure_radius</i>  | (Optional) secure radius enabled or not            |
| <i>aid</i>            | (Optional) Authority identity                      |
| <i>share_key</i>      | (Optional) RADIUS shared secret                    |
| <i>test_user_name</i> | (Optional) User name in test packets               |
| <i>test_pwd</i>       | (Optional) User password in test packets           |
| <i>idle_tim</i>       | (Optional) Time interval for monitoring the server |

### Command Mode

- /exec

## show radius-server directed-request

show radius-server directed-request [ \_\_readonly\_\_ { <radius\_directedRequest\_status> } ]

### Syntax Description

|                                      |   |
|--------------------------------------|---|
| show                                 | Show running system information                     |
| radius-server                        | Show RADIUS configuration information               |
| directed-request                     | Show directed server enable configuration           |
| __readonly__                         | (Optional)  |
| <i>radius_directedRequest_status</i> | (Optional) status of radius-server directed request |

### Command Mode

- /exec

## show radius-server groups

```
show radius-server groups [ <s0> ] [ __readonly__ [ <num_of_groups> ] TABLE_group <group_name> [
TABLE_server <server_ip> [ <auth_port> ] [ <acct_port> ] ] [ <dead_time> ] [ <vrf_name> ] [
<source_interface> ] ]
```

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information   |
| radius-server           | Show RADIUS configuration information   |
| groups                  | Show RADIUS server group configuration information  |
| <i>s0</i>               | (Optional) RADIUS server group name   |
| <i>__readonly__</i>     | (Optional)  |
| <i>num_of_groups</i>    | (Optional) number of groups   |
| TABLE_group             | (Optional)  |
| <i>group_name</i>       | (Optional) name of the group  |
| TABLE_server            | (Optional)  |
| <i>server_ip</i>        | (Optional) DNS name or IP address   |
| <i>auth_port</i>        | (Optional) radius server authentication port  |
| <i>acct_port</i>        | (Optional) radius server accounting port  |
| <i>dead_time</i>        | (Optional) Time interval for which the server is marked as dead before sending a test command |
| <i>vrf_name</i>         | (Optional) name of the vrf  |
| <i>source_interface</i> | (Optional) Interface Description  |

### Command Mode

- /exec

## show radius-server sorted

```
show radius-server sorted [ __readonly__ [ <global_secretKey> ] { <global_timeout> <retransmissionCount>
<global_deadtime> } [ <global_source_intf> ] [ <global_idle_time> ] { [ <global_testUsername> ] [
<global_testPassword> ] } { <server_count> } [ TABLE_server <server_ip> [ <auth_port> ] [ <acct_port> ]
[ <secretKey> ] [ <timeout> ] [ <retries> ] ] ]
```

### Syntax Description

|                            |   |
|----------------------------|---|
| show                       | Show running system information                                   |
| radius-server              | Show RADIUS configuration information                             |
| sorted                     | Show RADIUS servers sorted by name                                |
| <i>__readonly__</i>        | (Optional)  |
| <i>global_secretKey</i>    | (Optional) Global shared secret                                   |
| <i>global_timeout</i>      | (Optional) Global timeout for radius                              |
| <i>retransmissionCount</i> | (Optional) Retransmission count when there is no server response  |
| <i>global_deadtime</i>     | (Optional) Global deadtime  |
| <i>global_source_intf</i>  | (Optional) Radius global source interface                         |
| <i>global_idle_time</i>    | (Optional) Radius global idle-time for server monitoring          |
| <i>global_testUsername</i> | (Optional) Username of global test parameters                     |
| <i>global_testPassword</i> | (Optional) Password of global test parameters                     |
| <i>server_count</i>        | (Optional) Total number of radius servers configured              |
| TABLE_server               | (Optional)  |
| <i>server_ip</i>           | (Optional) Ip address of the server                               |
| <i>auth_port</i>           | (Optional) Authentication port used for this server               |
| <i>acct_port</i>           | (Optional) Accounting Port used for this server                   |
| <i>secretKey</i>           | (Optional) Shared secret between the server and the radius client |
| <i>timeout</i>             | (Optional) Timeout for this radius server                         |
| <i>retries</i>             | (Optional) Retry count for individual servers                     |

### Command Mode

- /exec

## show radius-server statistics

```
show radius-server statistics <host0> [ __readonly__ { <server_state> [ <clock_time> { monitoring_statistics
<time_in_pstate> <ndead> <tt_in_dstate> } ] } { auth_statistics <auth_failed_transactions>
<auth_succ_transactions> <auth_req_sent> <auth_req_timedout> <auth_resp_no_match>
<auth_resp_not_processed> <auth_resp_error> } { acct_statistics <acct_failed_transactions>
<acct_succ_transactions> <acct_req_sent> <acct_req_timedout> <acct_resp_no_match>
<acct_resp_not_processed> <acct_resp_error> } } ]
```

### Syntax Description

|                                 |   |
|---------------------------------|---|
| show                            | Show running system information                                   |
| radius-server                   | Show RADIUS configuration information                             |
| statistics                      | Show RADIUS statistics  |
| <i>host0</i>                    | DNS name or IP address  |
| <i>__readonly__</i>             | (Optional)  |
| <i>server_state</i>             | (Optional) Show state of server                                   |
| <i>clock_time</i>               | (Optional) Show clock time in terms of hours, minutes and seconds |
| <i>monitoring_statistics</i>    | (Optional) Monitoring Statistics                                  |
| <i>time_in_pstate</i>           | (Optional) Time in previous state                                 |
| <i>ndead</i>                    | (Optional) Number of times dead                                   |
| <i>tt_in_dstate</i>             | (Optional) Total time in dead state                               |
| <i>auth_statistics</i>          | (Optional) Authentication Statistics                              |
| <i>acct_statistics</i>          | (Optional) Accounting Statistics                                  |
| <i>auth_failed_transactions</i> | (Optional) Authentication: Failed transactions                    |
| <i>auth_succ_transactions</i>   | (Optional) Authentication: Successful transactions                |
| <i>auth_req_sent</i>            | (Optional) Authentication: Requests sent                          |
| <i>auth_req_timedout</i>        | (Optional) Authentication: Requests timedout                      |
| <i>auth_resp_no_match</i>       | (Optional) Authentication: Responses with no matching requests    |
| <i>auth_resp_not_processed</i>  | (Optional) Authentication: Responses not processed                |
| <i>auth_resp_error</i>          | (Optional) Authentication: Responses containing errors            |
| <i>acct_failed_transactions</i> | (Optional) Accounting: Failed transactions                        |
| <i>acct_succ_transactions</i>   | (Optional) Accounting: Successful transactions                    |

|                                |  |
|--------------------------------|--|
| <i>acct_req_sent</i>           | (Optional) Accounting: Requests sent                       |
| <i>acct_req_timeout</i>        | (Optional) Accounting: Requests timeout                    |
| <i>acct_resp_no_match</i>      | (Optional) Accounting: Responses with no matching requests |
| <i>acct_resp_not_processed</i> | (Optional) Accounting: Responses not processed             |
| <i>acct_resp_error</i>         | (Optional) Accounting: Responses containing errors         |

**Command Mode**

- /exec

## show radius status

```
show radius status [ __readonly__ [ <distr_status> ] [ <session_status> ] [ <session_owner> ] [ <session_db> ] [ <last_operation> ] [ <last_operation_status> ] [ <fail_code> ] ]
```

### Syntax Description

|                              |  |
|------------------------------|--|
| show                         | Show running system information                      |
| radius                       | Show RADIUS Information                              |
| status                       | Show RADIUS cfs distribution status                  |
| <i>__readonly__</i>          | (Optional)   |
| <i>distr_status</i>          | (Optional) radius distribution status                |
| <i>session_status</i>        | (Optional) current session status                    |
| <i>session_owner</i>         | (Optional) owner of the current distribution session |
| <i>session_db</i>            | (Optional) status of session db                      |
| <i>last_operation</i>        | (Optional) last_operation                            |
| <i>last_operation_status</i> | (Optional) status of the last operation              |
| <i>fail_code</i>             | (Optional) reason for the failure of last operation  |

### Command Mode

- /exec

## show redundancy status

```
show redundancy status [ __readonly__ <rmode_admin> <rmode_opr> <this_sup> <this_sup_rd_st>
<this_sup_sup_st> <this_sup_int_st> <oth_sup> <oth_sup_rd_st> <oth_sup_sup_st> <oth_sup_int_st>
<sys_strt_time> <sys_uptm_days> <sys_uptm_hrs> <sys_uptm_mins> <sys_uptm_secs> <kern_uptm_days>
<kern_uptm_hrs> <kern_uptm_mins> <kern_uptm_secs> <asup_uptm_days> <asup_uptm_hrs>
<asup_uptm_mins> <asup_uptm_secs> ]
```

### Syntax Description

|                        |                               |
|------------------------|-------------------------------|
| show                   |                               |
| redundancy             | Show system redundancy status |
| status                 | Current redundancy status     |
| <i>__readonly__</i>    | (Optional)                    |
| <i>rmode_admin</i>     | (Optional)                    |
| <i>rmode_opr</i>       | (Optional)                    |
| <i>this_sup</i>        | (Optional)                    |
| <i>this_sup_rd_st</i>  | (Optional)                    |
| <i>this_sup_sup_st</i> | (Optional)                    |
| <i>this_sup_int_st</i> | (Optional)                    |
| <i>oth_sup</i>         | (Optional)                    |
| <i>oth_sup_rd_st</i>   | (Optional)                    |
| <i>oth_sup_sup_st</i>  | (Optional)                    |
| <i>oth_sup_int_st</i>  | (Optional)                    |
| <i>sys_strt_time</i>   | (Optional)                    |
| <i>sys_uptm_days</i>   | (Optional)                    |
| <i>sys_uptm_hrs</i>    | (Optional)                    |
| <i>sys_uptm_mins</i>   | (Optional)                    |

| <i>kern_uptm_hrs</i>   | (Optional)                    |
| <i>kern_uptm_mins</i>  | (Optional)                    |
| <i>kern_uptm_secs</i>  | (Optional)                    |

|                       |            |
|-----------------------|------------|
| <i>asup_uptm_days</i> | (Optional) |
| <i>asup_uptm_hrs</i>  | (Optional) |
| <i>asup_uptm_mins</i> | (Optional) |
| <i>asup_uptm_secs</i> | (Optional) |

**Command Mode**

- /exec

# show regexp

```
show { ip mbgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] | ip bgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] all | ip bgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [ ipv4 { unicast | multicast } ] } regexp <regexp-str> [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                 |
| ip                    | Display IP information  |
| bgp                   | Display BGP status and configuration                            |
| mbgp                  | Display MBGP status and configuration                           |
| vrf                   | (Optional) Virtual Router Context                               |
| <i>vrf-name</i>       | (Optional) VRF name   |
| <i>vrf-known-name</i> | (Optional) Known VRF name                                       |
| ipv4                  | (Optional) Display BGP information for IPv4 address family      |
| unicast               | (Optional) Display BGP information for unicast address family   |
| multicast             | (Optional) Display BGP information for multicast address family |
| all                   | Display BGP information for all address families                |
| regexp                | Display routes matching the AS path regular expression          |
| <i>regexp-str</i>     | Regular expression to match the AS paths                        |

## Command Mode

- /exec

# show reload

show reload [ *\_\_readonly\_\_* <reload-schedule> ]

## Syntax Description

|                        |  |
|------------------------|--|
| show                   | Show running system information            |
| reload                 | Display information about scheduled reload |
| <i>__readonly__</i>    | (Optional)                                 |
| <i>reload-schedule</i> | (Optional) Reload scheduling info          |

## Command Mode

- /exec

## show resource

```
show resource [ <res-mgr-res-known-name> ] [ hidden-too | with-flags ] [ __readonly__ {
TABLE_vdc_resource_local <res_name> <min> <max> <used> <unused> <free> } ]
```

### Syntax Description

|                               |  |
|-------------------------------|--|
| show                          | Show running system information                                  |
| resource                      | Show resource configuration for VDC                              |
| <i>res-mgr-res-known-name</i> | (Optional) Resource name   |
| hidden-too                    | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                        |
| with-flags                    | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                        |
| __readonly__                  | (Optional) Read Only   |
| TABLE_vdc_resource_local      | (Optional)   |
| <i>res_name</i>               | (Optional) Resource Name   |
| <i>min</i>                    | (Optional) Resource min configuration                            |
| <i>max</i>                    | (Optional) Resource max configuration                            |
| <i>used</i>                   | (Optional) Resource current usage for this VDC                   |
| <i>unused</i>                 | (Optional) Resource reserved for this VDC but currently not used |
| <i>free</i>                   | (Optional) Resource current free for this VDC                    |

### Command Mode

- /exec

# show rmon

```
show rmon { alarms | events | hcalarms | info | logs } [ __readonly__ [ TABLE_rmon_alarm { <alarm-str>
<ascii-buf-str> <samp-type-str> <ris-trshod-str> <fall-trshod-str> <start-enable-str> } ] [ TABLE_rmon_event
{ <ev-alaran-str> <ev-desc-str> <ev-fir-cause> <last-fired> } ] [ TABLE_rmon_hcala { <hc-alaran-str>

| TABLE_role_feature_rule | (Optional)  |
| <i>feature_rule</i>     | (Optional)  |

## Command Mode

- /exec

# show role status

show role status

## Syntax Description

|        |                                 |
|--------|---------------------------------|
| show   | Show running system information |
| role   | Show role configuration         |
| status | Display role status             |

## Command Mode

- /exec

# show rollback log exec

```
show rollback log { exec | verify } [ __readonly__ [ <log_entry> + ] ]
```

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information        |
| rollback            | Show rollback                          |
| log                 | show rollback log                      |
| exec                | show rollback execution log            |
| verify              | show rollback verify log               |
| <i>__readonly__</i> | (Optional) Read only                   |
| <i>log_entry</i>    | (Optional) log entry from rollback log |

## Command Mode

- /exec

## show rollback status

```
show rollback status [ __readonly__ <last_operation> [ <rollback_type> ] [ <name> ] [ <start_time> ] [ <end_time> ] [ <operation_status> ] ]
```

### Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information        |
| rollback                | show rollback                          |
| status                  | show status of last rollback operation |
| <i>__readonly__</i>     | (Optional) Read only                   |
| <i>last_operation</i>   | (Optional) last operation              |
| <i>rollback_type</i>    | (Optional) rollback type               |
| <i>name</i>             | (Optional) name                        |
| <i>start_time</i>       | (Optional) start time                  |
| <i>end_time</i>         | (Optional) end time                    |
| <i>operation_status</i> | (Optional) operation status            |

### Command Mode

- /exec

# show route-map

```
show route-map [ <route-map-name> | <route-map-cfg-name> ] [ __readonly__ TABLE_rmap <name>
<action> <seq> [ <descript> ] [ <continue> ] [ { TABLE_rmap_match <match_type> <match_stmt> } ] [ {
TABLE_rmap_set <set_type> <set_stmt> } ] ]
```

## Syntax Description

|                           |                                 |
|---------------------------|---------------------------------|

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                 |
| routing               | Display routing information                                     |
| ipv6                  | Display IPv6 information  |
| vrf                   | (Optional) Display per-VRF information                          |
| <i>vrf-name</i>       | (Optional) VRF name   |
| <i>vrf-known-name</i> | (Optional) Known VRF name                                       |
| vrf-all               | (Optional) Display information for all VRFs                     |
| unicast               | (Optional) Display unicast information                          |
| topology              | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                       |
| <i>topology-name</i>  | (Optional) topology name  |
| l3vm-info             | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                       |
| rpf                   | (Optional) Display RPF information for multicast source         |
| longer-prefixes       | (Optional) Display matching routes with mask-lengths >= prefix  |
| shorter-prefixes      | (Optional) Display matching routes with mask-lengths <= prefix  |
| <i>ipv6-protocol</i>  | (Optional) Display routes for protocol (or route type)          |
| all                   | (Optional) Display routes for protocol for backup next-hops too |
| bind-label            | (Optional) Display routes with this bind-label only             |
| <i>bind-lbl</i>       | (Optional) Binding label  |
| <i>srv6-funct</i>     | (Optional) Srv6 function  |

|  |   |
|--|---|
| <i>next-hop</i>                          | (Optional) Display routes with this next-hop only           |
| <i>interface</i>                         | (Optional) Display routes with this output interface only   |
| <i>interface</i>                         | (Optional) Interface Name                                   |
| <i>updated</i>                           | (Optional) Display routes filtered by last updated time     |
| <i>since</i>                             | (Optional) Display those routes updated since this time     |
| <i>stime</i>                             | (Optional) Since this date/time [[CC]YY-][MM-DD-]HH:MM[:SS] |
| <i>until</i>                             | (Optional) Display those routes updated until this time     |
| <i>utime</i>                             | (Optional) Until this date/time [[CC]YY-][MM-DD-]HH:MM[:SS] |
| <i>summary</i>                           | (Optional) Display route counts                             |

| <i>source-rloc</i>     | (Optional)                      |
| <i>dest-rloc</i>       | (Optional)                      |
| <i>ref-count</i>       | (Optional)                      |

### Command Mode

- /exec

## show routing ipv6 multicast mdt encapsulation

```
show routing ipv6 multicast mdt encapsulation [ detail ] [ vrf { <vrf-name> | <vrf-known-name> | all } ] [
__readonly__ [ TABLE_vrf <vrf-name> [ TABLE_mdt <index> <group> <source> <count> <delete-pending>
]]]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information             |
| routing               | Display routing information                 |
| ipv6                  | Display IPv6 information                    |
| multicast             | Display multicast information               |
| mdt                   | Multicast Distribution Tree                 |
| encapsulation         | Encapsulation Information                   |
| detail                | (Optional) Display detailed information     |
| vrf                   | (Optional) Display per-VRF information      |
| <i>vrf-name</i>       | (Optional) VRF name                         |
| <i>vrf-known-name</i> | (Optional) Known VRF name                   |
| all                   | (Optional) Display information for all VRFs |
| <i>__readonly__</i>   | (Optional)                                  |
| TABLE_vrf             | (Optional)                                  |
| <i>vrf-name</i>       | (Optional)                                  |
| TABLE_mdt             | (Optional)                                  |
| <i>index</i>          | (Optional)                                  |
| <i>count</i>          | (Optional)                                  |
| <i>delete-pending</i> | (Optional)                                  |

### Command Mode

- /exec

## show routing ipv6 multicast memory estimate

```
show routing ipv6 multicast memory estimate [ groups <group-count> sources-per-group <source-count>
oifs-per-entry <oif-count> [ mdt-encap-entries <encap-entry-count> ] [ __readonly__ [ TABLE_currentmax
[ <max-mb> ] [ <max-groups> ] [ <sources-per-group> ] [ <oifs-per-entry> ] ] [ TABLE_inuse [ <used-kb>
] [ <alloc-count> ] [ <sources-per-group> ] [ <oifs-per-entry> ] [ <mdt-encap-entry> ] ] [
TABLE_configuredmax [ <max-mb> ] [ <max-groups> ] [ <sources-per-group> ] [ <oifs-per-entry> ] ] [
TABLE_estimate [ <estimate-mb> ] [ <groups> ] [ <sources-per-group> ] [ <oifs-per-entry> ] [
<mdt-encap-entry> ] ] ] ]
```

### Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information   |
| routing                  | Display routing information   |
| ipv6                     | Display IPv6 information  |
| multicast                | Display multicast information   |
| memory                   | Display mrib memory information   |
| estimate                 | Display mrib memory estimate  |

## show routing vxlan-hash peer-ip

```
show routing vxlan-hash peer-ip <peer-ip> <inner-src-mac> <inner-dst-mac> [ <inner-src-ip> <inner-dst-ip>
] [ <inner-src-ip6> <inner-dst-ip6> ] [ ip-proto <ip-proto> ] [ <inner-src-port> <inner-dst-port> ] [ module
<module-id> ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                   |
| routing               | Display routing information                       |
| vxlan-hash            | Display load-balancing information for vxlan      |
| peer-ip               | Peer IP address                                   |
| <i>peer-ip</i>        | Peer IP   |
| <i>inner-src-mac</i>  | Inner Source MAC Address                          |
| <i>inner-dst-mac</i>  | Inner Destination MAC Address                     |
| <i>inner-src-ip</i>   | (Optional) Inner Source IP                        |
| <i>inner-dst-ip</i>   | (Optional) Inner Destination IP                   |
| ip-proto              | (Optional) IP Protocol information for the packet |
| <i>ip-proto</i>       | (Optional) IP Protocol information for the packet |
| <i>inner-src-port</i> | (Optional) Inner Source-port                      |
| <i>inner-dst-port</i> | (Optional) Inner Destination-port                 |
| module                | (Optional) Module                                 |
| <i>module-id</i>      | (Optional) Module                                 |

### Command Mode

- /exec

## show routing vxlan-hash peer-ipv6

```
show routing vxlan-hash peer-ipv6 <peer-ipv6> <inner-src-mac> <inner-dst-mac> [ <inner-src-ip>
<inner-dst-ip> ] [ <inner-src-ip6> <inner-dst-ip6> ] [ ip-proto <ip-proto> ] [ <inner-src-port> <inner-dst-port>
] [ module <module-id> ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                   |
| routing               | Display routing information                       |
| vxlan-hash            | Display load-balancing information for vxlan      |
| peer-ipv6             | Peer IPv6 address                                 |
| <i>inner-src-mac</i>  | Inner Source MAC Address                          |
| <i>inner-dst-mac</i>  | Inner Destination MAC Address                     |
| <i>inner-src-ip</i>   | (Optional) Inner Source IP                        |
| <i>inner-dst-ip</i>   | (Optional) Inner Destination IP                   |
| ip-proto              | (Optional) IP Protocol information for the packet |
| <i>ip-proto</i>       | (Optional) IP Protocol information for the packet |
| <i>inner-src-port</i> | (Optional) Inner Source-port                      |
| <i>inner-dst-port</i> | (Optional) Inner Destination-port                 |
| module                | (Optional) Module                                 |
| <i>module-id</i>      | (Optional) Module                                 |

### Command Mode

- /exec

# show rscn event-tov vsan

show rscn event-tov vsan <i0>

## Syntax Description

|           |                                 |
|-----------|---------------------------------|
| show      | Show running system information |
| event-tov | show event time out value       |
| vsan      | show event time out value       |
| <i>i0</i> | VSAN id                         |

## Command Mode

- /exec

# show rscn pending-diff vsan

show rscn pending-diff vsan <i0>

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                      |
| pending-diff | show difference b/w pending and active configuration |
| vsan         | show difference b/w pending and active configuration |
| <i>i0</i>    | VSAN id  |

## Command Mode

- /exec

# show rscn pending vsan

show rscn pending vsan <i0>

## Syntax Description

|           |                                 |
|-----------|---------------------------------|
| show      | Show running system information |
| pending   | show pending configuration      |
| vsan      | show pending configuration      |
| <i>i0</i> | VSAN id                         |

## Command Mode

- /exec

# show rscn scr-table

show rscn scr-table [ vsan <i0> ]

## Syntax Description

|           |                                      |
|-----------|--------------------------------------|
| show      | Show running system information      |
| scr-table | show State Change Registration table |
| vsan      | (Optional) show table for given vsan |
| <i>i0</i> | (Optional) VSAN id range             |

## Command Mode

- /exec

# show rscn session status vsan

show rscn session status vsan <i0>

## Syntax Description

|           |                                    |
|-----------|------------------------------------|
| show      | Show running system information    |
| session   | show rscn session status           |
| status    | show rscn session status           |
| vsan      | show internals for session history |
| <i>i0</i> | VSAN id range                      |

## Command Mode

- /exec

# show rscn statistics

```
show rscn statistics { [ vsan <i0> ] | detail [ vsan <i1> ] }
```

## Syntax Description

|            |   |
|------------|---|
| show       | Show running system information           |
| statistics | show RSCN Statistics                      |
| vsan       | (Optional) show statistics for given vsan |
| <i>i0</i>  | (Optional) VSAN id range                  |
| detail     | show statistics for each type of RSCN     |
| vsan       | (Optional) show statistics for given vsan |
| <i>i1</i>  | (Optional) VSAN id range                  |

## Command Mode

- /exec

# show running-config

show running-config

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| running-config | Current operating configuration |

## Command Mode

- /exec

# show running-config aaa

show running-config aaa [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| aaa            | Display aaa configuration                    |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config acllog

show running-config acllog [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| acllog         | show running config for acllog               |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config aclmgr

show running-config aclmgr [ all | inactive-if-config ]

## Syntax Description

|                    |  |
|--------------------|--|
| show               | Show running system information                      |
| running-config     | Current operating configuration                      |
| aclmgr             | show running config for aclmgr                       |
| all                | (Optional) show running config with defaults         |
| inactive-if-config | (Optional) show running config for inactive-policies |

## Command Mode

- /exec

# show running-config adjmgr

show running-config adjmgr [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operating configuration                      |
| adjmgr         | Display adjmgr information                           |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config all

show running-config all

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information               |
| running-config | Current operating configuration               |
| all            | Current operating configuration with defaults |

## Command Mode

- /exec

# show running-config arp

show running-config arp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operating configuration                      |
| arp            | Display arp information                              |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config assoc

show running-config assoc [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| assoc          | Original ID to Translated ID Association     |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config backup

show running-config { backup | flexlink } [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information           |
| running-config | Current operating configuration           |
| backup         | Show running config for Switchport Backup |
| flexlink       | Show running config for Switchport Backup |
| all            | (Optional) Show config with defaults      |

## Command Mode

- /exec

# show running-config bfd

show running-config bfd [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| bfd            | show running config for bfd                  |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config bgp

show running-config bgp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| bgp            | Display bgp information                              |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config bloggerd

show running-config bloggerd [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| bloggerd       | Display bloggerd configuration               |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config callhome

show running-config callhome [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| callhome       | Display callhome configuration               |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config cdp

show running-config cdp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| cdp            | Display cdp configuration                    |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config cert-enroll

show running-config cert-enroll [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| cert-enroll    | Display certificates configuration           |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config cfs

show running-config cfs [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operation configuration              |
| cfs            | Display cfs configurations                   |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config clock\_manager

show running-config clock\_manager [ all ]

## Syntax Description

|                |  |
|----------------|--|
| running-config | Current operating configuration              |
| clock_manager  | show running config for clock manager        |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config config-profile

show running-config config-profile [ <all\_conf\_profile\_name> ]

## Syntax Description

|                              |  |
|------------------------------|--|
| show                         | Show running-cfg                         |
| running-config               | show running configuration               |
| config-profile               | Display port-profile configuration       |
| <i>all_conf_profile_name</i> | (Optional) Enter the name of the profile |

## Command Mode

- /exec

# show running-config controller

show running-config controller

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| running-config | Current operating configuration |
| controller     | controller                      |

## Command Mode

- /exec

# show running-config copp

show running-config copp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| copp           | Control-Plane Policing                       |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config dhcp

show running-config dhcp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operation configuration              |
| dhcp           | Display dhcp snoop configurations            |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config diagnostic

show running-config diagnostic [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| running-config | Current operating configuration                 |
| diagnostic     | Display diagnostic information                  |
| all            | (Optional) Display running config with defaults |

## Command Mode

- /exec

# show running-config diff

show running-config diff

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                               |
| running-config | Current operating configuration                               |
| diff           | Show the difference between running and startup configuration |

## Command Mode

- /exec

# show running-config dot1x

show running-config dot1x [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| dot1x          | Display dot1x configuration                  |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config ecp

show running-config ecp [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| running-config | Current operationg configuration                |
| ecp            | ECP (Edge Control Protocol)                     |
| all            | (Optional) Display running config with defaults |

## Command Mode

- /exec

# show running-config eem

show running-config eem

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Show the system running configuration        |
| eem            | Show the event manager running configuration |

## Command Mode

- /exec

# show running-config eigrp

show running-config eigrp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| eigrp          | Display eigrp information                            |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config eltm

show running-config eltm

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| running-config | Current operation configuration |
| eltm           | Display eltm configurations     |

## Command Mode

- /exec

# show running-config epbr

show running-config epbr

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show running-cfg                |
| running-config | show running system information |
| epbr           | epbr                            |

## Command Mode

- /exec

# show running-config evb

show running-config evb [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| running-config | Current operationg configuration                |
| evb            | EVB (Edge Virtual Bridge)                       |
| all            | (Optional) Display running config with defaults |

## Command Mode

- /exec

# show running-config exclude

show running-config exclude <feature-list> +

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                     |
| running-config      | Current operating configuration                     |
| exclude             | Exclude running configuration of specified features |
| <i>feature-list</i> | Exclude features                                    |

## Command Mode

- /exec

# show running-config expand-port-profile

show running-config expand-port-profile

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| running-config      | Current operating configuration |
| expand-port-profile | Expand port profile             |

## Command Mode

- /exec

# show running-config fabric forwarding

show running-config fabric forwarding [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                         |
| running-config | Current operationg configuration                        |
| fabric         | Fabric  |
| forwarding     | Fabric Forwarding Protocol: Host Mobility Manager (HMM) |
| all            | (Optional) Display running config with defaults clis    |

## Command Mode

- /exec

# show running-config fabric multicast

show running-config fabric multicast [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operating configuration                      |
| fabric         | Fabric   |
| multicast      | Multicast information                                |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config fabricpath

show running-config fabricpath [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| fabricpath     | fabricpath information                       |
| all            | (Optional) Show running config with defaults |

## Command Mode

- /exec

# show running-config fabricpath domain default

show running-config fabricpath domain default [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operating configuration                      |
| fabricpath     | fabricpath information                               |
| domain         | Enter fabricpath IS-IS domain configuration mode     |
| default        | default fabricpath domain                            |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config fabricpath switch-id

show running-config fabricpath switch-id [ all ]

## Syntax Description

|                |  |
|----------------|--|
| running-config | Current operating configuration              |
| fabricpath     | fabricpath information                       |
| switch-id      | fabricpath switch-id configuration           |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config fabricpath topology

show running-config fabricpath topology [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| fabricpath     | fabricpath Module Information                        |
| topology       | Fabricpath topology Information                      |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config fcoe\_mgr

show running-config fcoe\_mgr [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| fcoe_mgr       | Display fcoe_mgr configuration               |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config fsync\_mgr

show running-config fsync\_mgr [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| fsync_mgr      | Frequency Synchronization Manager            |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config hardware-telemetry

show running-config hardware-telemetry [ all ]

## Syntax Description

|                    |  |
|--------------------|--|
| running-config     | Current operating configuration              |
| hardware-telemetry | show running config for hardware-telemetry   |
| all                | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config hsrp

show running-config hsrp [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show system information                             |
| running-config | System running configuration                        |
| hsrp           | HSRP running configuration                          |
| all            | (Optional) Show HSRP running configuration defaults |

## Command Mode

- /exec

# show running-config icam

show running-config icam

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show running-cfg                |
| running-config | show running system information |
| icam           | icam services                   |

## Command Mode

- /exec

# show running-config icmpv6

show running-config icmpv6 [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operating configuration                      |
| icmpv6         | Display icmpv6 information                           |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config igmp

show running-config igmp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| igmp           | Display igmp information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config imp

show running-config imp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show system information                            |
| running-config | System running configuration                       |
| imp            | IMP running configuration                          |
| all            | (Optional) Show IMP running configuration defaults |

## Command Mode

- /exec

# show running-config interface

show running-config interface [ <if0> ] [ all ] [ expand-port-profile ]

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                            |
| running-config      | Current operating configuration                            |
| interface           | Interface configuration                                    |
| <i>if0</i>          | (Optional) interface type and number in module/slot format |
| all                 | (Optional) show running config with defaults               |
| expand-port-profile | (Optional) Expand port profile                             |

## Command Mode

- /exec

# show running-config interface

show running-config interface <if0> [ membership ] [ expand-port-profile ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                 |
| running-config      | Current operating configuration                 |
| interface           | Interface configuration                         |
| <i>if0</i>          | interface type and number in module/slot format |
| membership          | (Optional) Show membership information          |
| expand-port-profile | (Optional) Expand port profile                  |

## Command Mode

- /exec

# show running-config ip

show running-config ip [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operating configuration                      |
| ip             | Display ip information                               |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config ipqos

show running-config ipqos [ all | inactive-if-config ]

## Syntax Description

|                    |  |
|--------------------|--|
| show               | Show running system information                      |
| running-config     | Current operating configuration                      |
| all                | (Optional) show running config with defaults         |
| inactive-if-config | (Optional) show running config for inactive-policies |

## Command Mode

- /exec

# show running-config ipv6

show running-config ipv6 [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operating configuration                      |
| ipv6           | Display ipv6 information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config isis

show running-config isis [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| isis           | Display isis information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config l3vm

show running-config l3vm [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| running-config | Current operationg configuration                |
| l3vm           | Display l3vm information                        |
| all            | (Optional) Display running config with defaults |

## Command Mode

- /exec

# show running-config ldap

show running-config ldap [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| ldap           | Display ldap configuration                   |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config license

show running-config license [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show   |
| running-config | show running system information              |
| license        | Display licensing configuration              |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config lisp

show running-config lisp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| lisp           | Display lisp information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config lldp

show running-config lldp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| lldp           | Display lldp configuration                   |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config macsec

show running-config macsec

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| running-config | Current operating configuration |
| macsec         | Show CTS information            |

## Command Mode

- /exec

# show running-config mfwd

show running-config { mfwd | mcastfwd } [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationng configuration                    |
| mcastfwd       | Display MCASTFWD information                         |
| mfwd           | Display MFWD information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config mfwdv6

show running-config { mfwdv6 | mcastfwdv6 } [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| mcastfwdv6     | Display IPV6 MCASTFWD information                    |
| mfwdv6         | Display IPV6 MFWD information                        |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config mld

show running-config mld [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| mld            | Display MLD information                              |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config mmode

show running-config mmode [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                |
| running-config | Show running configuration                     |
| mmode          | Display maintenance mode running configuration |
| all            | (Optional) Show running config with defaults   |

## Command Mode

- /exec

# show running-config monitor

show running-config monitor [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| monitor        | Configure Ethernet SPAN sessions             |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config mpls static

show running-config mpls static [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| running-config | Current operating configuration                 |
| mpls           | Display MPLS status and configuration           |
| static         | Static Label Bindings                           |
| all            | (Optional) Display running-config with defaults |

## Command Mode

- /exec

# show running-config mpls strip

show running-config mpls strip [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                                 |
| mpls           | MPLS information  |
| strip          | Stripping of MPLS headers                                       |
| running-config | System running configuration                                    |
| all            | (Optional) Show running configuration for STRIPCL with defaults |

## Command Mode

- /exec

# show running-config msdp

show running-config msdp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| msdp           | Display msdp information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config nat

show running-config nat [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| nat            | Display NAT configuration                    |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config nbm

show running-config nbm

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| running-config | Current operating configuration |
| nbm            | Non Blocking Multicast          |

## Command Mode

- /exec

# show running-config ngoam

show running-config ngoam [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Show running system information              |
| ngoam          | ngoam configuration                          |
| all            | (Optional) Show running config with defaults |

## Command Mode

- /exec

# show running-config ntp

show running-config ntp [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show information                              |
| running-config | Show running system configuration             |
| ntp            | Show NTP information                          |
| all            | (Optional) Show all NTP running configuration |

## Command Mode

- /exec

# show running-config nv overlay

show running-config nv overlay [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show system information                            |
| running-config | System running configuration                       |
| nv             | NVE running configuration                          |
| overlay        | NVE running configuration                          |
| all            | (Optional) Show NVE running configuration defaults |

## Command Mode

- /exec

# show running-config nxsdk

show running-config nxsdk [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| running-config | Current operating configuration                 |
| nxsdk          | NXOS SDK  |
| all            | (Optional) Display running config with defaults |

## Command Mode

- /exec

# show running-config ofm

show running-config ofm [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                          |
| running-config | Show running system information                          |
| ofm            | Display Overlay Flow/Policy Manager information          |
| all            | (Optional) Current operating configuration with defaults |

## Command Mode

- /exec

# show running-config openflow

show running-config openflow [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| openflow       | Show running config for OpenFlow agent       |
| all            | (Optional) Show running config with defaults |

## Command Mode

- /exec

# show running-config ospf

show running-config ospf [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| ospf           | Display ospf information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config ospfv3

show running-config ospfv3 [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| ospfv3         | Display ospfv3 information                           |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config otv-isis

show running-config otv-isis [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| otv-isis       | Display otv-isis information                         |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config param-list

show running-config param-list [ <plistname> ]

## Syntax Description

|                  |   |
|------------------|---|
| show             | Show running-cfg                            |
| running-config   | show running configuration                  |
| param-list       | Display param-list configuration            |
| <i>plistname</i> | (Optional) Enter the name of the param list |

## Command Mode

- /exec

# show running-config pim

show running-config pim [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| pim            | Display pim information                              |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config pim6

show running-config pim6 [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| pim6           | Display pim6 information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config poe

show running-config poe [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| poe            | Power over Ethernet                          |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config port-profile

show running-config port-profile [ <all\_profile\_name> ]

## Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running-cfg                         |
| running-config          | show running configuration               |
| port-profile            | Display port-profile configuration       |
| <i>all_profile_name</i> | (Optional) Enter the name of the profile |

## Command Mode

- /exec

# show running-config port-security

show running-config port-security [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| port-security  | Display port-security configuration          |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config ptp

show running-config ptp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| running-config | Current operating configuration              |
| ptp            | show running config for ptp                  |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config radius

show running-config radius [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| radius         | Display radius configuration                 |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config rip

show running-config rip [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| rip            | Display rip information                              |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config routing ip multicast

show running-config routing { ip | ipv4 } multicast [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| routing        | Display routing information                          |
| ip             | Display IP information                               |
| ipv4           | Display IP information                               |
| multicast      | Display multicast information                        |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config routing ipv6 multicast

show running-config routing ipv6 multicast [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| routing        | Display routing information                          |
| ipv6           | Display IPv6 information                             |
| multicast      | Display multicast information                        |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config rpm

show running-config rpm [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| running-config | Current operating configuration                 |
| rpm            | Display Route Policy Manager (RPM) information  |
| all            | (Optional) Display running config with defaults |

## Command Mode

- /exec

# show running-config scheduler

show running-config scheduler [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| scheduler      | Show scheduler config or data                |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config section

show running-config section <section>

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information  |
| running-config | Current operating configuration  |
| section        | show only a particular section of running-config (in format needed for 'merge config' command) |
| <i>section</i> | the section to show, a regular expression, (use a dot for a space)                             |

## Command Mode

- /exec

# show running-config security

show running-config security [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| security       | Display security configuration               |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config segment-routing

show running-config segment-routing [ all ]

## Syntax Description

|                 |   |
|-----------------|---|
| show            | Show running system information               |
| running-config  | Show running configuration                    |
| segment-routing | Display segment-routing running configuration |
| all             | (Optional) Show running config with defaults  |

## Command Mode

- /exec

# show running-config service-reflect

show running-config service-reflect

## Syntax Description

|                 |  |
|-----------------|--|
| show            | Show running system information              |
| running-config  | Current operationg configuration             |
| service-reflect | Display NAT feature service-reflect commands |

## Command Mode

- /exec

# show running-config services

show running-config services

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show running-cfg                |
| running-config | show running system information |
| services       | services                        |

## Command Mode

- /exec

# show running-config services

show running-config services

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show running-cfg                |
| running-config | show running system information |
| services       | services                        |

## Command Mode

- /exec

# show running-config sflow

show running-config sflow [ all ]

## Syntax Description

|                |  |
|----------------|--|
| running-config | Current operating configuration              |
| sflow          | show running config for sflow                |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config sla responder

show running-config sla responder

## Syntax Description

|                |                                      |
|----------------|--------------------------------------|
| show           | show running-cfg                     |
| running-config | show running system information      |
| sla            | Service Level Agreement (SLA)        |
| responder      | Show information about sla-responder |

## Command Mode

- /exec

# show running-config sla sender

show running-config sla sender

## Syntax Description

|                |                                   |
|----------------|-----------------------------------|
| show           | show running-cfg                  |
| running-config | show running system information   |
| sla            | Service Level Agreement (SLA)     |
| sender         | Show information about sla-sender |

## Command Mode

- /exec

# show running-config sla twamp-server

show running-config sla twamp-server

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                           |
| running-config | show running system information            |
| sla            | Service Level Agreement (SLA)              |
| twamp-server   | Show IPSLA IPPM TWAMP server configuration |

## Command Mode

- /exec

# show running-config snmp

show running-config snmp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| snmp           | Display snmp configuration                   |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config spanning-tree

show running-config spanning-tree [ <all> | interface <interface\_range> ]

## Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information                             |
| running-config         | Current operating configuration                             |
| spanning-tree          | Show spanning tree information                              |
| <i>all</i>             | (Optional)  |
| interface              | (Optional) Specify an interface as a target for the command |
| <i>interface_range</i> | (Optional)  |

## Command Mode

- /exec

# show running-config srte

show running-config srte

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| running-config | Current operating configuration |
| srte           | SRTE                            |

## Command Mode

- /exec

# show running-config switch

show running-config { switch-profile | include-switch-profile }

## Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information               |
| running-config         | Current operating configuration               |
| switch-profile         | Show switch-profile information               |
| include-switch-profile | Show running and switch-profile configuration |

## Command Mode

- /exec

# show running-config sync

show running-config sync [ all ]

## Syntax Description

|                |  |
|----------------|--|
| running-config | Current operating configuration              |
| sync           | show running config for sync                 |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config tacacs

show running-config tacacs + [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running-cfg                             |
| running-config | show running system information              |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config telemetry

show running-config telemetry [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show running system configuration            |
| running-config | Current operating configuration              |
| telemetry      | Display telemetry configuration              |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config track

show running-config track [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Show the system running information                  |
| track          | Show track running configuration                     |
| all            | (Optional) Show track running configuration defaults |

## Command Mode

- /exec

# show running-config tunnel-encryption

show running-config tunnel-encryption

## Syntax Description

|                   |  |
|-------------------|--|
| show              | Show running system information                  |
| running-config    | Current operating configuration                  |
| tunnel-encryption | Show information about Tunnel Encryption Manager |

## Command Mode

- /exec

# show running-config udd

show running-config udd [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| udd            | Show udd configuration                       |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config vdc-all

show running-config vdc-all [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                           |
| running-config | Current operating configuration                           |
| vdc-all        | Display config from all VDC                               |
| all            | (Optional) Display config from all VDC including defaults |

## Command Mode

- /exec

# show running-config vdc

show running-config vdc [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| vdc            | Show Virtual Device Contexts                 |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config virtual-service

show running-config virtual-service

## Syntax Description

|                 |   |
|-----------------|---|
| show            | Show running system information                 |
| running-config  | Current operating configuration                 |
| virtual-service | Show running config for virtualization services |

## Command Mode

- /exec

# show running-config vlan

show running-config vlan <vlan-id> [ expand-port-profile ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                 |
| running-config      | Current operating configuration                 |
| vlan                | Vlan commands                                   |
| <i>vlan-id</i>      | VLAN ID 1-4094 or range(s): 1-5, 10 or 2-5,7-19 |
| expand-port-profile | (Optional) Expand port profile                  |

## Command Mode

- /exec

# show running-config vlan

show running-config vlan

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| running-config | Current operating configuration |
| vlan           | Vlan commands                   |

## Command Mode

- /exec

# show running-config vlan

show running-config vlan <vlan-id> [ expand-port-profile ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                 |
| running-config      | Current operating configuration                 |
| vlan                | Vlan commands                                   |
| <i>vlan-id</i>      | VLAN ID 1-4094 or range(s): 1-5, 10 or 2-5,7-19 |
| expand-port-profile | (Optional) Expand port profile                  |

## Command Mode

- /exec

# show running-config vmtracker

show running-config vmtracker [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| vmtracker      | show running config for vmtracker            |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config vpc

show running-config vpc [ all ]

## Syntax Description

|                |  |
|----------------|--|
| running-config | Current operating configuration              |
| vpc            | show running config for vPC                  |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config vrf

show running-config vrf <vrf-cfg-name> [ all ]

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                      |
| running-config      | Current operationng configuration                    |
| vrf                 | Display VRF information                              |
| <i>vrf-cfg-name</i> | Configurable VRF name                                |
| all                 | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config vrf default

show running-config vrf default [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| running-config | Current operationg configuration                     |
| vrf            | Display VRF information                              |
| default        | Known VRF name                                       |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show running-config vrrp

show running-config vrrp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| vrrp           | Display VRRP running configuration           |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config vrrpv3

show running-config vrrpv3 [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| running-config | Current operating configuration              |
| vrrpv3         | Show running config for VRRPv3               |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show running-config vshd

show running-config vshd

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| running-config | Current operating configuration |
| vshd           | Show running config for vshd    |

## Command Mode

- /exec

# show running-config vtp

show running-config vtp [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                             |
| running-config | Current operating configuration                             |
| vtp            | Show running configuration for VTP                          |
| all            | (Optional) Show running configuration for VTP with defaults |

## Command Mode

- /exec

# show running-config wwnm

show running-config wwnm

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information           |
| running-config | Current running configuration             |
| wwnm           | Display WWN Manager running configuration |

## Command Mode

- /exec

# show running-config zone

show running-config zone

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information           |
| running-config | Current operating configuration           |
| zone           | Display zone server running configuration |

## Command Mode

- /exec

# show running-config zone vsan

show running-config zone vsan <vsan-id>

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                    |
| running-config | Current operating configuration                    |
| zone           | Display zone server running configuration per vsan |
| vsan           | Vsan commands                                      |
| <i>vsan-id</i> | Vsan id  |

## Command Mode

- /exec

```
show running-config zone vsan
```

# show san-port-channel compatibility-parameters

```
show san-port-channel compatibility-parameters [ __readonly__ [ { TABLE_compatibility_params <parameter>
<description> } ] ]
```

## Syntax Description

|                                   |  |
|-----------------------------------|--|
| show                              | Show running system information                |
| san-port-channel                  | Show san-port-channel information              |
| compatibility-parameters          | Show san-port-channel compatibility-parameters |
| <i>__readonly__</i>               | (Optional) Read Only                           |
| <i>TABLE_compatibility_params</i> | (Optional) Table with compatibility params     |
| <i>parameter</i>                  | (Optional) Compatibility parameter             |
| <i>description</i>                | (Optional) Parameter description               |

## Command Mode

- /exec

## show san-port-channel consistency

```
show san-port-channel consistency [ __readonly__ [ <msg> ] [ { [ <error_msg> ] [ <consistency_state> ] [
<module> ] [ { TABLE_inconsistent_database [ <database> ] [ { [ <total_port_channels> ] [ {
TABLE_san_port_channel_database [ <interface> ] [ <total_ports> ] [ <first_operational_port> ] [ {
TABLE_san_port_channel_member <port> <state> } ] [ <db_error_str> } ] } ] } ] } ] }
```

### Syntax Description

| <i>total_oper_ports</i>                   | (Optional) Total oper ports in the san-po      |
| TABLE_san_port_channel_member             | (Optional) san-po member Table                 |
| <i>port</i>                               | (Optional) san-po member port                  |
| <i>state</i>                              | (Optional) san-po member port state            |
| <i>cmd_error_str</i>                      | (Optional) prints cmd errors,if any            |

**Command Mode**

- /exec

# show san-port-channel summary

```
show san-port-channel summary [ __readonly__ [ { TABLE_san_port_channel_summary <interface>
<total_ports> <total_oper_ports> <first_operational_port> } ] [ <cmd_error_str> ] ]
```

## Syntax Description

|                                       |  |
|---------------------------------------|--|
| <i>show</i>                           | Show running system information                |
| <i>san-port-channel</i>               | Show san-port-channel information              |
| <i>summary</i>                        | Show san-port-channel summary                  |
| <i>__readonly__</i>                   | (Optional) Read Only                           |
| <i>TABLE_san_port_channel_summary</i> | (Optional) san-port-channel Summary Table      |
| <i>interface</i>                      | (Optional) san-po Interface                    |
| <i>total_ports</i>                    | (Optional) Total number of ports in the san-po |
| <i>total_oper_ports</i>               | (Optional) Total oper ports in the san-po      |
| <i>first_operational_port</i>         | (Optional) First oper port in san-po           |
| <i>cmd_error_str</i>                  | (Optional) Prints cmd error,if any             |

## Command Mode

- /exec

## show san-port-channel usage

```
show san-port-channel usage [ __readonly__ [ <total_channel_numbers_used> { <used_range> } + {
<unused_range> } + ] [ <error_str> ] ]
```

### Syntax Description

|                                   |   |
|-----------------------------------|---|
| show                              | Show running system information               |
| san-port-channel                  | Show san-port-channel information             |
| usage                             | Show san-port-channel usages                  |
| <i>__readonly__</i>               | (Optional) Read Only                          |
| <i>total_channel_numbers_used</i> | (Optional) Total used number of port-channels |
| <i>used_range</i>                 | (Optional) Used range                         |
| <i>unused_range</i>               | (Optional) Un-used range                      |
| <i>error_str</i>                  | (Optional) Prints error if any                |

### Command Mode

- /exec

## show scheduler config

```
show scheduler config [ __readonly__ [ <terminal> ] [ <feature> ] [ <logfilesize> ] [ <emailfrom> ] [
<emailreplyto> ] [ <smtpserver> ] [ <port> ] [ <usevrf> ] [ { TABLE_userconfig <username> [ <password>
} ] ] [ { TABLE_jobconfig <jobdata> } ] [ { TABLE_scheduleconfig <schedulename> [ <scheduletype> ] [
{ TABLE_jobs <status> } ] [ <email> } ] ] ]
```

### Syntax Description

|                      |                                 |
|----------------------|---------------------------------|
| show                 | Show running system information |
| scheduler            | Show scheduler config or data   |
| config               | Display scheduler config        |
| <i>__readonly__</i>  | (Optional)                      |
| <i>terminal</i>      | (Optional) logfile terminal     |
| <i>feature</i>       | (Optional) name service         |
| <i>logfilesize</i>   | (Optional) logfilesize          |
| <i>emailfrom</i>     | (Optional) emailfrom            |
| <i>emailreplyto</i>  | (Optional) emailreplyto         |
| <i>smtpserver</i>    | (Optional) smtpserver           |
| <i>port</i>          | (Optional) port                 |
| <i>usevrf</i>        | (Optional) usevrf               |
| TABLE_userconfig     | (Optional) userconfig           |
| <i>username</i>      | (Optional) username             |
| <i>password</i>      | (Optional) password             |
| TABLE_jobconfig      | (Optional) job configs          |
| <i>jobdata</i>       | (Optional) jobdata              |
| TABLE_scheduleconfig | (Optional) schedule configs     |
| <i>schedulename</i>  | (Optional) schedulename         |
| <i>scheduletype</i>  | (Optional) scheduletype         |
| TABLE_jobs           | (Optional) jobs                 |
| <i>status</i>        | (Optional) status               |
| <i>email</i>         | (Optional) email                |

**Command Mode**

- /exec

# show scheduler job

```
show scheduler job [ name <s0> ] [ __readonly__ [ { TABLE_schedulerjobs <jobname> [ <jobdata> ] } ] ]
```

## Syntax Description

|                     |                                    |
|---------------------|------------------------------------|
| show                | Show running system information    |
| scheduler           | Show scheduler config or data      |
| job                 | Display job information            |
| name                | (Optional) Specify the name of job |
| <i>s0</i>           | (Optional) Specify the job name    |
| <i>__readonly__</i> | (Optional)                         |
| TABLE_schedulerjobs | (Optional) schedulerjobs           |
| <i>jobname</i>      | (Optional) job name                |
| <i>jobdata</i>      | (Optional) job data                |

## Command Mode

- /exec

# show scheduler logfile

```
show scheduler logfile [ __readonly__ [ { TABLE_joblog <jobname> [ <jobstatus> ] [ <schedulename> ] [ <scheduleusername> ] [ <completiontime> ] [ <joboutput> ] } ] ]
```

## Syntax Description

|                         |                                  |
|-------------------------|----------------------------------|
| show                    | Show running system information  |
| scheduler               | Show scheduler config or data    |
| logfile                 | Display scheduler job output log |
| <i>__readonly__</i>     | (Optional)                       |
| <i>TABLE_joblog</i>     | (Optional) jobs log              |
| <i>jobname</i>          | (Optional) job name              |
| <i>jobstatus</i>        | (Optional) job status            |
| <i>schedulename</i>     | (Optional) schedulename          |
| <i>scheduleusername</i> | (Optional) scheduleusername      |
| <i>completiontime</i>   | (Optional) completiontime        |
| <i>joboutput</i>        | (Optional) joboutput             |

## Command Mode

- /exec

# show scheduler schedule

```
show scheduler schedule [ name <s0> ] [ __readonly__ [ { TABLE_schedules <schedulename> [
<scheduleusername> ] [ <scheduletype> ] [ <starttime> ] [ <lastexecetime> ] [ <lastcompletiontime> ] [
<execcount> ] [ <jobcount> ] [ { TABLE_jobs <jobname> [ <execstatus> ] } } ] ] ]
```

## Syntax Description

|                           |   |
|---------------------------|---|
| show                      | Show running system information         |
| scheduler                 | Show scheduler config or data           |
| schedule                  | Display schedule information            |
| name                      | (Optional) Specify the name of schedule |
| <i>s0</i>                 | (Optional) Specify the schedule name    |
| <i>__readonly__</i>       | (Optional)                              |
| TABLE_schedules           | (Optional) schedules                    |
| <i>schedulename</i>       | (Optional) Schedule name                |
| <i>scheduleusername</i>   | (Optional) schedule username            |
| <i>scheduletype</i>       | (Optional) scheduletype                 |
| <i>starttime</i>          | (Optional) starttime                    |
| <i>lastexecetime</i>      | (Optional) last exec time               |
| <i>lastcompletiontime</i> | (Optional) lastcompletiontime           |
| <i>execcount</i>          | (Optional) execcount                    |
| <i>jobcount</i>           | (Optional) jobcount                     |
| TABLE_jobs                | (Optional) jobs                         |
| <i>jobname</i>            | (Optional) jobname                      |
| <i>execstatus</i>         | (Optional) execstatus                   |

## Command Mode

- /exec

## show segment-routing

```
show segment-routing [ detail ] [ __readonly__ <srvname> <state> <process_id> [ <srgb_min_label>
<srgb_max_label> <srgb_alloc_status> [ <oper_srgb_min_label> <oper_srgb_max_label> ] <cleanup_intvl>
<retry_intvl> [ <num_retries> ] [ <srgb_alloc_hdl> ] [ <cleanup_timer_state> <retry_timer_state> ] ] [
<ulib_reg_status> [ <ulib_pib_hdl> ] ] ]
```

### Syntax Description

|                            |                                       |
|----------------------------|---------------------------------------|
| show                       | Show running system information       |
| segment-routing            | Show segment-routing status info      |
| detail                     | (Optional) Show detailed information  |
| __readonly__               | (Optional)                            |
| <i>srvname</i>             | (Optional) Service name               |
| <i>state</i>               | (Optional) Process state              |
| <i>process_id</i>          | (Optional) Process id                 |
| <i>srgb_min_label</i>      | (Optional) Configured SRGB min label  |
| <i>srgb_max_label</i>      | (Optional) Configured SRGB max label  |
| <i>srgb_alloc_status</i>   | (Optional) SRGB allocation status     |
| <i>oper_srgb_min_label</i> | (Optional) Operational SRGB min label |
| <i>oper_srgb_max_label</i> | (Optional) Operational SRGB max label |
| <i>cleanup_intvl</i>       | (Optional) SRGB cleanup interval      |
| <i>retry_intvl</i>         | (Optional) SRGB alloc retry interval  |
| <i>num_retries</i>         | (Optional) SRGB alloc retries done    |
| <i>srgb_alloc_hdl</i>      | (Optional) SRGB alloc handle          |
| <i>cleanup_timer_state</i> | (Optional) SRGB cleanup timer state   |
| <i>retry_timer_state</i>   | (Optional) SRGB retry timer state     |
| <i>ulib_reg_status</i>     | (Optional) ULIB registration done     |
| <i>ulib_pib_hdl</i>        | (Optional) ULIB PIB handle            |

### Command Mode

- /exec

## show segment-routing clients

```
show segment-routing clients [ __readonly__ [ { TABLE_client <client_pib_name> <client_pib_index>
<client_uuid> <client_pid> <client_sap> [ { TABLE_tib <vrf_name> <tib_name> [ <pfxsid_cleanup_status>
] } ] } ] <total_clients> ]
```

### Syntax Description

|                              |                                       |
|------------------------------|---------------------------------------|
| show                         | Show running system information       |
| segment-routing              | Show segment-routing status info      |
| clients                      | Show client info                      |
| <i>__readonly__</i>          | (Optional)                            |
| TABLE_client                 | (Optional)                            |
| <i>client_pib_name</i>       | (Optional) Client name                |
| <i>client_pib_index</i>      | (Optional) Client pib index           |
| <i>client_uuid</i>           | (Optional) Client UUID                |
| <i>client_pid</i>            | (Optional) Client PID                 |
| <i>client_sap</i>            | (Optional) Client SAP                 |
| TABLE_tib                    | (Optional)                            |
| <i>vrf_name</i>              | (Optional) VRF name                   |

| <i>client_uuid</i>          | (Optional) Client UUID                |
| <i>client_pid</i>           | (Optional) Client PID                 |
| <i>client_sap</i>           | (Optional) Client SAP                 |
| <i>TABLE_tib</i>            | (Optional)                            |
| <i>vrf_name</i>             | (Optional) VRF name                   |
| <i>tib_name</i>             | (Optional) Table name                 |
| <i>pxsid_cleanup_status</i> | (Optional) Prefixsid Cleanup Pending? |
| <i>total_clients</i>        | (Optional) Total number of clients    |

### Command Mode

- /exec

# show segment-routing mpls ipv4 connected-prefix-sid-map

```
show segment-routing mpls ipv4 connected-prefix-sid-map [ __readonly__ [ { TABLE_tib <vrf_name>
<tib_name> [ { TABLE_pfxsid <prefix> <index> <absolute> <range> <valid> } ] } ] ] ]
```

## Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information            |
| segment-routing          | Show segment-routing status info           |
| mpls                     | Show segment-routing mpls info             |
| ipv4                     | Show info for IPv4 address-family          |
| connected-prefix-sid-map | Show prefix-sid mapping                    |
| <i>__readonly__</i>      | (Optional)                                 |
| <i>TABLE_tib</i>         | (Optional)                                 |
| <i>vrf_name</i>          | (Optional) Vrf name                        |
| <i>tib_name</i>          | (Optional) Table name                      |
| <i>TABLE_pfxsid</i>      | (Optional)                                 |
| <i>prefix</i>            | (Optional) Prefix                          |
| <i>index</i>             | (Optional) Segment ID                      |
| <i>absolute</i>          | (Optional) Segment ID is absolute?         |
| <i>range</i>             | (Optional) Range of Segment IDs from index |
| <i>valid</i>             | (Optional) Segment ID is valid?            |

## Command Mode

- /exec

# show sflow

```
show sflow [ __readonly__ <sampling-rate> <max-sampled-size> <counter-poll-interval> <max-datagram-size>
<collector-vrf> <collector-ip> [ <source-ip> ] <collector-port> <agent-ip> [ <data-source-interface> + ] ]
```

## Syntax Description

|                              |                                    |
|------------------------------|------------------------------------|
| show                         | Show running system information    |
| sflow                        | Display sFlow global configuration |
| <i>__readonly__</i>          | (Optional) Read only               |
| <i>sampling-rate</i>         | (Optional) Sampling Rate           |
| <i>max-sampled-size</i>      | (Optional) Max Sampled Size        |
| <i>counter-poll-interval</i> | (Optional) Counter Poll Interval   |
| <i>max-datagram-size</i>     | (Optional) Max Datagram Size       |
| <i>collector-vrf</i>         | (Optional) Collector VRF           |
| <i>collector-ip</i>          | (Optional) Collector IP            |
| <i>source-ip</i>             | (Optional) Source IP               |
| <i>collector-port</i>        | (Optional) Collector Port          |
| <i>agent-ip</i>              | (Optional) Agent IP                |
| <i>data-source-interface</i> | (Optional) Data Source Interface   |

## Command Mode

- /exec

# show sflow statistics

```
show sflow statistics [ __readonly__ <total-packets> <total-samples> <processed-samples> <dropped-samples>
[ <rate-limiter-drops> ] [ <dropped-sflow-samples> ] <sent-datagrams> <dropped-datagrams> ]
```

## Syntax Description

|                              |                                    |
|------------------------------|------------------------------------|
| show                         | Show running system information    |
| sflow                        | Display sFlow global configuration |
| statistics                   | Display sFlow statistics           |
| <i>__readonly__</i>          | (Optional) Read only               |
| <i>total-packets</i>         | (Optional) Total Packets           |
| <i>total-samples</i>         | (Optional) Total Samples           |
| <i>processed-samples</i>     | (Optional) Processed Samples       |
| <i>dropped-samples</i>       | (Optional) Dropped Samples         |
| <i>rate-limiter-drops</i>    | (Optional) Rate-Limiter Drops      |
| <i>dropped-sflow-samples</i> | (Optional) Dropped sflow Samples   |
| <i>sent-datagrams</i>        | (Optional) Sent Datagrams          |
| <i>dropped-datagrams</i>     | (Optional) Dropped Datagrams       |

## Command Mode

- /exec

# show snapshots

show snapshots [ \_\_readonly\_\_ TABLE\_snapshot <snap\_name> <snap\_ctime> <description> ]

## Syntax Description

|                    |                                 |
|--------------------|---------------------------------|
| show               | Show running system information |
| snapshots          | Snapshots present on the switch |
| __readonly__       | (Optional)                      |
| TABLE_snapshot     | (Optional)                      |
| <i>snap_name</i>   | (Optional) snapshot name        |
| <i>snap_ctime</i>  | (Optional) snapshot create time |
| <i>description</i> | (Optional) snapshot description |

## Command Mode

- /exec

# show snapshots compare

```
show snapshots compare <snapshot-name-T1> <snapshot-name-T2> [ __readonly__ TABLE_feature
<feat_name> [ <feat_state1> <feat_state2> ] [ TABLE_element <elemkey1> <elemval1> [ <elemkey2>
<elemval2> ] [ <elemkey3> <elemval3> ] [ <elemkey4> <elemval4> ] [ <elemstate1> <elemstate2> ] [

| <i>tag</i>              | (Optional) element tag                  |

|                  |   |
|------------------|---|
| <i>val1</i>      | (Optional) element value for tag in snapshot1 |
| <i>val2</i>      | (Optional) element value for tag in snapshot2 |
| TABLE_subrow     | (Optional)                                    |
| <i>subrowkey</i> | (Optional) subrow key                         |
| <i>subrowval</i> | (Optional) subrow value                       |
| <i>substate1</i> | (Optional) subrow state in snapshot 1         |
| <i>substate2</i> | (Optional) subrow state in snapshot 2         |
| TABLE_subvalue   | (Optional)                                    |
| <i>tag</i>       | (Optional) subrow tag                         |
| <i>val1</i>      | (Optional) subrow value for tag in snapshot1  |
| <i>val2</i>      | (Optional) subrow value for tag in snapshot2  |

**Command Mode**

- /exec

## show snapshots compare ipv4routes

```
show snapshots compare <snapshot-name-T1> <snapshot-name-T2> ipv4routes [ __readonly__
TABLE_summary <item_desc> <summary_val1> <summary_val2> [ <changed> ] [ TABLE_prefix <prefix>
<missing_snapshot> ] ]
```

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information         |
| snapshots               | Snapshots present on the switch         |
| compare                 | Compare two snapshots                   |
| <i>snapshot-name-T1</i> | Name of a snapshot taken at interval T1 |
| <i>snapshot-name-T2</i> | Name of a snapshot taken at interval T2 |
| ipv4routes              | Compare ipv4 route information          |
| <i>__readonly__</i>     | (Optional)                              |
| TABLE_summary           | (Optional)                              |
| <i>item_desc</i>        | (Optional) item description             |
| <i>summary_val1</i>     | (Optional) summary value in snapshot1   |
| <i>summary_val2</i>     | (Optional) summary value in snapshot2   |
| <i>changed</i>          | (Optional) changed flag                 |
| TABLE_prefix            | (Optional)                              |
| <i>prefix</i>           | (Optional) route prefix                 |
| <i>missing_snapshot</i> | (Optional) missing in snapshot name     |

### Command Mode

- /exec

# show snapshots compare ipv6routes

```
show snapshots compare <snapshot-name-T1> <snapshot-name-T2> ipv6routes [ __readonly__
TABLE_summary <item_desc> <summary_val1> <summary_val2> [ <changed> ] [ TABLE_prefix <prefix>
<missing_snapshot> ] ]
```

## Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information         |
| snapshots               | Snapshots present on the switch         |
| compare                 | Compare two snapshots                   |
| <i>snapshot-name-T1</i> | Name of a snapshot taken at interval T1 |
| <i>snapshot-name-T2</i> | Name of a snapshot taken at interval T2 |
| ipv6routes              | Compare ipv6 route information          |
| <i>__readonly__</i>     | (Optional)                              |
| TABLE_summary           | (Optional)                              |
| <i>item_desc</i>        | (Optional) item description             |
| <i>summary_val1</i>     | (Optional) summary value in snapshot1   |
| <i>summary_val2</i>     | (Optional) summary value in snapshot2   |
| <i>changed</i>          | (Optional) changed flag                 |
| TABLE_prefix            | (Optional)                              |
| <i>prefix</i>           | (Optional) route prefix                 |
| <i>missing_snapshot</i> | (Optional) missing in snapshot name     |

## Command Mode

- /exec

## show snapshots compare summary

```
show snapshots compare <snapshot-name-T1> <snapshot-name-T2> summary [ __readonly__
TABLE_summary <item_desc> <summary_val1> <summary_val2> [ <changed> ] ]
```

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information         |
| snapshots               | Snapshots present on the switch         |
| compare                 | Compare two snapshots                   |
| <i>snapshot-name-T1</i> | Name of a snapshot taken at interval T1 |
| <i>snapshot-name-T2</i> | Name of a snapshot taken at interval T2 |
| summary                 | Compare summary information             |
| <i>__readonly__</i>     | (Optional)                              |
| <i>TABLE_summary</i>    | (Optional)                              |
| <i>item_desc</i>        | (Optional) item description             |
| <i>summary_val1</i>     | (Optional) summary value in snapshot1   |
| <i>summary_val2</i>     | (Optional) summary value in snapshot2   |
| <i>changed</i>          | (Optional) changed flag                 |

### Command Mode

- /exec

# show snapshots dump

```
show snapshots dump <snapshot-name> <section-name> [ __readonly__ TABLE_snapshot <file_name>
<snap_name> ]
```

## Syntax Description

|                           |                                   |

| <i>plo_oper_status</i>   | (Optional) Police oper status        |
| <i>pol_port_type</i>     | (Optional) policy port type          |
| <i>counter</i>           | (Optional) counters                  |
| <i>threshold</i>         | (Optional) Threshold                 |
| <i>interval</i>          | (Optional) Interval                  |
| <i>rising_threshold</i>  | (Optional) Rising threshold          |
| <i>rising_event</i>      | (Optional) Rising Event              |
| <i>falling_threshold</i> | (Optional) Falling threshold         |
| <i>falling_event</i>     | (Optional) Falling Event             |
| <i>pmon_config</i>       | (Optional) PMON configured           |
| <i>protocol_status</i>   | (Optional) Protocol Enable status    |
| <i>context_name</i>      | (Optional) context name              |
| <i>proto_instanceid</i>  | (Optional) Protocol instance ID      |
| <i>vrf</i>               | (Optional) VRF Name                  |
| <i>topology</i>          | (Optional) Topology                  |
| <i>vlan</i>              | (Optional) VLAN name                 |
| <i>MST</i>               | (Optional) MST name                  |

**Command Mode**

- /exec

# show snmp community

```
show snmp community [ __readonly__ { TABLE_snmp_community <community_name> <grouporaccess>
<context> <aclfilter> } ]
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information              |
| snmp                  | show snmp information                        |
| community             | show snmp community strings                  |
| __readonly__          | (Optional) Read Only                         |
| TABLE_snmp_community  | (Optional) contains all snmp community names |
| <i>community_name</i> | (Optional) community name                    |
| <i>grouporaccess</i>  | (Optional) group or access name              |
| <i>context</i>        | (Optional) context name                      |
| <i>aclfilter</i>      | (Optional) acl filter name                   |

## Command Mode

- /exec

# show snmp context

```
show snmp context [ __readonly__ { TABLE_snmp_contexts <context_name> <proto_instanceid> <vrf>
<topology> [ <vlan> | <MST> ] } ]
```

## Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information          |
| snmp                    | show snmp information                    |
| context                 | show snmp context mapping entries        |
| __readonly__            | (Optional)                               |
| TABLE_snmp_contexts     | (Optional) All SNMP Contexts Entries     |
| <i>context_name</i>     | (Optional) SNMP context Name             |
| <i>proto_instanceid</i> | (Optional) Name of the protocol instance |
| <i>vrf</i>              | (Optional) VRF name                      |
| <i>topology</i>         | (Optional) Name of the Topology          |
| <i>vlan</i>             | (Optional) VLAN Name                     |
| <i>MST</i>              | (Optional)                               |

## Command Mode

- /exec

# show snmp engineID

show snmp engineID [ \_\_readonly\_\_ <engineIDHex> <engineIDDec> ]

## Syntax Description

|                    |                                     |
|--------------------|-------------------------------------|
| show               | Show running system information     |
| snmp               | show snmp information               |
| engineID           | show snmp engineID                  |
| __readonly__       | (Optional)                          |
| <i>engineIDHex</i> | (Optional) SNMP engineID in HEX     |
| <i>engineIDDec</i> | (Optional) SNMP engineID in Decimal |

## Command Mode

- /exec

# show snmp group

```
show snmp group [ __readonly__ { TABLE_role <role_name> <role_description> [ <attribute_scope> ] [
<permit_vsan> ] [ <permit_vlan> ] [ <permit_vlan_id> ] [ <permit_interface> ] [ <permit_interface_slot> ]
[ <permit_vrf> ] [ TABLE_vrf<permit_vrf_name> ] [ { TABLE_rule [ <rule_num> ] [ <rule_action> ] {
<rule_permission> | <rule_permission_mds> } [ <rule_featuretype> ] [ <rule_entity> ] } } ]
```

## Syntax Description

|                              |                                 |

| <i>rule_action</i>           | (Optional)                      |
| <i>rule_permission</i>       | (Optional)                      |
| <i>rule_permission_mds</i>   | (Optional)                      |
| <i>rule_featuretype</i>      | (Optional)                      |
| <i>rule_entity</i>           | (Optional)                      |

## Command Mode

- /exec

# show snmp host

```
show snmp host [ __readonly__ { TABLE_host <host><port><version><level><type><secname> [ [ <vrf>
] [ TABLE_vrf_filters <vrf_filter> ] [ <src_intf> ] ] } ]
```

## Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information                                    |
| snmp                     | show snmp information  |
| host                     | show snmp hosts  |
| <i>__readonly__</i>      | (Optional) Read Only   |
| <i>TABLE_host</i>        | (Optional) displays the list of hosts configured for snmp requests |
| <i>TABLE_vrf_filters</i> | (Optional) displays the host vrf filters                           |
| <i>vrf</i>               | (Optional) VRF Name  |
| <i>vrf_filter</i>        | (Optional) vrf filters   |
| <i>src_intf</i>          | (Optional) source interface  |

## Command Mode

- /exec

# show snmp nms-statistics

```
show snmp nms-statistics [ __readonly__ <header> [ <nms_stats> ] ]
```

## Syntax Description

|                  |                                  |
|------------------|----------------------------------|
| show             | Show running system information  |
| snmp             | Show snmp information            |
| nms-statistics   | Show SNMP NMS statistics         |
| __readonly__     | (Optional) Read Only             |
| <i>header</i>    | (Optional) NMS Statistics header |
| <i>nms_stats</i> | (Optional) NMS Statistics        |

## Command Mode

- /exec

## show snmp oid-statistics

```
show snmp oid-statistics [ last-access ] [ __readonly__ <header> { TABLE_snmp_gen <oid_stats> |
TABLE_snmp_la <oid_last_access_stats> } ]
```

### Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information                         |
| snmp                         | Show snmp information                                   |
| oid-statistics               | Show SNMP oid statistics                                |
| last-access                  | (Optional) Show SNMP oid statistics of last-access      |
| __readonly__                 | (Optional) Read Only                                    |
| <i>header</i>                | (Optional) OID Statistics header                        |
| TABLE_snmp_gen               | (Optional) contains all snmp oid statistics             |
| <i>oid_stats</i>             | (Optional) OID Statistics                               |
| TABLE_snmp_la                | (Optional) contains all snmp oid last access statistics |
| <i>oid_last_access_stats</i> | (Optional) OID Last Access Statistics                   |

### Command Mode

- /exec

# show snmp sessions

show snmp sessions [ \_\_readonly\_\_ { TABLE\_session <dest> } ]

## Syntax Description

|               |                                       |
|---------------|---------------------------------------|
| show          | Show running system information       |
| snmp          | show snmp information                 |
| sessions      | show snmp sessions                    |
| __readonly__  | (Optional) Read Only                  |
| TABLE_session | (Optional) table displays destination |
| <i>dest</i>   | (Optional) destination                |

## Command Mode

- /exec

# show snmp source-interface

```
show snmp source-interface [ __readonly__ { <trap_srcintf> <informs_srcintf> } ]
```

## Syntax Description

|                        |  |
|------------------------|--|
| show                   | Show running system information                            |
| snmp                   | show snmp information                                      |
| source-interface       | show source-interface through which notifications are sent |
| __readonly__           | (Optional) Read Only                                       |
| <i>trap_srcintf</i>    | (Optional) Displays the source interface for traps         |
| <i>informs_srcintf</i> | (Optional) Displays the source interface for informs       |

## Command Mode

- /exec

# show snmp trap

```
show snmp trap [ __readonly__ { TABLE_snmp_trap <trap_type><description><isEnabled> } ]
```

## Syntax Description

|                 |                                      |
|-----------------|--------------------------------------|
| show            | Show running system information      |
| snmp            | show snmp information                |
| trap            | show snmp traps                      |
| __readonly__    | (Optional) Read Only                 |
| TABLE_snmp_trap | (Optional) All snmp traps configured |

## Command Mode

- /exec

# show snmp user

```
show snmp user [ <s0> [ engineID <s1> ] ] [ __readonly__ [ { TABLE_snmp_users <user> <auth> <priv> [ <group> ] + [ <acl_filter> ] [ <engineID> } ] ] ]
```

## Syntax Description

|                   |  |
|-------------------|--|
| show              | Show running system information                                      |
| snmp              | show snmp information  |
| user              | show SNMPv3 users  |
| <i>s0</i>         | (Optional) Name of the user  |
| engineID          | (Optional) engineID  |
| <i>s1</i>         | (Optional) Target's SNMP engineID(colon separated) for SNMPv3 inform |
| __readonly__      | (Optional) Read Only   |
| TABLE_snmp_users  | (Optional) table displays the snmp users                             |
| <i>user</i>       | (Optional) user name   |
| <i>auth</i>       | (Optional) auth type   |
| <i>priv</i>       | (Optional) priv type   |
| <i>group</i>      | (Optional) group belongs to  |
| <i>acl_filter</i> | (Optional) acl filter  |
| <i>engineID</i>   | (Optional) engineID for specific user                                |

## Command Mode

- /exec

## show sockets client

```

show sockets client { [ pid <pid> ] [ tcp | udp | raw ] [ detail ] [ kstack-ns-all ] } [ __readonly__ [

### Syntax Description

|            |  |
|------------|--|
| show       | Show running system information                        |
| sockets    | Display sockets status and configuration               |
| client     | Display sockets client information                     |
| pid        | (Optional) Display specific client process information |
| <i>pid</i> | (Optional) Display client process <pid>                |

|                     |   |
|---------------------|---|
| tcp                 | (Optional) Display TCP clients                    |
| udp                 | (Optional) Display UDP clients                    |
| raw                 | (Optional) Display RAW clients                    |
| detail              | (Optional) Display socket details                 |
| kstack-ns-all       | (Optional) Show kernel clients for all namespaces |
| __readonly__        | (Optional)  |
| TABLE_total_clients | (Optional) Total no of client sockets             |
| socket-type         | (Optional) Sockets type                           |
| total-clients       | (Optional) total clients                          |
| no-total-clients    | (Optional) number of total clients                |
| TABLE_cl_sk         | (Optional) Display Client sockets                 |
| prefix              | (Optional) Prefix to the sockets                  |
| client-name         | (Optional) Display socket client info             |
| pid                 | (Optional) Display client process <pid>           |
| No-of-clients       | (Optional) Number of socket clients               |
| fast-tcp-mts-ctrl-q | (Optional) Fast tcp mts control queue             |
| cancel-requests     | (Optional) cancel requests                        |
| cancel-unblocks     | (Optional) cancel unblocks                        |
| cancel-misses       | (Optional) cancel misses                          |
| select-drops        | (Optional) select drops                           |
| select-wakes        | (Optional) select wakes                           |
| TABLE_det           | (Optional) Display Socket client Details          |
| fd                  | (Optional) Client socket fd                       |
| client-id           | (Optional) Client socket id                       |
| mts-sap             | (Optional) socket mts addr sap                    |
| TABLE_st            | (Optional) Sock detail Ctrl statistics            |
| soc-calls           | (Optional) sockets calls                          |
| bind-calls          | (Optional) socket bind calls                      |
| listen-calls        | (Optional) socket listen calls                    |

|                          |  |
|--------------------------|--|
| <i>accept-calls</i>      | (Optional) socket accept calls           |
| <i>acc-dispat-err</i>    | (Optional) socket accept dispatch error  |
| <i>connect-calls</i>     | (Optional) socket connect calls          |
| <i>connec-dispatch</i>   | (Optional) socket dispatch calls         |
| <i>recvmsg-dispatch</i>  | (Optional) receive msg dispatch          |
| <i>recv-dis-nblock</i>   | (Optional) receive dispatch nonblock     |
| <i>recvmsg-call</i>      | (Optional) receive message call          |
| <i>brecv-dispatch</i>    | (Optional) broadcast receive dispatch    |
| <i>fsendmsg-calls</i>    | (Optional) forward send message dispatch |
| <i>sendmsg-dispatch</i>  | (Optional) send message dispatch         |
| <i>sendmsg-calls</i>     | (Optional) send message calls            |
| <i>msendmsg-calls</i>    | (Optional) multicast send message calls  |
| <i>select-calls</i>      | (Optional) select calls                  |
| <i>select-dispatch</i>   | (Optional) select dispatch               |
| <i>select-need-work</i>  | (Optional) select need work              |
| <i>sh-calls</i>          | (Optional) show calls                    |
| <i>close-calls</i>       | (Optional) close calls                   |
| <i>fctl-calls</i>        | (Optional) fcntl calls                   |
| <i>ioctl-calls</i>       | (Optional) ioctl calls                   |
| <i>setsock-calls</i>     | (Optional) setsock calls                 |
| <i>getsock-calls</i>     | (Optional) getsock calls                 |
| <i>getsockname-calls</i> | (Optional) get socket name calls         |
| <i>getpeer-calls</i>     | (Optional) get peer calls                |
| <i>fork-calls</i>        | (Optional) fork calls                    |
| <i>execve-calls</i>      | (Optional) execve calls                  |
| <i>dup-calls</i>         | (Optional) duplicate calls               |
| <i>can-calls</i>         | (Optional) cancel calls                  |
| <i>can-miss</i>          | (Optional) cancel miss                   |
| <i>can-unblk-sele</i>    | (Optional) cancel unblock select         |

|                          |   |
|--------------------------|---|
| <i>soc-ha-calls</i>      | (Optional) socket ha calls                        |
| <i>pfork-client</i>      | (Optional) pfork client                           |
| <i>read-fd</i>           | (Optional) socket read fd                         |
| <i>write-fd</i>          | (Optional) socket write fd                        |
| <i>read-fd-set</i>       | (Optional) socket read fd set                     |
| <i>write-fd-set</i>      | (Optional) socket write fd set                    |
| <i>fast-tcp-send-req</i> | (Optional) socket fast tcp send request           |
| <i>fast-tcp-send-suc</i> | (Optional) socket fast tcp send success           |
| <i>fast-tcp-ack</i>      | (Optional) socket fast tcp ack                    |
| TABLE_sterr              | (Optional) Client Socket Error Statistics         |
| <i>sock-err</i>          | (Optional) socket error                           |
| <i>sock-nodev-err</i>    | (Optional) socket nodev error                     |
| <i>bind-err</i>          | (Optional) socket bind error                      |
| <i>lis-err</i>           | (Optional) socket listen error                    |
| <i>accept-err</i>        | (Optional) socket accept error                    |
| <i>connect-err</i>       | (Optional) socket connect error                   |
| <i>recvmsg-err</i>       | (Optional) socket receive message error           |
| <i>brcvmsg-err</i>       | (Optional) socket broadcast receive message error |
| <i>fsendmsg-err</i>      | (Optional) socket forward send message error      |
| <i>sendmsg-err</i>       | (Optional) socket send message error              |
| <i>msndmsg-err</i>       | (Optional) socket multicast send message error    |
| <i>select-err</i>        | (Optional) socket select error                    |
| <i>sel-nomem-err</i>     | (Optional) socket select no member error          |
| <i>shut-err</i>          | (Optional) socket shutdown error                  |
| <i>close-err</i>         | (Optional) socket close error                     |
| <i>fcntl-err</i>         | (Optional) socket fcntl error                     |
| <i>ioctl-err</i>         | (Optional) socket ioctl error                     |
| <i>setsoc-err</i>        | (Optional) set socket error                       |
| <i>getsoc-err</i>        | (Optional) get socket error                       |

|                           |   |
|---------------------------|---|

- /exec

## show sockets connection

```
show sockets connection [ pid <pid> | tcp | udp | raw ] [ local { <srcIP> | <srcIP6> } ] [ foreign { <dstIP> | <dstIP6> } ] [ detail ] [ keydetails ] [ __readonly__ ] [ { TABLE_sockets <protocol> [ <total-conn-count> ] [ { TABLE_conn <afi> [ <laddr> ] [ <lport> ] [ <faddr> ] [ <fport> ] [ <prot> ] [ <type> ] [ <ttl> ] [ <tos> ] [ <options> ] [ <state> ] [ <rcv-count> ] [ <rcv-hiwat> ] [ <rcv-lowat> ] [ <rcv-flags> ] [ <snd-count> ] [ <snd-hiwat> ] [ <snd-lowat> ] [ <snd-flags> ] [ <iss> ] [ <snd-una> ] [ <snd-nxt> ] [ <snd_wnd> ] [ <irs> ] [ <rcv-nxt> ] [ <rcv-wnd> ] [ <snd-cwnd> ] [ <ooo_pkt_rcv> ] [ <ooo_pkt_drpd> ] [ <ooo_pkt_rqc> ] [ <rtt> ] [ <rttvar> ] [ <krtd> ] [ <rttmin> ] [ <mss> ] [ <dur> ] [ <tcp-state> ] [ <flags> ] [ <md5-cnt> ] [ <md5-host> ] [ <md5-err> ] [ <tcp-count> ] [ <udp-count> ] [ <raw-count> ] [ <vrf-name> ] [ <intf> } ] ] ]
```

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                                       |
| sockets                 | Display sockets status and configuration                              |
| connection              | Display connection information  |
| pid                     | (Optional) Display specific client process connection status          |
| <i>pid</i>              | (Optional) Display client process connection status <pid>             |
| tcp                     | (Optional) Display all TCP connections                                |
| udp                     | (Optional) Display all UDP connections                                |
| raw                     | (Optional) Display all raw connections                                |
| local                   | (Optional) Display all TCP connections with specified local address   |
| <i>srcIP</i>            | (Optional) Display all TCP connections with specified local address   |
| foreign                 | (Optional) Display all TCP connections with specified foreign address |
| <i>dstIP</i>            | (Optional) Display all TCP connections with specified foreign address |
| detail                  | (Optional) Display detailed connection information                    |
| keydetails              | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                             |
| __readonly__            | (Optional)  |
| TABLE_sockets           | (Optional) sockets table  |

| <i>rttvar</i>      | (Optional) socket connection rttvar                              |

|                  |  |
|------------------|--|
| <i>krtt</i>      | (Optional) socket connection krtt          |
| <i>rttmin</i>    | (Optional) socket connection rtt mintues   |
| <i>mss</i>       | (Optional) socket connection mss           |
| <i>dur</i>       | (Optional) socket connection duration      |
| <i>flags</i>     | (Optional) socket connection flags         |
| <i>md5-cnt</i>   | (Optional) socket connection md5 count     |
| <i>md5-host</i>  | (Optional) socket connection md5 host      |
| <i>md5-err</i>   | (Optional) socket connection md5 error     |
| <i>rcv-hiwat</i> | (Optional) socket connection receive hiwat |
| <i>rcv-lowat</i> | (Optional) socket connection receive lowat |
| <i>rcv-flags</i> | (Optional) socket connection receive flags |
| <i>snd-hiwat</i> | (Optional) socket connection send hiwat    |
| <i>snd-lowat</i> | (Optional) socket connection send lowat    |
| <i>snd-flags</i> | (Optional) socket connection send flags    |
| <i>tcp-count</i> | (Optional) socket connection tcp count     |
| <i>udp-count</i> | (Optional) socket connection udp count     |
| <i>raw-count</i> | (Optional) socket connection raw count     |

**Command Mode**

- /exec

## show sockets local-port-range

```
show sockets local-port-range [ __readonly__ <kstack_local_port_range_start> <kstack_local_port_range_end>
<netstack_local_port_range_start> <netstack_local_port_range_end> <nat_local_port_range_start>
<nat_local_port_range_end> ]
```

### Syntax Description

|  |  |
|--|--|
| show                                   | Show running system information            |
| sockets                                | Display sockets status and configuration   |
| local-port-range                       | Display local port range                   |
| <i>__readonly__</i>                    | (Optional)                                 |
| <i>kstack_local_port_range_start</i>   | (Optional) Kstack local port range start   |
| <i>kstack_local_port_range_end</i>     | (Optional) Kstack local port range end     |
| <i>netstack_local_port_range_start</i> | (Optional) Netstack local port range start |
| <i>netstack_local_port_range_end</i>   | (Optional) Netstack local port range end   |
| <i>nat_local_port_range_start</i>      | (Optional) Nat local port range start      |
| <i>nat_local_port_range_end</i>        | (Optional) Nat local port range end        |

### Command Mode

- /exec

## show sockets ns-port-kiosk

```
show sockets ns-port-kiosk [ __readonly__ [ TABLE_port_kiosk { <client-process-id> <client-name> } [
TABLE_port_state_pro_name { <entry-counter> [ <listening-port> ] [ <fwd-port> ] [ <tcp-state> ] [ <mts-sap>
] [ <protocol-name> } ] ] ] ]
```

### Syntax Description

|                                  |   |
|----------------------------------|---|
| show                             | Show running system information                       |
| sockets                          | Display sockets status and configuration              |
| ns-port-kiosk                    | Display port kiosk for netstack socket clients        |
| <i>__readonly__</i>              | (Optional)  |
| <i>TABLE_port_kiosk</i>          | (Optional) Sockets ns port kiosk information          |
| <i>client-process-id</i>         | (Optional) Client Process ID                          |
| <i>client-name</i>               | (Optional) Client Name                                |
| <i>TABLE_port_state_pro_name</i> | (Optional) Sockets ns port state protocol information |
| <i>entry-counter</i>             | (Optional) Table Entry Counter                        |
| <i>listening-port</i>            | (Optional) Listening Port                             |
| <i>fwd-port</i>                  | (Optional) FWD Port                                   |
| <i>tcp-state</i>                 | (Optional) TCP State                                  |
| <i>mts-sap</i>                   | (Optional) MTS SAP                                    |
| <i>protocol-name</i>             | (Optional) Protocol Name                              |

### Command Mode

- /exec

### Syntax Description

|                        |  |
|------------------------|--|
| show                   | Show running system information                                  |
| sockets                | Display sockets status and configuration                         |
| statistics             | Display sockets statistics                                       |
| all                    | (Optional) Display TCP/UDP/RAW v4/v6 protocols statistics        |
| tcp                    | (Optional) Display TCP v4 protocol statistics                    |
| tcp6                   | (Optional) Display TCP v6 protocol statistics                    |
| tcpsum                 | (Optional) Display sum of TCP v4 and TCP v6 protocols statistics |
| udp                    | (Optional) Display UDP v4 protocol statistics                    |
| udp6                   | (Optional) Display UDP v6 protocol statistics                    |
| udpsum                 | (Optional) Display sum of UDP v4 and UDP v6 protocols statistics |
| raw                    | (Optional) Display RAW v4 protocol statistics                    |
| raw6                   | (Optional) Display RAW v6 protocol statistics                    |
| rawsum                 | (Optional) Display sum of RAW v4 and RAW v6 protocols statistics |
| __readonly__           | (Optional)   |
| TABLE_stat             | (Optional) sockets statistics table                              |
| <i>rx-total</i>        | (Optional) total packets received                                |
| <i>rx-bad-csum</i>     | (Optional) packets received with ccksum errs                     |
| <i>rx-bad-offset</i>   | (Optional) packets received with bad offset                      |
| <i>rx-too-short</i>    | (Optional) packets received too short                            |
| <i>rx-bad-md5</i>      | (Optional) Recieved bad digest                                   |
| <i>rx-inseq-pack</i>   | (Optional) packets received in sequence                          |
| <i>rx-inseq-bytes</i>  | (Optional) bytes received in sequence                            |
| <i>rx-dup-pack</i>     | (Optional) duplicate-only packets received                       |
| <i>rx-dup-bytes</i>    | (Optional) duplicate-only bytes received                         |
| <i>rx-partdup-pack</i> | (Optional) packets with some duplicate data                      |

|                              |   |
|------------------------------|---|
| <i>rx-partdup-bytes</i>      | (Optional) dup. bytes in part-dup. packets      |
| <i>rx-oo-pack</i>            | (Optional) out-of-order packets received        |
| <i>rx-oo-bytes</i>           | (Optional) out-of-order bytes received          |
| <i>rx-oo-drop-cnt</i>        | (Optional) out-of-order drop count              |
| <i>rx-afterwin-pack</i>      | (Optional) packets with data after window       |
| <i>rx-afterwin-bytes</i>     | (Optional) bytes rcvd after window              |
| <i>rx-afterclose-pack</i>    | (Optional) packets rcvd after close             |
| <i>rx-winprobe-pack</i>      | (Optional) rcvd window probe packets            |
| <i>rx-winupdate-pack</i>     | (Optional) rcvd window update packets           |
| <i>rx-dupack-pack</i>        | (Optional) rcvd duplicate acks                  |
| <i>rx-dupack-unsent-pack</i> | (Optional) rcvd acks for unsent data            |
| <i>rx-ack-pack</i>           | (Optional) rcvd ack packets                     |
| <i>rx-ack-bytes</i>          | (Optional) bytes acked by rcvd acks             |
| <i>rx-rcv-memdrop</i>        | (Optional) packets dropped for lack of memory   |
| <i>rx-dig-mssing</i>         | (Optional) digest missing                       |
| <i>rx-dig-unexpected</i>     | (Optional) digest unexpected                    |
| <i>rx-dig-notused</i>        | (Optional) digest not used                      |
| <i>rx-dig-valid</i>          | (Optional) digest valid                         |
| <i>rx-dig-invalid</i>        | (Optional) digest invalid                       |
| <i>rx-get-passwd-fail</i>    | (Optional) get pass failed for RST              |
| <i>rx-md5-mbuf-exded</i>     | (Optional) md5 passwd exceeds mbuf              |
| <i>rx-uspec-src-recv</i>     | (Optional) Dropped Unspecified src pkt recieved |
| <i>rx-pkt-too-short</i>      | (Optional) Dropped Packet too short             |
| <i>rx-sin-finest</i>         | (Optional) Dropped packet set with SYN/FIN      |
| <i>rx-black-hole-syn</i>     | (Optional) Dropped black hole SYN               |
| <i>rx-black-hole</i>         | (Optional) Dropped black hole                   |
| <i>rx-drop-no-inpcb</i>      | (Optional) Dropped no inpcb                     |
| <i>rx-drop-notpcb</i>        | (Optional) Dropped no tcpcb                     |
| <i>rx-drp-sock-closed</i>    | (Optional) Dropped socket closed                |

|                                    |   |
|------------------------------------|---|
| <i>rx-syn-with-rst</i>             | (Optional) Dropped SYN with reset             |
| <i>rx-syn-drop</i>                 | (Optional) Dropped SYN                        |
| <i>rx-bandlim</i>                  | (Optional) Dropped Bandlim rst open port      |
| <i>rx-forged-pkt</i>               | (Optional) Dropped Same src/dst               |
| <i>rx-drp-mbcast</i>               | (Optional) Dropped Broadcast/Multicast        |
| <i>rx-drp-syn-add</i>              | (Optional) Dropped Adding SYN failed          |
| <i>rx-drp-syn-recvd</i>            | (Optional) ACK recvd not for our SYN          |
| <i>rx-drp-cc-sent</i>              | (Optional) Dropped cc sent                    |
| <i>rx-drp-rst-ccsent</i>           | (Optional) Dropped cc sent with reset         |
| <i>rx-frecv-enqueue</i>            | (Optional) Fast recv packets enqueued         |
| <i>rx-frecv-enqueue-fail</i>       | (Optional) Fast recv enqueue failed           |
| <i>rx-ftcp-cant-rcv-more</i>       | (Optional) Fast TCP can not recv more         |
| <i>rx-ftcp-data-ack-toapp-fail</i> | (Optional) Fast TCP data ACK to app failed    |
| <i>rx-ftcp-data-ack-toapp</i>      | (Optional) Fast TCP data ACK to app           |
| <i>tx-total</i>                    | (Optional) total packets sent                 |
| <i>tx-urg</i>                      | (Optional) packets sent with URG only         |
| <i>tx-ctrl</i>                     | (Optional) control (SYN FIN RST) packets sent |
| <i>tx-data-pack</i>                | (Optional) data packets sent                  |
| <i>tx-data-bytes</i>               | (Optional) data bytes sent                    |
| <i>tx-reasm-pack</i>               | (Optional) data packets retransmitted         |
| <i>tx-reasm-bytes</i>              | (Optional) data bytes retransmitted           |
| <i>tx-ackonly-pack</i>             | (Optional) ack-only packets sent              |
| <i>tx-winprobe-pack</i>            | (Optional) window probes sent                 |
| <i>tx-winupdate-bytes</i>          | (Optional) window update-only packets sent    |
| <i>tx-encrypt</i>                  | (Optional) Encrypted packets sent             |
| <i>tx-unencrypt</i>                | (Optional) Unencrypted packets sent           |
| <i>tx-md5rst</i>                   | (Optional) No of encrypted RST packets        |
| <i>tx-conn-init</i>                | (Optional) connections initiated              |
| <i>tx-conn-accepted</i>            | (Optional) connections accepted               |

|                                |  |
|--------------------------------|--|
| <i>tx-conn-estd</i>            | (Optional) connections established             |
| <i>closed</i>                  | (Optional) conn. closed (includes drops)       |
| <i>dropped</i>                 | (Optional) connections dropped                 |
| <i>emb-dropped</i>             | (Optional) embryonic connections dropped       |
| <i>tx-rxmt-timeout</i>         | (Optional) total rxmt timeout                  |
| <i>tx-rxmt-timeout-dropped</i> | (Optional) connections dropped in rxmt timeout |
| <i>tx-ka-timeout</i>           | (Optional) keepalive timeouts                  |
| <i>tx-ka-probe</i>             | (Optional) keepalive probes sent               |
| <i>tx-ka-drop</i>              | (Optional) connections dropped in keepalive    |
| <i>gen-seg-timed</i>           | (Optional) segs where we tried to get rtt      |
| <i>gen-rtt-updated</i>         | (Optional) times we succeeded to get rtt       |
| <i>gen-delack</i>              | (Optional) delayed acks sent                   |
| <i>gen-persist-timeout</i>     | (Optional) persist timeouts                    |
| <i>gen-paws-drop</i>           | (Optional) segments dropped due to PAWS        |
| <i>gen-predack</i>             | (Optional) hdr predict ok for acks             |
| <i>gen-preddat</i>             | (Optional) hdr predict ok for data pkts        |
| <i>gen-pcb-cachemiss</i>       | (Optional) PCB cache miss                      |
| <i>gen-cache-drtt</i>          | (Optional) times cached RTT in route updated   |
| <i>gen-cache-drttvar</i>       | (Optional) times cached rttvar updated         |
| <i>gen-cached-ssthresh</i>     | (Optional) times cached ssthresh updated       |
| <i>gen-usedrtt</i>             | (Optional) times RTT initialized from route    |
| <i>gen-usedrttvar</i>          | (Optional) times RTTVAR initialized from rt    |
| <i>gen-usedssthresh</i>        | (Optional) times ssthresh initialized from rt  |
| <i>gen-persistdrop</i>         | (Optional) timeout in persist state            |
| <i>gen-badsyn</i>              | (Optional) bogus SYN, e.g. premature ACK       |
| <i>gen-mturesent</i>           | (Optional) resends due to MTU discovery        |
| <i>gen-list-endrop</i>         | (Optional) listen queue overflows              |
| <i>gen-rpm-bind-synsock</i>    | (Optional) rpm bind in synsock                 |
| <i>gen-rpm-bindsynadd</i>      | (Optional) rpm bind in synadd                  |

|                               |   |
|-------------------------------|---|
| <i>gen-rpm-bindlookup</i>     | (Optional) rpm bind in lookup               |
| <i>gen-rpm-bindsetsock</i>    | (Optional) rpm bind in setsock              |
| <i>gen-rpm-unbind-getpass</i> | (Optional) rpm unbind get pass              |
| <i>gen-rpm-unbinduser1</i>    | (Optional) rpm unbind by user               |
| <i>gen-rpm-unbinduser2</i>    | (Optional) rpm unbind by user1              |
| <i>gen-rpm-unbindrollover</i> | (Optional) rpm unbind during rollover       |
| <i>gen-rpm-unbind-synfree</i> | (Optional) rpm unbind in syn free           |
| <i>gen-rpm-unbind-tpfree</i>  | (Optional) rpm unbind in tp free            |
| <i>syn-sc-added</i>           | (Optional) entry added to syncache          |
| <i>syn-retransmitted</i>      | (Optional) syncache entry was retransmitted |
| <i>syn-dupsyn</i>             | (Optional) duplicate SYN packet             |
| <i>syn-dropped</i>            | (Optional) could not reply to packet        |
| <i>syn-completed</i>          | (Optional) successful extraction of entry   |
| <i>syn-bucket-overflow</i>    | (Optional) syncache per-bucket limit hit    |
| <i>syn-cache-overflow</i>     | (Optional) syncache cache limit hit         |
| <i>syn-sc-reset</i>           | (Optional) RST removed entry from syncache  |
| <i>syn-sc-stale</i>           | (Optional) timed out or listen socket gone  |
| <i>syn-sc-aborted</i>         | (Optional) syncache entry aborted           |
| <i>syn-sc-badack</i>          | (Optional) removed due to bad ACK           |
| <i>syn-sc-unreach</i>         | (Optional) ICMP unreachable received        |
| <i>syn-sc-zonefail</i>        | (Optional) zalloc() failed                  |
| <i>syn-sc-sendcookie</i>      | (Optional) SYN cookie sent                  |
| <i>syn-sc-recvcookie</i>      | (Optional) SYN cookie received              |
| <i>syn-sc-crosshits</i>       | (Optional) crosshits on the SC blocks       |
| <i>syn-sc-supsyncrosshits</i> | (Optional) crosshits dup SYN on SC block    |
| <i>syn-sc-removecrosshits</i> | (Optional) crosshits on SC blocks to remove |
| <i>udp-rx-version</i>         | (Optional) udp sockets version              |
| <i>udp-rx-total</i>           | (Optional) total udp packets                |
| <i>udp-rx-bad-csum</i>        | (Optional) udp checksum error               |

|                                     |  |
|-------------------------------------|--|
| <i>udp-rx-no-csum</i>               | (Optional) udp no checksum                 |
| <i>udp-rx-too-short</i>             | (Optional) udp packets drops               |
| <i>udp-rx-bad-len</i>               | (Optional) udp bad length                  |
| <i>udp-rx-no-port</i>               | (Optional) udp no port                     |
| <i>udp-rx-no-port-bcast</i>         | (Optional) udp no port broadcast           |
| <i>udp-rx-no-port-mcast</i>         | (Optional) udp no port multicast           |
| <i>udp-rx-full-socket-drop</i>      | (Optional) udp dropped full socket         |
| <i>udp-tx-total</i>                 | (Optional) udp total packets               |
| <i>raw-rx-version</i>               | (Optional) raw sockets version             |
| <i>raw-rx-rcvd</i>                  | (Optional) raw sockets connection received |
| <i>raw-rx-no-port</i>               | (Optional) raw socket no port              |
| <i>raw-rx-full-socket-drop</i>      | (Optional) raw socket full sockets drop    |
| <i>raw-tx-sent</i>                  | (Optional) raw socket connection sent      |
| <i>inpcb-tot-alloc</i>              | (Optional) inpcb allocation                |
| <i>inpcb-tot-bind</i>               | (Optional) inpcb bind                      |
| <i>inpcb-tot-laddr</i>              | (Optional) inpcb laddr                     |
| <i>inpcb-tot-connect</i>            | (Optional) inpcb connect                   |
| <i>inpcb-tot-disconnect</i>         | (Optional) inpcb disconnect                |
| <i>inpcb-tot-detach</i>             | (Optional) inpcb detach                    |
| <i>inpcb-tot-detach-noinc</i>       | (Optional) inpcb detaach no increment      |
| <i>inpcb-tot-detach-rort</i>        | (Optional) inpcb detach no return          |
| <i>inpcb-tot-rtfree</i>             | (Optional) inpcb rt free                   |
| <i>inpcb-tot-setsock-addr</i>       | (Optional) inpcb set socket address        |
| <i>inpcb-tot-setpeeraddr</i>        | (Optional) inpcb set peer address          |
| <i>inpcb-tot-notify</i>             | (Optional) inpcb notify                    |
| <i>inpcb-tot-lookup-npacl-deny</i>  | (Optional) inpcb lookup hash npacl deny    |
| <i>inpcb-tot-lookup-npacl-allow</i> | (Optional) inpcb lookup npacl allow        |
| <i>inpcb-tot-inshash-ipv4</i>       | (Optional) inpcb inshash ipv4              |
| <i>inpcb-tot-inshash-ipv6</i>       | (Optional) inpcb inshash ipv6              |

|                                      |  |
|--------------------------------------|--|
| <i>inpcb-tot-brehash-ipv4</i>        | (Optional) inpcb brehash ipv4                        |
| <i>inpcb-tot-brehash-ipv6</i>        | (Optional) inpcb brehash ipv6                        |
| <i>inpcb-tot-bremhash</i>            | (Optional) inpcb brehash                             |
| <i>inpcb-err-allocnomem</i>          | (Optional) inpcb allocation no memory error          |
| <i>inpcb-err-bindeinavl</i>          | (Optional) inpcb bind inval error                    |
| <i>inpcb-err-eaddrinuse</i>          | (Optional) inpcb eaddr in use error                  |
| <i>inpcb-err-eagain</i>              | (Optional) inpcb eagain error                        |

**Command Mode**

- /exec

# show sockets tcp keychain binding

```
show sockets tcp keychain binding [ __readonly__ { TABLE_keychain <keychain> <handle> <ref_count>
} ]
```

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information          |
| sockets             | Display sockets status and configuration |
| tcp                 | TCP information                          |
| keychain            | Keychain information                     |
| binding             | Binding information regarding RPM        |
| <i>__readonly__</i> | (Optional)                               |
| TABLE_keychain      | (Optional) all sockets tcp keychains     |
| <i>keychain</i>     | (Optional) xml keychain information      |
| <i>handle</i>       | (Optional) xml handle information        |
| <i>ref_count</i>    | (Optional) xml refcount information      |

## Command Mode

- /exec

## show software authenticity file

```
show software authenticity { file <uri0> | running } [ __readonly__ [ TABLE_filekey <image> <image_type>
<signer_cname> [ <signer_org_unit> ] <signer_org_name> <cert_serial_num> <hash_algo> <signature_algo>
[ <key_version> ] [ <verifier_name> <verifier_version> ] ] ]
```

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | show information                              |
| software                | signifies information about current software  |
| authenticity            | signifies image signature                     |
| file                    | show verification information of a file       |
| <i>uri0</i>             | file to be verified                           |
| running                 | Show running image information                |
| <i>__readonly__</i>     | (Optional)                                    |
| TABLE_filekey           | (Optional) file signer information            |
| <i>image</i>            | (Optional) Image                              |
| <i>image_type</i>       | (Optional) Image type                         |
| <i>signer_cname</i>     | (Optional) Signer Common Name                 |
| <i>signer_org_unit</i>  | (Optional) Signer Organization Unit           |
| <i>signer_org_name</i>  | (Optional) Signer Organization Name           |
| <i>cert_serial_num</i>  | (Optional) Certificate Serial Number          |
| <i>hash_algo</i>        | (Optional) Hash Algorithm Used                |
| <i>signature_algo</i>   | (Optional) Signature Algorithm Used           |
| <i>key_version</i>      | (Optional) key version used to sign this file |
| <i>verifier_name</i>    | (Optional) verifier Image                     |
| <i>verifier_version</i> | (Optional) Verifier version                   |

### Command Mode

- /exec

## show software authenticity keys

```
show software authenticity keys [ __readonly__ [ TABLE_sh_keys <key_num> <key_type> <pub_key_algo>
<modulus> <exponent> <key_version> [ <product_name> ] ] ]
```

### Syntax Description

|                      |  |
|----------------------|--|
| show                 | show information                             |
| software             | signifies information about current software |
| authenticity         | signifies image signature                    |
| keys                 | show installed verification keys             |
| <i>__readonly__</i>  | (Optional)                                   |
| <i>TABLE_sh_keys</i> | (Optional) table of device keys              |
| <i>key_num</i>       | (Optional) Key number                        |
| <i>key_type</i>      | (Optional) Type of key record                |
| <i>pub_key_algo</i>  | (Optional) Public key algorithm              |
| <i>modulus</i>       | (Optional) Key Modulus                       |
| <i>exponent</i>      | (Optional) Key exponent                      |
| <i>key_version</i>   | (Optional) Key version                       |
| <i>product_name</i>  | (Optional) Product name                      |

### Command Mode

- /exec

## show spanning-tree

| <i>designated_port</i>               | (Optional) Designated Port Id                        |
| <i>tc_acknowledge</i>                | (Optional) Is topology change acknowledge flag set ? |
| <i>forward_transition_count</i>      | (Optional) Port transitions to Forwarding            |
| <i>self_looped</i>                   | (Optional) Is Port self looped ?                     |
| <i>inconsistency</i>                 | (Optional) PVST+ Inconsistency Error Flags           |
| <i>bpdu_in</i>                       | (Optional) BPDUs received on this stp port           |

|                            |   |
|----------------------------|---|
| <i>bpdus_out</i>           | (Optional) BPDUs send on this stp port              |
| <i>port_fast</i>           | (Optional) Port Fast configured on port             |
| <i>link_type</i>           | (Optional) Link type configured on this port        |
| <i>port_guard</i>          | (Optional) Port Guard mode of port                  |
| <i>bpdu_guard</i>          | (Optional) Bpdu Guard mode configured               |
| <i>bpdu_filter</i>         | (Optional) Bpdu Filter mode configured              |
| <i>oper_portfast</i>       | (Optional) Is portfast enabled ?                    |
| <i>oper_p2p</i>            | (Optional) Is port P2P ?                            |
| <i>oper_loopguard</i>      | (Optional) Is loopguard enabled ?                   |
| <i>oper_bpduguard</i>      | (Optional) Is bpduguard enabled ?                   |
| <i>oper_bpdufilter</i>     | (Optional) Is bpdufilter enabled ?                  |
| <i>int_bpdufilter</i>      | (Optional) Is internal bpdufilter enabled ?         |
| <i>forward_delay_timer</i> | (Optional) Forward Delay timer                      |
| <i>hold_timer</i>          | (Optional) Hold Timer                               |
| <i>message_age</i>         | (Optional) Message age timer                        |
| <i>peer</i>                | (Optional) STP protocol of the peer                 |
| <i>dispute</i>             | (Optional) Is port Disputed ?                       |
| <i>pvstsim_inc_timer</i>   | (Optional) PVST Simulation Inconsistency Hold Timer |
| <i>boundary</i>            | (Optional) Is port boundary ?                       |
| <i>prestd</i>              | (Optional) Is port Pre STD MST ?                    |
| <i>simulate_pvst</i>       | (Optional) Is port is pvst simulate mode ?          |
| <i>oper_networkport</i>    | (Optional) Is network port enabled ?                |
| <i>simulate_pvst_cfg</i>   | (Optional) PVST Simulation configured on port       |

### Command Mode

- /exec

## show spanning-tree blockedports

```
{ show spanning-tree [ vlan <vlan-id> ] blockedports [ __readonly__ [ TABLE_tree [ <port_info_tree_id> ]
[ TABLE_port [ <if_index> ] ] ] [ <tree_type> ] [ <num_ports> ] ] }
```

### Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information              |
| spanning-tree            | Show spanning tree information               |
| vlan                     | (Optional) VLAN Switch Spanning Trees        |
| __readonly__             | (Optional)                                   |
| TABLE_tree               | (Optional)                                   |
| <i>port_info_tree_id</i> | (Optional) Tree name                         |
| TABLE_port               | (Optional)                                   |
| <i>if_index</i>          | (Optional) Port name                         |
| <i>tree_type</i>         | (Optional) Tree Type                         |
| <i>num_ports</i>         | (Optional) Number of Ports                   |
| <i>vlan-id</i>           | (Optional) vlan range, Example: 1,3-5,7,9-11 |
| blockedports             | Show blocked ports                           |

### Command Mode

- /exec

## show spanning-tree bridge

```
{ show spanning-tree [ vlan <vlan-id> | bridge-domain <bd-id> ] bridge [ priority [ system-id ] ] [ __readonly__
{ TABLE_tree <tree_id> <tree_tree_type> <tree_protocol> <bridge_mac> <bridge_priority>
<bridge_forward_delay> <bridge_max_age> <bridge_hello_time> } ] } | { show spanning-tree [ vlan <vlan-id>
| bridge-domain <bd-id> ] bridge [ { detail | brief } ] [ __readonly__ { TABLE_tree <tree_id> <tree_tree_type>
<tree_protocol> <bridge_mac> <bridge_priority> <bridge_forward_delay> <bridge_max_age>
<bridge_hello_time> } ] } | { show spanning-tree [ vlan <vlan-id> | bridge-domain <bd-id> ] bridge [ { address
| forward-time | hello-time | id | max-age | protocol } ] [ __readonly__ { TABLE_tree <tree_id> <tree_tree_type>
<tree_protocol> <bridge_mac> <bridge_priority> <bridge_forward_delay> <bridge_max_age>
<bridge_hello_time> } ] }
```

### Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                                 |
| spanning-tree  | Show spanning tree information                                  |
| vlan           | (Optional) VLAN Switch Spanning Trees                           |
| bridge-domain  | (Optional) Bridge-Domain Switch Spanning Trees                  |
| <i>vlan-id</i> | (Optional) vlan range, Example: 1,3-5,7,9-11                    |
| <i>bd-id</i>   | (Optional) Bridge-Domain range, Example: 2,4-5,7,9-11           |
| bridge         | Status and configuration of this bridge                         |
| address        | (Optional) Mac address of this bridge                           |
| forward-time   | (Optional) Forward delay interval                               |
| hello-time     | (Optional) Hello time   |
| id             | (Optional) Spanning tree bridge identifier                      |
| max-age        | (Optional) Max age  |
| protocol       | (Optional) Spanning tree protocol                               |
| brief          | (Optional) Brief summary of the status and configuration output |
| detail         | (Optional) Detailed of the status and configuration             |
| priority       | (Optional) Bridge priority of this bridge                       |
| system-id      | (Optional) Spanning tree priority with system id extension      |
| __readonly__   | (Optional) Read Only  |
| TABLE_tree     | (Optional)  |
| <i>tree_id</i> | (Optional) Tree Id  |

|                             |                                      |
|-----------------------------|--------------------------------------|
| <i>tree_tree_type</i>       | (Optional) Tree Type                 |
| <i>tree_protocol</i>        | (Optional) Tree Protocol             |
| <i>bridge_mac</i>           | (Optional) Bridge Mac                |
| <i>bridge_priority</i>      | (Optional) Bridge Priority           |
| <i>bridge_forward_delay</i> | (Optional) Configured Forward Delay  |
| <i>bridge_max_age</i>       | (Optional) Configured Bridge Max Age |
| <i>bridge_hello_time</i>    | (Optional) Configured Hello Time     |

**Command Mode**

- /exec

## show spanning-tree inconsistentports

```
{ show spanning-tree [ vlan <vlan-id> ] inconsistentports [ __readonly__ [ TABLE_tree <port_info_tree_id>
<if_index> <inconsistency> ] [ <tree_type> ] [ <num_ports> ] ] }
```

### Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information              |
| spanning-tree            | Show spanning tree information               |
| vlan                     | (Optional) VLAN Switch Spanning Trees        |
| <i>vlan-id</i>           | (Optional) vlan range, Example: 1,3-5,7,9-11 |
| inconsistentports        | Show inconsistent ports                      |
| <i>__readonly__</i>      | (Optional)                                   |
| TABLE_tree               | (Optional)                                   |
| <i>port_info_tree_id</i> | (Optional) Tree name                         |
| <i>if_index</i>          | (Optional) Port name                         |
| <i>inconsistency</i>     | (Optional) Inconsistency type                |
| <i>tree_type</i>         | (Optional) Tree Type                         |
| <i>num_ports</i>         | (Optional) Number of Ports                   |

### Command Mode

- /exec

## show spanning-tree interface

```
{ show spanning-tree [ vlan <vlan-id> | bridge-domain <bd-id> ] interface <interface-id> [ __readonly__ {
TABLE_port <if_index> [ <vpc> ] <port_info_tree_id> <state> <role> <port_priority> <port_number>

| <i>int_bpdufilter</i>                | (Optional) Is internal bpdufilter enabled ?          |

|                            |   |
|----------------------------|---|
| <i>forward_delay_timer</i> | (Optional) Forward Delay timer                      |
| <i>hold_timer</i>          | (Optional) Hold Timer                               |
| <i>message_age</i>         | (Optional) Message age timer                        |
| <i>peer</i>                | (Optional) STP protocol of the peer                 |
| <i>dispute</i>             | (Optional) Is port Disputed ?                       |
| <i>pvstsim_inc_timer</i>   | (Optional) PVST Simulation Inconsistency Hold Timer |
| <i>boundary</i>            | (Optional) Is port boundary ?                       |
| <i>prestd</i>              | (Optional) Is port Pre STD MST ?                    |
| <i>simulate_pvst</i>       | (Optional) Is port is pvst simulate mode ?          |
| <i>oper_networkport</i>    | (Optional) Is network port enabled ?                |
| <i>simulate_pvst_cfg</i>   | (Optional) PVST Simulation configured on port       |

**Command Mode**

- /exec

## show spanning-tree interface

```
{ show spanning-tree [ vlan <vlan-id> ] interface <interface-id> { cost | inconsistency | edge | priority | rootcost
| state } [ __readonly__ [ TABLE_vlan_interface_info <tree_name> [ <cost> ] [ <edge> ] [ <inconsistency>
] [ <priority> ] [ <rootcost> ] [ <state> ] ] ] }
```

### Syntax Description

|                           |  |
|---------------------------|--|
| show                      | Show running system information                  |
| spanning-tree             | Show spanning tree information                   |
| vlan                      | (Optional) VLAN Switch Spanning Trees            |
| <i>vlan-id</i>            | (Optional) vlan range, Example: 1,3-5,7,9-11     |
| interface                 | Spanning Tree interface status and configuration |
| <i>interface-id</i>       |  |
| cost                      | Port path cost                                   |
| inconsistency             | Port inconsistency state                         |
| edge                      | Edge Port configuration                          |
| priority                  | Port priority                                    |
| rootcost                  | Path cost to root                                |
| state                     | Port spanning tree state                         |
| __readonly__              | (Optional)                                       |
| TABLE_vlan_interface_info | (Optional)                                       |
| <i>tree_name</i>          | (Optional) Spanning tree name                    |
| <i>cost</i>               | (Optional) Path cost                             |
| <i>edge</i>               | (Optional) Portfast enabled or not               |
| <i>inconsistency</i>      | (Optional) Port inconsistency                    |
| <i>priority</i>           | (Optional) Port Priority                         |
| <i>rootcost</i>           | (Optional) Designated Cost                       |
| <i>state</i>              | (Optional) Port state                            |

### Command Mode

- /exec

## show spanning-tree issu-impact

```
show spanning-tree issu-impact [ __readonly__ [ TABLE_topology <tc_detected> <tc_name> <no_of_tc>
<time> <tc_string> ] [ TABLE_BA_ports <port_name> ] [ <criteria1> ] [ <criteria2> ] [
TABLE_non_edge_ports <port> <vlan> <role> <sts> <tree> <instance> ] [ <criteria3> ] ]
```

### Syntax Description

|                             |                                      |
|-----------------------------|--------------------------------------|
| show                        | Show running system information      |
| spanning-tree               | Show spanning tree information       |
| issu-impact                 | Show whether STP meets ISSU criteria |
| <i>__readonly__</i>         | (Optional)                           |

### Syntax Description

|               |   |
|---------------|---|
| show          | Show running system information                   |
| spanning-tree | Show spanning tree information                    |
| mst           | Multiple spanning trees                           |
| <i>mst-id</i> | (Optional) MST instance range, example: 0-3,5,7-9 |
| detail        | Detailed information                              |
| __readonly__  | (Optional) Read Only                              |
| TABLE_tree    | (Optional)  |

|  |   |
|--|---|
| <i>tree_id</i>                         | (Optional) Tree Id                                |
| <i>tree_tree_type</i>                  | (Optional) Tree Type                              |
| <i>tree_protocol</i>                   | (Optional) Tree Protocol                          |
| <i>port_count</i>                      | (Optional) Number of Ports in Tree                |
| <i>bridge_mac</i>                      | (Optional) Bridge Mac                             |
| <i>bridge_priority</i>                 | (Optional) Bridge Priority                        |
| <i>tree_designated_root</i>            | (Optional) Designated Root Mac                    |
| <i>tree_designated_root_priority</i>   | (Optional) Designated Root Priority               |
| <i>stp_active</i>                      | (Optional) Spanning Tree State                    |
| <i>root_path_cost</i>                  | (Optional) Root Path Cost                         |
| <i>root_port_if_index</i>              | (Optional) Root Port                              |
| <i>root_port_priority</i>              | (Optional) Root Port Priority                     |
| <i>root_port_number</i>                | (Optional) Root Port Number                       |
| <i>topology_change</i>                 | (Optional) Topology Change flag is set ?          |
| <i>topology_change_detected</i>        | (Optional) Topology Change detected flag is set ? |
| <i>topology_change_count</i>           | (Optional) Topology Change Count                  |
| <i>topology_change_time_since_last</i> | (Optional) Time since last TC                     |
| <i>tc_initiator_if_index</i>           | (Optional) Topology Change initiator port         |
| <i>max_age</i>                         | (Optional) Max Age                                |
| <i>hello_time</i>                      | (Optional) Hello Time                             |
| <i>forward_delay</i>                   | (Optional) Forward delay                          |
| <i>bridge_max_age</i>                  | (Optional) Configured Bridge Max Age              |
| <i>bridge_hello_time</i>               | (Optional) Configured Hello Time                  |
| <i>bridge_forward_delay</i>            | (Optional) Configured Forward Delay               |
| <i>hold_time</i>                       | (Optional) Configured Hold Time                   |
| <i>hello_timer</i>                     | (Optional) Hello Timer Value                      |
| <i>topology_change_timer</i>           | (Optional) Topology Change Timer Value            |
| <i>tcn_timer</i>                       | (Optional) TCN Timer Value                        |
| <i>aging_timer</i>                     | (Optional) Ageing Timer Value                     |

|                                      |   |
|--------------------------------------|---|
| <i>disabled</i>                      | (Optional) Number of ports Disabled       |
| <i>blocking</i>                      | (Optional) Number of ports Blocking       |
| <i>listening</i>                     | (Optional) Number of ports Listening      |
| <i>learning</i>                      | (Optional) Number of ports Learning       |
| <i>forwarding</i>                    | (Optional) Number of ports Forwarding     |
| <i>invalid</i>                       | (Optional) Number of ports Invalid        |
| <i>ist-master-id-mac</i>             | (Optional) IST Master ID MAC address      |
| <i>ist-master-prio</i>               | (Optional) IST Master ID priority         |
| <i>ist-path-cost</i>                 | (Optional) IST path cost                  |
| <i>remaining-hops</i>                | (Optional) Remaining hops                 |
| <i>max-hops</i>                      | (Optional) Max Hops                       |
| <i>txholdcount</i>                   | (Optional) TX Hold count                  |
| <i>tree-vlan-map</i>                 | (Optional) Bitmap of vlans mapped to tree |
| TABLE_port                           | (Optional)                                |
| <i>if_index</i>                      | (Optional) Interface                      |
| <i>state</i>                         | (Optional) STP Port State                 |
| <i>role</i>                          | (Optional) STP Port Role                  |
| <i>port_priority</i>                 | (Optional) Port priority                  |
| <i>port_number</i>                   | (Optional) Port Number                    |
| <i>port_info_tree_id</i>             | (Optional) Tree Id                        |
| <i>port_tree_type</i>                | (Optional) Tree Type                      |
| <i>port_protocol</i>                 | (Optional) Tree Protocol                  |
| <i>path_cost</i>                     | (Optional) Cost configured on this port   |
| <i>port_designated_root</i>          | (Optional) Designated Root Mac            |
| <i>port_designated_root_priority</i> | (Optional) Designated Root Priority       |
| <i>designated_cost</i>               | (Optional) Designated cost                |
| <i>designated_bridge</i>             | (Optional) Designated bridge mac          |
| <i>designated_bridge_priority</i>    | (Optional) Designated bridge priority     |
| <i>designated_port</i>               | (Optional) Designated Port Id             |

|                                       |  |
|---------------------------------------|--|
| <i>tc_acknowledge</i>                 | (Optional) Is topology change acknowledge flag set ? |
| <i>forward_transition_count</i>       | (Optional) Port transitions to Forwarding            |
| <i>self_looped</i>                    | (Optional) Is Port self looped ?                     |
| <i>inconsistency</i>                  | (Optional) PVST+ Inconsistency Error Flags           |
| <i>bpdu_in</i>                        | (Optional) BPDUs received on this stp port           |
| <i>bpdu_out</i>                       | (Optional) BPDUs send on this stp port               |
| <i>port_fast</i>                      | (Optional) Port Fast configured on port              |
| <i>link_type</i>                      | (Optional) Link type configured on this port         |

| <i>bpdu_guard</i>                     | (Optional) Bpdu Guard mode configured                |
| <i>bpdu_filter</i>                    | (Optional) Bpdu Filter mode configured               |
| <i>oper_portfast</i>                  | (Optional) Is portfast enabled ?                     |
| <i>oper_p2p</i>                       | (Optional) Is port P2P ?                             |
| <i>oper_loopguard</i>                 | (Optional) Is loopguard enabled ?                    |
| <i>oper_bpduguard</i>                 | (Optional) Is bpduguard enabled ?                    |
| <i>oper_bpdufilter</i>                | (Optional) Is bpdufilter enabled ?                   |
| <i>int_bpdufilter</i>                 | (Optional) Is internal bpdufilter enabled ?          |
| <i>forward_delay_timer</i>            | (Optional) Forward Delay timer                       |
| <i>hold_timer</i>                     | (Optional) Hold Timer                                |
| <i>message_age</i>                    | (Optional) Message age timer                         |
| <i>peer</i>                           | (Optional) STP protocol of the peer                  |
| <i>boundary</i>                       | (Optional) Is port boundary ?                        |
| <i>simulate_pvst</i>                  | (Optional) Is port is pvst simulate mode ?           |
| <i>dispute</i>                        | (Optional) Is port Disputed ?                        |
| <i>pvstsim_inc_timer</i>              | (Optional) PVST Simulation Inconsistency Hold Timer  |
| <i>prestd</i>                         | (Optional) Is port Pre STD MST ?                     |
| <i>designated_ist_master</i>          | (Optional) Ist master mac                            |
| <i>designated_ist_master_priority</i> | (Optional) Ist master priority                       |
| <i>designated_ist_cost</i>            | (Optional) Ist master path cost                      |

|                          |   |
|--------------------------|---|
| <i>vlan-map</i>          | (Optional) Bitmap of vlans mapped to port     |
| <i>oper_networkport</i>  | (Optional) Is network port enabled ?          |
| <i>simulate_pvst_cfg</i> | (Optional) PVST Simulation configured on port |

**Command Mode**

- /exec

## show spanning-tree mst configuration

```
{ show spanning-tree mst configuration [ __readonly__ <stp-mode> <name> <rev-id> {
TABLE_instance_to_vlan_map <mst_id> <vlan_bit_map> } [ <pvlan-sync> ] ] }
```

### Syntax Description

|                            |  |
|----------------------------|--|
| show                       | Show running system information          |
| spanning-tree              | Show spanning tree information           |
| mst                        | Multiple spanning trees                  |
| configuration              | MST current region configuration         |
| __readonly__               | (Optional) Read Only                     |
| <i>stp-mode</i>            | (Optional) Spanning Tree operating mode  |
| <i>name</i>                | (Optional) Configuration name            |
| <i>rev-id</i>              | (Optional) Configuration revision number |
| TABLE_instance_to_vlan_map | (Optional) Instance to vlan mapping Info |
| <i>mst_id</i>              | (Optional) MST Instance ID               |
| <i>vlan_bit_map</i>        | (Optional) VLAN Bitmap                   |
| <i>pvlan-sync</i>          | (Optional) pvlan synchronization         |

### Command Mode

- /exec

## show spanning-tree mst configuration digest

```
{ show spanning-tree mst configuration digest [ __readonly__ <stp-mode> <name> <rev-id> <digest>
<prestd-digest> [ <pvlan-sync> ] ] }
```

### Syntax Description

|                      |  |
|----------------------|--|
| show                 | Show running system information                    |
| spanning-tree        | Show spanning tree information                     |
| mst                  | Multiple spanning trees                            |
| configuration        | MST current region configuration                   |
| digest               | Display MST configuration digest                   |
| <i>__readonly__</i>  | (Optional) Read Only                               |
| <i>stp-mode</i>      | (Optional) Spanning Tree operating mode            |
| <i>name</i>          | (Optional) Configuration name                      |
| <i>rev-id</i>        | (Optional) Configuration revision number           |
| <i>digest</i>        | (Optional) MST region configuration digest         |
| <i>prestd-digest</i> | (Optional) MST region configuration pre-std digest |
| <i>pvlan-sync</i>    | (Optional) pvlan synchronization                   |

### Command Mode

- /exec

## show spanning-tree mst interface

```
{ show spanning-tree mst [ <mst-id> ] interface <interface-id> [ __readonly__ TABLE_port <if_index>
<port_info_tree_id> <state> <role> <port_priority> <port_number> <port_protocol> <port_tree_type>

}
```

### Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information                   |
| spanning-tree            | Show spanning tree information                    |
| mst                      | Multiple spanning trees                           |
| <i>mst-id</i>            | (Optional) MST instance range, example: 0-3,5,7-9 |
| interface                | Spanning Tree interface status and configuration  |
| <i>interface-id</i>      | Specify an interface as a target for the command  |
| detail                   | Detailed information                              |
| __readonly__             | (Optional) Read Only                              |
| TABLE_port               | (Optional)  |
| <i>if_index</i>          | (Optional) Interface                              |
| <i>port_info_tree_id</i> | (Optional) Tree Id                                |
| <i>state</i>             | (Optional) STP Port State                         |
| <i>role</i>              | (Optional) STP Port Role                          |
| <i>port_priority</i>     | (Optional) Port priority                          |
| <i>port_number</i>       | (Optional) Port Number                            |

|                                      |  |
|--------------------------------------|--|
| <i>port_tree_type</i>                | (Optional) Tree Type                                 |
| <i>port_protocol</i>                 | (Optional) Tree Protocol                             |
| <i>path_cost</i>                     | (Optional) Cost configured on this port              |
| <i>port_designated_root</i>          | (Optional) Designated Root Mac                       |
| <i>port_designated_root_priority</i> | (Optional) Designated Root Priority                  |
| <i>designated_cost</i>               | (Optional) Designated cost                           |
| <i>designated_bridge</i>             | (Optional) Designated bridge mac                     |
| <i>designated_bridge_priority</i>    | (Optional) Designated bridge priority                |
| <i>designated_port</i>               | (Optional) Designated Port Id                        |
| <i>tc_acknowledge</i>                | (Optional) Is topology change acknowledge flag set ? |
| <i>forward_transition_count</i>      | (Optional) Port transitions to Forwarding            |
| <i>self_looped</i>                   | (Optional) Is Port self looped ?                     |
| <i>inconsistency</i>                 | (Optional) PVST+ Inconsistency Error Flags           |
| <i>bp dus_in</i>                     | (Optional) BPDUs received on this stp port           |
| <i>bp dus_out</i>                    | (Optional) BPDUs send on this stp port               |
| <i>port_fast</i>                     | (Optional) Port Fast configured on port              |
| <i>link_type</i>                     | (Optional) Link type configured on this port         |
| <i>port_guard</i>                    | (Optional) Port Guard mode of port                   |
| <i>bp du_guard</i>                   | (Optional) Bpdu Guard mode configured                |
| <i>bp du_filter</i>                  | (Optional) Bpdu Filter mode configured               |
| <i>oper_portfast</i>                 | (Optional) Is portfast enabled ?                     |
| <i>oper_p2p</i>                      | (Optional) Is port P2P ?                             |
| <i>oper_loopguard</i>                | (Optional) Is loopguard enabled ?                    |
| <i>oper_bp duguard</i>               | (Optional) Is bp duguard enabled ?                   |
| <i>oper_bp dufilter</i>              | (Optional) Is bp dufilter enabled ?                  |
| <i>int_bp dufilter</i>               | (Optional) Is internal bp dufilter enabled ?         |
| <i>forward_delay_timer</i>           | (Optional) Forward Delay timer                       |
| <i>hold_timer</i>                    | (Optional) Hold Timer                                |
| <i>message_age</i>                   | (Optional) Message age timer                         |

|                                       |   |
|---------------------------------------|---|
| <i>peer</i>                           | (Optional) STP protocol of the peer                 |
| <i>boundary</i>                       | (Optional) Is port boundary ?                       |
| <i>simulate_pvst</i>                  | (Optional) Is port is pvst simulate mode ?          |
| <i>dispute</i>                        | (Optional) Is port Disputed ?                       |
| <i>prestd</i>                         | (Optional) Is port Pre STD MST ?                    |
| <i>designated_ist_master</i>          | (Optional) Ist master mac                           |
| <i>designated_ist_master_priority</i> | (Optional) Ist master priority                      |
| <i>designated_ist_cost</i>            | (Optional) Ist master path cost                     |
| <i>vlan-map</i>                       | (Optional) Bitmap of vlans mapped to port           |
| <i>oper_networkport</i>               | (Optional) Is network port enabled ?                |
| <i>pvstsim_inc_timer</i>              | (Optional) PVST Simulation Inconsistency Hold Timer |
| <i>simulate_pvst_cfg</i>              | (Optional) PVST Simulation configured on port       |

#### Command Mode

- /exec

# show spanning-tree pathcost method

```
{ show spanning-tree pathcost method [ __readonly__ <stp-pathcost-method> [ <stp-operpathcost-method> ] ] }
```

## Syntax Description

|                                |                                     |
|--------------------------------|-------------------------------------|
| show                           | Show running system information     |
| spanning-tree                  | Show spanning tree information      |
| pathcost                       | Show Spanning pathcost options      |
| method                         | Default pathcost calculation method |
| <i>__readonly__</i>            | (Optional)                          |
| <i>stp-pathcost-method</i>     | (Optional) STP Pathcost Method      |
| <i>stp-operpathcost-method</i> | (Optional) STP Pathcost Method      |

## Command Mode

- /exec

## show spanning-tree root

```
{ show spanning-tree [ vlan <vlan-id> | bridge-domain <bd-id> ] root [ priority [ system-id ] ] [ __readonly__
TABLE_tree <tree_id> <tree_tree_type> <tree_protocol> <tree_designated_root>
<tree_designated_root_priority> <root_path_cost> <root_port_if_index> <root_port_priority>
<root_port_number> <max_age> <hello_time> <forward_delay> ] } | { show spanning-tree [ vlan <vlan-id>
| bridge-domain <bd-id> ] root [ { address | cost | forward-time | hello-time | id | max-age | port } ] [
__readonly__ TABLE_tree <tree_id> <tree_tree_type> <tree_protocol> <tree_designated_root>
<tree_designated_root_priority> <root_path_cost> <root_port_if_index> <root_port_priority>
<root_port_number> <max_age> <hello_time> <forward_delay> ] } | { show spanning-tree [ vlan <vlan-id>
| bridge-domain <bd-id> ] root [ { detail | brief } ] [ __readonly__ TABLE_tree <tree_id> <tree_tree_type>
<tree_protocol> <tree_designated_root> <tree_designated_root_priority> <root_path_cost>
<root_port_if_index> <root_port_priority> <root_port_number> <max_age> <hello_time> <forward_delay>
] } }
```

### Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                            |
| spanning-tree  | Show spanning tree information                             |
| vlan           | (Optional) VLAN Switch Spanning Trees                      |
| bridge-domain  | (Optional) Bridge-Domain Switch Spanning Trees             |
| <i>vlan-id</i> | (Optional) vlan range, Example: 1,3-5,7,9-11               |
| <i>bd-id</i>   | (Optional) Bridge-Domain range, Example: 2,4-5,7,9-11      |
| root           | Status and configuration of the root bridge                |
| address        | (Optional) Mac address of this bridge                      |
| cost           | (Optional) Path cost from this bridge to the root          |
| forward-time   | (Optional) Forward delay interval                          |
| hello-time     | (Optional) Hello time                                      |
| id             | (Optional) Spanning tree bridge identifier                 |
| max-age        | (Optional) Max age   |
| port           | (Optional) Root port                                       |
| brief          | (Optional) Brief summary of interface information          |
| detail         | (Optional) Detailed information                            |
| priority       | (Optional) Bridge priority of this bridge                  |
| system-id      | (Optional) Spanning tree priority with system id extension |
| __readonly__   | (Optional) Read Only                                       |

|                                      |                                     |
|--------------------------------------|-------------------------------------|
| TABLE_tree                           | (Optional)                          |
| <i>tree_id</i>                       | (Optional) Tree Id                  |
| <i>tree_tree_type</i>                | (Optional) Tree Type                |
| <i>tree_protocol</i>                 | (Optional) Tree Protocol            |
| <i>tree_designated_root</i>          | (Optional) Designated Root Mac      |
| <i>tree_designated_root_priority</i> | (Optional) Designated Root Priority |
| <i>root_path_cost</i>                | (Optional) Root Path Cost           |
| <i>root_port_if_index</i>            | (Optional) Root Port                |
| <i>root_port_priority</i>            | (Optional) Root Port Priority       |
| <i>root_port_number</i>              | (Optional) Root Port Number         |

```

### Syntax Description

|                                      |   |
|--------------------------------------|---|
| show                                 | Show running system information                       |
| spanning-tree                        | Show spanning tree information                        |
| vlan                                 | (Optional) VLAN Switch Spanning Trees                 |
| bridge-domain                        | (Optional) Bridge-Domain Switch Spanning Trees        |
| <i>vlan-id</i>                       | (Optional) vlan range, Example: 1,3-5,7,9-11          |
| <i>bd-id</i>                         | (Optional) Bridge-Domain range, Example: 2,4-5,7,9-11 |
| summary                              | Summary of port states                                |
| <i>__readonly__</i>                  | (Optional) Read Only                                  |
| <i>stp-mode</i>                      | (Optional) Spanning Tree operating mode               |
| <i>stp_tree_root_info</i>            | (Optional) STP Tree Root info marker                  |
| <i>tree_type</i>                     | (Optional) Tree Type                                  |
| <i>bridge_mac</i>                    | (Optional) Bridge Mac                                 |
| <i>bridge_priority</i>               | (Optional) Bridge Priority                            |
| <i>tree_designated_root</i>          | (Optional) Designated Root Mac                        |
| <i>tree_designated_root_priority</i> | (Optional) Designated Root Priority                   |
| <i>stp_root_bmp_info</i>             | (Optional) STP root bitmap info marker                |
| <i>stp_root_tree_type</i>            | (Optional) Tree Type                                  |
| <i>tree_root_bmp</i>                 | (Optional) STP tree root bmp                          |
| <i>stp_l2gstp_bmp_info</i>           | (Optional) L2 Gateway STP bitmap marker               |
| <i>stp_l2gstp_tree_type</i>          | (Optional) Tree Type                                  |

|                             |   |
|-----------------------------|---|
| <i>stp_l2gstp_bmp</i>       | (Optional) L2 Gateway STP bitmap            |
| <i>stp_global_info</i>      | (Optional) STP global info marker           |
| <i>pcost_method</i>         | (Optional) STP pathcost method              |
| <i>oper_pcost_method</i>    | (Optional) STP oper pathcost method         |
| <i>port_fast</i>            | (Optional) Port Fast configured on port     |
| <i>bpdu_guard</i>           | (Optional) Bpdu Guard mode configured       |
| <i>bpdu_filter</i>          | (Optional) Bpdu Filter mode configured      |
| <i>oper_loopguard</i>       | (Optional) Is loopguard enabled ?           |
| <i>bridge_assurance</i>     | (Optional) Bridge Assurance                 |
| <i>networkport_default</i>  | (Optional) Network Port default             |
| <i>simulate_pvst</i>        | (Optional) Is port is pvst simulate mode ?  |
| <i>max-hops</i>             | (Optional) Max Hops                         |
| <i>peer_switch_cfg</i>      | (Optional) peer switch configuration status |
| <i>oper_peer_switch</i>     | (Optional) peer switch operational status   |
| <i>stp_l2gstp_domain_id</i> | (Optional) L2 Gateway STP Domain ID         |
| <i>stp_lite</i>             | (Optional) STP-Lite                         |

## show srte pce ipv4 peer

```
show srte pce ipv4 peer [ <pce_address> ] [ __readonly__ [ TABLE_peer <pce_address> <pcc_address>
<precedence> <state> ] ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information             |
| srte                | Show Segment-Routing Traffic Eng commands   |
| pce                 | Show PCC related information                |
| ipv4                | Show ipv4 pcc information                   |
| peer                | Show PCE peers                              |
| <i>pce_address</i>  | (Optional) PCE address of the peer          |
| <i>__readonly__</i> | (Optional)                                  |
| TABLE_peer          | (Optional) Table with a list of peers       |
| <i>pce_address</i>  | (Optional) Address of the PCE               |
| <i>pcc_address</i>  | (Optional) Address of the PCC               |
| <i>precedence</i>   | (Optional) Configured precedence of the PCE |
| <i>state</i>        | (Optional) State of the PCE connection      |

### Command Mode

- /exec

## show srte policy

```
show srte policy [ { <policy_name_val> } | { color <color_val> endpoint { <end_point_val> | <ipv6-addr>
} } | { policy-id <policy_id_val> } ] [ holddown ] [ detail ] [ __readonly__ [ TABLE_policy <policy_name>
[ <source> ] <end_point> <state> <col> { <binding_label> | <binding_sid> } <policy_id> [ <policy_owner>
] [ <flags> ] [ <holddown_time> ] [ TABLE_pref <pref> [ TABLE_paths { <exp_path_name> |
<deleg_pce_addr> } [ TABLE_index <index> [ { <label> | <sid> } ] ] [ <proactive_monitoring_session_id>
] [ <proactive_monitoring_session_state> ] ] ] ] ]
```

### Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information               |
| srte                   | Show Segment-Routing Traffic Eng commands     |
| policy                 | Show existing policies                        |
| color                  | (Optional) Show policies with the color       |
| endpoint               | (Optional) Show Policies with the destination |
| <i>end_point_val</i>   | (Optional) Endpoint for the policy            |
| <i>policy_name_val</i> | (Optional) Policy name of the policy          |
| <i>color_val</i>       | (Optional) Color of the policy                |
| <i>policy_id_val</i>   | (Optional) Policy_id of the policy            |
| policy-id              | (Optional) Show Policy for the policy-id      |
| holddown               | (Optional) Show Policies that are in holddown |
| detail                 | (Optional) Display detailed information       |
| __readonly__           | (Optional)                                    |
| TABLE_policy           | (Optional) Table with a list of policies      |
| <i>policy_name</i>     | (Optional) Unique name for the policy         |
| <i>end_point</i>       | (Optional) Endpoint for the policy            |
| <i>source</i>          | (Optional) Source address of the policy       |
| <i>state</i>           | (Optional) State of the policy                |
| <i>col</i>             | (Optional) Color of the policy                |
| <i>binding_label</i>   | (Optional) Binding label of the policy        |
| <i>binding_sid</i>     | (Optional) Binding sid of the policy          |
| <i>policy_id</i>       | (Optional) Policy ID                          |

|   |  |
|---|--|
| <i>policy_owner</i>                       | (Optional) Policy Owners                                     |
| <i>flags</i>                              | (Optional) Policy Flags                                      |
| <i>holddown_time</i>                      | (Optional) Time when the policy was put in holddown          |
| TABLE_pref                                | (Optional) Table with a list of candidate path based on pref |
| <i>pref</i>                               | (Optional) Preference for candidate paths                    |
| TABLE_paths                               | (Optional) Table with a list of exp path for pref            |
| <i>exp_path_name</i>                      | (Optional) Name of the explicit-path                         |
| <i>deleg_pce_addr</i>                     | (Optional) Delegated PCE Address                             |
| TABLE_index                               | (Optional) Table with a list of index for the exp path       |
| <i>index</i>                              | (Optional) Index for the explicit path                       |
| <i>label</i>                              | (Optional) Label for the explicit path                       |
| <i>proactive_monitoring_session_id</i>    | (Optional) Proactive monitoring session ID                   |
| <i>proactive_monitoring_session_state</i> | (Optional) Proactive monitoring session state                |

| key                    | Show ssh keys                             |
| dsa                    | (Optional) Show dsa ssh keys              |
| rsa                    | (Optional) Show rsa ssh keys              |
| ecdsa                  | (Optional) Show ecdsa ssh keys            |
| md5                    | (Optional) Show Fingerprint in MD5 Format |
| __readonly__           | (Optional)                                |
| TABLE_sessions         | (Optional) ssh key                        |
| <i>key_type</i>        | (Optional) keys type                      |
| <i>key_time</i>        | (Optional) timestamp                      |
| <i>key_data</i>        | (Optional) ssh key data                   |
| <i>key_bitcount</i>    | (Optional) bitcount                       |
| <i>key_fingerprint</i> | (Optional) fingerprint                    |

## Command Mode

- /exec

# show ssh server

```
show ssh server [ __readonly__ { operation_status <o_status> } ]
```

## Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information             |
| ssh                     | Show SSH information                        |
| server                  | Show whether ssh server is enabled or not   |
| <i>__readonly__</i>     | (Optional)                                  |
| <i>operation_status</i> | (Optional) run-time information about ssh   |
| <i>o_status</i>         | (Optional) operational status of ssh server |

## Command Mode

- /exec

# show ssx details

```
show ssx details [ __readonly__ [ TABLE_ssx_details <system-id><arp-timer-running> [ TABLE_slot [ <slot> ] <asic-instance><asic-slice><io-srcid> [ <packets-sent> ] ] ] ]
```

## Syntax Description

|                   |                               |
|-------------------|-------------------------------|
| ssx               | Display SSX information       |
| details           | Show SSX details              |
| __readonly__      | (Optional) Read Only          |
| TABLE_ssx_details | (Optional) SSX details table  |
| TABLE_slot        | (Optional) Slot table for EOR |
| slot              | (Optional) Slot number        |

## Command Mode

- /exec

# show ssx exporter

```
show ssx exporter { all | <exportername> } [ __readonly__ [ TABLE_ssx_exporters <exporter-name> {
<src-ip><src-udp-port><dest-ip><dest-udp-port><vrf><mtu><dscp> | <dest-intf> } ] ]
```

## Syntax Description

|                     |                                |
|---------------------|--------------------------------|
| ssx                 | Display SSX information        |
| exporter            | Show exporter details          |
| all                 | All sessions                   |
| <i>exportername</i> | SSX Exporter to display        |
| <i>__readonly__</i> | (Optional) Read Only           |
| TABLE_ssx_exporters | (Optional) SSX Exporters table |

## Command Mode

- /exec

## show ssx monitor

```
show ssx monitor { all | <monitorname> } [ __readonly__ [ TABLE_ssx_monitors <monitor-name>
<globally-applied><status><exportername><recordname> ] ]
```

### Syntax Description

|                    |                               |
|--------------------|-------------------------------|
| ssx                | Display SSX information       |
| monitor            | Show monitor details          |
| all                | All sessions                  |
| <i>monitorname</i> | SSX Monitor to display        |
| __readonly__       | (Optional) Read Only          |
| TABLE_ssx_monitors | (Optional) SSX monitors table |

### Command Mode

- /exec

# show ssx record

```
show ssx record { all | <recordname> } [ __readonly__ [ TABLE_ssx_records <record-name> [
TABLE_stats_type <stats-type> ] <interval> ] ]
```

## Syntax Description

|                                |   |
|--------------------------------|---|
| <code>ssx</code>               | Display SSX information                 |
| <code>record</code>            | Show record details                     |
| <code>all</code>               | All sessions                            |
| <i>recordname</i>              | SSX Record to display                   |
| <code>__readonly__</code>      | (Optional) Read Only                    |
| <code>TABLE_ssx_records</code> | (Optional) SSX records table            |
| <code>TABLE_stats_type</code>  | (Optional) SSX records stats type table |
| <i>interval</i>                | (Optional) SSX interval                 |

## Command Mode

- /exec

# show startup-config

show startup-config

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| startup-config | Current startup configuration   |

## Command Mode

- /exec

# show startup-config aaa

show startup-config aaa

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show startup-cfg                |
| startup-config | show startup system information |
| aaa            | Display aaa configuration       |

## Command Mode

- /exec

# show startup-config acllog

show startup-config acllog [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| startup-config | Displaying the startup configuration         |
| acllog         | show startup config for acllog               |
| all            | (Optional) show startup config with defaults |

## Command Mode

- /exec

# show startup-config aclmgr

show startup-config aclmgr [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| startup-config | Display the startup configuration            |
| aclmgr         | show startup config for aclmgr               |
| all            | (Optional) show startup config with defaults |

## Command Mode

- /exec

# show startup-config adjmgr

show startup-config adjmgr [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| adjmgr         | Display adjmgr information                           |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config arp

show startup-config arp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| arp            | Display arp information                              |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config assoc

show startup-config assoc [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| startup-config | Current saved configuration                  |
| assoc          | Original ID to Translated ID Association     |
| all            | (Optional) show startup config with defaults |

## Command Mode

- /exec

# show startup-config backup

show startup-config { backup | flexlink } [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information           |
| startup-config | System startup-config commands            |
| backup         | Show startup config for Switchport Backup |
| flexlink       | Show startup config for Switchport Backup |
| all            | (Optional) Show config with defaults      |

## Command Mode

- /exec

# show startup-config bfd

show startup-config bfd [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show system information                      |
| startup-config | Display the startup configuration            |
| bfd            | show startup config for bfd                  |
| all            | (Optional) show startup config with defaults |

## Command Mode

- /exec

# show startup-config bgp

show startup-config bgp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| bgp            | Display bgp information                              |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config bloggerd

show startup-config bloggerd [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | show startup-cfg                              |
| startup-config | show system startup configuration information |
| bloggerd       | Display bloggerd configuration                |
| all            | (Optional) show startup config with defaults  |

## Command Mode

- /exec

# show startup-config callhome

show startup-config callhome

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show startup-cfg                |
| startup-config | show startup system information |
| callhome       | Display callhome configuration  |

## Command Mode

- /exec

# show startup-config cdp

show startup-config cdp [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | show startup-cfg                              |
| startup-config | show system startup configuration information |
| cdp            | Display cdp configuration                     |
| all            | (Optional) show startup config with defaults  |

## Command Mode

- /exec

# show startup-config cert-enroll

show startup-config cert-enroll

## Syntax Description

|                |                                    |
|----------------|------------------------------------|
| show           | show startup-cfg                   |
| startup-config | show startup system information    |
| cert-enroll    | Display certificates configuration |

## Command Mode

- /exec

# show startup-config cfs

show startup-config cfs [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| startup-config | Current startup configuration                |
| cfs            | Display cfs configurations                   |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show startup-config config-profile

show startup-config config-profile [ <all\_conf\_profile\_name> ]

## Syntax Description

|                              |  |
|------------------------------|--|
| show                         | Show startup-config                      |
| startup-config               | Current startup configuration            |
| config-profile               | Display port-profile configuration       |
| <i>all_conf_profile_name</i> | (Optional) Enter the name of the profile |

## Command Mode

- /exec

# show startup-config copp

show startup-config copp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| startup-config | System startup-config commands               |
| copp           | Control-Plane Policing                       |
| all            | (Optional) show startup config with defaults |

## Command Mode

- /exec

# show startup-config dhcp

show startup-config dhcp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| startup-config | Current startup configuration                |
| dhcp           | Display dhcp snoop configurations            |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show startup-config diagnostic

show startup-config diagnostic [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| startup-config | Contents of startup configuration               |
| diagnostic     | Diagnostic configuration                        |
| all            | (Optional) Display running config with defaults |

## Command Mode

- /exec

# show startup-config dot1x

show startup-config dot1x

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show startup-cfg                |
| startup-config | show startup system information |
| dot1x          | Display dot1x configuration     |

## Command Mode

- /exec

# show startup-config ecp

show startup-config ecp [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| startup-config | Current startup configuration                   |
| ecp            | ECP (Edge Control Protocol)                     |
| all            | (Optional) Display startup config with defaults |

## Command Mode

- /exec

# show startup-config eem

show startup-config eem

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| startup-config | Show the system startup configuration        |
| eem            | Show the event manager startup configuration |

## Command Mode

- /exec

# show startup-config eigrp

show startup-config eigrp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| eigrp          | Display eigrp information                            |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config eltm

show startup-config eltm

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| startup-config | Current startup configuration   |
| eltm           | Display eltm configurations     |

## Command Mode

- /exec

# show startup-config epbr

show startup-config epbr

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show startup-cfg                |
| startup-config | show startup system information |
| epbr           | epbr                            |

## Command Mode

- /exec

# show startup-config evb

show startup-config evb [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| startup-config | Current startup configuration                   |
| evb            | EVB (Edge Virtual Bridge)                       |
| all            | (Optional) Display startup config with defaults |

## Command Mode

- /exec

# show startup-config exclude

show startup-config exclude <feature-list> +

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                     |
| startup-config      | Current startup configuration                       |
| exclude             | Exclude startup configuration of specified features |
| <i>feature-list</i> | Exclude features                                    |

## Command Mode

- /exec

# show startup-config expand-port-profile

show startup-config expand-port-profile

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| startup-config      | System startup-config commands  |
| expand-port-profile | Expand port profile             |

## Command Mode

- /exec

# show startup-config fabric forwarding

show startup-config fabric forwarding [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                         |
| startup-config | Current startup configuration                           |
| fabric         | Fabric  |
| forwarding     | Fabric Forwarding Protocol: Host Mobility Manager (HMM) |
| all            | (Optional) Display running config with defaults clis    |

## Command Mode

- /exec

# show startup-config fabric multicast

show startup-config fabric multicast [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| fabric         | Fabric   |
| multicast      | Multicast information                                |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config fabricpath

show startup-config fabricpath

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| startup-config | System startup-config commands  |
| fabricpath     | fabricpath information          |

## Command Mode

- /exec

# show startup-config fabricpath domain default

show startup-config fabricpath domain default [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| fabricpath     | fabricpath information                               |
| domain         | Enter fabricpath IS-IS domain configuration mode     |
| default        | default fabricpath domain                            |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config fabricpath switch-id

show startup-config fabricpath switch-id

## Syntax Description

|                |                                    |
|----------------|------------------------------------|
| startup-config | Current startup configuration      |
| fabricpath     | fabricpath information             |
| switch-id      | fabricpath switch-id configuration |

## Command Mode

- /exec

# show startup-config fabricpath topology

show startup-config fabricpath topology [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| fabricpath     | fabricpath Module Information                        |
| topology       | Fabricpath topology Information                      |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config fcoe\_mgr

show startup-config fcoe\_mgr

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show startup-cfg                |
| startup-config | show startup system information |
| fcoe_mgr       | Display fcoe_mgr configuration  |

## Command Mode

- /exec

# show startup-config fsync\_mgr

show startup-config fsync\_mgr [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| startup-config | System startup-config commands               |
| fsync_mgr      | Frequency Synchronization Manager            |
| all            | (Optional) show startup config with defaults |

## Command Mode

- /exec

# show startup-config glbp

show startup-config glbp

## Syntax Description

|                |                              |
|----------------|------------------------------|
| show           | Show system information      |
| startup-config | System startup configuration |
| glbp           | GLBP startup configuration   |

## Command Mode

- /exec

# show startup-config hardware-telemetry

show startup-config hardware-telemetry [ all ]

## Syntax Description

|                    |  |
|--------------------|--|
| show               | Show system information                      |
| startup-config     | Current startup configuration                |
| hardware-telemetry | show startup config for hardware-telemetry   |
| all                | (Optional) show running config with defaults |

## Command Mode

- /exec

# show startup-config hsrp

show startup-config hsrp

## Syntax Description

|                |                              |
|----------------|------------------------------|
| show           | Show system information      |
| startup-config | System startup configuration |
| hsrp           | HSRP startup configuration   |

## Command Mode

- /exec

# show startup-config icam

show startup-config icam

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show startup-cfg                |
| startup-config | show startup system information |
| icam           | icam services                   |

## Command Mode

- /exec

# show startup-config icmpv6

show startup-config icmpv6 [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| icmpv6         | Display icmpv6 information                           |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config igmp

show startup-config igmp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| igmp           | Display igmp information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config imp

show startup-config imp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                    |
| startup-config | Current startup configuration                      |
| imp            | Display imp information                            |
| all            | (Optional) Display start config with defaults clis |

## Command Mode

- /exec

# show startup-config interface

show startup-config interface [ <if0> ] [ expand-port-profile ]

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                            |
| startup-config      | Current startup configuration                              |
| interface           | Interface configuration                                    |
| <i>if0</i>          | (Optional) interface type and number in module/slot format |
| expand-port-profile | (Optional) Expand port profile                             |

## Command Mode

- /exec

# show startup-config interface

show startup-config interface <if0> [ membership ] [ expand-port-profile ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                 |
| startup-config      | Current startup configuration                   |
| interface           | Interface configuration                         |
| <i>if0</i>          | interface type and number in module/slot format |
| membership          | (Optional) Show membership information          |
| expand-port-profile | (Optional) Expand port profile                  |

## Command Mode

- /exec

# show startup-config ip

show startup-config ip [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| ip             | Display ip information                               |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config ipqos

show startup-config ipqos [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| startup-config | Display the startup configuration            |
| all            | (Optional) show startup config with defaults |

## Command Mode

- /exec

# show startup-config ipv6

show startup-config ipv6 [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| ipv6           | Display ipv6 information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config isis

show startup-config isis [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| isis           | Display isis information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config l3vm

show startup-config l3vm [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| startup-config | Current startup configuration                   |
| l3vm           | Display l3vm information                        |
| all            | (Optional) Display running config with defaults |

## Command Mode

- /exec

# show startup-config ldap

show startup-config ldap

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show startup-cfg                |
| startup-config | show startup system information |
| ldap           | Display ldap configuration      |

## Command Mode

- /exec

# show startup-config license

show startup-config license [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show startup-cfg                             |
| startup-config | show startup system information              |
| license        | Display licensing configuration              |
| all            | (Optional) show startup config with defaults |

## Command Mode

- /exec

# show startup-config lisp

show startup-config lisp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| lisp           | Display lisp information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config lldp

show startup-config lldp [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | show startup-cfg                              |
| startup-config | show system startup configuration information |
| lldp           | Display lldp configuration                    |
| all            | (Optional) show startup config with defaults  |

## Command Mode

- /exec

# show startup-config log

```
show startup-config { log | mdp-log } [ bootstrap ]
```

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                                     |
| startup-config | Current startup configuration                                       |
| mdp-log        | Displays execution log of last used mdp ascii startup configuration |
| log            | Displays execution log of last used ascii startup configuration     |
| bootstrap      | (Optional) Bootstrap config replay execution log                    |

## Command Mode

- /exec

# show startup-config macsec

show startup-config macsec

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| startup-config | show startup system information |
| macsec         | Show CTS information            |

## Command Mode

- /exec

# show startup-config mfwd

```
show startup-config { mfwd | mcastfwd } [ all ]
```

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| mcastfwd       | Display MCASTFWD information                         |
| mfwd           | Display MFWD information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config mfwdv6

show startup-config { mfwdv6 | mcastfwdv6 } [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| mcastfwdv6     | Display IPV6 MCASTFWD information                    |
| mfwdv6         | Display IPV6 MFWD information                        |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config mld

show startup-config mld [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| mld            | Display MLD information                              |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config mmode

show startup-config mmode [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                |
| startup-config | Show startup configuration                     |
| mmode          | Display maintenance mode startup configuration |
| all            | (Optional) Show startup config with defaults   |

## Command Mode

- /exec

# show startup-config monitor

show startup-config monitor

## Syntax Description

|                |                                  |
|----------------|----------------------------------|
| show           | Show running system information  |
| startup-config | Current startup configuration    |
| monitor        | Configure Ethernet SPAN sessions |

## Command Mode

- /exec

# show startup-config mpls static

show startup-config mpls static [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| startup-config | Current operating configuration                 |
| mpls           | Display MPLS status and configuration           |
| static         | Static Label Bindings                           |
| all            | (Optional) Display running-config with defaults |

## Command Mode

- /exec

# show startup-config mpls strip

show startup-config mpls strip [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                                 |
| mpls           | MPLS information  |
| strip          | Stripping of MPLS headers                                       |
| startup-config | System startup configuration                                    |
| all            | (Optional) Show startup configuration for STRIPCL with defaults |

## Command Mode

- /exec

# show startup-config msdp

show startup-config msdp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| msdp           | Display msdp information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config nat

show startup-config nat [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show system information                      |
| startup-config | Display the startup configuration            |
| nat            | show startup config for nat                  |
| all            | (Optional) show startup config with defaults |

## Command Mode

- /exec

# show startup-config nbm

show startup-config nbm

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| startup-config | Current startup configuration   |
| nbm            | Non Blocking Multicast          |

## Command Mode

- /exec

# show startup-config ngoam

show startup-config ngoam

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| startup-config | Show startup system information |
| ngoam          | ngoam configuration             |

## Command Mode

- /exec

# show startup-config ntp

show startup-config ntp [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show information                              |
| startup-config | Show startup system configuration             |
| ntp            | Show NTP information                          |
| all            | (Optional) Show all NTP startup configuration |

## Command Mode

- /exec

# show startup-config nv overlay

show startup-config nv overlay [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show system information                  |
| startup-config | System startup configuration             |
| nv             | NVE startup configuration                |
| overlay        | NVE startup configuration                |
| all            | (Optional) Show NVE config with defaults |

## Command Mode

- /exec

# show startup-config nxsdk

show startup-config nxsdk [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| startup-config | Display the startup configuration               |
| nxsdk          | NXOS SDK  |
| all            | (Optional) Display running config with defaults |

## Command Mode

- /exec

# show startup-config ofm

show startup-config ofm [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show system information                           |
| startup-config | System startup configuration                      |
| ofm            | Overlay Flow/Policy Manager startup configuration |
| all            | (Optional) Show config with defaults              |

## Command Mode

- /exec

# show startup-config openflow

show startup-config openflow [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| startup-config | Current startup configuration                |
| openflow       | Show startup config for OpenFlow             |
| all            | (Optional) Show startup config with defaults |

## Command Mode

- /exec

# show startup-config ospf

show startup-config ospf [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| ospf           | Display ospf information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config ospfv3

show startup-config ospfv3 [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| ospfv3         | Display ospfv3 information                           |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config otv-isis

show startup-config otv-isis [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| otv-isis       | Display otv-isis information                         |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config param-list

show startup-config param-list [ <plistname> ]

## Syntax Description

|                  |   |
|------------------|---|
| show             | Show startup-cfg                            |
| startup-config   | show startup configuration                  |
| param-list       | Display param-list configuration            |
| <i>plistname</i> | (Optional) Enter the name of the param list |

## Command Mode

- /exec

# show startup-config pim

show startup-config pim [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| pim            | Display pim information                              |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config pim6

show startup-config pim6 [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| pim6           | Display pim6 information                             |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config poe

show startup-config poe [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| startup-config | Current saved configuration                  |
| poe            | Power over Ethernet                          |
| all            | (Optional) show startup config with defaults |

## Command Mode

- /exec

# show startup-config port-profile

show startup-config port-profile [ <all\_profile\_name> ]

## Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show startup-config                      |
| startup-config          | Current startup configuration            |
| port-profile            | Display port-profile configuration       |
| <i>all_profile_name</i> | (Optional) Enter the name of the profile |

## Command Mode

- /exec

# show startup-config port-security

show startup-config port-security [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show startup-cfg                             |
| startup-config | show startup system information              |
| port-security  | Display port-security configuration          |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show startup-config ptp

show startup-config ptp [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | show system information                                     |
| startup-config | show startup system information                             |
| ptp            | Show startup configuration for ptp                          |
| all            | (Optional) Show startup configuration for PTP with defaults |

## Command Mode

- /exec

# show startup-config radius

show startup-config radius

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show startup-cfg                |
| startup-config | show startup system information |
| radius         | Display radius configuration    |

## Command Mode

- /exec

# show startup-config rip

show startup-config rip [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| rip            | Display rip information                              |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config routing ip multicast

```
show startup-config routing { ip | ipv4 } multicast [ all ]
```

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| routing        | Display routing information                          |
| ip             | Display IP information                               |
| ipv4           | Display IP information                               |
| multicast      | Display multicast information                        |
| all            | (Optional) Display startup config with defaults clis |

## Command Mode

- /exec

# show startup-config routing ipv6 multicast

show startup-config routing ipv6 multicast [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| routing        | Display routing information                          |
| ipv6           | Display IPv6 information                             |
| multicast      | Display multicast information                        |
| all            | (Optional) Display startup config with defaults clis |

## Command Mode

- /exec

# show startup-config rpm

show startup-config rpm [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| startup-config | Current startup configuration                   |
| rpm            | Display Route Policy Manager (RPM) information  |
| all            | (Optional) Display startup config with defaults |

## Command Mode

- /exec

# show startup-config scheduler

show startup-config scheduler [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | show startup-cfg                              |
| startup-config | show system startup configuration information |
| scheduler      | Show scheduler config or data                 |
| all            | (Optional) show startup config with defaults  |

## Command Mode

- /exec

# show startup-config security

show startup-config security

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show startup-cfg                |
| startup-config | show startup system information |
| security       | Display security configuration  |

## Command Mode

- /exec

# show startup-config segment-routing

show startup-config segment-routing [ all ]

## Syntax Description

|                 |   |
|-----------------|---|
| show            | Show running system information               |
| startup-config  | Show startup configuration                    |
| segment-routing | Display segment-routing startup configuration |
| all             | (Optional) Show startup config with defaults  |

## Command Mode

- /exec

# show startup-config services

show startup-config services

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show startup-cfg                |
| startup-config | show startup system information |
| services       | services                        |

## Command Mode

- /exec

# show startup-config sflow

show startup-config { sflow } [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show system information                      |
| startup-config | Current startup configuration                |
| sflow          | show startup config for sflow                |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show startup-config sla responder

show startup-config sla responder

## Syntax Description

|                |                                      |
|----------------|--------------------------------------|
| show           | show startup-cfg                     |
| startup-config | show startup system information      |
| sla            | Service Level Agreement (SLA)        |
| responder      | Show information about sla-responder |

## Command Mode

- /exec

# show startup-config sla sender

show startup-config sla sender

## Syntax Description

|                |                                   |
|----------------|-----------------------------------|
| show           | show startup-cfg                  |
| startup-config | show startup system information   |
| sla            | Service Level Agreement (SLA)     |
| sender         | Show information about sla-sender |

## Command Mode

- /exec

# show startup-config sla twamp-server

show startup-config sla twamp-server

## Syntax Description

|                |                                     |
|----------------|-------------------------------------|
| show           | show startup-cfg                    |
| startup-config | show startup system information     |
| sla            | Service Level Agreement (SLA)       |
| twamp-server   | Show information about twamp-server |

## Command Mode

- /exec

# show startup-config snmp

show startup-config snmp [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show startup-cfg                             |
| startup-config | show startup system information              |
| snmp           | Display snmp configuration                   |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show startup-config srte

show startup-config srte

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| startup-config | Current operating configuration |
| srte           | SRTE                            |

## Command Mode

- /exec

# show startup-config switch

show startup-config { switch-profile | include-switch-profile }

## Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information               |
| startup-config         | System startup configuration                  |
| switch-profile         | Show switch-profile information               |
| include-switch-profile | Show startup and switch-profile configuration |

## Command Mode

- /exec

# show startup-config sync

show startup-config sync [ all ]

## Syntax Description

|                |  |
|----------------|--|
| startup-config | Current startup configuration                |
| sync           | show startup config for sync                 |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show startup-config tacacs

show startup-config tacacs +

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show startup-cfg                |
| startup-config | show startup system information |

## Command Mode

- /exec

# show startup-config telemetry

show startup-config telemetry [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | show startup system configuration            |
| startup-config | show startup system information              |
| telemetry      | Display telemetry configuration              |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show startup-config track

show startup-config track

## Syntax Description

|                |                                       |
|----------------|---------------------------------------|
| show           | Show running system information       |
| startup-config | Show the system startup configuration |
| track          | Show the track startup configuration  |

## Command Mode

- /exec

# show startup-config tunnel-encryption

show startup-config tunnel-encryption

## Syntax Description

|                   |  |
|-------------------|--|
| show              | Show running system information                  |
| startup-config    | show startup system information                  |
| tunnel-encryption | Show information about Tunnel Encryption Manager |

## Command Mode

- /exec

# show startup-config udd

show startup-config udd

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| startup-config | Current startup configuration   |
| udd            | Show udd configuration          |

## Command Mode

- /exec

# show startup-config vdc-all

show startup-config vdc-all

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| startup-config | Current startup configuration   |
| vdc-all        | Display config from all VDC     |

## Command Mode

- /exec

# show startup-config vdc

show startup-config vdc [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information              |
| startup-config | Current saved configuration                  |
| vdc            | Show Virtual Device Contexts                 |
| all            | (Optional) show startup config with defaults |

## Command Mode

- /exec

# show startup-config virtual-service

show startup-config virtual-service

## Syntax Description

|                 |   |
|-----------------|---|
| show            | Show running system information                 |
| startup-config  | System startup-config commands                  |
| virtual-service | Show startup config for virtualization services |

## Command Mode

- /exec

# show startup-config vlan

show startup-config vlan

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| startup-config | System startup-config commands  |
| vlan           | Vlan commands                   |

## Command Mode

- /exec

# show startup-config vlan

show startup-config vlan <vlan-id>

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                 |
| startup-config | System startup-config commands                  |
| vlan           | Vlan commands                                   |
| <i>vlan-id</i> | VLAN ID 1-4094 or range(s): 1-5, 10 or 2-5,7-19 |

## Command Mode

- /exec

# show startup-config vmtracker

show startup-config vmtracker [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show system information                        |
| startup-config | System startup configuration                   |
| vmtracker      | Show VMTracker configuration                   |
| all            | (Optional) Show VMTracker config with defaults |

## Command Mode

- /exec

# show startup-config vpc

show startup-config vpc [ all ]

## Syntax Description

|                |  |
|----------------|--|
| startup-config | Current startup configuration                |
| vpc            | show startup config for vPC                  |
| all            | (Optional) show running config with defaults |

## Command Mode

- /exec

# show startup-config vrf

show startup-config vrf <vrf-cfg-name> [ all ]

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                      |
| startup-config      | Current startup configuration                        |
| vrf                 | Display VRF information                              |
| <i>vrf-cfg-name</i> | Configurable VRF name                                |
| all                 | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config vrf default

show startup-config vrf default [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                      |
| startup-config | Current startup configuration                        |
| vrf            | Display VRF information                              |
| default        | Known VRF name                                       |
| all            | (Optional) Display running config with defaults clis |

## Command Mode

- /exec

# show startup-config vrrpv3

show startup-config vrrpv3 [ all ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show system information                                |
| startup-config | System startup configuration                           |
| vrrpv3         | VRRPv3 startup configuration                           |
| all            | (Optional) show startup config of VRRPv3 with defaults |

## Command Mode

- /exec

# show startup-config vshd

show startup-config vshd

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show startup system information |
| startup-config | Current startup configuration   |
| vshd           | Show startup config for vshd    |

## Command Mode

- /exec

# show startup-config vtp

show startup-config vtp [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                             |
| startup-config | System startup-config commands                              |
| vtp            | Show startup configuration for VTP                          |
| all            | (Optional) Show startup configuration for VTP with defaults |

## Command Mode

- /exec

# show startup-config wwnm

show startup-config wwnm

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information           |
| startup-config | Current startup configuration             |
| wwnm           | Display WWN Manager startup configuration |

## Command Mode

- /exec

# show startup-config zone

show startup-config zone

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information           |
| startup-config | Current startup configuration             |
| zone           | Display zone server startup configuration |

## Command Mode

- /exec

# show startup-config zone vsan

show startup-config zone vsan <vsan-id>

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                    |
| startup-config | Current startup configuration                      |
| zone           | Display zone server startup configuration per vsan |
| vsan           | Vsan commands                                      |
| <i>vsan-id</i> | Vsan id  |

## Command Mode

- /exec

# show summary

```
show { ip mbgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] | ip bgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] all | ip bgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] [ ipv4 [ { unicast | multicast } ] ] } summary [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                 |
| ip                    | Display IP information  |
| bgp                   | Display BGP status and configuration                            |
| mbgp                  | Display MBGP status and configuration                           |
| vrf                   | (Optional) Virtual Router Context                               |
| <i>vrf-name</i>       | (Optional) VRF name   |
| <i>vrf-known-name</i> | (Optional) Known VRF name                                       |
| summary               | Display summarized information of BGP state                     |
| ipv4                  | (Optional) Display BGP information for IPv4 address family      |
| unicast               | (Optional) Display BGP information for unicast address family   |
| multicast             | (Optional) Display BGP information for multicast address family |
| all                   | Display BGP information for all address families                |

## Command Mode

- /exec

# show switch-profile

```
show switch-profile [ __readonly__ <profile_name> <cfg_rev> ]
```

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| switch-profile      | Show switch-profiles            |
| <i>__readonly__</i> | (Optional)                      |
| <i>profile_name</i> | (Optional)                      |
| <i>cfg_rev</i>      | (Optional)                      |

## Command Mode

- /exec

# show switch-profile

```
show switch-profile [ <profile-name> ] { session-history | status commit } [ __readonly__ <prof-name>
TABLE_session <session_index> <start_usec> <start_time> <end_usec> <end_time> <revision_number>
<session_type> <session_subtype> <peer_triggered> [ <profile_status> ] [ <local_status> ] [ <local_error>
] [ <peer_address> ] [ <peer_sync_status> ] [ <merge_flags> ] [ <remote_status> ] [ <remote_error> ] ]
```

## Syntax Description

|                         |                                   |
|-------------------------|-----------------------------------|
| show                    | Show running system information   |

**Command Mode**

- /exec

# show switch-profile buffer

```
show switch-profile [ <profile-name> ] buffer [ __readonly__ <prof-name> [ TABLE_commands <seq_no>
[ <cmd> ] + ] ]
```

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| switch-profile      | Show switch-profile             |
| buffer              | buffered commands               |
| <i>profile-name</i> | (Optional) switch-profile name  |
| <i>__readonly__</i> | (Optional)                      |
| <i>prof-name</i>    | (Optional)                      |
| TABLE_commands      | (Optional)                      |
| <i>seq_no</i>       | (Optional)                      |
| <i>cmd</i>          | (Optional)                      |

## Command Mode

- /exec

## show switch-profile peer

```
show switch-profile [ <profile-name> ] peer [ <dest-ip> ] [ details ] [ __readonly__ <prof-name> [ <rev> ] [ <peer_address> ] [ <peer_sync_status> ] [ <merge_flags> ] [ <remote_status> ] [ <remote_error> ] [ <cmd> ] + ]
```

### Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information                  |
| switch-profile          | Show switch-profile                              |
| <i>profile-name</i>     | (Optional) switch-profile name                   |
| peer                    | peer info  |
| <i>dest-ip</i>          | (Optional) IPv4 address (A.B.C.D) of destination |
| details                 | (Optional) information in detail                 |
| <i>__readonly__</i>     | (Optional)                                       |
| <i>prof-name</i>        | (Optional)                                       |
| <i>rev</i>              | (Optional)                                       |
| <i>peer_address</i>     | (Optional)                                       |
| <i>peer_sync_status</i> | (Optional)                                       |
| <i>merge_flags</i>      | (Optional)                                       |
| <i>remote_status</i>    | (Optional)                                       |
| <i>remote_error</i>     | (Optional)                                       |
| <i>cmd</i>              | (Optional)                                       |

### Command Mode

- /exec

## show switch-profile status

```
show switch-profile [ <profile-name> ] status [ __readonly__ <prof-name> <start_usec> <start_time>
<end_usec> <end_time> <revision_number> <session_type> [ <session_subtype> ] <peer_triggered>
<profile_status> <local_status> <local_error> [ <peer_address> ] [ <peer_sync_status> ] [ <merge_flags> ]
[ <remote_status> ] [ <remote_error> ] ]
```

### Syntax Description

|                         |                                 |
|-------------------------|---------------------------------|
| show                    | Show running system information |
| switch-profile          | Show switch-profile             |
| status                  | Switch-profile sync status      |
| <i>profile-name</i>     | (Optional) switch-profile name  |
| <i>__readonly__</i>     | (Optional)                      |
| <i>prof-name</i>        | (Optional)                      |
| <i>start_usec</i>       | (Optional)                      |
| <i>start_time</i>       | (Optional)                      |
| <i>end_usec</i>         | (Optional)                      |
| <i>end_time</i>         | (Optional)                      |
| <i>revision_number</i>  | (Optional)                      |
| <i>session_type</i>     | (Optional)                      |
| <i>session_subtype</i>  | (Optional)                      |
| <i>peer_triggered</i>   | (Optional)                      |
| <i>profile_status</i>   | (Optional)                      |
| <i>local_status</i>     | (Optional)                      |
| <i>local_error</i>      | (Optional)                      |
| <i>peer_address</i>     | (Optional)                      |
| <i>peer_sync_status</i> | (Optional)                      |
| <i>merge_flags</i>      | (Optional)                      |
| <i>remote_status</i>    | (Optional)                      |
| <i>remote_error</i>     | (Optional)                      |

### Command Mode

- /exec

# show switching-mode

```
show switching-mode [ __readonly__ { <switching-mode> } { TABLE_swtpmoduinfo <moduleno> <opmode> } ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                 |
| switching-mode        | Show the operating switching mode               |
| __readonly__          | (Optional)                                      |
| <i>switching-mode</i> | (Optional) switching mode description           |
| TABLE_swtpmoduinfo    | (Optional) the xml switching module information |
| <i>moduleno</i>       | (Optional) Module Number                        |
| <i>opmode</i>         | (Optional) Operation Mode                       |

## Command Mode

- /exec

# show switching-mode fabric-speed

```
show switching-mode fabric-speed [ __readonly__ TABLE_switching_mode_fabric_speed <fabric-speed-desc> ]
```

## Syntax Description

|                                   |  |
|-----------------------------------|--|
| show                              | Show running system information                              |
| switching-mode                    | Show the operating switching mode                            |
| fabric-speed                      | Show the fabric speed  |
| __readonly__                      | (Optional)   |
| TABLE_switching_mode_fabric_speed | (Optional) the xml switching_mode_fabric_speed configuration |
| <i>fabric-speed-desc</i>          | (Optional) fabric speed description                          |

## Command Mode

- /exec

# show system acl

```
show system acl [ __readonly__ TABLE_system_acl <protocol> [ TABLE_type <type> <acl_name> <inout> ] ]
```

## Syntax Description

|                  |                                 |
|------------------|---------------------------------|
| show             | Show running system information |
| system           | System management commands      |
| acl              | ACL parameters                  |
| __readonly__     | (Optional)                      |
| TABLE_system_acl | (Optional)                      |
| <i>protocol</i>  | (Optional) protocol             |
| TABLE_type       | (Optional)                      |
| <i>type</i>      | (Optional) type                 |
| <i>acl_name</i>  | (Optional)                      |
| <i>inout</i>     | (Optional) Traffic direction    |

## Command Mode

- /exec

# show system auto-collect tech-support

show system auto-collect tech-support [ *\_\_readonly\_\_* <result> ]

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                                  |
| system              | System management commands                                       |
| auto-collect        | Auto collection of information                                   |
| tech-support        | Collect tech-support in case of service causing supervisor reset |
| <i>__readonly__</i> | (Optional)   |
| <i>result</i>       | (Optional) show tech collection enable status                    |

## Command Mode

- /exec

# show system boottime

```
show system boottime [ __readonly__ { TABLE_uptimeinf <slot> <starttime> <daysup> <hoursup>
<minutesup> <secondsup> } ]
```

## Syntax Description

|                 |  |
|-----------------|--|
| show            | Show running system information        |
| system          | System-related show commands           |
| boottime        | Show platform boot time of each module |
| __readonly__    | (Optional)                             |
| TABLE_uptimeinf | (Optional) Show uptime info            |
| slot            | (Optional) Slot                        |
| starttime       | (Optional) Start Time                  |
| daysup          | (Optional) Days Up                     |
| hoursup         | (Optional) Hours Up                    |
| minutesup       | (Optional) Minutes Up                  |
| secondsup       | (Optional) Seconds Up                  |

## Command Mode

- /exec

# show system config reload-pending

```
show system config reload-pending [ __readonly__ { TABLE_reload_pending <cmds_list> } ]
```

## Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information         |
| system               | System-related show commands            |
| config               | Config commands which require reload    |
| reload-pending       | Commands which require a reload         |
| __readonly__         | (Optional)                              |
| TABLE_reload_pending | (Optional) reload pending commands list |
| cmds_list            | (Optional) cmds_list                    |

## Command Mode

- /exec

# show system cores

show system cores [ \_\_readonly\_\_ { <content> } ]

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| system         | System-related show commands    |
| cores          | Displays core transfer option   |
| __readonly__   | (Optional)                      |
| <i>content</i> | (Optional) Core transfer option |

## Command Mode

- /exec

# show system default switchport

```
show system default switchport [ __readonly__ <sys_def_port_state> <sys_def_trunk_mode>
<sys_def_link_fail_syslog_level> <sys_def_tx_credit_queue_type> ]
```

## Syntax Description

|                                       |   |
|---------------------------------------|---|
| show                                  | Show running system information                             |
| <i>__readonly__</i>                   | (Optional) read only  |
| <i>sys_def_port_state</i>             | (Optional) System default port state                        |
| <i>sys_def_trunk_mode</i>             | (Optional) System default trunk mode                        |
| <i>sys_def_link_fail_syslog_level</i> | (Optional) System default link failure syslog logging level |
| <i>sys_def_tx_credit_queue_type</i>   | (Optional) System default tx credit queue type              |
| system                                | System-related show commands                                |
| default                               | Show system default values                                  |
| switchport                            | Show default values for switchport attributes               |

## Command Mode

- /exec

# show system default zone

show system default zone

## Syntax Description

|         |                                 |
|---------|---------------------------------|
| show    | Show running system information |
| system  | System-related show commands    |
| default | Show system default values      |
| zone    | Show default values for zone    |

## Command Mode

- /exec

# show system error-id

```
show system error-id { list | <i0> } [ __readonly__ <errorid> <facility> <desc> ]
```

## Syntax Description

|                     |                                       |
|---------------------|---------------------------------------|
| show                | Show running system information       |
| system              | System-related show commands          |
| error-id            | Show description about errors         |
| list                | Show description about all error IDs  |
| <i>i0</i>           | Show description about specific error |
| <i>__readonly__</i> | (Optional)                            |
| <i>errorid</i>      | (Optional)                            |
| <i>facility</i>     | (Optional)                            |
| <i>desc</i>         | (Optional)                            |

## Command Mode

- /exec

## show system exception-info

```
show system exception-info [ __readonly__ { TABLE_exception { <second> <panic_data> <register_data>
<stack_pointer> <stack_depth> <stack_timestamp> <stacl_magic> <hdr_length> <stack_data> <pre_usec>
<pre_sec> <int_t> <reason> <service> <version> } } ]
```

### Syntax Description

|                        |                                     |
|------------------------|-------------------------------------|
| show                   | Show running system information     |
| system                 | System-related show commands        |
| exception-info         | Show last exception log information |
| __readonly__           | (Optional)                          |
| TABLE_exception        | (Optional)                          |
| <i>second</i>          | (Optional) Time of exception        |
| <i>panic_data</i>      | (Optional) Panic information dump   |
| <i>register_data</i>   | (Optional) CPU register dump        |
| <i>stack_pointer</i>   | (Optional) Current Stack-pointer    |
| <i>stack_depth</i>     | (Optional) Current Stack-depth      |
| <i>stack_timestamp</i> | (Optional) Stack dump timestamp     |
| <i>stacl_magic</i>     | (Optional) Stack Magic              |
| <i>hdr_length</i>      | (Optional) Hdr length               |
| <i>stack_data</i>      | (Optional) Stack Dump               |
| <i>pre_usec</i>        | (Optional)                          |
| <i>pre_sec</i>         | (Optional)                          |
| <i>int_t</i>           | (Optional)                          |
| <i>reason</i>          | (Optional) Reason                   |
| <i>service</i>         | (Optional) Service                  |
| <i>version</i>         | (Optional) Version                  |

### Command Mode

- /exec

# show system fabric-mode

show system fabric-mode [ \_\_readonly\_\_ TABLE\_system\_fabric\_mode <system-fabric-mode-desc> ]

## Syntax Description

|                                |   |
|--------------------------------|---|
| show                           | Show running system information                     |
| system                         | Show system information                             |
| fabric-mode                    | Show the fabric operation mode information          |
| __readonly__                   | (Optional)  |
| TABLE_system_fabric_mode       | (Optional) the xml system_fabric_mode configuration |
| <i>system-fabric-mode-desc</i> | (Optional) system fabric mode description           |

## Command Mode

- /exec

# show system fast-reload stabilization-timer

show system fast-reload stabilization-timer [ *\_\_readonly\_\_* { *<timer\_val>* } ]

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information  |
| system              | System management commands   |
| fast-reload         | fast-reload software   |
| stabilization-timer | Network stabilization time in seconds before fast-reload can be executed after the previous reload |
| <i>__readonly__</i> | (Optional) Read Only   |
| <i>timer_val</i>    | (Optional) XML attribute for timer value   |

## Command Mode

- /exec

# show system image-verification

```
show system image-verification [ __readonly__ { [ TABLE_system_image_verification <Str1> ] } ]
```

## Syntax Description

|                                 |   |
|---------------------------------|---|
| show                            | Show running system information         |
| system                          | Show system information                 |
| image-verification              | image signature verification status     |
| __readonly__                    | (Optional)                              |
| TABLE_system_image_verification | (Optional) table for image verification |
| <i>Str1</i>                     | (Optional) status of image verification |

## Command Mode

- /exec

# show system inband cpu-mac log threshold

```
show system inband cpu-mac log threshold [ __readonly__ { <rx_threshold> } { <tx_threshold> } { <throttle> } ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information           |
| system              | System-related show commands              |
| inband              | Show Inband related information           |
| cpu-mac             | Show CPU-MACs related information         |
| log                 | Show log information                      |
| threshold           | Show inband threshold                     |
| <i>__readonly__</i> | (Optional)                                |
| <i>rx_threshold</i> | (Optional) Registered RX PPS Threshold    |
| <i>tx_threshold</i> | (Optional) Registered TX PPS Threshold    |
| <i>throttle</i>     | (Optional) Registered Throttle in seconds |

## Command Mode

- /exec

## show system inband queuing statistics

```
show system inband queuing statistics [ __readonly__ { TABLE_sys_inband_queue_stats <inbandpktunmap>
<inbandpktbpdqueue> <inbandpktmapq0> <inbandpktmapq1> <klmpktmapbpdu> <klmpktmaparp>
<klmpktmapq0> <klmpktmapq1> <klmpktmapveobc> <queuename> [ TABLE_bpdu_stats { <pmrcvpkts>
<pmdroppkts> <pmcongested> <rcvbuf> <sndbuf> <pmnodrop> } ] [ TABLE_q_stats { <indexstat>
<ipmrcvpkts> <ipmdroppkts> <ipmcongested> <ircvbuf> <isndbuf> <ipmnodrop> } ] ] ]
```

### Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information           |
| system                       | System-related show commands              |
| inband                       | Inband Commands                           |
| queuing                      | Inband Queuing commands                   |
| statistics                   | Inband statistics                         |
| <i>__readonly__</i>          | (Optional)                                |
| TABLE_sys_inband_queue_stats | (Optional) System Inband Statistics       |
| <i>inbandpktunmap</i>        | (Optional) Inband packets unmapped        |
| <i>inbandpktbpdqueue</i>     | (Optional) Inband packets mapped to bpdu  |
| <i>inbandpktmapq0</i>        | (Optional) Inband packets mapped to q0    |
| <i>inbandpktmapq1</i>        | (Optional) Inband packets mapped to q1    |
| <i>klmpktmapbpdu</i>         | (Optional) In KLM packets mapped to bpdu  |
| <i>klmpktmaparp</i>          | (Optional) In KLM packets mapped to arp   |
| <i>klmpktmapq0</i>           | (Optional) In KLM packets mapped to q0    |
| <i>klmpktmapq1</i>           | (Optional) In KLM packets mapped to q1    |
| <i>klmpktmapveobc</i>        | (Optional) In KLM packets mapped to veobc |
| <i>queuename</i>             | (Optional) Inband queue name              |
| TABLE_bpdu_stats             | (Optional) BPDU Statistics                |
| <i>pmrcvpkts</i>             | (Optional) BPDU Receive Packets           |
| <i>pmdroppkts</i>            | (Optional) BPDU Drop Packets              |
| <i>pmcongested</i>           | (Optional) BPDU Congested                 |
| <i>rcvbuf</i>                | (Optional) BPDU Receive Buffer            |
| <i>sndbuf</i>                | (Optional) BPDU Send Buffer               |

|                      |                                  |
|----------------------|----------------------------------|
| <i>pmnoproduct</i>   | (Optional) BPDU No drop          |
| TABLE_q_stats        | (Optional) Queue Statistics      |
| <i>indexstat</i>     | (Optional) Queue Index           |
| <i>ipmrecvpkts</i>   | (Optional) Queue receive packets |
| <i>ipmdroppkts</i>   | (Optional) Queue drop packets    |
| <i>ipmcongested</i>  | (Optional) Queue Congested       |
| <i>ircvbuf</i>       | (Optional) Queue receive buffer  |
| <i>isndbuf</i>       | (Optional) Queue send buffer     |
| <i>ipmnooproduct</i> | (Optional) Queue no drop         |

**Command Mode**

- /exec

## show system inband queuing status

```
show system inband queuing status [ __readonly__ [ { TABLE_sys_inband_queue_status <pminbandalgo>
<pminbandweigh0> <pminbandweigh1> <pminbandweigh2> } ] ]
```

### Syntax Description

|                                      |                                      |
|--------------------------------------|--------------------------------------|
| show                                 | Show running system information      |
| system                               | System-related show commands         |
| inband                               | Inband Commands                      |
| queuing                              | Inband Queuing commands              |
| status                               | Selective Packet Discard Information |
| <i>__readonly__</i>                  | (Optional)                           |
| <i>TABLE_sys_inband_queue_status</i> | (Optional) System Inband Status      |
| <i>pminbandalgo</i>                  | (Optional) Queuing Algorithm         |
| <i>pminbandweigh0</i>                | (Optional) BPDU Weight               |
| <i>pminbandweigh1</i>                | (Optional) Q0 Weight                 |
| <i>pminbandweigh2</i>                | (Optional) Q1 Weight                 |

### Command Mode

- /exec

# show system login

```
show system login [ __readonly__ [ [ <acc_list> ] [ <attempts> ] ] [ <within> <block_for> <time> ] [ <fail_count> ] [ <switch_mode> ] ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                 |
| system              | System-related show commands                    |
| login               | Display Secure Login Configurations and State   |
| <i>__readonly__</i> | (Optional)                                      |
| <i>acc_list</i>     | (Optional) Appiled ACL's                        |
| <i>attempts</i>     | (Optional) Number of login failures             |
| <i>within</i>       | (Optional) Number of login failures within time |
| <i>block_for</i>    | (Optional) Login disabled for time              |
| <i>time</i>         | (Optional) Time remaining to re-enable login    |
| <i>fail_count</i>   | (Optional) Login failure count                  |
| <i>switch_mode</i>  | (Optional) Mode of operation                    |

## Command Mode

- /exec

# show system login failures

```
show system login failures [ __readonly__ [ { TABLE_loginStats <username> <port> <remote_addr>
<app_name> <time> } ] ]
```

## Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information                    |
| system                  | System-related show commands                       |
| login                   | Secure Login                                       |
| failures                | Display Login failures in the current watch period |
| <i>__readonly__</i>     | (Optional)   |
| <i>TABLE_loginStats</i> | (Optional)   |
| <i>username</i>         | (Optional) User name                               |
| <i>port</i>             | (Optional) Login port number                       |
| <i>remote_addr</i>      | (Optional) Remote address                          |
| <i>app_name</i>         | (Optional) Application name                        |
| <i>time</i>             | (Optional) Login time                              |

## Command Mode

- /exec

## show system memory-thresholds

```
show system memory-thresholds [ __readonly__ <critical_mem_threshold> <severe_mem_threshold>
<minor_mem_threshold> ]
```

### Syntax Description

|                               |   |
|-------------------------------|---|
| show                          | Show running system information             |
| <i>__readonly__</i>           | (Optional)                                  |
| <i>critical_mem_threshold</i> | (Optional) Critical System Memory Threshold |
| <i>severe_mem_threshold</i>   | (Optional) Severe System Memory Threshold   |
| <i>minor_mem_threshold</i>    | (Optional) Minor System Memory Threshold    |
| system                        | System management commands                  |
| memory-thresholds             | Set memory thresholds on the card           |

### Command Mode

- /exec

# show system mode

```
show system mode [ __readonly__ <system_mode> [ <timer_state> ] ]
```

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| system              | System configuration commands   |
| mode                | Show system mode                |
| <i>__readonly__</i> | (Optional)                      |
| <i>system_mode</i>  | (Optional) system mode          |
| <i>timer_state</i>  | (Optional) timer state          |

## Command Mode

- /exec

# show system nve infra-vlans

```
show system nve infra-vlans [ __readonly__ [ current_active_vlan <active_vlan_output> ] { available_infra_vlan
<available_vlan_output> } ]
```

## Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information             |
| system                       | System-related show commands                |
| nve                          | Show NVE information                        |
| infra-vlans                  | Show NVE infra-vlans related information    |
| __readonly__                 | (Optional)                                  |
| current_active_vlan          | (Optional) Current Active Infra Vlan        |
| <i>active_vlan_output</i>    | (Optional) Current active infra vlan output |
| available_infra_vlan         | (Optional) Available Infra Vlan             |
| <i>available_vlan_output</i> | (Optional) Available Infra Vlan output      |

## Command Mode

- /exec

# show system poap

```
show system poap [ __readonly__ { [ TABLE_show_system_poap <Str1> ] } ]
```

## Syntax Description

|                        |                                  |
|------------------------|----------------------------------|
| show                   | Show running system information  |
| system                 | Show system information          |
| poap                   | Show information related to POAP |
| __readonly__           | (Optional)                       |
| TABLE_show_system_poap | (Optional) table for poap        |
| <i>Str1</i>            | (Optional) status of poap        |

## Command Mode

- /exec

## show system pss shrink status

```
show system pss shrink status [ details ] [ __readonly__ { [ <summary> ] [ TABLE_per_vdc <vdc_id> [
TABLE_detail_events <service> <vdc> <event> ] ] [ TABLE_events <service> <vdc> <event> ] } ]
```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                    |
| system              | System-related show commands                       |
| pss                 | Displays last pss shrink status                    |
| shrink              | Displays last pss shrink status                    |
| status              | Displays last pss shrink status                    |
| details             | (Optional) Displays last pss shrink status details |
| __readonly__        | (Optional)   |
| <i>summary</i>      | (Optional) PSS shrink summary                      |
| TABLE_per_vdc       | (Optional)   |
| <i>vdc_id</i>       | (Optional) VDC id                                  |
| TABLE_detail_events | (Optional) PSS shrink events                       |
| <i>service</i>      | (Optional) Service name                            |
| <i>vdc</i>          | (Optional) VDC number                              |
| <i>event</i>        | (Optional) PSS evnets                              |
| TABLE_events        | (Optional) PSS shrink events                       |
| <i>service</i>      | (Optional) Service name                            |
| <i>vdc</i>          | (Optional) VDC number                              |
| <i>event</i>        | (Optional) PSS evnets                              |

### Command Mode

- /exec

## show system redundancy ha status

```
show system redundancy ha status [ __readonly__ { [ TABLE_ha_status <vdc_id> <this_sup_internal_state>
<other_sup_internal_state> ] } ]
```

### Syntax Description

|                                 |                                    |
|---------------------------------|------------------------------------|
| show                            | Show running system information    |
| system                          | System-related show commands       |
| redundancy                      | redundancy status                  |
| ha                              | vdc redundancy status              |
| status                          | all vdc redundancy status          |
| <i>__readonly__</i>             | (Optional)                         |
| <i>TABLE_ha_status</i>          | (Optional) HA status for all vdcs  |
| <i>vdc_id</i>                   | (Optional) vdc id                  |
| <i>this_sup_internal_state</i>  | (Optional) This Supervisor State   |
| <i>other_sup_internal_state</i> | (Optional) Remote Supervisor State |

### Command Mode

- /exec

## show system redundancy status

```
show system redundancy status [ __readonly__ { <rdn_mode_admin> <rdn_mode_oper> <this_sup>
<this_sup_rdn_state> <this_sup_sup_state> <this_sup_internal_state> [ <other_sup> ] [ <other_sup_rdn_state>
] [ <other_sup_sup_state> ] [ <other_sup_internal_state> } } ]
```

### Syntax Description

|                                 |  |
|---------------------------------|--|
| show                            | Show running system information        |
| system                          | System-related show commands           |
| redundancy                      | redundancy status                      |
| status                          | Current redundancy status              |
| <i>__readonly__</i>             | (Optional) readonly                    |
| <i>rdn_mode_admin</i>           | (Optional) Redundancy Mode Admin       |
| <i>rdn_mode_oper</i>            | (Optional) Redundancy Mode Operational |
| <i>this_sup</i>                 | (Optional) This Supervisor             |

| <i>service</i>          | (Optional) service name             |
| <i>version</i>          | (Optional) version                  |

## Command Mode

- /exec

# show system reset-reason

```
show system reset-reason [ __readonly__ { TABLE_reason <slot> { TABLE_rr <time> <reason> <service>
<version> } } ]
```

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| system         | System-related show commands    |
| reset-reason   | Show last reset reason          |
| __readonly__   | (Optional)                      |
| TABLE_reason   | (Optional) Reset reason info    |
| <i>slot</i>    | (Optional) slot                 |
| TABLE_rr       | (Optional) reset reason         |
| <i>time</i>    | (Optional) time                 |
| <i>reason</i>  | (Optional) reset reason         |
| <i>service</i> | (Optional) service name         |
| <i>version</i> | (Optional) version              |

## Command Mode

- /exec

# show system reset-reason module

```
show system reset-reason module <module> [ __readonly__ { TABLE_reason <slot> { TABLE_rr <time>
<reason> <service> <version> } } ]
```

## Syntax Description

|                     |                                   |
|---------------------|-----------------------------------|
| show                | Show running system information   |
| system              | System-related show commands      |
| reset-reason        | Show last reset reason            |
| module              | Show per module reset-reason code |
| <i>module</i>       | please enter module number        |
| <i>__readonly__</i> | (Optional)                        |
| TABLE_reason        | (Optional) Reset reason info      |
| <i>slot</i>         | (Optional) slot                   |
| TABLE_rr            | (Optional) reset reason           |
| <i>time</i>         | (Optional) time                   |
| <i>reason</i>       | (Optional) reset reason           |
| <i>service</i>      | (Optional) service name           |
| <i>version</i>      | (Optional) version                |

## Command Mode

- /exec

## show system resources

```
show system resources [ __readonly__ { [ <load_avg_1min> ] [ <load_avg_5min> ] [ <load_avg_15min> ]
[ <processes_total> ] [ <processes_running> ] [ <cpu_state_user> ] [ <cpu_state_kernel> ] [ <cpu_state_idle>
] [ TABLE_cpu_usage <cpuid> <user> <kernel> <idle> ] [ <memory_usage_total> ] [ <memory_usage_used>
] [ <memory_usage_free> ] [ <vm_total> ] [ <vm_free> ] [ <mem_buffers> ] [ <mem_cached> ] [
<current_memory_status> ] }
```

### Syntax Description

|                           |                                      |
|---------------------------|--------------------------------------|
| <i>show</i>               | Show running system information      |
| <i>system</i>             | System-related show commands         |
| <i>resources</i>          | Show system resources                |
| <i>__readonly__</i>       | (Optional)                           |
| <i>TABLE_cpu_usage</i>    | (Optional) All Cpu Usage Information |
| <i>load_avg_1min</i>      | (Optional) Load Average 1 Min        |
| <i>load_avg_5min</i>      | (Optional) Load Average 5 Min        |
| <i>load_avg_15min</i>     | (Optional) Load Average 15 Min       |
| <i>processes_total</i>    | (Optional) Total processes           |
| <i>processes_running</i>  | (Optional) Running Processes         |
| <i>cpu_state_user</i>     | (Optional) CPU State User            |
| <i>cpu_state_kernel</i>   | (Optional) CPU State Kernel          |
| <i>cpu_state_idle</i>     | (Optional) CPU State Idle            |
| <i>cpuid</i>              | (Optional) CPU id                    |
| <i>user</i>               | (Optional) user time                 |
| <i>kernel</i>             | (Optional) kernel time               |
| <i>idle</i>               | (Optional) idle time                 |
| <i>memory_usage_total</i> | (Optional) Memory Usage Total        |
| <i>memory_usage_used</i>  | (Optional) Memory Usage Used         |
| <i>memory_usage_free</i>  | (Optional) Memory Usage Free         |
| <i>vm_total</i>           | (Optional) Kernal VMemory Total      |
| <i>vm_free</i>            | (Optional) Kernal VMemory Free       |
| <i>mem_buffers</i>        | (Optional) Kernal Buffers            |

|                              |                                  |
|------------------------------|----------------------------------|
| <i>mem_cached</i>            | (Optional) Kernal Cached         |
| <i>current_memory_status</i> | (Optional) Current Memory Status |

**Command Mode**

- /exec

## show system resources all-modules

```
show system resources all-modules [ __readonly__ { [ <load_avg_1min> ] [ <load_avg_5min> ] [
<load_avg_15min> ] [ <processes_total> ] [ <processes_running> ] [ <cpu_state_user> ] [ <cpu_state_kernel>
] [ <cpu_state_idle> ] [ TABLE_cpu_usage <cpuid> <user> <kernel> <idle> ] [ <memory_usage_total> ] [
<memory_usage_used> ] [ <memory_usage_free> ] [ <current_memory_status> } ] ]
```

### Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information                 |
| system                       | System-related show commands                    |
| resources                    | Show system resources                           |
| all-modules                  | Show system resources for all available modules |
| <i>__readonly__</i>          | (Optional)                                      |
| <i>TABLE_cpu_usage</i>       | (Optional) All Cpu Usage Information            |
| <i>load_avg_1min</i>         | (Optional) Load Average 1 Min                   |
| <i>load_avg_5min</i>         | (Optional) Load Average 5 Min                   |
| <i>load_avg_15min</i>        | (Optional) Load Average 15 Min                  |

| <i>kernel</i>                | (Optional) kernel time                          |
| <i>idle</i>                  | (Optional) idle time                            |
| <i>memory_usage_total</i>    | (Optional) Memory Usage Total                   |
| <i>memory_usage_used</i>     | (Optional) Memory Usage Used                    |
| <i>memory_usage_free</i>     | (Optional) Memory Usage Free                    |
| <i>current_memory_status</i> | (Optional) Current Memory Status                |

### Command Mode

- /exec

## show system routing mode

```
show system routing mode [ __readonly__ TABLE_system_routing_mode { [ <configured-sys-routing-mode>
] [ <applied-sys-routing-mode> ] [ <svi-hardware-flood-mode> ] [ <routing-perf-mode> ] [
<mrouting-perf-mode> ] } ]
```

### Syntax Description

|                                    |  |
|------------------------------------|--|
| show                               | Show running system information                                |
| system                             | Show system information  |
| routing                            | Show routing related information                               |
| mode                               | Show mode related information                                  |
| <i>__readonly__</i>                | (Optional)   |
| <i>TABLE_system_routing_mode</i>   | (Optional) the xml system_routing_mode configuration           |
| <i>configured-sys-routing-mode</i> | (Optional) Configured system routing mode description          |
| <i>applied-sys-routing-mode</i>    | (Optional) Applied system routing mode description             |
| <i>svi-hardware-flood-mode</i>     | (Optional) Configured SVI hardware flood mode description      |
| <i>routing-perf-mode</i>           | (Optional) Applied System Routing Performance Mode description |
| <i>mrouting-perf-mode</i>          | (Optional) Applied System Mrouting Performance Mode            |

### Command Mode

- /exec

# show system security

```
show system security [ common-criteria ] [ __readonly__ { [ <common_criteria_o_status> ] } ]
```

## Syntax Description

|                                 |  |
|---------------------------------|--|
| show                            | Show running system information                                |
| system                          | System Management commands                                     |
| security                        | Security Management commands                                   |
| common-criteria                 | (Optional) Show if common-criteria mode is enabled or disabled |
| __readonly__                    | (Optional)   |
| <i>common_criteria_o_status</i> | (Optional) operational status of common-criteria               |

## Command Mode

- /exec

# show system simulate fan-presence

show system simulate fan-presence

## Syntax Description

|              |                                 |
|--------------|---------------------------------|
| show         | Show running system information |
| system       | System management commands      |
| simulate     | Simulate Fan Presence           |
| fan-presence | Simulate Fan Presence           |

## Command Mode

- /exec

# show system standby manual-boot

```
show system standby manual-boot [ __readonly__ { <content> } ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                       |
| system              | System-related show commands                          |
| standby             | Displays system standby manual boot option            |
| manual-boot         | Displays system standby manual boot option            |
| <i>__readonly__</i> | (Optional)  |
| <i>content</i>      | (Optional) Displays system standby manual boot option |

## Command Mode

- /exec

# show system switch-mode

show system switch-mode [ *\_\_readonly\_\_* <*op\_mode*> ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information             |
| system              | System-related show commands                |
| switch-mode         | Show current operational mode of the switch |
| <i>__readonly__</i> | (Optional)                                  |
| <i>op_mode</i>      | (Optional) Operational Mode                 |

## Command Mode

- /exec

# show system uptime

```
show system uptime [ __readonly__ { <sys_st_time> <sys_up_days> <sys_up_hrs> <sys_up_mins>
<sys_up_secs> <kn_up_days> <kn_up_hrs> <kn_up_mins> <kn_up_secs> [ <as_up_days> ] [ <as_up_hrs>
] [ <as_up_mins> ] [ <as_up_secs> ] } ]
```

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                  |
| system              | System-related show commands                     |
| uptime              | Show how long the system has been up and running |
| <i>__readonly__</i> | (Optional) readonly                              |
| <i>sys_st_time</i>  | (Optional) System Start Time                     |
| <i>sys_up_days</i>  | (Optional) System Uptime Days                    |
| <i>sys_up_hrs</i>   | (Optional) System Uptime Hours                   |
| <i>sys_up_mins</i>  | (Optional) System Uptime Minutes                 |
| <i>sys_up_secs</i>  | (Optional) System Uptime Seconds                 |
| <i>kn_up_days</i>   | (Optional) Kernel Uptime Days                    |
| <i>kn_up_hrs</i>    | (Optional) Kernel Uptime Hours                   |
| <i>kn_up_mins</i>   | (Optional) Kernel Uptime Minutes                 |
| <i>kn_up_secs</i>   | (Optional) Kernel Uptime Seconds                 |
| <i>as_up_days</i>   | (Optional) Active Sup Uptime Days                |
| <i>as_up_hrs</i>    | (Optional) Active Sup Uptime Hours               |
| <i>as_up_mins</i>   | (Optional) Active Sup Uptime Minutes             |
| <i>as_up_secs</i>   | (Optional) Active Sup Uptime Seconds             |

## Command Mode

- /exec

## show system verify bios flash

```
show system verify bios { flash <i0> [ module <module> ] | protection <i1> [ module <module1> ] } [
__readonly__ { <return> <verify_result> <protection_status> } ]
```

### Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information        |
| system                   | System-related show commands           |
| verify                   | Verify commands                        |
| bios                     | Verify bios                            |
| flash                    | verify bios flash or protection status |
| <i>i0</i>                | Select primary or alternate flash      |
| module                   | (Optional) Module number               |
| <i>module</i>            | (Optional) Enter module number         |
| protection               | verify bios flash or protection status |
| <i>i1</i>                | Select primary or alternate flash      |
| module                   | (Optional) Module number               |
| <i>module1</i>           | (Optional) Enter module number         |
| <i>__readonly__</i>      | (Optional)                             |
| <i>return</i>            | (Optional)                             |
| <i>verify_result</i>     | (Optional)                             |
| <i>protection_status</i> | (Optional)                             |

### Command Mode

- /exec

# show system vlan reserved

```
show system vlan reserved [ __readonly__ { TABLE_vlan <current_reserved_vlan_start>
<current_reserved_vlan_end> [ <future_reserved_vlan_start> ] [ <future_reserved_vlan_end> ] } ]
```

## Syntax Description

|                                    |   |
|------------------------------------|---|
| show                               | Show running system information                       |

# show table-map

```
show table-map [ <tmap-name> | <default-tmap-enum-name> ] [ __readonly__ { [ TABLE_tmap <tmap-name>
[ <desc> ] [ <def-value> ] [ <def-copy> ] [ <def-ignore> ] [ TABLE_list <frm-list> <to-val> ] ] } ]
```

## Syntax Description

|                               |  |
|-------------------------------|--|
| show                          | Show running system information                              |
| table-map                     | Table maps   |
| TABLE_tmap                    | (Optional) all tmap xml sessions                             |
| <i>tmap-name</i>              | (Optional) Show a particular table map                       |
| <i>default-tmap-enum-name</i> | (Optional)   |
| <code>__readonly__</code>     | (Optional)   |
| <i>desc</i>                   | (Optional) Description string                                |
| <i>def-value</i>              | (Optional) Unspecified entries will default to this value    |
| <i>def-copy</i>               | (Optional) Map unspecified values to equivalent output value |
| <i>def-ignore</i>             | (Optional) Ignore unspecified values                         |
| TABLE_list                    | (Optional) table map lists                                   |
| <i>frm-list</i>               | (Optional) Original list of values which are to be mapped    |
| <i>to-val</i>                 | (Optional) To value  |

## Command Mode

- /exec

## show tacacs-server

```
show tacacs-server [ __readonly__ [ <global_secretKey> ] { <global_timeout> <global_deadtime> } [
<global_source_intf> ] [ <global_idle_time> ] { [ <global_testUsername> ] [ <global_testPassword> ] } {
<server_count> } [ TABLE_server <server_ip> <port> [ <secretKey> ] [ <timeout> ] ] [ { <host0>
<tacacs_port> <shared_key> <idle_time><test_username> <test_password> } + ] ]
```

### Syntax Description

|                            |   |
|----------------------------|---|
| show                       | Show running system information                                   |
| tacacs-server              | Show TACACS+ configuration information                            |
| <i>__readonly__</i>        | (Optional)  |
| <i>global_secretKey</i>    | (Optional) Global shared secret                                   |
| <i>global_timeout</i>      | (Optional) Global timeout for tacacs                              |
| <i>global_deadtime</i>     | (Optional) Global deadtime  |
| <i>global_source_intf</i>  | (Optional) Tacacs global source interface                         |
| <i>global_idle_time</i>    | (Optional) Tacacs global idle-time for server monitoring          |
| <i>global_testUsername</i> | (Optional) Username of global test parameters                     |
| <i>global_testPassword</i> | (Optional) Password of global test parameters                     |
| <i>server_count</i>        | (Optional) Total number of tacacs servers configured              |
| TABLE_server               | (Optional)  |
| <i>server_ip</i>           | (Optional) Ip address of the server                               |
| <i>port</i>                | (Optional) Port used for this server                              |
| <i>secretKey</i>           | (Optional) Shared secret between the server and the tacacs client |
| <i>timeout</i>             | (Optional) Timeout for this tacacs server                         |
| <i>host0</i>               | (Optional) DNS name or IP address                                 |
| <i>tacacs_port</i>         | (Optional) TACACS+ server port                                    |
| <i>shared_key</i>          | (Optional) TACACS+ shared secret                                  |
| <i>test_password</i>       | (Optional) User password in test packets                          |

### Command Mode

- /exec

## show tacacs-server

```
show tacacs-server { <host0> } [ __readonly__ { <host1> } ] [ <tac_port> ] [ <tac_shared_key> ] [ <time_out> ] [ <conn_type> ] [ <tac_idle_time> ] [ <test_user_name> ] <test_pwd> ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                    |
| tacacs-server         | Show TACACS+ configuration information             |
| <i>host0</i>          | DNS name or IP address                             |
| <i>__readonly__</i>   | (Optional)   |
| <i>host1</i>          | (Optional) DNS name or IP address                  |
| <i>tac_port</i>       | (Optional) TACACS+ server port                     |
| <i>tac_shared_key</i> | (Optional) TACACS+ shared secret                   |
| <i>time_out</i>       | (Optional) radius server timeout                   |
| <i>conn_type</i>      | (Optional) TACACS+ connection type                 |
| <i>test_user_name</i> | (Optional) User name in test packets               |
| <i>test_pwd</i>       | (Optional) User password in test packets           |
| <i>tac_idle_time</i>  | (Optional) Time interval for monitoring the server |

### Command Mode

- /exec

# show tacacs-server directed-request

```
show tacacs-server directed-request [ __readonly__ { <tacacs_directedRequest_status> } ]
```

## Syntax Description

|                                      |   |
|--------------------------------------|---|
| show                                 | Show running system information                     |
| tacacs-server                        | Show TACACS+ configuration information              |
| directed-request                     | Show directed server enable configuration           |
| __readonly__                         | (Optional)  |
| <i>tacacs_directedRequest_status</i> | (Optional) status of tacacs-server directed request |

## Command Mode

- /exec

## show tacacs-server groups

```
show tacacs-server groups [ <s0> ] [ __readonly__ [ <num_of_groups> ] [ TABLE_group <group_name> [
TABLE_server <server_ip> [ <port> ] ] [ <dead_time> ] [ <vrf_name> ] [ <source_interface> ] ] ]
```

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information   |
| tacacs-server           | Show TACACS+ configuration information  |
| groups                  | Show TACACS+ server group configuration information   |
| <i>s0</i>               | (Optional) TACACS+ server group name  |
| <i>__readonly__</i>     | (Optional)  |
| <i>num_of_groups</i>    | (Optional) number of groups   |
| TABLE_group             | (Optional)  |
| <i>group_name</i>       | (Optional) name of the group  |
| TABLE_server            | (Optional)  |
| <i>server_ip</i>        | (Optional) DNS name or IP address   |
| <i>port</i>             | (Optional) TACACS+ server port  |
| <i>dead_time</i>        | (Optional) Time interval for which the server is marked as dead before sending a test command |
| <i>vrf_name</i>         | (Optional) name of the vrf  |
| <i>source_interface</i> | (Optional) Interface Description  |

### Command Mode

- /exec

## show tacacs-server sorted

```
show tacacs-server sorted [ __readonly__ [ <global_secretKey> ] { <global_timeout> <global_deadtime> }
[ <global_source_intf> ] [ <global_idle_time> ] { [ <global_testUsername> ] [ <global_testPassword> ] } {
<server_count> } [ TABLE_server <server_ip> <port> [ <secretKey> ] [ <timeout> ] ] ]
```

### Syntax Description

|                            |   |
|----------------------------|---|
| show                       | Show running system information                                   |
| tacacs-server              | Show TACACS+ configuration information                            |
| sorted                     | Show TACACS+ servers sorted by server name                        |
| <i>__readonly__</i>        | (Optional)  |
| <i>global_secretKey</i>    | (Optional) Global shared secret                                   |
| <i>global_timeout</i>      | (Optional) Global timeout for tacacs                              |
| <i>global_deadtime</i>     | (Optional) Global deadtime  |
| <i>global_source_intf</i>  | (Optional) Tacacs global source interface                         |
| <i>global_idle_time</i>    | (Optional) Tacacs global idle-time for server monitoring          |
| <i>global_testUsername</i> | (Optional) Username of global test parameters                     |
| <i>global_testPassword</i> | (Optional) Password of global test parameters                     |
| <i>server_count</i>        | (Optional) Total number of tacacs servers configured              |
| TABLE_server               | (Optional)  |
| <i>server_ip</i>           | (Optional) Ip address of the server                               |
| <i>port</i>                | (Optional) Port used for this server                              |
| <i>secretKey</i>           | (Optional) Shared secret between the server and the tacacs client |
| <i>timeout</i>             | (Optional) Timeout for this tacacs server                         |

### Command Mode

- /exec

## show tacacs-server statistics

```
show tacacs-server statistics { <host0> } [ __readonly__ { <server_state> [ <clock_time> { monitoring_statistics
<time_in_pstate> <ndead> <tt_in_dstate> } ] } { auth_statistics <auth_failed_transactions>
<auth_succ_transactions> <auth_req_sent> <auth_req_timedout> <auth_resp_no_match>
<auth_resp_not_processed> <auth_resp_error> } { autho_statistics <autho_failed_transactions>
<autho_succ_transactions> <autho_req_sent> <autho_req_timedout> <autho_resp_no_match>
<autho_resp_not_processed> <autho_resp_error> } { acct_statistics <acct_failed_transactions>
<acct_succ_transactions> <acct_req_sent> <acct_req_timedout> <acct_resp_no_match>
<acct_resp_not_processed> <acct_resp_error> } ]
```

### Syntax Description

|                                 |   |
|---------------------------------|---|
| show                            | Show running system information                                   |
| tacacs-server                   | Show TACACS+ configuration information                            |
| statistics                      | Show TACACS statistics  |
| <i>host0</i>                    | DNS name or IP address  |
| <i>__readonly__</i>             | (Optional)  |
| <i>server_state</i>             | (Optional) Show state of server                                   |
| <i>clock_time</i>               | (Optional) Show clock time in terms of hours, minutes and seconds |
| monitoring_statistics           | (Optional) Monitoring Statistics                                  |
| <i>time_in_pstate</i>           | (Optional) Time in previous state                                 |
| <i>ndead</i>                    | (Optional) Number of times dead                                   |
| <i>tt_in_dstate</i>             | (Optional) Total time in dead state                               |
| auth_statistics                 | (Optional) Authentication Statistics                              |
| autho_statistics                | (Optional) Authorization Statistics                               |
| acct_statistics                 | (Optional) Accounting Statistics                                  |
| <i>auth_failed_transactions</i> | (Optional) Authentication: Failed transactions                    |
| <i>auth_succ_transactions</i>   | (Optional) Authentication: Successful transactions                |
| <i>auth_req_sent</i>            | (Optional) Authentication: Requests sent                          |
| <i>auth_req_timedout</i>        | (Optional) Authentication: Requests timedout                      |
| <i>auth_resp_no_match</i>       | (Optional) Authentication: Responses with no matching requests    |
| <i>auth_resp_not_processed</i>  | (Optional) Authentication: Responses not processed                |
| <i>auth_resp_error</i>          | (Optional) Authentication: Responses containing errors            |

|                                  |   |
|----------------------------------|---|
| <i>autho_failed_transactions</i> | (Optional) Authorization: Failed transactions                 |
| <i>autho_succ_transactions</i>   | (Optional) Authorization: Successful transactions             |
| <i>autho_req_sent</i>            | (Optional) Authorization: Requests sent                       |
| <i>autho_req_timedout</i>        | (Optional) Authorization: Requests timedout                   |
| <i>autho_resp_no_match</i>       | (Optional) Authorization: Responses with no matching requests |
| <i>autho_resp_not_processed</i>  | (Optional) Authorization: Responses not processed             |
| <i>autho_resp_error</i>          | (Optional) Authorization: Responses containing errors         |
| <i>acct_failed_transactions</i>  | (Optional) Accounting: Failed transactions                    |
| <i>acct_succ_transactions</i>    | (Optional) Accounting: Successful transactions                |
| <i>acct_req_sent</i>             | (Optional) Accounting: Requests sent                          |
| <i>acct_req_timedout</i>         | (Optional) Accounting: Requests timedout                      |
| <i>acct_resp_no_match</i>        | (Optional) Accounting: Responses with no matching requests    |
| <i>acct_resp_not_processed</i>   | (Optional) Accounting: Responses not processed                |
| <i>acct_resp_error</i>           | (Optional) Accounting: Responses containing errors            |

**Command Mode**

- /exec

# show tech-support

show tech-support [ time-optimized ] [ forced ] [ debug-enable ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information  |
| tech-support   | Gather information for troubleshooting                                     |
| time-optimized | (Optional) Gather tech-support faster, requires more memory and disk space |
| forced         | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                                  |
| debug-enable   | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                                  |

## Command Mode

- /exec

# show tech-support aaa

show tech-support aaa

## Syntax Description

|              |  |
|--------------|--|
| show         | show tech-support                      |
| tech-support | Gather information for troubleshooting |
| aaa          | Display aaa information                |

## Command Mode

- /exec

# show tech-support acl

```
show tech-support acl [ { commands | detail [ commands ] } ]
```

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                                |
| tech-support | Gather information for troubleshooting                         |
| acl          | Show information for acl technical support                     |
| commands     | (Optional) Show commands run as part of acl technical support  |
| detail       | (Optional) Show detailed information for acl technical support |
| commands     | (Optional) Show commands run as part of acl technical support  |

## Command Mode

- /exec

# show tech-support aclmgr

show tech-support aclmgr [ detail ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| aclmgr       | ACL commands                           |
| detail       | (Optional) Detailed Tech Support       |

## Command Mode

- /exec

# show tech-support aclmgr compressed

show tech-support aclmgr compressed <uri0> [ detail ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information          |
| tech-support | Gather information for troubleshooting   |
| aclmgr       | ACL commands                             |
| compressed   | Save compressed aclqos technical support |
| <i>uri0</i>  | Enter filename to store                  |
| detail       | (Optional) Detailed Tech Support         |

## Command Mode

- /exec

# show tech-support aclqos

show tech-support aclqos

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information               |
| tech-support | Gather information for troubleshooting        |
| aclqos       | Show information for aclqos technical support |

## Command Mode

- /exec

# show tech-support aclqos compressed

show tech-support aclqos compressed <uri0>

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information               |
| tech-support | Gather information for troubleshooting        |
| aclqos       | Show information for aclqos technical support |
| compressed   | Save compressed aclqos technical support      |
| <i>uri0</i>  | Enter filename to store                       |

## Command Mode

- /exec

# show tech-support adjmgr

show tech-support adjmgr [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| adjmgr       | Display Adjmgr information             |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support all

show tech-support all [ space-optimized ] [ time-optimized ]

## Syntax Description

|                 |  |
|-----------------|--|
| show            | Show running system information  |
| tech-support    | Gather information for troubleshooting                                     |
| all             | Gather detailed information for troubleshooting                            |
| space-optimized | (Optional) Gather tech-support info. using less memory and disk space      |
| time-optimized  | (Optional) Gather tech-support faster, requires more memory and disk space |

## Command Mode

- /exec

# show tech-support all binary

show tech-support all binary <uri0>

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information   |
| tech-support | Gather information for troubleshooting  |
| all          | Gather detailed information for troubleshooting   |
| binary       | Gather tech support for all applications in binary format   |
| <i>uri0</i>  | Select destination filesystem to save the binary output (NOTE: The output file name will be automatically generated and cannot be chosen) |

## Command Mode

- /exec

# show tech-support analytics

show tech-support analytics [ brief ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| analytics    | Show Analytics tech-support information |
| brief        | (Optional) Brief information            |

## Command Mode

- /exec

# show tech-support analytics

show tech-support analytics [ brief ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| analytics    | Show Analytics tech-support information |
| brief        | (Optional) Brief information            |

## Command Mode

- /exec

# show tech-support arp

show tech-support arp [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| arp          | Display ARP information                |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support ascii-cfg

show tech-support ascii-cfg

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                            |
| tech-support | Show information for technical support personnel           |
| ascii-cfg    | Show ascii-cfg information for technical support personnel |

## Command Mode

- /exec

# show tech-support assoc\_mgr

show tech-support assoc\_mgr

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                           |
| tech-support | Gather information for troubleshooting                    |
| assoc_mgr    | Gather detailed information for assoc_mgr troubleshooting |

## Command Mode

- /exec

# show tech-support backup

show tech-support { backup | flexlink }

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                                   |
| tech-support | Gather information for troubleshooting                            |
| backup       | Gather detailed information for Switchport Backup troubleshooting |
| flexlink     | Gather detailed information for Switchport Backup troubleshooting |

## Command Mode

- /exec

# show tech-support bcm

show tech-support bcm

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| bcm          | bcm hardware info                      |

## Command Mode

- /exec

# show tech-support bfd

show tech-support bfd

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| bfd          | BFD commands                           |

## Command Mode

- /exec

# show tech-support bgp

show tech-support bgp [ brief | detailed ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| bgp          | Display BGP status and configuration   |
| brief        | (Optional) Brief information           |
| detailed     | (Optional) Detailed information        |

## Command Mode

- /exec

# show tech-support biosd

show tech-support biosd

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information              |
| tech-support | Gather information for troubleshooting       |
| biosd        | Gather bios install log for trouble shooting |

## Command Mode

- /exec

# show tech-support bloggerd-all

show tech-support bloggerd-all

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information   |
| tech-support | Gather information for troubleshooting                                    |
| bloggerd-all | Gather detailed information for bloggerd troubleshooting from ALL modules |

## Command Mode

- /exec

# show tech-support bloggerd

show tech-support bloggerd

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                          |
| tech-support | Gather information for troubleshooting                   |
| bloggerd     | Gather detailed information for bloggerd troubleshooting |

## Command Mode

- /exec

# show tech-support bootvar

show tech-support bootvar

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                         |
| tech-support | Gather information for troubleshooting                  |
| bootvar      | Gather detailed information for bootvar troubleshooting |

## Command Mode

- /exec

# show tech-support brief

show tech-support brief

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system summary information        |
| tech-support | Gather information for troubleshooting         |
| brief        | Gather summary information for troubleshooting |

## Command Mode

- /exec

# show tech-support callhome

show tech-support callhome

## Syntax Description

|              |  |
|--------------|--|
| show         | show tech-support                      |
| tech-support | Gather information for troubleshooting |
| callhome     | callhome troubleshooting information   |

## Command Mode

- /exec

# show tech-support cdp

show tech-support cdp

## Syntax Description

|              |   |
|--------------|---|
| show         | show running system information             |
| tech-support | Gather information for troubleshooting      |
| cdp          | Gather information for CDP trouble shooting |

## Command Mode

- /exec

# show tech-support cert-enroll

show tech-support cert-enroll

## Syntax Description

|              |  |
|--------------|--|
| show         | show commands                          |
| tech-support | Gather information for troubleshooting |
| cert-enroll  | Display certificates information       |

## Command Mode

- /exec

# show tech-support cfs

```
show tech-support cfs [ { commands | name <cfs-dyn-app-name> [ commands1 ] } ]
```

## Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information   |
| tech-support            | Gather information for troubleshooting                                    |
| cfs                     | Gather detailed information for cfs troubleshooting                       |
| commands                | (Optional) CFS show tech commands   |
| name                    | (Optional) Gather detailed information of cfs for a specified application |
| <i>cfs-dyn-app-name</i> | (Optional) Registered name of the local application                       |
| commands1               | (Optional) CFS application show tech commands                             |

## Command Mode

- /exec

# show tech-support cli

show tech-support cli

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information               |
| tech-support | Gather information for troubleshooting        |
| cli          | Gather information for parser troubleshooting |

## Command Mode

- /exec

# show tech-support clis

show tech-support clis [ brief ] [ commands ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                                     |
| tech-support | Gather information for troubleshooting                              |
| clis         | Gather information for CLI Server troubleshooting                   |
| brief        | (Optional) Detailed information                                     |
| commands     | (Optional) Show commands executed as part of show tech-support clis |

## Command Mode

- /exec

# show tech-support clock\_manager

show tech-support clock\_manager

## Syntax Description

|               |   |
|---------------|---|
| show          | Show running system information                               |
| tech-support  | Gather information for troubleshooting                        |
| clock_manager | Gather detailed information for clock manager troubleshooting |

## Command Mode

- /exec

# show tech-support commands

show tech-support commands

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                              |
| tech-support | Gather information for troubleshooting                       |
| commands     | Show commands executed as part of show tech-support commands |

## Command Mode

- /exec

# show tech-support controller

show tech-support controller

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                   |
| tech-support | Gather information for troubleshooting            |
| controller   | Gather information for Controller troubleshooting |

## Command Mode

- /exec

# show tech-support copp

show tech-support copp

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information              |
| tech-support | Gather information for trouble shooting      |
| copp         | Gather information for copp trouble shooting |

## Command Mode

- /exec

# show tech-support cores

```
show tech-support cores [ filename { <uri0> | <uri1> [ vrf <vrf-known-name> ] } [ archive { <core-count> | all } ] ]
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information  |
| tech-support          | Gather information for troubleshooting   |
| cores                 | Debugging information for process crashes  |
| filename              | (Optional) Create a file with the process crash debugging information and latest core files. Default is show_tech_cores.tar.gz |
| <i>uri0</i>           | (Optional) Destination file system, path, and filename   |
| <i>uri1</i>           | (Optional) Destination file system, path, and filename   |
| vrf                   | (Optional) Enter the vrf name  |
| <i>vrf-known-name</i> | (Optional) VRF name  |
| archive               | (Optional) Gather core files from the logflash archive not just the current ones to place in the compressed file               |
| <i>core-count</i>     | (Optional) Number of most recent archived core files to gather from logflash   |
| all                   | (Optional) Attempt to gather all archived core files from logflash   |

## Command Mode

- /exec

# show tech-support dcbx

show tech-support dcbx

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                |
| tech-support | Gather information for troubleshooting         |
| dcbx         | Gather detailed information for DCBX component |

## Command Mode

- /exec

# show tech-support details

show tech-support details [ space-optimized ] [ time-optimized ] [ debug-enable ]

## Syntax Description

|                 |  |
|-----------------|--|
| show            | Show running system information  |
| tech-support    | Gather information for troubleshooting                                     |
| details         | Gather detailed information for troubleshooting                            |
| space-optimized | (Optional) Gather tech-support info. using less memory and disk space      |
| time-optimized  | (Optional) Gather tech-support faster, requires more memory and disk space |
| debug-enable    | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                                  |

## Command Mode

- /exec

# show tech-support device-alias

show tech-support device-alias

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                 |
| tech-support | Gather information for troubleshooting          |
| device-alias | Show device-alias technical support information |

## Command Mode

- /exec

# show tech-support dhclient

show tech-support dhclient

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                  |
| tech-support | Gather information for trouble shooting          |
| dhclient     | Gather information for dhclient trouble shooting |

## Command Mode

- /exec

# show tech-support dhcp

show tech-support dhcp

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                      |
| tech-support | Gather information for troubleshooting               |
| dhcp         | Gather detailed information for dhcp troubleshooting |

## Command Mode

- /exec

# show tech-support dme

show tech-support dme [ commands ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                                    |
| tech-support | Gather information for troubleshooting                             |
| dme          | Gather detailed information for dme troubleshooting                |
| commands     | (Optional) Show commands executed as part of show tech-support dme |

## Command Mode

- /exec

# show tech-support dot1x

show tech-support dot1x

## Syntax Description

|              |  |
|--------------|--|
| show         | show tech-support                      |
| tech-support | Gather information for troubleshooting |
| dot1x        | Display dot1x information              |

## Command Mode

- /exec

# show tech-support dpvm

show tech-support dpvm

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information             |
| tech-support | Gather information for troubleshooting      |
| dpvm         | Show information for dpvm technical support |

## Command Mode

- /exec

# show tech-support ecp

show tech-support ecp

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| ecp          | ECP (Edge Control Protocol)            |

## Command Mode

- /exec

# show tech-support eem

show tech-support eem

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| eem          | Show EEM tech-support information       |

## Command Mode

- /exec

# show tech-support eigrp

show tech-support eigrp [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| eigrp        | Display EIGRP status and configuration |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support eltm

show tech-support eltm [ detail ]

## Syntax Description

|              |   |
|--------------|---|
| show         | show tech-support                       |
| tech-support | Gather information for trouble-shooting |
| eltm         | eltm debug info                         |
| detail       | (Optional) Detailed information         |

## Command Mode

- /exec

# show tech-support epbr

show tech-support epbr

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| epbr         | EPBR                                    |

## Command Mode

- /exec

# show tech-support epp

show tech-support epp

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                     |
| tech-support | Gather information for troubleshooting              |
| epp          | Gather detailed information for EPP troubleshooting |

## Command Mode

- /exec

# show tech-support ethpm

show tech-support ethpm

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                       |
| tech-support | Gather information for troubleshooting                |
| ethpm        | Gather detailed information for ETHPM troubleshooting |

## Command Mode

- /exec

# show tech-support ethport

show tech-support ethport

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                         |
| tech-support | Gather information for troubleshooting                  |
| ethport      | Gather detailed information for ETHPORT troubleshooting |

## Command Mode

- /exec

# show tech-support evb

show tech-support evb

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| evb          | EVB (Edge Virtual Bridge)              |

## Command Mode

- /exec

# show tech-support fabric forwarding

show tech-support fabric forwarding

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                         |
| tech-support | Gather information for troubleshooting                  |
| fabric       | Fabric  |
| forwarding   | Fabric Forwarding Protocol: Host Mobility Manager (HMM) |

## Command Mode

- /exec

# show tech-support fabric multicast

show tech-support fabric multicast

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| fabric       | Fabric                                 |
| multicast    | Multicast information                  |

## Command Mode

- /exec

# show tech-support fabricpath isis

show tech-support fabricpath isis [ brief ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| fabricpath   | fabricpath information                  |
| isis         | Fabricpath IS-IS information            |
| brief        | (Optional) Brief information            |

## Command Mode

- /exec

# show tech-support fabricpath topology

show tech-support fabricpath topology [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                            |
| tech-support | Gather information for troubleshooting                     |
| fabricpath   | Gather detailed information for Fabricpath troubleshooting |
| topology     | Gather detailed information for Topology troubleshooting   |
| brief        | (Optional) Brief information                               |

## Command Mode

- /exec

# show tech-support fast-reload

show tech-support fast-reload

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                            |
| tech-support | Gather information for troubleshooting                     |
| fast-reload  | Gather information for troubleshooting fast-reload timings |

## Command Mode

- /exec

# show tech-support fc2

show tech-support fc2 [ commands ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                               |
| tech-support | Gather information for troubleshooting                        |
| fc2          | Show information for fc2 technical support                    |
| commands     | (Optional) Show commands run as part of fc2 technical support |

## Command Mode

- /exec

# show tech-support fcdomain

show tech-support fcdomain [ commands ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                                    |
| tech-support | Gather information for troubleshooting                             |
| fcdomain     | Gather detailed information for fcdomain troubleshooting           |
| commands     | (Optional) Show commands run as part of fcdomain technical support |

## Command Mode

- /exec

# show tech-support fcns

show tech-support fcns [ vsan <i0> ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                                    |
| tech-support | Gather information for troubleshooting                             |
| fcns         | Show information for fcns technical support                        |
| vsan         | (Optional) Show technical support information for a specified vsan |
| <i>i0</i>    | (Optional) VSAN id range   |

## Command Mode

- /exec

# show tech-support fcoe

show tech-support fcoe

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                  |
| tech-support | Gather information for troubleshooting           |
| fcoe         | Gather information for FCOE mgr trouble shooting |

## Command Mode

- /exec

# show tech-support fcs

show tech-support fcs

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                     |
| tech-support | Gather information for troubleshooting              |
| fcs          | Gather detailed information for fcs troubleshooting |

## Command Mode

- /exec

# show tech-support feature

show tech-support feature [ commands ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information  |
| tech-support | Gather information for troubleshooting                                 |
| feature      | Gather detailed information for feature troubleshooting                |
| commands     | (Optional) Show commands executed as part of show tech-support feature |

## Command Mode

- /exec

# show tech-support fib-all

show tech-support fib-all

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                              |
| tech-support | Gather information for troubleshooting                       |
| fib-all      | Gather detailed information for FC/FCoE FIB from all modules |

## Command Mode

- /exec

# show tech-support fib module

show tech-support fib module <module>

## Syntax Description

|               |   |
|---------------|---|
| show          | Show running system information                             |
| tech-support  | Gather information for troubleshooting                      |
| fib           | Gather detailed information for FC/FCoE FIB troubleshooting |
| module        | Gather info related to a fib                                |
| <i>module</i> | Enter module number   |

## Command Mode

- /exec

# show tech-support fips

show tech-support fips

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information            |
| tech-support | Gather information for troubleshooting     |
| fips         | show tech support information for security |

## Command Mode

- /exec

# show tech-support flogi

show tech-support flogi

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                       |
| tech-support | Gather information for troubleshooting                |
| flogi        | Gather detailed information for flogi troubleshooting |

## Command Mode

- /exec

# show tech-support forwarding l2 multicast

show tech-support forwarding l2 multicast

## Syntax Description

|              |                              |
|--------------|------------------------------|
| show         |                              |
| tech-support | tech-support information     |
| forwarding   | forwarding debug information |
| l2           | layer 2 debug information    |
| multicast    | multicast                    |

## Command Mode

- /exec

# show tech-support forwarding l2 multicast vdc-all

show tech-support forwarding l2 multicast vdc-all

## Syntax Description

|              |                              |
|--------------|------------------------------|
| show         |                              |
| tech-support | tech-support information     |
| forwarding   | forwarding debug information |
| l2           | layer 2 debug information    |
| multicast    | multicast                    |
| vdc-all      | vdc-all                      |

## Command Mode

- /exec

# show tech-support forwarding l2 unicast

show tech-support forwarding l2 unicast [ module <module> ]

## Syntax Description

|               |   |
|---------------|---|
| show          | show tech-support                       |
| tech-support  | Gather information for trouble-shooting |
| forwarding    | Forwarding debug info                   |
| l2            | layer 2 debug info                      |
| unicast       | unicast                                 |
| module        | (Optional) Slot number                  |
| <i>module</i> | (Optional) Module Number                |

## Command Mode

- /exec

# show tech-support forwarding l3 multicast

show tech-support forwarding l3 multicast

## Syntax Description

|              |                              |
|--------------|------------------------------|
| show         |                              |
| tech-support | tech-support information     |
| forwarding   | forwarding debug information |
| l3           | layer 3 debug information    |
| multicast    | multicast                    |

## Command Mode

- /exec

# show tech-support forwarding l3 multicast detail vdc-all

show tech-support forwarding l3 multicast detail vdc-all

## Syntax Description

|              |                              |
|--------------|------------------------------|
| show         |                              |
| tech-support | tech-support information     |
| forwarding   | forwarding debug information |
| l3           | layer 3 debug information    |
| multicast    | multicast                    |
| detail       | detail                       |
| vdc-all      | vdc-all                      |

## Command Mode

- /exec

# show tech-support forwarding l3 multicast detail

show tech-support forwarding l3 multicast detail

## Syntax Description

|              |                              |
|--------------|------------------------------|
| show         |                              |
| tech-support | tech-support information     |
| forwarding   | forwarding debug information |
| l3           | layer 3 debug information    |
| multicast    | multicast                    |
| detail       | detail                       |

## Command Mode

- /exec

# show tech-support forwarding l3 multicast vdc-all

show tech-support forwarding l3 multicast vdc-all

## Syntax Description

|              |                              |
|--------------|------------------------------|
| show         |                              |
| tech-support | tech-support information     |
| forwarding   | forwarding debug information |
| l3           | layer 3 debug information    |
| multicast    | multicast                    |
| vdc-all      | vdc-all                      |

## Command Mode

- /exec

# show tech-support forwarding l3 unicast

show tech-support forwarding l3 unicast [ module <module> ] [ list ]

## Syntax Description

|               |  |
|---------------|--|
| show          |  |
| tech-support  | tech-support information                             |
| forwarding    | forwarding debug information                         |
| l3            | layer 3 debug information                            |
| unicast       | unicast  |
| module        | (Optional) module                                    |
| <i>module</i> | (Optional) module number                             |
| list          | (Optional) list the commands, without executing them |

## Command Mode

- /exec

# show tech-support forwarding l3 unicast detail

show tech-support forwarding l3 unicast detail [ module <module> ] [ list ]

## Syntax Description

|               |  |
|---------------|--|
| show          |  |
| tech-support  | tech-support information                             |

| l3            | layer 3 debug information                      |
| unicast       | unicast  |
| detail        | detailed show tech including platform commands |
| vdc-all       | vdc-all  |
| module        | (Optional) module                              |
| <i>module</i> | (Optional) module number                       |

## Command Mode

- /exec

# show tech-support forwarding l3 unicast vdc-all

show tech-support forwarding l3 unicast vdc-all [ module <module> ]

## Syntax Description

|               |                              |
|---------------|------------------------------|
| show          |                              |
| tech-support  | tech-support information     |
| forwarding    | forwarding debug information |
| l3            | layer 3 debug information    |
| unicast       | unicast                      |
| vdc-all       | vdc-all                      |
| module        | (Optional) module            |
| <i>module</i> | (Optional) module number     |

## Command Mode

- /exec

# show tech-support forwarding mpls

show tech-support forwarding mpls [ module <module> ] [ evpn ]

## Syntax Description

|               |                                      |
|---------------|--------------------------------------|
| show          |                                      |
| tech-support  | tech-support information             |
| forwarding    | forwarding debug information         |
| mpls          | mpls related information             |
| module        | (Optional) module                    |
| <i>module</i> | (Optional) module number             |
| evpn          | (Optional) evpn related tech support |

## Command Mode

- /exec

# show tech-support forwarding multicast

show tech-support forwarding multicast [ module <module> ]

## Syntax Description

|               |                              |
|---------------|------------------------------|
| show          |                              |
| tech-support  | tech-support information     |
| forwarding    | forwarding debug information |
| multicast     | multicast                    |
| module        | (Optional) module            |
| <i>module</i> | (Optional) module number     |

## Command Mode

- /exec

# show tech-support forwarding multicast nat

show tech-support forwarding multicast nat

## Syntax Description

|              |                              |
|--------------|------------------------------|
| show         |                              |
| tech-support | tech-support information     |
| forwarding   | forwarding debug information |
| multicast    | multicast                    |
| nat          | Inat/Enat debug information  |

## Command Mode

- /exec

## show tech-support forwarding srv6

show tech-support forwarding srv6 [ module <module> ]

### Syntax Description

|               |                              |
|---------------|------------------------------|
| show          |                              |
| tech-support  | tech-support information     |
| forwarding    | forwarding debug information |
| srv6          | srv6 debug information       |
| module        | (Optional) module            |
| <i>module</i> | (Optional) module number     |

### Command Mode

- /exec

# show tech-support frequency synchronization

show tech-support frequency synchronization

## Syntax Description

|                 |   |
|-----------------|---|
| show            | Show running system information   |
| tech-support    | Gather information for troubleshooting                                    |
| frequency       | Gather detailed information for frequency synchronization troubleshooting |
| synchronization | Gather detailed information for frequency synchronization troubleshooting |

## Command Mode

- /exec

# show tech-support fspf

show tech-support fspf [ commands ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                                |
| tech-support | Gather information for troubleshooting                         |
| fspf         | Show information for fspf technical support                    |
| commands     | (Optional) Show commands run as part of fspf technical support |

## Command Mode

- /exec

# show tech-support fsync\_mgr

show tech-support fsync\_mgr [ detail ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                  |
| tech-support | Gather information for trouble shooting          |
| fsync_mgr    | Gather information for fsync_mgr troubleshooting |
| detail       | (Optional) Show more details                     |

## Command Mode

- /exec

# show tech-support gold

show tech-support gold

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| gold         | Show gold tech-support information      |

## Command Mode

- /exec

# show tech-support gpixm

show tech-support gpixm

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                             |
| tech-support | Gather information for troubleshooting                      |
| gpixm        | Gather detailed information for GLOBAL-PIXM troubleshooting |

## Command Mode

- /exec

# show tech-support ha

show tech-support ha [ commands ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information  |
| tech-support | Gather information for troubleshooting                                     |
| ha           | Gather detailed information for HA troubleshooting                         |
| commands     | (Optional) Show commands executed as part of show tech-support ha commands |

## Command Mode

- /exec

# show tech-support ha module

show tech-support ha module <module>

## Syntax Description

|               |  |
|---------------|--|
| show          | Show running system information                    |
| tech-support  | Gather information for troubleshooting             |
| ha            | Gather detailed information for HA troubleshooting |
| module        | Gather info related to a module                    |
| <i>module</i> | Enter module number                                |

## Command Mode

- /exec

# show tech-support ha\_short

show tech-support ha\_short [ commands ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information  |
| tech-support | Gather information for troubleshooting                                     |
| ha_short     | Gather shortened version of HA tech-support for troubleshooting            |
| commands     | (Optional) Show commands executed as part of show tech-support ha commands |

## Command Mode

- /exec

# show tech-support ha standby

show tech-support ha standby [ commands ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information  |
| tech-support | Gather information for troubleshooting                                     |
| ha           | Gather detailed information for HA troubleshooting                         |
| standby      | Gather detailed information for HA troubleshooting from standby supervisor |
| commands     | (Optional) Show commands executed as part of show tech-support ha commands |

## Command Mode

- /exec

# show tech-support hardware-telemetry

show tech-support hardware-telemetry

## Syntax Description

|                    |  |
|--------------------|--|
| show               | Show running system information        |
| tech-support       | Gather information for troubleshooting |
| hardware-telemetry | Hardware Telemetry Information         |

## Command Mode

- /exec

# show tech-support hsrp

show tech-support hsrp

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| hsrp         | Show hsrp tech-support information      |

## Command Mode

- /exec

# show tech-support hsrp brief

show tech-support hsrp brief

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| hsrp         | Show hsrp tech-support information      |
| brief        | Show tech-support information in brief  |

## Command Mode

- /exec

# show tech-support icam

show tech-support icam [ detail ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| icam         | icam - TCAM Analytics                   |
| detail       | (Optional) Show more details            |

## Command Mode

- /exec

# show tech-support icmpv6

show tech-support icmpv6 [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| icmpv6       | Display Icmpv6 information             |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support im

show tech-support im

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                    |
| tech-support | Gather information for troubleshooting             |
| im           | Gather detailed information for IM troubleshooting |

## Command Mode

- /exec

# show tech-support imp

show tech-support imp

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| imp          | IMP commands                           |

## Command Mode

- /exec

# show tech-support inband counters

show tech-support inband counters

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information               |
| tech-support | Gather information for troubleshooting        |
| inband       | Gather all information about inband data path |
| counters     | Gather all counters in inband data path       |

## Command Mode

- /exec

# show tech-support include-time

show tech-support include-time

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                                    |
| tech-support | Gather information for troubleshooting                             |
| include-time | Gather tech-support and capture time taken to execute each command |

## Command Mode

- /exec

# show tech-support install

show tech-support install

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                               |
| tech-support | Gather information for trouble shooting                       |
| install      | Gather detailed information for rpm/package install operation |

## Command Mode

- /exec

# show tech-support interface-vlan

show tech-support interface-vlan

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                                |
| tech-support   | Gather information for troubleshooting                         |
| interface-vlan | Gather detailed information for interface-vlan troubleshooting |

## Command Mode

- /exec

# show tech-support interfaces all

show tech-support interfaces all

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                            |
| tech-support | Gather information for troubleshooting                     |
| interfaces   | Gather information for interfaces troubleshooting          |
| all          | Gather detailed information for interfaces troubleshooting |

## Command Mode

- /exec

# show tech-support ip

show tech-support ip [ brief | static-routes ]

## Syntax Description

|               |  |
|---------------|--|
| show          | Show running system information        |
| tech-support  | Gather information for troubleshooting |
| ip            | Display IP information                 |
| brief         | (Optional) Brief information           |
| static-routes | (Optional) Static-Routes information   |

## Command Mode

- /exec

# show tech-support ip igmp

show tech-support ip igmp [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| ip           | Display IP information                 |
| igmp         | Display IGMP status and configuration  |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support ip igmp snooping

show tech-support ip igmp snooping [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| ip           | Display IP information                 |
| igmp         | Display IGMP status and configuration  |
| snooping     | IGMP Snooping information              |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support ip msdp

show tech-support ip msdp [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| ip           | Display IP information                 |
| msdp         | Display MSDP status and configuration  |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support ip pim

show tech-support ip pim [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| ip           | Display IP information                 |
| pim          | PIM global configuration commands      |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support ipqos

show tech-support ipqos [ server-only ] [ all ] [ snmp ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information   |
| tech-support | Gather information for troubleshooting  |
| server-only  | (Optional) Dump the tech-support information only from IP QoS Manager server only             |
| all          | (Optional) Dump the tech-support information IP QoS Manager plus brief summary of system      |
| snmp         | (Optional) Dump the tech-support information only from IP QoS Manager server only (SNMP only) |

## Command Mode

- /exec

# show tech-support ipv6

show tech-support ipv6 [ brief | static-routes ]

## Syntax Description

|               |  |
|---------------|--|
| show          | Show running system information        |
| tech-support  | Gather information for troubleshooting |
| ipv6          | Display IPv6 information               |
| brief         | (Optional) Brief information           |
| static-routes | (Optional) Static-Routes information   |

## Command Mode

- /exec

# show tech-support ipv6 mfwd

show tech-support ipv6 mfwd [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information              |
| tech-support | Gather information for troubleshooting       |
| ipv6         | Display IPv6 information                     |
| mfwd         | Display MCASTFWD v6 status and configuration |
| brief        | (Optional) Brief information                 |

## Command Mode

- /exec

# show tech-support ipv6 mld

show tech-support ipv6 mld [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                  |
| tech-support | Gather information for troubleshooting           |
| ipv6         | Display IPv6 information                         |
| mld          | Display Multicast Listener Discovery information |
| brief        | (Optional) Brief information                     |

## Command Mode

- /exec

# show tech-support ipv6 mld snooping

show tech-support ipv6 mld snooping [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                  |
| tech-support | Gather information for troubleshooting           |
| ipv6         | Display IPv6 information                         |
| mld          | Display Multicast Listener Discovery information |
| snooping     | MLD Snooping information                         |
| brief        | (Optional) Brief information                     |

## Command Mode

- /exec

# show tech-support ipv6 multicast

show tech-support ipv6 multicast

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| ipv6         | Display IPv6 information               |
| multicast    | Display V6 Multicast information       |

## Command Mode

- /exec

# show tech-support ipv6 pim

show tech-support ipv6 pim [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| ipv6         | Display IPv6 information               |
| pim          | PIM6 global configuration commands     |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support isis

show tech-support isis [ brief ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| isis         | IS-IS events                            |
| brief        | (Optional) Brief information            |

## Command Mode

- /exec

# show tech-support issu

show tech-support issu [ commands ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information   |
| tech-support | Gather information for troubleshooting                                      |
| issu         | Gather detailed information for issu troubleshooting                        |
| commands     | (Optional) Show commands executed as part of show tech-support issu command |

## Command Mode

- /exec

# show tech-support kstack

show tech-support kstack

## Syntax Description

|              |                          |
|--------------|--------------------------|
| show         |                          |
| tech-support | tech-support information |
| kstack       | kstack information       |

## Command Mode

- /exec

# show tech-support l2

show tech-support l2

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                         |
| tech-support | Gather information for troubleshooting                  |
| l2           | Gather detailed information for layer 2 troubleshooting |

## Command Mode

- /exec

# show tech-support l2fm

show tech-support l2fm

## Syntax Description

|              |   |
|--------------|---|
| show         | show tech-support                       |
| tech-support | Gather information for trouble-shooting |
| l2fm         | l2fm debug info                         |

## Command Mode

- /exec

# show tech-support l2fm clients

show tech-support l2fm clients [ module <module> ]

## Syntax Description

|               |  |
|---------------|--|
| show          | Show running system information                          |
| tech-support  | Gather information for troubleshooting                   |
| l2fm          | l2fm debug info  |
| clients       | debug info of l2fm clients only running on linecard(mtm) |
| module        | (Optional) Slot number                                   |
| <i>module</i> | (Optional) Module Number                                 |

## Command Mode

- /exec

# show tech-support l2fm detail

show tech-support l2fm detail [ module <module> ]

## Syntax Description

|               |   |
|---------------|---|
| show          | Show running system information           |
| tech-support  | Gather information for troubleshooting    |
| l2fm          | l2fm debug info                           |
| detail        | All info related to l2fm                  |
| module        | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| <i>module</i> | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |

## Command Mode

- /exec

# show tech-support l2fm l2dbg

show tech-support l2fm l2dbg [ module <module> ]

## Syntax Description

|               |  |
|---------------|--|
| show          | show tech-support  |
| tech-support  | Gather information for trouble-shooting                      |
| l2fm          | l2fm debug info  |
| l2dbg         | tech support capturing additional debug info for l2fm(l2dbg) |
| module        | (Optional) Slot number                                       |
| <i>module</i> | (Optional) Module Number                                     |

## Command Mode

- /exec

# show tech-support l2fm l2dbg

show tech-support l2fm l2dbg [ module <module> ]

## Syntax Description

|               |  |
|---------------|--|
| show          | show tech-support  |
| tech-support  | Gather information for trouble-shooting                      |
| l2fm          | l2fm debug info  |
| l2dbg         | tech support capturing additional debug info for l2fm(l2dbg) |
| module        | (Optional) Slot number                                       |
| <i>module</i> | (Optional) Module Number                                     |

## Command Mode

- /exec

# show tech-support l2rib

show tech-support l2rib

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| l2rib        | Display L2RIB information              |

## Command Mode

- /exec

# show tech-support l3vm

show tech-support l3vm [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| l3vm         | Display VRF information                |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support l3vpn

show tech-support l3vpn [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| l3vpn        | BGP l3vpn information                  |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support lacp

show tech-support lacp [ all ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                                       |
| tech-support | Gather information for troubleshooting                                |
| lacp         | Gather detailed information for LACP component                        |
| all          | (Optional) Gather detailed information of LACP and related components |

## Command Mode

- /exec

# show tech-support ldap

show tech-support ldap

## Syntax Description

|              |  |
|--------------|--|
| show         | show tech-support                      |
| tech-support | Gather information for troubleshooting |
| ldap         | Display ldap information               |

## Command Mode

- /exec

# show tech-support license

show tech-support license

## Syntax Description

|              |  |
|--------------|--|
| show         | show commands                          |
| tech-support | Gather information for troubleshooting |
| license      | Display licensing information          |

## Command Mode

- /exec

# show tech-support lim

show tech-support lim

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                     |
| tech-support | Gather information for troubleshooting              |
| lim          | Gather detailed information for LIM troubleshooting |

## Command Mode

- /exec

# show tech-support lisp

show tech-support lisp [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| lisp         | LISP show commands                     |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support lldp

show tech-support lldp

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                      |
| tech-support | Gather information for troubleshooting               |
| lldp         | Gather detailed information for LLDP troubleshooting |

## Command Mode

- /exec

# show tech-support logging

show tech-support logging

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                         |
| tech-support | Gather information for troubleshooting                  |
| logging      | Show information on logging for technical support staff |

## Command Mode

- /exec

# show tech-support m2rib

show tech-support m2rib

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                       |
| tech-support | Gather information for troubleshooting                |
| m2rib        | Gather detailed information for M2RIB troubleshooting |

## Command Mode

- /exec

# show tech-support macsec

show tech-support macsec

## Syntax Description

|              |   |
|--------------|---|
| tech-support | Gather information for troubleshooting        |
| macsec       | Gather information for macsec troubleshooting |

## Command Mode

- /exec

# show tech-support macsec detail

show tech-support macsec detail [ module <module> ]

## Syntax Description

|               |   |
|---------------|---|
| show          | Show running system information           |
| tech-support  | Gather information for troubleshooting    |
| macsec        | macsec debug info                         |
| detail        | All info related to MACsec                |
| module        | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| <i>module</i> | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |

## Command Mode

- /exec

# show tech-support mfwd

show tech-support mfwd [ brief ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information           |
| tech-support | Gather information for troubleshooting    |
| mfwd         | Display MCASTFWD status and configuration |
| brief        | (Optional) Brief information              |

## Command Mode

- /exec

# show tech-support mmode

show tech-support mmode

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information              |
| tech-support | Gather information for troubleshooting       |
| mmode        | Gather information for troubleshooting mmode |

## Command Mode

- /exec

# show tech-support module

show tech-support module <module>

## Syntax Description

|               |  |
|---------------|--|
| show          | Show running system information        |
| tech-support  | Gather information for troubleshooting |
| module        | Gather info related to a module        |
| <i>module</i> | Enter module number                    |

## Command Mode

- /exec

# show tech-support module all

show tech-support module all

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                  |
| tech-support | Gather information for troubleshooting           |
| module       | Gather info related to a module                  |
| all          | Gather info related to all modules in the system |

## Command Mode

- /exec

# show tech-support monitor

show tech-support monitor

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                         |
| tech-support | Gather information for troubleshooting                  |
| monitor      | Gather detailed information for monitor troubleshooting |

## Command Mode

- /exec

# show tech-support monitor erspan

show tech-support monitor erspan

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                                |
| tech-support | Gather information for troubleshooting                         |
| monitor      | Gather detailed information for monitor troubleshooting        |
| erspan       | Gather detailed information for erspan session troubleshooting |

## Command Mode

- /exec

# show tech-support monitorc-all

show tech-support monitorc-all

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                             |
| tech-support | Gather information for troubleshooting                      |
| monitorc-all | Gather detailed information for LC MONITORC troubleshooting |

## Command Mode

- /exec

# show tech-support mpls manager

```
{ show tech-support mpls manager }
```

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| mpls         | MPLS                                   |
| manager      | MPLS-Mgr                               |

## Command Mode

- /exec

# show tech-support mpls oam

show tech-support mpls oam

## Syntax Description

|              |                                       |
|--------------|---------------------------------------|
| show         | Show running system information       |
| tech-support | Gather MPLS OAM information           |
| mpls         | Display MPLS status and configuration |
| oam          | Gather MPLS OAM information           |

## Command Mode

- /exec

# show tech-support mpls static

show tech-support mpls static [ brief ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                             |
| tech-support | Gather information for troubleshooting                      |
| mpls         | Display MPLS status and configuration                       |
| static       | Display STATIC configuration and status for troubleshooting |
| brief        | (Optional) Brief information                                |

## Command Mode

- /exec

# show tech-support mpls strip

show tech-support mpls strip

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information              |
| tech-support | Gather information for trouble shooting      |
| mpls         | MPLS   |
| strip        | Gather MPLS label strip troubleshooting info |

## Command Mode

- /exec

# show tech-support mpls switching

show tech-support mpls switching

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information           |
| tech-support | Gather MPLS switching information         |
| mpls         | Display MPLS status and configuration     |
| switching    | Display the MPLS label switching database |

## Command Mode

- /exec

# show tech-support mpls fwd

show tech-support mpls fwd [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| mplsfwd      | Display MPLS forwarding information    |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support multicast-vxlan-evpn

show tech-support multicast-vxlan-evpn

## Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information         |
| tech-support         | Gather information for trouble shooting |
| multicast-vxlan-evpn | Multicast VxLAN EVPN feature            |

## Command Mode

- /exec

# show tech-support multicast

show tech-support [ ip | ipv4 ] multicast

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| ip           | (Optional) Display IP information      |
| ipv4         | (Optional) Display IP information      |
| multicast    | Display V4 Multicast information       |

## Command Mode

- /exec

# show tech-support mvpn

show tech-support mvpn [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| mvpn         | Display Multicast VPN information      |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support nat

show tech-support nat

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information            |
| tech-support | Gather information for troubleshooting     |
| nat          | Gather information for troubleshooting NAT |

## Command Mode

- /exec

# show tech-support nbm

show tech-support nbm [ brief ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble-shooting |
| nbm          | Non Blocking Multicast                  |
| brief        | (Optional) Minimal information          |

## Command Mode

- /exec

# show tech-support nbm group

show tech-support nbm group <grp> [ source <src> ] [ vrf { <vrf-name> | <nbm-vrf-known-name> | all } ]

## Syntax Description

|                           |   |
|---------------------------|---|
| show                      | Show running system information         |
| tech-support              | Gather information for trouble-shooting |
| nbm                       | Non Blocking Multicast                  |
| group                     | Multicast group                         |
| <i>grp</i>                | Multicast group address                 |
| source                    | (Optional) Source IP address            |
| <i>src</i>                | (Optional) Source unicast IP address    |
| vrf                       | (Optional) Display per-VRF information  |
| all                       | (Optional) Display all VRFs             |
| <i>vrf-name</i>           | (Optional) VRF name                     |
| <i>nbm-vrf-known-name</i> | (Optional) NBM VRF Name                 |

## Command Mode

- /exec

# show tech-support netflow

show tech-support netflow [ brief ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| netflow      | Show NetFlow tech-support information   |
| brief        | (Optional) Brief information            |

## Command Mode

- /exec

# show tech-support netstack

show tech-support netstack

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                 |
| tech-support | Gather information for troubleshooting          |
| netstack     | Gather information for NETSTACK troubleshooting |

## Command Mode

- /exec

# show tech-support netstack detail

show tech-support netstack detail

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                          |
| tech-support | Gather information for troubleshooting                   |
| netstack     | Gather information for NETSTACK troubleshooting          |
| detail       | Gather detailed information for NETSTACK troubleshooting |

## Command Mode

- /exec

# show tech-support nexus9000v

show tech-support nexus9000v

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information   |
| tech-support | Gather information for trouble shooting   |
| nexus9000v   | Gather information for Nexus 9000v virtualization infrastructure trouble shooting |

## Command Mode

- /exec

# show tech-support ngoam

show tech-support ngoam

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble-shooting |
| ngoam        | ngoam                                   |

## Command Mode

- /exec

# show tech-support npacl

show tech-support npacl [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| npacl        | Display npacl information              |
| brief        | (Optional) Brief npacl information     |

## Command Mode

- /exec

# show tech-support npv

show tech-support npv

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                  |
| tech-support | Gather information for troubleshooting           |
| npv          | Show information for NPV technical support staff |

## Command Mode

- /exec

# show tech-support ns

show tech-support ns

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                |
| tech-support | Gather information for troubleshooting         |
| ns           | Gather detailed information for northstar asic |

## Command Mode

- /exec

# show tech-support ntp

show tech-support ntp

## Syntax Description

|              |   |
|--------------|---|
| show         | show running system information             |
| tech-support | Gather information for trouble shooting     |
| ntp          | Gather information for NTP trouble shooting |

## Command Mode

- /exec

# show tech-support nve

show tech-support nve

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| nve          | Display NVE information                 |

## Command Mode

- /exec

# show tech-support nxapi

show tech-support nxapi

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                       |
| tech-support | Gather information for troubleshooting                |
| nxapi        | Gather detailed information for nxapi troubleshooting |

## Command Mode

- /exec

# show tech-support nxsdk

show tech-support nxsdk

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| nxsdk        | NXOS SDK                               |

## Command Mode

- /exec

# show tech-support object-store

show tech-support object-store

## Syntax Description

|              |   |
|--------------|---|
| show         | Show Object Store   |
| tech-support | Gather information for troubleshooting                              |
| object-store | Gather information from object store for Controller troubleshooting |

## Command Mode

- /exec

# show tech-support ofm

show tech-support ofm [ server-only ] [ flow-interface ] [ all ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information   |
| tech-support   | Gather information for troubleshooting  |
| server-only    | (Optional) Dump the tech-support information only from Overlay Flow Manager server only |
| flow-interface | (Optional) Dump the tech-support info for OFM ELTM IFTMC and SDK components             |
| all            | (Optional) Dump the tech-support information OFM plus brief summary of system           |

## Command Mode

- /exec

# show tech-support openflow

show tech-support openflow [ brief | detailed ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| openflow     | Show tech support for OpenFlow          |
| brief        | (Optional) Brief information            |
| detailed     | (Optional) Detailed information         |

## Command Mode

- /exec

# show tech-support openflow platform

show tech-support openflow platform

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| openflow     | openflow component                     |
| platform     | openflow platform components           |

## Command Mode

- /exec

# show tech-support ospf

show tech-support ospf [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| ospf         | Display OSPF status and configuration  |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support ospfv3

show tech-support ospfv3 [ brief ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for troubleshooting  |
| ospfv3       | Display OSPFv3 status and configuration |
| brief        | (Optional) Brief information            |

## Command Mode

- /exec

# show tech-support otv isis

show tech-support otv isis [ brief ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| otv          | IS-IS events                            |
| isis         | IS-IS events                            |
| brief        | (Optional) Brief information            |

## Command Mode

- /exec

# show tech-support page

show tech-support page [ time-optimized ] [ forced ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information  |
| tech-support   | Gather information for troubleshooting                                     |
| page           | Page through the output  |
| time-optimized | (Optional) Gather tech-support faster, requires more memory and disk space |
| forced         | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                                  |

## Command Mode

- /exec

# show tech-support patch

show tech-support patch

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                       |
| tech-support | Gather information for troubleshooting                |
| patch        | Gather detailed information for patch troubleshooting |

## Command Mode

- /exec

# show tech-support pbr

{ show tech-support pbr }

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                |
| tech-support | Gather information for troubleshooting         |
| pbr          | Display Policy Based Routing (PBR) information |

## Command Mode

- /exec

# show tech-support pfstat

show tech-support pfstat

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                        |
| tech-support | Gather information for troubleshooting                 |
| pfstat       | Gather detailed information for pfstat troubleshooting |

## Command Mode

- /exec

# show tech-support pixm-all

show tech-support pixm-all

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                      |
| tech-support | Gather information for troubleshooting               |
| pixm-all     | Gather detailed information for PIXM troubleshooting |

## Command Mode

- /exec

# show tech-support pixm

show tech-support pixm

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                                |
| tech-support | Gather information for troubleshooting                         |
| pixm         | Gather detailed information for vdc-local-PIXM troubleshooting |

## Command Mode

- /exec

# show tech-support pixmc-all

show tech-support pixmc-all

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                          |
| tech-support | Gather information for troubleshooting                   |
| pixmc-all    | Gather detailed information for LC PIXMC troubleshooting |

## Command Mode

- /exec

# show tech-support pktmgr

show tech-support pktmgr [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| pktmgr       | Display Packet Manager information     |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support platform-sdk

show tech-support platform-sdk

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                              |
| tech-support | Gather information for troubleshooting                       |
| platform-sdk | Gather detailed information for platform-sdk troubleshooting |

## Command Mode

- /exec

# show tech-support platform

show tech-support platform

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| platform     | Get platform related information       |

## Command Mode

- /exec

# show tech-support plcmgr

show tech-support plcmgr [ detail ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                   |
| tech-support | Gather information for troubleshooting            |
| plcmgr       | Policy Manager                                    |
| detail       | (Optional) Print more details (e.g. messages,etc) |

## Command Mode

- /exec

# show tech-support pltfm-config

show tech-support pltfm-config

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                              |
| tech-support | Gather information for troubleshooting                       |
| pltfm-config | Gather detailed information for pltfm-config troubleshooting |

## Command Mode

- /exec

# show tech-support pnp

show tech-support pnp

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information          |
| tech-support | Gather information for troubleshooting   |
| pnp          | Show Technical support for Plug and Play |

## Command Mode

- /exec

# show tech-support poe

show tech-support poe

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information             |
| tech-support | Gather information for troubleshooting      |
| poe          | Gather information for PoE trouble shooting |

## Command Mode

- /exec

# show tech-support port-channel

show tech-support port-channel

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                              |
| tech-support | Gather information for troubleshooting                       |
| port-channel | Gather detailed information for port channel troubleshooting |

## Command Mode

- /exec

# show tech-support port-client-all

show tech-support port-client-all

## Syntax Description

|                 |  |
|-----------------|--|
| show            | Show running system information                                |
| tech-support    | Gather information for troubleshooting                         |
| port-client-all | Gather detailed information for LC port client troubleshooting |

## Command Mode

- /exec

# show tech-support port-profile

show tech-support port-profile

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                      |
| tech-support | Gather information for troubleshooting               |
| port-profile | Gather information for troubleshooting port-profiles |

## Command Mode

- /exec

# show tech-support port-security

show tech-support port-security

## Syntax Description

|               |   |
|---------------|---|
| show          | Show running system information         |
| tech-support  | Gather information for trouble shooting |
| port-security | Port security related command           |

## Command Mode

- /exec

# show tech-support port

show tech-support port

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                              |
| tech-support | Gather information for troubleshooting                       |
| port         | Gather detailed information for port manager troubleshooting |

## Command Mode

- /exec

# show tech-support private-vlan

show tech-support private-vlan

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                              |
| tech-support | Gather information for troubleshooting                       |
| private-vlan | Gather detailed information for private-vlan troubleshooting |

## Command Mode

- /exec

# show tech-support pss

show tech-support pss

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                     |
| tech-support | Gather information for troubleshooting              |
| pss          | Gather detailed information for PSS troubleshooting |

## Command Mode

- /exec

# show tech-support ptp

show tech-support ptp

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                     |
| tech-support | Gather information for troubleshooting              |
| ptp          | Gather detailed information for PTP troubleshooting |

## Command Mode

- /exec

# show tech-support radius

show tech-support radius

## Syntax Description

|              |  |
|--------------|--|
| show         | show tech-support                      |
| tech-support | Gather information for troubleshooting |
| radius       | Display radius information             |

## Command Mode

- /exec

# show tech-support rib

show tech-support rib

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                     |
| tech-support | Gather information for troubleshooting              |
| rib          | Gather detailed information for rib troubleshooting |

## Command Mode

- /exec

# show tech-support rip

show tech-support rip [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| rip          | Display RIP routing protocol status    |
| brief        | (Optional) Brief information           |

## Command Mode

- /exec

# show tech-support routing

show tech-support routing [ ip | ipv4 ] [ unicast ] [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                |
| tech-support | Gather information for troubleshooting         |
| routing      | Display routing information                    |
| ip           | (Optional) Display IP information              |
| ipv4         | (Optional) Display IP information              |
| unicast      | (Optional) Display unicast routing information |
| brief        | (Optional) Brief information                   |

## Command Mode

- /exec

# show tech-support routing ipv6

show tech-support routing ipv6 [ unicast ] [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                |
| tech-support | Gather information for troubleshooting         |
| routing      | Display routing information                    |
| ipv6         | Display IPv6 information                       |
| unicast      | (Optional) Display unicast routing information |
| brief        | (Optional) Brief information                   |

## Command Mode

- /exec

# show tech-support routing ipv6 multicast

show tech-support routing ipv6 multicast [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| routing      | Display routing information            |
| ipv6         | Display IPv6 information               |
| multicast    | Display V6 Multicast information       |
| brief        | (Optional) Display brief information   |

## Command Mode

- /exec

# show tech-support routing multicast

show tech-support routing [ ip | ipv4 ] multicast [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| routing      | Display routing information            |
| ip           | (Optional) Display IP information      |
| ipv4         | (Optional) Display IP information      |
| multicast    | Display V4 Multicast information       |
| brief        | (Optional) Display brief information   |

## Command Mode

- /exec

# show tech-support rpm

```
{ show tech-support rpm }
```

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                |
| tech-support | Gather information for troubleshooting         |
| rpm          | Display Route Policy Manager (RPM) information |

## Command Mode

- /exec

# show tech-support rscn

show tech-support rscn [ vsan <i0> ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                                    |
| tech-support | Gather information for troubleshooting                             |
| vsan         | (Optional) Show technical support information for a specified vsan |
| <i>i0</i>    | (Optional) VSAN id range   |

## Command Mode

- /exec

# show tech-support sal

show tech-support sal

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| sal          | Show SAL tech-support information       |

## Command Mode

- /exec

# show tech-support san-port-channel

show tech-support san-port-channel

## Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information                                  |
| tech-support     | Gather information for troubleshooting                           |
| san-port-channel | Gather detailed information for san port channel troubleshooting |

## Command Mode

- /exec

# show tech-support san

show tech-support san

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information             |
| tech-support | Gather information for troubleshooting      |
| san          | Gather information for SAN trouble shooting |

## Command Mode

- /exec

# show tech-support satmgr

show tech-support satmgr

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                        |
| tech-support | Gather information for troubleshooting                 |
| satmgr       | Gather detailed information for satmgr troubleshooting |

## Command Mode

- /exec

# show tech-support security

show tech-support security

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information            |
| tech-support | Gather information for troubleshooting     |
| security     | show tech support information for security |

## Command Mode

- /exec

# show tech-support segment-routing

show tech-support segment-routing

## Syntax Description

|                 |                                 |
|-----------------|---------------------------------|
| show            | Show running system information |
| tech-support    | Gather tech-support information |
| segment-routing | Segment-routing tech-support    |

## Command Mode

- /exec

# show tech-support services

show tech-support services [ detail ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| services     | Services                                |
| detail       | (Optional) Show more details            |

## Command Mode

- /exec

# show tech-support session-mgr

show tech-support session-mgr

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                        |
| tech-support | Gather information for troubleshooting                 |
| session-mgr  | Gather information for troubleshooting session manager |

## Command Mode

- /exec

# show tech-support sflow

show tech-support sflow

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information               |
| tech-support | Gather information for troubleshooting        |
| sflow        | Gather detailed information for sflow feature |

## Command Mode

- /exec

# show tech-support single-jericho

show tech-support single-jericho

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                                |
| tech-support   | Gather information for troubleshooting                         |
| single-jericho | Gather detailed information for single-jericho troubleshooting |

## Command Mode

- /exec

# show tech-support sksd

show tech-support sksd

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| sksd         | show tech support information for sksd |

## Command Mode

- /exec

# show tech-support sla responder

show tech-support sla responder [ brief | detail ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| sla          | Service Level Agreement (SLA)           |
| responder    | Configure sla-responder tech support    |
| brief        | (Optional) Show less details            |
| detail       | (Optional) Show more details            |

## Command Mode

- /exec

# show tech-support sla sender

show tech-support sla sender [ brief | detail ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| sla          | Service Level Agreement (SLA)           |
| sender       | Configure sla-sender tech support       |
| brief        | (Optional) Show less details            |
| detail       | (Optional) Show more details            |

## Command Mode

- /exec

# show tech-support sla twamp-server

show tech-support sla twamp-server [ brief | detail ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| sla          | Service Level Agreement (SLA)           |
| twamp-server | Configure sla-twamp-server tech support |
| brief        | (Optional) Show less details            |
| detail       | (Optional) Show more details            |

## Command Mode

- /exec

# show tech-support slowdrain

show tech-support slowdrain [ commands ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information  |
| tech-support | Gather information for troubleshooting   |
| slowdrain    | Gather detailed information for slowdrain troubleshooting                        |
| commands     | (Optional) Show commands executed as part of show tech-support slowdrain command |

## Command Mode

- /exec

# show tech-support smm

show tech-support smm

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| smm          | Shared memory                          |

## Command Mode

- /exec

# show tech-support snmp

show tech-support snmp

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| snmp         | Gather info related to snmp            |

## Command Mode

- /exec

# show tech-support sockets

show tech-support sockets [ brief ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information          |
| tech-support | Gather information for troubleshooting   |
| sockets      | Display sockets status and configuration |
| brief        | (Optional) Brief information             |

## Command Mode

- /exec

# show tech-support spm

show tech-support spm [ <application> ] [ detail ]

## Syntax Description

|                    |   |
|--------------------|---|
| show               | Show running system information                   |
| tech-support       | Gather information for troubleshooting            |
| spm                | Service Policy Manager                            |
| <i>application</i> | (Optional) Specify an application                 |
| detail             | (Optional) Print more details (e.g. messages,etc) |

## Command Mode

- /exec

# show tech-support srte

show tech-support srte

## Syntax Description

|              |                                 |
|--------------|---------------------------------|
| show         | Show running system information |
| tech-support | Gather SRTE information         |
| srte         | Segment-Routing Traffic Eng     |

## Command Mode

- /exec

# show tech-support statsclient

show tech-support statsclient [ module <module> ]

## Syntax Description

|               |  |
|---------------|--|
| show          | Show running system information              |
| tech-support  | Gather information for troubleshooting       |
| statsclient   | Gather statsclient tech-support              |
| module        | (Optional) Gather info related to one module |
| <i>module</i> | (Optional) Enter module number               |

## Command Mode

- /exec

# show tech-support stp

show tech-support stp

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                     |
| tech-support | Gather information for troubleshooting              |
| stp          | Gather detailed information for STP troubleshooting |

## Command Mode

- /exec

# show tech-support sup-filesys

show tech-support sup-filesys

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| sup-filesys  | File-sys related issue                 |

## Command Mode

- /exec

# show tech-support super-bridging

show tech-support super-bridging

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                                |
| tech-support   | Gather information for troubleshooting                         |
| super-bridging | Gather detailed information for super-bridging troubleshooting |

## Command Mode

- /exec

# show tech-support sysmgr

show tech-support sysmgr [ commands ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                                       |
| tech-support | Gather information for troubleshooting                                |
| sysmgr       | Gather detailed information for sysmgr troubleshooting                |
| commands     | (Optional) Show commands executed as part of show tech-support sysmgr |

## Command Mode

- /exec

# show tech-support tacacs

show tech-support tacacs +

## Syntax Description

|              |  |
|--------------|--|
| show         | show tech-support                      |
| tech-support | Gather information for troubleshooting |

## Command Mode

- /exec

# show tech-support telemetry

show tech-support telemetry

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                  |
| tech-support | Gather information for troubleshooting           |
| telemetry    | Gather information for telemetry troubleshooting |

## Command Mode

- /exec

# show tech-support track

show tech-support track

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| track        | Show track tech-support information     |

## Command Mode

- /exec

# show tech-support trm

show tech-support trm

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| trm          | Tenant Routed Multicast information    |

## Command Mode

- /exec

# show tech-support tunnel-encryption

show tech-support tunnel-encryption [ detail ]

## Syntax Description

|                   |  |
|-------------------|--|
| tech-support      | Gather information for troubleshooting                   |
| tunnel-encryption | Gather information for Tunnel-Encryption troubleshooting |
| detail            | (Optional) Detailed information                          |

## Command Mode

- /exec

# show tech-support tunnel

show tech-support tunnel [ { commands | detail [ commands1 ] } ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information  |
| tech-support | Gather information for troubleshooting                                     |
| tunnel       | Gather detailed information for tunnel troubleshooting                     |
| commands     | (Optional) Lists commands under 'show tunnel tech-support' command         |
| detail       | (Optional) Gather detailed information for tunnel troubleshooting          |
| commands1    | (Optional) Lists commands under 'Show tech-support tunnel detail' commands |

## Command Mode

- /exec

# show tech-support u2rib

show tech-support u2rib

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                       |
| tech-support | Gather information for troubleshooting                |
| u2rib        | Gather detailed information for U2RIB troubleshooting |

## Command Mode

- /exec

# show tech-support udd

show tech-support udd

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                     |
| tech-support | Gather information for troubleshooting              |
| udd          | Gather detailed information for udd troubleshooting |

## Command Mode

- /exec

# show tech-support usd-all

show tech-support usd-all [ time-optimized ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information  |
| tech-support   | Gather information for troubleshooting                                     |
| usd-all        | Gather detailed information for LC USD troubleshooting                     |
| time-optimized | (Optional) Gather tech-support faster, requires more memory and disk space |

## Command Mode

- /exec

# show tech-support vdc

show tech-support vdc

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                     |
| tech-support | Gather information for troubleshooting              |
| vdc          | Gather detailed information for VDC troubleshooting |

## Command Mode

- /exec

# show tech-support virtual-service

show tech-support virtual-service

## Syntax Description

|                 |   |
|-----------------|---|
| show            | Show running system information                                 |
| tech-support    | Gather information for trouble shooting                         |
| virtual-service | Gather information for virtualization services trouble shooting |

## Command Mode

- /exec

# show tech-support vlan

show tech-support vlan

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                      |
| tech-support | Gather information for troubleshooting               |
| vlan         | Gather detailed information for VLAN troubleshooting |

## Command Mode

- /exec

# show tech-support vmtracker

show tech-support vmtracker

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information        |
| tech-support | Gather information for troubleshooting |
| vmtracker    | VMTRACKER commands                     |

## Command Mode

- /exec

# show tech-support vpc

show tech-support vpc

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                     |
| tech-support | Gather information for troubleshooting              |
| vpc          | Gather detailed information for VPC troubleshooting |

## Command Mode

- /exec

# show tech-support vrrp

show tech-support vrrp

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information             |
| tech-support | Gather information for troubleshooting      |
| vrrp         | Show information for vrrp technical support |

## Command Mode

- /exec

# show tech-support vrrp brief

show tech-support vrrp brief

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                      |
| tech-support | Gather information for troubleshooting               |
| vrrp         | Show information for vrrp technical support          |
| brief        | Show information for vrrp technical support in brief |

## Command Mode

- /exec

# show tech-support vrrpv3

show tech-support vrrpv3 [ detail ]

## Syntax Description

|              |   |
|--------------|---|
| vrrpv3       | VRRPv3 configuration commands           |
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| detail       | (Optional) Detailed output              |

## Command Mode

- /exec

# show tech-support vsan

show tech-support vsan [ <i>i0</i> | commands ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                                |
| tech-support | Gather information for troubleshooting                         |
| vsan         | Gather detailed information for vsan troubleshooting           |
| <i>i0</i>    | (Optional) VSAN id range                                       |
| commands     | (Optional) Show commands run as part of vsan technical support |

## Command Mode

- /exec

# show tech-support vshd

show tech-support vshd

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information             |
| tech-support | Show information for technical support      |
| vshd         | Show vshd information for technical support |

## Command Mode

- /exec

# show tech-support vtp

show tech-support vtp

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                     |
| tech-support | Gather information for troubleshooting              |
| vtp          | Gather detailed information for vtp troubleshooting |

## Command Mode

- /exec

# show tech-support vwan

show tech-support vwan

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                            |
| tech-support | Gather information for troubleshooting                     |
| vwan         | Gather detailed information for Voice VLAN troubleshooting |

## Command Mode

- /exec

# show tech-support vxlan-evpn

show tech-support vxlan-evpn

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| vxlan-evpn   | VxLAN evpn feature                      |

## Command Mode

- /exec

# show tech-support vxlan

show tech-support vxlan

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| vxlan        | VxLAN feature                           |

## Command Mode

- /exec

# show tech-support vxlan platform

show tech-support vxlan platform

## Syntax Description

|              |  |
|--------------|--|
| show         | Show tech-support                      |
| tech-support | Gather information for troubleshooting |
| vxlan        | VxLAN components                       |
| platform     | VxLAN platform components              |

## Command Mode

- /exec

# show tech-support xbar

show tech-support xbar

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for trouble shooting |
| xbar         | Show xbar tech-support information      |

## Command Mode

- /exec

# show tech-support xml

show tech-support xml

## Syntax Description

|              |   |
|--------------|---|
| show         | show running system information             |
| tech-support | Gather information for trouble shooting     |
| xml          | Gather information for xml trouble shooting |

## Command Mode

- /exec

# show tech-support xos

show tech-support xos [ brief ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information         |
| tech-support | Gather information for troubleshooting  |
| xos          | Cross-OS Library Information and Traces |
| brief        | (Optional) Brief information            |

## Command Mode

- /exec

# show tech-support zone

show tech-support zone [ [ commands ] [ vsan <i0> ] ]

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                                    |
| tech-support | Gather information for troubleshooting                             |
| zone         | Show information for zoneserver technical support                  |
| vsan         | (Optional) Show technical support information for a specified vsan |
| commands     | (Optional) Show tech-support commands for zoneserver               |
| <i>i0</i>    | (Optional) VSAN id range   |

## Command Mode

- /exec

## show telemetry control database

```

show telemetry control { database [ subscriptions | destination-groups | destinations | [ { [ sensor-paths |
sensor-groups ] [ detail ] } ] ] | stats } [ __readonly__ [ <subscription_db_size> ] [ { TABLE_subscriptions

### Syntax Description

|           |                                 |
|-----------|---------------------------------|
| show      | Show running system information |
| telemetry | Show telemetry info             |

|                                |  |
|--------------------------------|--|
| control                        | Show telemetry control                               |
| database                       | Show database  |
| subscriptions                  | (Optional) Show subscriptions                        |
| destination-groups             | (Optional) Show destination-groups                   |
| destinations                   | (Optional) Show destinations                         |
| sensor-paths                   | (Optional) Show sensor-paths                         |
| sensor-groups                  | (Optional) Show sensor-groups                        |
| detail                         | (Optional) Show completed id                         |
| stats                          | Show stats   |
| __readonly__                   | (Optional)   |
| TABLE_sensor_grp               | (Optional) Sensor group table                        |
| <i>sensor_grp_db_size</i>      | (Optional) Sensor group DB size                      |
| <i>snsr_grp_row_idx</i>        | (Optional) Sensor Group Row Idx                      |
| <i>snsr_grp_id</i>             | (Optional) Sensor Group Id                           |
| <i>snsr_grp_type</i>           | (Optional) Sensor Group Type                         |
| <i>snsr_grp_collector_type</i> | (Optional) Sensor Group Collector Type               |
| <i>snsr_grp_timer_interval</i> | (Optional) Sensor Group Timer Interval in ms         |
| <i>snsr_grp_timer_status</i>   | (Optional) Sensor Group Timer Status                 |
| <i>snsr_grp_sub_count</i>      | (Optional) Sensor Group Sub Count                    |
| <i>snsr_grp_sub_id</i>         | (Optional) Sensor Group Sub Id                       |
| <i>snsr_grp_dc_cur_time</i>    | (Optional) Sensor Group Data collection Current Time |
| <i>snsr_grp_dc_min_time</i>    | (Optional) Sensor Group Data collection Minimum Time |
| <i>snsr_grp_dc_max_time</i>    | (Optional) Sensor Group Data collection Maximum Time |
| <i>snsr_grp_enc_cur_time</i>   | (Optional) Sensor Group Encoding Current Time        |
| <i>snsr_grp_enc_min_time</i>   | (Optional) Sensor Group Encoding Minimum Time        |
| <i>snsr_grp_enc_max_time</i>   | (Optional) Sensor Group Encoding Maximum Time        |
| <i>snsr_grp_trans_cur_time</i> | (Optional) Sensor Group Transport Current Time       |
| <i>snsr_grp_trans_min_time</i> | (Optional) Sensor Group Transport Minimum Time       |
| <i>snsr_grp_trans_max_time</i> | (Optional) Sensor Group Transport Maximum Time       |

|   |  |
|---|--|
| <i>snsr_grp_stream_cur_time</i>         | (Optional) Sensor Group Streaming Current Time               |
| <i>snsr_grp_stream_min_time</i>         | (Optional) Sensor Group Streaming Minimum Time               |
| <i>snsr_grp_stream_max_time</i>         | (Optional) Sensor Group Streaming Maximum Time               |
| <i>snsr_grp_stream_col_id_drop</i>      | (Optional) Sensor Group Stream collection id Drop            |
| <i>snsr_grp_stream_last_col_id_drop</i> | (Optional) Sensor Group Stream last collection id Drop       |
| <i>snsr_grp_stream_col_drop</i>         | (Optional) Sensor Group Stream number of collections dropped |
| TABLE_sensor_path                       | (Optional) Sensor path table                                 |
| <i>sensor_path_db_size</i>              | (Optional) Sensor path DB size                               |
| <i>path_row_idx</i>                     | (Optional) Sensor Path row index                             |
| <i>path_subscribed</i>                  | (Optional) Sensor path subscribed to events                  |
| <i>path_group_count</i>                 | (Optional) Sensor path group subscriptions                   |
| <i>path_secondary_group_count</i>       | (Optional) Sensor path secondary group subscriptions         |
| <i>path_level</i>                       | (Optional) Sensor path level                                 |
| <i>path_name</i>                        | (Optional) Sensor path name                                  |
| <i>path_grp_id</i>                      | (Optional) Sensor path group ID                              |
| <i>path_query_condition</i>             | (Optional) Sensor path query condition                       |
| <i>path_filter_condition</i>            | (Optional) Sensor path filter condition                      |
| <i>path_gpb_cur_enc_size</i>            | (Optional) Sensor path gpb current encoded size              |
| <i>path_gpb_min_enc_size</i>            | (Optional) Sensor path gpb min encoded size                  |
| <i>path_gpb_max_enc_size</i>            | (Optional) Sensor path gpb max encoded size                  |
| <i>path_json_cur_enc_size</i>           | (Optional) Sensor path json current encoded size             |
| <i>path_json_min_enc_size</i>           | (Optional) Sensor path json min encoded size                 |
| <i>path_json_max_enc_size</i>           | (Optional) Sensor path json max encoded size                 |
| <i>path_cgpb_cur_enc_size</i>           | (Optional) Sensor path cgpb current encoded size             |
| <i>path_cgpb_min_enc_size</i>           | (Optional) Sensor path cgpb min encoded size                 |
| <i>path_cgpb_max_enc_size</i>           | (Optional) Sensor path cgpb max encoded size                 |
| <i>path_dc_cur_time</i>                 | (Optional) sensor path last collection time                  |
| <i>path_dc_min_time</i>                 | (Optional) sensor path min collection time                   |
| <i>path_dc_max_time</i>                 | (Optional) sensor path max collection time                   |

|  |   |
|--|---|

| <i>kafka_lib_version</i>              | (Optional) Kafka library version              |

**Command Mode**

- /exec

# show telemetry usability

```
show telemetry usability { all | environment | interface | vxlan | resources } [ __readonly__ [ {
TABLE_path_labels <label_row_idx> <label_name> <label_path_name> <label_query_type>
<label_query_condition> } ] ]
```

## Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information               |
| telemetry                    | Show telemetry info                           |
| usability                    | Usability path information                    |
| all                          | show all the usability path query information |
| environment                  | show environment query information            |
| interface                    | show interface query information              |
| vxlan                        | show vxlan query information                  |
| resources                    | show system resources query information       |
| __readonly__                 | (Optional)                                    |
| TABLE_path_labels            | (Optional) Ease of use path table             |
| <i>label_row_idx</i>         | (Optional) row index                          |
| <i>label_name</i>            | (Optional) label name                         |
| <i>label_path_name</i>       | (Optional) actual path configured             |
| <i>label_query_type</i>      | (Optional) query type                         |
| <i>label_query_condition</i> | (Optional) actual query condition             |

## Command Mode

- /exec

## show telemetry yang direct-path cisco-nxos-device

```
show telemetry yang direct-path cisco-nxos-device [ __readonly__ [ { TABLE_path_list <list_row_idx>
<path_name> } ] ]
```

### Syntax Description

|                        |  |
|------------------------|--|
| show                   | Show running system information                |
| telemetry              | Show telemetry info                            |
| yang                   | yang direct path information                   |
| direct-path            | yang direct path information                   |
| cisco-nxos-device      | show cisco nxos device direct path information |
| <i>__readonly__</i>    | (Optional)                                     |
| <i>TABLE_path_list</i> | (Optional) direct path list                    |
| <i>list_row_idx</i>    | (Optional) direct path row index               |
| <i>path_name</i>       | (Optional) direct path name                    |

### Command Mode

- /exec

# show telnet server

show telnet server [ \_\_readonly\_\_ { operation\_status <o\_status> } ]

## Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information                |
| telnet           | Show telnet server configuration               |
| server           | Show telnet server configuration               |
| __readonly__     | (Optional)                                     |
| operation_status | (Optional) run-time information about telnet   |
| <i>o_status</i>  | (Optional) operational status of telnet server |

## Command Mode

- /exec

# show terminal

```
show terminal [ __readonly__ { <terminal_tty> } { <terminal_type> } { <terminal_length> } {
<terminal_width> } { <session_timeout> } { <evnt_mgr_cli_evnt_bypass> } { <redirection_mode> } {
<acc_log_all_commands> } [ <vlan_mutex_value> ] { <vlan_batch_mode> } ]
```

## Syntax Description

|                                 |   |
|---------------------------------|---|
| show                            | Show running system information           |
| terminal                        | Display terminal configuration parameters |
| <i>__readonly__</i>             | (Optional)                                |

| <i>vlan_batch_mode</i>          | (Optional)                                |

## Command Mode

- /exec

# show terminal lock

```
show terminal lock [ __readonly__ <owner_pid> <user_name> <session> <state> [ <reason> ]
<lock_acqrd_time> <lock_expiry_timeout> ]
```

## Syntax Description

|                            |  |
|----------------------------|--|
| show                       | Show running system information                |
| terminal                   | Display terminal configuration parameters      |
| lock                       | Display the session holding the terminal lock  |
| <i>__readonly__</i>        | (Optional)                                     |
| <i>owner_pid</i>           | (Optional) PID of the process holding the lock |
| <i>user_name</i>           | (Optional) User holding the lock               |
| <i>session</i>             | (Optional) Terminal holding the lock           |
| <i>state</i>               | (Optional) Status of the lock                  |
| <i>reason</i>              | (Optional) Reason for the lock                 |
| <i>lock_acqrd_time</i>     | (Optional) Time when the lock got acquired     |
| <i>lock_expiry_timeout</i> | (Optional) Lock expiry timeout                 |

## Command Mode

- /exec

# show terminal output xml version

```
show terminal output xml version [ __readonly__ { xml_version <version> } ]
```

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| terminal            | Display                         |
| output              | Display                         |
| xml                 | Display                         |
| version             | Display                         |
| <i>__readonly__</i> | (Optional)                      |
| <i>xml_version</i>  | (Optional) xml version          |
| <i>version</i>      | (Optional) version              |

## Command Mode

- /exec

## show time-range

```
show time-range [ <name> ] [ __readonly__ TABLE_timerange <timerange_name> <active> [ TABLE_seqno
<seqno> { { absolute [ <start_abs_h> <start_abs_m> <start_abs_s> <start_abs_d> <start_abs_mon>
<start_abs_y> ] [ <end_abs_h> <end_abs_m> <end_abs_s> <end_abs_d> <end_abs_mon> <end_abs_y> ]
} | { periodic { Monday | Tuesday | Wednesday | Thursday | Friday | Saturday | Sunday | daily | weekdays |
weekend } + <start_per_h> <start_per_m> <start_per_s> [ <eday> ] <end_per_h> <end_per_m> <end_per_s>
} | { <remark> } } ] ] ]
```

### Syntax Description

|                       |                                 |
|-----------------------|---------------------------------|
| show                  | Show running system information |
| time-range            | Define time range entries       |
| <i>name</i>           | (Optional) Time range name      |
| <i>__readonly__</i>   | (Optional)                      |
| TABLE_timerange       | (Optional)                      |
| <i>timerange_name</i> | (Optional)                      |
| <i>active</i>         | (Optional) active               |
| TABLE_seqno           | (Optional)                      |
| <i>seqno</i>          | (Optional) Sequence number      |
| absolute              | (Optional)                      |
| periodic              | (Optional)                      |
| <i>remark</i>         | (Optional)                      |
| <i>start_abs_h</i>    | (Optional)                      |
| <i>start_abs_m</i>    | (Optional)                      |
| <i>start_abs_s</i>    | (Optional)                      |
| <i>start_abs_d</i>    | (Optional)                      |
| <i>start_abs_mon</i>  | (Optional)                      |
| <i>start_abs_y</i>    | (Optional)                      |
| <i>end_abs_h</i>      | (Optional)                      |
| <i>end_abs_m</i>      | (Optional)                      |

| Monday             | (Optional) Monday                |
| Tuesday            | (Optional) Tuesday               |
| Wednesday          | (Optional) Wednesday             |
| Thursday           | (Optional) Thursday              |
| Friday             | (Optional) Friday                |
| Saturday           | (Optional) Saturday              |
| Sunday             | (Optional) Sunday                |
| daily              | (Optional) Every day of the week |
| weekdays           | (Optional) Monday thru Friday    |
| weekend            | (Optional) Saturday and Sunday   |
| <i>start_per_h</i> | (Optional)                       |
| <i>start_per_m</i> | (Optional)                       |
| <i>start_per_s</i> | (Optional)                       |
| <i>eday</i>        | (Optional) Day of the week       |
| <i>end_per_h</i>   | (Optional)                       |
| <i>end_per_m</i>   | (Optional)                       |
| <i>end_per_s</i>   | (Optional)                       |

**Command Mode**

- /exec

# show time-stamp running-config last-changed

show time-stamp running-config last-changed [ *\_\_readonly\_\_* <*run\_config\_change\_time*> ]

## Syntax Description

|                               |  |
|-------------------------------|--|
| show                          | Show running system information              |
| time-stamp                    | Time running-config last changed             |
| running-config                | Current operating configuration              |
| last-changed                  | Running configuration last changed           |
| <i>__readonly__</i>           | (Optional) Read only                         |
| <i>run_config_change_time</i> | (Optional) Running-cfg last change timestamp |

## Command Mode

- /exec

# show topology

show topology [ vsan <i0> ]

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information        |
| topology  | Show information of connected switches |
| vsan      | (Optional) Enter VSAN                  |
| <i>i0</i> | (Optional) VSAN id                     |

## Command Mode

- /exec

# show topology isl

```
show topology isl [ [ san-port-channel <i1> ] [ detail ] ]
```

## Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information              |
| topology         | Show information of connected switches       |
| isl              | Show isl                                     |
| san-port-channel | (Optional) Specify the san-port-channel      |
| <i>i1</i>        | (Optional) san-port-channel number           |
| detail           | (Optional) Gives detailed information on isl |

## Command Mode

- /exec

# show topology isl

```
show topology isl [ [ vsan <i0> ] [ detail ] ]
```

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information              |
| topology  | Show information of connected switches       |
| isl       | Show isl                                     |
| vsan      | (Optional) Specify the vsan id               |
| <i>i0</i> | (Optional) VSAN id range                     |
| detail    | (Optional) Gives detailed information on isl |

## Command Mode

- /exec

# show topology isl

show topology isl [ detail ]

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information              |
| topology | Show information of connected switches       |
| isl      | Show isl                                     |
| detail   | (Optional) Gives detailed information on isl |

## Command Mode

- /exec

# show trace callhome

show trace callhome

## Syntax Description

|          |  |
|----------|--|
| show     | Show XOS trace information                         |
| trace    | Show logging configuration and contents of logfile |
| callhome | Show callhome logging configuration                |

## Command Mode

- /exec

## show track

```
show track { [ <object-id> | interface | ip { route | sla } | ipv6 routev6 | list boolean and | list boolean or | list
threshold weight | list threshold percentage ] } [ dynamic ] [ __readonly__ { <show_track_start> {
TABLE_track_detail <st_obj_id> <st_obj_ms_up> <st_obj_ms_down> <st_obj_type> [ <st_obj_instance>
] <st_obj_param> <st_obj_timer_value> [ <st_obj_state> ] [ <st_obj_chg_cnt> ] [ <st_last_chg_time> ] [
<st_threshold_info> ] [ <st_track_list_obj> ] + [ <st_vrf> ] [ <st_ipsla_rcode> ] [ <st_ipsla_rtt> ] [
<show_track_clnt_hdr> ] [ <show_track_clnt_start> ] [ { TABLE_track_clnt_info <st_client_name> [

<st_track_list_info> ] + <st_obj_up_delay> <st_obj_down_delay> } <show_track_end> } ]
```

### Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Negate a command or set its defaults           |
| track                   | Tracking information                           |
| dynamic                 | (Optional) Entry created by client through API |
| <i>object-id</i>        | (Optional) Tracked object                      |
| interface               | (Optional) Interface objects                   |
| ip                      | (Optional) IPv4 Protocol objects               |
| route                   | (Optional) route (ipv4) objects                |
| sla                     | (Optional) Service Level Agreement objects     |
| ipv6                    | (Optional) IPv6 Protocol objects               |
| routev6                 | (Optional) route (ipv6) objects                |
| list                    | (Optional) Tracklist objects                   |
| boolean                 | (Optional) Boolean Traclist                    |
| and                     | (Optional) AND boolean objects                 |
| or                      | (Optional) OR boolean objects                  |
| threshold               | (Optional) Threshold parameters                |
| weight                  | (Optional) Threshold weight                    |
| percentage              | (Optional) Threshold percentage                |
| __readonly__            | (Optional) Read only                           |
| <i>show_track_start</i> | (Optional) Show track start                    |
| TABLE_track_detail      | (Optional) Track table detail                  |
| <i>st_obj_id</i>        | (Optional) Object id                           |

|                              |  |
|------------------------------|--|
| <i>st_obj_type</i>           | (Optional) Object Type                   |
| <i>st_obj_ms_up</i>          | (Optional) Is MS UP                      |
| <i>st_obj_ms_down</i>        | (Optional) Is MS DOWN                    |
| <i>st_obj_instance</i>       | (Optional) Object instance               |
| <i>st_obj_param</i>          | (Optional) Object parameter              |
| <i>st_obj_timer_value</i>    | (Optional) Current value of timer        |
| <i>st_obj_state</i>          | (Optional) Object status                 |
| <i>st_obj_chg_cnt</i>        | (Optional) Count of Object state changes |
| <i>st_last_chg_time</i>      | (Optional) Timestamp of last change      |
| <i>st_threshold_info</i>     | (Optional) Threshold Parameters          |
| <i>st_track_list_obj</i>     | (Optional) Objects part of this list     |
| <i>st_vrf</i>                | (Optional) VRF                           |
| <i>st_ipsla_rcode</i>        | (Optional) IP SLA Return Code            |
| <i>st_ipsla_rtt</i>          | (Optional) IP SLA RTT                    |
| <i>show_track_clnt_hdr</i>   | (Optional) Tracked by:                   |
| <i>show_track_clnt_start</i> | (Optional) Show track client start       |
| TABLE_track_clnt_info        | (Optional) Track client info             |
| <i>st_client_name</i>        | (Optional) Tracking client name          |
| <i>st_client_iface</i>       | (Optional) Tracking client interface     |
| <i>st_client_group_id</i>    | (Optional) Client group id               |
| <i>st_client_detail</i>      | (Optional) Tracking client detail        |
| <i>show_track_clnt_end</i>   | (Optional) End of track client           |
| <i>st_track_list_info</i>    | (Optional) Track list info               |
| <i>st_obj_up_delay</i>       | (Optional) Delay up notification         |
| <i>st_obj_down_delay</i>     | (Optional) Delay down notification       |
| <i>show_track_end</i>        | (Optional) End of Track                  |

**Command Mode**

- /exec

## show track brief

```
show track { [ <object-id> | interface | ip { route | sla } | ipv6 routev6 | list boolean and | list boolean or | list
threshold weight | list threshold percentage ] } [ dynamic ] brief [ __readonly__ { <show_track_brf_start>
<show_track_brf_all_begin> { TABLE_track_brief<st_brf_obj_id><st_brf_obj_type><st_brf_obj_instance>

|-----------------------------|-------------------------------------|
| <i>st_brf_obj_type</i>      | (Optional) Object Type              |
| <i>st_brf_obj_instance</i>  | (Optional) Object instance          |
| <i>st_brf_obj_param</i>     | (Optional) Object parameter         |
| <i>st_brf_obj_state</i>     | (Optional) Object status            |
| <i>st_brf_last_chg_time</i> | (Optional) Timestamp of last change |
| <i>show_track_brf_end</i>   | (Optional) End of Group             |

**Command Mode**

- /exec

# show troubleshoot l2 mac vlan

show troubleshoot l2 mac <mac-addr> vlan <vlan-id> [ detail ]

## Syntax Description

|                 |  |
|-----------------|--|
| show            | Show running system information                            |
| troubleshoot    | Display troubleshoot data dump                             |
| l2              | Display l2 information                                     |
| mac             | MAC address  |
| <i>mac-addr</i> | address  |
| vlan            | Vlan ID  |
| <i>vlan-id</i>  | vlan number  |
| detail          | (Optional) Print detailed debugging info for mac/interface |

## Command Mode

- /exec

# show troubleshoot l2 port-channel

```
show troubleshoot l2 port-channel [ interface <ch-id> ]
```

## Syntax Description

|              |                                 |
|--------------|---------------------------------|
| show         | Show running system information |
| troubleshoot | Display troubleshoot data dump  |
| l2           | Display l2 information          |
| port-channel | Switched Port Channel           |
| interface    | (Optional) Interface            |
| <i>ch-id</i> | (Optional) Port-Channel name    |

## Command Mode

- /exec

## show troubleshoot l3 vrf

```
show troubleshoot l3 { ipv4 { <dip4-prefix> | <ip-prefix> } [ src-ip <sip4-prefix> ] | ipv6 { <dip6-prefix> | <ip6-prefix> } [ src-ip <sip6-prefix> ] } vrf <vrf-name>
```

### Syntax Description

|                    |   |
|--------------------|---|
| show               |   |
| troubleshoot       | Display troubleshoot data dump                        |
| l3                 | Display l3 information                                |
| ipv4               | Choose IPv4 address                                   |
| ipv6               | Choose IPv6 address                                   |
| <i>dip4-prefix</i> | Display single exact match route for Destination IP   |
| <i>ip-prefix</i>   | Display single exact match route, specify prefix/mask |
| vrf                | check routes for a specific VRF                       |
| <i>vrf-name</i>    | vrf name  |
| src-ip             | (Optional) Source IP for routing hash CLI             |
| <i>sip4-prefix</i> | (Optional) Source IPv4 address                        |

### Command Mode

- /exec

# show trunk protocol

show trunk protocol [ *\_\_readonly\_\_* <trunk\_protocol\_status> ]

## Syntax Description

|                              |                                  |
|------------------------------|----------------------------------|
| show                         | Show running system information  |
| trunk                        | Show trunk information           |
| protocol                     | Show trunk protocol information  |
| <i>__readonly__</i>          | (Optional)                       |
| <i>trunk_protocol_status</i> | (Optional) trunk protocol status |

## Command Mode

- /exec

# show ttag brief

```
show ttag brief [ __readonly__ [ TABLE_ttag <ttag-ifindex> <state> ] <ttag-end> ]
```

## Syntax Description

|                           |   |
|---------------------------|---|
| <code>ttag</code>         | enable ingress packet with ttag on this interface |
| <code>brief</code>        | ttag port in brief list                           |
| <code>__readonly__</code> | (Optional) Read Only                              |
| <code>TABLE_ttag</code>   | (Optional) ttag table                             |
| <code>ttag-ifindex</code> | (Optional) ttag ifindex                           |
| <code>state</code>        | (Optional) TTAG state                             |
| <code>ttag-end</code>     | (Optional) End of table                           |

## Command Mode

- /exec

# show ttag brief

```
show ttag brief [ __readonly__ { TABLE_ttag <ttag-ifindex> <state> } <ttag-end> ]
```

## Syntax Description

|                           |   |
|---------------------------|---|
| <code>ttag</code>         | enable ingress packet with ttag on this interface |
| <code>brief</code>        | ttag port in brief list                           |
| <code>__readonly__</code> | (Optional) Read Only                              |
| <code>TABLE_ttag</code>   | (Optional) ttag table                             |
| <code>ttag-ifindex</code> | (Optional) ttag ifindex                           |
| <code>ttag-end</code>     | (Optional) End of table                           |
| <code>state</code>        | (Optional) TTAG state                             |

## Command Mode

- /exec

# show tunnel-encryption info global

```
show tunnel-encryption info global [ __readonly__ { TABLE_tem_info_global <policy_mode> <sci_list>
<num_active_peers> } ]
```

## Syntax Description

|                              |  |
|------------------------------|--|
| show                         | Show running system information            |
| tunnel-encryption            | Show Tunnel-encryption manager information |
| info                         | Show information                           |
| global                       | Show tunnel global information             |
| <i>__readonly__</i>          | (Optional)                                 |
| <i>TABLE_tem_info_global</i> | (Optional)                                 |
| <i>policy_mode</i>           | (Optional) Global Policy Mode              |
| <i>sci_list</i>              | (Optional) SCI List                        |
| <i>num_active_peers</i>      | (Optional) Numbers of Active Peers         |

## Command Mode

- /exec

## show tunnel-encryption policy

```
show tunnel-encryption policy [ <policy_name> ] [ __readonly__ { TABLE_tun_enc_policy <name>
<cipher_suite> <window_size> <conf_offset> <security_policy> <sak-expiry-time> <include_icv_indicator>
} ]
```

### Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information             |
| tunnel-encryption            | Show Tunnel-encryption manager information  |
| policy                       | Show Tunnel-Encryption policy information   |
| <i>policy_name</i>           | (Optional) Name of Tunnel-encryption Policy |
| <i>__readonly__</i>          | (Optional)                                  |
| TABLE_tun_enc_policy         | (Optional)                                  |
| <i>name</i>                  | (Optional) Tunnel-Encryption Policy Name    |
| <i>cipher_suite</i>          | (Optional) Cipher Suite                     |
| <i>window_size</i>           | (Optional) Window Size                      |
| <i>conf_offset</i>           | (Optional) Confidentiality Offset           |
| <i>security_policy</i>       | (Optional) Security Policy                  |
| <i>sak-expiry-time</i>       | (Optional) SAK expiry on time interval      |
| <i>include_icv_indicator</i> | (Optional) Include ICV indicator in MKPDUs  |

### Command Mode

- /exec

## show tunnel-encryption session

```
show tunnel-encryption session [ peer-ip <peer_ipaddress_v4> ] [ detail ] [ __readonly__ [ TABLE_tem_session
<PeerAddr> <PolicyName> <KCName> <RxStatus> <TxStatus> ] [ TABLE_tem_session_detail <PeerAddr>
<PolicyName> <KCName> <CKN> <RxStatus> <TxStatus> <peersci> <rxsa_latest_an> <rxsa_old_an>
<rxsa_cs> <rxsa_winsize> <txsa_an> <txsa_cs> <txsa_ckn> <last_rx_flap> <last_tx_flap>
<last_sak_rekey_time> ] ]
```

### Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information               |
| tunnel-encryption        | Show Tunnel-Encryption Manager information    |
| session                  | Show session information                      |
| peer-ip                  | (Optional) Specify peer-address               |
| <i>peer_ipaddress_v4</i> | (Optional) IP Address in format A.B.C.D       |
| detail                   | (Optional) Show sessions detailed information |
| <i>__readonly__</i>      | (Optional)                                    |
| TABLE_tem_session        | (Optional)                                    |
| <i>PeerAddr</i>          | (Optional) Peer-address                       |
| <i>PolicyName</i>        | (Optional) Policy name for Peer               |
| <i>KCName</i>            | (Optional) KeyChain name for Peer             |
| <i>CKN</i>               | (Optional) Active CKN                         |
| <i>RxStatus</i>          | (Optional) Rx Session status for Peer         |
| <i>TxStatus</i>          | (Optional) Tx Session status for Peer         |
| TABLE_tem_session_detail | (Optional)                                    |
| <i>peersci</i>           | (Optional) Peer SCI list                      |
| <i>rxsa_latest_an</i>    | (Optional) RxSA Latest AN                     |
| <i>rxsa_old_an</i>       | (Optional) RxSA Old AN                        |
| <i>rxsa_cs</i>           | (Optional) RxSA Cipher-suite                  |
| <i>rxsa_winsize</i>      | (Optional) RxSA Replay Window-size            |
| <i>txsa_an</i>           | (Optional) TxSA AN                            |
| <i>txsa_cs</i>           | (Optional) TxSA Cipher-Suite                  |
| <i>txsa_ckn</i>          | (Optional) TxSA CKN                           |

|                            |                                      |
|----------------------------|--------------------------------------|
| <i>last_rx_flap</i>        | (Optional) Last Rx session flap time |
| <i>last_tx_flap</i>        | (Optional) Last Tx session flap time |
| <i>last_sak_rekey_time</i> | (Optional) Last SAK rekey            |

**Command Mode**

- /exec

## show tunnel-encryption statistics

```
show tunnel-encryption statistics [ peer-ip <peer_ipaddress_v4> ] [ __readonly__ [ TABLE_statistics
<PeerAddr> [ TABLE_rx_sa_an <rx_sa_an> [ <in_pkts_unchecked> ] [ <in_pkts_delayed> ] [ <in_pkts_late>
] [ <in_pkts_ok> ] [ <in_pkts_invalid> ] [ <in_pkts_not_valid> ] [ <in_pkts_not_using_sa> ] [

- /exec

# show udd global

show udd global [ \_\_readonly\_\_ <udd-global-mode> <message-interval> ]

## Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information                        |
| udd                     | UDLD protocol  |
| global                  | UDLD global status and configuration on all interfaces |
| __readonly__            | (Optional)   |
| <i>udd-global-mode</i>  | (Optional) UDLD global configuration setting           |
| <i>message-interval</i> | (Optional) UDLD probe message interval                 |

## Command Mode

- /exec

# show udd neighbors

show udd neighbors [ *\_\_readonly\_\_* *TABLE\_entry* <local-port-id> <neighbor-echo-device-name> <device-id> <neighbor-echo-port-id> <neighbor-state> ]

## Syntax Description

|                                  |                                   |
|----------------------------------|-----------------------------------|
| show                             | Show running system information   |
| udd                              | UDLD protocol                     |
| neighbors                        | UDLD neighbor interfaces          |
| <i>__readonly__</i>              | (Optional)                        |
| <i>TABLE_entry</i>               | (Optional)                        |
| <i>local-port-id</i>             | (Optional) Local port ID          |
| <i>neighbor-echo-device-name</i> | (Optional) Echo device name       |
| <i>device-id</i>                 | (Optional) Device ID              |
| <i>neighbor-echo-port-id</i>     | (Optional) Echo port ID           |
| <i>neighbor-state</i>            | (Optional) Current neighbor state |

## Command Mode

- /exec

# show upgrade history

```
show upgrade history [ __readonly__ { [ TABLE_installHistory <installHistoryStr> ] } ]
```

## Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information                   |
| upgrade                  | Show the upgrade history                          |
| history                  | Show the upgrade history of software and firmware |
| __readonly__             | (Optional)  |
| TABLE_installHistory     | (Optional) Upgrade History table                  |
| <i>installHistoryStr</i> | (Optional)  |

## Command Mode

- /exec

## show user-account

```
show user-account [ <s0> ] [ __readonly__ TABLE_template <usr_name> [ <expire_date> ] { TABLE_role
<role> } [ <remote_login> ] [ <sshkey_info> ] { [ TABLE_keys <ssh_keys> ] } ]
```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                                    |
| TABLE_template      | (Optional)   |
| TABLE_role          | (Optional)   |
| TABLE_keys          | (Optional)   |
| __readonly__        | (Optional)   |
| <i>usr_name</i>     | (Optional) Name of the user  |
| <i>expire_date</i>  | (Optional) Expiry date for this user account(in YYYY-MM-DD format) |
| <i>role</i>         | (Optional) role/s which the user is to be assigned to              |
| <i>remote_login</i> | (Optional) Remote account information for a remote user            |
| <i>sshkey_info</i>  | (Optional) SSH key information of user                             |
| <i>ssh_keys</i>     | (Optional) SSH key pairs of the user                               |
| user-account        | Show user information  |
| <i>s0</i>           | (Optional) User name   |

### Command Mode

- /exec

# show username keypair

```
show username <s0> keypair [ __readonly__ { TABLE_sessions <t_type> <t_time> <t_keys> <t_bitcount>
<t_fingerprint> } ]
```

## Syntax Description

|                      |                                 |
|----------------------|---------------------------------|
| show                 | Show running system information |
| username             | Show user information.          |
| keypair              | Show SSH keypairs               |
| <i>s0</i>            | user name                       |
| __readonly__         | (Optional)                      |
| TABLE_sessions       | (Optional) username keypair     |
| <i>t_type</i>        | (Optional) keys type            |
| <i>t_time</i>        | (Optional) timestamp            |
| <i>t_keys</i>        | (Optional) ssh key              |
| <i>t_bitcount</i>    | (Optional) bitcount             |
| <i>t_fingerprint</i> | (Optional) fingerprint          |

## Command Mode

- /exec

## show username passphrase timevalues

```
show username <username> passphrase timevalues [ __readonly__ [ timevalues [ <tvalue> ] ] [
passphrase_change <last_passphrase_change> ] [ Default_lifetime <def_ltime> ] [ Default_warntime
<def_wrntime> ] [ Default_gracetime <def_gtime> ] ]
```

### Syntax Description

|                               |  |
|-------------------------------|--|
| show                          | Show running system information                          |
| username                      | Configure user information.                              |
| <i>username</i>               | user name  |
| passphrase                    | user passphrase  |
| timevalues                    | passphrase lifetime, warningtime and gracetime           |
| <i>__readonly__</i>           | (Optional)   |
| timevalues                    | (Optional) Timevalues of the Passphrase                  |
| <i>tvalue</i>                 | (Optional) Absolute time values of the Passphrase        |
| passphrase_change             | (Optional) passphrase last change date                   |
| <i>last_passphrase_change</i> | (Optional) absolute last passphrase change date          |
| Default_lifetime              | (Optional) Default Lifetime of the Passphrase            |
| <i>def_ltime</i>              | (Optional) Absolute life time value of the passphrase    |
| Default_warntime              | (Optional) Default Warningtime of the Passphrase         |
| <i>def_wrntime</i>            | (Optional) Absolute warning time value of the Passphrase |
| Default_gracetime             | (Optional) Default Grace time of the Passphrase          |
| <i>def_gtime</i>              | (Optional) Absolute Grace time value of the Passphrase   |

### Command Mode

- /exec

# show userpassphrase

```
show userpassphrase { default-lifetime | default-warntime | default-gracetime | timevalues } [ __readonly__
[ Default_warntime <def_wrntime> ] [ Default_gracetime <def_gtime> ] [ Default_lifetime <def_ltime> ] ]
```

## Syntax Description

|                    |  |
|--------------------|--|
| show               | Show running system information                          |
| userpassphrase     | user passphrase  |
| default-lifetime   | passphrase default lifetime                              |
| default-warntime   | passphrase default warningtime                           |
| default-gracetime  | passphrase default gracetime                             |
| timevalues         | passphrase lifetime, warning time and gracetime          |
| __readonly__       | (Optional)   |
| Default_warntime   | (Optional) Default Warningtime of the Passphrase         |
| <i>def_wrntime</i> | (Optional) Absolute warning time value of the Passphrase |
| Default_gracetime  | (Optional) Default Grace time of the Passphrase          |
| <i>def_gtime</i>   | (Optional) Absolute Grace time value of the Passphrase   |
| Default_lifetime   | (Optional) Default Lifetime of the Passphrase            |
| <i>def_ltime</i>   | (Optional) Absolute life time value of the passphrase    |

## Command Mode

- /exec

# show userpassphrase

```
show userpassphrase { min-length | max-length | length } [ __readonly__ [ Minimum_length <min_length>
] [ Maximum_length <max_length> ] ]
```

## Syntax Description

|                   |   |
|-------------------|---|
| show              | Show running system information                 |
| userpassphrase    | user passphrase                                 |
| min-length        | passphrase minimum length                       |
| max-length        | passphrase maximum length                       |
| length            | passphrase min and max length                   |
| __readonly__      | (Optional)                                      |
| Minimum_length    | (Optional) minimum length of the passphrase     |
| <i>min_length</i> | (Optional) Absolute value of the Minimum length |
| Maximum_length    | (Optional) Maximum length of the passphrase     |
| <i>max_length</i> | (Optional) Absolute value of max length         |

## Command Mode

- /exec

# show users

```
show users [ __readonly__ { TABLE_sessions <u_name> <t_terminal> <t_time> <t_idle> <p_pid>
<c_comment> } ]
```

## Syntax Description

|                   |   |
|-------------------|---|
| show              | Show running system information             |
| users             | Show the current users logged in the system |
| __readonly__      | (Optional)                                  |
| TABLE_sessions    | (Optional) users table                      |
| <i>u_name</i>     | (Optional) user name                        |
| <i>t_terminal</i> | (Optional) terminal                         |
| <i>t_time</i>     | (Optional) time                             |
| <i>t_idle</i>     | (Optional) idle                             |
| <i>p_pid</i>      | (Optional) pid                              |
| <i>c_comment</i>  | (Optional) comment                          |

### Syntax Description

|  |   |
|--|---|
| show                                     | Show running system information                       |
| virtual-service                          | Display virtualization service information            |
| global                                   | (Optional) Virtual service global information         |
| list                                     | (Optional) List virtual services                      |
| detail                                   | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED             |
| core                                     | (Optional) Core information                           |
| name                                     | (Optional) Information for a specific virtual service |
| <i>virt_serv_name</i>                    | (Optional) Name of a virtual service                  |
| <i>virt_serv_name_core</i>               | (Optional) Name of a virtual service                  |
| <i>__readonly__</i>                      | (Optional) Read Only                                  |
| <i>infrastructure_major_version</i>      | (Optional) Infrastructure major version               |
| <i>infrastructure_minor_version</i>      | (Optional) Infrastructure minor version               |
| <i>total_virtual_services_installed</i>  | (Optional) Total virtual services installed           |
| <i>total_virtual_services_activated</i>  | (Optional) Total virtual services activated           |
| <i>maximum_vcpus_per_virtual_service</i> | (Optional) Maximum VCPUs per virtual service          |
| <i>machine_types_supported</i>           | (Optional) Machine types supported                    |
| <i>machine_types_disabled</i>            | (Optional) Machine types disabled                     |
| TABLE_resource_limits                    | (Optional) Virtual service global resource limits     |
| <i>media_name</i>                        | (Optional) Resource name                              |
| <i>quota</i>                             | (Optional) Resource Virtualization quota              |

|                                |   |
|--------------------------------|---|
| <i>committed</i>               | (Optional) Resource Virtualization committed  |
| <i>available</i>               | (Optional) Resource Virtualization available  |
| TABLE_list                     | (Optional) Virtual service list table         |
| <i>name</i>                    | (Optional) Virtual service name               |
| <i>status</i>                  | (Optional) Virtual service status             |
| <i>package_name</i>            | (Optional) Virtual service package name       |
| TABLE_detail                   | (Optional) Virtual service detail table       |
| <i>name</i>                    | (Optional) Virtual service name               |
| <i>package_name</i>            | (Optional) Virtual service package name       |
| <i>application_name</i>        | (Optional) Name of the application            |
| <i>application_version</i>     | (Optional) Version of the application         |
| <i>application_description</i> | (Optional) Description of the application     |
| <i>key_type</i>                | (Optional) Virtual service key type           |
| <i>signing_method</i>          | (Optional) Method used to sign the package    |
| <i>licensing_name</i>          | (Optional) Name of the license                |
| <i>licensing_version</i>       | (Optional) Version of the license             |
| <i>ova_path</i>                | (Optional) Virtual service OVA path           |
| <i>state</i>                   | (Optional) Virtual service state              |
| <i>disk_reservation</i>        | (Optional) Virtual service disk reservation   |
| <i>memory_reservation</i>      | (Optional) Virtual service memory reservation |
| <i>cpu_reservation</i>         | (Optional) Virtual service CPU reservation    |
| TABLE_attached_devices         | (Optional) Attached devices table             |
| <i>type</i>                    | (Optional) Type of the attached device        |
| <i>name</i>                    | (Optional) Name of the attached device        |
| <i>alias</i>                   | (Optional) Alias for the attached device      |
| TABLE_core                     | (Optional) Virtual service core table         |
| <i>name</i>                    | (Optional) Virtual service name               |
| <i>name_core</i>               | (Optional) Name of core                       |

**Command Mode**

- /exec

## show virtual-service storage pool list

```
show virtual-service storage pool list [ __readonly__ [ TABLE_storage <pool_name> <pool_type> <pool_path> ] ]
```

### Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information                         |
| virtual-service      | Display virtualization service storage pool information |
| storage              | Storage information about virtual service               |
| pool                 | Storage pool information about virtual service          |
| list                 | List storage pool for virtual service                   |
| <i>__readonly__</i>  | (Optional) Read Only                                    |
| <i>TABLE_storage</i> | (Optional) Virtual service storage pool list table      |
| <i>pool_name</i>     | (Optional) Virtual service storage pool name            |
| <i>pool_type</i>     | (Optional) Virtual service storage pool type            |
| <i>pool_path</i>     | (Optional) Virtual service storage pool path            |

### Command Mode

- /exec

# show virtual-service tech-support

show virtual-service tech-support

## Syntax Description

|                 |   |
|-----------------|---|
| show            | Show running system information                                 |
| virtual-service | Gather information for virtualization services trouble shooting |
| tech-support    | Gather information for trouble shooting                         |

## Command Mode

- /exec

## show virtual-service utilization name

```
show virtual-service utilization name <virt_serv_name> [ __readonly__ [ TABLE_cpu <request> <actual>
<state> ] [ TABLE_memory <allocation> <used> ] [ TABLE_storage <name> <alias> <capacity> <used>
<available> <usage> ] ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                        |
| virtual-service       | Display virtualization service utilization information |
| utilization           | Utilization information about virtual service          |
| name                  | Utilization of a virtual service                       |
| <i>virt_serv_name</i> | Name of a virtual service                              |
| <i>__readonly__</i>   | (Optional) Read Only                                   |
| TABLE_storage         | (Optional) Virtual service storage utilization         |
| <i>name</i>           | (Optional) storage device name                         |
| <i>alias</i>          | (Optional) storage device alias                        |
| <i>capacity</i>       | (Optional) Capacity 1k blocks                          |
| <i>used</i>           | (Optional) Used 1k blocks                              |
| <i>available</i>      | (Optional) Available 1k blocks                         |
| <i>usage</i>          | (Optional) Usage                                       |
| TABLE_memory          | (Optional) Virtual service memory utilization          |
| <i>allocation</i>     | (Optional) Memory allocation                           |
| <i>used</i>           | (Optional) Memory used                                 |
| TABLE_cpu             | (Optional) Virtual service cpu utilization             |
| <i>request</i>        | (Optional) Requested Application Utilization           |
| <i>actual</i>         | (Optional) Actual Application Utilization              |
| <i>state</i>          | (Optional) CPU state                                   |

### Command Mode

- /exec

## show virtual-service version

```
show virtual-service version { { installed } | { name <virt_serv_name> installed } } [ __readonly__
<virt_service_name> <application_name> <application_version> ]
```

### Syntax Description

|                            |  |
|----------------------------|--|
| show                       | Show running system information                    |
| virtual-service            | Display virtualization service version information |
| version                    | Version information about virtual service          |
| installed                  | Installed version                                  |
| name                       | Version of a virtual service                       |
| <i>virt_serv_name</i>      | Name of a virtual service                          |
| <i>__readonly__</i>        | (Optional) Read Only                               |
| <i>virt_service_name</i>   | (Optional) Virtual service name                    |
| <i>application_name</i>    | (Optional) Application name                        |
| <i>application_version</i> | (Optional) Application version                     |

### Command Mode

- /exec

# show vlan

```
show vlan [ controller ] [ __readonly__ <vlanshowbr-hdr> { TABLE_vlanbrief <vlanshowbr-vlanid>
<vlanshowbr-vlanid-utf> <vlanshowbr-vlanname> <vlanshowbr-vlanstate> <vlanshowbr-shutstate> [

<total_rcv_p> ] [ <total_sent_b> ] [ <total_sent_p> ] } ]
```

### Syntax Description

|                    |   |
|--------------------|---|
| show               | Show running system information         |
| vlan               | Vlan commands                           |
| counters           | display counters                        |
| __readonly__       | (Optional) Read Only                    |
| TABLE_vlancounters | (Optional) vlan counters table format   |
| vlanshowbr-vlanid  | (Optional) VLAN brief VLAN ID           |
| l2_ing_ucast_b     | (Optional) L2 Ingress unicast octets    |
| l2_ing_ucast_p     | (Optional) L2 Ingress unicast packets   |
| l2_ing_mcast_b     | (Optional) L2 Ingress multicast octets  |
| l2_ing_mcast_p     | (Optional) L2 Ingress multicast packets |
| l2_ing_bcast_b     | (Optional) L2 Ingress broadcast octets  |
| l2_ing_bcast_p     | (Optional) L2 Ingress broadcast packets |
| l2_egr_ucast_b     | (Optional) L2 Egress unicast octets     |
| l2_egr_ucast_p     | (Optional) L2 Egress unicast packets    |
| l3_ucast_rcv_b     | (Optional) L3 unicast octets in         |
| l3_ucast_rcv_p     | (Optional) L3 unicast packets in        |
| total_rcv_b        | (Optional) Total octets in              |
| total_rcv_p        | (Optional) Total packets in             |
| total_sent_b       | (Optional) Total octets out             |
| total_sent_p       | (Optional) Total packets out            |

### Command Mode

- /exec

# show vlan dot1Q tag native

show vlan dot1Q tag native [ *\_\_readonly\_\_* <*tag\_native\_mode*> ]

## Syntax Description

|                        |                                     |
|------------------------|-------------------------------------|
| show                   | Show running system information     |
| vlan                   | VTP VLAN status                     |
| dot1Q                  | Display dot1q parameters            |
| tag                    | Display tag parameters              |
| native                 | Display native vlan tagging         |
| <i>__readonly__</i>    | (Optional) Read Only                |
| <i>tag_native_mode</i> | (Optional) Native vlan tagging mode |

## Command Mode

- /exec

# show vlan fcoe

```
show vlan fcoe [ <vlan-id> ] [ __readonly__ { TABLE_assoc <orig-id> <tran-id> <assoc-state> } ]
```

## Syntax Description

|                    |   |
|--------------------|---|
| show               | Show running system information                                       |
| fcoe               | FCOE Congiguration  |
| vlan               | Original VLAN Status  |
| __readonly__       | (Optional) Read Only  |
| TABLE_assoc        | (Optional) Association Table Format                                   |
| <i>vlan-id</i>     | (Optional) VLAN ID <1-4094>   |
| <i>orig-id</i>     | (Optional) Enter original VLAN-ID being associated with translated ID |
| <i>tran-id</i>     | (Optional) Enter VSAN-ID being associated with VLAN-ID                |
| <i>assoc-state</i> | (Optional) Show Association Status                                    |

## Command Mode

- /exec

# show vlan filter

```
show vlan filter [ access-map <name> | vlan <vlan> ] [ __readonly__ TABLE_vlan_filter <vacl_name>
<configured_vlans> ]
```

## Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information                          |
| vlan                    | VLAN status  |
| filter                  | Information about VLAN filters                           |
| access-map              | (Optional) Show the VLANs where an access-map is applied |
| <i>name</i>             | (Optional) List name                                     |
| vlan                    | (Optional) Show the access-map applied to a VLAN         |
| <i>vlan</i>             | (Optional) VLAN number                                   |
| <i>__readonly__</i>     | (Optional)   |
| TABLE_vlan_filter       | (Optional)   |
| <i>vacl_name</i>        | (Optional) List name                                     |
| <i>configured_vlans</i> | (Optional) VLAN numbers                                  |

## Command Mode

- /exec

## show vlan id

```
show vlan id <vlan-id> [ __readonly__ <vlanshowbr-hdr> { TABLE_vlanbriefid <vlanshowbr-vlanid>
<vlanshowbr-vlanid-utf> <vlanshowbr-vlanname> <vlanshowbr-vlanstate> <vlanshowbr-shutstate> [
<vlanshowplist-ifidx> + ] } <vlanshowinfo-mtu-hdr> { TABLE_mtuinfoid <vlanshowinfo-vlanid>
<vlanshowinfo-media-type> <vlanshowinfo-vlanmode> } [ <vlanshow-vlanerrbitmap> ] [
<vlanshowrspan-hdr1> ] [ <vlanshowrspan-vlantype> ] [ <vlanshowrspan-hdr2> ] [
<vlanshowrspan-vlanbitmap> ] [ <pvlan-hdr> ] [ <pvlan-id-section> ] [ <pvlan-stby> ] [ <is-vtp-manageable>
] [ <is-internal> ] [ <is-reserved> ] [ <is-rspan> ] [ <is-dynamic-gvrp> ] <show-end> [ <true-end> ] ]
```

### Syntax Description

|                                |   |
|--------------------------------|---|
| show                           | Show running system information                   |
| vlan                           | VLAN status                                       |
| id                             | VLAN status by VLAN id                            |
| <i>vlan-id</i>                 | VLAN ID 1-4094 or range(s): 1-5, 10 or 2-5,7-19   |
| <i>__readonly__</i>            | (Optional) Read Only                              |
| TABLE_vlanbriefid              | (Optional) VLAN brief table format                |
| TABLE_mtuinfoid                | (Optional) MTU information table format           |
| <i>vlanshowbr-hdr</i>          | (Optional) VLAN brief header                      |

| <i>vlanshowbr-vlanid-utf</i>   | (Optional) VLAN brief VLAN ID                     |
| <i>vlanshowbr-vlanname</i>     | (Optional) VLAN brief VLAN name                   |
| <i>vlanshowbr-vlanstate</i>    | (Optional) VLAN brief VLAN state                  |
| <i>vlanshowbr-shutstate</i>    | (Optional) VLAN brief shutdown state              |
| <i>vlanshowplist-ifidx</i>     | (Optional) Port list ifindex                      |
| <i>vlanshowinfo-mtu-hdr</i>    | (Optional) Vlan info mtu header                   |
| <i>vlanshowinfo-vlanid</i>     | (Optional) Vlan info VLAN ID                      |
| <i>vlanshowinfo-media-type</i> | (Optional) Select media type                      |
| <i>vlanshowinfo-vlanmode</i>   | (Optional) VLAN brief VLAN mode                   |
| <i>vlanshow-vlanerrbitmap</i>  | (Optional) VLAN error bitmap                      |
| <i>vlanshowrspan-hdr1</i>      | (Optional) RSPAN VLAN header for one VLAN         |
| <i>vlanshowrspan-hdr2</i>      | (Optional) RSPAN VLAN header for multiple VLANs   |
| <i>vlanshowrspan-vlantype</i>  | (Optional) RSPAN VLAN one VLAN rspan or non-rspan |

|                                 |  |
|---------------------------------|--|
| <i>vlanshowrspan-vlanbitmap</i> | (Optional) RSPAN VLAN multiple VLANs       |
| <i>show-end</i>                 | (Optional) Show vlan end marker            |
| <i>true-end</i>                 | (Optional) Show vlan end marker            |
| <i>pvlan-hdr</i>                | (Optional) private vlan section            |
| <i>pvlan-id-section</i>         | (Optional) private id vlan section         |
| <i>pvlan-stby</i>               | (Optional) private vlan section on standby |
| <i>is-vtp-manageable</i>        | (Optional) VTP Manageable VLAN flag        |
| <i>is-internal</i>              | (Optional) Internal VLAN flag              |
| <i>is-reserved</i>              | (Optional) Reserved VLAN flag              |
| <i>is-rspan</i>                 | (Optional) RSPAN VLAN flag                 |
| <i>is-dynamic-gvrp</i>          | (Optional) Dynamic GVRP VLAN flag          |

**Command Mode**

- /exec

## show vlan id counters

```
show vlan id <vlan-id> counters [ __readonly__ { TABLE_vlancounters <vlanshowbr-vlanid> [
<l2_ing_ucast_b> ] [ <l2_ing_ucast_p> ] [ <l2_ing_mcast_b> ] [ <l2_ing_mcast_p> ] [ <l2_ing_bcast_b> ]
[ <l2_ing_bcast_p> ] [ <l2_egr_ucast_b> ] [ <l2_egr_ucast_p> ] [ <l3_ucast_rcv_b> ] [ <l3_ucast_rcv_p> ]
[ <total_rcv_b> ] [ <total_rcv_p> ] [ <total_sent_b> ] [ <total_sent_p> ] } ]
```

### Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information                 |
| vlan                     | Vlan commands                                   |
| id                       | VLAN status by VLAN id                          |
| counters                 | display counters                                |
| <i>vlan-id</i>           | VLAN ID 1-4094 or range(s): 1-5, 10 or 2-5,7-19 |
| <u>__readonly__</u>      | (Optional) Read Only                            |
| TABLE_vlancounters       | (Optional) vlan counters table format           |
| <i>vlanshowbr-vlanid</i> | (Optional) VLAN brief VLAN ID                   |
| <i>l2_ing_ucast_b</i>    | (Optional) L2 Ingress unicast octets            |
| <i>l2_ing_ucast_p</i>    | (Optional) L2 Ingress unicast packets           |
| <i>l2_ing_mcast_b</i>    | (Optional) L2 Ingress multicast octets          |
| <i>l2_ing_mcast_p</i>    | (Optional) L2 Ingress multicast packets         |
| <i>l2_ing_bcast_b</i>    | (Optional) L2 Ingress broadcast octets          |
| <i>l2_ing_bcast_p</i>    | (Optional) L2 Ingress broadcast packets         |
| <i>l2_egr_ucast_b</i>    | (Optional) L2 Egress unicast octets             |
| <i>l2_egr_ucast_p</i>    | (Optional) L2 Egress unicast packets            |
| <i>l3_ucast_rcv_b</i>    | (Optional) L3 unicast octets in                 |
| <i>l3_ucast_rcv_p</i>    | (Optional) L3 unicast packets in                |
| <i>total_rcv_b</i>       | (Optional) Total octets in                      |
| <i>total_rcv_p</i>       | (Optional) Total packets in                     |
| <i>total_sent_b</i>      | (Optional) Total octets out                     |
| <i>total_sent_p</i>      | (Optional) Total packets out                    |

### Command Mode

- /exec

# show vlan id vn-segment

```
show vlan id <vlan-id> vn-segment [ __readonly__ <vlanshowinfo-segid-hdr> { TABLE_seginfoid
<vlanshowinfo-seg-vlanid> <vlanshowinfo-segment-id> } <show-end> [ <true-end> ] ]
```

## Syntax Description

|                                |   |
|--------------------------------|---|
| show                           | Show running system information                 |
| vlan                           | VLAN status                                     |
| id                             | VLAN status by VLAN id                          |
| vn-segment                     | Show vn-segment mapping                         |
| <i>vlan-id</i>                 | VLAN ID 1-4094 or range(s): 1-5, 10 or 2-5,7-19 |
| <i>__readonly__</i>            | (Optional) Read Only                            |
| <i>TABLE_seginfoid</i>         | (Optional) Segment id information table format  |
| <i>vlanshowinfo-segid-hdr</i>  | (Optional) Vlan info segment id header          |
| <i>vlanshowinfo-seg-vlanid</i> | (Optional) Vlan info VLAN ID                    |
| <i>vlanshowinfo-segment-id</i> | (Optional) Vlan info SEGMENT ID                 |
| <i>show-end</i>                | (Optional) Show vlan end marker                 |
| <i>true-end</i>                | (Optional) Show vlan end marker                 |

## Command Mode

- /exec

## show vlan name

```
show vlan name <vname> [ __readonly__ <vlanshowbr-hdr> { TABLE_vlanbriefname <vlanshowbr-vlanid>
<vlanshowbr-vlanid-utf> <vlanshowbr-vlanname> <vlanshowbr-vlanstate> <vlanshowbr-shutstate> [
<vlanshowplist-ifidx> + ] } <vlanshowinfo-mtu-hdr> { TABLE_mtuinfofname <vlanshowinfo-vlanid>
<vlanshowinfo-media-type> <vlanshowinfo-vlanmode> } [ <vlanshowrspan-hdr1> ] [
<vlanshowrspan-vlantype> ] [ <vlanshowrspan-hdr2> ] [ <vlanshowrspan-vlanbitmap> ] <show-end> [
<true-end> ] ]
```

### Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information                          |
| vlan                     | VLAN status  |
| name                     | VLAN status by VLAN name                                 |
| vname                    | A vlan name with size 32 (128 if long vlan name enabled) |
| __readonly__             | (Optional) Read Only                                     |
| TABLE_vlanbriefname      | (Optional) VLAN brief table format                       |
| TABLE_mtuinfofname       | (Optional) MTU information table format                  |
| vlanshowbr-hdr           | (Optional) VLAN brief header                             |
| vlanshowbr-vlanid        | (Optional) VLAN brief VLAN ID                            |
| vlanshowbr-vlanid-utf    | (Optional) VLAN brief VLAN ID                            |
| vlanshowbr-vlanname      | (Optional) VLAN brief VLAN name                          |
| vlanshowbr-vlanstate     | (Optional) VLAN brief VLAN state                         |
| vlanshowbr-shutstate     | (Optional) VLAN brief shutdown state                     |
| vlanshowplist-ifidx      | (Optional) Port list ifindex                             |
| vlanshowinfo-mtu-hdr     | (Optional) Vlan info mtu header                          |
| vlanshowinfo-vlanid      | (Optional) Vlan info VLAN ID                             |
| vlanshowinfo-media-type  | (Optional) Select media type                             |
| vlanshowinfo-vlanmode    | (Optional) VLAN brief VLAN mode                          |
| vlanshowrspan-hdr1       | (Optional) RSPAN VLAN header for one VLAN                |
| vlanshowrspan-hdr2       | (Optional) RSPAN VLAN header for multiple VLANs          |
| vlanshowrspan-vlantype   | (Optional) RSPAN VLAN one VLAN rspan or non-rspan        |
| vlanshowrspan-vlanbitmap | (Optional) RSPAN VLAN multiple VLANs                     |

|                 |                                 |
|-----------------|---------------------------------|
| <i>show-end</i> | (Optional) Show vlan end marker |
| <i>true-end</i> | (Optional) Show vlan end marker |

**Command Mode**

- /exec

## show vlan private-vlan

```
show vlan [ id <vlan-id> ] private-vlan [ __readonly__ [ { TABLE_pvlan_primary <vlan-key> [ <primary>
] [ <secondary> ] <pvlan-type> [ <ports> + ] } ] ]
```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                            |
| vlan                | VLAN status  |
| id                  | (Optional) VLAN status by VLAN id                          |
| <i>vlan-id</i>      | (Optional) VLAN ID 1-4094 or range(s): 1-5, 10 or 2-5,7-19 |
| private-vlan        | Private VLAN information                                   |
| <i>__readonly__</i> | (Optional) Read Only                                       |
| TABLE_pvlan_primary | (Optional) Pvlan primary vlan table                        |
| <i>vlan-key</i>     | (Optional) Vlan key  |
| <i>primary</i>      | (Optional) Primary VLAN                                    |
| <i>secondary</i>    | (Optional) Secondary VLAN                                  |
| <i>pvlan-type</i>   | (Optional) PVLAN Type                                      |
| <i>ports</i>        | (Optional) Port list                                       |

### Command Mode

- /exec

## show vlan private-vlan type

```
show vlan [ id <vlan-id> ] private-vlan type [ __readonly__ [ { TABLE_pvlantype <vlan-num> <pvlan-type> } ] ]
```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                            |
| vlan                | VLAN status  |
| id                  | (Optional) VLAN status by VLAN id                          |
| <i>vlan-id</i>      | (Optional) VLAN ID 1-4094 or range(s): 1-5, 10 or 2-5,7-19 |
| private-vlan        | Private VLAN information                                   |
| type                | Private VLAN type information                              |
| <i>__readonly__</i> | (Optional) Read Only                                       |
| TABLE_pvlantype     | (Optional) Pvlan type table                                |
| <i>vlan-num</i>     | (Optional) vlan  |
| <i>pvlan-type</i>   | (Optional) PVLAN Type                                      |

### Command Mode

- /exec

## show vlan xbrief

```
show vlan xbrief [ controller | cli ] [ __readonly__ <vlanshowbr-hdr> { TABLE_vlanbriefxbrief
<vlanshowbr-vlanid> <vlanshowbr-vlanid-utf> <vlanshowbr-vlanname> <vlanshowbr-vlanstate>
<vlanshowbr-shutstate> [ <vlanshowplist-ifidx> + ] } <show-end> [ <true-end> ] ]
```

### Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information           |
| vlan                         | VLAN status                               |
| xbrief                       | All VLAN status in brief                  |
| controller                   | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| cli                          | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| __readonly__                 | (Optional) Read Only                      |
| TABLE_vlanbriefxbrief        | (Optional) VLAN brief table format        |
| <i>vlanshowbr-hdr</i>        | (Optional) VLAN brief header              |
| <i>vlanshowbr-vlanid</i>     | (Optional) VLAN brief VLAN ID             |
| <i>vlanshowbr-vlanid-utf</i> | (Optional) VLAN brief VLAN ID             |
| <i>vlanshowbr-vlanname</i>   | (Optional) VLAN brief VLAN name           |
| <i>vlanshowbr-vlanstate</i>  | (Optional) VLAN brief VLAN state          |
| <i>vlanshowbr-shutstate</i>  | (Optional) VLAN brief shutdown state      |
| <i>vlanshowplist-ifidx</i>   | (Optional) Port list ifindex              |
| <i>show-end</i>              | (Optional) Show vlan end marker           |
| <i>true-end</i>              | (Optional) Show vlan end marker           |

### Command Mode

- /exec

# show vlan xsummary

```
show vlan xsummary [ __readonly__ <vlansum-all-vlan> <vlansum-vtp-vlan> <vlansum-ext-vlan>
<vlansum-max-supported-vlan> <vlansum-carved-vlan> <show-end> [ <true-end> ] ]
```

## Syntax Description

|                                   |   |
|-----------------------------------|---|
| show                              | Show running system information                         |
| vlan                              | VLAN status   |
| xsummary                          | VLAN summary information                                |
| <i>__readonly__</i>               | (Optional) Read Only                                    |
| <i>vlansum-all-vlan</i>           | (Optional) Show vlan summary Total                      |
| <i>vlansum-vtp-vlan</i>           | (Optional) Show vlan summary Number of normal vlans     |
| <i>vlansum-ext-vlan</i>           | (Optional) Show vlan summary Number of extended vlans   |
| <i>vlansum-max-supported-vlan</i> | (Optional) Show vlan summary Max supported vlans        |
| <i>vlansum-carved-vlan</i>        | (Optional) Show vlan summary Number of carved sdn vlans |
| <i>show-end</i>                   | (Optional) Show vlan end marker                         |
| <i>true-end</i>                   | (Optional) Show vlan end marker                         |

## Command Mode

- /exec

## show vmtracker

```
show vmtracker [ connection <conn_name> ] { { info { { [ interface <intf_id> ] { summary | detail | host |
vm | port-group } } | { vxlan-segment | vxlan-vms } } } | event-history } [ __readonly__ [ TABLE_info

| interface        | (Optional) Display vmtracker interface information    |
| <i>intf_id</i>   | (Optional) Interface name to display                  |
| summary          | Display a summary of vmtracker information            |
| detail           | Display vmtracker information details                 |
| host             | Display vmtracker host information                    |
| vm               | Display vmtracker related Virtual Machine information |
| port-group       | Display vmtracker related port-group information      |
| vxlan-segment    | Print all segment info                                |
| vxlan-vm         | Print all vm info                                     |
| event-history    | Display vmtracker related event-history               |

**Command Mode**

- /exec

# show vmtracker certificate

show vmtracker certificate [ \_\_readonly\_\_ TABLE\_cert <certificate> ]

## Syntax Description

|                    |   |
|--------------------|---|
| __readonly__       | (Optional)                                      |
| TABLE_cert         | (Optional) The entire certificate, line by line |
| <i>certificate</i> | (Optional) A line of the certificate in xml     |
| show               | Show running system information                 |
| vmtracker          | VMTRACKER commands                              |
| certificate        | Show the default certificate used               |

## Command Mode

- /exec

## show vmtracker fabric auto-config

```
show vmtracker fabric auto-config [ interface <intf_id> ] [ vlan <vlan_id> ] [ status { success | pending |
failure | skipped } ] [ __readonly__ { <oper_status> } ] [ TABLE_autoconfig <interface_name>
<port_group_name> <vlan_range> <config_status> ] ]
```

### Syntax Description

|                        |   |
|------------------------|---|
| <i>__readonly__</i>    | (Optional)  |
| <i>oper_status</i>     | (Optional) fabric auto-config enabled or disabled               |
| TABLE_autoconfig       | (Optional)  |
| <i>interface_name</i>  | (Optional) interface to the UCS                                 |
| <i>port_group_name</i> | (Optional) port-channel of this interface                       |
| <i>vlan_range</i>      | (Optional) vlans learned  |
| <i>config_status</i>   | (Optional) status of auto-config over this interface            |
| show                   | Show running system information                                 |
| vmtracker              | VMTRACKER commands  |
| fabric                 | VM Tracker Fabric paramters                                     |
| auto-config            | VM Tracker Fabric AutoConfiguration                             |
| interface              | (Optional) Display vmtracker interface information              |
| <i>intf_id</i>         | (Optional) Interface name to display                            |
| vlan                   | (Optional) vlan to display                                      |
| <i>vlan_id</i>         | (Optional) VLAN ID 1-4094 or range(s) like: 1-5, 10 or 2-5,7-19 |
| status                 | (Optional) Auto-config status                                   |
| success                | (Optional) Success  |
| pending                | (Optional) Pending  |
| failure                | (Optional) Failure  |
| skipped                | (Optional) Skipped  |

### Command Mode

- /exec

# show vmtracker status

```
show vmtracker [ connection <conn_name> ] status [ __readonly__ { TABLE_connection <name> <host_or_ip>
<conn_status> } ]
```

## Syntax Description

|                     |  |
|---------------------|--|
| <i>__readonly__</i> | (Optional)                                       |
| TABLE_connection    | (Optional)                                       |
| <i>name</i>         | (Optional)                                       |
| <i>host_or_ip</i>   | (Optional)                                       |
| <i>conn_status</i>  | (Optional)                                       |
| show                | Show running system information                  |
| vmtracker           | Show vmtracker info                              |
| connection          | (Optional) Show vmtracker configured connections |
| <i>conn_name</i>    | (Optional) Show vmtracker Connection name        |
| status              | Show vmtracker connection status                 |

## Command Mode

- /exec

## show vpc

```
show vpc [ brief ] [ __readonly__ <vpc-domain-id> [ <vpc-l2mp-switch-id> ] <vpc-peer-status>

| <i>syserr</i>          | (Optional) vPC consistency reason         |
| <i>reason_code</i>     | (Optional) vPC consistency reason         |

### Command Mode

- /exec

# show vpc fabric-ports

```
show vpc fabric-ports [ __readonly__ [ { TABLE_fabric_ports <vpc-fabric-ports> } ] ]
```

## Syntax Description

|                         |   |
|-------------------------|---|
| vpc                     | Virtual Port Channel configuration                  |
| fabric-ports            | Show ports that are part of uplink virtual-peerlink |
| __readonly__            | (Optional) Read Only                                |
| TABLE_fabric_ports      | (Optional) vPC fabric ports table                   |
| <i>vpc-fabric-ports</i> | (Optional) description of the port                  |

## Command Mode

- /exec

## show vpc orphan-ports

```
show vpc orphan-ports [ __readonly__ [ { TABLE_orphan_ports <vpc-vlan> <vpc-orphan-ports> } ] ]
```

### Syntax Description

|                    |   |
|--------------------|---|
| vpc                | Virtual Port Channel configuration                        |
| orphan-ports       | Show ports that are not part of vPC but have common VLANs |
| __readonly__       | (Optional) Read Only                                      |
| TABLE_orphan_ports | (Optional) vPC orphan ports table                         |
| vpc-vlan           | (Optional) port vlan                                      |
| vpc-orphan-ports   | (Optional) description of the port                        |

### Command Mode

- /exec

## show vpc peer-keepalive

```
show vpc peer-keepalive [ __readonly__ <vpc-peer-keepalive-status> <vpc-keepalive-dest>
<vpc-keepalive-send-interface> <vpc-keepalive-receive-interface> <vpc-keepalive-send-tstamp>
<vpc-keepalive-receive-tstamp> <vpc-peer-keepalive-up-time> <vpc-keepalive-send-status>
<vpc-keepalive-receive-status> <vpc-keepalive-lastupdate> [ <vpc-keepalive-dest> ] <vpc-keepalive-interval>
<vpc-keepalive-timeout> <vpc-keepalive-hold-timeout> <vpc-keepalive-vrf> <vpc-keepalive-udp-port>
<vpc-keepalive-tos> ]
```

### Syntax Description

|  |   |
|--|---|
| vpc                                    | Virtual Port Channel configuration              |
| peer-keepalive                         | vPC keepalive status                            |
| __readonly__                           | (Optional) Read Only                            |
| <i>vpc-peer-keepalive-status</i>       | (Optional) vpc peer keepalive status            |
| <i>vpc-keepalive-dest</i>              | (Optional) vPC keepalive destination ip address |
| <i>vpc-keepalive-send-status</i>       | (Optional) vPC keepalive send status            |
| <i>vpc-keepalive-receive-status</i>    | (Optional) vPC keepalive receive status         |
| <i>vpc-peer-keepalive-up-time</i>      | (Optional) keepalive- alive time                |
| <i>vpc-keepalive-send-tstamp</i>       | (Optional) vPC keepalive last send timestamp    |
| <i>vpc-keepalive-send-interface</i>    | (Optional) vPC keepalive send interface         |
| <i>vpc-keepalive-receive-tstamp</i>    | (Optional) vPC keepalive last receive timestamp |
| <i>vpc-keepalive-receive-interface</i> | (Optional) vPC keepalive receive interface      |
| <i>vpc-keepalive-lastupdate</i>        | (Optional) vPC keepalive last update from peer  |
| <i>vpc-keepalive-interval</i>          | (Optional) vPC keepalive timeout                |
| <i>vpc-keepalive-timeout</i>           | (Optional) vPC keepalive interval               |
| <i>vpc-keepalive-hold-timeout</i>      | (Optional) hold timeout                         |
| <i>vpc-keepalive-vrf</i>               | (Optional) vrf name                             |
| <i>vpc-keepalive-udp-port</i>          | (Optional) udp port                             |
| <i>vpc-keepalive-tos</i>               | (Optional) tos value                            |

### Command Mode

- /exec

# show vpc role

```
show vpc role [ __readonly__ <vpc-peer-status> <vpc-peer-status-reason> [ <vpc-current-role> ] [
<vpc-es-current-role> ] <dual-active-detected> <vpc-system-mac> <vpc-system-prio> <vpc-local-system-mac>
<vpc-local-system-prio><vpc-local-role-prio> <vpc-peer-system-mac>
<vpc-peer-system-prio><vpc-peer-role-prio> ]
```

## Syntax Description

|                               |   |
|-------------------------------|---|
| vpc                           | Virtual Port Channel configuration      |
| role                          | vPC role status                         |
| __readonly__                  | (Optional) Read Only                    |
| <i>vpc-peer-status</i>        | (Optional) vPC peer status              |
| <i>vpc-peer-status-reason</i> | (Optional) vPC peer status reason       |
| <i>vpc-current-role</i>       | (Optional) vPC role                     |
| <i>vpc-es-current-role</i>    | (Optional) vPC role                     |
| <i>dual-active-detected</i>   | (Optional) Dual active detection status |
| <i>vpc-system-mac</i>         | (Optional) vPC system mac               |
| <i>vpc-local-system-mac</i>   | (Optional) vPC local system mac         |
| <i>vpc-peer-system-mac</i>    | (Optional) vPC peer system mac          |
| <i>vpc-system-prio</i>        | (Optional) vPC system priority          |

## Command Mode

- /exec

## show vpc statistics peer-keepalive

```
show vpc statistics peer-keepalive [ __readonly__ <vpc-peer-keepalive-status> <vpc-keepalive-counters-tx>
<vpc-keepalive-counters-rx> <vpc-keepalive-avg-rx-interval> <vpc-keepalive-peer-state-changes> ]
```

### Syntax Description

|   |  |
|---|--|
| vpc                                     | Virtual Port Channel configuration       |
| statistics                              | Statistics                               |
| peer-keepalive                          | peer keepalive module related statistics |
| __readonly__                            | (Optional) Read Only                     |
| <i>vpc-peer-keepalive-status</i>        | (Optional) vpc peer keepalive status     |
| <i>vpc-keepalive-counters-tx</i>        | (Optional) tx counters                   |
| <i>vpc-keepalive-counters-rx</i>        | (Optional) rx counters                   |
| <i>vpc-keepalive-avg-rx-interval</i>    | (Optional) avg rx interval in ms         |
| <i>vpc-keepalive-peer-state-changes</i> | (Optional) peer state changes            |

### Command Mode

- /exec

# show vpc statistics vpc

show vpc statistics { vpc <vpc\_num> | peer-link }

## Syntax Description

|                |                                    |
|----------------|------------------------------------|
| vpc            | Virtual Port Channel configuration |
| statistics     | Statistics                         |
| <i>vpc_num</i> | Virtual Port Channel number        |
| peer-link      | stats for peer-link                |

## Command Mode

- /exec

# show vpc virtual-peerlink dest reachable

show vpc virtual-peerlink dest reachable

## Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information        |
| vpc              | vPC related information                |
| virtual-peerlink | virtual-peerlink Related show commands |
| dest             | dest info                              |
| reachable        | dest reachability                      |

## Command Mode

- /exec

# show vpc virtual-peerlink vlan consistency

show vpc virtual-peerlink vlan consistency

## Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information        |
| vpc              | vPC related information                |
| virtual-peerlink | virtual-peerlink Related show commands |
| vlan             | vlan info for vPC                      |
| consistency      | vlan vni consistency                   |

## Command Mode

- /exec

# show vrf

show vrf [ <vrf-name> | <vrf-known-name> | all ]

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                 |
| vrf                   | Display VRF information                         |
| <i>vrf-name</i>       | (Optional) VRF name                             |
| <i>vrf-known-name</i> | (Optional) Known VRF name                       |
| all                   | (Optional) Display VRF information for all VRFs |

## Command Mode

- /exec

# show vrf

```
show vrf [ <vrf-name> | <vrf-known-name> | all ] [ order id ] [ detail ] [ passive ] [ __readonly__ TABLE_vrf
<vrf_name> <vrf_id> <vrf_state> [ <vrf_reason> ] [ <vrf_pend> ] [ <vpnid> <rd> [ <vni> ] <max_routes>
<mid_threshold> ] [ { TABLE_tib <tib_id> <tib_af> <tib_nonce> <tib_state> [ <tib_reason> ] [ <tib_pend>
} ] ] ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                 |
| vrf                   | Display VRF information                         |
| <i>vrf-name</i>       | (Optional) VRF name                             |
| <i>vrf-known-name</i> | (Optional) Known VRF name                       |
| all                   | (Optional) Display VRF information for all VRFs |
| order                 | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED       |
| id                    | (Optional) Order by ID                          |
| detail                | (Optional) Display VRF detail information       |
| passive               | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED       |
| __readonly__          | (Optional)                                      |

## Command Mode

- /exec

# show vsan

```
show vsan [ <id_in> ] [ __readonly__ { TABLE_vsan <id> { [ <name> <state> <interop_mode>
<load_balancing> <operational_state> ] | <inactive_vsan_name> | <evfp_control_vsan_name> } } ]
```

## Syntax Description

|                               |                                  |
|-------------------------------|----------------------------------|
| show                          | Show running system information  |
| vsan                          | Vsan commands                    |
| <i>id_in</i>                  | (Optional) VSAN ID range         |
| <i>__readonly__</i>           | (Optional) Read Only             |
| TABLE_vsan                    | (Optional) Table of VSAN's       |
| <i>id</i>                     | (Optional) VSAN ID               |
| <i>name</i>                   | (Optional) VSAN name             |
| <i>state</i>                  | (Optional) VSAN state            |
| <i>interop_mode</i>           | (Optional) Interoperability mode |
| <i>load_balancing</i>         | (Optional) Load balancing        |
| <i>operational_state</i>      | (Optional) Operational state     |
| <i>inactive_vsan_name</i>     | (Optional) Isolated VSAN         |
| <i>evfp_control_vsan_name</i> | (Optional) EVFP isolated VSAN    |

## Command Mode

- /exec

# show vsan membership

```
show vsan [ <id_in> ] membership [ __readonly__ { TABLE_vsan <id> [ <inactive_vsan_name> ] [
<evfp_control_vsan_name> ] [ TABLE_interface <name> ] } ]
```

## Syntax Description

|                               |                                      |
|-------------------------------|--------------------------------------|
| show                          | Show running system information      |
| vsan                          | Vsan commands                        |
| <i>id_in</i>                  | (Optional) VSAN ID range             |
| membership                    | VSAN membership information          |
| <i>__readonly__</i>           | (Optional) Read Only                 |
| TABLE_vsan                    | (Optional) VSAN table                |
| <i>id</i>                     | (Optional) VSAN ID                   |
| <i>inactive_vsan_name</i>     | (Optional) Isolated VSAN             |
| <i>evfp_control_vsan_name</i> | (Optional) EVFP isolated VSAN        |
| TABLE_interface               | (Optional) List of interface members |
| <i>name</i>                   | (Optional) Interface name            |

## Command Mode

- /exec

## show vsan membership interface

```
show vsan membership interface <if_in> [ __readonly__ { TABLE_interface <name> <vsan_id_memb> [
<inactive_vsan_name> | <evfp_control_vsan_name> ] <allowed_vsan_list> } ]
```

### Syntax Description

|                               |   |
|-------------------------------|---|
| show                          | Show running system information               |
| vsan                          | Vsan commands                                 |
| membership                    | VSAN membership information                   |
| interface                     | Show interface status and information         |
| <i>if_in</i>                  | Interface range                               |
| <i>__readonly__</i>           | (Optional) Read Only                          |
| <i>TABLE_interface</i>        | (Optional) Interface VSAN table               |
| <i>name</i>                   | (Optional) Interface Name                     |
| <i>vsan_id_memb</i>           | (Optional) VSAN ID to which interface belongs |
| <i>inactive_vsan_name</i>     | (Optional) Isolated VSAN                      |
| <i>evfp_control_vsan_name</i> | (Optional) EVFP isolated VSAN                 |
| <i>allowed_vsan_list</i>      | (Optional) Allowed VSAN list                  |

### Command Mode

- /exec

## show vsan usage

```
show vsan usage [ __readonly__ { <num_vsans_configured> <configured_range_of_vsans>
<vsans_available_to_configure> } ]
```

### Syntax Description

|                                     |  |
|-------------------------------------|--|
| show                                | Show running system information              |
| vsan                                | Vsan commands                                |
| usage                               | show VSAN usage in the system                |
| <i>__readonly__</i>                 | (Optional) Read Only                         |
| <i>num_vsans_configured</i>         | (Optional) Total VSAN's configured           |
| <i>configured_range_of_vsans</i>    | (Optional) Range of VSAN's configured        |
| <i>vsans_available_to_configure</i> | (Optional) VSAN range available to configure |

### Command Mode

- /exec

## show vtp counters

```
show vtp counters [ __readonly__ <start> <summary_rx> <subset_rx> <request_rx> <summary_tx>
<subset_tx> <request_tx> <num_config_rev_error> <num_config_digest_error> <num_v1_summary_error>
[ { TABLE_pruning_counters <if_index> <join_tx> <join_rx> <summary_adv_v1_rx> } ] ]
```

### Syntax Description

|                                |   |
|--------------------------------|---|
| show                           | Show running system information                                   |
| vtp                            | VTP information   |
| counters                       | VTP statistics  |
| <i>__readonly__</i>            | (Optional) Read Only  |
| <i>start</i>                   | (Optional) Start  |
| <i>summary_rx</i>              | (Optional) Summary advertisements received                        |
| <i>subset_rx</i>               | (Optional) Subset advertisements received                         |
| <i>request_rx</i>              | (Optional) Request advertisements received                        |
| <i>summary_tx</i>              | (Optional) Summary advertisements transmitted                     |
| <i>subset_tx</i>               | (Optional) Subset advertisements transmitted                      |
| <i>request_tx</i>              | (Optional) Request advertisements transmitted                     |
| <i>num_config_rev_error</i>    | (Optional) Number of config revision errors                       |
| <i>num_config_digest_error</i> | (Optional) Number of config digest errors                         |
| <i>num_v1_summary_error</i>    | (Optional) Number of V1 summary errors                            |
| TABLE_pruning_counters         | (Optional) Pruning counters in table format                       |
| <i>if_index</i>                | (Optional) Trunk  |
| <i>join_tx</i>                 | (Optional) Join Transmitted                                       |
| <i>join_rx</i>                 | (Optional) Join Received  |
| <i>summary_adv_v1_rx</i>       | (Optional) Summary advts received from non-pruning-capable device |

### Command Mode

- /exec

# show vtp interface

```
show vtp interface [ <interface_range> ] [ __readonly__ [ <start> ] { TABLE_vtp_interface <if_index>
<status> } ]
```

## Syntax Description

|                        |  |
|------------------------|--|
| show                   | Show running system information                        |
| vtp                    | VTP information  |
| interface              | VTP interface status and configuration                 |
| <i>interface_range</i> | (Optional) Enter interfaces                            |
| <i>__readonly__</i>    | (Optional) Read Only                                   |
| <i>start</i>           | (Optional) Start                                       |
| TABLE_vtp_interface    | (Optional) VTP interface configuration in table format |
| <i>if_index</i>        | (Optional) Trunk                                       |
| <i>status</i>          | (Optional) VTP interface status                        |

## Command Mode

- /exec

# show vtp password

```
show vtp password [ domain <domain-id> ] [ __readonly__ <start> <passwd> <password-type> <secret-key> ]
```

## Syntax Description

|                      |  |
|----------------------|--|
| show                 | Show running system information                  |
| vtp                  | VTP information                                  |
| password             | VTP password                                     |
| domain               | (Optional) VTP administrative domain             |
| <i>domain-id</i>     | (Optional) Domain index(Domain-id)               |
| <i>__readonly__</i>  | (Optional) Read Only                             |
| <i>start</i>         | (Optional) Start                                 |
| <i>passwd</i>        | (Optional) VTP Domain Password                   |
| <i>password-type</i> | (Optional) Password Type (1=plaintext, 2=hidden) |
| <i>secret-key</i>    | (Optional) Secret Key for the password           |

## Command Mode

- /exec

## show vtp status

```
show vtp status [ __readonly__ <start> <version> <config_rev> <max_vlan_supported_local>
<num_current_vlans> <oper_mode> <domain_name> <pruning_mode> <oper_pruning_mode> <v2_mode>
<trap_enabled> <md5_digest> <last_modified_ip> <last_modified_time> <running-version> <updater_id>
<updater_reason> ]
```

### Syntax Description

|                                 |  |
|---------------------------------|--|
| show                            | Show running system information            |
| vtp                             | VTP information                            |
| status                          | VTP domain status                          |
| <i>__readonly__</i>             | (Optional) Read Only                       |
| <i>start</i>                    | (Optional) Start                           |
| <i>version</i>                  | (Optional) VTP version                     |
| <i>config_rev</i>               | (Optional) Configuration Revision          |
| <i>max_vlan_supported_local</i> | (Optional) Maximum VLANs supported locally |
| <i>num_current_vlans</i>        | (Optional) Number of existing VLANs        |
| <i>oper_mode</i>                | (Optional) VTP Mode                        |
| <i>domain_name</i>              | (Optional) VTP Domain Name                 |
| <i>pruning_mode</i>             | (Optional) Pruning Mode                    |
| <i>oper_pruning_mode</i>        | (Optional) Operational Pruning Mode        |
| <i>v2_mode</i>                  | (Optional) VTP v2 Mode                     |
| <i>trap_enabled</i>             | (Optional) trap enabled                    |
| <i>md5_digest</i>               | (Optional) MD5 Digest                      |
| <i>last_modified_ip</i>         | (Optional) Configuration last modified by  |
| <i>last_modified_time</i>       | (Optional) Configuration last modified at  |
| <i>running-version</i>          | (Optional) VTP Version Running             |
| <i>updater_id</i>               | (Optional) Local Updater id                |
| <i>updater_reason</i>           | (Optional) Local Updater id reason         |

### Command Mode

- /exec

**show vtp status**

## show wrr-queue qos-group-map

```
show wrr-queue qos-group-map [ __readonly__ <mcast_queue_id> [ TABLE_wrr_queue <wrr_queue> [
TABLE_qos_group <qos_group> ] ] ]
```

### Syntax Description

|                        |  |
|------------------------|--|
| show                   | Show running system information                                  |
| wrr-queue              | Display mapping of traffic priority (CoS) values to L3 Multicast |
| qos-group-map          | Show wrr-queue qos-group-map                                     |
| <i>__readonly__</i>    | (Optional)   |
| <i>mcast_queue_id</i>  | (Optional) MCAST Queue ID  |
| <i>TABLE_wrr_queue</i> | (Optional) Table wrr queue                                       |
| <i>wrr_queue</i>       | (Optional) Traffic priority values                               |
| <i>TABLE_qos_group</i> | (Optional) Table qos group                                       |
| <i>qos_group</i>       | (Optional) QoS-Group-Map   |

### Command Mode

- /exec

## show wrr unicast-bandwidth

show wrr unicast-bandwidth [ \_\_readonly\_\_ TABLE\_wrr\_unicast\_bandwidth <unicast-bandwidth> ]

### Syntax Description

|                             |   |
|-----------------------------|---|
| show                        | Show running system information           |
| wrr                         | unicast bandwidth configuration           |
| unicast-bandwidth           | rate in percentage of data rate           |
| __readonly__                | (Optional)                                |
| TABLE_wrr_unicast_bandwidth | (Optional) XML show wrr unicast-bandwidth |
| <i>unicast-bandwidth</i>    | (Optional) unicast bandwidth value        |

### Command Mode

- /exec

# show wwn oui

```
show wwn oui [ __readonly__ [ TABLE_oui <oui> [ <vendor> ] [ <type> ] ] ]
```

## Syntax Description

|               |                                 |
|---------------|---------------------------------|
| show          | Show running system information |
| wwn           | show wwn information            |
| oui           | Show oui database               |
| __readonly__  | (Optional) Read Only            |
| TABLE_oui     | (Optional) show wwn oui table   |
| <i>oui</i>    | (Optional) oui of the switch    |
| <i>vendor</i> | (Optional) Switch vendor name   |
| <i>type</i>   | (Optional) Default/Static       |

## Command Mode

- /exec

## show wwn status

```
show wwn status [ { backplane-prom | block-id <i0> | non-volatile-pss | volatile-pss } ] [ __readonly__ [
TABLE_status <type> <configured> <available> <avbl_percent> <resd> <alarm> ] [ <wwn_start> <wwn_end>
<num_of_wwn> <allocated_wwn> <available_wwn> <alloc_status> ] ]
```

### Syntax Description

|                  |   |
|------------------|---|
| show             | Show running system information           |
| wwn              | show wwn information                      |
| status           | Show overall WWN Usage and Alarm Status   |
| backplane-prom   | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| block-id         | (Optional) Enter a block id.              |
| i0               | (Optional) Enter a block id.              |
| non-volatile-pss | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| volatile-pss     | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| __readonly__     | (Optional) Read Only                      |
| TABLE_status     | (Optional) show wwn status table          |
| type             | (Optional) WWN Type                       |
| configured       | (Optional) Number of Configured WWNs      |
| available        | (Optional) Number of Available WWNs       |
| avbl_percent     | (Optional) Available % of WWNs            |
| resd             | (Optional) Reserved WWNs                  |
| alarm            | (Optional) Alarm State                    |
| wwn_start        | (Optional) Start value of WWN-range       |
| wwn_end          | (Optional) End value of WWN-range         |
| num_of_wwn       | (Optional) Total Number of WWNs           |
| allocated_wwn    | (Optional) Number of Allocated WWNs       |
| available_wwn    | (Optional) Number of Available WWNs       |
| alloc_status     | (Optional) Block Allocation Status        |

### Command Mode

- /exec

# show wwn switch

```
show wwn switch [ __readonly__ { <sw_wwn> } ]
```

## Syntax Description

|               |                                 |
|---------------|---------------------------------|
| show          | Show running system information |
| wwn           | show wwn information            |
| switch        | Show switch WWN                 |
| __readonly__  | (Optional) Read Only            |
| <i>sw_wwn</i> | (Optional) The Switch WWN       |

## Command Mode

- /exec

## show wwn test

```
show wwn test { get_swwn_from_pwwn <wwn0> | get_pwwn_from_swwn <wwn1> if_index <i0> |

# show xml server logging configuration

show xml server logging configuration

## Syntax Description

|               |  |
|---------------|--|
| show          | Show running system information                    |
| xml           | Show xmlagent logging configuration                |
| server        | xml agent server                                   |
| logging       | Show logging configuration and contents of logfile |
| configuration | Show facility logging configuration                |

## Command Mode

- /exec

## show xml server status

```
show xml server status [ __readonly__ { operational_status <o_status> } { maximum_sessions_configured
<max_session> } [ { TABLE_sessions <session_id> <user_name> <start_time> <sap_id> <timeout>
<time_remaining_to_timeout> <ip_addr> } ] ]
```

### Syntax Description

|                                    |  |
|------------------------------------|--|
| show                               | to display xml agent information         |
| xml                                | xml agent                                |
| server                             | xml agent server                         |
| status                             | display xml agent information            |
| <i>__readonly__</i>                | (Optional)                               |
| <i>operational_status</i>          | (Optional) run-time info about xml       |
| <i>o_status</i>                    | (Optional) operational status of the xml |
| <i>maximum_sessions_configured</i> | (Optional) the max session configured    |
| <i>max_session</i>                 | (Optional) max sessions number           |
| <i>TABLE_sessions</i>              | (Optional) all xml sessions              |
| <i>session_id</i>                  | (Optional) one xml session id            |
| <i>user_name</i>                   | (Optional) the xml session user name     |
| <i>start_time</i>                  | (Optional) the xml session start time    |
| <i>sap_id</i>                      | (Optional) the mts sap id                |
| <i>timeout</i>                     | (Optional) inactivity timeout value      |
| <i>time_remaining_to_timeout</i>   | (Optional) time remaining to timeout     |
| <i>ip_addr</i>                     | (Optional) ip address of the session     |

### Command Mode

- /exec

show xml server status

# show zone-attribute-group

```
show zone-attribute-group [ [ name <s0> ] [ [ pending ] [ vsan <i0> ] ] ]
```

## Syntax Description

|                      |  |
|----------------------|--|
| show                 | Show running system information                                      |
| zone-attribute-group | Attribute-group show commands  |
| name                 | (Optional) Show attributes of a specified attribute-group            |
| <i>s0</i>            | (Optional) Enter the name of attr_group                              |
| pending              | (Optional) Show attributes of a specified attribute-group in session |
| vsan                 | (Optional) Show attr_groups belonging to the specified VSAN          |
| <i>i0</i>            | (Optional) VSAN id range   |

## Command Mode

- /exec

# show zone

show zone

## Syntax Description

|      |                                 |
|------|---------------------------------|
| show | Show running system information |
|------|---------------------------------|

## Command Mode

- /exec

# show zone active

show zone active [ vsan <i0> ]

## Syntax Description

|           |   |
|-----------|---|
| show      | Show running system information                       |
| active    | Show zones which are part of active zoneset           |
| vsan      | (Optional) Show zones belonging to the specified VSAN |
| <i>i0</i> | (Optional) VSAN id range                              |

## Command Mode

- /exec

# show zone analysis

show zone analysis [ pending ] { active vsan <i0> | vsan1 <i1> | zoneset <s0> vsan2 <i2> }

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                          |
| analysis  | Show analysis  |
| pending   | (Optional) Show zoneset analysis in the pending database |
| active    | Show active zoneset analysis                             |
| vsan      | Show active zoneset analysis in the specified VSAN       |
| <i>i0</i> | VSAN id range  |
| vsan1     | Show analysis in the specified VSAN                      |
| <i>i1</i> | VSAN id range  |
| zoneset   | Show zoneset analysis                                    |
| <i>s0</i> | Zoneset name   |
| vsan2     | Show zoneset analysis in the specified VSAN              |
| <i>i2</i> | VSAN id range  |

## Command Mode

- /exec

# show zone ess

show zone ess [ vsan <i0> ]

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                          |
| ess       | Show ESS info  |
| vsan      | (Optional) Show ESS info belonging to the specified VSAN |
| <i>i0</i> | (Optional) VSAN id range                                 |

## Command Mode

- /exec

## show zone member

```
show zone member { fcalias <s0> [ [ active ] [ vsan <i0> ] ] | fcid <fcid1> [ [ lun <lun2> ] [ [ active ] [ vsan1
<i3> ] ] ] | pwwn <wwn4> [ [ lun1 <lun5> ] [ [ active ] [ vsan2 <i6> ] ] ] | device-alias <s7> [ [ lun2 <lun8>
] [ [ active ] [ vsan3 <i9> ] ] ] }
```

### Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information   |
| member       | Show all zones in which the given member is part of                     |
| fcalias      | Alias Name  |
| <i>s0</i>    | Enter the name of fcalias   |
| active       | (Optional) Show zones from active database                              |
| vsan         | (Optional) Displays only those zones which belong to the specified VSAN |
| <i>i0</i>    | (Optional) VSAN id range  |
| fcid         | FCID  |
| <i>fcid1</i> | Enter FCID  |
| lun          | (Optional) LUN  |
| <i>lun2</i>  | (Optional) Enter LUN  |
| active       | (Optional) Show zones from active database                              |
| vsan1        | (Optional) Displays only those zones which belong to the specified VSAN |
| <i>i3</i>    | (Optional) VSAN id range  |
| pwwn         | WWN   |
| <i>wwn4</i>  | Enter Port WWN  |
| lun1         | (Optional) LUN  |
| <i>lun5</i>  | (Optional) Enter LUN  |
| active       | (Optional) Show zones from active database                              |
| vsan2        | (Optional) Displays only those zones which belong to the specified VSAN |
| <i>i6</i>    | (Optional) VSAN id range  |
| device-alias | Device-Alias  |

|               |   |
|---------------|---|
| <i>s7</i>     | Enter device-alias  |
| <i>lun2</i>   | (Optional) LUN  |
| <i>lun8</i>   | (Optional) Enter LUN  |
| <i>active</i> | (Optional) Show zones from active database                              |
| <i>vsan3</i>  | (Optional) Displays only those zones which belong to the specified VSAN |
| <i>i9</i>     | (Optional) VSAN id range  |

**Command Mode**

- /exec

# show zone name

show zone name <s0>

## Syntax Description

|      |                                  |
|------|----------------------------------|
| show | Show running system information  |
| name | Show members of a specified zone |
| s0   | Enter the name of zone           |

## Command Mode

- /exec

## show zone name active

show zone name <s0> active [ vsan <i0> ]

### Syntax Description

|           |   |
|-----------|---|
| show      | Show running system information                       |
| name      | Show members of a specified zone                      |
| <i>s0</i> | Enter the name of zone                                |
| active    | Show zones which are part of active zoneset           |
| vsan      | (Optional) Show zones belonging to the specified VSAN |
| <i>i0</i> | (Optional) VSAN id range                              |

### Command Mode

- /exec

# show zone name pending

```
show zone name <s0> pending [ { active [ vsan <i0> ] | vsan1 <i1> } ]
```

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                        |
| name      | Show members of a specified zone                       |
| <i>s0</i> | Enter the name of zone                                 |
| pending   | Show members of a specified zone in session            |
| active    | (Optional) Show zones which are part of active zoneset |
| vsan      | (Optional) Show zones belonging to the specified VSAN  |
| <i>i0</i> | (Optional) VSAN id range                               |
| vsan1     | (Optional) Show zones belonging to the specified VSAN  |
| <i>i1</i> | (Optional) VSAN id range                               |

## Command Mode

- /exec

# show zone pending-diff

show zone pending-diff [ vsan <i0> ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                                 |
| pending-diff | Zone Server pending changes                                     |
| vsan         | (Optional) Show pending changes belonging to the specified VSAN |
| <i>i0</i>    | (Optional) VSAN id range  |

## Command Mode

- /exec

# show zone pending

```
show zone pending [ { active [ vsan <i0> ] | vsan1 <i1> } ]
```

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                        |
| pending   | Show members of a specified zone in session            |
| active    | (Optional) Show zones which are part of active zoneset |
| vsan      | (Optional) Show zones belonging to the specified VSAN  |
| <i>i0</i> | (Optional) VSAN id range                               |
| vsan1     | (Optional) Show zones belonging to the specified VSAN  |
| <i>i1</i> | (Optional) VSAN id range                               |

## Command Mode

- /exec

# show zone policy

show zone policy [ { pending [ vsan <i0> ] | vsan1 <i1> } ]

## Syntax Description

|           |   |
|-----------|---|
| show      | Show running system information                               |
| policy    | Show zone policies  |
| pending   | (Optional) Show zone policies pending                         |
| vsan      | (Optional) Show zone policies pending in specified VSAN       |
| <i>i0</i> | (Optional) VSAN id range                                      |
| vsan1     | (Optional) Show zone policies belonging to the specified VSAN |
| <i>i1</i> | (Optional) VSAN id range                                      |

## Command Mode

- /exec

# show zone smart-zoning auto-conv log errors

show zone smart-zoning auto-conv log errors

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information               |
| smart-zoning | Show smart-zoning commands                    |
| auto-conv    | Show auto-convert status                      |
| log          | Show logged messages                          |
| errors       | Show error-logs for smart-zoning auto-convert |

## Command Mode

- /exec

## show zone smart-zoning auto-conv status vsan

show zone smart-zoning auto-conv status vsan <i0>

### Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information              |
| smart-zoning | Show smart-zoning commands                   |
| auto-conv    | Show previous auto-convert status            |
| status       | Show previous auto-convert status            |
| vsan         | Show previous auto-convert status for a VSAN |
| <i>i0</i>    | VSAN id range                                |

### Command Mode

- /exec

# show zone statistics

show zone statistics

## Syntax Description

|            |                                 |
|------------|---------------------------------|
| show       | Show running system information |
| statistics | Show zone server statistics     |

## Command Mode

- /exec

# show zone statistics vsan

show zone statistics vsan <i0>

## Syntax Description

|            |   |
|------------|---|
| show       | Show running system information                 |
| statistics | Show zone server statistics                     |
| vsan       | Show statistics belonging to the specified VSAN |
| <i>i0</i>  | VSAN id range                                   |

## Command Mode

- /exec

# show zone status

```
show zone status [ { vsan <i0> | global } ]
```

## Syntax Description

|           |   |
|-----------|---|
| show      | Show running system information                       |
| status    | Show zone server current status                       |
| vsan      | (Optional) Show zone server current status for a VSAN |
| global    | (Optional) Show zone server global values             |
| <i>i0</i> | (Optional) VSAN id range                              |

## Command Mode

- /exec

# show zone vsan

show zone vsan <i0>

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information            |
| vsan      | Show zones belonging to the specified VSAN |
| <i>i0</i> | VSAN id range                              |

## Command Mode

- /exec

# show zone vsan

```
show zone [ name <s0> ] vsan <i0>
```

## Syntax Description

|           |   |
|-----------|---|
| show      | Show running system information             |
| name      | (Optional) Show members of a specified zone |
| <i>s0</i> | (Optional) Enter the name of zone           |
| vsan      | Show zones belonging to the specified VSAN  |
| <i>i0</i> | VSAN id range                               |

## Command Mode

- /exec

# show zoneset

```
show zoneset [ [ name <s0> ] [ [ pending ] [ [ brief ] [ [ active ] [ vsan <i0> ] ] ] ] ]
```

## Syntax Description

|           |   |
|-----------|---|
| show      | Show running system information                           |
| zoneset   | Zoneset show commands                                     |
| name      | (Optional) Show members of a specified zoneset            |
| <i>s0</i> | (Optional) Enter the name of zoneset                      |
| pending   | (Optional) Show members of a specified zoneset in session |
| brief     | (Optional) Show members in brief mode                     |
| active    | (Optional) Show only active zonesets                      |
| vsan      | (Optional) Show zonesets belonging to the specified VSAN  |
| <i>i0</i> | (Optional) VSAN id range                                  |
