THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS REFERENCED IN THIS DOCUMENTATION ARE SUBJECT TO CHANGE WITHOUT NOTICE. EXCEPT AS MAY OTHERWISE BE AGREED BY CISCO IN WRITING, ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS DOCUMENTATION ARE PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED.

The Cisco End User License Agreement and any supplemental license terms govern your use of any Cisco software, including this product documentation, and are located at:

<http://www.cisco.com/go/softwareterms>. Cisco product warranty information is available at <http://www.cisco.com/go/warranty>. US Federal Communications Commission Notices are found here <http://www.cisco.com/c/en/us/products/us-fcc-notice.html>.

IN NO EVENT SHALL CISCO OR ITS SUPPLIERS BE LIABLE FOR ANY INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES, INCLUDING, WITHOUT LIMITATION, LOST PROFITS OR LOSS OR DAMAGE TO DATA ARISING OUT OF THE USE OR INABILITY TO USE THIS MANUAL, EVEN IF CISCO OR ITS SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Any products and features described herein as in development or available at a future date remain in varying stages of development and will be offered on a when-and-if-available basis. Any such product or feature roadmaps are subject to change at the sole discretion of Cisco and Cisco will have no liability for delay in the delivery or failure to deliver any products or feature roadmap items that may be set forth in this document.

Any Internet Protocol (IP) addresses and phone numbers used in this document are not intended to be actual addresses and phone numbers. Any examples, command display output, network topology diagrams, and other figures included in the document are shown for illustrative purposes only. Any use of actual IP addresses or phone numbers in illustrative content is unintentional and coincidental.

The documentation set for this product strives to use bias-free language. For the purposes of this documentation set, bias-free is defined as language that does not imply discrimination based on age, disability, gender, racial identity, ethnic identity, sexual orientation, socioeconomic status, and intersectionality. Exceptions may be present in the documentation due to language that is hardcoded in the user interfaces of the product software, language used based on RFP documentation, or language that is used by a referenced third-party product.

Cisco and the Cisco logo are trademarks or registered trademarks of Cisco and/or its affiliates in the U.S. and other countries. To view a list of Cisco trademarks, go to this URL: [www.cisco.com go trademarks](http://www.cisco.com/go/trademarks). Third-party trademarks mentioned are the property of their respective owners. The use of the word partner does not imply a partnership relationship between Cisco and any other company. (1721R)

| show bgp convergence               | 101 |
| show bgp dampening dampened        | 103 |
| show bgp dampening flap-statistics | 110 |
| show bgp dampening parameters      | 113 |
| show bgp evi                       | 116 |

|                                    |     |
|------------------------------------|-----|
| show bgp extcommunity              | 118 |
| show bgp l3vpn                     | 125 |
| show bgp neighbors                 | 127 |
| show bgp neighbors                 | 134 |
| show bgp neighbors commands        | 145 |
| show bgp neighbors flap-statistics | 147 |
| show bgp neighbors paths           | 149 |
| show bgp path-attribute discard    | 151 |
| show bgp paths                     | 158 |
| show bgp peer-template             | 159 |
| show bgp peer                      | 163 |
| show bgp prefix-list               | 165 |
| show bgp private attr              | 171 |
| show bgp private debug history     | 172 |
| show bgp process                   | 173 |
| show bgp received-paths            | 179 |
| show bgp regexp                    | 186 |
| show bgp segment-routing srv6      | 192 |
| show bgp self-originated           | 193 |
| show bgp sessions                  | 199 |
| show bgp statistics                | 201 |
| show bgp summary                   | 202 |
| show bgp summary                   | 207 |
| show boot                          | 211 |
| show boot auto-copy                | 212 |
| show boot auto-copy list           | 213 |
| show boot current                  | 214 |
| show boot mode                     | 215 |
| show boot order                    | 216 |
| show boot timings                  | 217 |
| show boot variables                | 218 |
| show buffer-drop detail            | 219 |
| show buffer-latency detail         | 220 |

## CHAPTER 4

**C Show Commands 221**

- show callhome 225
- show callhome destination-profile 227
- show callhome destination-profile profile 228
- show callhome destination-profile profile CiscoTAC-1 229
- show callhome destination-profile profile full-txt-destination 230
- show callhome destination-profile profile short-txt-destination 231
- show callhome transport-email 232
- show callhome transport 233
- show callhome user-def-cmds 235
- show cdp 236
- show cdp all 238
- show cdp global 239
- show cdp neighbors 240
- show cdp neighbors detail 241
- show cdp traffic interface2 243
- show cdp traffic interface2 all 244
- show cfs application 245
- show cfs lock 246
- show cfs lock 247
- show cfs merge status 248
- show cfs merge status 249
- show cfs peers 251
- show cfs peers 252
- show cfs regions 253
- show cfs static peers 255
- show cfs status 256
- show checkpoint 257
- show checkpoint 258
- show checkpoint summary 259
- show class-map 260
- show class-map type control-plane 262
- show class-map type network-qos 263

|   |     |

# Notice

---

**Warning**

This document should be used only as a glossary reference for possible commands. The listing of a command in this document does not guarantee that the command is available or supported for your platform or application.

The command information in this reference document is auto-generated from the NX-OS source code. While we attempt to manually remove unsupported, deprecated, or internal-use commands, such commands may occasionally appear in this document. Also, with the large variety of hardware platform combinations using NX-OS software, some listed commands may not be applicable or recommended for a specific platform. Platform-based dependency information is not provided in this command reference.

We strongly encourage you to refer to the configuration guides for appropriate commands to configure and operate a feature. Command limitations, restrictions, and recommendations are documented only in the configuration guides. When in doubt, please consult your Cisco representative.

# show aaa accounting

```
show aaa accounting [ __readonly__ [ TABLE_acctMethods <service> <methods> ] ]
```

## Syntax Description

|                   |  |
|-------------------|--|
| show              | Show running system information                              |
| aaa               | Show aaa information   |
| accounting        | Show accounting configuration                                |
| __readonly__      | (Optional)   |
| TABLE_acctMethods | (Optional)   |
| <i>service</i>    | (Optional) service type                                      |
| <i>methods</i>    | (Optional) Accounting methods configured for the application |

## Command Mode

- /exec

# show aaa authentication

show aaa authentication [ *\_\_readonly\_\_* [ *TABLE\_AuthenMethods* <service> <method> ] ]

## Syntax Description

|                            |   |
|----------------------------|---|
| <i>show</i>                | Show running system information                       |
| <i>aaa</i>                 | Show aaa information                                  |
| <i>authentication</i>      | Show authentication configuration                     |
| <i>__readonly__</i>        | (Optional)  |
| <i>TABLE_AuthenMethods</i> | (Optional)  |
| <i>service</i>             | (Optional) Service for which authentication is needed |
| <i>method</i>              | (Optional) Authentication method used for the service |

## Command Mode

- /exec

## show aaa authentication login

```
show aaa authentication login { mschap | mschapv2 | chap } [ __readonly__ [ <mschap_status> ] [
<mschapv2_status> ] [ <chap_status> ] ]
```

### Syntax Description

|                        |  |
|------------------------|--|
| show                   | Show running system information                          |
| aaa                    | Show aaa information                                     |
| authentication         | Show authentication configuration                        |
| login                  | Show authentication login error message configuration    |
| mschap                 | Show authentication login MSCHAP enable configuration    |
| mschapv2               | Show authentication login MSCHAP V2 enable configuration |
| chap                   | Show authentication login CHAP enable configuration      |
| __readonly__           | (Optional)   |
| <i>mschap_status</i>   | (Optional) mschap enabled or disabled                    |
| <i>mschapv2_status</i> | (Optional) mschapv2 enabled or disabled                  |
| <i>chap_status</i>     | (Optional) chap enabled or disabled                      |

### Command Mode

- /exec

# show aaa authentication login ascii-authentication

```
show aaa authentication login ascii-authentication [ __readonly__ { <ascii_authen_status> } ]
```

## Syntax Description

|                            |   |
|----------------------------|---|
| show                       | Show running system information                 |
| aaa                        | Show aaa information                            |
| authentication             | Show authentication configuration               |
| login                      | Show authentication login message configuration |
| ascii-authentication       | Show ascii-authentication configuration         |
| <i>__readonly__</i>        | (Optional)                                      |
| <i>ascii_authen_status</i> | (Optional) ascii authentication status          |

## Command Mode

- /exec

## show aaa authentication login error-enable

show aaa authentication login error-enable [ \_\_readonly\_\_ [ <status> ] ]

### Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                              |
| aaa            | Show aaa information   |
| authentication | Show authentication configuration                            |
| login          | Show authentication login error message configuration        |
| error-enable   | Show authentication login error message enable configuration |
| __readonly__   | (Optional)   |
| <i>status</i>  | (Optional) login error-enable enabled or disabled            |

### Command Mode

- /exec

# show aaa authentication login invalid-username-log

```
show aaa authentication login invalid-username-log [ __readonly__ [ <status> ] ]
```

## Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information                           |
| aaa                  | Show aaa information                                      |
| authentication       | Show authentication configuration                         |
| login                | Show authentication login message configuration           |
| invalid-username-log | Show invalid username log configuration                   |
| __readonly__         | (Optional)  |
| <i>status</i>        | (Optional) login invalid-username-log enabled or disabled |

## Command Mode

- /exec

# show aaa authorization

```
show aaa authorization [ all ] [ __readonly__ [ <pki_ssh_cert_author> <pki_ssh_pubkey_author> ] [
TABLE_cmd_methods <appl_subtype> <cmd_type> <methods> ] [ TABLE_app_methods <appl> <methods>
] ]
```

## Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information   |
| aaa                          | Show aaa information  |
| authorization                | Show authorization configuration  |
| all                          | (Optional) Show all(include defaults configurations) authorization info |
| __readonly__                 | (Optional)  |
| <i>pki_ssh_cert_author</i>   | (Optional)  |
| <i>pki_ssh_pubkey_author</i> | (Optional)  |
| TABLE_cmd_methods            | (Optional) table containing command authorization methods               |
| <i>appl_subtype</i>          | (Optional)  |
| <i>cmd_type</i>              | (Optional)  |
| <i>methods</i>               | (Optional)  |
| TABLE_app_methods            | (Optional) table containing application authorization methods           |
| <i>appl</i>                  | (Optional)  |
| <i>methods</i>               | (Optional)  |

## Command Mode

- /exec

## show aaa bypass-user

```
show aaa bypass-user [ <s0> ] [ __readonly__ [ <num_bypass_users> ] [ TABLE_bypassUsers <username>
<account> <author> ] ]
```

### Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information              |
| aaa                     | Show aaa information                         |
| bypass-user             | Show bypass user information                 |
| <i>s0</i>               | (Optional) Enter the username                |
| <i>__readonly__</i>     | (Optional)                                   |
| <i>num_bypass_users</i> | (Optional) Number of bypass users configured |
| TABLE_bypassUsers       | (Optional)                                   |
| <i>username</i>         | (Optional) Username                          |
| <i>account</i>          | (Optional) Accounting Bypass                 |
| <i>author</i>           | (Optional) Authorization bypass              |

### Command Mode

- /exec

## show aaa client radius statistics

```
show aaa client radius statistics <host0> [ __readonly__ TABLE_allstat [ <auth_client> ] TABLE_allcoastat
[ <requests> ] [ <transactions> ] [ <retransmissions> ] [ <active_trans> ] [ <ack_responses> ] [ <nak_responses>
] [ <invalid_req> ] [ <errors> ] ]
```

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                     |
| aaa                     | Show aaa information                                |
| client                  | Show AAA client info                                |
| radius                  | show radius dynamic authorization client info       |
| statistics              | show radius dynamic authorization client statistics |
| <i>host0</i>            | IPV4/IPV6 address or DNS name of RADIUS client      |
| <i>__readonly__</i>     | (Optional)  |
| <i>TABLE_allstat</i>    | (Optional)  |
| <i>TABLE_allcoastat</i> | (Optional)  |
| <i>auth_client</i>      | (Optional) Authentication Client Port details       |
| <i>requests</i>         | (Optional) COA Request Sent count                   |
| <i>transactions</i>     | (Optional) COA transactions count                   |
| <i>retransmissions</i>  | (Optional) COA retransmission count                 |
| <i>active_trans</i>     | (Optional) COA active transactions count            |
| <i>ack_responses</i>    | (Optional) COA acknowledgement responses count      |
| <i>nak_responses</i>    | (Optional) COA nak responses count                  |
| <i>invalid_req</i>      | (Optional) Invalid requests count                   |
| <i>errors</i>           | (Optional) COA Error count                          |

### Command Mode

- /exec

# show aaa groups

```
show aaa groups [ __readonly__ { TABLE_groups <group> } ]
```

## Syntax Description

|              |                                     |
|--------------|-------------------------------------|
| show         | Show running system information     |
| aaa          | Show aaa information                |
| groups       | Show configured groups              |
| __readonly__ | (Optional)                          |
| TABLE_groups | (Optional) Table showing aaa groups |
| <i>group</i> | (Optional) Name of the group        |

## Command Mode

- /exec

# show aaa local user blocked

show aaa local user blocked [ \_\_readonly\_\_ { TABLE\_sessions <u\_name> <u\_state> } ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information          |
| aaa            | Configure aaa functions                  |
| local          | Local username                           |
| user           | Local system user                        |
| blocked        | Display Blocked users                    |
| __readonly__   | (Optional)                               |
| TABLE_sessions | (Optional) aaa local users blocked table |
| <i>u_name</i>  | (Optional) Name of the user              |
| <i>u_state</i> | (Optional) State of the user             |

## Command Mode

- /exec

## show aaa server radius statistics

```
show aaa server radius statistics [ __readonly__ TABLE_allstat [ <auth_ser> ] [ <coa_sessions> ]
TABLE_alldot1xstat [ <request_sent> ] [ <resp_received> ] [ <resp_timeout> ] [ <errors> ] ]
```

### Syntax Description

|                           |   |
|---------------------------|---|
| show                      | Show running system information               |
| aaa                       | Show aaa information                          |
| server                    | show Local AAA server info                    |
| radius                    | show local radius server info                 |
| statistics                | show local radius server statistics           |
| <i>__readonly__</i>       | (Optional)                                    |
| <i>TABLE_allstat</i>      | (Optional)                                    |
| <i>TABLE_alldot1xstat</i> | (Optional)                                    |
| <i>auth_ser</i>           | (Optional) Authentication Server Port details |
| <i>coa_sessions</i>       | (Optional) Active COA session numbers         |
| <i>request_sent</i>       | (Optional) DOT1X Request Sent Count           |
| <i>resp_received</i>      | (Optional) DOT1X Response received Count      |
| <i>resp_timeout</i>       | (Optional) DOT1X Response Timeout Value       |
| <i>errors</i>             | (Optional) DOT1X Error count                  |

### Command Mode

- /exec

# show aaa user blocked

show aaa user blocked [ *\_\_readonly\_\_* [ *<total\_users>* ] { *TABLE\_sessions* *<u\_name>* *<u\_state>* } ]

## Syntax Description

|                       |                                    |
|-----------------------|------------------------------------|
| show                  | Show running system information    |
| aaa                   | Configure aaa functions            |
| user                  | system user                        |
| blocked               | Display blocked users              |
| <i>__readonly__</i>   | (Optional)                         |
| <i>total_users</i>    | (Optional) Number of users in list |
| <i>TABLE_sessions</i> | (Optional) aaa blocked userstable  |
| <i>u_name</i>         | (Optional) Name of the user        |
| <i>u_state</i>        | (Optional) State of the user       |

## Command Mode

- /exec

# show aaa user default-role

```
show aaa user default-role [ __readonly__ { default_role_status <udr_status> } ]
```

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                              |
| aaa                 | Show aaa information   |
| user                | Remotely authenticated user                                  |
| default-role        | Default role assigned by aaa-admin for remote authentication |
| __readonly__        | (Optional)   |
| default_role_status | (Optional) user default role status                          |
| <i>udr_status</i>   | (Optional) Status of user default role                       |

## Command Mode

- /exec

## show access-list

```
show { system internal | hardware } access-list { summary | [ vdc <vdc_id> ] } [ interface <if_name> | vlan

### Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                  |
| system         | System-related show commands                     |
| internal       | Commands for internal use                        |
| hardware       | Show hardware information                        |
| access-list    | Access Control List                              |
| summary        | summary  |
| vdc            | (Optional) vdc id                                |
| <i>vdc_id</i>  | (Optional) vdc_id                                |
| interface      | (Optional) interface name                        |
| <i>if_name</i> | (Optional) display access list for the interface |
| vlan           | (Optional) vlan_id                               |
| <i>vlan_id</i> | (Optional) vlan_id                               |
| inband         | (Optional) inband interface                      |
| table          | (Optional) vrf table number                      |
| <i>table</i>   | (Optional) vrf table number                      |
| input          | (Optional) input/ingress policies                |
| output         | (Optional) output/egress policies                |
| config         | (Optional) parsed policy software database       |
| entries        | (Optional) tcam entries                          |

|                    |   |
|--------------------|---|
| statistics         | (Optional) aggregate statistics           |
| l4ops              | (Optional) l4 operations information      |
| redirect           | (Optional) redirect resource information  |
| sampler            | (Optional) with sampler details           |
| merge              | (Optional) tcam entries merge information |
| detail             | (Optional) detailed information           |
| module             | (Optional) Slot/module                    |
| <i>module</i>      | (Optional) Slot/module number             |
| __readonly__       | (Optional)                                |
| <i>type</i>        | (Optional) policy type eg: ACL, QOS       |
| <i>feature</i>     | (Optional) feature type eg: RACL, VACL    |
| <i>policy_id</i>   | (Optional) policy id                      |
| <i>src_ip</i>      | (Optional) src ipv4 address               |
| <i>src_mask</i>    | (Optional) src mask                       |
| <i>dst_ip</i>      | (Optional) dst ipv4 address               |
| <i>dst_mask</i>    | (Optional) dst mask                       |
| <i>proto</i>       | (Optional) protocol eg: TCP, UDP ...      |
| <i>l4ops</i>       | (Optional) layer 4 operations             |
| <i>action</i>      | (Optional) action                         |
| <i>mac</i>         | (Optional) mac address                    |
| <i>cos</i>         | (Optional) acos value                     |
| <i>vlan</i>        | (Optional) vlan id                        |
| <i>l2_proto</i>    | (Optional) L2 protocol                    |
| <i>ethertype</i>   | (Optional) ethertype                      |
| TABLE_vdc          | (Optional) show for vdc                   |
| <i>vdc-no</i>      | (Optional) vdc number                     |
| <i>vdc-type</i>    | (Optional) VDC type-COPP etc              |
| <i>dir</i>         | (Optional) Policy Direction               |
| <i>policy-type</i> | (Optional) Policy type                    |

|                                    |   |
|------------------------------------|---|
| <i>policy-id</i>                   | (Optional) Policy id                          |
| <i>policy-name</i>                 | (Optional) Policy name                        |
| TABLE_instance                     | (Optional) show for an instance               |
| <i>inst</i>                        | (Optional) instance number                    |
| TABLE_tcaml_resource_usage         | (Optional) TCAM resource usage                |
| <i>tcam-no</i>                     | (Optional) tcam number                        |
| TABLE_bank                         | (Optional) table bank                         |
| <i>bank-no</i>                     | (Optional) bank number                        |
| <i>lbl</i>                         | (Optional) lbl name                           |
| <i>hw-lbl-id</i>                   | (Optional) hw lbl id                          |
| <i>bank</i>                        | (Optional) bank number                        |
| TABLE_class                        | (Optional) table class                        |
| <i>class-type</i>                  | (Optional) Class type                         |
| TABLE_policies                     | (Optional) policy table                       |
| <i>policy</i>                      | (Optional) Policy name                        |
| <i>netflow-profile</i>             | (Optional) Netflow Profile                    |
| <i>netflow-deny-profile</i>        | (Optional) Netflow Deny Profile               |
| TABLE_tcaml_entry                  | (Optional) table tcam entries                 |
| <i>tcam-index</i>                  | (Optional) Index of tcam entry                |
| <i>tcam-rule</i>                   | (Optional) tcam rule                          |
| <i>tcam-stats</i>                  | (Optional) stats of tcam rule                 |
| <i>tcam-entries</i>                | (Optional) No. of TCAM entries                |
| <i>l4-protocol-cam-entries</i>     | (Optional) L4 protocol cam entries            |
| TABLE_l4_proto_cam_entries         | (Optional) L4 protocol cam entry table        |
| <i>l4-protocol</i>                 | (Optional) Protocol                           |
| <i>l4-encoding</i>                 | (Optional) Encoding                           |
| <i>l4-index</i>                    | (Optional) Index                              |
| <i>l4-ref-count</i>                | (Optional) Ref-count                          |
| <i>mac-etype-proto-cam-entries</i> | (Optional) No. of mac etype/proto cam entries |

|  |   |
|--|---|
| <i>TABLE_mac_etype_proto_cam_entries</i> | (Optional) MAC etype protocol cam entry table |
| <i>mac-index</i>                         | (Optional) Index                              |
| <i>mac-etype</i>                         | (Optional) Etype                              |
| <i>mac-proto</i>                         | (Optional) Protocol                           |
| <i>mac-ref-count</i>                     | (Optional) Reg-count                          |
| <i>lous</i>                              | (Optional) No. of LOU's                       |
| <i>tcp-flags-table-entries</i>           | (Optional) No. of CP flags table entries      |
| <i>adjacency-entries</i>                 | (Optional) No. of adjacency entries           |

**Command Mode**

- /exec

## show access-list database

```
show { system internal | hardware } access-list [ vdc <vdc_id> ] database { interface | vlan | policy | process
} [ module <module> ] [ __readonly__ <if_idx> <vlan> <plcy_id> <process_info> ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                 |
| system              | System-related show commands                    |
| internal            | Commands for internal use                       |
| hardware            | Show hardware information                       |
| access-list         | Access Control List                             |
| vdc                 | (Optional) vdc id                               |
| <i>vdc_id</i>       | (Optional) vdc_id                               |
| database            | Show memory database                            |
| interface           | display interfaces/vlans in a vdc with policies |
| policy              | display policies in a vdc                       |
| vlan                | display vlans in a vdc                          |
| process             | display process database in a vdc               |
| module              | (Optional) Slot/module                          |
| <i>module</i>       | (Optional) Slot/module number                   |
| <i>__readonly__</i> | (Optional)                                      |
| <i>if_idx</i>       | (Optional) interface                            |
| <i>vlan</i>         | (Optional) vlan                                 |
| <i>plcy_id</i>      | (Optional) policy id                            |
| <i>process_info</i> | (Optional) process information                  |

### Command Mode

- /exec

## show access-list resource

```
show { system internal | hardware } access-list resource { { { entries | l4ops | redirect | ipv6-compression |
mac-compression | aqm-d | aqm-q | oq | opool | prm | hardware-telemetry } [ detail ] } | utilization [ per-feature
] | { entry tcam <tcam_id> bank <bank_id> index <index> } | { default-tcam-allocation } } [ no-header ] [
module <module> ] [ __readonly__ [ TABLE_instance <inst> [ TABLE_resource_util_info <resource_hdr>
<ents_use> [ <ents_free> ] [ <ents_pctage> ] ] ] ] ] ] ]
```

### Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information              |
| system                  | System-related show commands                 |
| internal                | Commands for internal use                    |
| hardware                | Show hardware information                    |
| access-list             | Access Control List                          |
| resource                | hardware resource                            |
| entries                 | tcam entries                                 |
| l4ops                   | l4 operations information                    |
| redirect                | redirect resource information                |
| entry                   | display hardware information of a tcam entry |
| tcam                    | tcam id                                      |
| <i>tcam_id</i>          | tcam_id                                      |
| bank                    | bank id                                      |
| <i>bank_id</i>          | bank_id                                      |
| index                   | index within bank                            |
| <i>index</i>            | index withing bank                           |
| default-tcam-allocation | default team allocation                      |
| utilization             | utilization matrix                           |
| per-feature             | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED    |
| ipv6-compression        | ipv6 compression                             |
| mac-compression         | mac compression table info                   |
| aqm-d                   | aqm d params                                 |
| aqm-q                   | aqm q params                                 |

|                          |   |
|--------------------------|---|
| oq                       | oq profiles                                 |

### Syntax Description

|                             |   |
|-----------------------------|---|
| show                        | Show running system information               |
| <i>name</i>                 | (Optional) List name                          |
| <i>ip_ipv6_mac</i>          | (Optional) IP/IPv6/MAC                        |
| capture                     | (Optional) capture                            |
| session                     | (Optional) session                            |
| <i>capture_session</i>      | (Optional) session id                         |
| <i>op_ip_ipv6_mac</i>       | (Optional) IP/IPv6/MAC                        |
| access-lists                | List access lists                             |
| <i>show_summary</i>         | (Optional)                                    |
| <i>acl_name</i>             | (Optional) List name                          |
| <i>__readonly__</i>         | (Optional)                                    |
| TABLE_ip_ipv6_mac           | (Optional)                                    |
| <i>frag_opt_permit_deny</i> | (Optional) frag_op_type                       |
| ethertype                   | (Optional) Configure match based on ethertype |

|                       |   |
|-----------------------|---|
| <i>vlan</i>           | (Optional) Configure match based on vlan              |
| <i>ingress_intf</i>   | (Optional) Configure match based on ingress interface |
| <i>vlan_priority</i>  | (Optional) Configure match based on priority          |
| <i>ethertypeid</i>    | (Optional) Configure the ethertype value              |
| <i>vlanid</i>         | (Optional) VLAN number                                |
| <i>intfid</i>         | (Optional) Interface index                            |
| <i>intfname</i>       | (Optional) Interface name                             |
| <i>vlanpriorityid</i> | (Optional) Vlan Priority                              |
| <i>seqno</i>          | (Optional) Sequence number                            |
| <i>permitdeny</i>     | (Optional) Permit/deny                                |
| <i>proto</i>          | (Optional) A protocol number                          |
| TABLE_seqno           | (Optional)  |
| <i>proto_str</i>      | (Optional) Protocol name                              |
| <i>ip</i>             | (Optional) IP   |
| <i>ipv6</i>           | (Optional) IPV6                                       |
| <i>src_any</i>        | (Optional) SRCAny                                     |
| <i>dest_any</i>       | (Optional) DESTAny                                    |
| <i>src_ip_prefix</i>  | (Optional) Source IP prefix                           |
| <i>src_ip_addr</i>    | (Optional) Source IP address                          |
| <i>src_ip_mask</i>    | (Optional) Source IP mask                             |
| <i>mac_src</i>        | (Optional) Source MAC address                         |
| <i>mac_src_wild</i>   | (Optional) Source MAC mask                            |
| <i>dest_ip_prefix</i> | (Optional) Destination IP prefix                      |
| <i>dest_ip_addr</i>   | (Optional) Destination IP address                     |
| <i>dest_ip_mask</i>   | (Optional) Destination IP mask                        |
| <i>mac_dest</i>       | (Optional) Destination MAC address                    |
| <i>mac_dest_wild</i>  | (Optional) Destination MAC mask                       |
| <i>src_port_op</i>    | (Optional) Source Port operator                       |
| <i>dest_port_op</i>   | (Optional) Destination Port operator                  |

|                               |                                    |
|-------------------------------|------------------------------------|
| <i>src_port1_str</i>          | (Optional) Source port name        |
| <i>src_port1_num</i>          | (Optional) Source port number      |
| <i>src_port2_str</i>          | (Optional) Source port name        |
| <i>src_port2_num</i>          | (Optional) Source port number      |
| <i>dest_port1_str</i>         | (Optional) Destination port name   |
| <i>dest_port1_num</i>         | (Optional) Destination port number |
| <i>dest_port2_str</i>         | (Optional) Destination port name   |
| <i>dest_port2_num</i>         | (Optional) Destination port number |
| <i>icmp_type</i>              | (Optional) ICMP type               |
| <i>icmp_code</i>              | (Optional) ICMP code               |
| <i>icmp_str</i>               | (Optional) ICMP message            |
| <i>icmpv6_type</i>            | (Optional) ICMP type               |
| <i>icmpv6_code</i>            | (Optional) ICMP code               |
| <i>icmpv6_str</i>             | (Optional) ICMP message            |
| <i>igmp_type</i>              | (Optional) IGMP type               |
| <i>igmp_type_str</i>          | (Optional) IGMP type String        |
| <i>precedence</i>             | (Optional) precedence              |
| <i>precedence_str</i>         | (Optional) precedence string       |
| <i>tos</i>                    | (Optional) tos                     |
| <i>tos_str</i>                | (Optional) tos string              |
| <i>dscp</i>                   | (Optional) dscp                    |
| <i>dscp_mask</i>              | (Optional) dscp mask               |
| <i>dscp_str</i>               | (Optional) dscp string             |
| <i>udfs</i>                   | (Optional) udfs string             |
| <i>ttl</i>                    | (Optional) ttl                     |
| <i>capture_session</i>        | (Optional) capture session         |
| <i>global_capture_session</i> | (Optional) capture session         |
| <i>log</i>                    | (Optional) Log                     |
| <i>telemetry_queue</i>        | (Optional) telemetry_queue         |

|                           |  |
|---------------------------|--|

| <i>stats-detail</i>     | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED   |

**Command Mode**

- /exec

## show access-lists

```
show <mpls_acl> access-lists [ <mpls_name> ] [ __readonly__ TABLE_mpls <mpls_name> [ <statistics> ]
[ TABLE_seqno <seqno> { <permitdeny> <mpls> [ <mpls_option> ] { <label1_any> | { <label1> [ mask
<label1_mask> ] } } [ <label2_any> | { <label2> [ mask <label2_mask> ] } } ] [ <label3_any> | { <label3> [
mask <label3_mask> ] } } ] [ <label4_any> | { <label4> [ mask <label4_mask> ] } } ] <mplsaction> <mplsactionid>
} | <remark> ] ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information   |
| <i>mpls_acl</i>     | mpls acl value  |
| access-lists        | List access lists   |
| <i>mpls_name</i>    | (Optional) List name  |
| <i>__readonly__</i> | (Optional)  |
| <i>mpls_name</i>    | (Optional) Name of the MPLS ACL   |
| <i>seqno</i>        | (Optional) Sequence number  |
| <i>permitdeny</i>   | (Optional) Permit/deny  |
| <i>mplsaction</i>   | (Optional) mpls ACL Action  |
| <i>mplsactionid</i> | (Optional) redirect: Ethernet1/1,port-channel1 set-erspan-dscp: <1-63><br>set-erspan-gre-proto: <1-65535> |
| <i>statistics</i>   | (Optional) STATISTICS   |
| mask                | (Optional) mask   |
| <i>label1</i>       | (Optional) mpls label one   |
| <i>label2</i>       | (Optional) mpls label two   |
| <i>label3</i>       | (Optional) mpls label three   |
| <i>label4</i>       | (Optional) mpls label three   |
| <i>label1_mask</i>  | (Optional) mpls label one mask  |
| <i>label2_mask</i>  | (Optional) mpls label two mask  |
| <i>label3_mask</i>  | (Optional) mpls label three mask  |
| <i>label4_mask</i>  | (Optional) mpls label four mask   |
| <i>label1_any</i>   | (Optional) label one Any  |
| <i>label2_any</i>   | (Optional) label two Any  |

|                    |                            |
|--------------------|----------------------------|
| <i>label3_any</i>  | (Optional) label three Any |
| <i>label4_any</i>  | (Optional) label four Any  |
| <i>mpls</i>        | (Optional) mpls keyword    |
| <i>mpls_option</i> | (Optional) mpls option     |
| TABLE_mpls         | (Optional)                 |
| TABLE_seqno        | (Optional)                 |
| <i>remark</i>      | (Optional) Remark String   |

**Command Mode**

- /exec

# show accounting log

```
show accounting log [ { <i0> | start-time <SYYYY> <SMonth> <SDate> <STime> [ end-time <EYYYY>
<EMonth> <EDate> <ETime> ] } ] [ __readonly__ [ TABLE_acctlog_time <accountlog_starttime> ] ]
```

## Syntax Description

|                             |  |
|-----------------------------|--|
| show                        | Show running system information                                |
| accounting                  | Show Accounting Information                                    |
| log                         | Show Accounting Log  |
| <i>i0</i>                   | (Optional) Log Size(in bytes)                                  |
| start-time                  | (Optional) Show messages from a given start-time               |
| <i>SYYYY</i>                | (Optional) Enter year in YYYY format                           |
| <i>SMonth</i>               | (Optional) Enter Month as Jan, Feb, Mar, ..., Oct, Nov, or Dec |
| <i>SDate</i>                | (Optional) Enter day of month in dd format                     |
| <i>STime</i>                | (Optional) Enter hour, minutes, seconds as HH:MM:SS            |
| end-time                    | (Optional) Show messages from a given end-time                 |
| <i>EYYYY</i>                | (Optional) Enter year in YYYY format                           |
| <i>EMonth</i>               | (Optional) Enter Month as Jan, Feb, Mar, ..., Oct, Nov, or Dec |
| <i>EDate</i>                | (Optional) Enter day of month in dd format                     |
| <i>ETime</i>                | (Optional) Enter hour, minutes, seconds as HH:MM:SS            |
| __readonly__                | (Optional)   |
| TABLE_acctlog_time          | (Optional)   |
| <i>accountlog_starttime</i> | (Optional) accounting log starttime                            |

## Command Mode

- /exec

# show accounting log all

```
show accounting log all [ __readonly__ [ TABLE_acctlog <accountlog_all> ] ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information   |
| accounting            | Show accounting configuration   |
| log                   | Show Accounting Log   |
| all                   | Display accounting log including show commands (Use <terminal log-all> to enable show command accounting) |
| __readonly__          | (Optional)  |
| TABLE_acctlog         | (Optional)  |
| <i>accountlog_all</i> | (Optional) accounting log all   |

## Command Mode

- /exec

# show accounting log last-index

show accounting log last-index [ \_\_readonly\_\_ { <last\_index> } ]

## Syntax Description

|                   |  |
|-------------------|--|
| show              | Show running system information            |
| accounting        | Show accounting configuration              |
| log               | Show Accounting Log                        |
| last-index        | Show accounting log last index information |

| <i>EMonth</i>                    | (Optional) Enter Month as Jan, Feb, Mar, ..., Oct, Nov, or Dec |
| <i>EDate</i>                     | (Optional) Enter day of month in dd format                     |
| <i>ETime</i>                     | (Optional) Enter hour, minutes, seconds as HH:MM:SS            |
| __readonly__                     | (Optional)   |
| TABLE_acctnvramlog_time          | (Optional)   |
| <i>accountnvramlog_starttime</i> | (Optional) accounting log nvram starttime                      |

### Command Mode

- /exec

## show accounting log nvram last-index

show accounting log nvram last-index [ *\_\_readonly\_\_* { <last\_index> } ]

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information            |
| accounting          | Show accounting configuration              |
| log                 | Show Accounting Log                        |
| nvram               | present in nvram                           |
| last-index          | Show accounting log last index information |
| <i>__readonly__</i> | (Optional)                                 |
| <i>last_index</i>   | (Optional) accounting log last index       |

### Command Mode

- /exec

## show accounting log nvram start-seqnum

```
show accounting log nvram start-seqnum <SSEQNUM> [ end-seqnum <ESEQNUM> ] [ __readonly__ [
TABLE_acctnvramlog_seq <accountnvramlog_seq> ] ]
```

### Syntax Description

|                               |  |
|-------------------------------|--|
| show                          | Show running system information                              |
| accounting                    | Show Accounting Information                                  |
| log                           | Show Accounting Log  |
| nvram                         | present in nvram   |
| start-seqnum                  | Show messages starting from a given sequence number          |
| end-seqnum                    | (Optional) Show messages ending with a given sequence number |
| <i>SSEQNUM</i>                | Enter Starting Sequence Number                               |
| <i>ESEQNUM</i>                | (Optional) Enter Starting Sequence Number                    |
| <i>__readonly__</i>           | (Optional)   |
| <i>TABLE_acctnvramlog_seq</i> | (Optional)   |
| <i>accountnvramlog_seq</i>    | (Optional) accounting log nvram seqnum                       |

### Command Mode

- /exec

## show accounting log start-seqnum

```
show accounting log start-seqnum <SSEQNUM> [ end-seqnum <ESEQNUM> ] [ __readonly__ [
TABLE_acctlog_seq <accountlog_seq> ] ]
```

### Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information                              |
| accounting               | Show Accounting Information                                  |
| log                      | Show Accounting Log  |
| start-seqnum             | Show messages starting from a given sequence number          |
| end-seqnum               | (Optional) Show messages ending with a given sequence number |
| <i>SSEQNUM</i>           | Enter Starting Sequence Number                               |
| <i>ESEQNUM</i>           | (Optional) Enter Starting Sequence Number                    |
| <i>__readonly__</i>      | (Optional)   |
| <i>TABLE_acctlog_seq</i> | (Optional)   |
| <i>accountlog_seq</i>    | (Optional) accounting log seqnum                             |

### Command Mode

- /exec

## show acl status

```
show acl status [ __readonly__ [ <current_operation> [ <current_operation_stage> ] [ <current_operation_cli>
] <last_operation> [ <last_operation_status> ] [ <last_operation_cli> ] [ <current_acl> ] [ <current_ace> ] ]
]
```

### Syntax Description

|                                |  |
|--------------------------------|--|
| show                           | Show running system information        |
| acl                            | Show information about acl             |
| status                         | Shows the status of last acl operation |
| <i>__readonly__</i>            | (Optional)                             |
| <i>current_operation</i>       | (Optional) Current operation           |
| <i>current_operation_stage</i> | (Optional) Current operation stage     |
| <i>current_operation_cli</i>   | (Optional) Current operation CLI       |
| <i>last_operation</i>          | (Optional) Last operation              |
| <i>last_operation_status</i>   | (Optional) Last operation status       |
| <i>last_operation_cli</i>      | (Optional) Last operation CLI          |
| <i>current_acl</i>             | (Optional) Access-list being modified  |
| <i>current_ace</i>             | (Optional) ACE rule being modified     |

### Command Mode

- /exec

## show amt process

```
show amt process [ vrf { <vrf-name> | <vrf-known-name> } ] [ __readonly__ TABLE_vrf <vrf> <pid> <uuid>
<q> <re4> <ge4> <re6> <ge6> <pi4> <ar4> <ag4> <ra4> <ga4> <dra4> <pi6> <ar6> <ag6> <ra6> <ga6>

**Command Mode**

- /exec

# show amt vrf all

show amt vrf all [ *\_\_readonly\_\_* *TABLE\_vrf* <vrf> <cid> <ip\_tid> <ipv6\_tid> ]

## Syntax Description

|                     |                                       |
|---------------------|---------------------------------------|
| show                | Show running system information       |
| amt                 | AMT show commands                     |
| vrf                 | Display all VRFs AMT is configured in |
| all                 | Display all VRFs AMT is configured in |
| <i>__readonly__</i> | (Optional)                            |
| <i>TABLE_vrf</i>    | (Optional)                            |
| <i>vrf</i>          | (Optional)                            |
| <i>cid</i>          | (Optional)                            |
| <i>ip_tid</i>       | (Optional)                            |
| <i>ipv6_tid</i>     | (Optional)                            |

## Command Mode

- /exec

# show archive log config

```
show archive log config { all | [ user <username> ] [ first-index <first_index> [ last-index <last_index> ] ] }
[ __readonly__ [ TABLE_archivelog_time [ <archivelog_firstindex> ] ] ]
```

## Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information                             |
| archive                      | Show archive configuration                                  |
| log                          | Show Archive Log  |
| config                       | Show Config Logger information                              |
| all                          | List all the records in the config log                      |
| user                         | (Optional) List records for specific user in the config log |
| <i>username</i>              | (Optional) Username   |
| first-index                  | (Optional) The first record number to display               |
| last-index                   | (Optional) The last record number to display                |
| <i>first_index</i>           | (Optional) config log first index                           |
| <i>last_index</i>            | (Optional) config log last index                            |
| __readonly__                 | (Optional)  |
| TABLE_archivelog_time        | (Optional)  |
| <i>archivelog_firstindex</i> | (Optional) archive log startindex                           |

## Command Mode

- /exec

## show arp access-lists

```
show arp access-lists [ <name> ] [ __readonly__ TABLE_arp <arp_name> [ TABLE_seqno <seqno> {
<permitdeny> <reqresp> ip { { <sender_ip_any> | { { <sender_host> <sender_ip> | { <sender_net_ip>

# show background

```
show background [ __readonly__ [ { TABLE_jobs <pid> <user_name> <terminal> <start> <time> <script>
<args> } ] ]
```

## Syntax Description

|                           |   |
|---------------------------|---|
| <code>show</code>         | Show running system information   |
| <code>background</code>   | show background processes (started with 'source background <file>' command) |
| <code>__readonly__</code> | (Optional)  |
| <code>TABLE_jobs</code>   | (Optional) All background jobs  |
| <code>pid</code>          | (Optional) Process ID of the job  |
| <code>user_name</code>    | (Optional) User name of the process   |
| <code>terminal</code>     | (Optional) Terminal where job is running                                    |
| <code>start</code>        | (Optional) Start time of job  |
| <code>time</code>         | (Optional) Time   |
| <code>script</code>       | (Optional) Script name  |
| <code>args</code>         | (Optional) Arguments passed to script                                       |

## Command Mode

- /exec

## show banner exec

```
show banner exec [ __readonly__ { banner_msg <b_msg> } ]
```

### Syntax Description

|              |                                  |
|--------------|----------------------------------|
| show         | Show running system information  |
| banner       | Show current banner message      |
| exec         | Show current exec banner message |
| __readonly__ | (Optional)                       |
| banner_msg   | (Optional) The banner message    |
| <i>b_msg</i> | (Optional) The banner message    |

### Command Mode

- /exec

# show banner motd

```
show banner motd [ __readonly__ { banner_msg <b_msg> } ]
```

## Syntax Description

|              |                                  |
|--------------|----------------------------------|
| show         | Show running system information  |
| banner       | Show current banner message      |
| motd         | Show current motd banner message |
| __readonly__ | (Optional)                       |
| banner_msg   | (Optional) The banner message    |
| <i>b_msg</i> | (Optional) The banner message    |

## Command Mode

- /exec

# show bash-shell

```
show bash-shell [ __readonly__ { operation_status <o_status> } ]
```

## Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information             |
| bash-shell              | Show bash shell status                      |
| <i>__readonly__</i>     | (Optional)                                  |
| <i>operation_status</i> | (Optional) Bash shell status                |
| <i>o_status</i>         | (Optional) operational status of bash shell |

## Command Mode

- /exec

# show bfd clients

```
show bfd clients [ __readonly__ <header> [ { TABLE_bfdClients <client_name> <num_sess> } ] ]
```

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| bfd                 | BFD commands                    |
| clients             | bfd client list                 |
| <i>__readonly__</i> | (Optional)                      |
| <i>header</i>       | (Optional) print header         |
| TABLE_bfdClients    | (Optional) BFD Client table     |
| <i>client_name</i>  | (Optional) client name          |
| <i>num_sess</i>     | (Optional) Number of sessions   |

## Command Mode

- /exec

## show bfd neighbors

```
show bfd { [ vrf { <vrf-name> | <vrf-known-name> | all } ] } { [ <ip_type> ] } neighbors { [ multihop ] | [
module <module> ] | [ interface <intf_id> ] | [ application <bfd_cli_client_names> ] | [ { src-ip <src_ip> |
src-ipv6 <src_ipv6> } ] | [ { dest-ip <dest_ip> | dest-ipv6 <dest_ipv6> } ] | [ vrf { <vrf-name> |
<vrf-known-name> | all } ] } + [ details ] [ __readonly__ TABLE_bfdNeighbor <local_disc> [ <header> ] [
<sess_type> ] [ <vrf_name> ] [ <src_ip_addr> ] [ <src_ipv6_addr> ] [ <dest_ip_addr> ] [ <dest_ipv6_addr>
] [ <remote_disc> ] [ <local_state> ] [ <remote_state> ] [ <holddown> ] [ <cur_detect_mult> ] [ <intf> ] [
<echo> ] [ <echo_tx> ] [ <local_diag> ] [ <demand> ] [ <poll> ] [ <min_tx> ] [ <min_rx> ] [ <local_multi>
] [ <detect_timer> ] [ <tx_interval> ] [ <rx_count> ] [ <rx_avg> ] [ <rx_min> ] [ <rx_max> ] [ <last_rx> ] [
<tx_count> ] [ <tx_avg> ] [ <tx_min> ] [ <tx_max> ] [ <last_tx> ] [ <app> ] [ <up_time> ] [ <up_count> ] [
<down_count> ] [ <version> ] [ <diag> ] [ <state_bit> ] [ <demand_bit> ] [ <poll_bit> ] [ <final_bit> ] [
<multiplier> ] [ <length> ] [ <my_disc> ] [ <your_disc> ] [ <min_tx_interval> ] [ <req_min_rx> ] [
<min_echo_interval> ] [ <out_str> ] [ <host_lc> ] [ <down_reason> ] [ <no_host_reason> ] [ <parent> ] [
<per_link_str> ] [ <auth> ] [ <auth_bit> ] [ <print_details> ] ]
```

### Syntax Description

|                             |  |
|-----------------------------|--|
| show                        | Show running system information                                    |
| bfd                         | BFD commands   |
| <i>ip_type</i>              | (Optional) ipv4 or ipv6  |
| neighbors                   | neighbors  |
| multihop                    | (Optional) Display Multihop sessions only                          |
| module                      | (Optional) module  |
| <i>module</i>               | (Optional) module number   |
| interface                   | (Optional) interface   |
| <i>intf_id</i>              | (Optional) show bfd sessions based on interface id                 |
| application                 | (Optional) application   |
| <i>bfd_cli_client_names</i> | (Optional) __nil__ Clients need to register with bfd for this list |
| src-ip                      | (Optional) Source ip   |
| src-ipv6                    | (Optional) Source ip   |
| <i>src_ip</i>               | (Optional) Source ip value   |
| dest-ip                     | (Optional) Destination ip  |
| dest-ipv6                   | (Optional) Destination ip  |
| <i>dest_ip</i>              | (Optional) Destination ip value                                    |
| vrf                         | (Optional) Display per-VRF information                             |

|                        |   |
|------------------------|---|
| <i>vrf-name</i>        | (Optional) VRF name                         |
| <i>vrf-known-name</i>  | (Optional) Known VRF name                   |
| all                    | (Optional) Display information for all VRFs |
| details                | (Optional) details                          |
| <i>__readonly__</i>    | (Optional)                                  |
| TABLE_bfdNeighbor      | (Optional) BFD Neighbor table               |
| <i>header</i>          | (Optional) Header                           |
| <i>sess_type</i>       | (Optional) Session type                     |
| <i>vrf_name</i>        | (Optional) vrf name                         |
| <i>src_ip_addr</i>     | (Optional) Source IPV4 address              |
| <i>dest_ip_addr</i>    | (Optional) Destination IPV4 address         |
| <i>local_disc</i>      | (Optional) Local Discriminator              |
| <i>remote_disc</i>     | (Optional) Remote Discriminator             |
| <i>local_state</i>     | (Optional) Local State                      |
| <i>remote_state</i>    | (Optional) Remote State                     |
| <i>holddown</i>        | (Optional) Hold Down Time                   |
| <i>cur_detect_mult</i> | (Optional) Current Detection Multiplier     |
| <i>intf</i>            | (Optional) Interface                        |
| <i>echo</i>            | (Optional) Echo enabled                     |
| <i>echo_tx</i>         | (Optional) Echo Tx Interval                 |
| <i>local_diag</i>      | (Optional) Local Diag                       |
| <i>demand</i>          | (Optional) Demand Mode                      |
| <i>poll</i>            | (Optional) Poll Bit                         |
| <i>min_tx</i>          | (Optional) Local Min Tx Interval            |
| <i>min_rx</i>          | (Optional) Local Min Rx Interval            |
| <i>local_multi</i>     | (Optional) Local Detection Multiplier       |
| <i>detect_timer</i>    | (Optional) Current Detection Timer          |
| <i>tx_interval</i>     | (Optional) Tx Interval                      |
| <i>rx_count</i>        | (Optional) Tx Count                         |

|                          |  |
|--------------------------|--|
| <i>rx_avg</i>            | (Optional) Rx Interval Avg                     |
| <i>rx_min</i>            | (Optional) Rx Interval Min                     |
| <i>rx_max</i>            | (Optional) Rx Interval Max                     |
| <i>last_rx</i>           | (Optional) Last Rx time                        |
| <i>tx_count</i>          | (Optional) Tx Count                            |
| <i>tx_avg</i>            | (Optional) Tx Interval Avg                     |
| <i>tx_min</i>            | (Optional) Tx Interval Min                     |
| <i>tx_max</i>            | (Optional) Tx Interval Max                     |
| <i>last_tx</i>           | (Optional) Last Tx time                        |
| <i>app</i>               | (Optional) App name                            |
| <i>up_time</i>           | (Optional) Up time                             |
| <i>up_count</i>          | (Optional) Up Count                            |
| <i>down_count</i>        | (Optional) Down Count                          |
| <i>version</i>           | (Optional) Version in Last Packet              |
| <i>diag</i>              | (Optional) diag in Last Packet                 |
| <i>state_bit</i>         | (Optional) State Bit in Last Packet            |
| <i>demand_bit</i>        | (Optional) Demand Bit in Last Packet           |
| <i>poll_bit</i>          | (Optional) Poll Bit in Last Packet             |
| <i>final_bit</i>         | (Optional) Final Bit in Last Packet            |
| <i>multiplier</i>        | (Optional) Detection Multiplier in Last Packet |
| <i>length</i>            | (Optional) Length in Last Packet               |
| <i>my_disc</i>           | (Optional) My Discriminator in Last Packet     |
| <i>your_disc</i>         | (Optional) Your Discriminator in Last Packet   |
| <i>min_tx_interval</i>   | (Optional) Min Tx Interval in Last Packet      |
| <i>req_min_rx</i>        | (Optional) Required Rx Interval in Last Packet |
| <i>min_echo_interval</i> | (Optional) Min Echo Interval in Last Packet    |
| <i>out_str</i>           | (Optional) No Host LC string                   |
| <i>parent</i>            | (Optional) Parent Session                      |
| <i>per_link_str</i>      | (Optional) Per Link string                     |

|                       |                                    |
|-----------------------|------------------------------------|
| <i>host_lc</i>        | (Optional) Host LC                 |
| <i>down_reason</i>    | (Optional) Session Down Reason     |
| <i>no_host_reason</i> | (Optional) Not Hosted Reason       |
| <i>auth</i>           | (Optional) Authentication Mode     |
| <i>auth_bit</i>       | (Optional) Auth Bit in Last Packet |
| <i>print_details</i>  | (Optional) print details           |

**Command Mode**

- /exec

# show bgp

```
show bgp [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234 } ] { ipv4 { unicast |
multicast } flap-statistics [ <ip-prefix> | <ip-addr> [ <ip-mask> ] ] | ipv6 { unicast | multicast } flap-statistics
[ <ipv6-prefix> ] | all flap-statistics } [ vrf { <vrf-name> | <vrf-known-name> | ALL_VRFS_012345678901234
} ] [ __readonly__ TABLE_vrf <vrf-name-out> [ TABLE_afi <afi> TABLE_safi <safi> <af-name> [
TABLE_rd [ <rd_val> [ <rd_vrf> ] [ <rd_vniid> ] ] [ <dampening> <historypaths> <dampenedpaths> ] [

] [ <flapcount> ] [ <duration> ] [ <reuse> ] [ <penalty> ] [ <suppresslimit> ] [ <reuselimit> ] [ <best> ] ] ] ]
]
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                      |
| bgp                   | Display BGP status and configuration                 |
| vrf                   | (Optional) Virtual Router Context                    |
| <i>vrf-name</i>       | (Optional) VRF name                                  |
| <i>vrf-known-name</i> | (Optional) Known VRF name                            |
| flap-statistics       | Display route flap statistics                        |
| <i>ip-prefix</i>      | (Optional) Display flap statistics for one prefix    |
| <i>ip-addr</i>        | (Optional) Display flap statistics for one network   |
| <i>ip-mask</i>        | (Optional) Network mask                              |
| ipv4                  | Display BGP information for IPv4 address family      |
| ipv6                  | Display BGP information for IPv6 address family      |
| unicast               | Display BGP information for unicast address family   |
| multicast             | Display BGP information for multicast address family |
| all                   | Display BGP information for all address families     |
| __readonly__          | (Optional)   |
| TABLE_vrf             | (Optional)   |
| <i>vrf-name-out</i>   | (Optional)   |
| TABLE_afi             | (Optional)   |

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                      |
| bgp                   | Display BGP status and configuration                 |
| vrf                   | (Optional) Virtual Router Context                    |
| <i>vrf-name</i>       | (Optional) VRF name                                  |
| <i>vrf-known-name</i> | (Optional) Known VRF name                            |
| ipv4                  | Display BGP information for IPv4 address family      |
| ipv6                  | Display BGP information for IPv6 address family      |
| vpnv4                 | Display BGP information for VPNv4 address family     |
| unicast               | Display BGP information for unicast address family   |
| multicast             | Display BGP information for multicast address family |
| policy                | Display policy related information                   |
| statistics            | Display Route Filter statistics                      |
| redistribute          | Statistics for redistribution                        |
| isis                  | (Optional) ISO IS-IS                                 |
| ospf                  | (Optional) Open Shortest Path First                  |
| ospfv3                | (Optional) Open Shortest Path First v3               |
| rip                   | (Optional) Routing Information Protocol              |
| eigrp                 | (Optional) Enhanced Interior Gateway Protocol        |

|                          |   |
|--------------------------|---|
| static                   | (Optional) Static routes                            |
| direct                   | (Optional) Directly connected                       |
| amt                      | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED           |
| lisp                     | (Optional) LISP EID-prefixes in the non-default VRF |
| hmm                      | (Optional) HMM prefix                               |
| am                       | (Optional) AM routes (learned via ARP)              |
| <i>tag</i>               | (Optional) Source protocol tag                      |
| neighbor                 | Show neighbor specific counters                     |
| <i>neighbor-id</i>       | Neighbor IPv4 address                               |
| route-map                | (Optional) Neighbor route-map                       |
| prefix-list              | (Optional) Neighbor prefix-list                     |
| filter-list              | (Optional) Neighbor filter-list                     |
| out                      | (Optional) Outbound policy                          |
| in                       | (Optional) Inbound policy                           |
| default-originate        | (Optional) Default-originate policy                 |
| dampening                | Show dampening info                                 |
| network                  | Configured IP prefix to advertise                   |
| mask                     | Configured mask of the IP prefix advertised         |
| aggregate-address        | Configured BGP aggregate prefixes                   |
| suppress-map             | Statistics of suppress policy                       |
| advertise-map            | Statistics of advertise policy                      |
| <i>ip-addr</i>           | IP network advertised                               |
| <i>ip-mask</i>           | Dotted 4-octet mask                                 |
| <i>ip-prefix</i>         | IP prefix in CIDR format                            |
| __readonly__             | (Optional)  |
| TABLE_vrf                | (Optional)  |
| <i>vrf-name-polstats</i> | (Optional)  |
| <i>rpm-handle-count</i>  | (Optional)  |
| TABLE_rmap               | (Optional)  |

|                         |            |
|-------------------------|------------|
| <i>name</i>             | (Optional) |
| <i>action</i>           | (Optional) |
| <i>seqnum</i>           | (Optional) |
| TABLE_cmd               | (Optional) |
| <i>command</i>          | (Optional) |
| <i>comparecount</i>     | (Optional) |
| <i>matchcount</i>       | (Optional) |
| <i>totalacceptcount</i> | (Optional) |
| <i>totalrejectcount</i> | (Optional) |

**Command Mode**

- /exec

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                   |
| bgp                   | Display BGP status and configuration                              |
| vrf                   | (Optional) Virtual Router Context                                 |
| <i>vrf-name</i>       | (Optional) VRF name   |
| <i>vrf-known-name</i> | (Optional) Known VRF name   |
| <i>ip-addr</i>        | (Optional) Display one particular network from the BRIB in detail |
| <i>ip-mask</i>        | (Optional) Mask for one particular prefix in the BRIB             |
| <i>ip-prefix</i>      | (Optional) Display one particular prefix from the BRIB in detail  |
| longer-prefixes       | (Optional) Display route and more specific routes                 |
| labels                | (Optional) Display BGP labels for prefixes                        |
| exported              | (Optional) Display only exported prefixes                         |
| imported              | (Optional) Display only imported prefixes                         |
| injected-routes       | (Optional) Display only injected prefixes                         |
| mdt-group             | (Optional) Display prefixes with MDT group address                |
| <i>mdt-group</i>      | (Optional) MDT group address                                      |
| rd                    | (Optional) Display information for a route distinguisher          |
| ve-id                 | (Optional) VPLS VE ID   |
| <i>ve-id</i>          | (Optional) VPLS VE ID   |
| route-type            | (Optional) EVPN Route Type number                                 |
| <i>rtype</i>          | (Optional) EVPN route type number                                 |
| 1                     | (Optional) Inter-AS PMSI AD                                       |
| 2                     | (Optional) Intra-AS PMSI AD                                       |
| 3                     | (Optional) SPMSI AD   |
| 4                     | (Optional) LEAF AD  |
| 5                     | (Optional) Source-Active AD                                       |
| 6                     | (Optional) Shared C-Multicast                                     |
| 7                     | (Optional) Source C-Multicast                                     |
| vni-id                | (Optional) EVPN VNI ID number                                     |

|                           |   |
|---------------------------|---|
| <i>vni_id</i>             | (Optional) EVPN VNI ID number                                     |
| <i>rt-type</i>            | (Optional) Link-State route-type                                  |
| <i>es</i>                 | (Optional) Ethernet Segment                                       |
| <i>es-id</i>              | (Optional) ESID   |
| <i>etid</i>               | (Optional) Ethernet Tag-ID for L2VPN EVPN route                   |
| <i>et</i>                 | (Optional) Ethernet Tag-ID  |
| <i>ipv4-evpn-rt</i>       | (Optional) EVPN IPv4 address                                      |
| <i>ipv4-ls-rt</i>         | (Optional) Link-State NLRI with descriptor including IPv4 address |
| <i>mac-address</i>        | (Optional) MAC address  |
| <i>block-offset</i>       | (Optional) VPLS VE Block offset                                   |
| <i>ve-bs</i>              | (Optional) VPLS VE Block offset                                   |
| <i>ext-comm-rd-aa4nn2</i> | (Optional) VPN route distinguisher in aa4:nn or ip:nn format      |
| <i>ext-comm-rd-aa2nn4</i> | (Optional) VPN route distinguisher in aa:nn format                |
| <i>ipv4</i>               | Display BGP information for IPv4 address family                   |
| <i>vpn4</i>               | Display BGP information for VPNv4 address family                  |
| <i>vpn6</i>               | Display BGP information for VPNv6 address family                  |
| <i>ipv6</i>               | Display BGP information for IPv6 address family                   |
| <i>unicast</i>            | Display BGP information for unicast address family                |
| <i>multicast</i>          | Display BGP information for multicast address family              |
| <i>mdt</i>                | Display BGP information for multicast distribution tree           |
| <i>link-state</i>         | Display BGP information for link-state address family             |
| <i>l2vpn</i>              | Display BGP information for L2VPN address family                  |
| <i>vpls</i>               | Display BGP information for L2VPN VPLS address family             |
| <i>labeled-unicast</i>    | Display BGP information for labeled-unicast address family        |
| <i>mvpn</i>               | Display BGP information for MVPN address family                   |
| <i>evpn</i>               | Display BGP information for L2VPN EVPN address family             |
| <i>all</i>                | Display BGP information for all address families                  |
| <i>join</i>               | (Optional) Display Multicast Join route                           |
| <i>detail</i>             | (Optional) Display detailed path info for routes                  |

|               |   |
|---------------|---|
| sa            | (Optional) Display Multicast Source Active AD route |
| sa-ad         | (Optional) Display Multicast Source Active AD route |
| i-pmsi        | (Optional) Display Multicast Intra-AS I-PMSI route  |
| rp            | (Optional) Display Multicast Group to RP route      |
| v4src-addr    | (Optional) Source IP Address                        |
| src-asn       | (Optional) Source ASN                               |
| v4grp-addr    | (Optional) Group IP Address                         |
| grp-v4prefix  | (Optional) Group IP prefix                          |
| pe-addr       | (Optional) PE IP Address                            |
| rp-flags      | (Optional) Flags                                    |
| rp-priority   | (Optional) RP Priority                              |
| hashlen       | (Optional) Hash mask length                         |

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                         |
| bgp                   | Display BGP status and configuration                    |
| vrf                   | (Optional) Virtual Router Context                       |
| <i>vrf-name</i>       | (Optional) VRF name                                     |
| <i>vrf-known-name</i> | (Optional) Known VRF name                               |
| link-state            | Display BGP information for link-state address family   |
| l2vpn                 | Display BGP information for L2VPN address family        |
| vpls                  | Display BGP information for L2VPN VPLS address family   |
| nexthop-database      | Display nexthop database                                |
| ipv4                  | Display BGP information for IPv4 address family         |
| ipv6                  | Display BGP information for IPv6 address family         |
| vpnv4                 | Display BGP information for VPNv4 address family        |
| vpnv6                 | Display BGP information for VPNv6 address family        |
| mdt                   | Display BGP information for multicast distribution tree |
| mvpn                  | Display BGP information for MVPN address family         |
| evpn                  | Display BGP information for L2VPN EVPN address family   |
| unicast               | Display BGP information for unicast address family      |
| multicast             | Display BGP information for multicast address family    |
| all                   | Display BGP information for all address families        |

|                           |                            |
|---------------------------|----------------------------|

### Syntax Description

|                           |  |
|---------------------------|--|
| show                      | Show running system information                            |
| bgp                       | Display BGP status and configuration                       |
| vrf                       | (Optional) Virtual Router Context                          |
| <i>vrf-name</i>           | (Optional) VRF name  |
| <i>vrf-known-name</i>     | (Optional) Known VRF name                                  |
| neighbors                 | Display all configured BGP neighbors                       |
| <i>neighbor-id</i>        | (Optional) Display one particular BGP neighbor             |
| <i>neighbor-prefix-id</i> | (Optional) Display details for a prefix peering            |
| <i>neighbor-interface</i> | (Optional) Display details for BGP interface peering       |
| ipv4                      | Display BGP information for IPv4 address family            |
| vpn4                      | Display BGP information for VPNv4 address family           |
| vpn6                      | Display BGP information for VPNv6 address family           |
| ipv6                      | Display BGP information for IPv6 address family            |
| unicast                   | Display BGP information for unicast address family         |
| multicast                 | Display BGP information for multicast address family       |
| labeled-unicast           | Display BGP information for labeled-unicast address family |
| link-state                | Display BGP information for link-state address family      |
| l2vpn                     | Display BGP information for L2VPN address family           |
| vpls                      | Display BGP information for L2VPN VPLS address family      |
| mvpn                      | Display BGP information for MVPN address family            |
| evpn                      | Display BGP information for L2VPN EVPN address family      |
| all                       | Display BGP information for all address families           |
| __readonly__              | (Optional)   |
| TABLE_neighbor            | (Optional)   |
| <i>neighbor</i>           | (Optional)   |

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                      |
| bgp                   | Display BGP status and configuration                 |
| vrf                   | (Optional) Virtual Router Context                    |
| <i>vrf-name</i>       | (Optional) VRF name                                  |
| <i>vrf-known-name</i> | (Optional) Known VRF name                            |
| summary               | Display summarized information of BGP state          |
| ipv4                  | Display BGP information for IPv4 address family      |
| ipv6                  | Display BGP information for IPv6 address family      |
| unicast               | Display BGP information for unicast address family   |
| multicast             | Display BGP information for multicast address family |
| all                   | Display BGP information for all address families     |
| __readonly__          | (Optional)   |
| TABLE_vrf             | (Optional)   |
| <i>vrf-name-out</i>   | (Optional) VRF name                                  |
| <i>vrf-id</i>         | (Optional) VRF ID                                    |

|                                    |   |
|------------------------------------|---|

```

## Syntax Description

|                               |  |
|-------------------------------|--|
| show                          | Show running system information                              |
| boot                          | Show Bootvar Variables                                       |
| <i>__readonly__</i>           | (Optional)   |
| <i>TABLE_bootvar_show</i>     | (Optional) Bootvar table                                     |
| <i>TABLE_Current_Bootvar</i>  | (Optional) Table for current boot variables                  |
| <i>TABLE_Startup_Bootvar</i>  | (Optional) Table for boot variables on next reload           |
| <i>Str1</i>                   | (Optional)   |
| <i>current_sup_module</i>     | (Optional) Current boot variable supervisor module           |
| <i>current_image</i>          | (Optional) Current image set for boot variable               |
| <i>current_poap_status</i>    | (Optional) Current status for poap                           |
| <i>current_exclude_cfg</i>    | (Optional) current value of exclude_cfg                      |
| <i>start_sup_module</i>       | (Optional) Next reload supervisor module                     |
| <i>start_image</i>            | (Optional) Next reload boot variable                         |
| <i>start_poap_status</i>      | (Optional) Next reload poap status                           |
| <i>configured_exclude_cfg</i> | (Optional) configured value of exclude_cfg in running config |

## Command Mode

- /exec

# show boot auto-copy

```
show boot auto-copy [ __readonly__ { [ TABLE_auto_copy <Str1> <status> ] } ]
```

## Syntax Description

|                 |  |
|-----------------|--|
| show            | Show running system information                  |
| boot            | Show Bootvar Variables                           |
| auto-copy       | See if autcopy is turned on                      |
| __readonly__    | (Optional)                                       |
| TABLE_auto_copy | (Optional) Auto copy table                       |
| <i>Str1</i>     | (Optional)                                       |
| <i>status</i>   | (Optional) status of auto copy is enable/disable |

## Command Mode

- /exec

# show boot auto-copy list

```
show boot auto-copy list [ __readonly__ { [ TABLE_auto_copy_list <Str1> <file> ] } ]
```

## Syntax Description

|                      |  |
|----------------------|--|
| show                 | Show running system information          |
| boot                 | Show Bootvar Variables                   |
| auto-copy            | See if autocopy is turned on             |

| mode                        | See if lxc boot is turned on                      |
| __readonly__                | (Optional)  |
| TABLE_mode                  | (Optional) boot mode table                        |
| <i>Str1</i>                 | (Optional)  |
| <i>current_boot_mode</i>    | (Optional) current running boot mode              |
| <i>configured_boot_mode</i> | (Optional) configured boot mode in running config |

## Command Mode

- /exec

# show boot order

```
show boot order [ __readonly__ { [ TABLE_bootvar_order <Str1> ] [ TABLE_boot_order <current_order>
<next_order> ] } ]
```

## Syntax Description

|                      |                                       |
|----------------------|---------------------------------------|
| show                 | Show running system information       |
| boot                 | Show Bootvar Variables                |
| order                | Show Boot Order                       |
| __readonly__         | (Optional)                            |
| TABLE_bootvar_order  | (Optional) Boot order table           |
| TABLE_boot_order     | (Optional) Current boot order table   |
| <i>Str1</i>          | (Optional)                            |
| <i>current_order</i> | (Optional) order of the boot location |
| <i>next_order</i>    | (Optional) order of the boot location |

## Command Mode

- /exec

# show boot timings

show [ system internal ] boot timings [ detail ]

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information          |
| system   | (Optional) System-Related show commands  |
| internal | (Optional) Commands for internal use     |
| boot     | show boot information                    |
| timings  | show boot timings                        |
| detail   | (Optional) show detailed time statistics |

## Command Mode

- /exec

# show boot variables

```
show boot variables [ __readonly__ { [ TABLE_boot_vars <Str1> <boot_variable> ] } ]
```

## Syntax Description

|                      |                                      |
|----------------------|--------------------------------------|
| show                 | Show running system information      |
| boot                 | Show Bootvar Variables               |
| variables            | Display the list of boot variables   |
| __readonly__         | (Optional)                           |
| TABLE_boot_vars      | (Optional) Show boot variables table |
| <i>Str1</i>          | (Optional)                           |
| <i>boot_variable</i> | (Optional) available boot variable   |

## Command Mode

- /exec

# show buffer-drop detail

```
show buffer-drop detail [ __readonly__ <system-monitor-name> <monitor-name> <collector-name>
<v4-acl-name> <v6-acl-name> <queue-id> <sampler-prob-rate> <sampler-mb-rate> <sampler-mb-pkts> ]
```

## Syntax Description

|                            |                                       |
|----------------------------|---------------------------------------|
| show                       | Show running system information       |
| buffer-drop                | Show Buffer Drop information          |
| detail                     | Show Session Configuration            |
| <i>__readonly__</i>        | (Optional) Read only                  |
| <i>system-monitor-name</i> | (Optional) system monitor name        |
| <i>monitor-name</i>        | (Optional) monitor name               |
| <i>collector-name</i>      | (Optional) collector name             |
| <i>v4-acl-name</i>         | (Optional) v4 acl name                |
| <i>v6-acl-name</i>         | (Optional) v6 acl name                |
| <i>queue-id</i>            | (Optional) queue id                   |
| <i>sampler-prob-rate</i>   | (Optional) sampler probabilistic rate |
| <i>sampler-mb-rate</i>     | (Optional) sampler mb rate            |
| <i>sampler-mb-pkts</i>     | (Optional) sampler mb max pkts        |

## Command Mode

- /exec

## show buffer-latency detail

```
show buffer-latency detail [ __readonly__ <system-monitor-name> <monitor-name> <collector-name>
<record-name> <v4-acl-name> <v6-acl-name> <queue-id> <interface> <latency-threshold>
<sampler-prob-rate> <sampler-mb-rate> <sampler-mb-pkts> ]
```

### Syntax Description

|                            |                                       |
|----------------------------|---------------------------------------|
| show                       | Show running system information       |
| buffer-latency             | Show Buffer Drop information          |
| detail                     | Show Session Configuration            |
| <i>__readonly__</i>        | (Optional) Read only                  |
| <i>system-monitor-name</i> | (Optional) system monitor name        |
| <i>monitor-name</i>        | (Optional) monitor name               |
| <i>collector-name</i>      | (Optional) collector name             |
| <i>record-name</i>         | (Optional) record name                |
| <i>v4-acl-name</i>         | (Optional) v4 acl name                |
| <i>v6-acl-name</i>         | (Optional) v6 acl name                |
| <i>queue-id</i>            | (Optional) queue id                   |
| <i>interface</i>           | (Optional) interface                  |
| <i>latency-threshold</i>   | (Optional) latency threshold          |
| <i>sampler-prob-rate</i>   | (Optional) sampler probabilistic rate |
| <i>sampler-mb-rate</i>     | (Optional) sampler mb rate            |
| <i>sampler-mb-pkts</i>     | (Optional) sampler mb max pkts        |

### Command Mode

- /exec

### Command Mode

- /exec

## show callhome destination-profile profile

```
show callhome destination-profile profile <s0> [ __readonly__ <user_txt_info> <max_mess_size>
<mess_format> <mess_level> <trans_method> <email_info> [ TABLE_email [ <index> <email_conf> ] ]
<url_info> [ TABLE_url [ <index> <url_conf> ] ] <alert_groups> [ TABLE_alert [ <alert_conf> ] ] ]
```

### Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information                       |
| callhome             | Show callhome information                             |
| destination-profile  | Show callhome destination profile information         |
| profile              | Specify the destination profile                       |
| <i>s0</i>            | Show information for user defined destination profile |
| <i>__readonly__</i>  | (Optional)  |
| <i>user_txt_info</i> | (Optional)  |
| <i>max_mess_size</i> | (Optional)  |
| <i>mess_format</i>   | (Optional)  |
| <i>mess_level</i>    | (Optional)  |
| <i>trans_method</i>  | (Optional)  |
| <i>email_info</i>    | (Optional)  |
| <i>index</i>         | (Optional)  |
| TABLE_email          | (Optional)  |
| <i>email_conf</i>    | (Optional)  |
| <i>url_info</i>      | (Optional)  |
| TABLE_url            | (Optional)  |
| <i>url_conf</i>      | (Optional)  |
| <i>alert_groups</i>  | (Optional)  |
| TABLE_alert          | (Optional)  |
| <i>alert_conf</i>    | (Optional)  |

### Command Mode

- /exec

# show callhome destination-profile profile CiscoTAC-1

```
show callhome destination-profile profile CiscoTAC-1 [ __readonly__ <tac_xml_info> <max_mess_size>
<mess_level> <trans_method> <email_info> [ <index> <email_conf> ] <url_info> [ <index> <url_conf> ]
<alert_groups> [ <alert_conf> ] ]
```

## Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information                     |
| callhome             | Show callhome information                           |
| destination-profile  | Show callhome destination profile information       |
| profile              | Specify the destination profile                     |
| CiscoTAC-1           | Show information for CiscoTAC-1 destination profile |
| <i>__readonly__</i>  | (Optional)  |
| <i>tac_xml_info</i>  | (Optional)  |
| <i>max_mess_size</i> | (Optional)  |
| <i>mess_level</i>    | (Optional)  |
| <i>trans_method</i>  | (Optional)  |
| <i>email_info</i>    | (Optional)  |
| <i>index</i>         | (Optional)  |
| <i>email_conf</i>    | (Optional)  |
| <i>url_info</i>      | (Optional)  |
| <i>url_conf</i>      | (Optional)  |
| <i>alert_groups</i>  | (Optional)  |
| <i>alert_conf</i>    | (Optional)  |

## Command Mode

- /exec

## show callhome destination-profile profile full-txt-destination

```
show callhome destination-profile profile full-txt-destination [ __readonly__ <full_txt_info> <max_mess_size>
<mess_level> <trans_method> <email_info> [ <index> <email_conf> ] <url_info> [ <index> <url_conf> ]
<alert_groups> [ <alert_conf> ] ]
```

### Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information                               |
| callhome             | Show callhome information                                     |
| destination-profile  | Show callhome destination profile information                 |
| profile              | Specify the destination profile                               |
| full-txt-destination | Show information for full-txt-destination destination profile |
| <i>__readonly__</i>  | (Optional)  |
| <i>full_txt_info</i> | (Optional)  |
| <i>max_mess_size</i> | (Optional)  |
| <i>mess_level</i>    | (Optional)  |
| <i>trans_method</i>  | (Optional)  |
| <i>email_info</i>    | (Optional)  |
| <i>index</i>         | (Optional)  |
| <i>email_conf</i>    | (Optional)  |
| <i>url_info</i>      | (Optional)  |
| <i>url_conf</i>      | (Optional)  |
| <i>alert_groups</i>  | (Optional)  |
| <i>alert_conf</i>    | (Optional)  |

### Command Mode

- /exec

# show callhome destination-profile profile short-txt-destination

```
show callhome destination-profile profile short-txt-destination [ __readonly__ <shrt_txt_info>
<max_mess_size> <mess_level> <trans_method> <email_info> [ <index> <email_conf> ] <url_info> [
<index> <url_conf> ] <alert_groups> [ <alert_conf> ] ]
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                                |
| callhome              | Show callhome information                                      |
| destination-profile   | Show callhome destination profile information                  |
| profile               | Specify the destination profile                                |
| short-txt-destination | Show information for short-txt-destination destination profile |
| <i>__readonly__</i>   | (Optional)   |
| <i>shrt_txt_info</i>  | (Optional)   |
| <i>max_mess_size</i>  | (Optional)   |
| <i>mess_level</i>     | (Optional)   |
| <i>trans_method</i>   | (Optional)   |
| <i>email_info</i>     | (Optional)   |
| <i>index</i>          | (Optional)   |
| <i>email_conf</i>     | (Optional)   |

| <i>url_conf</i>       | (Optional)   |
| <i>alert_groups</i>   | (Optional)   |
| <i>alert_conf</i>     | (Optional)   |

## Command Mode

- /exec

# show callhome transport-email

```
show callhome transport-email [ __readonly__ { <from_email> } [ <reply_to_email> ] [ <return_receipt_addr>
] { <smtp_server> } [ <smtp_server_port> ] ]
```

## Syntax Description

|                                  |   |
|----------------------------------|---|
| <code>__readonly__</code>        | (Optional)                                  |
| <code>show</code>                | Show running system information             |
| <code>callhome</code>            | Show callhome information                   |
| <code>transport-email</code>     | Show callhome email transport configuration |
| <code>from_email</code>          | (Optional)                                  |
| <code>reply_to_email</code>      | (Optional)                                  |
| <code>return_receipt_addr</code> | (Optional)                                  |
| <code>smtp_server</code>         | (Optional)                                  |
| <code>smtp_server_port</code>    | (Optional)                                  |

## Command Mode

- /exec

## show callhome transport

```
show callhome transport [ __readonly__ <vrf> <from_email> [ <rep_email> ] [ <ret_email> ] [ <smtp_ser>
] [ <smtp_ser_port> ] [ <smtp_ser_vrf> ] [ <smtp_ser_prior> ] [ <smtp_ser_do> ] [ <smtp_ser_port_do> ] [
<smtp_ser_vrf_do> ] [ <smtp_ser_prior_do> ] [ <smtp_ser_got> ] [ <smtp_ser_port_got> ] [
<smtp_ser_vrf_got> ] [ <smtp_ser_prior_got> ] <http_prox> <http_port> <http_state> ]
```

### Syntax Description

|                           |  |
|---------------------------|--|
| show                      | Show running system information                        |
| callhome                  | Show callhome information                              |
| transport                 | Show callhome transport configuration (email and http) |
| <i>__readonly__</i>       | (Optional)   |
| <i>vrf</i>                | (Optional)   |
| <i>from_email</i>         | (Optional)   |
| <i>rep_email</i>          | (Optional)   |
| <i>ret_email</i>          | (Optional)   |
| <i>smtp_ser</i>           | (Optional)   |
| <i>smtp_ser_port</i>      | (Optional)   |
| <i>smtp_ser_vrf</i>       | (Optional)   |
| <i>smtp_ser_prior</i>     | (Optional)   |
| <i>smtp_ser_do</i>        | (Optional)   |
| <i>smtp_ser_port_do</i>   | (Optional)   |
| <i>smtp_ser_vrf_do</i>    | (Optional)   |

| <i>smtp_ser_got</i>       | (Optional)   |
| <i>smtp_ser_port_got</i>  | (Optional)   |
| <i>smtp_ser_vrf_got</i>   | (Optional)   |
| <i>smtp_ser_prior_got</i> | (Optional)   |
| <i>http_prox</i>          | (Optional)   |
| <i>http_port</i>          | (Optional)   |
| <i>http_state</i>         | (Optional)   |

**Command Mode**

- /exec

## show callhome user-def-cmds

```
show callhome user-def-cmds [ __readonly__ { <user_configured_cmds> } [ { TABLE_user_def_cmds
<alert_group> <index> <user_defined_cmds> } ] ]
```

### Syntax Description

|                             |   |
|-----------------------------|---|
| show                        | Show running system information                       |
| callhome                    | Show callhome information                             |
| user-def-cmds               | Show the cli commands configured for each alert group |
| <i>__readonly__</i>         | (Optional)  |
| <i>user_configured_cmds</i> | (Optional) List of user configured commands           |
| TABLE_user_def_cmds         | (Optional)  |
| <i>index</i>                | (Optional)  |
| <i>alert_group</i>          | (Optional)  |
| <i>user_defined_cmds</i>    | (Optional)  |

### Command Mode

- /exec

# show cdp

```
show cdp { entry { all | name <s0> } } [ __readonly__ TABLE_cdp_entry_all <device_id> [ <sysname> ]
<numaddr> [ { <v4addr> | <v6addr> } + ] <platform_id> <capability> + <intf_id> <port_id> <ttl> <version>
<version_no> [ <nativevlan> ] [ <vtpname> ] [ <duplexmode> ] [ <syslocation> ] [ <num_mgmtaddr> [ {
<v4mgmtaddr> | <v6mgmtaddr> } + ] ] ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information           |
| cdp                 | Show Cisco Discovery Protocol information |
| entry               | Show CDP entries in database              |
| all                 | Show all CDP entries in database          |
| name                | Show a specific CDP entry matching a name |
| s0                  |   |
| __readonly__        | (Optional) Read only                      |
| TABLE_cdp_entry_all | (Optional) output of show cdp entry all   |
| device_id           | (Optional) Device Identifier              |
| sysname             | (Optional) System Name                    |
| numaddr             | (Optional) No of IP Address configured    |
| v4addr              | (Optional) Interface IP V4 Address        |
| v6addr              | (Optional) Interface IP V6 Address        |
| platform_id         | (Optional) Platform Id                    |
| capability          | (Optional) Capability                     |
| intf_id             | (Optional) Interface Id                   |
| port_id             | (Optional) Port Identifier                |
| ttl                 | (Optional) Hold Time                      |
| version             | (Optional) Software Version               |
| version_no          | (Optional) CDP version number             |
| nativevlan          | (Optional) NativeVLAN                     |
| vtpname             | (Optional) Vtp Management Domain Name     |
| duplexmode          | (Optional) Duplex Mode                    |

|                     |  |
|---------------------|--|
| <i>syslocation</i>  | (Optional) System Location               |
| <i>num_mgmtaddr</i> | (Optional) No of Mgmt Address configured |
| <i>v4mgmtaddr</i>   | (Optional) IP V4 Mgmt Address            |
| <i>v6mgmtaddr</i>   | (Optional) IP V6 Mgmt Address            |

**Command Mode**

- /exec

# show cdp all

```
show cdp { all | interface <if0> } [ __readonly__ TABLE_cdp_all <intf_id> <port_up> [ <cdp_global_enabled>
] <cdp_intf_enabled> [ <oper_mode> ] <refresh_time> <ttl> ]
```

## Syntax Description

|                           |   |
|---------------------------|---|
| show                      | Show running system information           |
| cdp                       | Show Cisco Discovery Protocol information |
| all                       | Show all interfaces in CDP database       |
| interface                 | Show CDP parameters for an interface      |
| <i>if0</i>                |   |
| <i>__readonly__</i>       | (Optional) Read only                      |
| <i>TABLE_cdp_all</i>      | (Optional) output of show cdp all         |
| <i>intf_id</i>            | (Optional) Interface Id                   |
| <i>port_up</i>            | (Optional) Port status                    |
| <i>cdp_global_enabled</i> | (Optional) CDP global status              |
| <i>cdp_intf_enabled</i>   | (Optional) CDP interface status           |
| <i>oper_mode</i>          | (Optional) CDP operation mode             |
| <i>refresh_time</i>       | (Optional) Refresh Time                   |
| <i>ttl</i>                | (Optional) Hold Time                      |

## Command Mode

- /exec

# show cdp global

```
show cdp global [ __readonly__ <cdp_global_enabled> <refresh_time> <ttl> <v2_advertisement>
<deviceid_format> ]
```

## Syntax Description

|                           |   |
|---------------------------|---|
| show                      | Show running system information           |
| cdp                       | Show Cisco Discovery Protocol information |
| global                    | Show CDP global parameters                |
| <i>__readonly__</i>       | (Optional) Read only                      |
| <i>cdp_global_enabled</i> | (Optional) CDP global status              |
| <i>refresh_time</i>       | (Optional) Refresh Time                   |
| <i>ttl</i>                | (Optional) Hold Time                      |
| <i>v2_advertisement</i>   | (Optional) Show v2 advertisement          |
| <i>deviceid_format</i>    | (Optional) Show deviceId Format           |

## Command Mode

- /exec

## show cdp neighbors

```
show cdp neighbors [ interface <if> ] [ __readonly__ { TABLE_cdp_neighbor_brief_info <ifindex>
<device_id> <intf_id> <ttl> <capability> + <platform_id> <port_id> } { <neigh_count> } ]
```

### Syntax Description

|                               |   |
|-------------------------------|---|
| show                          | Show running system information                   |
| cdp                           | Show Cisco Discovery Protocol information         |
| neighbors                     | Show CDP neighbors                                |
| interface                     | (Optional) Show CDP neighbors on an interface     |
| <i>if</i>                     | (Optional) Specify Interface                      |
| <i>__readonly__</i>           | (Optional) Read only                              |
| TABLE_cdp_neighbor_brief_info | (Optional) output of show cdp neighbor - in brief |
| <i>ifindex</i>                | (Optional) Interface index                        |
| <i>device_id</i>              | (Optional) System Name (or) Device Identifier     |
| <i>intf_id</i>                | (Optional) Interface Id                           |
| <i>port_id</i>                | (Optional) Port Identifier                        |
| <i>platform_id</i>            | (Optional) Platform Id                            |
| <i>ttl</i>                    | (Optional) Hold Time                              |
| <i>capability</i>             | (Optional) Capability                             |
| <i>neigh_count</i>            | (Optional) Neighbor Count                         |

### Command Mode

- /exec

# show cdp neighbors detail

```
show cdp neighbors [ interface <if> ] detail [ __readonly__ TABLE_cdp_neighbor_detail_info <ifindex>
<device_id> [ <sysname> ] [ <vtpname> ] <numaddr> [ { <v4addr> | <v6addr> } + ] <platform_id>
<capability> + <intf_id> <port_id> <ttl> <version> <version_no> [ <nativevlan> ] [ <duplexmode> ] [ <mtu>
] [ <syslocation> ] [ <num_mgmtaddr> [ { <v4mgmtaddr> | <v6mgmtaddr> } + ] ] <local_intf_mac>
<remote_intf_mac> ]
```

## Syntax Description

|                                |   |
|--------------------------------|---|
| show                           | Show running system information               |
| cdp                            | Show Cisco Discovery Protocol information     |
| neighbors                      | Show CDP neighbors                            |
| detail                         | Show CDP neighbors detailed                   |
| interface                      | (Optional) Show CDP neighbors on an interface |
| <i>if</i>                      | (Optional) Specify Interface                  |
| <i>__readonly__</i>            | (Optional) Read only                          |
| TABLE_cdp_neighbor_detail_info | (Optional) output of show cdp neighbor detail |
| <i>ifindex</i>                 | (Optional) Interface index                    |
| <i>device_id</i>               | (Optional) Device Identifier                  |
| <i>sysname</i>                 | (Optional) System Name                        |
| <i>vtpname</i>                 | (Optional) Vtp Management Domain Name         |
| <i>numaddr</i>                 | (Optional) No of IP Address configured        |
| <i>v4addr</i>                  | (Optional) Interface IP V4 Address            |
| <i>v6addr</i>                  | (Optional) Interface IP V6 Address            |
| <i>platform_id</i>             | (Optional) Platform Id                        |
| <i>capability</i>              | (Optional) Capability                         |
| <i>intf_id</i>                 | (Optional) Interface Id                       |
| <i>port_id</i>                 | (Optional) Port Identifier                    |
| <i>ttl</i>                     | (Optional) Hold Time                          |
| <i>version</i>                 | (Optional) Software Version                   |
| <i>version_no</i>              | (Optional) CDP version number                 |
| <i>nativevlan</i>              | (Optional) NativeVLAN                         |

|                        |  |
|------------------------|--|
| <i>duplexmode</i>      | (Optional) Duplex Mode                   |
| <i>mtu</i>             | (Optional) MTU                           |
| <i>syslocation</i>     | (Optional) System Location               |
| <i>num_mgmtaddr</i>    | (Optional) No of Mgmt Address configured |
| <i>v4mgmtaddr</i>      | (Optional) IP V4 Mgmt Address            |
| <i>v6mgmtaddr</i>      | (Optional) IP V6 Mgmt Address            |
| <i>local_intf_mac</i>  | (Optional) Local interface MAC           |
| <i>remote_intf_mac</i> | (Optional) Remote interface MAC          |

**Command Mode**

- /exec

## show cdp traffic interface2

```
show cdp traffic interface2 <if2> [ __readonly__ <intf_id> <total_input_packets> <valid_cdp_packets>
<input_v1_packets> <input_v2_packets> <invalid_cdp_packets> <unsupported_version> <checksum_errors>
<malformed_packets> <total_output_packets> <output_v1_packets> <output_v2_packets> <send_errors>
<flap_cnt> ]
```

### Syntax Description

|                             |   |
|-----------------------------|---|
| show                        | Show running system information               |
| cdp                         | Show Cisco Discovery Protocol information     |
| traffic                     | Show CDP traffic statistics                   |
| interface2                  | Show CDP traffic statistics on an interface   |
| <i>if2</i>                  |   |
| <i>__readonly__</i>         | (Optional) Read only                          |
| <i>intf_id</i>              | (Optional) Interface Id                       |
| <i>total_input_packets</i>  | (Optional) Total input cdp packets            |
| <i>valid_cdp_packets</i>    | (Optional) Total valid cdp packets            |
| <i>input_v1_packets</i>     | (Optional) Input vesrion1 packets             |
| <i>input_v2_packets</i>     | (Optional) Input vesrion2 packets             |
| <i>invalid_cdp_packets</i>  | (Optional) Invalid cdp packets                |
| <i>unsupported_version</i>  | (Optional) Packets having unsupported version |
| <i>checksum_errors</i>      | (Optional) Packets having checksum errors     |
| <i>malformed_packets</i>    | (Optional) Total malformed packets            |
| <i>total_output_packets</i> | (Optional) Total output packets               |
| <i>output_v1_packets</i>    | (Optional) Output vesrion1 packets            |
| <i>output_v2_packets</i>    | (Optional) Output vesrion2 packets            |
| <i>send_errors</i>          | (Optional) Number of send errors              |
| <i>flap_cnt</i>             | (Optional) Number of PDU timeout              |

### Command Mode

- /exec

## show cdp traffic interface2 all

```
show cdp traffic interface2 all [ __readonly__ TABLE_cdp_traffic <intf_id> <total_input_packets>
<valid_cdp_packets> <input_v1_packets> <input_v2_packets> <invalid_cdp_packets> <unsupported_version>
<checksum_errors> <malformed_packets> <total_output_packets> <output_v1_packets> <output_v2_packets>
<send_errors> <flap_cnt> ]
```

### Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information               |
| cdp                  | Show Cisco Discovery Protocol information     |
| traffic              | Show CDP traffic statistics                   |
| interface2           | Show CDP traffic statistics on an interface   |
| all                  | Display all interface traffic                 |
| __readonly__         | (Optional) Read only                          |
| TABLE_cdp_traffic    | (Optional) output of show cdp traffic         |
| intf_id              | (Optional) Interface Id                       |
| total_input_packets  | (Optional) Total input cdp packets            |
| valid_cdp_packets    | (Optional) Total valid cdp packets            |
| input_v1_packets     | (Optional) Input vesrion1 packets             |
| input_v2_packets     | (Optional) Input vesrion2 packets             |
| invalid_cdp_packets  | (Optional) Invalid cdp packets                |
| unsupported_version  | (Optional) Packets having unsupported version |
| checksum_errors      | (Optional) Packets having checksum errors     |
| malformed_packets    | (Optional) Total malformed packets            |
| total_output_packets | (Optional) Total output packets               |
| output_v1_packets    | (Optional) Output vesrion1 packets            |
| output_v2_packets    | (Optional) Output vesrion2 packets            |
| send_errors          | (Optional) Number of send errors              |
| flap_cnt             | (Optional) Number of PDU timeout              |

### Command Mode

- /exec

# show cfs application

```
show cfs application [ { name <cfs-dyn-app-name> | sap <i0> } ] [ __readonly__ [ <enabled> <timeout>
<merge_capable> <scope> <region> ] [ { TABLE_apps <app_name> <app_enabled> <app_scope> } ] ]
```

## Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                       |
| cfs                     | CFS Show Command handler                              |
| application             | Show locally registered applications                  |
| name                    | (Optional) Show local application information by name |
| <i>cfs-dyn-app-name</i> | (Optional) Registered name of the local application   |
| sap                     | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED             |
| <i>i0</i>               | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED             |
| <i>__readonly__</i>     | (Optional)  |
| <i>enabled</i>          | (Optional) whether application is CFS enabled         |
| <i>timeout</i>          | (Optional) timeout                                    |
| <i>merge_capable</i>    | (Optional) merge_capable                              |
| <i>scope</i>            | (Optional) scope                                      |
| <i>region</i>           | (Optional) region                                     |
| TABLE_apps              | (Optional) all cfs applications                       |
| <i>app_name</i>         | (Optional) name of cfs application                    |
| <i>app_enabled</i>      | (Optional) whether application is cfs enabled         |
| <i>app_scope</i>        | (Optional) distribution scope of cfs application      |

## Command Mode

- /exec

# show cfs lock

```
show cfs lock [ { name <cfs-dyn-app-name> [ vsan <i0> ] | sap <i1> [ vsan1 <i2> ] } ]
```

## Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                                   |
| cfs                     | CFS Show Command handler  |
| lock                    | Show state of application's logical/physical locks                |
| name                    | (Optional) Application name for which the lock status is required |
| <i>cfs-dyn-app-name</i> | (Optional) Registered name of the local application               |
| vsan                    | (Optional) Show application's locks per vsan                      |
| <i>i0</i>               | (Optional) Vsan Range   |
| sap                     | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                         |
| <i>i1</i>               | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                         |
| vsan1                   | (Optional) Show application's locks per vsan                      |
| <i>i2</i>               | (Optional) Vsan Range   |

## Command Mode

- /exec

# show cfs lock

```
show cfs lock [ { name <cfs-dyn-app-name> | sap <i1> } ] [ __readonly__ [ { TABLE_locks [ <app_name>
] <app_scope> [ <vsan> ] [ <domain> ] [ <wwn> ] <ip_addr> <u_name> <u_type> [ <hostname> } ] ] ]
```

## Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                                   |
| cfs                     | CFS Show Command handler  |
| lock                    | Show state of application's logical/physical locks                |
| name                    | (Optional) Application name for which the lock status is required |
| <i>cfs-dyn-app-name</i> | (Optional) Registered name of the local application               |
| sap                     | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                         |
| <i>i1</i>               | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                         |
| <u>__readonly__</u>     | (Optional)  |
| TABLE_locks             | (Optional) table of all CFS locks                                 |
| <i>app_name</i>         | (Optional) name of CFS application                                |
| <i>app_scope</i>        | (Optional) scope of CFS application                               |
| <i>vsan</i>             | (Optional) vsan   |
| <i>domain</i>           | (Optional) domain   |
| <i>wwn</i>              | (Optional) wwn of switch holding CFS lock                         |
| <i>ip_addr</i>          | (Optional) ip address of switch holding CFS lock                  |
| <i>u_name</i>           | (Optional) user name  |
| <i>u_type</i>           | (Optional) user type  |
| <i>hostname</i>         | (Optional) hostname   |

## Command Mode

- /exec

## show cfs merge status

show cfs merge status [ { name <cfs-dyn-app-name> [ vsan <i0> ] | sap <i1> [ vsan1 <i2> ] } ]

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                     |
| cfs                     | CFS Show Command handler                            |
| merge                   | Show cfs merge information                          |
| status                  | Show status of merge                                |
| name                    | (Optional) Show merge status by name                |
| <i>cfs-dyn-app-name</i> | (Optional) Registered name of the local application |
| vsan                    | (Optional) Show merge information based on vsan     |
| <i>i0</i>               | (Optional) Vsan Range                               |
| sap                     | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED           |
| <i>i1</i>               | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED           |
| vsan1                   | (Optional) Show merge information based on vsan     |
| <i>i2</i>               | (Optional) Vsan Range                               |

### Command Mode

- /exec

## show cfs merge status

```
show cfs merge status [ { name <cfs-dyn-app-name> [ detail ] | sap <i1> [ detail2 ] } ] [ __readonly__ [ {
scope <scope> } ] [ { merge_status <status> } ] [ { failure_reason <reason> } ] [ { TABLE_all_merge
<app_name> <scope> <vsan> <status> } ] [ { TABLE_local_fabric [ <domain> ] <wwn> <ip_addr>
<app_scope> [ <master> ] [ <hostname> ] } ] [ { TABLE_remote_fabric [ <domain> ] <wwn> <ip_addr>

**Command Mode**

- /exec

## show cfs peers

```
show cfs peers [ { name <cfs-dyn-app-name> | sap <i1> } ] [ __readonly__ [ { scope <scope> } ] ] [ {
TABLE_peers <wwn> <ip_addr> [ <local> ] [ <hostname> ] [ <domain> } ] ] ]
```

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                     |
| cfs                     | CFS Show Command handler                            |
| peers                   | Show all the peers in the physical fabric           |
| name                    | (Optional) Show peers for given application name    |
| <i>cfs-dyn-app-name</i> | (Optional) Registered name of the local application |
| sap                     | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED           |
| <i>i1</i>               | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED           |
| <i>__readonly__</i>     | (Optional)  |
| scope                   | (Optional) scope                                    |
| <i>scope</i>            | (Optional) scope                                    |
| TABLE_peers             | (Optional) all peers                                |
| <i>wwn</i>              | (Optional) wwn                                      |
| <i>ip_addr</i>          | (Optional) ip_addr                                  |
| <i>local</i>            | (Optional) local                                    |
| <i>hostname</i>         | (Optional) hname                                    |
| <i>domain</i>           | (Optional) domain                                   |

### Command Mode

- /exec

# show cfs peers

```
show cfs peers [ { name <cfs-dyn-app-name> [ vsan <i0> ] | sap <i1> [ vsan1 <i2> ] } ]
```

## Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                     |
| cfs                     | CFS Show Command handler                            |
| peers                   | Show all the peers in the physical fabric           |
| name                    | (Optional) Show peers for given application name    |
| <i>cfs-dyn-app-name</i> | (Optional) Registered name of the local application |
| vsan                    | (Optional) Show peers for a specified vsan(s)       |
| <i>i0</i>               | (Optional) Vsan Range                               |
| sap                     | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED           |
| <i>i1</i>               | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED           |
| vsan1                   | (Optional) Show peers for a specified vsan(s)       |
| <i>i2</i>               | (Optional) Vsan Range                               |

## Command Mode

- /exec

## show cfs regions

```
show cfs regions [ { brief [ region <i0> ] | name <cfs-dyn-app-name> | region1 <i1> } ] [ __readonly__ [ {
region <id> } ] [ { application <name> } ] [ { scope <scope> } ] [ { TABLE_PEERS <wwn> <ip_addr>
<local> [ <hostname> ] [ <domain> } ] [ { TABLE_switches [ <wwn> ] [ <ip_addr> ] <region> <app_name>
<enabled> [ <scope> } ] ] ]
```

### Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information                                      |
| cfs                     | CFS Show Command handler   |
| regions                 | Show all the applications with peers and region information          |
| brief                   | (Optional) Show all configured regions and applications(no peers)    |
| region                  | (Optional) Show all configured applications(no peers)                |
| <i>i0</i>               | (Optional) Region Id   |
| name                    | (Optional) Show peers and region information for a given application |
| <i>cfs-dyn-app-name</i> | (Optional) Registered name of the local application                  |
| region1                 | (Optional) Show all configured applications with peers               |
| <i>i1</i>               | (Optional) Region Id   |
| __readonly__            | (Optional)   |
| region                  | (Optional) region  |
| <i>id</i>               | (Optional) id  |
| application             | (Optional) app   |
| <i>name</i>             | (Optional) name  |
| scope                   | (Optional) scope   |
| <i>scope</i>            | (Optional) scope   |
| TABLE_PEERS             | (Optional) all region peers  |
| <i>wwn</i>              | (Optional) wwn   |
| <i>ip_addr</i>          | (Optional) ip_address  |
| <i>local</i>            | (Optional) local   |
| <i>hostname</i>         | (Optional) hname   |
| <i>domain</i>           | (Optional) domain  |

|                       |                                   |
|-----------------------|-----------------------------------|
| <i>TABLE_switches</i> | (Optional) all switches in region |
| <i>wwn</i>            | (Optional) wwn                    |
| <i>ip_addr</i>        | (Optional) ip_addr                |
| <i>region</i>         | (Optional) region                 |
| <i>app_name</i>       | (Optional) name                   |
| <i>enabled</i>        | (Optional) enabled                |
| <i>scope</i>          | (Optional) scope                  |

**Command Mode**

- /exec

# show cfs static peers

show cfs static peers

## Syntax Description

|        |  |
|--------|--|
| show   | Show running system information              |
| cfs    | CFS Show Command handler                     |
| static | Show all static peers with status            |
| peers  | Show all configured static peers with status |

## Command Mode

- /exec

## show cfs status

```
show cfs status [ __readonly__ <distribution> <dist_over_ip> <ipv4_mcast_addr> <ipv6_mcast_addr>
<dist_over_eth> ]
```

### Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information                   |
| cfs                    | CFS Show Command handler                          |
| status                 | Show current status of CFS                        |
| <i>__readonly__</i>    | (Optional)  |
| <i>distribution</i>    | (Optional) operational status of CFS distribution |
| <i>dist_over_ip</i>    | (Optional) operational status of CFS overIP       |
| <i>ipv4_mcast_addr</i> | (Optional) ipv4 multicast address                 |
| <i>ipv6_mcast_addr</i> | (Optional) ipv6 multicast address                 |
| <i>dist_over_eth</i>   | (Optional) operations status of CFSoE             |

### Command Mode

- /exec

# show checkpoint

```
show checkpoint [ all ] [ user | system ] [ __readonly__ TABLE_checkpoint_details <name>
<checkpoint_config> + ]
```

## Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information                                |
| checkpoint               | Show configuration rollback checkpoints                        |
| all                      | (Optional) Show default config                                 |
| user                     | (Optional) Show only user configuration rollback checkpoints   |
| system                   | (Optional) Show only system configuration rollback checkpoints |
| __readonly__             | (Optional) Read only   |
| TABLE_checkpoint_details | (Optional) checkpoint details                                  |
| <i>name</i>              | (Optional) Checkpoint name                                     |
| <i>checkpoint_config</i> | (Optional) Configuration entry from checkpoint                 |

## Command Mode

- /exec

# show checkpoint

show checkpoint <chkpoint\_name> [ all ] [ \_\_readonly\_\_ TABLE\_checkpoint\_details <name1>  
<checkpoint\_config> + ]

## Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information                 |
| checkpoint               | Show configuration rollback checkpoint contents |
| <i>chkpoint_name</i>     | Checkpoint name                                 |
| all                      | (Optional) Show default config                  |
| __readonly__             | (Optional) Read only                            |
| TABLE_checkpoint_details | (Optional) Checkpoint details                   |
| <i>name1</i>             | (Optional) Checkpoint name                      |
| <i>checkpoint_config</i> | (Optional) Configuration entry from checkpoint  |

## Command Mode

- /exec

# show checkpoint summary

```
show checkpoint summary [ user | system ] [ __readonly__ TABLE_checkpoint_header_info <name>
<user_name> <timestamp> <file_path> <chkpt_type> <description> ]
```

## Syntax Description

|   |  |
|---|--|
| <code>show</code>                         | Show running system information  |
| <code>checkpoint</code>                   | Show configuration rollback checkpoints                                |
| <code>summary</code>                      | Show configuration rollback checkpoints summary                        |
| <code>user</code>                         | (Optional) Show only user configuration rollback checkpoints summary   |
| <code>system</code>                       | (Optional) Show only system configuration rollback checkpoints summary |
| <code>__readonly__</code>                 | (Optional) Read only   |
| <code>TABLE_checkpoint_header_info</code> | (Optional) Checkpoint header info                                      |
| <code>user_name</code>                    | (Optional) Username  |
| <code>name</code>                         | (Optional) Checkpoint name   |
| <code>file_path</code>                    | (Optional) Checkpoint name   |
| <code>timestamp</code>                    | (Optional) Timestamp of checkpoint creation                            |
| <code>chkpt_type</code>                   | (Optional) Type of checkpoint either user or system                    |
| <code>description</code>                  | (Optional) Checkpoint description                                      |

## Command Mode

- /exec

## show class-map

```
show class-map [ { [ type qos ] [ <omap-name> | xxx <color-map-enum-name> ] } | { type queuing [ yyy
<omap-enum-name> | zzz <default-omap-enum-name> | <omap-dce-name> | <omap-name-hque> ] } ] [

| <i>nq-cos-list</i>        | (Optional) List of class-of-service values                               |
| <i>qos-group-list</i>     | (Optional) List of qos-group values                                      |
| <i>nq-qos-group-list</i>  | (Optional) List of qos-group values                                      |
| <i>discard-class-list</i> | (Optional) List of discard-class values                                  |
| <i>vlan-list</i>          | (Optional) List of vlan-ids  |
| <i>match-cmap-name</i>    | (Optional) class-map name  |
| <i>match-acl-name</i>     | (Optional) Match class-map name  |
| <i>note-string</i>        | (Optional) Placeholder string param to display any info in string format |
| <i>pkt-len-list</i>       | (Optional) Packet length multi-range                                     |
| <i>rtp-port-list</i>      | (Optional) IP RTP UDP port multi-range                                   |
| <i>roce-port-list</i>     | (Optional) IP ROCE UDP port multi-range                                  |
| <i>prot</i>               | (Optional) Protocol  |
| <i>input-iface-list</i>   | (Optional) Input Interface multi-range                                   |
| <i>exp-list</i>           | (Optional) List of MPLS exp values                                       |
| <i>cl-def</i>             | (Optional) Match any criteria for class-default only                     |

**Command Mode**

- /exec

## show class-map type control-plane

```
show class-map type control-plane [ <omap-name> ] [ __readonly__ [ { TABLE_cmap <omap-key>
<omap-name-out> <opt_any_or_all> [ TABLE_match <match-key> [ access_grp <acc_grp_name> ] [ redirect
<opt_match_redirect> ] [ exception <opt_match_except> ] [ protocol <opt_match_protocol> ] } ] ] ]
```

### Syntax Description

|                           |  |
|---------------------------|--|
| show                      | Show running system information                  |
| class-map                 | Show class maps                                  |
| type                      | Type of the class-map                            |
| control-plane             | This is for copp policy                          |
| <i>omap-name</i>          | (Optional) Name of the class-map                 |
| <i>__readonly__</i>       | (Optional)                                       |
| TABLE_cmap                | (Optional) all cmap xml sessions                 |
| <i>omap-name-out</i>      | (Optional) Name of the class-map                 |
| <i>omap-key</i>           | (Optional) Class-map name: xml key               |
| <i>opt_any_or_all</i>     | (Optional) Enter match-any or match-all          |
| TABLE_match               | (Optional) all match xml sessions                |
| <i>match-key</i>          | (Optional) match count: xml key                  |
| access_grp                | (Optional)                                       |
| <i>acc_grp_name</i>       | (Optional)                                       |
| redirect                  | (Optional)                                       |
| <i>opt_match_redirect</i> | (Optional) Match criteria for redirected packets |
| exception                 | (Optional)                                       |
| <i>opt_match_except</i>   | (Optional) Match criteria for exception packets  |
| protocol                  | (Optional)                                       |
| <i>opt_match_protocol</i> | (Optional) Match criteria for protocol packets   |

### Command Mode

- /exec

## show class-map type network-qos

```
show class-map type network-qos [ <omap-name-nq> ] [ __readonly__ { [ <display-all> ] [ TABLE_omap
<omap-key> <xomap-name> [ <desc> ] [ <cos-list> ] [ <qos-group-list> ] [ <protocol> ] [ TABLE_xmatch
<xmatch-key> [ <xcos-list> ] [ <xqos-group-list> ] [ <xprotocol> ] ] ] } ]
```

### Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information               |
| class-map              | Show class maps                               |
| type                   | Type of the class-map                         |
| <i>omap-name-nq</i>    | (Optional) Class-map name                     |
| network-qos            | type network-qos                              |
| <i>__readonly__</i>    | (Optional)                                    |
| <i>display-all</i>     | (Optional) Display all network-qos class-maps |
| TABLE_omap             | (Optional) all network-qos omap xml sessions  |
| <i>omap-key</i>        | (Optional) Class-map name: xml key            |
| <i>xomap-name</i>      | (Optional) Class-map name                     |
| <i>desc</i>            | (Optional) Description string                 |
| TABLE_xmatch           | (Optional) all match xml sessions             |
| <i>xmatch-key</i>      | (Optional) match count: xml key               |
| <i>cos-list</i>        | (Optional) List of class-of-service values    |
| <i>qos-group-list</i>  | (Optional) List of qos-group values           |
| <i>protocol</i>        | (Optional) protocol                           |
| <i>xcos-list</i>       | (Optional) List of class-of-service values    |
| <i>xqos-group-list</i> | (Optional) List of qos-group values           |
| <i>xprotocol</i>       | (Optional) xprotocol                          |

### Command Mode

- /exec

# show cli alias

```
show cli alias [ name <s0> ] [ __readonly__ { TABLE_cli_alias <alias> <name> } ]
```

## Syntax Description

|                 |                                     |
|-----------------|-------------------------------------|
| show            | Show running system information     |
| cli             | Show CLI information                |
| alias           | Display the alias configuration     |
| name            | (Optional) Display a specific alias |
| s0              | (Optional) Specify the alias        |
| __readonly__    | (Optional)                          |
| TABLE_cli_alias | (Optional) cli alias table          |
| alias           | (Optional) alias                    |
| name            | (Optional) name                     |

## Command Mode

- /exec

# show cli dynamic integers

```
show cli dynamic integers [ <name> ] [ __readonly__ TABLE_dynamic_integers <name-o> <min> <max> ]
```

## Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information                     |
| cli                    | CLI commands  |
| dynamic                | Display current range of dynamic parameters         |
| integers               | Display current range of dynamic integer parameters |
| <i>name</i>            | (Optional) name of the dynamic parameter            |
| <i>__readonly__</i>    | (Optional)  |
| TABLE_dynamic_integers | (Optional)  |
| <i>name-o</i>          | (Optional)  |
| <i>min</i>             | (Optional)  |
| <i>max</i>             | (Optional)  |

## Command Mode

- /exec

## show cli dynamic strings

show cli dynamic strings [ <name> ] [ \_\_readonly\_\_ TABLE\_dynamic\_strings <name-o> <value> + ]

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                    |
| cli                   | CLI commands                                       |
| dynamic               | Display current range of dynamic parameters        |
| strings               | Display current range of dynamic string parameters |
| <i>name</i>           | (Optional) name of the dynamic parameter           |
| <i>__readonly__</i>   | (Optional)   |
| TABLE_dynamic_strings | (Optional)   |
| <i>name-o</i>         | (Optional)   |
| <i>value</i>          | (Optional)   |

### Command Mode

- /exec

# show cli history

show cli history [ this-mode-only | exec-mode | config-mode ] [ <count> | unformatted ] +

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information                    |
| cli            | debug cli  |
| history        | history of cli commands                            |
| <i>count</i>   | (Optional) number of lines to display (from end)   |
| unformatted    | (Optional) display just the commands               |
| this-mode-only | (Optional) display history from current mode only  |
| exec-mode      | (Optional) display history of exec commands only   |
| config-mode    | (Optional) display history of config commands only |

## Command Mode

- /exec

# show cli interface table

show cli interface table

## Syntax Description

|           |           |
|-----------|-----------|
| show      | show      |
| cli       | cli       |
| interface | interface |
| table     | table     |

## Command Mode

- /exec

# show cli list

show cli list [ detail | recurse | <component> | <max-per-cmd> | has-xml-out ] +

## Syntax Description

|                    |                                 |
|--------------------|---------------------------------|
| show               | Show running system information |
| cli                | Show CLI information            |
| list               | show                            |
| <i>component</i>   | (Optional) component            |
| <i>max-per-cmd</i> | (Optional) max                  |
| has-xml-out        | (Optional) show                 |
| recurse            | (Optional) go                   |
| detail             | (Optional) formats              |

## Command Mode

- /exec

# show cli syntax

show cli syntax [ long | recurse ] + [ has-xml-out | has-no-xml-out | is-data-modeled ] [ roles [ network-admin | network-operator | <roles-mask> ] ]

## Syntax Description

|                   |                                 |
|-------------------|---------------------------------|
| show              | Show running system information |
| cli               | Show CLI information            |
| syntax            | show                            |
| long              | (Optional) use                  |
| recurse           | (Optional) also                 |
| has-xml-out       | (Optional) show                 |
| has-no-xml-out    | (Optional) show                 |
| is-data-modeled   | (Optional) show                 |
| roles             | (Optional) show                 |
| network-admin     | (Optional) show                 |
| network-operator  | (Optional) show                 |
| <i>roles-mask</i> | (Optional) show                 |

## Command Mode

- /exec

# show cli variables

```
show cli variables [ __readonly__ <switchname> <timestamp> <currentuser> [ { TABLE_variable <key>
<value> } ] [ { TABLE_session_variable <key> <value> } ] ]
```

## Syntax Description

|                        |                                   |
|------------------------|-----------------------------------|
| show                   | Show running system information   |
| cli                    | Show CLI information              |
| variables              | Show CLI variables                |
| <i>__readonly__</i>    | (Optional)                        |
| <i>switchname</i>      | (Optional) Switch Name            |
| <i>timestamp</i>       | (Optional) Timestamp              |
| <i>currentuser</i>     | (Optional) Current User           |
| TABLE_variable         | (Optional) Variable table         |
| <i>key</i>             | (Optional) key                    |
| <i>value</i>           | (Optional) value                  |
| TABLE_session_variable | (Optional) Session variable table |
| <i>key</i>             | (Optional) key                    |
| <i>value</i>           | (Optional) value                  |

## Command Mode

- /exec

# show clock

```
show clock [ detail ] [ __readonly__ { <simple_time> <time_source> [ <daylight_zone> <daylight_start_week>
<daylight_start_weekday> <daylight_start_month> <daylight_start_time> <daylight_end_week>
<daylight_end_weekday> <daylight_end_month> <daylight_end_time> <daylight_utc_min_offset> } } ]
```

## Syntax Description

|                                |  |
|--------------------------------|--|
| show                           | Show running system information                              |
| clock                          | Display current Date   |
| detail                         | (Optional) Display current date and summertime configuration |
| __readonly__                   | (Optional)   |
| <i>simple_time</i>             | (Optional) simple clock format                               |
| <i>time_source</i>             | (Optional) Time source                                       |
| <i>daylight_zone</i>           | (Optional) summer-time daylight zone                         |
| <i>daylight_start_week</i>     | (Optional) daylight start week                               |
| <i>daylight_start_weekday</i>  | (Optional) daylight start weekday                            |
| <i>daylight_start_month</i>    | (Optional) daylight start month                              |
| <i>daylight_start_time</i>     | (Optional) daylight start time                               |
| <i>daylight_end_week</i>       | (Optional) daylight end week                                 |
| <i>daylight_end_weekday</i>    | (Optional) daylight end weekday                              |
| <i>daylight_end_month</i>      | (Optional) daylight end month                                |
| <i>daylight_end_time</i>       | (Optional) daylight end time                                 |
| <i>daylight_utc_min_offset</i> | (Optional) daylight utc offset                               |

## Command Mode

- /exec

## show config-profile

```
show config-profile [ name <all_conf_profile_name> ] [ __readonly__ TABLE_conf_profile_all
<conf_profile_name> { [ <conf_profile_desc> ] <conf_profile_cfg> + [ <conf_profile_applied> ] + [
<conf_profile_include> ] + } ]
```

### Syntax Description

|                               |  |
|-------------------------------|--|
| show                          | Show running system information                    |
| config-profile                | Show config-profiles                               |
| name                          | (Optional) config-profile name                     |
| <i>all_conf_profile_name</i>  | (Optional) Enter the name of configuration profile |
| <i>__readonly__</i>           | (Optional)   |
| <i>TABLE_conf_profile_all</i> | (Optional)   |
| <i>conf_profile_name</i>      | (Optional)   |
| <i>conf_profile_desc</i>      | (Optional)   |
| <i>conf_profile_cfg</i>       | (Optional)   |
| <i>conf_profile_applied</i>   | (Optional)   |
| <i>conf_profile_include</i>   | (Optional)   |

### Command Mode

- /exec

## show config-profile applied

```
show config-profile { applied [ auto | manually ] | non-applied } [ match-name <profile_substring> ] [
__readonly__ [ <profiles> ] + ]
```

### Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information   |
| config-profile           | Show config-profiles  |
| applied                  | List of config-profiles that are applied                                    |
| auto                     | (Optional) List of config-profiles that are applied via auto-config         |
| manually                 | (Optional) List of all config-profiles which were applied directly from cli |
| non-applied              | List of config-profiles that are not applied                                |
| match-name               | (Optional) List of all config-profiles that have matching sub-string        |
| __readonly__             | (Optional)  |
| <i>profiles</i>          | (Optional)  |
| <i>profile_substring</i> | (Optional) Enter a substring to match with config-profile name              |

### Command Mode

- /exec

## show config-replace log exec

```
show config-replace log { exec | verify } [ __readonly__ [ <last_operation> ] [ <checkpoint_name> ] [ <scheme> ] [ <user> ] [ <config_replace_type> ] [ <verbose> ] [ <start_time> ] [ <start_time_utc> ] [ <log_entry> + ] [ <end_time> ] [ <end_time_utc> ] [ <status> ] [ <restoring_previous_status> + ] [ <executing_switch_profile_patch> + ] [ <tobe_removed_present> + ] [ <tobe_added_missing> + ] [ <executing_patch> + ] [ <validating_patch> + ] [ <executing_patch_post_validation> + ] [ <retrying_patch> + ] [ <restore_previous_config> + ] [ <undo_end_time> ] [ <undo_end_time_utc> ] [ <undo_status> ] ]
```

### Syntax Description

|                                       |   |
|---------------------------------------|---|
| show                                  | Show running system information                 |
| config-replace                        | Show config-replace                             |
| log                                   | show config-replace log                         |
| exec                                  | show config-replace execution log               |
| verify                                | show config-replace verify log                  |
| <i>__readonly__</i>                   | (Optional) Read only                            |
| <i>last_operation</i>                 | (Optional) last operation                       |
| <i>checkpoint_name</i>                | (Optional) checkpoint name                      |
| <i>scheme</i>                         | (Optional) scheme                               |
| <i>user</i>                           | (Optional) user                                 |
| <i>config_replace_type</i>            | (Optional) config-replace type                  |
| <i>verbose</i>                        | (Optional) verbose                              |
| <i>start_time</i>                     | (Optional) Start Time                           |
| <i>start_time_utc</i>                 | (Optional) Start Time UTC                       |
| <i>log_entry</i>                      | (Optional) log entry from configure replace log |
| <i>end_time</i>                       | (Optional) End Time                             |
| <i>end_time_utc</i>                   | (Optional) End Time UTC                         |
| <i>status</i>                         | (Optional) status                               |
| <i>restoring_previous_status</i>      | (Optional) Restoring Previous Config Status     |
| <i>executing_switch_profile_patch</i> | (Optional) Executing Switch profile Patch       |
| <i>tobe_removed_present</i>           | (Optional) log entry from configure replace log |
| <i>tobe_added_missing</i>             | (Optional) log entry from configure replace log |

|  |  |
|--|--|
| <i>undo_end_time</i>                   | (Optional) Undo End Time                   |
| <i>undo_end_time_utc</i>               | (Optional) Undo End Time UTC               |
| <i>executing_patch</i>                 | (Optional) Executing Patch                 |
| <i>validating_patch</i>                | (Optional) Validating Patch                |
| <i>executing_patch_post_validation</i> | (Optional) Executing Patch post validation |
| <i>retrying_patch</i>                  | (Optional) Retrying Rollback Patch         |
| <i>restore_previous_config</i>         | (Optional) Restoring previous config       |
| <i>undo_status</i>                     | (Optional) undo status                     |

**Command Mode**

- /exec

## show config-replace status

```
show config-replace status [ __readonly__ <last_operation> [ <config_replace_type> ] [ <name> ] [
<start_time> ] [ <end_time> ] [ <operation_status> ] [ <commit_status> ] [ <commit_timeout_remaining> ]
]
```

### Syntax Description

|                                 |   |
|---------------------------------|---|
| show                            | Show running system information                 |
| config-replace                  | show config-replace                             |
| status                          | show status of last configure replace operation |
| <i>__readonly__</i>             | (Optional) Read only                            |
| <i>last_operation</i>           | (Optional) last operation                       |
| <i>config_replace_type</i>      | (Optional) config-replace type                  |
| <i>name</i>                     | (Optional) name                                 |
| <i>start_time</i>               | (Optional) start time                           |
| <i>end_time</i>                 | (Optional) end time                             |
| <i>operation_status</i>         | (Optional) operation status                     |
| <i>commit_status</i>            | (Optional) Commit status                        |
| <i>commit_timeout_remaining</i> | (Optional) commit timeout remaining             |

### Command Mode

- /exec

# show configuration

show configuration { commit list | dual-stage sessions }

## Syntax Description

|               |   |
|---------------|---|
| show          | Show running system information               |
| configuration | Show information about configuration sessions |
| commit        | commit information                            |
| list          | Information about commit-id                   |
| dual-stage    | Active dual stage session                     |
| sessions      | Users with active configuration sessions      |

## Command Mode

- /exec

# show configuration

show configuration

## Syntax Description

|               |   |
|---------------|---|
| show          | Show running system information               |
| configuration | Show information about configuration sessions |

## Command Mode

- /exec

# show configuration commit

show configuration commit { changes <conf-commit-id> | <conf-commit-id> | log }

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information               |
| configuration         | Show information about configuration sessions |
| commit                | commit information                            |
| changes               | difference in committed configs               |
| <i>conf-commit-id</i> | commit ID                                     |
| log                   | Displays execution logs of last commit        |

## Command Mode

- /exec

# show configuration failed

show configuration failed [ noerrors ]

## Syntax Description

|               |  |
|---------------|--|
| show          | Show running system information                                |
| configuration | Show information about configuration sessions                  |
| failed        | Contents of failed configuration                               |
| noerrors      | (Optional) Failed items in last commit (exclude error reasons) |

## Command Mode

- /exec

# show configuration file

show configuration file <uri0> [ clear-text ]

## Syntax Description

|               |   |
|---------------|---|
| show          | Show running system information               |
| configuration | Show information about configuration sessions |
| file          | Displays content of files                     |
| <i>uri0</i>   | Filename to be displayed                      |
| clear-text    | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED     |

## Command Mode

- /exec

# show configuration session

```
show configuration session [ __readonly__ [ TABLE_session_all <ssn-name> [ TABLE_session_all_cmd [
<ssn-cmd-num> ] [ <command> ] ] ] <activesesscnt> ]
```

## Syntax Description

|                              |  |
|------------------------------|--|
| show                         | Show running system information                    |
| configuration                | Show information about configuration sessions      |
| session                      | Show active configuration sessions                 |
| <i>__readonly__</i>          | (Optional) Read only                               |
| <i>TABLE_session_all</i>     | (Optional) Show session table                      |
| <i>ssn-name</i>              | (Optional)   |
| <i>TABLE_session_all_cmd</i> | (Optional) Show session related commands           |
| <i>ssn-cmd-num</i>           | (Optional)   |
| <i>command</i>               | (Optional)   |
| <i>activesesscnt</i>         | (Optional) Number of active configuration sessions |

## Command Mode

- /exec

# show configuration session

```
show configuration session <s3> [ __readonly__ <ssn-name> [ TABLE_session_details [ <ssn-cmd-num> ]
[ <command> ] ] ]
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                |
| configuration         | Show information about configuration sessions  |
| session               | Show active configuration sessions             |
| s3                    | Shows configuration session given a name       |
| __readonly__          | (Optional) Read only                           |
| ssn-name              | (Optional)                                     |
| TABLE_session_details | (Optional) Show session details for given name |
| ssn-cmd-num           | (Optional)                                     |
| command               | (Optional)                                     |

## Command Mode

- /exec

# show configuration session global-info

```
show configuration session global-info [ __readonly__ <max-ssns> <max-cmds> <curr-num-ssns>
<curr-num-cmds> ]
```

## Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information               |
| configuration        | Show information about configuration sessions |
| session              | Show active configuration sessions            |
| global-info          | Show configuration sessions global-info       |
| __readonly__         | (Optional) Read only                          |
| <i>max-ssns</i>      | (Optional)                                    |
| <i>max-cmds</i>      | (Optional)                                    |
| <i>curr-num-ssns</i> | (Optional)                                    |
| <i>curr-num-cmds</i> | (Optional)                                    |

## Command Mode

- /exec

## show configuration session status

```
show configuration session status [ <s3> ] [ __readonly__ [ TABLE_session_status <ssn-name> <last-action>
<ac-status> <ac-reason> <ac-tstamp> [ <failed-cmd-num> ] [ <failed-cmd> ] [ <last-vfy-cmd-num> ] [
<last-vfy-cmd> ] [ <last-vfy-tstamp> ] [ <rollback-status> ] ] ]
```

### Syntax Description

|                      |  |
|----------------------|--|
| show                 | Show running system information                            |
| configuration        | Show information about configuration sessions              |
| session              | Show active configuration sessions                         |
| status               | Show configuration session-mgr status                      |
| s3                   | (Optional) Shows configuration session status given a name |
| __readonly__         | (Optional) Read only                                       |
| TABLE_session_status | (Optional) Show session status table                       |
| ssn-name             | (Optional)   |
| last-action          | (Optional) Last Action                                     |
| ac-status            | (Optional) Last Action Status                              |
| ac-reason            | (Optional) Last Action Reason                              |
| ac-tstamp            | (Optional) Last Action Timestamp                           |
| failed-cmd-num       | (Optional) Failed Command Number                           |
| failed-cmd           | (Optional) Failed Command                                  |
| last-vfy-cmd-num     | (Optional) Last Verified Command Number                    |
| last-vfy-cmd         | (Optional) Last Verified Command                           |
| last-vfy-tstamp      | (Optional) Last Verified Command Timestamp                 |
| rollback-status      | (Optional) Rollback Status                                 |

### Command Mode

- /exec

# show configuration session summary

```
show configuration session summary [ __readonly__ [ TABLE_session_summary <ssn-name> <username>
<tstamp> ] [ <activesesscnt> ] ]
```

## Syntax Description

|                                    |  |
|------------------------------------|--|
| <code>show</code>                  | Show running system information                    |
| <code>configuration</code>         | Show information about configuration sessions      |
| <code>session</code>               | Show active configuration sessions                 |
| <code>summary</code>               | Show summary of the active configuration sessions  |
| <code>__readonly__</code>          | (Optional) Read only                               |
| <code>TABLE_session_summary</code> | (Optional) Show session summary table              |
| <code>ssn-name</code>              | (Optional)   |
| <code>username</code>              | (Optional) Session Owner                           |
| <code>tstamp</code>                | (Optional) Creation Time                           |
| <code>activesesscnt</code>         | (Optional) Number of active configuration sessions |

## Command Mode

- /exec

# show configuration session vsh

```
show configuration session <s3> vsh [ __readonly__ <ssn-name> [ TABLE_session_details_vsh [
<ssn-cmd-num> ] [ <command> ] ] ]
```

## Syntax Description

|                           |   |
|---------------------------|---|
| show                      | Show running system information                       |
| configuration             | Show information about configuration sessions         |
| session                   | Show active configuration sessions                    |
| s3                        | Shows configuration session given a name              |
| vsh                       |   |
| __readonly__              | (Optional) Read only                                  |
| TABLE_session_details_vsh | (Optional) Show session details for given name on vsh |
| ssn-name                  | (Optional)  |
| ssn-cmd-num               | (Optional)  |
| command                   | (Optional)  |

## Command Mode

- /exec

# show consistency-checker copp

show consistency-checker copp

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information               |
| consistency-checker | Consistency Checker                           |
| copp                | Verify copp programming from software context |

## Command Mode

- /exec

# show consistency-checker copp extended module

show consistency-checker copp extended module <module-id> [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| copp                | Verify copp programming from software context                   |
| extended            | extended  |
| module              | Limit display to this module                                    |
| <i>module-id</i>    | Enter module number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker dme interfaces

show consistency-checker dme interfaces

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| consistency-checker | Consistency Checker             |
| dme                 | DME (ObjectStore)               |
| interfaces          | interfaces oper data            |

## Command Mode

- /exec

# show consistency-checker egress-xlate private-vlan

show consistency-checker egress-xlate private-vlan <vlan>

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                    |
| consistency-checker | Consistency Checker                                |
| egress-xlate        | Check PVLAN egress-xlate                           |
| private-vlan        | Verifies private-vlan egress-xlate in the hardware |
| <i>vlan</i>         | Enter private-vlan id                              |

## Command Mode

- /exec

# show consistency-checker ehm interface

show consistency-checker ehm interface { <intf> | all }

## Syntax Description

|                     |                                       |
|---------------------|---------------------------------------|
| show                | Show running system information       |
| consistency-checker | Consistency Checker                   |
| ehm                 | Show EHM Info                         |
| interface           | Show interface status and information |
| <i>intf</i>         | Virtual Interface                     |
| all                 | Display All Interfaces                |

## Command Mode

- /exec

## show consistency-checker fcoe

```
show consistency-checker fcoe [ { interface <ifl> [ { exclude ping } ] } | { npv [ server-interface <svr_ifl>
external-interface <ext_ifl> ] } | { hw-table { pif | vif | ucpcfg | vsan | acl | fib [ flogi | domain [ local | remote
] ] | fcf | zone | mac } } | { [ exclude ] ping } | { drop [ ingress | egress ] } ] [ verbose [ detail ] ]
```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                          |
| consistency-checker | Consistency Checker                                      |
| fcoe                | FCoE manager   |
| interface           | (Optional) Interface Test                                |
| <i>ifl</i>          | (Optional) Interface name                                |
| npv                 | (Optional) NPV server to external interface pinning test |
| server-interface    | (Optional) Server Interface Name                         |
| <i>svr_ifl</i>      | (Optional) Server Interface name                         |
| external-interface  | (Optional) External Interface Name                       |
| <i>ext_ifl</i>      | (Optional) External Interface name                       |
| hw-table            | (Optional) Consistency checker for Hardware Tables       |
| pif                 | (Optional) PIF Table Test                                |
| vif                 | (Optional) VIF Table Test                                |
| ucpcfg              | (Optional) Port-channel Program Table Test               |
| vsan                | (Optional) VSAN VLAN related tables                      |
| acl                 | (Optional) ACL Test                                      |
| fib                 | (Optional) FIB Test                                      |
| flogi               | (Optional) FIB Test for FLOGIs                           |
| domain              | (Optional) FIB Test for domains                          |
| local               | (Optional) FIB Test for local domains                    |
| remote              | (Optional) FIB Test for remote domains                   |
| fcf                 | (Optional) FCF Test                                      |
| zone                | (Optional) ZONE Test                                     |
| mac                 | (Optional) MAC Table Test                                |

|         |                                   |
|---------|-----------------------------------|
| exclude | (Optional) Exclude given test     |
| ping    | (Optional) FCPING Test            |
| drop    | (Optional) Hardware drops         |
| ingress | (Optional) Ingress Drop Test      |
| egress  | (Optional) Egress Drop Test       |
| verbose | (Optional) To get debugs          |
| detail  | (Optional) To get detailed debugs |

**Command Mode**

- /exec

# show consistency-checker fex-interfaces fex

show consistency-checker fex-interfaces { fex <id> | interface <ifid> } [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| fex-interfaces      | Compares software and hardware state of fex interfaces          |
| fex                 | Limit display to interfaces on this fex                         |
| <i>id</i>           | Enter module number   |
| interface           | Limit display to FEX interface                                  |
| <i>ifid</i>         | FEX interface name  |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

## show consistency-checker forwarding

```
show consistency-checker forwarding [ ip | ipv4 ] [ unicast ] [ suppress-transient ] [ vrf { <vrf-name> | all_vrfs
} ] [ module { <module> | all_modules } ] [ __readonly__ [ <err_str> ] [ <cc_header> ] [ <table_id> ] [
<slot_id> ] [ <exec_time> ] [ <elapsed_time> ] [ <inconsis_adj> ] [ TABLE_inconsistency_adj { <id>
<slot> [ <unit> ] <vrf> [ <ipaddr> ] [ <ipprefix> ] [ <interface> ] <reason> } ] [ <inconsis_routes> ] [
TABLE_inconsistency_routes { <id> <slot> [ <unit> ] <vrf> [ <ipaddr> ] [ <ipprefix> ] [ <interface> ]
<reason> } ] [ <run_status> ] ]
```

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | show  |
| consistency-checker     | Consistency Checker                           |
| forwarding              | Display Forwarding Information                |
| ip                      | (Optional) ipv4                               |
| ipv4                    | (Optional) ipv4                               |
| unicast                 | (Optional) unicast                            |
| suppress-transient      | (Optional) Suppress Transient state           |
| vrf                     | (Optional) check routes for a specific VRF    |
| <i>vrf-name</i>         | (Optional) VRF name                           |
| module                  | (Optional) check routes for a specific module |
| <i>module</i>           | (Optional) module number                      |

# show consistency-checker forwarding single-route ipv4 vrf

```
show consistency-checker forwarding single-route { ipv4 | ipv6 } <ip-prefix> vrf { <vrf-name> |
<vrf-known-name> } [ brief | detail ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                 |
| consistency-checker   | Consistency Checker   |
| forwarding            | Display Forwarding Information                                  |
| single-route          | Run the consistency checker for a single route                  |
| ipv4                  | IPv4 address  |
| ipv6                  | IPv6 address  |
| <i>ip-prefix</i>      | Specify an IP prefix/mask                                       |
| vrf                   | check routes for a specific VRF                                 |
| <i>vrf-name</i>       | VRF name  |
| <i>vrf-known-name</i> | Known VRF name  |
| brief                 | (Optional) Show consistency checker structured output in brief  |
| detail                | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker fsync

show consistency-checker fsync [ debug-logs ] [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| fsync               | Do consistency check for frequency synchronization              |
| debug-logs          | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                       |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

|---------------------|---------------------------------|
| show                | Show running system information |
| consistency-checker | Consistency Checker             |
| kim                 | Kernel Interface                |

## Command Mode

- /exec

# show consistency-checker kim interface

```
show consistency-checker kim { interface <ifid> } [ brief | detail ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| kim                 | kernel interface  |
| interface           | Limit display to interface                                      |
| <i>ifid</i>         | Interface   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

## show consistency-checker l2-tahoe mac-address

show consistency-checker l2-tahoe mac-address <mac-addr> [ module <module> ] [ unit <unit> ] [ brief | detail ]

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| l2-tahoe            | Verify l2 mac programming in the hardware                       |
| mac-address         | MAC address   |
| <i>mac-addr</i>     | address   |
| module              | (Optional) Module to run the consistency-checker on             |
| <i>module</i>       | (Optional) Module number  |
| unit                | (Optional) Unit to run the consistency checker on               |
| <i>unit</i>         | (Optional) Enter Unit Number                                    |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

# show consistency-checker l2-tahoe sub-interface

show consistency-checker l2-tahoe sub-interface { <if\_name> } [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| l2-tahoe            | Verify l2 sub-interface programming in the hardware             |
| sub-interface       | sub-interface   |
| <i>if_name</i>      | Physical or Logical interface                                   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

## show consistency-checker l2-tahoe sub-interface vlan

show consistency-checker l2-tahoe sub-interface vlan <vlan-id>

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                     |
| consistency-checker | Consistency Checker                                 |
| l2-tahoe            | Verify l2 sub-interface programming in the hardware |
| sub-interface       | sub-interface                                       |
| vlan                | Do consistency check for vlan                       |
| <i>vlan-id</i>      | vlan number   |

### Command Mode

- /exec

## show consistency-checker l2-tahoe switchport

```
show consistency-checker l2-tahoe switchport { interface { <if_name> | all } | module { <module> | all } } [
brief | detail ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| l2-tahoe            | Verify l2 mac programming in the hardware                       |
| switchport          | Switchport Interface  |
| interface           | interface   |
| <i>if_name</i>      | Physical or Logical interface                                   |
| all                 | All switchport interfaces                                       |
| module              | Module to run the consistency-checker on                        |
| <i>module</i>       | Enter module number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

## show consistency-checker l2 module

show consistency-checker { l2-tahoe | l2-mtc } module <module> [ unit <unit> ] [ brief | detail ]

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| l2-tahoe            | Verify l2 mac programming in the hardware                       |
| l2-mtc              | Verify l2 mac programming in the hardware                       |
| module              | Module to run the consistency-checker on                        |
| <i>module</i>       | Enter module number   |
| unit                | (Optional) Unit to run the consistency checker on               |
| <i>unit</i>         | (Optional) Enter unit number                                    |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

## show consistency-checker l2 multicast group source vlan

```
show consistency-checker l2 multicast group { <grp-address> | <grp-ipv6-address> } source { <src-address>
| <src-ipv6-address> } vlan <vlan-id> [ debug-logs ] [ brief | detail ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| l2                  | Verify l2 mac programming in the hardware                       |
| multicast           | multicast related information                                   |
| group               | Do consistency check for group                                  |
| <i>grp-address</i>  | group IP address  |
| source              | Do consistency check for source                                 |
| <i>src-address</i>  | source IP address   |
| vlan                | Do consistency check for vlan                                   |
| <i>vlan-id</i>      | vlan number   |
| debug-logs          | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                       |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

## show consistency-checker l2 multicast mac vlan

show consistency-checker l2 multicast mac <mac-address> vlan <vlan-id> [ debug-logs ] [ brief | detail ]

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| l2                  | Verify l2 mac programming in the hardware                       |
| multicast           | multicast related information                                   |
| mac                 | Do consistency check for multicast mac address lookup           |
| <i>mac-address</i>  | mac address   |
| vlan                | Do consistency check for vlan                                   |
| <i>vlan-id</i>      | vlan number   |
| debug-logs          | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                       |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

## show consistency-checker l3-interface

```
show consistency-checker l3-interface { all | module <moduleid> | interface { <ifid> | <ch-id> | <vlan-id> }
} [ brief | detail ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| l3-interface        | Compares software and hardware properties of L3 interfaces      |
| all                 | Run on all modules on the switch                                |
| module              | Limit display to interfaces on module                           |
| <i>moduleid</i>     | Module number   |
| interface           | Limit display to interface                                      |
| <i>ifid</i>         | Interface name  |
| <i>ch-id</i>        | Port-Channel name   |
| <i>vlan-id</i>      | SVI VLAN  |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

## show consistency-checker l3 multicast group source vrf

```
show consistency-checker l3 multicast group { <grp-address> [ <mask> ] | <gprefix> | <grp-ipv6-address> }
source { <src-address> | <src-ipv6-address> } vrf { <vrf-name> | <vrf-known-name> } [ debug-logs ] [ brief
| detail ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                 |
| consistency-checker   | Consistency Checker   |
| l3                    | l3 consistency  |
| multicast             | multicast related information                                   |
| group                 | Do consistency check for group                                  |
| <i>grp-address</i>    | group IP address  |
| <i>mask</i>           | (Optional) mask for group ip address                            |
| <i>gprefix</i>        | IPv4 Multicast Group Prefix                                     |
| source                | Do consistency check for source                                 |
| <i>src-address</i>    | source IP address   |
| vrf                   | Do consistency check for vrf                                    |
| <i>vrf-name</i>       | VRF name  |
| <i>vrf-known-name</i> | Known VRF name  |
| debug-logs            | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                       |
| brief                 | (Optional) Show consistency checker structured output in brief  |
| detail                | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

# show consistency-checker link-state fabric-ieth

```
show consistency-checker link-state fabric-ieth { [ module <module> ] } [ brief | detail ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| link-state          | Compares software and hardware link state of interfaces         |
| fabric-ieth         | Internal Fabric ports   |
| module              | (Optional) Limit display to interfaces on module                |
| <i>module</i>       | (Optional) Enter module number                                  |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker link-state module

show consistency-checker link-state { module <module> | interface <ifid> } [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| link-state          | Compares software and hardware link state of interfaces         |
| module              | Limit display to interfaces on module                           |
| <i>module</i>       | Module number   |
| interface           | Limit display to interface                                      |
| <i>ifid</i>         | Interface name  |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker membership port-channels

show consistency-checker membership port-channels [ interface <ch-id> ] [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| membership          | Check various memberships                                       |
| port-channels       | Verifies port channel membership in the hardware                |
| interface           | (Optional) Port-channel number                                  |
| <i>ch-id</i>        | (Optional) Port-Channel name                                    |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

## show consistency-checker membership vlan

```
show consistency-checker membership vlan <vlanid> [ [ interface [ <intf-id> | <ch-id> ] ] ] [ private-vlan [
interface [ <int-id> | <ch-id> ] ] ] [ native-vlan ] [ brief | detail ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| vlan                | Verifies vlan membership in the hardware                        |
| <i>vlanid</i>       | Enter vlan id   |
| consistency-checker | Consistency Checker   |
| membership          | Check various memberships                                       |
| interface           | (Optional) Interface  |
| <i>intf-id</i>      | (Optional) Interface  |
| <i>ch-id</i>        | (Optional) Port-Channel name                                    |
| private-vlan        | (Optional) Check private-vlan primary vlan                      |
| interface           | (Optional) Interface  |
| <i>int-id</i>       | (Optional) Interface name                                       |
| <i>ch-id</i>        | (Optional) Port-Channel name                                    |
| native-vlan         | (Optional) Check for native vlans                               |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

## show consistency-checker multicast nlb cluster-ip vrf

```
show consistency-checker multicast nlb cluster-ip <ip-address> vrf { <vrf-name> | <vrf-known-name> } [
debug-logs ] [ brief | detail ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                 |
| consistency-checker   | Consistency Checker   |
| multicast             | multicast related information                                   |
| nlb                   | Do consistency check for Multicast NLB                          |
| cluster-ip            | Cluster virtual unicast IP address                              |
| <i>ip-address</i>     | Cluster IP address  |
| vrf                   | Do consistency check for vrf                                    |
| <i>vrf-name</i>       | VRF name  |
| <i>vrf-known-name</i> | Known VRF name  |
| debug-logs            | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                       |
| brief                 | (Optional) Show consistency checker structured output in brief  |
| detail                | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

## show consistency-checker multicast vlan

show consistency-checker multicast vlan <vlanid> [ group <group\_ip> | destination-mac <dst\_mac> ]

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                                  |
| consistency-checker | Consistency Checker  |
| multicast           | Verify Multicast   |
| vlan                | Verifies vlan flood sharing                                      |
| <i>vlanid</i>       | Enter vlan id  |
| group               | (Optional) Do consistency check for a group                      |
| <i>group_ip</i>     | (Optional) Multicast IP address of single group to display       |
| destination-mac     | (Optional) Do consistency check for a destination-mac            |
| <i>dst_mac</i>      | (Optional) Multicast Destination mac Address for Vlan to display |

### Command Mode

- /exec

# show consistency-checker niv-datapath interface

show consistency-checker niv-datapath interface <intf>

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information           |
| consistency-checker | Consistency Checker                       |
| niv-datapath        | Verify NIV Datapath for a given interface |
| interface           | Show interface status and information     |
| <i>intf</i>         | Virtual interface                         |

## Command Mode

- /exec

# show consistency-checker pacl extended ingress ip interface

show consistency-checker pacl extended ingress ip interface { <int-id> | <ch-id> } [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| pacl                | Verify pacl programming in the hardware                         |
| extended            | extended  |
| ingress             | ingress direction   |
| ip                  | ip protocol   |
| interface           | Interface   |
| <i>int-id</i>       | Interface   |
| <i>ch-id</i>        | Port-Channel name   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker pacl extended ingress ip module

show consistency-checker pacl extended ingress ip module <module-id> [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| pacl                | Verify pacl programming in the hardware                         |
| extended            | extended  |
| ingress             | ingress direction   |
| ip                  | ip protocol   |
| module              | Limit display to L2 interfaces on this module                   |
| <i>module-id</i>    | Enter module number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker pacl extended ingress ipv6 module

show consistency-checker pacl extended ingress ipv6 module <module-id> [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| pacl                | Verify pacl programming in the hardware                         |
| extended            | extended  |
| ingress             | ingress direction   |
| ipv6                | ipv6 protocol   |
| module              | Limit display to L2 interfaces on this module                   |
| <i>module-id</i>    | Enter module number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker pacl extended ingress ipv6 interface

show consistency-checker pacl extended ingress ipv6 interface { <int-id> | <ch-id> } [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| pacl                | Verify pacl programming in the hardware                         |
| extended            | extended  |
| ingress             | ingress direction   |
| ipv6                | ipv6 protocol   |
| interface           | Interface   |
| <i>int-id</i>       | Interface   |
| <i>ch-id</i>        | Port-Channel name   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker pacl extended ingress mac module

show consistency-checker pacl extended ingress mac module <module-id> [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| pacl                | Verify pacl programming in the hardware                         |
| extended            | extended  |
| ingress             | ingress direction   |
| mac                 | ethernet protocol   |
| module              | Limit display to L2 interfaces on this module                   |
| <i>module-id</i>    | Enter module number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker pacl extended ingress mac interface

show consistency-checker pacl extended ingress mac interface { <int-id> | <ch-id> } [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| pacl                | Verify pacl programming in the hardware                         |
| extended            | extended  |
| ingress             | ingress direction   |
| mac                 | ethernet protocol   |
| interface           | Interface   |
| <i>int-id</i>       | Interface   |
| <i>ch-id</i>        | Port-Channel name   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker pacl extended module

show consistency-checker pacl extended module { all | <module-id> } [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| pacl                | Verify pacl programming in the hardware                         |
| extended            | extended  |
| module              | Limit display to L2 interfaces on this module                   |
| all                 | To run cc across all the modules                                |
| <i>module-id</i>    | Enter module number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker pacl module

show consistency-checker pacl module <module>

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information               |
| consistency-checker | Consistency Checker                           |
| pacl                | Verify pacl programming in the hardware       |
| module              | Limit display to L2 interfaces on this module |
| <i>module</i>       | Enter module number                           |

## Command Mode

- /exec

# show consistency-checker pacl port-channels

show consistency-checker pacl port-channels [ interface <ch-id> ]

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                        |
| consistency-checker | Consistency Checker                                    |
| pacl                | Verify pacl programming in the hardware                |
| port-channels       | Verifies port channel pacl programming in the hardware |
| interface           | (Optional) Port-channel number                         |
| <i>ch-id</i>        | (Optional) Port-Channel name                           |

## Command Mode

- /exec

## show consistency-checker port-state

show consistency-checker port-state [ { module <module> | interface <ifid> } ] [ brief | detail ]

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| port-state          | Validates SI, MTU and IPG Settings                              |
| module              | (Optional) Limit display to interfaces on module                |
| <i>module</i>       | (Optional) Enter module number                                  |
| interface           | (Optional) Limit display to interface                           |
| <i>ifid</i>         | (Optional) Interface name                                       |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

## show consistency-checker port-state fabric-ieth

```
show consistency-checker port-state fabric-ieth [ module <module> [ ieth-port <ieth-port> ] ] [ brief | detail ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| port-state          | Validates SI, FEC and MTU Settings                              |
| fabric-ieth         | Internal Fabric ports   |
| module              | (Optional) Limit display to interfaces on module                |
| <i>module</i>       | (Optional) Enter module number                                  |
| ieth-port           | (Optional) Enter ieth-port number                               |
| <i>ieth-port</i>    | (Optional) Enter ieth-port number                               |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

# show consistency-checker qinq

```
show consistency-checker qinq [ interface [ <int-id> | <ch-id> ] ]
```

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| consistency-checker | Consistency Checker             |
| qinq                | QinQ consistency checker        |
| interface           | (Optional) Interface            |
| <i>int-id</i>       | (Optional) Eth Interface        |
| <i>ch-id</i>        | (Optional) Port-Channel         |

## Command Mode

- /exec

# show consistency-checker racl extended egress ip module

show consistency-checker racl extended egress ip module <module-id> [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| racl                | Verify racl programming in the hardware                         |
| extended            | extended  |
| egress              | egress direction  |
| ip                  | ip protocol   |
| module              | Limit display to L3 interfaces on this module                   |
| <i>module-id</i>    | Enter module number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker racl extended egress ipv6 module

show consistency-checker racl extended egress ipv6 module <module-id> [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| racl                | Verify racl programming in the hardware                         |
| extended            | extended  |
| egress              | egress direction  |
| ipv6                | ipv6 protocol   |
| module              | Limit display to L3 interfaces on this module                   |
| <i>module-id</i>    | Enter module number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

## show consistency-checker racl extended egress ip interface

show consistency-checker racl extended egress ip interface { <int-id> | <ch-id> | <vlan-id> } [ brief | detail ]

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| racl                | Verify racl programming in the hardware                         |
| extended            | extended  |
| egress              | egress direction  |
| ip                  | ip protocol   |
| interface           | Interface   |
| <i>int-id</i>       | Interface   |
| <i>ch-id</i>        | Port-Channel name   |
| <i>vlan-id</i>      | SVI VLAN  |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

# show consistency-checker racl extended egress ipv6 interface

show consistency-checker racl extended egress ipv6 interface { <int-id> | <ch-id> | <vlan-id> } [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| racl                | Verify racl programming in the hardware                         |
| extended            | extended  |
| egress              | egress direction  |

| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

## show consistency-checker racl extended module

show consistency-checker racl extended module { all | <module-id> } [ brief | detail ]

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| racl                | Verify racl programming in the hardware                         |
| extended            | extended  |
| module              | Limit display to L3 interfaces on this module                   |
| all                 | To run CC across all the modules                                |
| <i>module-id</i>    | Enter module number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

# show consistency-checker racl module

show consistency-checker racl module <module>

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information               |
| consistency-checker | Consistency Checker                           |
| racl                | Verify racl programming in the hardware       |
| module              | Limit display to L3 interfaces on this module |
| <i>module</i>       | Enter module number                           |

## Command Mode

- /exec

# show consistency-checker racl port-channels

show consistency-checker racl port-channels [ interface <ch-id> ]

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                        |
| consistency-checker | Consistency Checker                                    |
| racl                | Verify racl programming in the hardware                |
| port-channels       | Verifies port channel racl programming in the hardware |
| interface           | (Optional) Port-channel number                         |
| <i>ch-id</i>        | (Optional) Port-Channel name                           |

## Command Mode

- /exec

# show consistency-checker racl svi interface

show consistency-checker racl svi interface <vlan-id>

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information               |
| consistency-checker | Consistency Checker                           |
| racl                | Verify racl programming in the hardware       |
| svi                 | Verifies SVI racl programming in the hardware |
| interface           | SVI number                                    |
| <i>vlan-id</i>      | SVI VLAN                                      |

## Command Mode

- /exec

## show consistency-checker segment-routing mpls

show consistency-checker segment-routing mpls { ip <ip-address> mask <ip-mask> vrf <vrf-name> | label <label> } [ brief | detail ]

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| segment-routing     | Segment-routing   |
| mpls                | MPLS Information  |
| ip                  | IP Information  |
| <i>ip-address</i>   | IP Address  |
| mask                | Mask Information  |
| <i>ip-mask</i>      | Mask Length   |
| vrf                 | VRF Information   |
| <i>vrf-name</i>     | VRF Name  |
| label               | Label Information   |
| <i>label</i>        | Label Name  |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

# show consistency-checker selective-qinq

show consistency-checker selective-qinq

## Syntax Description

|                     |                                    |
|---------------------|------------------------------------|
| show                | Show running system information    |
| consistency-checker | Consistency Checker                |
| selective-qinq      | Selective QinQ consistency checker |

## Command Mode

- /exec

# show consistency-checker selective-qinq interface

show consistency-checker selective-qinq interface { <int-id> | <ch-id> }

## Syntax Description

|                     |                                    |
|---------------------|------------------------------------|
| show                | Show running system information    |
| consistency-checker | Consistency Checker                |
| selective-qinq      | Selective QinQ consistency checker |
| interface           | Interface                          |
| <i>int-id</i>       | Interface                          |
| <i>ch-id</i>        | Port-Channel name                  |

## Command Mode

- /exec

# show consistency-checker sflow

show consistency-checker sflow [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| sflow               | Compares software and hardware sflow details                    |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker storm-control

show consistency-checker storm-control

## Syntax Description

|                     |                                   |
|---------------------|-----------------------------------|
| show                | Show running system information   |
| consistency-checker | Consistency Checker               |
| storm-control       | Storm control consistency checker |

## Command Mode

- /exec

## show consistency-checker stp-state vlan

show consistency-checker stp-state vlan <vlan> [ interface <int-id> ] [ brief | detail ]

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information   |
| vlan                | Verifies spanning tree state in the hardware for all interfaces in the vlan |
| <i>vlan</i>         | Enter vlan id   |
| interface           | (Optional) Interface  |
| <i>int-id</i>       | (Optional) Interface  |
| consistency-checker | Consistency Checker   |
| stp-state           | Verify spanning tree state in the hardware                                  |
| brief               | (Optional) Show consistency checker structured output in brief              |
| detail              | (Optional) Show consistency checker structured output in detail             |

### Command Mode

- /exec

# show consistency-checker vacl

show consistency-checker vacl

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information         |
| consistency-checker | Consistency Checker                     |
| vacl                | Verify vacl programming in the hardware |

## Command Mode

- /exec

# show consistency-checker vacl extended ingress ipv6 vlan

show consistency-checker vacl extended ingress ipv6 vlan <vlan-id> [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| vacl                | Verify vacl programming in the hardware                         |
| extended            | extended  |
| ingress             | ingress direction   |
| ipv6                | ipv6 protocol   |
| vlan                | VLAN  |
| <i>vlan-id</i>      | vlan number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker vacl extended ingress ip vlan

show consistency-checker vacl extended ingress ip vlan <vlan-id> [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| vacl                | Verify vacl programming in the hardware                         |
| extended            | extended  |
| ingress             | ingress direction   |
| ip                  | ip protocol   |
| vlan                | VLAN  |
| <i>vlan-id</i>      | vlan number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker vACL extended ingress mac vlan

show consistency-checker vACL extended ingress mac vlan <vlan-id> [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| vACL                | Verify vACL programming in the hardware                         |
| extended            | extended  |
| ingress             | ingress direction   |
| mac                 | ethernet protocol   |
| vlan                | VLAN  |
| <i>vlan-id</i>      | vlan number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker vpc

show consistency-checker vpc [ source-interface [ <int-id> | <ch-id> ] ] [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| vpc                 | vPC related information   |
| source-interface    | (Optional) Source vPC member                                    |
| <i>int-id</i>       | (Optional) Eth Interface  |
| <i>ch-id</i>        | (Optional) Port-Channel   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker vpgrouping interface

show consistency-checker vpgrouping interface { <intf> | all }

## Syntax Description

|                     |                                       |
|---------------------|---------------------------------------|
| show                | Show running system information       |
| consistency-checker | Consistency Checker                   |
| vpgrouping          | Show VP Grouping Info                 |
| interface           | Show interface status and information |
| <i>intf</i>         | Physical or Logical Interface         |
| all                 | Display All Interfaces                |

## Command Mode

- /exec

# show consistency-checker vxlan config-check

show consistency-checker vxlan config-check [ verbose-mode ] [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| vxlan               | VxLAN consistency checker                                       |
| config-check        | Check the inconsistencies in the config                         |
| verbose-mode        | (Optional) config-check verbose                                 |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker vxlan infra

show consistency-checker vxlan infra [ verbose-mode ] [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| vxlan               | VxLAN consistency checker                                       |
| consistency-checker | Consistency Checker   |
| infra               | infra   |
| verbose-mode        | (Optional) detailed CC output                                   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

## show consistency-checker vxlan l2 mac-address module

show consistency-checker vxlan l2 mac-address <mac-addr> module <module> [ brief | detail ]

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| vxlan               | VxLAN consistency checker                                       |
| l2                  | l2  |
| mac-address         | MAC address   |
| <i>mac-addr</i>     | address   |
| module              | Module to run the consistency-checker on                        |
| <i>module</i>       | Module number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

# show consistency-checker vxlan l2 module

show consistency-checker vxlan l2 module <module> [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| vxlan               | VxLAN consistency checker                                       |
| l2                  | Check L2 inconsistencies  |
| module              | Module to run the consistency-checker on                        |
| <i>module</i>       | Enter module number   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

## show consistency-checker vxlan l3 single-route ipv4 vrf

```
show consistency-checker vxlan l3 single-route { ipv4 | ipv6 } <ip-prefix> vrf { <vrf-name> |
<vrf-known-name> } [ debug-logs ] [ brief | detail ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                                 |
| consistency-checker   | Consistency Checker   |
| vxlan                 | VxLAN consistency checker                                       |
| l3                    | l3  |
| single-route          | Run the consistency checker for a single route                  |
| ipv4                  | IPv4 address  |
| ipv6                  | IPv6 address  |
| <i>ip-prefix</i>      | Overlay L3 Route IP Address in prefix/mask format               |
| vrf                   | Do consistency check for vrf                                    |
| <i>vrf-name</i>       | VRF name  |
| <i>vrf-known-name</i> | Known VRF name  |
| debug-logs            | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                       |
| brief                 | (Optional) Show consistency checker structured output in brief  |
| detail                | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

## show consistency-checker vxlan l3 vrf start

```
show consistency-checker vxlan l3 vrf { <vrf-name> | all } { start-scan | report }
```

### Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| vxlan               | VxLAN consistency checker       |
| consistency-checker | Consistency Checker             |
| l3                  | l3                              |
| vrf                 | VRF                             |
| <i>vrf-name</i>     | vrf name                        |
| all                 | All VRFs                        |
| start-scan          | Start Route CC                  |
| report              | Show Route CC report            |

### Command Mode

- /exec

# show consistency-checker vxlan mh mac-addresses

show consistency-checker vxlan mh mac-addresses [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| consistency-checker | Consistency Checker   |
| vxlan               | VxLAN consistency checker                                       |
| mh                  | VxLAN BGP EVPN Multi Homing CC commands                         |
| mac-addresses       | Check mac address consistency between L2RIB and L2FM            |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

## Command Mode

- /exec

# show consistency-checker vxlan mh pathlist

show consistency-checker vxlan mh pathlist [ brief | detail ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information   |
| consistency-checker | Consistency Checker   |
| vxlan               | VxLAN consistency checker   |

## show consistency-checker vxlan vlan

show consistency-checker vxlan vlan { <vlanid> | all } [ verbose-mode ] [ brief | detail ]

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                                 |
| vxlan               | VxLAN consistency checker                                       |
| vlan                | Verifies flood list programming for vxlan vlans                 |
| consistency-checker | Consistency Checker   |
| <i>vlanid</i>       | Enter vlan id   |
| all                 | Check CC for all vxlans   |
| verbose-mode        | (Optional) detailed CC output                                   |
| brief               | (Optional) Show consistency checker structured output in brief  |
| detail              | (Optional) Show consistency checker structured output in detail |

### Command Mode

- /exec

# show consistency-checker vxlan xconnect

show consistency-checker vxlan xconnect

## Syntax Description

|                     |                                   |
|---------------------|-----------------------------------|
| show                | Show running system information   |
| consistency-checker | Consistency Checker               |
| vxlan               | VxLAN consistency checker         |
| xconnect            | Cross-Connect consistency checker |

## Command Mode

- /exec

# show controller accounting log

show controller <ctrl-id> accounting log

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| controller     | Controller command              |
| <i>ctrl-id</i> | Controller id value             |
| accounting     | Accounting                      |
| log            | Show log information            |

## Command Mode

- /exec

## show copp diff profile profile2

show copp diff profile <profile\_type> [ prior-ver ] profile2 <profile\_type2>

### Syntax Description

|                      |  |
|----------------------|--|
| show                 | Show running system information        |
| copp                 | Control-Plane Policing                 |
| diff                 | Difference between CoPP Profiles       |
| profile              | CoPP Profile                           |
| <i>profile_type</i>  | CoPP Profile Types                     |
| prior-ver            | (Optional) Previous Configured Version |
| profile2             | CoPP Profile                           |
| <i>profile_type2</i> | CoPP Profile Types                     |

### Command Mode

- /exec

# show copp profile

```

show copp profile { strict | moderate | lenient | dense } [ __readonly__ { TABLE_copp prof <acl-type> {

**Command Mode**

- /exec

## show copp status

```
show copp status [ __readonly__ { last_config_operation <last_cfg_oper> } { last_config_operation_time
<last_cfg_oper_time> } { last_config_operation_status <last_cfg_oper_status> } [
last_config_operation_error_time <last_cfg_oper_error_time> ] [ last_config_operation_error
<last_cfg_oper_error> ] { service_policy <srv_policy> } ]
```

### Syntax Description

|                                  |   |
|----------------------------------|---|
| show                             | Show running system information                       |
| copp                             | Control-Plane Policing                                |
| status                           | Show the internal status of CoPP                      |
| __readonly__                     | (Optional)  |
| last_config_operation            | (Optional) last config operation                      |
| <i>last_cfg_oper</i>             | (Optional) last config operation                      |
| last_config_operation_time       | (Optional) timestamp of last config operation         |
| <i>last_cfg_oper_time</i>        | (Optional) timestamp of last config operation         |
| last_config_operation_status     | (Optional) status of last config operation            |
| <i>last_cfg_oper_status</i>      | (Optional) status of last config operation            |
| last_config_operation_error_time | (Optional) timestamp of last config operation's error |
| <i>last_cfg_oper_error_time</i>  | (Optional) timestamp of last config operation's error |
| last_config_operation_error      | (Optional) last config operation's error              |
| <i>last_cfg_oper_error</i>       | (Optional) last config operation's error              |
| service_policy                   | (Optional) policy-map attached to control-plane       |
| <i>srv_policy</i>                | (Optional) policy-map attached to control-plane       |

### Command Mode

- /exec

# show copyright

show copyright [ *\_\_readonly\_\_* { *<content>* } ]

## Syntax Description

|                     |                                  |
|---------------------|----------------------------------|
| show                | Show running system information  |
| copyright           | Copyright information            |
| <i>__readonly__</i> | (Optional)                       |
| <i>content</i>      | (Optional) Copyright information |

## Command Mode

- /exec

# show cores

```
show cores [ vdc-all | { vdc [ <e-vdc2> | <vdc-id> ] } ] [ __readonly__ { [ TABLE_cores <vdc_id>
<module_id> <instance> <process_name> <pid> <sys_time> ] } ]
```

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information            |
| cores               | show all core dumps for the current vdc    |
| vdc-all             | (Optional) show core dumps from all vdes   |
| vdc                 | (Optional) show all core dumps for the vdc |
| __readonly__        | (Optional)                                 |
| TABLE_cores         | (Optional)                                 |
| <i>vdc_id</i>       | (Optional) vdc id                          |
| <i>module_id</i>    | (Optional) module id                       |
| <i>instance</i>     | (Optional) instance number                 |
| <i>process_name</i> | (Optional) name of the process             |
| <i>pid</i>          | (Optional) process id                      |
| <i>sys_time</i>     | (Optional) core generate time              |
| <i>e-vdc2</i>       | (Optional) Enter VDC <vdc-id>              |
| <i>vdc-id</i>       | (Optional) vdc number                      |

## Command Mode

- /exec

## show crypto ca certificates

```
show crypto ca certificates [ __readonly__ [ { TABLE_ca_certificates <trustpoint> [ <certificate> ] [ {
TABLE_ca_cert_chains <index> <ca_certificate> } ] } ] ]
```

### Syntax Description

|                              |  |
|------------------------------|--|
| show                         | Show running system information              |
| crypto                       | show crypto configuration                    |
| ca                           | show trustpoint configuration                |
| certificates                 | show various certificates                    |
| <i>__readonly__</i>          | (Optional)                                   |
| <i>TABLE_ca_certificates</i> | (Optional) Table of CA certificates          |
| <i>trustpoint</i>            | (Optional) Trustpoint name                   |
| <i>certificate</i>           | (Optional) Certificate                       |
| <i>TABLE_ca_cert_chains</i>  | (Optional) Table of CA certificates in chain |
| <i>index</i>                 | (Optional) CA Certificate Index              |
| <i>ca_certificate</i>        | (Optional) CA certificate                    |

### Command Mode

- /exec

## show crypto ca certificates

```
show crypto ca certificates <s0> [ __readonly__ { Trustpoint <trustpoint> } [ { Certificate <certificate> } ]
[ { TABLE_ca_cert_chains <index> <ca_certificate> } ] ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information              |
| crypto                | show crypto configuration                    |
| ca                    | show trustpoint configuration                |
| certificates          | show various certificates                    |
| <i>s0</i>             | trustpoint label                             |
| <i>__readonly__</i>   | (Optional)                                   |
| Trustpoint            | (Optional) Trustpoint                        |
| <i>trustpoint</i>     | (Optional) Trustpoint                        |
| Certificate           | (Optional) Certificate                       |
| <i>certificate</i>    | (Optional) Certificate                       |
| TABLE_ca_cert_chains  | (Optional) Table of CA certificates in chain |
| <i>index</i>          | (Optional) CA Certificate Index              |
| <i>ca_certificate</i> | (Optional) CA certificate                    |

### Command Mode

- /exec

# show crypto ca certstore

```
show crypto ca certstore [ __readonly__ { certstore_lookup <lookup_type> } ]
```

## Syntax Description

|                    |                                     |
|--------------------|-------------------------------------|
| show               | Show running system information     |
| crypto             | Show crypto configuration           |
| ca                 | show crypto ca configuration        |
| certstore          | Show the configured certstore       |
| __readonly__       | (Optional)                          |
| certstore_lookup   | (Optional) Certificate store lookup |
| <i>lookup_type</i> | (Optional) Lookup type              |

## Command Mode

- /exec

# show crypto ca crl

```
show crypto ca crl <s0> [ __readonly__ { Trustpoint <trustpoint> } [ { CRL <crl> } ] ]
```

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information        |
| crypto              | show crypto configuration              |
| ca                  | show trustpoint configuration          |
| crl                 | show CRL                               |
| <i>s0</i>           | trustpoint label                       |
| <i>__readonly__</i> | (Optional)                             |
| Trustpoint          | (Optional) Trustpoint                  |
| <i>trustpoint</i>   | (Optional) Trustpoint                  |
| CRL                 | (Optional) Certificate Revocation List |
| <i>crl</i>          | (Optional) Certificate Revocation List |

## Command Mode

- /exec

## show crypto ca remote-certstore

```
show crypto ca remote-certstore [ __readonly__ { remote_cert_store <rem_cert_store> } [ { crl_timer <crltimer>
} { ldap_server_group <ldap_server_grp> } ] ]
```

### Syntax Description

|                        |                                     |
|------------------------|-------------------------------------|
| show                   | Show running system information     |
| crypto                 | Show crypto configuration           |
| ca                     | show crypto ca configuration        |
| remote-certstore       | Show remote certstore configuration |
| __readonly__           | (Optional)                          |
| remote_cert_store      | (Optional) Remote cert store        |
| <i>rem_cert_store</i>  | (Optional) Remote certificate store |
| crl_timer              | (Optional) CRL timer                |
| <i>crltimer</i>        | (Optional) CRL timer                |
| ldap_server_group      | (Optional) LDAP Server Group        |
| <i>ldap_server_grp</i> | (Optional) LDAP Server Group        |

### Command Mode

- /exec

## show crypto ca trustpoints

```
show crypto ca trustpoints [ __readonly__ [ { TABLE_ca_truspoints <trustpoint> <key-pair> [ {
TABLE_revocation_methods <revocation-method> } ] [ <ocsp-url> ] } ] ]
```

### Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information        |
| crypto                   | show crypto configuration              |
| ca                       | show trustpoint configuration          |
| trustpoints              | show trustpoint configuration          |
| __readonly__             | (Optional)                             |
| <i>trustpoint</i>        | (Optional) Trustpoint                  |
| <i>key-pair</i>          | (Optional) Key pair                    |
| TABLE_revocation_methods | (Optional) Table of revocation methods |
| <i>revocation-method</i> | (Optional) Revocation mehtod           |
| <i>ocsp-url</i>          | (Optional) OCSP URL                    |
| TABLE_ca_truspoints      | (Optional) Table of CA trustpoints     |

### Command Mode

- /exec

# show crypto ca trustpool

```
show crypto ca trustpool [ __readonly__ [ { TABLE_ca_trustpool <serial-number> <subject> <issued-by>
<validity-start> <validity-end> } ] ]
```

## Syntax Description

|                       |                                  |
|-----------------------|----------------------------------|
| show                  | Show running system information  |
| crypto                | show crypto information          |
| ca                    | show trustpool data              |
| trustpool             | trustpool contents               |
| __readonly__          | (Optional)                       |
| TABLE_ca_trustpool    | (Optional) Table of CA trustpool |
| <i>serial-number</i>  | (Optional) Serial number         |
| <i>subject</i>        | (Optional) subject               |
| <i>issued-by</i>      | (Optional) Issued by             |
| <i>validity-start</i> | (Optional) validity start date   |
| <i>validity-end</i>   | (Optional) validity end date     |

## Command Mode

- /exec

## show crypto ca trustpool last download status

```
show crypto ca trustpool last download status [ __readonly__ [ http_url <http_url> ] [ download_time
<download_time> ] [ trustpool_download_status <status> ] [ download_failure <reason> ] ]
```

### Syntax Description

|                           |  |
|---------------------------|--|
| show                      | Show running system information                |
| crypto                    | show crypto information                        |
| ca                        | show trustpool data                            |

| policy                   | trustpool configuration                   |
| <i>__readonly__</i>      | (Optional)                                |
| http_url                 | (Optional) http url configured            |
| <i>http_url</i>          | (Optional) HTTP url                       |
| config_vrf               | (Optional) Configured vrf                 |
| <i>config_vrf</i>        | (Optional) vrf configured                 |
| <i>src_intf</i>          | (Optional) source interface for vrf       |
| proxy_server             | (Optional) Configured proxy server        |
| <i>proxy_server</i>      | (Optional) proxy server                   |
| <i>proxy_server_port</i> | (Optional) proxy server port              |

## Command Mode

- /exec

# show crypto certificatemap

```
show crypto certificatemap [ __readonly__ [ { TABLE_certmap <map_name> <subject_name>
<alternate_email> <alternate_upn> } ] ]
```

## Syntax Description

|                        |                                     |
|------------------------|-------------------------------------|
| show                   | Show running system information     |
| crypto                 | show crypto configuration           |
| certificatemap         | show certificatemap filters         |
| <i>__readonly__</i>    | (Optional)                          |
| <i>TABLE_certmap</i>   | (Optional) Table of Certificate Map |
| <i>map_name</i>        | (Optional) Map name                 |
| <i>subject_name</i>    | (Optional) Subject name             |
| <i>alternate_email</i> | (Optional) Alternate Email          |
| <i>alternate_upn</i>   | (Optional) Alternate UPN            |

## Command Mode

- /exec

## show crypto key mypubkey rsa

```
show crypto key mypubkey rsa [ __readonly__ [ { TABLE_rsa_keys <key_label> <key_size> <exportable>
<err_string> } ] ]
```

### Syntax Description

|                       |                                       |
|-----------------------|---------------------------------------|
| show                  | Show running system information       |
| crypto                | show crypto configuration             |
| key                   | show key configuration                |
| mypubkey              | show my public keys configuration     |
| rsa                   | show my rsa public keys configuration |
| <i>__readonly__</i>   | (Optional)                            |
| <i>TABLE_rsa_keys</i> | (Optional) Table of RSA keys          |
| <i>key_label</i>      | (Optional) Key Label                  |
| <i>key_size</i>       | (Optional) Key size                   |
| <i>exportable</i>     | (Optional) Exportable                 |
| <i>err_string</i>     | (Optional) Error String               |

### Command Mode

- /exec

# show crypto ssh-auth-map

```
show crypto ssh-auth-map [ __readonly__ [ { TABLE_ssh_auth_map <issuer_name> <map1> [ <map2> ] } ] ]
```

## Syntax Description

|                    |   |
|--------------------|---|
| show               | Show running system information                     |
| crypto             | show crypto configuration                           |
| ssh-auth-map       | show mapping filters applied for ssh authentication |
| __readonly__       | (Optional)  |
| TABLE_ssh_auth_map | (Optional) Table of SSH Auth MAP                    |
| <i>issuer_name</i> | (Optional) Issuer Name                              |
| <i>map1</i>        | (Optional) Map 1                                    |
| <i>map2</i>        | (Optional) Map 2                                    |

## Command Mode

- /exec

# show cts

```
show cts [ __readonly__ <device-id> <cache_en> <num-dot1x> <num-man> <sgt> ]
```

## Syntax Description

|                           |  |
|---------------------------|--|
| <code>cts</code>          | Show CTS global configuration                  |
| <code>__readonly__</code> | (Optional)                                     |
| <code>device-id</code>    | (Optional) name                                |
| <code>cache_en</code>     | (Optional) enable/disable                      |
| <code>num-dot1x</code>    | (Optional) number of interfaces in dot1x mode  |
| <code>num-man</code>      | (Optional) number of interfaces in manual mode |
| <code>sgt</code>          | (Optional)                                     |

## Command Mode

- /exec

# show current

show current

## Syntax Description

|         |  |
|---------|--|
| show    | Display region configurations            |
| current | Display mst configuration currently used |

## Command Mode

- /exec/configure/spanning-tree/mst/configuration

# show dampening interface

```
show dampening interface [ __readonly__ { <DampenedInterfaceCount> <SuppressedInterfaceCount> } ]
```

## Syntax Description

|                                 |  |
|---------------------------------|--|
| show                            | Show running system information                          |
| dampening                       | Display dampening information                            |
| interface                       | Display interface dampening general information          |
| __readonly__                    | (Optional)   |
| <i>DampenedInterfaceCount</i>   | (Optional) Count of interfaces configured with dampening |
| <i>SuppressedInterfaceCount</i> | (Optional) Count of interfaces in suppressed state       |

## Command Mode

- /exec

# show device-alias database

show device-alias database

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                          |
| device-alias | Show information about Device Alias Distribution Service |
| database     | Show Device Alias database                               |

## Command Mode

- /exec

# show device-alias merge status

show device-alias merge status

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                          |
| device-alias | Show information about Device Alias Distribution Service |
| merge        | Show merge information                                   |
| status       | Show device-alias merge status                           |

## Command Mode

- /exec

# show device-alias name

show device-alias name <s0> [ pending ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                               |
| device-alias | Show information about Device Alias Distribution Service      |
| name         | Show Device Alias information given a name                    |
| <i>s0</i>    | Enter Device Alias name                                       |
| pending      | (Optional) Show pending Device Alias information given a name |

## Command Mode

- /exec

# show device-alias pending-diff

show device-alias pending-diff

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                          |
| device-alias | Show information about Device Alias Distribution Service |
| pending-diff | Show pending diff for Device Alias database              |

## Command Mode

- /exec

# show device-alias pending

show device-alias pending

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                          |
| device-alias | Show information about Device Alias Distribution Service |
| pending      | Show pending Device Alias database                       |

## Command Mode

- /exec

# show device-alias pwwn

show device-alias pwwn <wwn0> [ pending ]

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                                   |
| device-alias | Show information about Device Alias Distribution Service          |
| pwwn         | Show Device Alias information given a port WWN                    |
| <i>wwn0</i>  | Enter port WWN  |
| pending      | (Optional) Show pending Device Alias information given a port WWN |

## Command Mode

- /exec

# show device-alias session rejected

show device-alias session rejected

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                          |
| device-alias | Show information about Device Alias Distribution Service |
| session      | Show session information                                 |
| rejected     | Show rejected command list                               |

## Command Mode

- /exec

# show device-alias session status

show device-alias session status

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                          |
| device-alias | Show information about Device Alias Distribution Service |
| session      | Show session information                                 |
| status       | Show device-alias session status                         |

## Command Mode

- /exec

# show device-alias statistics

show device-alias statistics

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                          |
| device-alias | Show information about Device Alias Distribution Service |
| statistics   | Show device-alias statistics                             |

## Command Mode

- /exec

# show device-alias status

show device-alias status

## Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                          |
| device-alias | Show information about Device Alias Distribution Service |
| status       | Show device-alias status                                 |

## Command Mode

- /exec

# show diagnostic bootup level

show diagnostic bootup level [ \_\_readonly\_\_ <bootup\_level> ]

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information          |
| diagnostic          | Diagnostic commands                      |
| bootup              | Show diagnostic bootup information       |
| level               | Show diagnostic bootup level information |
| __readonly__        | (Optional)                               |
| <i>bootup_level</i> | (Optional) Bootup level                  |

## Command Mode

- /exec

# show diagnostic content module

```
show diagnostic content module { all | <module> } [ __readonly__ <attr_descr> { TABLE_Module
<module_id> <module_type> { TABLE_test <test_id> <testname> <test_attr> <test_interval> } } ]
```

## Syntax Description

|                      |                                    |
|----------------------|------------------------------------|
| show                 | Show running system information    |
| diagnostic           | Diagnostic commands                |
| content              | Show diagnostic test content       |
| module               | Module Keyword                     |
| all                  | Select all module ID               |
| <i>module</i>        | Module number                      |
| <i>__readonly__</i>  | (Optional)                         |
| <i>attr_descr</i>    | (Optional) Attribute description   |
| TABLE_Module         | (Optional) All modules table       |
| <i>module_id</i>     | (Optional) Module Number           |
| <i>module_type</i>   | (Optional) module type description |
| TABLE_test           | (Optional) All tests table         |
| <i>test_id</i>       | (Optional) Test id                 |
| <i>testname</i>      | (Optional) Test name               |
| <i>test_attr</i>     | (Optional) Test Attribute          |
| <i>test_interval</i> | (Optional) HM test interval        |

## Command Mode

- /exec

# show diagnostic description module test all

```
show diagnostic description module <module> test { all | <name> | <test-id> } [ __readonly__ { TABLE_desc
<testname> <testdesc> } ]
```

## Syntax Description

|                 |                                      |
|-----------------|--------------------------------------|
| show            | Show running system information      |
| diagnostic      | Diagnostic commands                  |
| description     | Show diagnostic test desc            |
| module          | Module keyword                       |
| <i>module</i>   | Module Number                        |
| test            | Diagnostic test selection            |
| all             | Select all test ID                   |
| <i>name</i>     | Test name                            |
| <i>test-id</i>  |                                      |
| __readonly__    | (Optional)                           |
| TABLE_desc      | (Optional) Table of test description |
| <i>testname</i> | (Optional) Test name                 |
| <i>testdesc</i> | (Optional) Description of the test   |

## Command Mode

- /exec

# show diagnostic events

```
show diagnostic events [ error | info ] [ __readonly__ { TABLE_events <event_text> } ]
```

## Syntax Description

|                   |                                   |
|-------------------|-----------------------------------|
| show              | Show running system information   |
| diagnostic        | Diagnostic commands               |
| events            | Diagnostic events                 |
| error             | (Optional) Error event-type       |
| info              | (Optional) Information event-type |
| __readonly__      | (Optional)                        |
| TABLE_events      | (Optional) list of events logged  |
| <i>event_text</i> | (Optional) Text of one event      |

## Command Mode

- /exec

# show diagnostic ondemand setting

show diagnostic ondemand setting [ *\_\_readonly\_\_* <test\_iteration\_count> <action\_on\_failure> ]

## Syntax Description

|                             |                                       |
|-----------------------------|---------------------------------------|
| show                        | Show running system information       |
| diagnostic                  | Diagnostic commands                   |
| ondemand                    | Show diagnostic on demand information |
| setting                     | Show diagnostic on demand settings    |
| <i>__readonly__</i>         | (Optional)                            |
| <i>test_iteration_count</i> | (Optional) Iteration Count            |
| <i>action_on_failure</i>    | (Optional) Action on failure          |

## Command Mode

- /exec

|                               |  |
|-------------------------------|--|
| <i>packet_loss</i>            | (Optional) Packet lost                       |
| TABLE_Test                    | (Optional) Table of tests in module          |
| <i>test_id</i>                | (Optional) Test id of tests                  |
| <i>testname</i>               | (Optional) Test name                         |
| <i>testresult</i>             | (Optional) Test Results                      |
| <i>passed_ports</i>           | (Optional) List passed ports                 |
| <i>failed_ports</i>           | (Optional) List failed ports                 |
| <i>incomplete_ports</i>       | (Optional) List of Incompletely tested ports |
| <i>untested_ports</i>         | (Optional) List of untested ports            |
| <i>aborted_ports</i>          | (Optional) List of aborted ports             |
| <i>err_disabled_ports</i>     | (Optional) List error disabled ports         |
| <i>err_code</i>               | (Optional) Error code                        |
| <i>total_run_count</i>        | (Optional) Total run count                   |
| <i>last_execution_time</i>    | (Optional) Last execution time               |
| <i>first_failure_time</i>     | (Optional) First test failure time           |
| <i>last_failure_time</i>      | (Optional) Last test failure time            |
| <i>last_pass_time</i>         | (Optional) Last test pass time               |
| <i>total_fail_count</i>       | (Optional) Total fail count                  |
| <i>consecutive_fail_count</i> | (Optional) Consecutive failure count         |
| <i>last_fail_reason</i>       | (Optional) Last failure reason               |
| <i>next_execution_time</i>    | (Optional) Next test execution time          |

### Command Mode

- /exec

# show diagnostic result module all

```
show diagnostic result module all [ detail ] [ __readonly__ { TABLE_Module <module_id> <curr_diag_level>
<module_name> [ <bootup_diag_level> ] { TABLE_Test <test_id> <testname> [ <testresult> ] [ {
<passed_ports> <failed_ports> <incomplete_ports> <untested_ports> <aborted_ports> <err_disabled_ports>
} ] [ { <err_code> <total_run_count> <last_execution_time> <first_failure_time> <last_failure_time>
<last_pass_time> <total_fail_count> <consecutive_fail_count> <last_fail_reason> <next_execution_time>
} ] } ] }
```

## Syntax Description

|                           |  |
|---------------------------|--|
| show                      | Show running system information              |
| diagnostic                | Diagnostic commands                          |
| result                    | Show diagnostic test result                  |
| module                    | Module keyword                               |
| all                       | Select all test ID                           |
| detail                    | (Optional) Detailed result                   |
| __readonly__              | (Optional)                                   |

| <i>consecutive_fail_count</i> | (Optional) Consecutive failure count |
| <i>last_fail_reason</i>       | (Optional) Last failure reason       |
| <i>next_execution_time</i>    | (Optional) Next test execution time  |

**Command Mode**

- /exec

# show diagnostic simulation module

```
show diagnostic simulation module <module> [ __readonly__ <module_id> <module_name> [ { TABLE_detail
<serial_no> <testid> [ <portid> ] <mode> } ] ]
```

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information        |
| diagnostic          | Diagnostic commands                    |
| simulation          | Simulating Diagnostic result           |
| module              | Module keyword                         |
| <i>module</i>       | Module Number                          |
| <i>__readonly__</i> | (Optional)                             |
| <i>module_id</i>    | (Optional) Module ID                   |
| <i>module_name</i>  | (Optional) Module Name                 |
| TABLE_detail        | (Optional) Table of simulation details |
| <i>serial_no</i>    | (Optional) serial no                   |
| <i>testid</i>       | (Optional) Test id                     |
| <i>portid</i>       | (Optional) Port id                     |
| <i>mode</i>         | (Optional) Simulation mode             |

## Command Mode

- /exec

# show diagnostic status module

```
show diagnostic status module <module> [ __readonly__ <test_runby_mapping> <module_id> <module_name>
{ TABLE_current <cur_test_name> <cur_run_by> } { TABLE_enqueued <enq_test_name> <enq_run_by> }
]
```

## Syntax Description

|                           |  |
|---------------------------|--|
| show                      | Show running system information            |
| diagnostic                | Diagnostic commands                        |
| status                    | Show test status(running/enqueued)         |
| module                    | Module keyword                             |
| <i>module</i>             | Module number                              |
| <i>__readonly__</i>       | (Optional)                                 |
| <i>test_runby_mapping</i> | (Optional) Test type expansion             |
| <i>module_id</i>          | (Optional) Module Id                       |
| <i>module_name</i>        | (Optional) Module name                     |
| TABLE_current             | (Optional) Table of currently running test |
| <i>cur_test_name</i>      | (Optional) Currently running test          |
| <i>cur_run_by</i>         | (Optional) Test Run By                     |
| TABLE_enqueued            | (Optional) Table of enqueued tests         |
| <i>enq_test_name</i>      | (Optional) Enqueued test name              |
| <i>enq_run_by</i>         | (Optional) Test enqueued by                |

## Command Mode

- /exec

# show diff rollback-patch

```
show diff rollback-patch { src-checkpoint <chkpoint_name> | src-running-cfg | src-startup-cfg | src-file
<srcfile_uri> } { dst-checkpoint <chkpoint_name> | dst-running-cfg | dst-startup-cfg | dst-file <dstfile_uri>
} [ __readonly__ [ <patch_entry> ] + ]
```

## Syntax Description

|                      |  |
|----------------------|--|
| show                 | Show running system information                                |
| diff                 | Show diff between configuration files or checkpoints           |
| rollback-patch       | Show rollback patch between configuration files or checkpoints |
| src-checkpoint       | Use checkpoint as source configuration                         |
| <i>chkpoint_name</i> | Checkpoint name  |
| src-running-cfg      | Use running configuration as source                            |
| src-startup-cfg      | Use startup configuration as source                            |
| src-file             | Src Checkpoint file  |
| <i>srcfile_uri</i>   | Src Checkpoint file path                                       |
| dst-checkpoint       | Use checkpoint as destination configuration                    |
| <i>chkpoint_name</i> | Checkpoint name  |
| dst-running-cfg      | Use running configuration as destination                       |
| dst-startup-cfg      | Use startup configuration as destination                       |
| dst-file             | Dst Checkpoint file  |
| <i>dstfile_uri</i>   | Src Checkpoint file path                                       |
| <i>__readonly__</i>  | (Optional) Read only   |
| <i>patch_entry</i>   | (Optional) rollback patch entry                                |

## Command Mode

- /exec

# show dot1q-tunnel

show dot1q-tunnel [ \_\_readonly\_\_ TABLE\_interface <interface> ]

## Syntax Description

|                  |                                   |
|------------------|-----------------------------------|
| show             | Show running system information   |
| dot1q-tunnel     | Show if port mode is dot1q-tunnel |
| __readonly__     | (Optional) Read Only              |
| <i>interface</i> | (Optional) Interface index        |
| TABLE_interface  | (Optional) show interface         |

## Command Mode

- /exec

# show dot1q-tunnel interface

```
show dot1q-tunnel interface <ifid_eth_dot1q_tunnel> [ __readonly__ TABLE_interface <interface> ]
```

## Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information                       |
| dot1q-tunnel                 | Show if port mode is dot1q-tunnel                     |
| interface                    | Show interface status and information                 |
| <i>ifid_eth_dot1q_tunnel</i> | Enter interface type and number in module/slot format |
| <i>__readonly__</i>          | (Optional) Read Only                                  |
| <i>interface</i>             | (Optional) Interface index                            |
| <i>TABLE_interface</i>       | (Optional) show interface                             |

## Command Mode

- /exec

# show dot1x

show dot1x [ *\_\_readonly\_\_* <sys\_auth\_ctrl> <proto\_ver> <mac\_move> <server\_dead\_action\_authz> ]

## Syntax Description

|                                 |  |
|---------------------------------|--|
| dot1x                           | dot1x configuration commands                       |
| <i>__readonly__</i>             | (Optional)   |
| <i>sys_auth_ctrl</i>            | (Optional) show system auth control                |
| <i>proto_ver</i>                | (Optional) show protocol version                   |
| <i>mac_move</i>                 | (Optional) show mac move                           |
| <i>server_dead_action_authz</i> | (Optional) show server_dead_action_authz flag info |

## Command Mode

- /exec

## show dot1x all

```
show dot1x all [ __readonly__ <sys_auth_ctrl> <proto_ver> <mac_move> <server_dead_action_authz>
TABLE_all <if_index> TABLE_allpae <pae_type> [ <port_control> ] [ <host_mode> ] [ <quiet_period> ] [

```

### Syntax Description

|                         |   |
|-------------------------|---|
| dot1x                   | dot1x configuration commands                          |
| <i>if</i>               |   |
| client                  | 802.1x client   |
| statistics              | 802.1x statistics                                     |
| <i>__readonly__</i>     | (Optional)  |
| TABLE_mac_address       | (Optional)  |
| <i>if_index_stat</i>    | (Optional) Interface Index                            |
| <i>pae_type_stat</i>    | (Optional) Show PAE Type                              |
| <i>macaddr</i>          | (Optional) mac-address of the client                  |
| <i>rxstart</i>          | (Optional) Show Received EAPOL-Start                  |
| <i>rxlogoff</i>         | (Optional) Show Received EAPOL-Logoff                 |
| <i>rxresp</i>           | (Optional) Show Received EAP-Response                 |
| <i>rxrespid</i>         | (Optional) Show Received EAP-ResponseID               |
| <i>rxinvalid</i>        | (Optional) Show Received Invalid EAPOL Frame          |
| <i>rxlenerr</i>         | (Optional) Show Received EAPOL Bad Length Frame       |
| <i>rxtotal</i>          | (Optional) Show Received Total EAPOL Frame            |
| <i>txreq</i>            | (Optional) Show Transmitted EAP-Request               |
| <i>txreqid</i>          | (Optional) Show Transmitted EAP-RequestID             |
| <i>txtotal</i>          | (Optional) Show Transmitted Total EAPOL Frame         |
| <i>rxversion</i>        | (Optional) Show Received EAPOL Version                |
| <i>lastrxsourcemac</i>  | (Optional) Show Last Source MAC                       |
| <i>spurious_rxstart</i> | (Optional) Show Received EAPOL-Start of spurious macs |

|                                 |  |
|---------------------------------|--|
| <i>spurious_rxlogoff</i>        | (Optional) Show Received EAPOL-Logoff of spurious macs           |
| <i>spurious_rxresp</i>          | (Optional) Show Received EAP-Response of spurious macs           |
| <i>spurious_rxrespid</i>        | (Optional) Show Received EAP-ResponseID of spurious macs         |
| <i>spurious_rxinvalid</i>       | (Optional) Show Received Invalid EAPOL Frame of spurious macs    |
| <i>spurious_rxlennerr</i>       | (Optional) Show Received EAPOL Bad Length Frame of spurious macs |
| <i>spurious_rxtotal</i>         | (Optional) Show Received Total EAPOL Frame of spurious macs      |
| <i>spurious_txreq</i>           | (Optional) Show Transmitted EAP-Request of spurious macs         |
| <i>spurious_txreqid</i>         | (Optional) Show Transmitted EAP-RequestID of spurious macs       |
| <i>spurious_txtotal</i>         | (Optional) Show Transmitted Total EAPOL Frame of spurious macs   |
| <i>spurious_rxversion</i>       | (Optional) Show Received EAPOL Version of spurious macs          |
| <i>spurious_lastrxsourcemac</i> | (Optional) Show Last Source MAC of spurious macs                 |

**Command Mode**

- /exec

## show dot1x interface client statistics address

```
show dot1x interface <if> client statistics address <mac-address> [ __readonly__ <if_index_stat>
<pae_type_stat> [ <rxstart> ] [ <rxlogoff> ] [ <rxresp> ] [ <rxrespid> ] [ <rxinvalid> ] [ <rxlenerr> ] [ <rxtotal>
] [ <txreq> ] [ <txreqid> ] [ <txtotal> ] [ <rxversion> ] [ <lastrxsourcemac> ] ]
```

### Syntax Description

|                        |   |
|------------------------|---|
| dot1x                  | dot1x configuration commands                    |
| <i>if</i>              |   |
| client                 | 802.1x client                                   |
| statistics             | 802.1x statistics                               |
| address                | 802.1x client address                           |
| <i>mac-address</i>     | mac address EE:EE:EE:EE:EE:EE                   |
| <i>__readonly__</i>    | (Optional)                                      |
| <i>if_index_stat</i>   | (Optional) Interface Index                      |
| <i>pae_type_stat</i>   | (Optional) Show PAE Type                        |
| <i>rxstart</i>         | (Optional) Show Received EAPOL-Start            |
| <i>rxlogoff</i>        | (Optional) Show Received EAPOL-Logoff           |
| <i>rxresp</i>          | (Optional) Show Received EAP-Response           |
| <i>rxrespid</i>        | (Optional) Show Received EAP-ResponseID         |
| <i>rxinvalid</i>       | (Optional) Show Received Invalid EAPOL Frame    |
| <i>rxlenerr</i>        | (Optional) Show Received EAPOL Bad Length Frame |
| <i>rxtotal</i>         | (Optional) Show Received Total EAPOL Frame      |
| <i>txreq</i>           | (Optional) Show Transmitted EAP-Request         |
| <i>txreqid</i>         | (Optional) Show Transmitted EAP-RequestID       |
| <i>txtotal</i>         | (Optional) Show Transmitted Total EAPOL Frame   |
| <i>rxversion</i>       | (Optional) Show Received EAPOL Version          |
| <i>lastrxsourcemac</i> | (Optional) Show Last Source MAC                 |

### Command Mode

- /exec

# show dpvm database

show dpvm database [ active ]

## Syntax Description

|          |   |
|----------|---|
| show     | Show running system information         |
| dpvm     | Show dpvm                               |
| database | Show dpvm configured database           |
| active   | (Optional) Show dpvm activated database |

## Command Mode

- /exec

# show dpvm fip

show dpvm fip

## Syntax Description

|      |                                 |
|------|---------------------------------|
| show | Show running system information |
| dpvm | Show dpvm commands              |
| fip  | Display the enabled FIP         |

## Command Mode

- /exec

# show dpvm merge statistics

show dpvm merge statistics

## Syntax Description

|            |                                 |
|------------|---------------------------------|
| show       | Show running system information |
| dpvm       | Show dpvm                       |
| merge      | Show dpvm merge information     |
| statistics | Show dpvm merge statistics      |

## Command Mode

- /exec

# show dpvm merge status

show dpvm merge status

## Syntax Description

|        |                                 |
|--------|---------------------------------|
| show   | Show running system information |
| dpvm   | Show dpvm                       |
| merge  | Show dpvm merge information     |
| status | Show dpvm merge status          |

## Command Mode

- /exec

# show dpvm pending-diff

show dpvm pending-diff

## Syntax Description

|              |                                 |
|--------------|---------------------------------|
| show         | Show running system information |
| dpvm         | Show dpvm                       |
| pending-diff | Pending DPVM configuration diff |

## Command Mode

- /exec

# show dpvm pending

show dpvm pending [ activation status ]

## Syntax Description

|            |  |
|------------|--|
| show       | Show running system information              |
| dpvm       | Show dpvm                                    |
| pending    | Pending DPVM configuration                   |
| activation | (Optional) Pending activate db               |
| status     | (Optional) Show dpvm activate failure status |

## Command Mode

- /exec

# show dpvm ports

show dpvm ports [ vsan <i0> ]

## Syntax Description

|           |   |
|-----------|---|
| show      | Show running system information                     |
| dpvm      | Show dpvm   |
| ports     | Show dpvm dynamic ports                             |
| vsan      | (Optional) Show dpvm dynamic ports for a given VSAN |
| <i>i0</i> | (Optional) vsan id                                  |

## Command Mode

- /exec

# show dpvm session status

show dpvm session status

## Syntax Description

|         |                                 |
|---------|---------------------------------|
| show    | Show running system information |
| dpvm    | Show dpvm                       |
| session | Show dpvm session information   |
| status  | Show dpvm session status        |

## Command Mode

- /exec

# show dpvm status

show dpvm status

## Syntax Description

|        |                                 |
|--------|---------------------------------|
| show   | Show running system information |
| dpvm   | Show dpvm                       |
| status | Show dpvm status                |

## Command Mode

- /exec

**show dpvm status**

# show elam report

show elam report [ l2 | l3 | l4 | aclqos | mcast | mpls ]

## Syntax Description

|        |                                  |
|--------|----------------------------------|
| show   | Show running system information  |
| elam   | elam                             |
| report | Show ELAM report                 |
| l2     | (Optional) Layer 2 header report |
| l3     | (Optional) Layer 3 header report |
| l4     | (Optional) Layer 4 header report |
| aclqos | (Optional) Aclqos report         |
| mcast  | (Optional) Multicast report      |
| mpls   | (Optional) MPLS report           |

## Command Mode

- /exec/elamtah/outsel2

# show email

```
show email [ __readonly__ [ <ipv4> ] [ <ipv6> ] [ <host> ] [ <port> ] [ <reply> ] [ <from> ] [ <vrfname> ] ]
```

## Syntax Description

|                           |                                 |
|---------------------------|---------------------------------|
| <code>show</code>         | Show running system information |
| <code>email</code>        | Pipe email configuration        |
| <code>__readonly__</code> | (Optional)                      |
| <code>ipv4</code>         | (Optional)                      |
| <code>ipv6</code>         | (Optional)                      |
| <code>host</code>         | (Optional)                      |
| <code>port</code>         | (Optional)                      |
| <code>reply</code>        | (Optional)                      |
| <code>from</code>         | (Optional)                      |
| <code>vrfname</code>      | (Optional)                      |

## Command Mode

- /exec

# show encryption service status

```
show encryption service status [ __readonly__ [ <encryptionService> <MasterKeyEncryption>
<Type6Encryption> ] ]
```

## Syntax Description

|                            |                                       |
|----------------------------|---------------------------------------|
| show                       | Show running system information       |
| encryption                 | Encryption service                    |
| service                    | Encryption service                    |
| status                     | Encryption service status             |
| <i>__readonly__</i>        | (Optional)                            |
| <i>encryptionService</i>   | (Optional) Encryption service status  |
| <i>MasterKeyEncryption</i> | (Optional) Master key status          |
| <i>Type6Encryption</i>     | (Optional) Is type 6 encryption used? |

## Command Mode

- /exec

## Syntax Description

|               |  |
|---------------|--|
| show          | Show running system information  |
| environment   | system environment information   |
| fan           | (Optional) Fan information   |
| power         | (Optional) Power capacity and power distribution information   |
| detail        | (Optional) Detail Fan-tray information when used with Fan. Detail Power capacity and power distribution information when used with Power |
| detail1       | (Optional) Detail Fan-tray information when used with Fan  |
| ampere        | (Optional) Ampere Power capacity and power distribution information  |
| input         | (Optional) Power supply power input  |
| temperature   | (Optional) temperature sensor information  |
| module        | (Optional) enter a module number   |
| <i>module</i> | (Optional) please enter the module number  |

|                          |  |
|--------------------------|--|
| <i>s0</i>                | (Optional) xbar                                |
| <i>santa-cruz-range</i>  | (Optional) please enter the xbar number        |
| psu                      | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED      |
| <i>__readonly__</i>      | (Optional)                                     |
| TABLE_clockinfo          | (Optional) Environment Clock                   |
| <i>clockname</i>         | (Optional) Clock Instance (A or B)             |
| <i>clkmodel</i>          | (Optional) Model number of clock               |
| <i>clkhwver</i>          | (Optional) Hardware version of the clock       |
| <i>clkstatus</i>         | (Optional) Present/Absent Status of the clock  |
| <i>act_standby</i>       | (Optional) Active/Standby Status of clock      |
| fanetails                | (Optional) Environment Fan                     |
| TABLE_faninfo            | (Optional) Fan Info                            |
| <i>fanname</i>           | (Optional) Fan Instance                        |
| <i>fanmodel</i>          | (Optional) Model number of fan                 |
| <i>fanhwver</i>          | (Optional) Hardware version of the fan         |
| <i>fandir</i>            | (Optional) Air-flow direction of the fan-tray  |
| <i>fanstatus</i>         | (Optional) Present/Absent Status of the fan    |
| TABLE_fan_zone_speed     | (Optional) Fan Zone Speeds                     |
| <i>zone</i>              | (Optional) Zone Number                         |

| <i>ip_type</i>           | (Optional) IP type                         |
| <i>svc_ep</i>            | (Optional) Service Endpoint                |
| <i>track_id</i>          | (Optional) Track ID                        |
| <i>probe_state</i>       | (Optional) Probe State                     |
| <i>intf_name</i>         | (Optional) Interface Name                  |

## Command Mode

- /exec

# show epbr statistics policy

```
show epbr statistics policy <policy-name> [ reverse ] [ __readonly__ TABLE_pmap <pname> <match_stmt>
<bcount> [ { TABLE_pmap_t_match <bname> [ { TABLE_pmap_b_stats <sname> <pval> <action> } ] } ]
]
```

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information            |
| epbr                | Show information about epbr                |
| statistics          | EPBR Statistics                            |
| policy              | EPBR Policy                                |
| <i>policy-name</i>  | Policy name                                |
| reverse             | (Optional) Apply the policy in reverse dir |
| <i>__readonly__</i> | (Optional) Read Only                       |
| TABLE_pmap          | (Optional)                                 |
| <i>pname</i>        | (Optional) Policy Name                     |
| <i>match_stmt</i>   | (Optional) Match Statement                 |
| <i>bcount</i>       | (Optional) Bucket Count                    |
| TABLE_pmap_t_match  | (Optional)                                 |
| <i>bname</i>        | (Optional) Bucket Name                     |
| TABLE_pmap_b_stats  | (Optional)                                 |
| <i>sname</i>        | (Optional) Service Name                    |
| <i>pval</i>         | (Optional) Packet Value                    |
| <i>action</i>       | (Optional) Action                          |

## Command Mode

- /exec

# show errdisable detect

```
show errdisable { detect | recovery } [ __readonly__ TABLE_errdisable <cause> <state> [ <time_interval> ] ]
```

## Syntax Description

|                  |                                       |
|------------------|---------------------------------------|
| show             | Show running system information       |
| errdisable       | Error disable                         |
| detect           | Show errdisable detect                |
| recovery         | Show errdisable recovery              |
| __readonly__     | (Optional) Read Only                  |
| TABLE_errdisable | (Optional) show errdisable            |
| cause            | (Optional) errdisable cause           |
| state            | (Optional) Interface state            |
| time_interval    | (Optional) err recovery time interval |

## Command Mode

- /exec

# show errdisable flap

show errdisable flap

## Syntax Description

|            |                                 |
|------------|---------------------------------|
| show       | Show running system information |
| errdisable | Error disable                   |
| flap       | linkstate flapping              |

## Command Mode

- /exec

## show esmc counters interface

```
show esmc counters { interface <if0> | all } [ __readonly__ [ TABLE_esmc <intf_name> <esmc_infos_sent>
<esmc_events_sent> <esmc_dnus_sent> <esmc_infos_rcvd> <esmc_events_rcvd> <esmc_dnus_rcvd>
<esmc_malformed_rcvd> <esmc_rcvd_error> ] <esmc-end> ]
```

### Syntax Description

|                            |  |
|----------------------------|--|
| show                       | Show running system information            |
| esmc                       | Ethernet Synchronization Messaging Channel |
| __readonly__               | (Optional) Read Only                       |
| counters                   | Display ESMC packet counters               |
| interface                  | Enter the port interface                   |
| <i>if0</i>                 |  |
| all                        | Displays all information                   |
| TABLE_esmc                 | (Optional) Start of table                  |
| <i>intf_name</i>           | (Optional) Interface name                  |
| <i>esmc_infos_sent</i>     | (Optional) esmc infos sent                 |
| <i>esmc_events_sent</i>    | (Optional) esmc events sent                |
| <i>esmc_dnus_sent</i>      | (Optional) esmc dnus sent                  |
| <i>esmc_infos_rcvd</i>     | (Optional) esmc infos rcvd                 |
| <i>esmc_events_rcvd</i>    | (Optional) esmc events rcvd                |
| <i>esmc_dnus_rcvd</i>      | (Optional) esmc dnus rcvd                  |
| <i>esmc_malformed_rcvd</i> | (Optional) esmc malformed rcvd frames      |
| <i>esmc_rcvd_error</i>     | (Optional) esmc rcvd frame errors          |
| <i>esmc-end</i>            | (Optional) End of table                    |

### Command Mode

- /exec

## show esmc packet-trace

```
show esmc packet-trace [ __readonly__ <esmc-header> [ TABLE_esmc <intf-name> <sup-time> <pkt_dir>
<pkt_type> <pkt_info> ] <esmc-end> ]
```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information            |
| esmc                | Ethernet Synchronization Messaging Channel |
| <i>__readonly__</i> | (Optional) Read Only                       |
| packet-trace        | Display last few packet traces             |
| <i>esmc-header</i>  | (Optional) start of table                  |
| TABLE_esmc          | (Optional) ESMC table                      |
| <i>intf-name</i>    | (Optional) interface name                  |
| <i>sup-time</i>     | (Optional) sup time                        |
| <i>pkt_dir</i>      | (Optional) packet direction                |
| <i>pkt_type</i>     | (Optional) packet type                     |
| <i>pkt_info</i>     | (Optional) packet information              |
| <i>esmc-end</i>     | (Optional) end of table                    |

### Command Mode

- /exec

# show ethanalyzer background-session

```
show ethanalyzer background-session { [ processes ] | [ config ] }
```

## Syntax Description

|                    |  |
|--------------------|--|
| show               | Show running system information  |
| ethanalyzer        | Configure cisco packet analyzer  |
| background-session | Show background packet analyzer sessions                               |
| processes          | (Optional) Show background packet analyzer sessions processes          |
| config             | (Optional) Print background packet analyzer session configuration file |

## Command Mode

- /exec

# show evb

```
show evb [ __readonly__ <evb_role> <evb_vdp_mac> [ <evb_cisco_mac> ] [ <evb_user_mac> ] <evb_rwd>
<evb_rka> <evb_cnt_recv_vdpdu> <evb_cnt_drop_vdpdu> <evb_cnt_recv_tlv> <evb_cnt_recv_mgr_tlv>
<evb_cnt_recv_assoc_tlv> <evb_cnt_recv_cmd> ]
```

## Syntax Description

|                               |  |
|-------------------------------|--|
| show                          | Show running system information        |
| evb                           | EVB (Edge Virtual Bridge)              |

| <i>m_state</i>       | (Optional) Machine state       |
| <i>e_state</i>       | (Optional) Entry state         |
| <i>reason</i>        | (Optional) State reaon         |
| <i>timer</i>         | (Optional) Countdown timer     |
| TABLE_evb_vsi_filter | (Optional) EVB filter table    |
| <i>filter_row_id</i> | (Optional) Filter row id       |
| <i>filter_group</i>  | (Optional) Group id            |
| <i>filter_vid</i>    | (Optional) Vlan id             |
| <i>filter_bd</i>     | (Optional) Bridge-domain id    |
| <i>filter_mac</i>    | (Optional) Mac address         |
| <i>filter_ip</i>     | (Optional) IP address          |

**Command Mode**

- /exec

# show event manager environment

show event manager environment { all | <varname> } [ \_\_readonly\_\_ <environment-details> ]

## Syntax Description

|                            |   |
|----------------------------|---|
| show                       | Show running system information                                 |
| event                      | Event Manager commands  |
| manager                    | Event Manager commands  |
| environment                | Show information about environment variables                    |
| all                        | Show information about all the configured environment variables |
| <i>varname</i>             | The environment variable name on which information is required  |
| <i>__readonly__</i>        | (Optional)  |
| <i>environment-details</i> | (Optional) Show information about environment variables         |

## Command Mode

- /exec

## show event manager event-types

```
show event manager event-types [ all | <event-type-name> ] [ module <module-id> ] [ __readonly__ {
<event-types> } ]
```

### Syntax Description

|                        |  |
|------------------------|--|
| show                   | Show running system information                                |
| event                  | Event Manager commands   |
| manager                | Event Manager commands   |
| event-types            | Show information about registered event types                  |
| all                    | (Optional) Show information about advanced event types as well |
| <i>event-type-name</i> | (Optional) Show information about the specified event type     |
| module                 | (Optional) Show information about event types on other modules |
| <i>module-id</i>       | (Optional) Module Id   |
| __readonly__           | (Optional)   |
| <i>event-types</i>     | (Optional) Show information about registered event types       |

### Command Mode

- /exec

# show event manager events action-log

```
show event manager events action-log [ policy <policy-name> | event-type <event-type-name> ] [ __readonly__
{ <action-log-data> } ]
```

## Syntax Description

|                        |  |
|------------------------|--|
| show                   | Show running system information                          |
| event                  | Event Manager commands                                   |
| manager                | Event Manager commands                                   |
| events                 | Show information about the history of past events        |
| action-log             | Show policy action logs                                  |
| policy                 | (Optional) Name of policy                                |
| <i>policy-name</i>     | (Optional) Enter policy name                             |
| event-type             | (Optional) Name of event                                 |
| <i>event-type-name</i> | (Optional) Enter event type                              |
| __readonly__           | (Optional)   |
| <i>action-log-data</i> | (Optional) Show information about the policy action logs |

## Command Mode

- /exec

## show event manager history events

```
show event manager history events [ detail ] [ maximum <n-events> ] [ severity <sev> ] [ __readonly__ {
<history-events> } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information   |
| event                 | Event Manager commands  |
| manager               | Event Manager commands  |
| history               | Show information about the history of past activity                       |
| events                | Show information about the history of past events                         |
| detail                | (Optional) Show information about the event parameters as well            |
| maximum               | (Optional) Specify an upper limit on the number of events to be shown     |
| <i>n-events</i>       | (Optional) Specify the maximum number of events to be shown               |
| severity              | (Optional) Show only those events whose severity is >= specified severity |
| <i>sev</i>            | (Optional) Enter the severity threshold                                   |
| __readonly__          | (Optional)  |
| <i>history-events</i> | (Optional) Show information about the history of past events              |

### Command Mode

- /exec

## show event manager policy-state

```
show event manager policy-state <name> [ module <module-id> ] [ __readonly__ { <policy-state> } ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                         |
| event               | Event Manager commands                                  |
| manager             | Event Manager commands                                  |
| policy-state        | Show information about the state of a policy            |
| <i>name</i>         | Name of the policy                                      |
| module              | (Optional) Get the information from a module            |
| <i>module-id</i>    | (Optional) Module Id                                    |
| <i>__readonly__</i> | (Optional)  |
| <i>policy-state</i> | (Optional) Show information about the state of a policy |

### Command Mode

- /exec

## show event manager script system

```
show event manager script system { all | <script-name> } [ __readonly__ <script_system_details> ]
```

### Syntax Description

|                              |  |
|------------------------------|--|
| show                         | Show running system information                          |
| event                        | Event Manager commands                                   |
| manager                      | Event Manager commands                                   |
| script                       | Show information about a script policy                   |
| system                       | Show information about a system script policy            |
| all                          | Show all the available system script policies            |
| <i>script-name</i>           | Name of the system script policy                         |
| <i>__readonly__</i>          | (Optional)   |
| <i>script_system_details</i> | (Optional) Show Information about system script policies |

### Command Mode

- /exec

## show event manager system-policy

```
show event manager system-policy [ all | <policy-name> ] [ __readonly__ { [ TABLE_eem [ <thresh_min> ] [ <thresh_max> ] <event_name> <event_description> <event_overridable> <event_type> } } ]
```

### Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information  |
| event                    | Event Manager commands   |
| manager                  | Event Manager commands   |
| system-policy            | Show information about default system policies                             |
| all                      | (Optional) Show all policies (including advanced and non-overridable ones) |
| <i>policy-name</i>       | (Optional) Show detailed information about the specified policy            |
| <i>__readonly__</i>      | (Optional)   |
| TABLE_eem                | (Optional)   |
| <i>thresh_min</i>        | (Optional)   |
| <i>thresh_max</i>        | (Optional)   |
| <i>event_name</i>        | (Optional)   |
| <i>event_description</i> | (Optional)   |
| <i>event_overridable</i> | (Optional)   |
| <i>event_type</i>        | (Optional)   |

### Command Mode

- /exec

# show fabric-binding database

show fabric-binding database [ { active [ vsan <i0> ] | vsan1 <i1> } ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information         |
| fabric-binding | Show Fabric Binding                     |
| database       | Show Fabric Binding Configured database |
| active         | (Optional) Activated Fabric Bindings    |
| vsan           | (Optional) VSAN id                      |
| <i>i0</i>      | (Optional) VSAN range                   |
| vsan1          | (Optional) VSAN id                      |
| <i>i1</i>      | (Optional) VSAN range                   |

## Command Mode

- /exec

# show fabric-binding efmd statistics

show fabric-binding efmd statistics [ vsan <i0> ]

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| fabric-binding | Show Fabric Binding             |
| efmd           | Exchange Fabric Membership Data |
| statistics     | EFMD protocol statistics        |
| vsan           | (Optional) VSAN id              |
| <i>i0</i>      | (Optional) VSAN range           |

## Command Mode

- /exec

# show fabric-binding fip

show fabric-binding fip

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| fabric-binding | Fabric Binding configuration    |
| fip            | Display the enabled FIP         |

## Command Mode

- /exec

# show fabric-binding statistics

show fabric-binding statistics [ vsan <i0> ]

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| fabric-binding | Show Fabric Binding             |
| statistics     | Statistics of Fabric Binding    |
| vsan           | (Optional) VSAN Id              |
| <i>i0</i>      | (Optional) VSAN range           |

## Command Mode

- /exec

# show fabric-binding status

show fabric-binding status [ vsan <i0> ]

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| fabric-binding | Show Fabric Binding             |
| status         | Fabric binding Status           |
| vsan           | (Optional) VSAN Id              |
| <i>i0</i>      | (Optional) VSAN range           |

## Command Mode

- /exec

# show fabric-binding violations

show fabric-binding violations [ last <i0> ]

## Syntax Description

|                |                                       |
|----------------|---------------------------------------|
| show           | Show running system information       |
| fabric-binding | Show Fabric Binding                   |
| violations     | Violations of Fabric Binding policies |
| last           | (Optional) Latest n violations        |
| <i>i0</i>      | (Optional) Violation number           |

## Command Mode

- /exec

## show fabric database dci

```
show fabric database dci [ { vrf { <vrf-name> | <vrf-known-name> } [ peer-id <peer-ip-address> ] [ detail ]
} ] [ __readonly__ [ TABLE_database_dci <vrf_name> <state> <flags> <profile> <instance> ] [
TABLE_database_dci_detail <packet_arrival_time> <sent_to_database_manager_at>
<received_parameters_from_database_manager_at> <sent_apply_to_configuration_manager_at>
<completed_executing_all_commands_at> <sent_un_apply_to_configuration_manager_at>
<completed_unapplying_all_commands_at> ] ]
```

### Syntax Description

|   |  |
|---|--|
| show  | Show running system information                      |
| fabric  | Fabric   |
| database  | Fabric Database                                      |
| dci   | DCI Profile Database                                 |
| vrf   | (Optional) Display per-VRF information               |
| <i>vrf-name</i>                                     | (Optional) VRF name                                  |
| <i>vrf-known-name</i>                               | (Optional) Known VRF name                            |
| peer-id   | (Optional) management ip address of peer             |
| <i>peer-ip-address</i>                              | (Optional) IP address in CIDR format                 |
| detail  | (Optional) Show detailed information                 |
| __readonly__  | (Optional) Read Only                                 |
| TABLE_database_dci                                  | (Optional) table show fabric database dci            |
| <i>vrf_name</i>                                     | (Optional)   |
| <i>state</i>  | (Optional)   |
| <i>flags</i>  | (Optional)   |
| <i>profile</i>                                      | (Optional)   |
| <i>instance</i>                                     | (Optional)   |
| TABLE_database_dci_detail                           | (Optional) detail for table show fabric database dci |
| <i>packet_arrival_time</i>                          | (Optional) Profile request time                      |
| <i>sent_to_database_manager_at</i>                  | (Optional) Profile request sent to DCNM              |
| <i>received_parameters_from_database_manager_at</i> | (Optional) Profile downloaded from DCNM              |
| <i>sent_apply_to_configuration_manager_at</i>       | (Optional) Profile sent to PPM to apply              |

|  |   |
|--|---|
| <i>completed_executing_all_commands_at</i>       | (Optional) Profile applied by PPM       |
| <i>sent_un_apply_to_configuration_manager_at</i> | (Optional) Profile un-apply sent to PPM |
| <i>completed_unapplying_all_commands_at</i>      | (Optional) Profile un-applied by PPM    |

**Command Mode**

- /exec

## show fabric database host

## show fabric multicast vrf

```
show fabric multicast vrf [ { <vrf-name> | <vrf-known-name> | all } ] [ __readonly__ TABLE_vrf
<context_name> [ <context_id> ] [ <vprime_iod> ] [ <vnid> ] [ <l3trm> ] [ <iropt> ] ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                |
| fabric                | Fabric   |
| multicast             | Multicast information                          |
| vrf                   | Display per-VRF information                    |
| <i>vrf-name</i>       | (Optional) VRF name                            |
| <i>vrf-known-name</i> | (Optional) Known VRF name                      |
| all                   | (Optional) Display all VRFs NGMVPN is aware of |
| <i>__readonly__</i>   | (Optional)                                     |
| TABLE_vrf             | (Optional)                                     |
| <i>context_name</i>   | (Optional)                                     |
| <i>context_id</i>     | (Optional)                                     |
| <i>vprime_iod</i>     | (Optional)                                     |
| <i>vnid</i>           | (Optional)                                     |
| <i>l3trm</i>          | (Optional)                                     |
| <i>iropt</i>          | (Optional)                                     |

### Command Mode

- /exec

# show fabric switch information

show fabric switch information [ vsan <i0> ]

## Syntax Description

|             |  |
|-------------|--|
| show        | Show running system information              |
| fabric      | Show Fabric Information                      |
| switch      | Show switch details.                         |
| information | Show switch model, version and other details |
| vsan        | (Optional) VSAN id                           |
| <i>i0</i>   | (Optional) VSAN range                        |

## Command Mode

- /exec

# show fc2 bind

```
show fc2 bind [ __readonly__ { TABLE_fc2bind <SOCKET> <FLAGS> <NLEVEL> <RULE> <SINDEX>
<VSAN> <D_ID> <MASK> <TYPE> <SUBTYPE> <M_VALUES> } ]
```

## Syntax Description

|                 |                                 |
|-----------------|---------------------------------|
| show            | Show running system information |
| fc2             | show fc2 tables and statistics  |
| bind            | show fc2 socket bindings        |
| __readonly__    | (Optional) Read only            |
| TABLE_fc2bind   | (Optional) show fc2 bind        |
| <i>SOCKET</i>   | (Optional) socket               |
| <i>FLAGS</i>    | (Optional) flags                |
| <i>NLEVEL</i>   | (Optional) nlevel               |
| <i>RULE</i>     | (Optional) rule                 |
| <i>SINDEX</i>   | (Optional) sidnex               |
| <i>VSAN</i>     | (Optional) vsan                 |
| <i>D_ID</i>     | (Optional) d_id                 |
| <i>MASK</i>     | (Optional) mask                 |
| <i>TYPE</i>     | (Optional) type                 |
| <i>SUBTYPE</i>  | (Optional) subtype              |
| <i>M_VALUES</i> | (Optional) m_values             |

## Command Mode

- /exec

# show fc2 classf

```
show fc2 classf [ __readonly__ { TABLE_fc2classf <HIX> <VSAN> <S_ID> <D_ID> <IFIDX> <R_A_TOV>

| <i>UP_TIME</i>         | (Optional) up time                            |
| <i>UP_REFTIME</i>      | (Optional) up from                            |
| <i>DOWN_STRING</i>     | (Optional) down string                        |
| <i>DOWN_TIME</i>       | (Optional) down time                          |
| <i>DOWN_REFTIME</i>    | (Optional) down from                          |
| TABLE_VFCPORTSLOTSTATE | (Optional) vfc port slot state change history |
| <i>PORT_STRING</i>     | (Optional) port name                          |
| <i>PORT_NO</i>         | (Optional) port number                        |
| <i>UP_DOWN_CNTR</i>    | (Optional) up-down counter                    |
| <i>UP_STRING</i>       | (Optional) up                                 |
| <i>UP_TIME</i>         | (Optional) up time                            |
| <i>UP_REFTIME</i>      | (Optional) up from                            |
| <i>DOWN_STRING</i>     | (Optional) down string                        |
| <i>DOWN_TIME</i>       | (Optional) down time                          |
| <i>DOWN_REFTIME</i>    | (Optional) down from                          |

**Command Mode**

- /exec

# show fc2 socket

```
show fc2 socket [ __readonly__ { TABLE_fc2socket <SOCKET> <REFCNT> <PROTOCOL> <FLAGS>
<PID> <RCVBUF> <RMEM_USED> <QLEN> <NOTSK> } ]
```

## Syntax Description

|                  |                                 |
|------------------|---------------------------------|
| show             | Show running system information |
| fc2              | show fc2 tables and statistics  |
| socket           | show fc2 active sockets         |
| __readonly__     | (Optional) Read only            |
| TABLE_fc2socket  | (Optional) show fc2 socket      |
| <i>SOCKET</i>    | (Optional) socket               |
| <i>REFCNT</i>    | (Optional) refcnt               |
| <i>PROTOCOL</i>  | (Optional) protocol             |
| <i>FLAGS</i>     | (Optional) flags                |
| <i>PID</i>       | (Optional) pid                  |
| <i>RCVBUF</i>    | (Optional) rcvbuf               |
| <i>RMEM_USED</i> | (Optional) rmem_used            |
| <i>QLEN</i>      | (Optional) qlen                 |
| <i>NOTSK</i>     | (Optional) not_sk               |

## Command Mode

- /exec

## show fc2 sockexch

```
show fc2 sockexch [ __readonly__ { TABLE_fc2sockexch <SOCKET> <VSAN> <X_ID> <OX_ID>
<RX_ID> <O_ID> <R_ID> <ESTAT> <STATE> <CS> <TYPE> <SK> } ]
```

### Syntax Description

|                   |   |
|-------------------|---|
| show              | Show running system information           |
| fc2               | show fc2 tables and statistics            |
| sockexch          | show fc2 active exchanges for each socket |
| __readonly__      | (Optional) Read only                      |
| TABLE_fc2sockexch | (Optional) show fc2 sockexch              |
| SOCKET            | (Optional) socket                         |
| VSAN              | (Optional) vsan                           |
| X_ID              | (Optional) x_id                           |
| OX_ID             | (Optional) oxid                           |
| RX_ID             | (Optional) rxid                           |
| O_ID              | (Optional) o_id                           |
| R_ID              | (Optional) r_id                           |
| ESTAT             | (Optional) estat                          |
| STATE             | (Optional) state                          |
| CS                | (Optional) cs                             |
| TYPE              | (Optional) type                           |
| SK                | (Optional) sk                             |

### Command Mode

- /exec

## show fc2 socknotify

```
show fc2 socknotify [ __readonly__ { TABLE_fc2socknotify <SOCKET> <ADDRESS> <REF> <VSAN>
<D_ID> <MASK> <FL> <ST> <IFINDEX> } ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                               |
| fc2                 | show fc2 tables and statistics                                |
| socknotify          | show fc2 local nport plogi/logo notifications per each socket |
| __readonly__        | (Optional) Read only  |
| TABLE_fc2socknotify | (Optional) show fc2 socknotify                                |
| SOCKET              | (Optional) socket   |
| ADDRESS             | (Optional) address  |
| REF                 | (Optional) ref  |
| VSAN                | (Optional) vsan   |
| D_ID                | (Optional) d_id   |
| MASK                | (Optional) mask   |
| FL                  | (Optional) fl   |
| ST                  | (Optional) st   |
| IFINDEX             | (Optional) ifindex  |

### Command Mode

- /exec

# show fc2 socknport

```
show fc2 socknport [ __readonly__ { TABLE_fc2socknport <SOCKET> <ADDRESS> <REF> <VSAN>
<D_ID> <MASK> <FL> <ST> <IFINDEX> } ]
```

## Syntax Description

|                    |                                       |
|--------------------|---------------------------------------|
| show               | Show running system information       |
| fc2                | show fc2 tables and statistics        |
| socknport          | show fc2 local nports per each socket |
| __readonly__       | (Optional) Read only                  |
| TABLE_fc2socknport | (Optional) show fc2 socknport         |
| <i>SOCKET</i>      | (Optional) socket                     |
| <i>ADDRESS</i>     | (Optional) address                    |
| <i>REF</i>         | (Optional) ref                        |
| <i>VSAN</i>        | (Optional) vsan                       |
| <i>D_ID</i>        | (Optional) d_id                       |
| <i>MASK</i>        | (Optional) mask                       |
| <i>FL</i>          | (Optional) fl                         |
| <i>ST</i>          | (Optional) st                         |
| <i>IFINDEX</i>     | (Optional) ifindex                    |

## Command Mode

- /exec

## show fc2 vsan

```
show fc2 vsan [ __readonly__ { TABLE_fc2vsan <VSAN> <X_ID> <E_D_TOV> <R_A_TOV> <WWN>
<IOP_MODE> } ]
```

### Syntax Description

|               |                                 |
|---------------|---------------------------------|
| show          | Show running system information |
| fc2           | show fc2 tables and statistics  |
| vsan          | show fc2 vsan table             |
| __readonly__  | (Optional) Read only            |
| TABLE_fc2vsan | (Optional) show fc2 vsan        |
| VSAN          | (Optional) vsan                 |
| X_ID          | (Optional) xid                  |
| E_D_TOV       | (Optional) e_d_tov              |
| R_A_TOV       | (Optional) r_a_tov              |
| WWN           | (Optional) wwn                  |
| IOP_MODE      | (Optional) iop_mode             |

### Command Mode

- /exec

# show fcalias

```
show fcalias [ [ name <s0> ] [ [ pending ] [ vsan <i0> ] ] ]
```

## Syntax Description

|           |   |
|-----------|---|
| show      | Show running system information                           |
| fcalias   | Fcalias show commands                                     |
| name      | (Optional) Show members of a specified fcalias            |
| <i>s0</i> | (Optional) Enter the name of fcalias                      |
| pending   | (Optional) Show members of a specified fcalias in session |
| vsan      | (Optional) Show aliases belonging to the specified VSAN   |
| <i>i0</i> | (Optional) VSAN id range                                  |

## Command Mode

- /exec

# show fcdomain

show fcdomain

## Syntax Description

|          |                                 |
|----------|---------------------------------|
| show     | Show running system information |
| fcdomain | Show fcdomain information       |

## Command Mode

- /exec

# show fcdomain address-allocation

```
show fcdomain address-allocation [ { cache | vsan <i0> } ]
```

## Syntax Description

|                    |   |
|--------------------|---|
| show               | Show running system information                       |
| fcdomain           | Show fcdomain information                             |
| address-allocation | Show statistics for the fcid allocation               |
| cache              | (Optional) Show cache content for the fcid allocation |
| vsan               | (Optional) Specify the vsan id                        |
| <i>i0</i>          | (Optional) VSAN id                                    |

## Command Mode

- /exec

# show fcdomain allowed

show fcdomain allowed [ vsan <i0> ]

## Syntax Description

|           |                                 |
|-----------|---------------------------------|
| show      | Show running system information |
| fcdomain  | Show fcdomain information       |
| allowed   | Show list of allowed domain IDs |
| vsan      | (Optional) Specify the vsan id  |
| <i>i0</i> | (Optional) VSAN id              |

## Command Mode

- /exec

# show fcdomain domain-list

```
show fcdomain domain-list [ vsan <i0> ]
```

## Syntax Description

|             |   |
|-------------|---|
| show        | Show running system information                     |
| fcdomain    | Show fcdomain information                           |
| domain-list | Show list of domain IDs granted by the principal sw |
| vsan        | (Optional) Specify the vsan id                      |
| <i>i0</i>   | (Optional) VSAN id                                  |

## Command Mode

- /exec

# show fcdomain fcid persistent

```
show fcdomain fcid persistent [ { unused [ vsan <i0> ] | vsan1 <i1> } ]
```

## Syntax Description

|            |   |
|------------|---|
| show       | Show running system information                         |
| fcdomain   | Show fcdomain information                               |
| fcid       | Show persistent FCIDs (across reboot)                   |
| persistent | Show persistent FCIDs (across reboot)                   |
| unused     | (Optional) Show unused persistent FCIDs (across reboot) |
| vsan       | (Optional) Specify the vsan id                          |
| <i>i0</i>  | (Optional) VSAN id                                      |
| vsan1      | (Optional) Specify the vsan id                          |
| <i>i1</i>  | (Optional) VSAN id                                      |

## Command Mode

- /exec

# show fcdomain pending-diff

```
show fcdomain pending-diff [ vsan <i0> ]
```

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                               |
| fcdomain     | Show fcdomain information                                     |
| pending-diff | Show the difference between running and pending configuration |
| vsan         | (Optional) Specify the vsan id                                |
| <i>i0</i>    | (Optional) VSAN id  |

## Command Mode

- /exec

# show fcdomain pending

show fcdomain pending [ vsan <i0> ]

## Syntax Description

|           |                                 |
|-----------|---------------------------------|
| show      | Show running system information |
| fcdomain  | Show fcdomain information       |
| pending   | Show the pending configuration  |
| vsan      | (Optional) Specify the vsan id  |
| <i>i0</i> | (Optional) VSAN id              |

## Command Mode

- /exec

# show fcdomain session-status

show fcdomain session-status [ vsan <i0> ]

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information            |
| fcdomain       | Show fcdomain information                  |
| session-status | Show the last action performed by fcdomain |
| vsan           | (Optional) Specify the vsan id             |
| <i>i0</i>      | (Optional) VSAN id                         |

## Command Mode

- /exec

## show fcdomain statistics

show fcdomain statistics [ { interface <i>i0</i> [ vsan <i>i0</i> ] | vsan1 <i>i1</i> } ]

### Syntax Description

|            |  |
|------------|--|
| show       | Show running system information                |
| fcdomain   | Show fcdomain information                      |
| statistics | Show the statistics of fcdomain                |
| interface  | (Optional) Specify the fibre channel interface |
| <i>i0</i>  | (Optional)                                     |
| vsan       | (Optional) Specify the vsan id                 |
| <i>i0</i>  | (Optional) VSAN id                             |
| vsan1      | (Optional) Specify the vsan id                 |
| <i>i1</i>  | (Optional) VSAN id                             |

### Command Mode

- /exec

# show fcdomain status

show fcdomain status

## Syntax Description

|          |   |
|----------|---|
| show     | Show running system information                   |
| fcdomain | Show fcdomain information                         |
| status   | Show all vsan-independent information in fcdomain |

## Command Mode

- /exec

# show fcdomain vsan

show fcdomain vsan <i0>

## Syntax Description

|           |                                 |
|-----------|---------------------------------|
| show      | Show running system information |
| fcdomain  | Show fcdomain information       |
| vsan      | Specify the vsan id             |
| <i>i0</i> | VSAN id                         |

## Command Mode

- /exec

# show fcdroplateny

```
show fcdroplateny [ { network | switch } ] [ __readonly__ [ <switch_latency> ] [ <global_network_latency> ] ] [ TABLE_vsan_network_latency { <vsan-no> <network-latency> } ] ]
```

## Syntax Description

|                               |   |
|-------------------------------|---|
| show                          | Show running system information                   |
| fcdroplateny                  | show switch or network latency                    |
| network                       | (Optional) network latency in milliseconds        |
| switch                        | (Optional) switch latency in milliseconds         |
| __readonly__                  | (Optional)  |
| <i>switch_latency</i>         | (Optional) Switch latency value                   |
| <i>global_network_latency</i> | (Optional) global network latency value           |
| TABLE_vsan_network_latency    | (Optional) VSAN specific network latency settings |
| <i>vsan-no</i>                | (Optional) vsan number                            |
| <i>network-latency</i>        | (Optional) VSAN specific network latency          |

## Command Mode

- /exec

# show fcid-allocation area

show fcid-allocation area

## Syntax Description

|                 |   |
|-----------------|---|
| show            | Show running system information             |
| fcid-allocation | Show information about fcid-allocation list |
| area            | Show information about fcid-allocation list |

## Command Mode

- /exec

# show fcid-allocation company-id-from-wwn

show fcid-allocation company-id-from-wwn <wwn0>

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information             |
| fcid-allocation     | Show information about fcid-allocation list |
| company-id-from-wwn | Company id (or OUI).                        |
| <i>wwn0</i>         | Enter WWN to extract company_id/oui         |

## Command Mode

- /exec

## show fcns database

```
show fcns database [ { detail [ vsan <i0> ] | domain <i1> [ { detail [ vsan1 <i2> ] | vsan2 <i3> } ] | fcid <fcid4>
{ detail2 vsan3 <i5> | vsan4 <i6> } | local [ { detail1 [ vsan5 <i7> ] | vsan6 <i8> } ] | npv [ { detail1 [ vsan7
<i9> ] | node_wwn <wwn10> [ vsan8 <i11> ] | vsan9 <i12> } ] | proxy-host { detail4 vsan10 <i13> | vsan11
<i14> } | vsan12 <i15> } ]
```

### Syntax Description

|              |  |
|--------------|--|
| show         | Show running system information                            |
| fcns         | show name server tables                                    |

| <i>node_wwn</i>   | (Optional) show end-devices logged in via an npv node |
| <i>wwn10</i>      | (Optional) Node WWN of NPV                            |
| <i>vsan8</i>      | (Optional) show npv entries for the given vsan(s)     |
| <i>i11</i>        | (Optional) VSAN id range                              |
| <i>vsan9</i>      | (Optional) show npv entries for the given vsan(s)     |
| <i>i12</i>        | (Optional) VSAN id range                              |
| <i>proxy-host</i> | (Optional) show entry for the proxy-host              |
| <i>detail4</i>    | (Optional) show all objects in the entry              |
| <i>vsan10</i>     | (Optional) show port entry for the given vsan         |
| <i>i13</i>        | (Optional) VSAN id                                    |
| <i>vsan11</i>     | (Optional) show port entry for the given vsan         |
| <i>i14</i>        | (Optional) VSAN id                                    |
| <i>vsan12</i>     | (Optional) show entries for the given vsan(s)         |
| <i>i15</i>        | (Optional) VSAN id range                              |

**Command Mode**

- /exec

# show fcns statistics

show fcns statistics [ { detail [ vsan <i0> ] | vsan1 <i1> } ]

## Syntax Description

|            |   |
|------------|---|
| show       | Show running system information                     |
| fcns       | show name server tables                             |
| statistics | show name server statistics                         |
| detail     | (Optional) show detailed statistics                 |
| vsan       | (Optional) show detailed statistics for the vsan(s) |
| <i>i0</i>  | (Optional) VSAN id range                            |
| vsan1      | (Optional) show statistics for the vsan(s)          |
| <i>i1</i>  | (Optional) VSAN id range                            |

## Command Mode

- /exec

## show fcoe-npv issu-impact

```
show fcoe-npv issu-impact [ __readonly__ { <is_impact> } [ TABLE_interface <vfc_intf> <fc_id> ] ]
```

### Syntax Description

|                  |   |
|------------------|---|
| show             | Show running system information   |
| fcoe-npv         | feature fcoe-npv  |
| issu-impact      | Show feature fcoe-npv config issues if attempting to do non-disruptive ISSU |
| __readonly__     | (Optional) Read Only  |
| <i>is_impact</i> | (Optional) show issu impact   |
| TABLE_interface  | (Optional) show fcoe database   |
| <i>vfc_intf</i>  | (Optional) vfc port Interface index   |
| <i>fc_id</i>     | (Optional) vfc port FCID  |

### Command Mode

- /exec

# show fcoe

```
show fcoe [ __readonly__ { TABLE_fcf <fcf_if_index> <fcf_mac> <fc_map> <fcf_priority>
<fka_Advertisement> } [ TABLE_vfc <vfc_name> <vfcf_mac> ] ]
```

## Syntax Description

|                          |                                      |
|--------------------------|--------------------------------------|
| show                     | Show running system information      |
| fcoe                     | Show FCOE paramaters                 |
| __readonly__             | (Optional) Read Only                 |
| TABLE_fcf                | (Optional) fcf table                 |
| <i>fcf_if_index</i>      | (Optional) fcf if index              |
| <i>fcf_mac</i>           | (Optional) fcf mac                   |
| <i>fc_map</i>            | (Optional) fc map                    |
| <i>fcf_priority</i>      | (Optional) fcf priority              |
| <i>fka_Advertisement</i> | (Optional) fka Advertisement         |
| TABLE_vfc                | (Optional) vfc details table for sup |
| <i>vfc_name</i>          | (Optional) vfc name                  |
| <i>vfcf_mac</i>          | (Optional) vfcf mac                  |

## Command Mode

- /exec

# show fcoe database

```
show fcoe database [ __readonly__ { TABLE_interface <interface> [ <fcid> ] [ <port_name> ] <mac_address>
} <flogi_count> [ TABLE_veport <interface> <mac_address> <vsan> ] ]
```

## Syntax Description

|                     |                                    |
|---------------------|------------------------------------|
| show                | Show running system information    |
| fcoe                | Show FCOE paramaters               |
| database            | Show FCOE database                 |
| <i>__readonly__</i> | (Optional) Read Only               |
| <i>interface</i>    | (Optional) Interface index         |
| TABLE_interface     | (Optional) show fcoe database      |
| <i>fcid</i>         | (Optional) fcid                    |
| <i>port_name</i>    | (Optional) port name               |
| <i>mac_address</i>  | (Optional) mac address             |
| <i>interface</i>    | (Optional) ve port Interface index |
| TABLE_veport        | (Optional) ve port details         |
| <i>mac_address</i>  | (Optional) ve port mac address     |
| <i>flogi_count</i>  | (Optional) flogi_count             |
| <i>vsan</i>         | (Optional) ve port VSAN trunking   |

## Command Mode

- /exec

# show fcs database

show fcs database [ vsan <i0> ]

## Syntax Description

|           |   |
|-----------|---|
| show      | Show running system information           |
| database  | Show local database of FCS                |
| vsan      | (Optional) Show local database for a VSAN |
| <i>i0</i> | (Optional) VSAN range                     |

## Command Mode

- /exec

# show fcs ie

```
show fcs ie [ { nwwn <wwn0> vsan <i1> | vsan1 <i2> } ]
```

## Syntax Description

|             |   |
|-------------|---|
| show        | Show running system information               |
| ie          | Show Interconnect Element Objects Information |
| nwwn        | (Optional) IE WWN                             |
| <i>wwn0</i> | (Optional) IE WWN                             |
| vsan        | (Optional) VSAN id of IE                      |
| <i>i1</i>   | (Optional) VSAN id                            |
| vsan1       | (Optional) VSAN id of IE                      |
| <i>i2</i>   | (Optional) VSAN range                         |

## Command Mode

- /exec

# show fcs platform

show fcs platform { name <s0> vsan <i0> | vsan1 <i1> }

## Syntax Description

|           |                                   |
|-----------|-----------------------------------|
| show      | Show running system information   |
| platform  | Show Platform Objects Information |
| name      | Platform Name                     |
| <i>s0</i> | Platform name string              |
| vsan      | VSAN id of the platform           |
| <i>i0</i> | VSAN id                           |
| vsan1     | VSAN id of the platform           |
| <i>i1</i> | VSAN range                        |

## Command Mode

- /exec

# show fcs port

```
show fcs port { pwwn <wwn0> vsan <i1> | vsan1 <i2> }
```

## Syntax Description

|             |                                 |
|-------------|---------------------------------|
| show        | Show running system information |
| port        | Show Port Objects Information   |
| pwwn        | Port WWN                        |
| <i>wwn0</i> | Port WWN                        |
| vsan        | VSAN id of the port             |
| <i>i1</i>   | VSAN id                         |
| vsan1       | VSAN id of the port             |
| <i>i2</i>   | VSAN range                      |

## Command Mode

- /exec

# show fcs statistics

show fcs statistics [ vsan <i0> ]

## Syntax Description

|            |                                       |
|------------|---------------------------------------|
| show       | Show running system information       |
| statistics | Show statistics for FCS packets.      |
| vsan       | (Optional) Show statistics for a VSAN |
| <i>i0</i>  | (Optional) VSAN range                 |

## Command Mode

- /exec

# show fcs vsan

show fcs vsan

## Syntax Description

|      |   |
|------|---|
| show | Show running system information                         |
| vsan | Show list of all the VSANs and plat-check-mode for each |

## Command Mode

- /exec

# show fctimer

```
show fctimer [ __readonly__ { <F_S_TOV> <D_S_TOV> <E_D_TOV> <R_A_TOV> } ]
```

## Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | show running system information |
| fctimer        | show Fibre Channel timers       |
| __readonly__   | (Optional) Read only            |
| <i>F_S_TOV</i> | (Optional) F_S_TOV              |
| <i>D_S_TOV</i> | (Optional) D_S_TOV              |
| <i>E_D_TOV</i> | (Optional) E_D_TOV              |
| <i>R_A_TOV</i> | (Optional) R_A_TOV              |

## Command Mode

- /exec

## show fctimer D\_S\_TOV

```
show fctimer D_S_TOV [ vsan <i0> ] [ __readonly__ [ TABLE_D_S_TOV [ <vsan-no> ] <D_S_TOV> ] [ <non-exist-vcn> ] ]
```

### Syntax Description

|                      |                                 |
|----------------------|---------------------------------|
| show                 | Show running system information |
| fctimer              | show Fibre Channel timers       |
| D_S_TOV              | D_S_TOV in milliseconds         |
| vsan                 | (Optional) Specify VSAN id      |
| <i>i0</i>            | (Optional) VSAN id range        |
| <i>__readonly__</i>  | (Optional)                      |
| TABLE_D_S_TOV        | (Optional) table D_S_TOV        |
| <i>vsan-no</i>       | (Optional) vsan number          |
| <i>D_S_TOV</i>       | (Optional) D_S_TOV              |
| <i>non-exist-vcn</i> | (Optional) non configured vsans |

### Command Mode

- /exec

## show fctimer E\_D\_TOV

```
show fctimer E_D_TOV [ vsan <i0> ] [ __readonly__ [ TABLE_E_D_TOV [ <vsan-no> ] <E_D_TOV> ] [ <non-exist-vsan> ] ]
```

### Syntax Description

|                |                                 |
|----------------|---------------------------------|
| show           | Show running system information |
| fctimer        | show Fibre Channel timers       |
| E_D_TOV        | E_D_TOV in milliseconds         |
| vsan           | (Optional) Specify VSAN id      |
| i0             | (Optional) VSAN id range        |
| __readonly__   | (Optional)                      |
| TABLE_E_D_TOV  | (Optional) table                |
| vsan-no        | (Optional) vsan number          |
| E_D_TOV        | (Optional) E_D_TOV              |
| non-exist-vsan | (Optional) not exist vsans      |

### Command Mode

- /exec

## show fctimer F\_S\_TOV

```
show fctimer F_S_TOV [ vsan <i0> ] [ __readonly__ [ TABLE_F_S_TOV [ <vsan-no> ] <F_S_TOV> ] [ <non-exist-nsan> ] ]
```

### Syntax Description

|                       |                                 |
|-----------------------|---------------------------------|
| show                  | Show running system information |
| fctimer               | show Fibre Channel timers       |
| F_S_TOV               | F_S_TOV in milliseconds         |
| vsan                  | (Optional) Specify VSAN id      |
| <i>i0</i>             | (Optional) VSAN id range        |
| <i>__readonly__</i>   | (Optional)                      |
| TABLE_F_S_TOV         | (Optional) table                |
| <i>vsan-no</i>        | (Optional) vsan number          |
| <i>F_S_TOV</i>        | (Optional) F_S_TOV              |
| <i>non-exist-nsan</i> | (Optional) not exist vsans      |

### Command Mode

- /exec

## show fctimer R\_A\_TOV

```
show fctimer R_A_TOV [ vsan <i0> ] [ __readonly__ [ TABLE_R_A_TOV [ <vsan-no> ] <R_A_TOV> ] [ <non-exist-vsan> ] ]
```

### Syntax Description

|                              |                                 |
|------------------------------|---------------------------------|
| show                         | Show running system information |
| fctimer                      | show Fibre Channel timers       |
| R_A_TOV                      | R_A_TOV in milliseconds         |
| vsan                         | (Optional) Specify VSAN id      |
| <i>i0</i>                    | (Optional) VSAN id range        |
| __readonly__                 | (Optional)                      |
| TABLE_R_A_TOV                | (Optional) table                |
| <i>vsan-no</i>               | (Optional) vsan number          |
| <i>R_A_TOV</i>               | (Optional) R_A_TOV              |
| <i>non-exist-<i>vsan</i></i> | (Optional) non exist vsans      |

### Command Mode

- /exec

## show fctimer last action status

```
show fctimer last action status [ __readonly__ [ <vsan> ] <last_action_timestamp> <last_action>
<last_action_result> <last_action_failure_reason> ]
```

### Syntax Description

|                                   |  |
|-----------------------------------|--|
| show                              | Show running system information                        |
| fctimer                           | show Fibre Channel timers                              |
| last                              | Show the status of the last cfs commit/abort operation |
| action                            | Show the status of the last cfs commit/abort operation |
| status                            | Show the status of the last cfs commit/abort operation |
| <i>__readonly__</i>               | (Optional) Readonly                                    |
| <i>vsan</i>                       | (Optional) Vsan  |
| <i>last_action_timestamp</i>      | (Optional) Last action timestamp                       |
| <i>last_action</i>                | (Optional) Last action                                 |
| <i>last_action_result</i>         | (Optional) Last action result                          |
| <i>last_action_failure_reason</i> | (Optional) Last action failure reason                  |

### Command Mode

- /exec

## show fctimer pending-diff

show fctimer pending-diff [ \_\_readonly\_\_ <status\_fctimer> ]

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information  |
| fctimer               | show Fibre Channel timers  |
| pending-diff          | Show the difference between pending database and running config            |
| __readonly__          | (Optional)   |
| <i>status_fctimer</i> | (Optional) Show the difference between pending database and running config |

### Command Mode

- /exec

# show fctimer pending

show fctimer pending [ \_\_readonly\_\_ <status\_fctimer> ]

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                        |
| fctimer               | show Fibre Channel timers                              |
| pending               | Show the status of pending fctimer commands            |
| __readonly__          | (Optional)   |
| <i>status_fctimer</i> | (Optional) Show the status of pending fctimer commands |

## Command Mode

- /exec

## show fctimer session status

show fctimer session status [ *\_\_readonly\_\_* [ *<vsan>* ] *<last\_action\_timestamp>* *<last\_action>*  
*<last\_action\_result>* *<last\_action\_failure\_reason>* ]

### Syntax Description

|                                   |  |
|-----------------------------------|--|
| show                              | Show running system information                        |
| fctimer                           | show Fibre Channel timers                              |
| session                           | Show the state of fctimer cfs session                  |
| status                            | Show the status of the last cfs commit/abort operation |
| <i>__readonly__</i>               | (Optional) Readonly                                    |
| <i>vsan</i>                       | (Optional) Vsan  |
| <i>last_action_timestamp</i>      | (Optional) Last action timestamp                       |
| <i>last_action</i>                | (Optional) Last action                                 |
| <i>last_action_result</i>         | (Optional) Last action result                          |
| <i>last_action_failure_reason</i> | (Optional) Last action failure reason                  |

### Command Mode

- /exec

# show fctimer status

show fctimer status [ \_\_readonly\_\_ <Distribution> ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information         |
| fctimer             | show Fibre Channel timers               |
| status              | cfs distribution is enabled or disabled |
| __readonly__        | (Optional) read only                    |
| <i>Distribution</i> | (Optional) distribution                 |

## Command Mode

- /exec

## show fctimer vsan

```
show fctimer vsan <i0> [ __readonly__ { TABLE_fctimer <vsan-no> <F_S_TOV> <D_S_TOV> <E_D_TOV>
<R_A_TOV> } [ <non-exist-vsan> ] ]
```

### Syntax Description

|                       |                                 |
|-----------------------|---------------------------------|
| show                  | Show running system information |
| fctimer               | show Fibre Channel timers       |
| vsan                  | Specify VSAN id                 |
| <i>i0</i>             | VSAN id range                   |
| <i>__readonly__</i>   | (Optional) Read only            |
| <i>TABLE_fctimer</i>  | (Optional) table                |
| <i>vsan-no</i>        | (Optional) vsan number          |
| <i>F_S_TOV</i>        | (Optional) F_S_TOV              |
| <i>D_S_TOV</i>        | (Optional) D_S_TOV              |
| <i>E_D_TOV</i>        | (Optional) E_D_TOV              |
| <i>R_A_TOV</i>        | (Optional) R_A_TOV              |
| <i>non-exist-vsan</i> | (Optional) non exist vsans      |

### Command Mode

- /exec

# show fdmi database

show fdmi database

## Syntax Description

|          |                                 |
|----------|---------------------------------|
| show     | Show running system information |
| fdmi     | Show fdmi information           |
| database | show fdmi database              |

## Command Mode

- /exec

# show fdmi database detail

show fdmi database detail

## Syntax Description

|          |                                 |
|----------|---------------------------------|
| show     | Show running system information |
| fdmi     | Show fdmi information           |
| database | show fdmi database              |
| detail   | show all objects in each entry  |

## Command Mode

- /exec

# show fdmi database detail hba-id vsan

show fdmi database detail hba-id <wwn0> vsan <i1>

## Syntax Description

|             |                                   |
|-------------|-----------------------------------|
| show        | Show running system information   |
| fdmi        | Show fdmi information             |
| database    | show fdmi database                |
| detail      | show all objects in each entry    |
| hba-id      | show entries for the given HBA id |
| <i>wwn0</i> | HBA id                            |
| vsan        | show HBA id the given vsan        |
| <i>i1</i>   | VSAN id                           |

## Command Mode

- /exec

## show fdmi database detail vsan

show fdmi database detail vsan <i0>

### Syntax Description

|           |                                    |
|-----------|------------------------------------|
| show      | Show running system information    |
| fdmi      | Show fdmi information              |
| database  | show fdmi database                 |
| detail    | show all objects in each entry     |
| vsan      | show entries for the given vsan(s) |
| <i>i0</i> | VSAN id range                      |

### Command Mode

- /exec

# show fdmi database vsan

show fdmi database vsan <i0>

## Syntax Description

|           |                                    |
|-----------|------------------------------------|
| show      | Show running system information    |
| fdmi      | Show fdmi information              |
| database  | show fdmi database                 |
| vsan      | show entries for the given vsan(s) |
| <i>i0</i> | VSAN id range                      |

## Command Mode

- /exec

# show fdmi suppress-updates

show fdmi suppress-updates

## Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information            |
| fdmi             | Show fdmi information                      |
| suppress-updates | Show vsans on which updates are suppressed |

## Command Mode

- /exec

## show feature-set

```
show feature-set [ <name> ] [ <id> ] [ __readonly__ TABLE_cfcFeatureSetTable <cfcFeatureSetIndex>
<cfcFeatureSetName> <cfcFeatureSetAction> <cfcFeatureSetLastAction> <cfcFeatureSetLastActionResult>
<cfcFeatureSetLastFailureReason> <cfcFeatureSetOpStatus> <cfcFeatureSetOpStatusReason> ]
```

### Syntax Description

|                                       |                                    |
|---------------------------------------|------------------------------------|
| show                                  | Show running system information    |
| feature-set                           | Show feature set status            |
| <i>name</i>                           | (Optional) feature-set name        |
| <i>id</i>                             | (Optional) feature-set id          |
| <i>__readonly__</i>                   | (Optional)                         |
| <i>TABLE_cfcFeatureSetTable</i>       | (Optional) feature-set table       |
| <i>cfcFeatureSetIndex</i>             | (Optional) feature-set table index |
| <i>cfcFeatureSetName</i>              | (Optional) feature-set name        |
| <i>cfcFeatureSetAction</i>            | (Optional) action                  |
| <i>cfcFeatureSetLastAction</i>        | (Optional) last action             |
| <i>cfcFeatureSetLastActionResult</i>  | (Optional) last action result      |
| <i>cfcFeatureSetLastFailureReason</i> | (Optional) last failure reason     |
| <i>cfcFeatureSetOpStatus</i>          | (Optional) operation status        |
| <i>cfcFeatureSetOpStatusReason</i>    | (Optional) operation status        |

### Command Mode

- /exec

# show feature-set services

```
show feature-set services <s0> [ __readonly__ [ { TABLE_services <service_name> } ] { <count>
<feature_set> } ]
```

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                  |
| feature-set         | Show feature set status                          |
| services            | Show services in feature set                     |
| __readonly__        | (Optional)                                       |
| TABLE_services      | (Optional) all service names in feature set      |
| <i>service_name</i> | (Optional) name of the service                   |
| <i>count</i>        | (Optional) number of services in the feature set |
| <i>feature_set</i>  | (Optional) feature set name                      |
| <i>s0</i>           | Name of feature set                              |

## Command Mode

- /exec

# show feature

```
show feature [ __readonly__ [ { TABLE_cfcFeatureCtrlTable <cfcFeatureCtrlIndex2>
<cfcFeatureCtrlInstanceNum2> <cfcFeatureCtrlName2> <cfcFeatureCtrlAction2> <cfcFeatureCtrlLastAction2>
<cfcFeatureCtrlLastActionResult2> <cfcFeatureCtrlLastFailureReason2> <cfcFeatureCtrlOpStatus2>
<cfcFeatureCtrlOpStatusReason2> <cfcFeatureCtrlTag2> } ] ]
```

## Syntax Description

|   |  |
|---|--|
| show                                    | Show running system information  |
| feature                                 | Show feature status  |
| __readonly__                            | (Optional)   |
| TABLE_cfcFeatureCtrlTable               | (Optional) feature table   |
| <i>cfcFeatureCtrlIndex2</i>             | (Optional) feature table index   |
| <i>cfcFeatureCtrlInstanceNum2</i>       | (Optional) instance number   |
| <i>cfcFeatureCtrlName2</i>              | (Optional) feature name  |
| <i>cfcFeatureCtrlAction2</i>            | (Optional) Action to be triggered for the feature                                |
| <i>cfcFeatureCtrlLastAction2</i>        | (Optional) Last action triggered for the feature                                 |
| <i>cfcFeatureCtrlLastActionResult2</i>  | (Optional) The result of execution of the last action                            |
| <i>cfcFeatureCtrlLastFailureReason2</i> | (Optional) Failure Reason  |
| <i>cfcFeatureCtrlOpStatus2</i>          | (Optional) operation status  |
| <i>cfcFeatureCtrlOpStatusReason2</i>    | (Optional) Reason for current operation status                                   |
| <i>cfcFeatureCtrlTag2</i>               | (Optional) Name of the instance in string format in case of multinstance feature |

## Command Mode

- /exec

# show fhrp

```
show fhrp [ <intf> ] [ __readonly__ { TABLE_brief <intf_name> <intf_state> <ipv4_state> <ipv6_state>
<hardware_status> <refcount> } ]
```

## Syntax Description

|                        |  |
|------------------------|--|
| fhrp                   | FHRP Show commands                               |
| show                   | Show running system information                  |
| <i>intf</i>            | (Optional) Specify a single interface            |
| <i>__readonly__</i>    | (Optional)                                       |
| TABLE_brief            | (Optional) Show brief FHRP interface information |
| <i>intf_name</i>       | (Optional) Interface name                        |
| <i>intf_state</i>      | (Optional) Interface state                       |
| <i>ipv4_state</i>      | (Optional) Interface IPv4 state                  |
| <i>ipv6_state</i>      | (Optional) Interface IPv6 state                  |
| <i>hardware_status</i> | (Optional) Interface hardware status             |
| <i>refcount</i>        | (Optional) Interface refcount                    |

## Command Mode

- /exec

## show fhrp verbose

```
show fhrp [ <intf> ] verbose [ __readonly__ { TABLE_det <intf_name> <handle> <refcount> { TABLE_clients
<client_id> <client_name> } <running> <expired> <v_retries> <v_time> <r_delay> <min_delay>
<remaining_delay> <i_state> <ipv4_state> <ipv6_state> <h_state> <int_l2> } ]
```

### Syntax Description

|                 |  |
|-----------------|--|
| fhrp            | FHRP Show commands                             |
| show            | Show running system information                |
| intf            | (Optional) Specify a single interface          |
| verbose         | Display detailed information                   |
| __readonly__    | (Optional)                                     |
| TABLE_det       | (Optional) Detailed FHRP interface information |
| intf_name       | (Optional) Interface name                      |
| handle          | (Optional) Interface handle                    |
| refcount        | (Optional) Reference count                     |
| TABLE_clients   | (Optional) FHRP clients present on interface   |
| client_id       | (Optional) FHRP client id                      |
| client_name     | (Optional) FHRP client name                    |
| running         | (Optional) Time verify up timer running        |
| expired         | (Optional) Verify up timer has expired         |
| v_retries       | (Optional) Verify retries                      |
| v_time          | (Optional) Verify remaining time               |
| r_delay         | (Optional) Reload delay                        |
| min_delay       | (Optional) Min delay                           |
| remaining_delay | (Optional) Remaining delay                     |
| i_state         | (Optional) Interface state                     |
| ipv4_state      | (Optional) Interface IPv4 state                |
| ipv6_state      | (Optional) Interface IPv6 state                |
| h_state         | (Optional) Interface hardware state            |
| int_l2          | (Optional) Interface is L2-only                |

**Command Mode**

- /exec

# show file

```
show file <uri0> [ cksum | md5sum | sha256sum | sha512sum ] [ __readonly__ { [ <file_content> ] + [
<file_content_cksum> ] [ <file_content_md5sum> ] [ <file_content_sha256sum> ] [ <file_content_sha512sum>
] } ]
```

## Syntax Description

|                               |  |
|-------------------------------|--|
| show                          | Show running system information                |
| file                          | Displays content of files                      |
| <i>uri0</i>                   | Filename to be displayed                       |
| cksum                         | (Optional) Displays CRC checksum for a file    |
| md5sum                        | (Optional) Displays MD5 checksum for a file    |
| sha256sum                     | (Optional) Displays SHA256 checksum for a file |
| sha512sum                     | (Optional) Displays SHA512 checksum for a file |
| <i>__readonly__</i>           | (Optional) Read only                           |
| <i>file_content</i>           | (Optional) uri file content buffer string      |
| <i>file_content_cksum</i>     | (Optional) uri file content checksum           |
| <i>file_content_md5sum</i>    | (Optional) uri file content md5sum             |
| <i>file_content_sha256sum</i> | (Optional) uri file content sha256sum          |
| <i>file_content_sha512sum</i> | (Optional) uri file content sha512sum          |

## Command Mode

- /exec

## show fips status

```
show fips status [ __readonly__ { operation_status <o_status> } { mode_state <m_state> } [ TABLE_sessions
<lc_num> <lc_status> ] ]
```

### Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information            |
| fips             | Show if FIPS mode is enabled or disabled   |
| status           | Whether FIPS mode is enabled or disabled   |
| __readonly__     | (Optional)                                 |
| operation_status | (Optional) run-time information about fips |
| <i>o_status</i>  | (Optional) operational status of fips      |
| mode_state       | (Optional) mode state                      |
| <i>m_state</i>   | (Optional) fips or non-fips state          |
| TABLE_sessions   | (Optional) all lc status                   |
| <i>lc_num</i>    | (Optional) the lc number                   |
| <i>lc_status</i> | (Optional) the lc status                   |

### Command Mode

- /exec

# show flogi auto-area-list

show flogi auto-area-list

## Syntax Description

|                |  |
|----------------|--|
| show           | Show running system information            |
| flogi          | Show information about FLOGI               |
| auto-area-list | Show list of ouis that are allocated area. |

## Command Mode

- /exec

# show flogi database

```
show flogi database [ { details | [ fcid <fcid0> ] [ details ] | [ interface <if0> ] [ details ] | [ vsan <i1> ] [ details ] } ]
```

## Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                             |
| flogi        | Show information about FLOGI                                |
| database     | Show information about FLOGI sessions                       |
| details      | (Optional) details: shows fcid allocation details           |
| fcid         | (Optional) fcid: enter the fcid to be matched               |
| <i>fcid0</i> | (Optional) Enter fcid                                       |
| details      | (Optional) details: shows fcid allocation details           |
| interface    | (Optional) interface id: enter the interface id of the port |
| <i>if0</i>   | (Optional) Enter interface id                               |
| details      | (Optional) details: shows fcid allocation details           |
| vsan         | (Optional) vsan id: Enter the vsan number                   |
| <i>i1</i>    | (Optional) Enter vsan                                       |
| details      | (Optional) details: shows fcid allocation details           |

## Command Mode

- /exec

# show flow cache

```
show flow cache [ ipv4 | ipv6 | ce ] [ __readonly__ [ { TABLE_flow_cache <flow-cache-index> [ <flow-type> ] [ <source-ip> ] [ <destination-ip> ] [ <source-mac> ] [ <destination-mac> ] [ <bridge-domain-id> ] [ <ether-type> ] [ <source-port> ] [ <destination-port> ] [ <protocol> ] [ <ipv6-flowlabel> ] [ <byte-count> ] [ <packet-count> ] [ <tcp-flags> ] [ <tos> ] [ <if-id> ] [ <output-if-id> ] [ <flow-start> ] [ <flow-end> } } ] ] ]
```

## Syntax Description

|                         |                                     |
|-------------------------|-------------------------------------|
| show                    | Show running system information     |
| flow                    | Show NetFlow information            |
| cache                   | Show NetFlow Exporter Cache         |
| ipv4                    | (Optional) Show ipv4 cache entries  |
| ipv6                    | (Optional) Show ipv6 cache entries  |
| ce                      | (Optional) Show ce cache entries    |
| __readonly__            | (Optional)                          |
| TABLE_flow_cache        | (Optional) The XML flow cache table |
| <i>flow-cache-index</i> | (Optional) Flow Index               |
| <i>flow-type</i>        | (Optional) Flow type - v4,v6 or MAC |
| <i>source-ip</i>        | (Optional) Source IP                |
| <i>destination-ip</i>   | (Optional) Destination IP           |
| <i>source-mac</i>       | (Optional) Source MAC               |
| <i>destination-mac</i>  | (Optional) Destination MAC          |
| <i>bridge-domain-id</i> | (Optional) Bridge Domain ID         |
| <i>ether-type</i>       | (Optional) Ether Type               |
| <i>source-port</i>      | (Optional) Source Port              |
| <i>destination-port</i> | (Optional) Destination Port         |
| <i>protocol</i>         | (Optional) Protocol                 |
| <i>ipv6-flowlabel</i>   | (Optional) Ipv6 flowlabel           |
| <i>byte-count</i>       | (Optional) Byte Count               |
| <i>packet-count</i>     | (Optional) Packet Count             |
| <i>tcp-flags</i>        | (Optional) TCP Flags                |

|                     |                            |
|---------------------|----------------------------|
| <i>tos</i>          | (Optional) TOS             |
| <i>if-id</i>        | (Optional) IF ID           |
| <i>output-if-id</i> | (Optional) OUTPUT IF ID    |
| <i>flow-start</i>   | (Optional) Flow Start Time |
| <i>flow-end</i>     | (Optional) Flow End Time   |

**Command Mode**

- /exec

# show flow cache

```
show flow cache [ ipv4 | ipv6 | ce ] [ __readonly__ TABLE_flow_cache <flow-type> <source-ip>
<destination-ip> <bridge-domain-id> <source-port> <destination-port> <protocol> <ipv6-flowlabel>
<byte-count> <packet-count> <tcp-flags> <tos> <if-id> <flow-start> <flow-end> <source-mac>
<destination-mac> <ether-type> ]
```

## Syntax Description

## Command Mode

- /exec

# show flow monitor

```
show flow monitor [ name ] [ <monitor> [ cache [ detailed ] ] ] [ __readonly__ [ { TABLE_flow_monitor
<monitor> <use_count> [ <description> ] <record> <exporter1> <exporter2> <bucket_id> <src_addr>
<dest_addr> <direction> <pkt_count> <byte_count> } ] ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information           |
| flow                | Show NetFlow information                  |
| monitor             | Show Monitor Configuration                |
| name                | (Optional) Show a specific Flow Monitor   |
| <i>monitor</i>      | (Optional) Specify a monitor              |
| cache               | (Optional) Flow monitor cache contents    |
| detailed            | (Optional) Show the entire cache contents |
| <i>__readonly__</i> | (Optional)                                |
| TABLE_flow_monitor  | (Optional)                                |
| <i>monitor</i>      | (Optional)                                |
| <i>use_count</i>    | (Optional)                                |
| <i>description</i>  | (Optional)                                |
| <i>record</i>       | (Optional)                                |
| <i>exporter1</i>    | (Optional)                                |
| <i>exporter2</i>    | (Optional)                                |
| <i>bucket_id</i>    | (Optional)                                |
| <i>src_addr</i>     | (Optional)                                |
| <i>dest_addr</i>    | (Optional)                                |
| <i>direction</i>    | (Optional)                                |
| <i>pkt_count</i>    | (Optional)                                |
| <i>byte_count</i>   | (Optional)                                |

## Command Mode

- /exec

## show flow profile

```
show flow profile [ <profile> ] [ __readonly__ [ { TABLE_flow_profile <name> [ <desc> ] <number-of-users>
<export-intvl> <source-port> <packet-id-shift> <burst-intvl-shift> <mtu> [ <guess-threshold-lo> ] [
<guess-threshold-hi> ] [ { TABLE_payload_bin <payload-bin-num> <payload-bin-lo> <payload-bin-hi> }
] [ { TABLE_tcpopthdr_bin <tcpopthdr-bin-num> <tcpopthdr-bin-lo> <tcpopthdr-bin-hi> } ] [ {
TABLE_rcvwinsize_bin <rcvwinsize-bin-num> <rcvwinsize-bin-lo> <rcvwinsize-bin-hi> } ] } ] ] ]
```

### Syntax Description

|                           |   |
|---------------------------|---|
| show                      | Show running system information               |
| flow                      | Show Analytics information                    |
| profile                   | Show profile Configuration                    |
| <i>profile</i>            | (Optional) Specify a profile                  |
| <i>__readonly__</i>       | (Optional)                                    |

| distribution           | FIB distribution information     |
| multicast              | Multicast                        |
| client-ack-db          | Displays the client ack db       |
| <i>__readonly__</i>    | (Optional)                       |
| <i>xid</i>             | (Optional) XID                   |
| <i>num_receipients</i> | (Optional) Number of receipients |
| <i>num_responses</i>   | (Optional) Number of responses   |

### Command Mode

- /exec

# show forwarding distribution multicast client

show forwarding distribution multicast client [ *\_\_readonly\_\_* <num-clients> <client-name> <client-id> <shmem-name> ]

## Syntax Description

|                     |  |
|---------------------|--|
| show                |  |
| forwarding          | Display Forwarding Information                 |
| distribution        | FIB distribution information                   |
| multicast           | Multicast information                          |
| client              | Show multicast distribution client information |
| <i>__readonly__</i> | (Optional)                                     |
| <i>num-clients</i>  | (Optional) Number of Clients registered        |
| <i>client-name</i>  | (Optional) Client Name                         |
| <i>client-id</i>    | (Optional) Client-id                           |
| <i>shmem-name</i>   | (Optional) Shared Memory Segment Name          |

## Command Mode

- /exec

# show forwarding distribution multicast download

```
show forwarding distribution multicast download [ __readonly__ [ TABLE_MFDM_DOWNLOAD_INFO
<db_type> [ TABLE_MFDM_PENDING_INFO [ <table_id> ] ] ] ]
```

## Syntax Description

|                          |  |
|--------------------------|--|
| show                     |  |
| forwarding               | forwarding information                 |
| distribution             | FIB distribution information           |
| multicast                | Multicast FIB distribution information |
| download                 | show download queues                   |
| <i>__readonly__</i>      | (Optional)                             |
| TABLE_MFDM_DOWNLOAD_INFO | (Optional) MFDM download info          |
| <i>db_type</i>           | (Optional) Database type               |
| TABLE_MFDM_PENDING_INFO  | (Optional) Routes Pending info         |
| <i>table_id</i>          | (Optional) Table ID                    |

## Command Mode

- /exec

# show forwarding distribution multicast mfib

```
show forwarding distribution multicast { mfib-txlist [ vrf <vrf-name> ] | mfib-buffers } [ __readonly__
<no-free-buffers> <no-used-buffers> ]
```

## Syntax Description

|                        |   |
|------------------------|---|
| show                   |   |
| forwarding             | Display Forwarding Information                |
| distribution           | FIB distribution information                  |
| multicast              | Multicast information                         |
| mfib-txlist            | Show MFIB transmission-list information       |
| vrf                    | (Optional) Specify VRF                        |
| <i>vrf-name</i>        | (Optional) Specify VRF name                   |
| mfib-buffers           | Show MFIB route buffer information            |
| __readonly__           | (Optional)                                    |
| <i>no-free-buffers</i> | (Optional) Number of Free txlist MFIB buffers |
| <i>no-used-buffers</i> | (Optional) Number of Used txlist MFIB buffers |

## Command Mode

- /exec

# show forwarding distribution multicast outgoing-interface-list L2\_PRIME

```
show forwarding distribution multicast outgoing-interface-list L2_PRIME [ __readonly__ <index> <dvif>
<platform_index> <ref_count> <l2-oifs> <port_set> ]
```

## Syntax Description

|                         |  |
|-------------------------|--|
| show                    |  |
| forwarding              | Display Forwarding Information           |
| distribution            | FIB distribution information             |
| multicast               | Multicast FIB distribution information   |
| outgoing-interface-list | Outgoing interface list                  |
| L2_PRIME                | Layer 2 oiflist                          |
| <i>index</i>            | (Optional) Outgoing Interface List index |
| <i>__readonly__</i>     | (Optional)                               |
| <i>dvif</i>             | (Optional) Destination VIF               |
| <i>platform_index</i>   | (Optional) Platform index                |
| <i>ref_count</i>        | (Optional) Reference count               |
| <i>l2-oifs</i>          | (Optional) L2 oifs                       |
| <i>port_set</i>         | (Optional) Port set                      |

## Command Mode

- /exec

# show forwarding distribution multicast resp-ack-timer-msgs

show forwarding distribution multicast resp-ack-timer-msgs

## Syntax Description

|                     |                                   |
|---------------------|-----------------------------------|
| show                |                                   |
| forwarding          | Display Forwarding Information    |
| distribution        | FIB distribution information      |
| multicast           | Multicast information             |
| resp-ack-timer-msgs | show response ack timers for MFDM |

## Command Mode

- /exec

## show forwarding distribution multicast route

```
show forwarding distribution [ ip ] multicast route [ table <id> | vrf { <vrf_name> | <vrf-known-name> | all } ] [ [ group { <gaddr> [ <mask> ] | <gprefix> } [ source { <saddr> [ <smask> ] | <sprefix> } ] ] | summary ] [ __readonly__ TABLE_vrf [ <vrf-name> ] [ <table-name> ] [ <table-id> ] [ <table-wildcard> ] [ <total-num-groups> ] [ TABLE_route_summary [ <vrf-name> ] [ <total-num-routes> ] [ <num-star-g-route> ] [ <num-sg-route> ] [ <num-star-g-prfx> ] [ <num-group-count> ] ] [ TABLE_one_route [ <source-addr> ] [ <source-len> ] [ <group-addr> ] [ <group-len> ] [ <df-ordinal> ] [ <rpf-intf> ] [ <flags> ] [ <upstream-addr> ] [ <stats-state> ] [ <stats-pkts> ] [ <stats-bytes> ] [ <oif-count> ] [ <oiflist-index> ] [ TABLE_oif [ <oif-name> ] [ <mti-src-intf> ] [ <mti-grp-ip> ] [ <mti-src-ip> ] [ <next-hop> ] ] ] ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  |   |
| forwarding            | Display Forwarding Information                |
| distribution          | FIB distribution information                  |
| ip                    | (Optional) IPV4 information                   |
| multicast             | Multicast information                         |
| route                 | Multicast route related information           |
| vrf                   | (Optional) Specify VRF                        |
| <i>vrf_name</i>       | (Optional) Specify VRF name                   |
| <i>vrf-known-name</i> | (Optional) Known VRF name                     |
| all                   | (Optional) Display information for all VRFs   |
| table                 | (Optional) Specify Multicast Routing Table    |
| <i>id</i>             | (Optional) Multicast Routing Table Identifier |

- /exec

# show forwarding distribution multicast sr hash-db

show forwarding distribution multicast sr hash-db

## Syntax Description

|              |                                |
|--------------|--------------------------------|
| show         | show                           |
| forwarding   | Display Forwarding Information |
| distribution | FIB distribution information   |
| multicast    | Multicast                      |
| sr           | Service reflect rules          |
| hash-db      | Hash database                  |

## Command Mode

- /exec

# show forwarding distribution multicast vxlan dsg-db

show forwarding distribution multicast vxlan dsg-db

## Syntax Description

|              |                                |
|--------------|--------------------------------|
| show         | show                           |
| forwarding   | Display Forwarding Information |
| distribution | FIB distribution information   |
| multicast    | Multicast                      |
| vxlan        | vxlan                          |
| dsg-db       | delivery group/source db       |

## Command Mode

- /exec

## show forwarding distribution nve overlay-vlan

show forwarding distribution nve overlay-vlan [ *\_\_readonly\_\_* *TABLE\_overlay\_vlan\_peer\_id* <Vlan> <SVP> <install> <Origin> <VFP-region> <peercount> <peer\_id> + ]

### Syntax Description

|                                   |                                       |
|-----------------------------------|---------------------------------------|
| show                              | Show running system information       |
| forwarding                        | forwarding information                |
| distribution                      | fib distribution info                 |
| nve                               | nve distribution info                 |
| overlay-vlan                      | overlay-vlan adjacency info           |
| <i>__readonly__</i>               | (Optional)                            |
| <i>TABLE_overlay_vlan_peer_id</i> | (Optional) overlay vlan peer id table |
| <i>Vlan</i>                       | (Optional) VLAN                       |
| <i>SVP</i>                        | (Optional) SVP                        |
| <i>install</i>                    | (Optional) install                    |
| <i>Origin</i>                     | (Optional) Origin                     |
| <i>VFP-region</i>                 | (Optional) VFP-region                 |
| <i>peercount</i>                  | (Optional) Total count of Peers       |
| <i>peer_id</i>                    | (Optional) Peer-ID                    |

### Command Mode

- /exec

## show forwarding distribution peer-id

```
show forwarding distribution peer-id [ vpls | otv ] [ __readonly__ <header> TABLE_peer_id <app> <vlan>
<id> <peer_id> ]
```

### Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information           |
| forwarding     | forwarding information                    |
| distribution   | fib distribution info                     |
| peer-id        | HW Peer-id allocation info                |
| vpls           | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| otv            | (Optional) OTV                            |
| __readonly__   | (Optional)                                |
| <i>header</i>  | (Optional) Header                         |
| TABLE_peer_id  | (Optional) Peer ID table                  |
| <i>app</i>     | (Optional) OTV/VPLS                       |
| <i>vlan</i>    | (Optional) VLAN                           |
| <i>id</i>      | (Optional) ID                             |
| <i>peer_id</i> | (Optional) Peer-ID                        |

### Command Mode

- /exec

## show forwarding distribution srv6 local-sid bd-mapping

```
show forwarding distribution srv6 local-sid bd-mapping [ __readonly__ { local_sid_bd_map <sid_bd_map>
} [ { TABLE_local_sid <local_sid> <Table_id> <func_type> <bd> <locator> <function> <args> } ] ]
```

### Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information                |
| forwarding              | forwarding information                         |
| distribution            | fib distribution info                          |
| srv6                    | Srv6 related                                   |
| local-sid               | Local SID                                      |
| bd-mapping              | Local Sid to BD mappings                       |
| <i>__readonly__</i>     | (Optional)                                     |
| <i>local_sid_bd_map</i> | (Optional) Local-sid to BD mapping             |
| <i>sid_bd_map</i>       | (Optional) Local-sid to BD mappingi number     |
| <i>TABLE_local_sid</i>  | (Optional) Table with local SID's              |
| <i>local_sid</i>        | (Optional) V6 prefix associated with local-sid |
| <i>Table_id</i>         | (Optional) Table ID                            |
| <i>func_type</i>        | (Optional) Function behavior type              |
| <i>bd</i>               | (Optional) Bridge domain                       |
| <i>locator</i>          | (Optional) Locator V6 address                  |
| <i>function</i>         | (Optional) function                            |
| <i>args</i>             | (Optional) args                                |

### Command Mode

- /exec

# show forwarding distribution trace

show forwarding distribution trace

## Syntax Description

|              |                                |
|--------------|--------------------------------|
| show         |                                |
| forwarding   | Display Forwarding Information |
| distribution | fib distribution info          |
| trace        | unicast trace information      |

## Command Mode

- /exec

## show forwarding ecmp

```
show forwarding ecmp [ { [ vrf { <vrf-name> | <vrf-known-name> } ] lisp } ] [ platform ] [ module <module> ] [ partial ] [ __readonly__ [ <header> <ecmp_hash> <intf> <nh> <v6nh> <hw_index> <num_mpls> <holder> <refcount> <num_paths> <sw_ptr> <ecmp_partial> ] [ TABLE_ecmp { [ <hash> ] [ <num_paths> ] [ <hwinde> ] [ <ecmppartial> ] [ TABLE_index { [ <ecmp_idx> ] [ <cmn_idx> ] } ] [ <refcnt> ] [ <ecmp_holder> ] } ] [ TABLE_adjacency { [ <intf> ] [ <nh> ] [ <v6nh> ] [ <hw_adj_idx> ] [ <hw_cmn_idx> ] [ <lif> ] [ <hw_nve_adj_idx> ] [ <hw_nve_cmn_idx> ] [ <nve_lif> ] } ] [ <vobj_count> ] [ <vxlan_vobj_count> ] [ <vxlan> ] [ <vobj_list_header> ] [ <vobj-id> ] ] ] ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  |  |
| forwarding            | Display fib information                                |
| ecmp                  | Show information about ECMPs                           |
| vrf                   | (Optional) display info per VRF                        |
| <i>vrf-name</i>       | (Optional) VRF name                                    |
| <i>vrf-known-name</i> | (Optional) Known VRF name                              |
| lisp                  | (Optional) Show information about LISP ECMPs           |
| platform              | (Optional) one command to show pi and pd info together |
| module                | (Optional) slot  |
| <i>module</i>         | (Optional) slot number                                 |
| partial               | (Optional) Show partially installed ECMPs              |
| __readonly__          | (Optional)   |
| <i>header</i>         | (Optional) o/p header                                  |

| <i>intf</i>           | (Optional) interface                                   |
| <i>nh</i>             | (Optional) next hop                                    |
| <i>v6nh</i>           | (Optional) V6 next hop                                 |
| <i>hw_index</i>       | (Optional) Hw index                                    |
| <i>num_mpls</i>       | (Optional) No of MPLS ecmp                             |
| <i>holder</i>         | (Optional) holder bitmap                               |
| <i>refcount</i>       | (Optional) refcount                                    |
| <i>sw_ptr</i>         | (Optional) Software pointer                            |

|                         |                             |
|-------------------------|-----------------------------|
| <i>num_paths</i>        | (Optional) No of paths      |
| <i>ecmp_partial</i>     | (Optional) partial ecmp     |
| TABLE_ecmp              | (Optional) ecmp table       |
| <i>hash</i>             | (Optional) ecmp hash        |
| <i>num_paths</i>        | (Optional) No of paths      |
| <i>hwindex</i>          | (Optional) Hw index         |
| <i>ecmppartial</i>      | (Optional) partial ecmp     |
| TABLE_index             | (Optional) index table      |
| <i>ecmp_idx</i>         | (Optional) hw ecmp index    |
| <i>cmn_idx</i>          | (Optional) cmn index        |
| <i>refcnt</i>           | (Optional) refcount         |
| <i>ecmp_holder</i>      | (Optional) holder bitmap    |
| TABLE_adjacency         | (Optional) adjacency table  |
| <i>intf</i>             | (Optional) interface        |
| <i>nh</i>               | (Optional) next hop         |
| <i>v6nh</i>             | (Optional) v6 next hop      |
| <i>hw_adj_idx</i>       | (Optional) hw adj index     |
| <i>hw_cmn_idx</i>       | (Optional) hw cmn index     |
| <i>lif</i>              | (Optional) lif              |
| <i>hw_nve_adj_idx</i>   | (Optional) nve adj index    |
| <i>hw_nve_cmn_idx</i>   | (Optional) nve cmn index    |
| <i>nve_lif</i>          | (Optional) nve lif          |
| <i>vobj_count</i>       | (Optional) vobj count       |
| <i>vxlan_vobj_count</i> | (Optional) vxlan vobj count |
| <i>vxlan</i>            | (Optional) vxlan            |
| <i>vobj_list_header</i> | (Optional) vobj list header |
| <i>vobj-id</i>          | (Optional) vobj id          |

**Command Mode**

- /exec

## show forwarding ecmp recursive

```
show forwarding ecmp recursive [ platform ] [ srv6 ] [ max-display-count <display_count> ] [ module <module> ] [ partial ] [ __readonly__ [ TABLE_vobj { [ <header_vobj> ] [ <header_ecmp> } ] [ TABLE_vobj_idx { [ <hw_vobj_index> ] [ <cmn_index> } ] ] [ <num_pfxs> ] [ <ecmp_partial> ] [ <activepath_hdr> ] [ <ecmp_hw_prog_fail> ] [ TABLE_active { [ TABLE_activepath { [ <ap_nh> ] [ <ap_v6nh> ] [ <ap_rnh_len> ] [ <ap_nh_vpn_label> ] [ <ap_rnh_table_id> ] [ <ap_nh_weight> } ] } ] [ <backuppath_hdr> ] [ TABLE_backuppath { [ <bp_nh> ] [ <bp_v6nh> ] [ <bp_nh_vpn_label> ] [ <bp_rnh_table_id> ] [ <bp_nh_weight> } ] ] [ <cnh_hdr> ] [ TABLE_cnh { [ <nh> ] [ <v6nh> ] [ <intf> ] [ TABLE_cnh_adj { [ <hw_adj> ] [ <hw_cmn_index> ] [ <lif> } ] } ] [ <hw_inst_n> ] [ <ls_count_n> ] [ <hw_inst_o> ] [ <ls_count_o> ] [ <fec_type> ] [ <header_fec_ecmp> ] [ <hw_vobj_fec_idx> ] [ <cmn_idx> ] [ <vobj_hw_inst_n> ] [ <vobj_ls_count_n> ] [ <vobj_hw_inst_o> ] [ <vobj_ls_count_o> ] [ <vobj_refcount> ] [ <vobj_function> ] [ TABLE_vobj_ecmp { [ <ec_hash> ] [ <ec_num_paths> ] [ <ec_hwinde> ] [ <ec_ecmpartial> ] [ <ec_refcnt> ] [ <ec_ecmp_holder> } ] [ TABLE_adjacency_ec { [ <ec_intf> ] [ <ec_nh> ] [ <ec_v6nh> ] [ <ec_hw_adj_idx> ] [ <ec_hw_cmn_idx> ] [ <ec_lif> ] [ <ec_hw_nve_adj_idx> ] [ <ec_hw_nve_cmn_idx> ] [ <ec_nve_lif> } ] } ] [ <ec_vobj_count> ] [ <ec_vxlan_vobj_count> ] [ <ec_vxlan> ] [ <ec_vobj_list_header> ] ] ] [ <header> <num_pfxs> <rn timer_id> <rn timer_len> <v6nh> <hw_instance> <nh_vpn_label> <nh_weight> <cnh_intf> <ecmp_partial> ] [ TABLE_ecmp { [ <hash> ] [ <num_paths> ] [ <hwinde> ] [ <ecmpartial> ] [ TABLE_index { [ <ecmp_idx> ] [ <cmn_idx> } ] ] [ <refcnt> ] [ <ecmp_holder> } ] [ TABLE_adjacency { [ <intf> ] [ <nh> ] [ <v6nh> ] [ <hw_adj_idx> ] [ <hw_cmn_idx> ] [ <lif> ] [ <hw_nve_adj_idx> ] [ <hw_nve_cmn_idx> ] [ <nve_lif> } ] } ] [ <vobj_count> ] [ <vxlan_vobj_count> ] [ <vxlan> ] [ <vobj_list_header> ] [ TABLE_vobj_id { [ <vobj-id> } ] ] [ <vobj_function> ] ] ]
```

### Syntax Description

|                      |  |
|----------------------|--|
| show                 |  |
| forwarding           | Display fib information                                |
| ecmp                 | Show information about ECMPs                           |
| recursive            | Show information about recursive ECMPs                 |
| platform             | (Optional) one command to show pi and pd info together |
| srv6                 | (Optional) Show information about SRV6 encap           |
| module               | (Optional) slot  |
| partial              | (Optional) Show partially installed ECMPs              |
| <i>module</i>        | (Optional) slot number                                 |
| max-display-count    | (Optional) displays max # of routes                    |
| <i>display_count</i> | (Optional) count                                       |
| <i>__readonly__</i>  | (Optional)   |
| TABLE_vobj           | (Optional) Table vobj                                  |
| <i>header_vobj</i>   | (Optional) vobj o/p header                             |

|                          |   |
|--------------------------|---|
| <i>header_ecmp</i>       | (Optional) ecmp o/p header                              |
| TABLE_vobj_idx           | (Optional) Table vobj index                             |
| <i>hw_vobj_index</i>     | (Optional) HW VOBJ Index                                |
| <i>cmn_index</i>         | (Optional) cmn index                                    |
| <i>num_pfxs</i>          | (Optional) Number of prefixes using this virtual object |
| <i>ecmp_partial</i>      | (Optional) partial ecmp                                 |
| <i>ecmp_hw_prog_fail</i> | (Optional) Ecmp Hardware Program failure                |
| <i>actvepath_hdr</i>     | (Optional) o/p header                                   |
| TABLE_active             | (Optional) table active                                 |
| TABLE_activepath         | (Optional) table active path                            |
| <i>ap_nh</i>             | (Optional) Next hop info                                |
| <i>ap_v6nh</i>           | (Optional) v6 Next hop info                             |
| <i>ap_rnh_len</i>        | (Optional) Next hop mask length                         |
| <i>ap_nh_vpn_label</i>   | (Optional) NH VPN label                                 |
| <i>ap_rnh_table_id</i>   | (Optional) The table id where the RNHs are present      |
| <i>ap_nh_weight</i>      | (Optional) weighted ecmp info                           |
| <i>backuppath_hdr</i>    | (Optional) o/p header                                   |
| TABLE_backuppath         | (Optional) backup path table                            |
| <i>bp_nh</i>             | (Optional) Next hop info                                |
| <i>bp_v6nh</i>           | (Optional) v6 Next hop info                             |
| <i>bp_nh_vpn_label</i>   | (Optional) NH VPN label                                 |
| <i>bp_rnh_table_id</i>   | (Optional) The table id where the RNHs are present      |
| <i>bp_nh_weight</i>      | (Optional) weighted ecmp info                           |
| <i>cnh_hdr</i>           | (Optional) o/p header                                   |
| TABLE_cnh                | (Optional) cnh table                                    |
| <i>nh</i>                | (Optional) Next hop info                                |
| <i>v6nh</i>              | (Optional) v6 Next hop info                             |
| <i>intf</i>              | (Optional) cnh output interface                         |
| TABLE_cnh_adj            | (Optional) Table cnh adjacency                          |

|                        |                                       |
|------------------------|---------------------------------------|
| <i>hw_adj</i>          | (Optional) cnh hw adjacency           |
| <i>hw_cmn_index</i>    | (Optional) cnh hw cmn idx             |
| <i>lif</i>             | (Optional) lif                        |
| <i>hw_inst_n</i>       | (Optional) Hardware instance info new |
| <i>ls_count_n</i>      | (Optional) ls count new               |
| <i>hw_inst_o</i>       | (Optional) Hardware instance info old |
| <i>ls_count_o</i>      | (Optional) ls count old               |
| <i>fec_type</i>        | (Optional) fec type                   |
| <i>header_fec_ecmp</i> | (Optional) o/p header                 |
| <i>hw_vobj_fec_idx</i> | (Optional) hw fec idx                 |
| <i>cmn_idx</i>         | (Optional) cmn idx                    |
| <i>vobj_hw_inst_n</i>  | (Optional) vobj hw instance           |
| <i>vobj_ls_count_n</i> | (Optional) ls count new               |
| <i>vobj_hw_inst_o</i>  | (Optional) hw instnace info old       |
| <i>vobj_ls_count_o</i> | (Optional) ls count old               |
| <i>vobj_refcount</i>   | (Optional) vobj refcount              |
| <i>vobj_function</i>   | (Optional) vobj function              |
| TABLE_vobj_ecmp        | (Optional) ecmp table                 |
| <i>ec_hash</i>         | (Optional) ecmp hash                  |
| <i>ec_num_paths</i>    | (Optional) No of paths                |
| <i>ec_hwindex</i>      | (Optional) Hw index                   |
| <i>ec_ecmppartial</i>  | (Optional) partial ecmp               |
| <i>ec_refcnt</i>       | (Optional) refcount                   |
| <i>ec_ecmp_holder</i>  | (Optional) holder bitmap              |
| TABLE_adjacency_ec     | (Optional) adjacency table            |
| <i>ec_intf</i>         | (Optional) interface                  |
| <i>ec_nh</i>           | (Optional) next hop                   |
| <i>ec_v6nh</i>         | (Optional) v6 next hop                |
| <i>ec_hw_adj_idx</i>   | (Optional) hw adj index               |

|                            |   |
|----------------------------|---|
| <i>ec_hw_cmn_idx</i>       | (Optional) hw cmn index                                 |
| <i>ec_lif</i>              | (Optional) lif  |
| <i>ec_hw_nve_adj_idx</i>   | (Optional) nve adj index                                |
| <i>ec_hw_nve_cmn_idx</i>   | (Optional) nve cmn index                                |
| <i>ec_nve_lif</i>          | (Optional) nve lif                                      |
| <i>ec_vobj_count</i>       | (Optional) vobj count                                   |
| <i>ec_vxlan_vobj_count</i> | (Optional) vxlan vobj count                             |
| <i>ec_vxlan</i>            | (Optional) vxlan  |
| <i>ec_vobj_list_header</i> | (Optional) vobj list header                             |
| <i>vobj_function</i>       | (Optional) vobj function                                |
| <i>header</i>              | (Optional) o/p header                                   |
| <i>num_pfxs</i>            | (Optional) Number of prefixes using this virtual object |
| <i>rnh_table_id</i>        | (Optional) The table id where the RNHs are present      |
| <i>nh</i>                  | (Optional) Next hop info                                |
| <i>rnh_len</i>             | (Optional) Next hop mask length                         |
| <i>v6nh</i>                | (Optional) V6 Next hop info                             |
| <i>hw_instance</i>         | (Optional) Hardware instance info                       |
| <i>nh_vpn_label</i>        | (Optional) NH VPN label                                 |
| <i>nh_weight</i>           | (Optional) weighted ecmp info                           |

```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  |   |
| forwarding            | display fib information                     |
| ipv6                  | ipv6  |
| multicast             | IPV6 related Multicast information          |
| route                 | Multicast route information                 |
| vrf                   | (Optional) display info per VRF             |
| <i>vrf-name</i>       | (Optional) VRF name                         |
| <i>vrf-known-name</i> | (Optional) Known VRF name                   |
| all                   | (Optional) Display information for all VRFs |
| table                 | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED   |
| <i>tab_id</i>         | (Optional) table number                     |
| group                 | (Optional) Multicast IPv6 Group Address     |
| source                | (Optional) Multicast IPv6 Source Address    |
| summary               | display route counts                        |
| module                | (Optional) slot                             |
| <i>module</i>         | (Optional) slot number                      |
| __readonly__          | (Optional)                                  |
| <i>table_type</i>     | (Optional) Table Type                       |
| <i>vrfname</i>        | (Optional) VRF name                         |
| <i>table_id</i>       | (Optional) Table ID                         |

|                               |   |
|-------------------------------|---|
| <i>num_routes</i>             | (Optional) Number of routes                               |
| <i>num_starg_routes</i>       | (Optional) Number of (*,G) routes                         |
| <i>num_sg_routes</i>          | (Optional) Number of (S,G) routes                         |
| <i>num_gprefix_routes</i>     | (Optional) Number of (*,G-prefix) routes                  |
| <i>num_groups</i>             | (Optional) Number of group entries in the table           |
| <i>num_prefix_insert_fail</i> | (Optional) Prefix insert fail count                       |
| <i>num_sources</i>            | (Optional) Number of (S, G) entries for the group address |
| TABLE_MROUTE_INFO             | (Optional) Mroute info                                    |
| <i>address</i>                | (Optional) Mcast address                                  |
| <i>src_len</i>                | (Optional) Source Address Mask                            |
| <i>grp_len</i>                | (Optional) Group address Mask                             |
| <i>df_ordinal</i>             | (Optional) DF ordinal                                     |
| <i>rpfif</i>                  | (Optional) RPF interface                                  |
| <i>rpf_ifindex</i>            | (Optional) RPF Interface ifIndex                          |
| <i>flag</i>                   | (Optional) Route type flag                                |
| <i>flag_value</i>             | (Optional) hex value of route flag                        |
| <i>route_pkts</i>             | (Optional) Route packet count                             |
| <i>route_bytes</i>            | (Optional) Route bytes                                    |
| <i>oiflist_id</i>             | (Optional) OIF list Identifier                            |
| <i>oif_count</i>              | (Optional) Number of OIFs                                 |
| <i>oiflist_flag</i>           | (Optional) OIF List flag                                  |
| TABLE_OIF_INFO                | (Optional) OIF Info                                       |
| <i>oifindex</i>               | (Optional) OIF Interface ifIndex                          |
| <i>vlan</i>                   | (Optional) Vlan id  |
| TABLE_MCAST_OIF_INTF_INFO     | (Optional) OIF Interfaces                                 |
| <i>oifname</i>                | (Optional) OIF Interface name                             |
| <i>dvif</i>                   | (Optional) DVIF   |
| <i>platform_id</i>            | (Optional) Platform-index                                 |
| <i>encap_id</i>               | (Optional) Encap ID                                       |

|                 |                           |
|-----------------|---------------------------|
| <i>hw_index</i> | (Optional) Hardware index |
|-----------------|---------------------------|

**Command Mode**

- /exec

# show forwarding kvfib cache on

show forwarding kvfib cache { on | off }

## Syntax Description

|            |                 |
|------------|-----------------|
| show       |                 |
| forwarding | fib information |
| kvfib      | kvfib           |
| cache      | cache           |
| on         | set variable    |
| off        | reset variable  |

## Command Mode

- /exec

# show forwarding l2 multicast

```
show forwarding l2 multicast { [ { vlan <vlan-id> [ { group <grpaddr> source <srcaddr> } | { group
<v6grpaddr> source <v6srcaddr> } | destination-mac <dstmac> } ] } ] [ vdc <vdc-id> ] [ module <num> ] [

## show forwarding mpls drop-stats

```
show forwarding mpls drop-stats [ platform | label0-fwd-stats ] [ __readonly__ [ { TABLE_drop_stats
<unit-number> <pkts> <bytes> } ] ]
```

### Syntax Description

|                    |  |
|--------------------|--|
| show               | show   |
| forwarding         | forwarding                                     |
| mpls               | mpls forwarding                                |
| drop-stats         | MPLS dropped packets                           |
| platform           | (Optional) command to display stats per chip   |
| label0-fwd-stats   | (Optional) command to display stats for label0 |
| __readonly__       | (Optional)                                     |
| TABLE_drop_stats   | (Optional) Table for mpls drop stats           |
| <i>unit-number</i> | (Optional) unit number                         |
| <i>pkts</i>        | (Optional) Label Packet Stats                  |
| <i>bytes</i>       | (Optional) Label Bytes Stats                   |

### Command Mode

- /exec

|                  |                                      |
|------------------|--------------------------------------|
| <i>hh</i>        | (Optional) Hardware Handle           |
| <i>ecmp-type</i> | (Optional) type for per path in ecmp |

**Command Mode**

- /exec

# show forwarding mpls eompls

```
show forwarding mpls eompls [ peers { <addr> | all } ] [ __readonly__ [ { TABLE_peer_ip <peer_ip>
<peer_id> <vlan_bmp> <rx_pkts> <rx_bytes> } ] ]
```

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show                                       |
| forwarding          | Forwarding information                     |
| mpls                | mpls forwarding                            |
| eompls              | eompls                                     |
| peers               | (Optional) nve peers                       |
| <i>addr</i>         | (Optional) peer ipaddress                  |
| all                 | (Optional) Display peer info for all peers |
| <i>__readonly__</i> | (Optional)                                 |
| TABLE_peer_ip       | (Optional)                                 |
| <i>peer_ip</i>      | (Optional) peer address                    |
| <i>peer_id</i>      | (Optional) peer id                         |
| <i>vlan_bmp</i>     | (Optional) vlan bitmap                     |
| <i>rx_pkts</i>      | (Optional) packet stats                    |
| <i>rx_bytes</i>     | (Optional) bytes stats                     |

## Command Mode

- /exec

## show forwarding mpls eompls ir

```
show forwarding mpls eompls ir { [ vlan [ all | <vlan_id> ] ] | [ peer [ all | <peer_ip> ] ] } [ __readonly__ [ {
TABLE_VLAN <vlan_id> <vni> <ifindex> <plt_space> <bitmap> <peer> + <marked> + } ] [ {
TABLE_ONE_PEER <peer> <id> <repl_id> <oif> <path_intf> + <vcount> <vlan_id> + <plt_space> } ] ]
```

### Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information        |
| forwarding       | Forwarding information                 |
| mpls             | mpls                                   |
| eompls           | eompls                                 |
| ir               | ir                                     |
| vlan             | (Optional) vlans all                   |
| all              | (Optional) all                         |
| <i>vlan_id</i>   | (Optional) vlan-id                     |
| peer             | (Optional) peers-all                   |
| all              | (Optional) all                         |
| <i>peer_ip</i>   | (Optional) show detailed info for peer |
| __readonly__     | (Optional)                             |
| TABLE_VLAN       | (Optional) vlan peer ids table         |
| <i>vlan_id</i>   | (Optional) vlan id                     |
| <i>vni</i>       | (Optional) vni                         |
| <i>ifindex</i>   | (Optional) ifindex                     |
| <i>plt_space</i> | (Optional) platform space              |
| <i>bitmap</i>    | (Optional) peer bitmap                 |
| <i>peer</i>      | (Optional) peer_address                |
| <i>marked</i>    | (Optional) marked                      |
| TABLE_ONE_PEER   | (Optional) vlan peer ids table         |
| <i>peer</i>      | (Optional) vlan id                     |
| <i>id</i>        | (Optional) vni                         |
| <i>repl_id</i>   | (Optional) repli id                    |

|                  |                           |
|------------------|---------------------------|
| <i>oif</i>       | (Optional) ifindex        |
| <i>path_intf</i> | (Optional) pathintf name  |
| <i>vcount</i>    | (Optional) vlan count     |
| <i>vlan_id</i>   | (Optional) vlanid         |
| <i>plt_space</i> | (Optional) platform space |

**Command Mode**

- /exec

## show forwarding mpls option\_b

```
show forwarding mpls option_b [ label <label> ] [ module <module> ] [ platform ] [ __readonly__ [ {
TABLE_mpls_opt_b <label> [ <prefix> ] [ <v6prefix> ] [ <nxhop> ] [ <out-interface> ] [ <out-op> } ] ] ]
```

### Syntax Description

|                      |                             |
|----------------------|-----------------------------|
| show                 | show                        |
| forwarding           | forwarding                  |
| mpls                 | mpls forwarding             |
| option_b             | Option B                    |
| label                | (Optional) mpls labels      |
| <i>label</i>         | (Optional) mpls label value |
| module               | (Optional) slot             |
| <i>module</i>        | (Optional) slot number      |
| platform             | (Optional) show pd info     |
| __readonly__         | (Optional)                  |
| TABLE_mpls_opt_b     | (Optional)                  |
| <i>label</i>         | (Optional) mpls label value |
| <i>prefix</i>        | (Optional) Output Interface |
| <i>nxhop</i>         | (Optional) Output Next Hop  |
| <i>out-interface</i> | (Optional) Output Label op  |
| <i>out-op</i>        | (Optional) Output Label op  |

### Command Mode

- /exec

# show forwarding mpls summary

```
show forwarding mpls summary [ module <module> ] [ __readonly__ [ { TABLE_labels <space> <count>
} <total_deagg_labels> <feature_evpn_status> ] ]
```

## Syntax Description

|                            |                                |

### Syntax Description

|                       |                                      |
|-----------------------|--------------------------------------|
| show                  |                                      |
| forwarding            | display fib information              |
| nve                   | nve related info                     |
| l3                    | Layer 3                              |
| ecmp                  | nve ecmp info                        |
| <i>__readonly__</i>   | (Optional)                           |
| TABLE_nve13ecmp       | (Optional) nve l3 ecmp table         |
| <i>hw_index</i>       | (Optional) hw_index address pointer  |
| <i>ecmp_hash</i>      | (Optional) ecmp hash                 |
| <i>num_paths</i>      | (Optional) number of members in ECMP |
| <i>table_id</i>       | (Optional) table id                  |
| <i>flags</i>          | (Optional) flags                     |
| <i>adj_flags</i>      | (Optional) adj flags                 |
| <i>ref_count</i>      | (Optional) num of references         |
| TABLE_tunnel_info     | (Optional)                           |
| <i>tunnel_id</i>      | (Optional) tunnel id                 |
| <i>tunnel_ip</i>      | (Optional) v6 tunnel ip              |
| <i>segment_id</i>     | (Optional) segment id                |
| <i>hw_ecmp_index0</i> | (Optional) HW ECMP Index Unit 0      |
| <i>hw_ecmp_index1</i> | (Optional) HW ECMP Index Unit 1      |
| <i>hw_ecmp_index2</i> | (Optional) HW ECMP Index Unit 2      |

### Command Mode

- /exec

## show forwarding nve l3 peers

```
show forwarding nve l3 peers [ peers <peer_id> | tunnel <tunnel_id> | detail | module <module> ] + [
__readonly__ { TABLE_l3peers <tunnel_id> <peer_id> <peer_address> <interface> <rmac> <origin> <state>
<del> <count> } ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | show  |
| forwarding          | display fib information                     |
| nve                 | nve related info                            |
| l3                  | Layer 3                                     |
| peers               | nve peers                                   |
| <i>peer_id</i>      | (Optional) nve peer-id                      |
| tunnel              | (Optional) VXLAN tunnel                     |
| <i>tunnel_id</i>    | (Optional) Unique identifier for the tunnel |
| detail              | (Optional) Show detailed information        |
| module              | (Optional) Slot/module                      |
| <i>module</i>       | (Optional) Slot/module number               |
| __readonly__        | (Optional)                                  |
| TABLE_l3peers       | (Optional) all l3 nve peers                 |
| <i>tunnel_id</i>    | (Optional) tunnel_id                        |
| <i>peer_id</i>      | (Optional) peer_id                          |
| <i>peer_address</i> | (Optional) peer_address                     |
| <i>interface</i>    | (Optional) interface                        |
| <i>rmac</i>         | (Optional) rmac                             |
| <i>origin</i>       | (Optional) origin                           |
| <i>state</i>        | (Optional) state                            |
| <i>del</i>          | (Optional) del                              |
| <i>count</i>        | (Optional) count                            |

### Command Mode

- /exec

# show forwarding nve underlay-interfaces

```
show forwarding nve underlay-interfaces [ __readonly__ { <broadcast_status> <broadcast_level>
<multicast_status> <multicast_level> <unicast_status> <unicast_level> <no_of_uplink_interfaces> } [ {
TABLE_uplinks <ifindex> <peerid_bmp> <is_dci> [ <phy_if> ] } ] ]
```

## Syntax Description

|                                |  |
|--------------------------------|--|
| show                           | show                                   |
| forwarding                     | display fib information                |
| nve                            | NVE related info                       |
| underlay-interfaces            | underlay interfaces info               |
| <i>__readonly__</i>            | (Optional)                             |
| <i>broadcast_status</i>        | (Optional) status                      |
| <i>broadcast_level</i>         | (Optional) broadcast level             |
| <i>multicast_status</i>        | (Optional) multicast status            |
| <i>multicast_level</i>         | (Optional) multicast level             |
| <i>unicast_status</i>          | (Optional) unicast status              |

## show forwarding otv multicast outgoing-interface-list

```
show forwarding otv multicast outgoing-interface-list [ __readonly__ { TABLE_OIF <index> [ <refcount>
] [ <intf> ] [ { TABLE_OIFLIST <oifindex> [ <src_addr> ] [ <src_len> ] [ <oifname> ] [ <vlanid> ] [
<grp_addr> ] [ <grp_len> ] } ] } ]
```

### Syntax Description

|                         |  |
|-------------------------|--|
| show                    |  |
| forwarding              | Forwarding information                   |
| otv                     | over-the-top virtualization              |
| multicast               | Multicast IPv4 information               |
| outgoing-interface-list | show outgoing interface list info        |
| <i>__readonly__</i>     | (Optional)                               |
| TABLE_OIF               | (Optional) outgoing interface list table |
| <i>index</i>            | (Optional) outgoing interface list index |
| <i>refcount</i>         | (Optional) reference count               |
| <i>intf</i>             | (Optional) interface name                |
| TABLE_OIFLIST           | (Optional) outgoing interface list table |
| <i>oifindex</i>         | (Optional) OIF Interface ifIndex         |
| <i>src_addr</i>         | (Optional) Multicast IPv4 Source Address |
| <i>src_len</i>          | (Optional) Source Address Mask           |
| <i>oifname</i>          | (Optional) OIF Interface name            |
| <i>vlanid</i>           | (Optional) vlan id of the route          |
| <i>grp_addr</i>         | (Optional) Multicast IPv4 Group Address  |
| <i>grp_len</i>          | (Optional) Group address Mask            |

### Command Mode

- /exec

## show forwarding otv multicast route

```
show forwarding otv multicast route [ [ vlan <vlan-id> ] | [ softwarebd <software-bd> ] ] [ module <module> ] [ __readonly__ <replicator> ]
```

### Syntax Description

|                     |                                   |
|---------------------|-----------------------------------|
| show                | show                              |
| forwarding          | forwarding                        |
| otv                 | over-the-top virtualization       |
| multicast           | Multicast IPv4 information        |
| route               | Mcast route information           |
| vlan                | (Optional) vlan                   |
| <i>vlan-id</i>      | (Optional) vlan id                |
| softwarebd          | (Optional) Software Bridge Domain |
| <i>software-bd</i>  | (Optional) Software bd            |
| module              | (Optional) slot                   |
| <i>module</i>       | (Optional) slot number            |
| <i>__readonly__</i> | (Optional)                        |
| <i>replicator</i>   | (Optional) replicator name        |

### Command Mode

- /exec

# show forwarding otv vlan

```
show forwarding otv vlan [ <vlan_id> ] [ module <module> ] [ __readonly__ <vlan> ]
```

## Syntax Description

|                     |                        |
|---------------------|------------------------|
| show                | show                   |
| forwarding          | forwarding             |
| otv                 | otv                    |
| vlan                | vlan                   |
| <i>vlan_id</i>      | (Optional) vlan id     |
| module              | (Optional) slot        |
| <i>module</i>       | (Optional) slot number |
| <i>__readonly__</i> | (Optional)             |
| <i>vlan</i>         | (Optional) vlan        |

## Command Mode

- /exec

## show forwarding security group-tag

```
show forwarding [ vrf { <vrf-name> | <vrf-known-name> | <vrf-all> } | table <table_id> | vlan <vlan_id> ] [
ipv4 ] security group-tag [ <addr> ] [ module <module> | vrf { <vrf-name> | <vrf-known-name> | <vrf-all>
} ] + [ __readonly__ TABLE_sgt_vrf { <tid> <pfx-count> [ TABLE_sgt_prefix [ <ipa> ] [ <tag> ] [ <tv> ]
} ] ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  |   |
| forwarding            | display fib information                     |
| vrf                   | (Optional) display info per VRF             |

- /exec

## show forwarding srv6 adjacency decap

```
show forwarding srv6 adjacency decap [ table <table_id> ] [ module <num> ] [ __readonly__ {
TABLE_adj_decap <locator> <function> <behavior> <tableid> <bd> <is_drop> } ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | show  |
| forwarding          | display fib information                     |
| srv6                | Segment routing V6                          |
| adjacency           | SRV6 adjacency                              |
| decap               | Decapsulation adjacency                     |
| table               | (Optional) display info per vpn-id          |
| <i>table_id</i>     | (Optional) table number                     |
| <i>bd</i>           | (Optional) Bridge domain                    |
| module              | (Optional) Slot/module                      |
| <i>num</i>          | (Optional) Slot/module number               |
| <i>__readonly__</i> | (Optional)                                  |
| TABLE_adj_decap     | (Optional) all SRV6 decap adjacencies       |
| <i>locator</i>      | (Optional) Locator or binding sid           |
| <i>function</i>     | (Optional) Function                         |
| <i>behavior</i>     | (Optional) Behavior                         |
| <i>tableid</i>      | (Optional) tabled number                    |
| <i>is_drop</i>      | (Optional) Indicates if adjacency is a drop |

### Command Mode

- /exec

## show forwarding srv6 adjacency encap

```
show forwarding srv6 adjacency encap [ table <table_id> ] [ module <num> ] [ __readonly__ {
TABLE_adj_encap <loc_bsid> <source_ip> <function> <tableid> <is_drop> <bsid> } ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | show  |
| forwarding          | display fib information                     |
| srv6                | Segment routing V6                          |
| adjacency           | SRV6 adjacency                              |
| encap               | Encapsulation adjacency                     |
| table               | (Optional) display info per vpn-id          |
| <i>table_id</i>     | (Optional) table number                     |
| module              | (Optional) Slot/module                      |
| <i>num</i>          | (Optional) Slot/module number               |
| <i>__readonly__</i> | (Optional)                                  |
| TABLE_adj_encap     | (Optional) all SRV6 encap adjacencies       |
| <i>loc_bsid</i>     | (Optional) Locator or binding sid           |
| <i>source_ip</i>    | (Optional) Source IPV6 address              |
| <i>function</i>     | (Optional) Function                         |
| <i>tableid</i>      | (Optional) tabled number                    |
| <i>is_drop</i>      | (Optional) Indicates if adjacency is a drop |
| <i>bsid</i>         | (Optional) binding sid                      |

### Command Mode

- /exec

## show forwarding srv6 bsid-peer

```
show forwarding srv6 bsid-peer [ <bsid_value> ] [ <endpoint> ] [ module <num> ] [ __readonly__ {
TABLE_bsid_peer <bsid> <endpoint> <type> <table_id> <peer-id> } ]
```

### Syntax Description

|                     |                               |
|---------------------|-------------------------------|
| show                | show                          |
| forwarding          | display fib information       |
| srv6                | Segment routing V6            |
| bsid-peer           | Binding SID identifier        |
| module              | (Optional) Slot/module        |
| <i>num</i>          | (Optional) Slot/module number |
| <i>__readonly__</i> | (Optional)                    |
| TABLE_bsid_peer     | (Optional) BSID peer table    |
| <i>bsid</i>         | (Optional) Bsid value         |
| <i>endpoint</i>     | (Optional) Endpoint           |
| <i>type</i>         | (Optional) BSID type          |
| <i>table_id</i>     | (Optional) Table ID           |
| <i>peer-id</i>      | (Optional) Peer ID            |

### Command Mode

- /exec

# show forwarding srv6 bsid

```
show forwarding srv6 bsid [ <bsid_value> ] [ module <num> ] [ __readonly__ { TABLE_bsid <bsid> <type>
<table_id> <num_sids> <sid_list> <list_count> } ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | show  |
| forwarding          | display fib information                     |
| srv6                | Segment routing V6                          |
| bsid                | Binding SID                                 |
| module              | (Optional) Slot/module                      |
| <i>num</i>          | (Optional) Slot/module number               |
| <i>__readonly__</i> | (Optional)                                  |
| TABLE_bsid          | (Optional) BSID table                       |
| <i>table_id</i>     | (Optional) Table ID                         |
| <i>type</i>         | (Optional) BSID type                        |
| <i>num_sids</i>     | (Optional) Number of SID's in list          |
| <i>bsid</i>         | (Optional) Bsid value                       |
| <i>sid_list</i>     | (Optional) SID in list                      |
| <i>list_count</i>   | (Optional) Number of dependent peer objects |

## Command Mode

- /exec

## show forwarding srv6 ecmp

```
show forwarding srv6 ecmp [ vrf { <vrf-name> | <vrf-known-name> | <vrf-all> } ] [ table <table_id> ] [ module <num> ] [ __readonly__ { TABLE_ecmp <num_paths> <table_id> { TABLE_adj <loc_bsid> <source_ip> <function> } } ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | show  |
| forwarding            | display fib information                     |
| srv6                  | Segment routing V6                          |
| ecmp                  | SRV6 ecmp                                   |
| vrf                   | (Optional) display info per VRF             |
| <i>vrf-name</i>       | (Optional) VRF name                         |
| <i>vrf-known-name</i> | (Optional) Known VRF name                   |
| vrf-all               | (Optional) Display information for all VRFs |
| table                 | (Optional) display info per vpn-id          |
| <i>table_id</i>       | (Optional) table number                     |
| module                | (Optional) Slot/module                      |
| <i>num</i>            | (Optional) Slot/module number               |
| __readonly__          | (Optional)                                  |
| TABLE_ecmp            | (Optional) ecmp table                       |
| <i>num_paths</i>      | (Optional) No of paths                      |
| <i>table_id</i>       | (Optional) table number                     |
| TABLE_adj             | (Optional) Adjacency table                  |
| <i>loc_bsid</i>       | (Optional) Locator or binding sid           |
| <i>source_ip</i>      | (Optional) Source IPV6 address              |
| <i>function</i>       | (Optional) Function                         |

### Command Mode

- /exec

## show forwarding srv6 local-sid

```
show forwarding srv6 local-sid [ <sid_value> ] [ detail ] [ module <num> ] [ __readonly__ { TABLE_local_sid
<locator> <source_ip> <function> <behavior> <sid> } ]
```

### Syntax Description

|                     |                                |
|---------------------|--------------------------------|
| show                | show                           |
| forwarding          | display fib information        |
| srv6                | Segment routing V6             |
| local-sid           | local segment identifier       |
| detail              | (Optional) Details about SID   |
| module              | (Optional) Slot/module         |
| <i>num</i>          | (Optional) Slot/module number  |
| <i>__readonly__</i> | (Optional)                     |
| TABLE_local_sid     | (Optional) Local SID info      |
| <i>locator</i>      | (Optional) Locator             |
| <i>source_ip</i>    | (Optional) Source IPV6 address |
| <i>function</i>     | (Optional) function            |
| <i>behavior</i>     | (Optional) Behavior            |
| <i>sid</i>          | (Optional) Segment identifier  |

### Command Mode

- /exec

## show forwarding srv6 peers

```
show forwarding srv6 peers [ module <num> ] [ __readonly__ { TABLE_peers <peer_id> <locator>
<source_ip> <vobj_count> } ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | show  |
| forwarding          | display fib information                           |
| srv6                | Segment routing V6                                |
| peers               | SRV6 peer   |
| module              | (Optional) Slot/module                            |
| <i>num</i>          | (Optional) Slot/module number                     |
| <i>__readonly__</i> | (Optional)  |
| TABLE_peers         | (Optional) all SRV6 peers                         |
| <i>peer_id</i>      | (Optional) peer_id                                |
| <i>locator</i>      | (Optional) Locator                                |
| <i>source_ip</i>    | (Optional) Source IPV6 address                    |
| <i>vobj_count</i>   | (Optional) Number of VOBJs dependent on this peer |

### Command Mode

- /exec

# show forwarding trace

show forwarding trace [ clear ] [ module <module> ] [ \_\_readonly\_\_ <op> ]

## Syntax Description

|               |                                   |
|---------------|-----------------------------------|
| show          |                                   |
| forwarding    | display fib information           |
| trace         | display trace buffer              |
| clear         | (Optional) clear the trace buffer |
| module        | (Optional) slot                   |
| <i>module</i> | (Optional) slot number            |
| __readonly__  | (Optional)                        |
| <i>op</i>     | (Optional) output                 |

## Command Mode

- /exec

# show forwarding trace profile

show forwarding trace profile

## Syntax Description

|            |   |
|------------|---|
| show       |   |
| forwarding | display fib information                   |
| trace      | display trace buffer                      |
| profile    | show the collection profiling information |

## Command Mode

- /exec

## show forwarding trace profile funcstats

show forwarding trace profile funcstats [ enable | disable ] [ module <module> ] [ \_\_readonly\_\_ <op> ]

### Syntax Description

|               |   |
|---------------|---|
| show          |   |
| forwarding    | display fib information                   |
| trace         | display trace buffer                      |
| profile       | show the collection profiling information |
| funcstats     | function statistics                       |
| enable        | (Optional) enable function statistics     |
| disable       | (Optional) disable function statistics    |
| module        | (Optional) slot                           |
| <i>module</i> | (Optional) slot number                    |
| __readonly__  | (Optional)                                |
| <i>op</i>     | (Optional) output                         |

### Command Mode

- /exec

## show frequency synchronization clock-interface brief

```
show frequency synchronization clock-interface brief [ __readonly__ [ TABLE_fsync <clock_name>
<source_class> <clock_node> <clock_id> <clock_state> <assigned_for_selection> <ssm_support>
<ssm_enabled> <loop_back> <sqlched> <input_disabled> <output_disabled> <ql_rcv_option> <ql_rcv>
<ql_use_option> <ql_use> <priority> <ql_snt_option> <ql_snt> <selected_source_class> <selected_source_ifh>
<selected_source_clock_node> <selected_source_clock_id> <selected_source_clock_name> ] <fsync-end>
]
```

### Syntax Description

|                               |  |
|-------------------------------|--|
| show                          | Show running system information                |
| frequency                     | Frequency Synchronization Manager              |
| synchronization               | Frequency Synchronization Manager              |
| clock-interface               | Display clock-interface information            |
| brief                         | Displays all interfaces                        |
| <i>__readonly__</i>           | (Optional) Read Only                           |
| <i>TABLE_fsync</i>            | (Optional) fsync_mgr table                     |
| <i>source_class</i>           | (Optional) class of the source                 |
| <i>clock_node</i>             | (Optional) clock's node id                     |
| <i>clock_id</i>               | (Optional) clock's id                          |
| <i>clock_name</i>             | (Optional) clock name                          |
| <i>clock_state</i>            | (Optional) clock state                         |
| <i>assigned_for_selection</i> | (Optional) whether assigned as selection input |
| <i>ssm_support</i>            | (Optional) ssm support - enabled or disabled   |
| <i>ssm_enabled</i>            | (Optional) ssm enabled - enabled or disabled   |
| <i>loop_back</i>              | (Optional) loopback enabled or disabled        |
| <i>sqlched</i>                | (Optional) output is sqlched or not            |
| <i>input_disabled</i>         | (Optional) input disabled or enabled           |
| <i>output_disabled</i>        | (Optional) output disabled or enabled          |
| <i>ql_rcv_option</i>          | (Optional) ql rcv option                       |
| <i>ql_rcv</i>                 | (Optional) ql rcv                              |
| <i>ql_use_option</i>          | (Optional) ql use option                       |

|                                   |  |
|-----------------------------------|--|
| <i>ql_use</i>                     | (Optional) ql use                      |
| <i>priority</i>                   | (Optional) priority of synce port      |

| <i>spa_selection_points</i>         | (Optional) SPA selection points                         |
| <i>spa_selection_points_num</i>     | (Optional) Number of SPA selection points               |
| <i>node_selection_points</i>        | (Optional) Node selection points                        |
| <i>node_selection_points_num</i>    | (Optional) Number of node selection points              |
| <i>chassis_selection_points</i>     | (Optional) chassis selection points                     |
| <i>chassis_selection_points_num</i> | (Optional) Number of chassis selection points           |
| <i>router_selection_points</i>      | (Optional) router selection points                      |
| <i>router_selection_points_num</i>  | (Optional) Number of Router selection points            |
| <i>tod_sp</i>                       | (Optional) Use Time of day selection point else freq sp |

|                           |   |
|---------------------------|---|
| <i>local_line_output</i>  | (Optional) used for local line output or not        |
| <i>local_clock_output</i> | (Optional) used for local clock output or not       |
| <i>local_tod_output</i>   | (Optional) used for local time of day output or not |
| <i>stream_table_start</i> | (Optional) stream table start                       |
| TABLE_stream              | (Optional) stream table                             |
| <i>output_id</i>          | (Optional) output id of stream                      |
| <i>input</i>              | (Optional) source input for the stream              |
| <i>last_sp</i>            | (Optional) last selection point string              |
| <i>ql</i>                 | (Optional) QL of the selected source                |
| <i>tod_priority</i>       | (Optional) time of day priority                     |
| <i>priority</i>           | (Optional) priority of source                       |
| <i>state</i>              | (Optional) state of the stream                      |
| <i>stream-end</i>         | (Optional) End of SP table                          |
| <i>sp-end</i>             | (Optional) End of SP table                          |

**Command Mode**

- /exec

# show fspf

show fspf

## Syntax Description

|      |                                 |
|------|---------------------------------|
| show | Show running system information |
|------|---------------------------------|

## Command Mode

- /exec

# show fspf database

```
show fspf database [ vsan <i0> [ [ domain <i1> ] [ detail ] ] ]
```

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                  |
| database  | Show FSPF link state database                    |
| vsan      | (Optional) Enter VSAN                            |
| <i>i0</i> | (Optional) VSAN id                               |
| domain    | (Optional) Show LSR of a domain                  |
| <i>i1</i> | (Optional) domain index                          |
| detail    | (Optional) Gives detailed information on the LSR |

## Command Mode

- /exec

# show fspf interface

show fspf interface

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                  |
| interface | Show FSPF related information about an interface |

## Command Mode

- /exec

# show fspf vsan

show fspf vsan <i0>

## Syntax Description

|           |                                 |
|-----------|---------------------------------|
| show      | Show running system information |
| vsan      | Enter VSAN                      |
| <i>i0</i> | VSAN id                         |

## Command Mode

- /exec

# show fspf vsan interface

show fspf vsan <i0> interface [ <if0> ]

## Syntax Description

|            |   |
|------------|---|
| show       | Show running system information                             |
| vsan       | Enter VSAN  |
| <i>i0</i>  | VSAN id   |
| interface  | Show FSPF related information about an interface            |
| <i>if0</i> | (Optional) Show FSPF related information about an interface |

## Command Mode

- /exec

# show fte exporter

```
show fte exporter [ name ] [ <exportername> ] [ __readonly__ <exporter> <description> <dest> <vrf> <vrf_id>
<vrf_resolved> <dest_udp> <source_intf> <source_ip> <exporter-id> ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information         |
| fte                 | Show FTE information                    |
| exporter            | Show FTE Exporter Configuration         |
| name                | (Optional) Show a specific FTE Exporter |
| <i>exportername</i> | (Optional) Specify an exporter          |
| <i>__readonly__</i> | (Optional)                              |
| <i>exporter</i>     | (Optional)                              |
| <i>description</i>  | (Optional)                              |
| <i>dest</i>         | (Optional)                              |
| <i>vrf</i>          | (Optional)                              |
| <i>vrf_id</i>       | (Optional)                              |
| <i>vrf_resolved</i> | (Optional)                              |
| <i>dest_udp</i>     | (Optional)                              |
| <i>source_intf</i>  | (Optional)                              |
| <i>source_ip</i>    | (Optional)                              |
| <i>exporter-id</i>  | (Optional)                              |

## Command Mode

- /exec

# show fte monitor

```
show fte monitor [ name ] [ <monitorname> [ cache [ detailed ] ] ] [ __readonly__ <monitor> <use_count>
<description> <record> <event> <exporter1> <exporter2> <bucket_id> <src_addr> <dest_addr> ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information           |
| fte                 | Show FTE information                      |
| monitor             | Show Monitor Configuration                |
| name                | (Optional) Show a specific FTE Monitor    |
| <i>monitorname</i>  | (Optional) Specify a monitor              |
| cache               | (Optional) Flow monitor cache contents    |
| detailed            | (Optional) Show the entire cache contents |
| <i>__readonly__</i> | (Optional)                                |
| <i>monitor</i>      | (Optional)                                |

| <i>description</i>  | (Optional)                                |
| <i>record</i>       | (Optional)                                |
| <i>event</i>        | (Optional)                                |
| <i>exporter1</i>    | (Optional)                                |
| <i>exporter2</i>    | (Optional)                                |
| <i>bucket_id</i>    | (Optional)                                |
| <i>src_addr</i>     | (Optional)                                |
| <i>dest_addr</i>    | (Optional)                                |

## Command Mode

- /exec

## show fte record

```
show fte record [ name ] [ { <recordname> } | { fte-original } | { fte { protocol-port | layer2-switched { input
} | { ipv4 | ipv6 | l2 } { original-input } } } ] [ __readonly__ [ { TABLE_fte_record <record> [ <description>
] <use_count> [ <match_ipv4_params> + ] [ <match_ipv6_params> + ] [ <match_datalink_params> + } ] ]
]
```

### Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information                             |
| fte                          | Show FTE information  |
| record                       | Show Record Configuration                                   |
| name                         | (Optional) Show the configuration for a specific FTE Record |
| <i>recordname</i>            | (Optional) Specify a record                                 |
| fte-original                 | (Optional) Traditional IPv4 input FTE with origin ASs       |
| fte                          | (Optional) Traditional FTE collection schemes               |
| ipv4                         | (Optional) IPv4 collection schemes                          |
| ipv6                         | (Optional) IPv6 collection schemes                          |
| l2                           | (Optional) L2 collection schemes                            |
| layer2-switched              | (Optional) Layer2-Switched collection schemes               |
| original-input               | (Optional) Input FTE  |
| input                        | (Optional) Input FTE  |
| protocol-port                | (Optional) Protocol and Ports aggregation scheme            |
| __readonly__                 | (Optional)  |
| TABLE_fte_record             | (Optional) Record Table                                     |
| <i>record</i>                | (Optional) FTE Record                                       |
| <i>description</i>           | (Optional) Description for FTE description                  |
| <i>use_count</i>             | (Optional) Use count for FTE record                         |
| <i>match_ipv4_params</i>     | (Optional) Match IPv4 parameters under record               |
| <i>match_ipv6_params</i>     | (Optional) Match IPv6 parameters under record               |
| <i>match_datalink_params</i> | (Optional) Match datalink parameters under record           |

# show guestshell

```
show guestshell [ { detail } ] [ __readonly__ [ TABLE_detail <name> <state> <package_name> <ova_path>
<application_name> <application_version> <application_description> <key_type> <signing_method>
<licensing_name> <licensing_version> <disk_reservation> <memory_reservation> <cpu_reservation>
TABLE_attached_devices <type> <name> <alias> ] ]
```

## Syntax Description

|                                |   |
|--------------------------------|---|
| show                           | Show running system information                     |
| guestshell                     | Display guest shell service information             |
| detail                         | (Optional) Detailed guest shell service information |
| __readonly__                   | (Optional) Read Only                                |
| TABLE_detail                   | (Optional) Virtual service detail table             |
| <i>name</i>                    | (Optional) Virtual service name                     |
| <i>package_name</i>            | (Optional) Virtual service package name             |
| <i>application_name</i>        | (Optional) Name of the application                  |
| <i>application_version</i>     | (Optional) Version of the application               |
| <i>application_description</i> | (Optional) Description of the application           |
| <i>key_type</i>                | (Optional) Virtual service key type                 |
| <i>signing_method</i>          | (Optional) Method used to sign the package          |
| <i>licensing_name</i>          | (Optional) Name of the license                      |
| <i>licensing_version</i>       | (Optional) Version of the license                   |
| <i>ova_path</i>                | (Optional) Virtual service OVA path                 |
| <i>state</i>                   | (Optional) Virtual service state                    |
| <i>disk_reservation</i>        | (Optional) Virtual service disk reservation         |
| <i>memory_reservation</i>      | (Optional) Virtual service memory reservation       |
| <i>cpu_reservation</i>         | (Optional) Virtual service CPU reservation          |
| TABLE_attached_devices         | (Optional) Attached devices table                   |
| <i>type</i>                    | (Optional) Type of the attached device              |
| <i>name</i>                    | (Optional) Name of the attached device              |
| <i>alias</i>                   | (Optional) Alias for the attached device            |

## show hardware access-list lou resource threshold

```
show hardware access-list lou resource threshold [ __readonly__ { current [ { lou [ { resource [ { threshold [
{ <threshold_value> } ] } ] } ] } ] }
```

### Syntax Description

|                        |                                 |
|------------------------|---------------------------------|
| show                   | Show running system information |
| hardware               | Show hardware information       |
| access-list            | Access Control List             |
| lou                    | LOU                             |
| resource               | hardware resource               |
| threshold              | port expansion threshold        |
| <i>__readonly__</i>    | (Optional)                      |
| current                | (Optional)                      |
| lou                    | (Optional)                      |
| resource               | (Optional)                      |
| threshold              | (Optional)                      |
| <i>threshold_value</i> | (Optional)                      |

### Command Mode

- /exec

# show hardware access-list resource pooling

show hardware access-list resource pooling [ *\_\_readonly\_\_* <mod-num> <status> ]

## Syntax Description

|                     |                                   |
|---------------------|-----------------------------------|
| show                | Show running system information   |
| hardware            | Show hardware information         |
| access-list         | Access Control List               |
| resource            | Hardware resource                 |
| pooling             | ACL programming across TCAM banks |
| <i>__readonly__</i> | (Optional)                        |
| <i>mod-num</i>      | (Optional) module number          |
| <i>status</i>       | (Optional) Banchaining status     |

## Command Mode

- /exec

## show hardware access-list tcam

```
show hardware access-list tcam { { template { nfe | nfe2 | l2-l3 | l3 | <name> | all } } | { region } } [
__readonly__ { TCAM_Region [ { TABLE_Sizes <type> <tcam_size> <tcam_width> } ] } ]
```

### Syntax Description

|                   |   |
|-------------------|---|
| show              | Show running system information         |
| hardware          | Show hardware information               |
| access-list       | Access Control List                     |
| tcam              | Show tcam parameters                    |
| region            | Show tcam region sizes                  |
| __readonly__      | (Optional)                              |
| TCAM_Region       | (Optional)                              |
| TABLE_Sizes       | (Optional)                              |
| <i>type</i>       | (Optional)                              |
| <i>tcam_size</i>  | (Optional)                              |
| <i>tcam_width</i> | (Optional)                              |
| template          | Specify template name                   |
| nfe               | NFE (Trident2) TCAM template            |
| nfe2              | NFE2 (Tomahawk) tcam template           |
| l2-l3             | L2-L3 default tcam template             |
| l3                | L3 default tcam template                |
| <i>name</i>       | Name of custom template to be displayed |
| all               | Display all custom templates            |

### Command Mode

- /exec

# show hardware capacity

show hardware capacity

## Syntax Description

|          |   |
|----------|---|
| show     | Show running system information                               |
| hardware | Hardware related  |
| capacity | Hardware usage levels for Power, Switching Fabric, Flash, etc |

## Command Mode

- /exec

## show hardware capacity eobc

```
show hardware capacity eobc [ __readonly__ { eobc_usage [ <eobc_tx_pps> ] [ <eobc_tx_packets> ] [ <eobc_tx_dropped> ] [ <eobc_rx_pps> ] [ <eobc_rx_packets> ] [ <eobc_rx_dropped> ] } ]
```

### Syntax Description

|                        |                                       |
|------------------------|---------------------------------------|
| show                   | Show running system information       |
| hardware               | Hardware related                      |
| capacity               | resource inventory and/or usage level |
| eobc                   | EOBC resources                        |
| <i>__readonly__</i>    | (Optional)                            |
| <i>eobc_usage</i>      | (Optional)                            |
| <i>eobc_tx_packets</i> | (Optional)                            |
| <i>eobc_tx_dropped</i> | (Optional)                            |
| <i>eobc_tx_pps</i>     | (Optional)                            |
| <i>eobc_rx_packets</i> | (Optional)                            |
| <i>eobc_rx_dropped</i> | (Optional)                            |
| <i>eobc_rx_pps</i>     | (Optional)                            |

### Command Mode

- /exec

# show hardware capacity fabric-utilization

```
show hardware capacity fabric-utilization [ __readonly__ { TABLE_fabutl <mod> <bandwidth> <ingress>
<egress> } ]
```

## Syntax Description

|                    |                                       |
|--------------------|---------------------------------------|
| show               | Show running system information       |
| hardware           | Show hardware information             |
| capacity           | resource inventory and/or usage level |
| fabric-utilization | Show per module Fabric utilization    |
| __readonly__       | (Optional)                            |
| TABLE_fabutl       | (Optional) fabric utilization table   |
| <i>mod</i>         | (Optional)                            |
| <i>bandwidth</i>   | (Optional)                            |
| <i>ingress</i>     | (Optional)                            |
| <i>egress</i>      | (Optional)                            |

## Command Mode

- /exec

# show hardware capacity forwarding

show hardware capacity forwarding

## Syntax Description

|            |   |
|------------|---|
| show       | Show running system information                               |
| hardware   | Hardware related  |
| capacity   | Hardware usage levels for Power, Switching Fabric, Flash, etc |
| forwarding | L2/L3 Forwarding resources                                    |

## Command Mode

- /exec

# show hardware capacity interface

```
show hardware capacity interface [ __readonly__ { TABLE_moddrops <mod_num_drops> <tx_drops>
<rx_drops> <max_tx_port> <max_rx_port> } { TABLE_modbuffers <mod_num_buffers> <tx_buffers>
<rx_buffers> } ]
```

## Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information                     |
| hardware               | Hardware related                                    |
| capacity               | Usage levels  |
| interface              | Interface Resources - Tx/Rx drops and Tx/Rx buffers |
| __readonly__           | (Optional) Read Only                                |
| <i>mod_num_drops</i>   | (Optional) Module number for Tx/Rx drops            |
| TABLE_moddrops         | (Optional) show module                              |
| <i>tx_drops</i>        | (Optional) Tx drops                                 |
| <i>rx_drops</i>        | (Optional) Rx drops                                 |
| <i>max_tx_port</i>     | (Optional) Port with max Tx drops                   |
| <i>max_rx_port</i>     | (Optional) Port with max Rx drops                   |
| <i>mod_num_buffers</i> | (Optional) Module number for Tx/Rx buffers          |
| TABLE_modbuffers       | (Optional) show module                              |
| <i>tx_buffers</i>      | (Optional) Tx buffers                               |
| <i>rx_buffers</i>      | (Optional) Rx buffers                               |

## Command Mode

- /exec

## show hardware capacity module

```
show hardware capacity module [ __readonly__ { sup_ha_status [ <sup_ha_admin_status> ] [
<sup_ha_oper_status> ] [ <dual_sup_hw_state> ] [ <redundancy_state> ] } { switch_resouces { TABLE_lcinfo
<mod_num> <model_num> <part_num> <serial_num> } [ { TABLE_xbarinfo <mod_num1> <model_num1>
<part_num1> <serial_num1> } ] } { TABLE_flash_nvram_info <mod_num2> <dev_name> <total_bytes>
<free_bytes> <percent_used> } ]
```

### Syntax Description

|                            |                                       |
|----------------------------|---------------------------------------|
| show                       | Show running system information       |
| hardware                   | Hardware related                      |
| capacity                   | resource inventory and/or usage level |
| module                     | SUP, LC, XBAR                         |
| <i>__readonly__</i>        | (Optional)                            |
| <i>sup_ha_status</i>       | (Optional)                            |
| <i>sup_ha_admin_status</i> | (Optional)                            |

| TABLE_flash_nvram_info     | (Optional)                            |
| <i>mod_num2</i>            | (Optional)                            |

|                     |            |
|---------------------|------------|
| <i>dev_name</i>     | (Optional) |
| <i>total_bytes</i>  | (Optional) |
| <i>free_bytes</i>   | (Optional) |
| <i>percent_used</i> | (Optional) |

**Command Mode**

- /exec

## show hardware capacity power

```
show hardware capacity power [ __readonly__ { power_summary <ps_redun_mode_admin>
<ps_redun_mode_oper> <power_total> <power_rsvd> <power_rsvd_percent> <power_given_mod>
<power_given_mod_percent> <power_avail> <power_avail_percent> <power_out_actual_draw>
<power_input_actual_draw> } ]
```

### Syntax Description

|                                |   |
|--------------------------------|---|
| show                           | Show running system information             |
| hardware                       | Hardware related                            |
| capacity                       | resource inventory and/or usage level       |
| power                          | power summary                               |
| __readonly__                   | (Optional)                                  |
| power_summary                  | (Optional)                                  |
| <i>ps_redun_mode_admin</i>     | (Optional) Mode: Redundant or Non-redundant |
| <i>ps_redun_mode_oper</i>      | (Optional) Mode: Redundant or Non-redundant |
| <i>power_total</i>             | (Optional)                                  |
| <i>power_rsvd</i>              | (Optional)                                  |
| <i>power_rsvd_percent</i>      | (Optional)                                  |
| <i>power_given_mod</i>         | (Optional)                                  |
| <i>power_given_mod_percent</i> | (Optional)                                  |
| <i>power_avail</i>             | (Optional)                                  |
| <i>power_avail_percent</i>     | (Optional)                                  |
| <i>power_out_actual_draw</i>   | (Optional) Total Power Output, Actuals      |
| <i>power_input_actual_draw</i> | (Optional) Total Power Input, Actuals       |

### Command Mode

- /exec

# show hardware fabricpath mac-learning module

```
show hardware fabricpath mac-learning module <module> [ __readonly__ { [ { TABLE_module
<module_num> <port_group> <mac_learning> } ] } ]
```

## Syntax Description

|                     |                                    |
|---------------------|------------------------------------|
| show                | Show running system information    |
| hardware            | Show hardware information          |
| fabricpath          | Fabric Path                        |
| mac-learning        | MAC Learning                       |
| module              | Specify a module number            |
| <i>module</i>       | Specify a module number            |
| <i>__readonly__</i> | (Optional)                         |
| TABLE_module        | (Optional)                         |
| <i>module_num</i>   | (Optional) Specify a module number |
| <i>port_group</i>   | (Optional)                         |
| <i>mac_learning</i> | (Optional)                         |

## Command Mode

- /exec

# show hardware feature-capability

```
show hardware feature-capability [ detailed ] [ __readonly__ [ { TABLE_feature_support <feature_name> [
{ TABLE_mod_support <mod_inst> <support> } ] } ] ] ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information               |
| hardware              | Show hardware information                     |
| feature-capability    | show registered features supported            |
| detailed              | (Optional) detailed                           |
| __readonly__          | (Optional) Read_Only                          |
| TABLE_feature_support | (Optional) show features supported            |
| <i>feature_name</i>   | (Optional) feature name                       |
| TABLE_mod_support     | (Optional) show registered features supported |
| <i>mod_inst</i>       | (Optional) module instance                    |
| <i>support</i>        | (Optional) support details                    |

## Command Mode

- /exec

# show hardware flow aging

show hardware flow aging [ instance <inst> ] [ module <num> ]

## Syntax Description

|             |                                 |
|-------------|---------------------------------|
| show        | Show running system information |
| hardware    | Show hardware information       |
| flow        | Netflow Module                  |
| aging       | Aging Info                      |
| instance    | (Optional) Instance             |
| <i>inst</i> | (Optional) Earl Instance        |
| module      | (Optional) Line card module     |
| <i>num</i>  | (Optional) slot number          |

## Command Mode

- /exec

## show hardware flow entry address type

show hardware flow entry address <addr> type { ip | ipv6 | l2 | mpls } [ instance <inst> ] [ module <num> ]

### Syntax Description

|             |                                 |
|-------------|---------------------------------|
| show        | Show running system information |
| hardware    | Show hardware information       |
| flow        | Netflow Module                  |
| entry       | Netflow Table Entry             |
| address     | Netflow Table Address           |
| <i>addr</i> | Netflow Table Address           |
| type        | Flow Type                       |
| ip          | Internet Protocol Version 4     |
| ipv6        | Internet Protocol Version 6     |
| l2          | Layer 2 Protocol                |
| mpls        | MPLS Protocol                   |
| instance    | (Optional) Instance             |
| <i>inst</i> | (Optional) Earl Instance        |
| module      | (Optional) Line card module     |
| <i>num</i>  | (Optional) slot number          |

### Command Mode

- /exec

# show hardware flow ip

```
show hardware flow ip [ { { monitor <mname> } | { profile <prof_id> } | { vlan <vlan_id> } | { interface
<interface> } } ] [ instance <inst> ] [ detail ] [ module <num> ]
```

## Syntax Description

|                  |                                      |
|------------------|--------------------------------------|
| show             | Show running system information      |
| hardware         | Show hardware information            |
| flow             | Netflow Module                       |
| ip               | Internet Protocol Version 4          |
| monitor          | (Optional) Netflow Flow Monitor      |
| <i>mname</i>     | (Optional) Netflow Flow Monitor Name |
| profile          | (Optional) Flow Profile              |
| <i>prof_id</i>   | (Optional) Netflow Profile ID        |
| vlan             | (Optional) Vlan commands             |
| <i>vlan_id</i>   | (Optional) VLAN ID 1-4094            |
| interface        | (Optional) Interface                 |
| <i>interface</i> | (Optional) Interface Name            |
| instance         | (Optional) Instance                  |
| <i>inst</i>      | (Optional) Earl Instance             |
| detail           | (Optional) Detailed Output Display   |
| module           | (Optional) Line card module          |
| <i>num</i>       | (Optional) slot number               |

## Command Mode

- /exec

## show hardware flow ipv6

```
show hardware flow ipv6 [ { { monitor <mname> } | { profile <prof_id> } | { vlan <vlan_id> } | { interface
<interface> } } ] [ instance <inst> ] [ detail ] [ module <num> ]
```

### Syntax Description

|                  |                                      |
|------------------|--------------------------------------|
| show             | Show running system information      |
| hardware         | Show hardware information            |
| flow             | Netflow Module                       |
| ipv6             | Internet Protocol Version 6          |
| monitor          | (Optional) Netflow Flow Monitor      |
| <i>mname</i>     | (Optional) Netflow Flow Monitor Name |
| profile          | (Optional) Flow Profile              |
| <i>prof_id</i>   | (Optional) Netflow Profile ID        |
| vlan             | (Optional) Vlan commands             |
| <i>vlan_id</i>   | (Optional) VLAN ID 1-4094            |
| interface        | (Optional) Interface                 |
| <i>interface</i> | (Optional) Interface Name            |
| instance         | (Optional) Instance                  |
| <i>inst</i>      | (Optional) Earl Instance             |
| detail           | (Optional) Detailed Output Display   |
| module           | (Optional) Line card module          |
| <i>num</i>       | (Optional) slot number               |

### Command Mode

- /exec

## show hardware flow l2

```
show hardware flow l2 [ { { monitor <mname> } | { profile <prof_id> } | { vlan <vlan_id> } } ] [ instance
<inst> ] [ detail ] [ module <num> ]
```

### Syntax Description

|                |                                      |
|----------------|--------------------------------------|
| show           | Show running system information      |
| hardware       | Show hardware information            |
| flow           | Netflow Module                       |
| l2             | Layer 2 Protocol                     |
| monitor        | (Optional) Netflow Flow Monitor      |
| <i>mname</i>   | (Optional) Netflow Flow Monitor Name |
| profile        | (Optional) Flow Profile              |
| <i>prof_id</i> | (Optional) Netflow Profile ID        |
| vlan           | (Optional) Vlan commands             |
| <i>vlan_id</i> | (Optional) VLAN ID 1-4094            |
| instance       | (Optional) Instance                  |
| <i>inst</i>    | (Optional) Earl Instance             |
| detail         | (Optional) Detailed Output Display   |
| module         | (Optional) Line card module          |
| <i>num</i>     | (Optional) slot number               |

### Command Mode

- /exec

# show hardware flow mpls

```
show hardware flow mpls [ { { monitor <mname> } | { profile <prof_id> } | { vlan <vlan_id> } | { interface
<interface> } } ] [ instance <inst> ] [ detail ] [ module <num> ]
```

## Syntax Description

|                  |                                      |
|------------------|--------------------------------------|
| show             | Show running system information      |
| hardware         | Show hardware information            |
| flow             | Netflow Module                       |
| mpls             | MPLS Protocol                        |
| monitor          | (Optional) Netflow Flow Monitor      |
| <i>mname</i>     | (Optional) Netflow Flow Monitor Name |
| profile          | (Optional) Flow Profile              |
| <i>prof_id</i>   | (Optional) Netflow Profile ID        |
| vlan             | (Optional) Vlan commands             |
| <i>vlan_id</i>   | (Optional) VLAN ID 1-4094            |
| interface        | (Optional) Interface                 |
| <i>interface</i> | (Optional) Interface Name            |
| instance         | (Optional) Instance                  |
| <i>inst</i>      | (Optional) Earl Instance             |
| detail           | (Optional) Detailed Output Display   |
| module           | (Optional) Line card module          |
| <i>num</i>       | (Optional) slot number               |

## Command Mode

- /exec

# show hardware flow sampler

show hardware flow sampler { all | count | index <index> | name <sname> } [ detail ] [ instance <inst> ] [ module <num> ]

## Syntax Description

|              |                                    |
|--------------|------------------------------------|
| show         | Show running system information    |
| hardware     | Show hardware information          |
| flow         | Netflow Module                     |
| sampler      | Flow Sampler                       |
| all          | Netflow Sampler Usage              |
| count        | Netflow Sampler Utilization        |
| index        | Netflow Sampler Index              |
| <i>index</i> | Netflow Sampler Index              |
| name         | Netflow Sampler Name               |
| <i>sname</i> | Netflow Sampler Name               |
| detail       | (Optional) Detailed Output Display |
| instance     | (Optional) Instance                |
| <i>inst</i>  | (Optional) Clipper Instance        |
| module       | (Optional) Line card module        |
| <i>num</i>   | (Optional) slot number             |

## Command Mode

- /exec

## show hardware flow tah-etrap

```
show hardware flow tah-etrap [ module <module> ] [ { unit <unit> slice <slice> } ] [ __readonly__ [ {
TABLE_etrap_flows <unit> <slice> <index> <keytype> <src_addr> <dst_addr> <src_port> <dst_port>
<proto> <rate> } ] ]
```

### Syntax Description

|                   |   |
|-------------------|---|
| show              | Show running system information           |
| hardware          | Show hardware information                 |
| flow              | Traffic flow information                  |
| tah-etrap         | Elephant Trap information                 |
| module            | (Optional) Slot/module                    |
| <i>module</i>     | (Optional) Slot/module number             |
| unit              | (Optional) Asic Number                    |
| <i>unit</i>       | (Optional) Asic Number on the module      |
| slice             | (Optional) slice num on asic              |
| <i>slice</i>      | (Optional) slice number on asic           |
| __readonly__      | (Optional) Read Only                      |
| TABLE_etrap_flows | (Optional) Elephant trap flows            |
| <i>unit</i>       | (Optional) ASIC number on the module      |
| <i>slice</i>      | (Optional) Slice number on the ASIC       |
| <i>index</i>      | (Optional) Elephant trap table index      |
| <i>keytype</i>    | (Optional) Elephant trap table key type   |
| <i>src_addr</i>   | (Optional) Elephant trap flow src address |
| <i>dst_addr</i>   | (Optional) Elephant trap flow dst address |
| <i>src_port</i>   | (Optional) Elephant trap flow src port    |
| <i>dst_port</i>   | (Optional) Elephant trap flow src port    |
| <i>proto</i>      | (Optional) Elephant trap flow protocol    |
| <i>rate</i>       | (Optional) Elephant trap flow protocol    |

### Command Mode

- /exec

# show hardware flow utilization

show hardware flow utilization [ instance <inst> ] [ module <num> ]

## Syntax Description

|             |                                 |
|-------------|---------------------------------|
| show        | Show running system information |
| hardware    | Show hardware information       |
| flow        | Netflow Module                  |
| utilization | NT Table Utilization            |
| instance    | (Optional) Instance             |
| <i>inst</i> | (Optional) Earl Instance        |
| module      | (Optional) Line card module     |
| <i>num</i>  | (Optional) slot number          |

## Command Mode

- /exec

# show hardware forwarding interface statistics mode

```
show hardware forwarding interface statistics mode [ __readonly__ { system [ { <sysmode> } ] [ {
TABLE_module <module> <modmode> } ] ] ]
```

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information               |
| hardware       | Show hardware information                     |
| forwarding     | Show hardware information for forwarding path |
| interface      | Interface                                     |
| statistics     | Statistics                                    |
| mode           | Statistics mode                               |
| __readonly__   | (Optional)                                    |
| system         | (Optional)                                    |
| <i>sysmode</i> | (Optional)                                    |
| TABLE_module   | (Optional)                                    |
| <i>module</i>  | (Optional) Specify a module number            |
| <i>modmode</i> | (Optional)                                    |

## Command Mode

- /exec

## show hardware forwarding memory health detail

```
show hardware forwarding memory health detail [ __readonly__ { memscan_interval <mscan_interval> } {
memscan_rate <mscan_rate> } [ TABLE_ser <table_name> <entry_count> <table_head> <table_tail> [
TABLE_ser_entry_new <n_entry_index> [ <reg_id> ] [ <reg_port> ] [ <reg_index> ] [ <table_id> ] [
<table_index> ] <detections> <corrections> [ <last_detection_ts> ] [ <last_correction_ts> ] ] [
TABLE_ser_entry_old <o_entry_index> <mem_addr> <cause_bits> <event_type> <last_event> <last_time>
] ] [ { parity_detect_counter <parity_detect_cnt> } ] [ { parity_correct_counter <parity_correct_cnt> } ] [ {
reg_parity_detect_counter <reg_parity_detect_cnt> } ] [ { reg_parity_correct_counter <reg_parity_correct_cnt>
} ] [ { tcam_parity_detect_counter <tcam_parity_detect_cnt> } ] [ { tcam_parity_correct_counter
<tcam_parity_correct_cnt> } ] [ { sram_parity_detect_counter <sram_parity_detect_cnt> } ] [ {
sram_parity_correct_counter <sram_parity_correct_cnt> } ] [ { TABLE_ser_tbl_parity <table_id> <detections>
<corrections> } ] ] ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information            |
| hardware              | Show hardware information                  |
| forwarding            | forwarding information                     |
| memory                | memory information                         |
| health                | memory health information                  |
| detail                | show the detail                            |
| __readonly__          | (Optional) Read Only                       |
| memscan_interval      | (Optional) memory scan interval value      |
| <i>mscan_interval</i> | (Optional) mem scan interval               |
| memscan_rate          | (Optional) memory scan rate value          |
| <i>mscan_rate</i>     | (Optional) mem scan rate                   |
| TABLE_ser             | (Optional) ser table list                  |
| <i>table_name</i>     | (Optional) table name                      |
| <i>entry_count</i>    | (Optional) total entries in table          |
| <i>table_head</i>     | (Optional) start of entry index            |
| <i>table_tail</i>     | (Optional) end of entry index              |
| TABLE_ser_entry_new   | (Optional) ser table entry with new format |
| <i>n_entry_index</i>  | (Optional) entry index                     |
| <i>reg_id</i>         | (Optional) register id                     |

|                                |  |
|--------------------------------|--|
| <i>reg_port</i>                | (Optional) port                            |
| <i>reg_index</i>               | (Optional) register index                  |
| <i>table_id</i>                | (Optional) table id                        |
| <i>table_index</i>             | (Optional) table_index                     |
| <i>detections</i>              | (Optional) parity detetction count         |
| <i>corrections</i>             | (Optional) parity correction count         |
| <i>last_detection_ts</i>       | (Optional) last detetction timestamp       |
| <i>last_correction_ts</i>      | (Optional) last correction timestamp       |
| TABLE_ser_entry_old            | (Optional) ser table entry with new format |
| <i>o_entry_index</i>           | (Optional) table entry index               |
| <i>mem_addr</i>                | (Optional) memory address                  |
| <i>cause_bits</i>              | (Optional) cause bit                       |
| <i>event_type</i>              | (Optional) type of event                   |
| <i>last_event</i>              | (Optional) last event that occurred        |
| <i>last_time</i>               | (Optional) last time of event              |
| parity_detect_counter          | (Optional) parity detect count             |
| <i>parity_detect_cnt</i>       | (Optional) count of parity detect          |
| parity_correct_counter         | (Optional) parity correct count            |
| <i>parity_correct_cnt</i>      | (Optional) count of parity correct         |
| reg_parity_detect_counter      | (Optional) reg parity detect count         |
| <i>reg_parity_detect_cnt</i>   | (Optional) count of reg parity detect      |
| reg_parity_correct_counter     | (Optional) reg parity correct count        |
| <i>reg_parity_correct_cnt</i>  | (Optional) count of reg parity correct     |
| tcam_parity_detect_counter     | (Optional) tcam parity detect count        |
| <i>tcam_parity_detect_cnt</i>  | (Optional) count of tcam parity detect     |
| tcam_parity_correct_counter    | (Optional) tcam parity correct count       |
| <i>tcam_parity_correct_cnt</i> | (Optional) count of tcam parity correct    |
| sram_parity_detect_counter     | (Optional) sram parity detect count        |
| <i>sram_parity_detect_cnt</i>  | (Optional) count of sram parity detect     |

|                                    |  |
|------------------------------------|--|
| <i>sram_parity_correct_counter</i> | (Optional) sram parity correct count             |
| <i>sram_parity_correct_cnt</i>     | (Optional) count of sram parity correct          |
| <i>TABLE_ser_tbl_parity</i>        | (Optional) all ser tables                        |
| <i>table_id</i>                    | (Optional) table name                            |
| <i>detections</i>                  | (Optional) parity detection count for ser table  |
| <i>corrections</i>                 | (Optional) parity correction count for ser table |

**Command Mode**

- /exec

## show hardware forwarding memory health summary

```
show hardware forwarding memory health summary [ __readonly__ [ { parity_detect_counter
<parity_detect_cnt> } ] [ { parity_correct_counter <parity_correct_cnt> } ] [ { reg_parity_detect_counter
<reg_parity_detect_cnt> } ] [ { reg_parity_correct_counter <reg_parity_correct_cnt> } ] [ {
tcam_parity_detect_counter <tcam_parity_detect_cnt> } ] [ { tcam_parity_correct_counter
<tcam_parity_correct_cnt> } ] [ { sram_parity_detect_counter <sram_parity_detect_cnt> } ] [ {
sram_parity_correct_counter <sram_parity_correct_cnt> } ] [ { TABLE_ser_tbl_parity <table_id> <detections>
<corrections> } ] ] ]
```

### Syntax Description

|                                |   |
|--------------------------------|---|
| show                           | Show running system information         |
| hardware                       | Show hardware information               |
| forwarding                     | forwarding information                  |
| memory                         | memory information                      |
| health                         | memory health information               |
| summary                        | show the summary                        |
| <i>__readonly__</i>            | (Optional) Read Only                    |
| parity_detect_counter          | (Optional) parity detect count          |
| <i>parity_detect_cnt</i>       | (Optional) count of parity detect       |
| parity_correct_counter         | (Optional) parity correct count         |
| <i>parity_correct_cnt</i>      | (Optional) count of parity correct      |
| reg_parity_detect_counter      | (Optional) reg parity detect count      |
| <i>reg_parity_detect_cnt</i>   | (Optional) count of reg parity detect   |
| reg_parity_correct_counter     | (Optional) reg parity correct count     |
| <i>reg_parity_correct_cnt</i>  | (Optional) count of reg parity correct  |
| tcam_parity_detect_counter     | (Optional) tcam parity detect count     |
| <i>tcam_parity_detect_cnt</i>  | (Optional) count of tcam parity detect  |
| tcam_parity_correct_counter    | (Optional) tcam parity correct count    |
| <i>tcam_parity_correct_cnt</i> | (Optional) count of tcam parity correct |
| sram_parity_detect_counter     | (Optional) sram parity detect count     |
| <i>sram_parity_detect_cnt</i>  | (Optional) count of sram parity detect  |
| sram_parity_correct_counter    | (Optional) sram parity correct count    |

|                                |  |
|--------------------------------|--|
| <i>sram_parity_correct_cnt</i> | (Optional) count of sram parity correct          |
| TABLE_ser_tbl_parity           | (Optional) all ser tables                        |
| <i>table_id</i>                | (Optional) table name                            |
| <i>detections</i>              | (Optional) parity detection count for ser table  |
| <i>corrections</i>             | (Optional) parity correction count for ser table |

**Command Mode**

- /exec

# show hardware ip verify

show hardware [ forwarding ] ip verify [ module <module> ] [ \_\_readonly\_\_ <info\_str> ]

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                          |
| hardware            | Show hardware information                                |
| forwarding          | (Optional) Show hardware information for forwarding path |
| ip                  | IP   |
| verify              | Show IP packet verification checks enabled in hardware   |
| module              | (Optional) Specify a module number                       |
| <i>module</i>       | (Optional) Specify a module number                       |
| <i>__readonly__</i> | (Optional)   |
| <i>info_str</i>     | (Optional) IDS Check Stats                               |

## Command Mode

- /exec

## show hardware profile forwarding-mode

```
show hardware profile forwarding-mode [ __readonly__ <forwarding-mode> [ <host-size> ] [ <unicast-size>
] [ <unicast-rpf-size> ] [ <unicast-ipv4-size> ] [ <unicast-ipv4-rpf-size> ] [ <unicast-ipv6-size> ] [
<multicast-size> ] [ <l2-size> ] [ <unified-size> ] ]
```

### Syntax Description

|                              |                                       |

| <i>host_to_lpm_migrate_table</i>     | (Optional) Times Route Migrated from Host to LPM Table |
| <i>max_mcast_transit_route_limit</i> | (Optional) Max Mcast Transit Route Limit Entries       |
| <i>used_mcast_transit_routes</i>     | (Optional) Used Mcast Transit Routes                   |

**Command Mode**

- /exec

## show hardware profile tcam region

```
show hardware profile tcam region [ __readonly__ { TCAM_Region [ { TABLE_Sizes <tcam_compat_type>
<tcam_compat_size> <tcam_compat_width> } ] } ]
```

### Syntax Description

|                          |                                 |
|--------------------------|---------------------------------|
| show                     | Show running system information |
| hardware                 | Show hardware information       |
| profile                  | profile                         |
| tcam                     | Show tcam parameters            |
| region                   | Show tcam region sizes          |
| <i>__readonly__</i>      | (Optional)                      |
| TCAM_Region              | (Optional)                      |
| TABLE_Sizes              | (Optional)                      |
| <i>tcam_compat_type</i>  | (Optional)                      |
| <i>tcam_compat_size</i>  | (Optional)                      |
| <i>tcam_compat_width</i> | (Optional)                      |

### Command Mode

- /exec

## show hardware qos afd profile

show hardware qos afd profile [ module <module> ] [ \_\_readonly\_\_ TABLE\_qos\_afd\_profile [ <module> ] <prof-desc> ]

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                  |
| hardware              | Show hardware information                        |
| qos                   | Show qos related information                     |
| afd                   | Show Approximate Fair Dropping config            |
| profile               | Show AFD profile config                          |
| module                | (Optional) Specify a module number               |
| <i>module</i>         | (Optional) Specify a module number               |
| __readonly__          | (Optional)                                       |
| TABLE_qos_afd_profile | (Optional) the xml qos_afd_profile configuration |
| <i>prof-desc</i>      | (Optional) profile description                   |

### Command Mode

- /exec

# show hardware qos burst-detect max-records

show hardware qos burst-detect max-records [ *\_\_readonly\_\_* <*max\_records*> ]

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                   |
| hardware            | Show hardware information                         |
| qos                 | Show qos related information                      |
| burst-detect        | Show oobst burst-detect info                      |
| max-records         | Show oobst burst-detect max-records               |
| <i>__readonly__</i> | (Optional)  |
| <i>max_records</i>  | (Optional) max number of burst records configured |

## Command Mode

- /exec

## show hardware qos eoq stats-class

```
show hardware qos eoq stats-class [ module <module> ] [ __readonly__ TABLE_qos_eoq_stats_class [
<module> ] <eoq-stats-class-desc> ]
```

### Syntax Description

|                             |  |
|-----------------------------|--|
| show                        | Show running system information                      |
| hardware                    | Show hardware information                            |
| qos                         | Show QoS related information                         |
| eoq                         | Show Extended Output Queue(EOQ) related information  |
| stats-class                 | Show EOQ Statistics class selection config           |
| module                      | (Optional) Specify a module number                   |
| <i>module</i>               | (Optional) Specify a module number                   |
| <i>__readonly__</i>         | (Optional)   |
| TABLE_qos_eoq_stats_class   | (Optional) the xml qos_eoq_stats_class configuration |
| <i>eoq-stats-class-desc</i> | (Optional) selected class description                |

### Command Mode

- /exec

## show hardware qos include ipg

show hardware qos include ipg [ module <module> ] [ \_\_readonly\_\_ TABLE\_qos\_include\_ipg <module> ]

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                        |
| hardware              | Show hardware information                              |
| qos                   | Show qos related information                           |
| include               | Show include config                                    |
| ipg                   | Show whether to include IPG in Shaping/Policing config |
| module                | (Optional) Specify a module number                     |
| <i>module</i>         | (Optional) Specify a module number                     |
| <i>__readonly__</i>   | (Optional)   |
| TABLE_qos_include_ipg | (Optional) the xml qos_include_ipg configuration       |

### Command Mode

- /exec

## show hardware qos ing-pg-hdrm-reserve

```
show hardware qos ing-pg-hdrm-reserve [ module <module> ] [ __readonly__
TABLE_qos_ing_pg_hdrm_reserve <module> ]
```

### Syntax Description

|                               |  |
|-------------------------------|--|
| show                          | Show running system information                          |
| hardware                      | Show hardware information                                |
| qos                           | Show qos related information                             |
| ing-pg-hdrm-reserve           | Show ing-pg-hdrm-reserve config                          |
| module                        | (Optional) Specify a module number                       |
| <i>module</i>                 | (Optional) Specify a module number                       |
| __readonly__                  | (Optional)   |
| TABLE_qos_ing_pg_hdrm_reserve | (Optional) the xml qos_ing_pg_hdrm_reserve configuration |

### Command Mode

- /exec

## show hardware qos ing-pg-no-min

```
show hardware qos ing-pg-no-min [ module <module> ] [ __readonly__ TABLE_qos_ing_pg_no_min [
<module> ] <ingress_pg_min> <pg_min_value> ]
```

### Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information                    |
| hardware                | Show hardware information                          |
| qos                     | Show qos related information                       |
| ing-pg-no-min           | Show ing-pg-no-min config                          |
| module                  | (Optional) Specify a module number                 |
| <i>module</i>           | (Optional) Specify a module number                 |
| <i>__readonly__</i>     | (Optional)   |
| TABLE_qos_ing_pg_no_min | (Optional) the xml qos_ing_pg_no_min configuration |
| <i>ingress_pg_min</i>   | (Optional) Enable/Disable PG Min                   |
| <i>pg_min_value</i>     | (Optional) PG Min Value                            |

### Command Mode

- /exec

## show hardware qos ing-pg-share

```
show hardware qos ing-pg-share [ module <module> ] [ __readonly__ TABLE_qos_ing_pg_share <module> ]
```

### Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information                   |
| hardware               | Show hardware information                         |
| qos                    | Show qos related information                      |
| ing-pg-share           | Show ing-pg-share config                          |
| module                 | (Optional) Specify a module number                |
| <i>module</i>          | (Optional) Specify a module number                |
| <i>__readonly__</i>    | (Optional)  |
| TABLE_qos_ing_pg_share | (Optional) the xml qos_ing_pg_share configuration |

### Command Mode

- /exec

## show hardware qos min-buffer

```
show hardware qos min-buffer [ module <module> ] [ __readonly__ TABLE_qos_min_buffer_profile [
<module> ] <buff-prof-desc> ]
```

### Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information                         |
| hardware                     | Show hardware information                               |

| <i>sh_keystring_timeout</i>          | (Optional) Keysting timeout                       |
| <i>sh_keystring_cur_valid</i>        | (Optional) Keysting current valid time            |
| <i>sh_vmac</i>                       | (Optional) Virtual MAC                            |
| <i>sh_vmac_attr</i>                  | (Optional) Virtual MAC attribute                  |
| <i>sh_num_of_state_changes</i>       | (Optional) Number of state changes                |
| <i>sh_last_state_change</i>          | (Optional) Last state change time                 |
| <i>sh_num_of_total_state_changes</i> | (Optional) Number of total state changes          |
| <i>sh_last_total_state_change</i>    | (Optional) Last total state change time           |
| <i>sh_num_track_obj</i>              | (Optional) Number of tracked objects              |
| TABLE_grp_track_obj                  | (Optional) Group tracked objects                  |
| <i>sh_track_obj</i>                  | (Optional) Tracked object                         |
| <i>sh_track_obj_state</i>            | (Optional) State of tracked object                |
| <i>sh_track_obj_prio</i>             | (Optional) Tracked object priority decrement      |
| <i>sh_ip_redund_name</i>             | (Optional) IP redundancy name                     |

|                               |   |
|-------------------------------|---|
| <i>sh_ip_redund_name_attr</i> | (Optional) IP redundancy name attribute |
| <i>show_hsrp_end</i>          | (Optional) End of Group                 |

**Command Mode**

- /exec

# show hsrp anycast

```
show hsrp anycast [ <id> { ipv4 | ipv6 | both } ] [ brief ]
```

## Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                        |
| hsrp      | Hot Standby Router Protocol (HSRP) information         |
| anycast   | Anycast related commands                               |
| <i>id</i> | (Optional) Bundle number                               |
| ipv4      | (Optional) Associate IP Version 4 for the bundle       |
| ipv6      | (Optional) Associate IP Version 6 for the bundle       |
| both      | (Optional) Associate IP Version 4 and 6 for the bundle |
| brief     | (Optional) Brief output                                |

## Command Mode

- /exec

## show hsrp anycast interface vlan

show hsrp anycast interface { vlan | bdi } <id>

### Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                |
| hsrp      | Hot Standby Router Protocol (HSRP) information |
| anycast   | Anycast related commands                       |
| interface | Bundle on this interface Interface             |
| vlan      | VLAN interface                                 |
| bdi       | Bridge-Domain interface                        |
| <i>id</i> | VLAN number                                    |

### Command Mode

- /exec

## show hsrp anycast remote-db

show hsrp anycast remote-db [ <id> { ipv4 | ipv6 | both } ]

### Syntax Description

|           |  |
|-----------|--|
| show      | Show running system information                        |
| hsrp      | Hot Standby Router Protocol (HSRP) information         |
| anycast   | Anycast related commands                               |
| remote-db | Remote data base for the bundle                        |
| <i>id</i> | (Optional) Bundle number                               |
| ipv4      | (Optional) Associate IP Version 4 for the bundle       |
| ipv6      | (Optional) Associate IP Version 6 for the bundle       |
| both      | (Optional) Associate IP Version 4 and 6 for the bundle |

### Command Mode

- /exec

# show hsrp anycast summary

show hsrp anycast summary

## Syntax Description

|         |  |
|---------|--|
| show    | Show running system information                |
| hsrp    | Hot Standby Router Protocol (HSRP) information |
| anycast | Anycast related commands                       |
| summary | Show HSRP summary                              |

## Command Mode

- /exec

## show hsrp bfd-sessions

```
show hsrp bfd-sessions [ interface <interface-id> [ to <ipaddress> ] ] [ __readonly__ [ TABLE_bfd_sess [
<interface> ] [ <list_size> ] { [ <src_addr> ] } { [ <dst_addr> ] } [ <ref_count> ] { [ TABLE_ref_groups [
<ref_group_id> ] } ] } { [ TABLE_hist_groups [ <hist_group_id> ] [ <hist_operation> ] [ <hist_rel_time> ] [
<hist_abs_time> ] [ <hist_ref_count> ] [ <hist_group_state> ] [ <hist_status> ] [ <hist_op_reason> ] ] } ] ]
```

### Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information                |
| hsrp                    | Hot Standby Router Protocol (HSRP) information |
| bfd-sessions            | BFD sessions                                   |
| interface               | (Optional) Groups on this interface            |
| <i>interface-id</i>     | (Optional) Interface                           |
| to                      | (Optional) To IP address                       |
| <i>ipaddress</i>        | (Optional) Sessions to IP address              |
| <i>__readonly__</i>     | (Optional)                                     |
| TABLE_bfd_sess          | (Optional)                                     |
| <i>interface</i>        | (Optional) Interface                           |
| <i>list_size</i>        | (Optional) List size                           |
| <i>src_addr</i>         | (Optional) IPv4 Source address                 |
| <i>dst_addr</i>         | (Optional) IPv4 Destination address            |
| <i>ref_count</i>        | (Optional) Ref count                           |
| TABLE_ref_groups        | (Optional)                                     |
| <i>ref_group_id</i>     | (Optional) Group id                            |
| TABLE_hist_groups       | (Optional)                                     |
| <i>hist_group_id</i>    | (Optional) Group id                            |
| <i>hist_operation</i>   | (Optional) Operation                           |
| <i>hist_rel_time</i>    | (Optional) Relative time                       |
| <i>hist_abs_time</i>    | (Optional) Absolute time                       |
| <i>hist_ref_count</i>   | (Optional) Ref count                           |
| <i>hist_group_state</i> | (Optional) Group state                         |

|                       |                      |
|-----------------------|----------------------|
| <i>hist_status</i>    | (Optional) Status    |
| <i>hist_op_reason</i> | (Optional) Op reason |

**Command Mode**

- /exec

# show hsrp delay

```
show hsrp delay [ interface <interface-id> ] [ __readonly__ TABLE_delay <interface> <min_delay>
<reload_delay> ]
```

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                |
| hsrp                | Hot Standby Router Protocol (HSRP) information |
| delay               | Group initialisation delay                     |
| interface           | (Optional) Groups on this interface            |
| <i>interface-id</i> | (Optional) Interface                           |
| <i>__readonly__</i> | (Optional)                                     |
| <i>TABLE_delay</i>  | (Optional)                                     |
| <i>interface</i>    | (Optional) Interface                           |
| <i>min_delay</i>    | (Optional) Min delay                           |
| <i>reload_delay</i> | (Optional) Reload delay                        |

## Command Mode

- /exec

# show hsrp mgo

```
show hsrp mgo [ name <name> | brief ] [ __readonly__ TABLE_hsrp_mgo <master_name> <master_interface>
<master_address_family> <master_group_id> [ <master_version> ] <master_state> [ <master_down_reason>
] [ { TABLE_slave <slave_interface> <slave_group_id> <slave_state> [ <slave_down_reason> } ] [
<num_slave_group> ] ]
```

## Syntax Description

|                              |  |
|------------------------------|--|
| show                         | Show running system information                |

| vlan-logical-port-vp | (Optional) VLAN logical port VP count                    |
| vlan-per-fex-port    | (Optional) VLAN per FEX port                             |
| igmp-group           | (Optional) IGMP group                                    |
| history              | (Optional) Show scale history                            |
| <i>num_intervals</i> | (Optional) Number of intervals in history                |
| sort                 | (Optional) Sorted display                                |
| current-scale        | (Optional) Sort records by current-scale value           |
| ascending            | (Optional) Sort current-scale values in ascending order  |
| descending           | (Optional) Sort current-scale values in descending order |
| polled-timestamp     | (Optional) Sort records by polled-timestamp              |
| newest               | (Optional) Sort with newest record first                 |
| oldest               | (Optional) Sort with oldest record first                 |
| utilization          | (Optional) Show utilization statistics                   |
| thresholds           | (Optional) Show thresholds statistics                    |
| <i>__readonly__</i>  | (Optional) Read Only                                     |
| <i>Info_Thres</i>    | (Optional) Configured info threshold percent             |
| <i>Warn_Thres</i>    | (Optional) Configured warning threshold percent          |
| <i>Crit_Thres</i>    | (Optional) Configured critical threshold percent         |
| TABLE_technology     | (Optional) Table technology                              |
| <i>Technology</i>    | (Optional) Technology name                               |

|                             |  |
|-----------------------------|--|
| <i>TABLE_feature</i>        | (Optional) Table feature   |
| <i>Feature</i>              | (Optional) Feature name  |
| <i>Instance</i>             | (Optional) Instance name. Present if the record is for a specific instance on the system (i.e. module, port combination or specific application instance in a VDC) |
| <i>Verified_Scale</i>       | (Optional) Verified scale  |
| <i>Config_Scale</i>         | (Optional) Configured scale  |
| <i>TABLE_feature_stats</i>  | (Optional) Table feature stats   |
| <i>Used_Entries</i>         | (Optional) Used entries  |
| <i>Cur_Util</i>             | (Optional) Current utilization   |
| <i>Thres_Exceeded</i>       | (Optional) Threshold type exceeded   |
| <i>Polled_TS</i>            | (Optional) Polled timestamp  |
| <i>Avg_Util</i>             | (Optional) Average utilization   |
| <i>Week_Util</i>            | (Optional) 1 week utilization  |
| <i>Week_TS</i>              | (Optional) 1 week peak utilization timestamp   |
| <i>Peak_Util</i>            | (Optional) Peak utilization  |
| <i>Peak_TS</i>              | (Optional) Peak utilization timestamp  |
| <i>Info_Thres_Exceed</i>    | (Optional) Number of times info threshold exceeded   |
| <i>Info_Thres_Exceed_TS</i> | (Optional) Last info threshold exceeded timestamp  |
| <i>Warn_Thres_Exceed</i>    | (Optional) Number of times warning threshold exceeded  |
| <i>Warn_Thres_Exceed_TS</i> | (Optional) Last warning threshold exceeded timestamp   |
| <i>Crit_Thres_Exceed</i>    | (Optional) Number of times critical threshold exceeded   |
| <i>Crit_Thres_Exceed_TS</i> | (Optional) Last critical threshold exceeded timestamp  |

| <i>Warn_Thres_Exceed_TS</i> | (Optional) Last warning threshold exceeded timestamp   |
| <i>Crit_Thres_Exceed</i>    | (Optional) Number of times critical threshold exceeded |
| <i>Crit_Thres_Exceed_TS</i> | (Optional) Last critical threshold exceeded timestamp  |

### Command Mode

- /exec

# show ieth-header-decode

show ieth-header-decode <ieth>

## Syntax Description

|                    |  |
|--------------------|--|
| show               | Show running system information                    |
| ieth-header-decode | Show decode of ieth header                         |
| <i>ieth</i>        | ieth header in hex (0xFF...) or string (FF..) form |

## Command Mode

- /exec

# show inband-telemetry exporter

```
show inband-telemetry exporter [ <exportername> ] [ __readonly__ <exporter> <description> <dest> <vrf>
<vrf_id> <vrf_resolved> <dest_udp> <source_intf> <source_ip> <dscp> <seq_num> ]
```

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| inband-telemetry    | Show INT information            |
| exporter            | Show INT Exporter Configuration |
| <i>exportername</i> | (Optional) Specify an exporter  |
| <i>__readonly__</i> | (Optional)                      |
| <i>exporter</i>     | (Optional)                      |
| <i>description</i>  | (Optional)                      |
| <i>dest</i>         | (Optional)                      |
| <i>vrf</i>          | (Optional)                      |
| <i>vrf_id</i>       | (Optional)                      |
| <i>vrf_resolved</i> | (Optional)                      |
| <i>dest_udp</i>     | (Optional)                      |
| <i>source_intf</i>  | (Optional)                      |
| <i>source_ip</i>    | (Optional)                      |
| <i>dscp</i>         | (Optional)                      |
| <i>seq_num</i>      | (Optional)                      |

## Command Mode

- /exec

# show inband-telemetry flow-profile

```
show inband-telemetry flow-profile [ <flow-profilename> ] [ __readonly__ <flow-profile> <description>
<dscp> <age> <latency> ]
```

## Syntax Description

|                         |                                     |
|-------------------------|-------------------------------------|
| show                    | Show running system information     |
| inband-telemetry        | Show INT information                |
| flow-profile            | Show INT flow Profile Configuration |
| <i>flow-profilename</i> | (Optional) Specify an flow Profile  |
| <i>__readonly__</i>     | (Optional)                          |
| <i>flow-profile</i>     | (Optional)                          |
| <i>description</i>      | (Optional)                          |
| <i>dscp</i>             | (Optional)                          |
| <i>age</i>              | (Optional)                          |
| <i>latency</i>          | (Optional)                          |

## Command Mode

- /exec

## show inband-telemetry monitor

```
show inband-telemetry monitor [ <monitorname> [ cache [ detailed ] ] ] [ __readonly__ <monitor> <use_count>
<description> <record> <event> <exporter> <bucket_id> <src_addr> <dest_addr> <watchlist> ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information           |
| inband-telemetry    | Show INT information                      |
| monitor             | Show Monitor Configuration                |
| <i>monitorname</i>  | (Optional) Specify a monitor              |
| cache               | (Optional) Flow monitor cache contents    |
| detailed            | (Optional) Show the entire cache contents |
| <i>__readonly__</i> | (Optional)                                |
| <i>monitor</i>      | (Optional)                                |
| <i>use_count</i>    | (Optional)                                |
| <i>description</i>  | (Optional)                                |
| <i>record</i>       | (Optional)                                |
| <i>event</i>        | (Optional)                                |
| <i>exporter</i>     | (Optional)                                |
| <i>bucket_id</i>    | (Optional)                                |
| <i>src_addr</i>     | (Optional)                                |
| <i>dest_addr</i>    | (Optional)                                |
| <i>watchlist</i>    | (Optional)                                |

### Command Mode

- /exec

# show inband-telemetry queue-profile

```
show inband-telemetry queue-profile [ <queue-profilename> | queue-profile-default ] [ __readonly__
<queue-profile> <description> <depth> <latency> ]
```

## Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information                         |
| inband-telemetry         | Show INT information                                    |
| queue-profile            | Show INT Queue Profile Configuration                    |
| <i>queue-profilename</i> | (Optional) Specify an Queue Profile                     |
| queue-profile-default    | (Optional) Show INT Queue Profile Default Configuration |
| __readonly__             | (Optional)  |
| <i>queue-profile</i>     | (Optional)  |
| <i>description</i>       | (Optional)  |
| <i>depth</i>             | (Optional)  |
| <i>latency</i>           | (Optional)  |

## Command Mode

- /exec

# show inband-telemetry record

show inband-telemetry record [ { <recordname> } ] [ \_\_readonly\_\_ <record> <description> <use\_count> ]

## Syntax Description

|                    |                                 |
|--------------------|---------------------------------|
| show               | Show running system information |
| inband-telemetry   | Show INT information            |
| record             | Show Record Configuration       |
| <i>recordname</i>  | (Optional) Specify a record     |
| __readonly__       | (Optional)                      |
| <i>record</i>      | (Optional)                      |
| <i>description</i> | (Optional)                      |
| <i>use_count</i>   | (Optional)                      |

## Command Mode

- /exec

# show inband-telemetry sessions

show inband-telemetry sessions [ <monitorname> ] [ \_\_readonly\_\_ <monitor> ]

## Syntax Description

|                     |                                 |
|---------------------|---------------------------------|
| show                | Show running system information |
| inband-telemetry    | Show INT information            |
| sessions            | Show Session Configuration      |
| <i>monitorname</i>  | (Optional) Specify a monitor    |
| <i>__readonly__</i> | (Optional)                      |
| <i>monitor</i>      | (Optional)                      |

## Command Mode

- /exec

# show inband-telemetry watchlist

```
show inband-telemetry watchlist [ { <watchlistname> } ] [ __readonly__ <watchlist> <use_count>
<description> <num_aces> <ace_seq_num> <ace_action> <ace_type> <ace_sip> <ace_sip_len> <ace_dip>
<ace_dip_len> ]
```

## Syntax Description

|                      |                                 |
|----------------------|---------------------------------|
| show                 | Show running system information |
| inband-telemetry     | Show INT information            |
| watchlist            | Show watchlist Configuration    |
| <i>watchlistname</i> | (Optional) Specify a watchlist  |
| <i>__readonly__</i>  | (Optional)                      |
| <i>watchlist</i>     | (Optional)                      |
| <i>use_count</i>     | (Optional)                      |
| <i>description</i>   | (Optional)                      |
| <i>num_aces</i>      | (Optional)                      |
| <i>ace_seq_num</i>   | (Optional)                      |
| <i>ace_action</i>    | (Optional)                      |
| <i>ace_type</i>      | (Optional)                      |
| <i>ace_sip</i>       | (Optional)                      |
| <i>ace_sip_len</i>   | (Optional)                      |
| <i>ace_dip</i>       | (Optional)                      |
| <i>ace_dip_len</i>   | (Optional)                      |

## Command Mode

- /exec

## show incompatibility-all system

```
show incompatibility-all { system <uri0> | nxos <uri1> } [ __readonly__ { [ TABLE_incompat_all <Str1> [
<Serv> ] [ <Cap> ] [ <Desc> ] [ <Req> ] [ <Enable> ] ] [ <Dynamic> ] } ]
```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                        |
| incompatibility-all | Show incompatible configurations for the entire system |
| system              | show incompatibilities with an image                   |
| <i>uri0</i>         | Enter image uri  |
| nxos                | show incompatibilities with an image                   |
| <i>uri1</i>         | Enter image uri  |
| <i>__readonly__</i> | (Optional)   |
| TABLE_incompat_all  | (Optional) Show incompatibility system table           |
| <i>Str1</i>         | (Optional)   |
| <i>Serv</i>         | (Optional)   |
| <i>Cap</i>          | (Optional)   |
| <i>Desc</i>         | (Optional)   |
| <i>Req</i>          | (Optional)   |
| <i>Enable</i>       | (Optional)   |
| <i>Dynamic</i>      | (Optional)   |

### Command Mode

- /exec

# show incompatibility system

```
show incompatibility { system <uri0> | nxos <uri1> } [ __readonly__ { [ TABLE_incompat <Str1> [ <Serv>
] [ <Cap> ] [ <Desc> ] [ <Req> ] [ <Enable> ] [ <Dynamic> ] } ]
```

## Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information              |
| incompatibility     | Show incompatible configurations             |
| system              | show incompatibilities with an image         |
| <i>uri0</i>         | Enter image uri                              |
| nxos                | show incompatibilities with an image         |
| <i>uri1</i>         | Enter image uri                              |
| <i>__readonly__</i> | (Optional)                                   |
| TABLE_incompat      | (Optional) Show incompatibility system table |
| <i>Str1</i>         | (Optional)                                   |
| <i>Serv</i>         | (Optional)                                   |

| <i>Desc</i>         | (Optional)                                   |
| <i>Req</i>          | (Optional)                                   |
| <i>Enable</i>       | (Optional)                                   |
| <i>Dynamic</i>      | (Optional)                                   |

## Command Mode

- /exec

# show install

```
show install { inactive | active [ brief ] | committed } [ __readonly__ { <curr_nxos_image> [ TABLE_smu_list
<install_smu_id> <install_smu_state> ] [ TABLE_package_list <package_id> + ] [ TABLE_base_package_list
<base_package_id> + ] } ]
```

## Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information             |
| install                  | Install related show commands               |
| inactive                 | Inactive packages                           |
| active                   | Active packages                             |
| brief                    | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED   |
| committed                | Committed packages                          |
| __readonly__             | (Optional)                                  |
| <i>curr_nxos_image</i>   | (Optional) NXOS image                       |
| TABLE_smu_list           | (Optional)                                  |
| <i>install_smu_id</i>    | (Optional) install operation smu identifier |
| <i>install_smu_state</i> | (Optional) install operation smu state      |
| TABLE_package_list       | (Optional)                                  |
| <i>package_id</i>        | (Optional) Package name                     |
| TABLE_base_package_list  | (Optional)                                  |
| <i>base_package_id</i>   | (Optional) Base package name                |

## Command Mode

- /exec

## show install all failed-standby

```
show install all failed-standby [ __readonly__ { [ TABLE_installFailStandby <Str1> ] } ]
```

### Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information                     |
| install                  | Show the software install impact between two images |
| all                      | Show install all information                        |
| failed-standby           | show log from failed standby                        |
| __readonly__             | (Optional)  |
| TABLE_installFailStandby | (Optional) Install failed-standby table             |
| <i>Str1</i>              | (Optional)  |

### Command Mode

- /exec

## show install all failure-reason

```
show install all failure-reason [ __readonly__ { [ TABLE_installFailReason <installFailReasonStr> ] } ]
```

### Syntax Description

|                             |   |
|-----------------------------|---|
| show                        | Show running system information                     |
| install                     | Show the software install impact between two images |
| all                         | show install all information                        |
| failure-reason              | Show failure reason for the last install all        |
| __readonly__                | (Optional)  |
| TABLE_installFailReason     | (Optional) Install failure-reason table             |
| <i>installFailReasonStr</i> | (Optional)  |

### Command Mode

- /exec

# show install all impact

show install all impact [ nxos <uri> ] + [ non-disruptive ]

## Syntax Description

|                |   |
|----------------|---|
| show           | Show running system information                     |
| install        | Show the software install impact between two images |
| all            | show install all information                        |
| impact         | show impact of the install all command              |
| nxos           | (Optional) boot-variable name                       |
| <i>uri</i>     | (Optional) Enter image uri                          |
| non-disruptive | (Optional) non-disruptive show install              |

## Command Mode

- /exec

# show install all impact epld

```
show install all impact epld <uri> [ __readonly__ [ { TABLE_verinfo <ver_module> <ver_type> <epld_name>
<run_ver> <new_ver> <upg_req> } ] [ { TABLE_compat <module> <type> <upgradable> <impact> <reason>
} ] ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information             |
| install             | Show the software install status            |
| all                 | show install all information                |
| impact              | show impact of the install all epld command |
| epld                | Show EPLD install information               |
| <i>uri</i>          | Local URI containing EPLD Image             |
| <i>__readonly__</i> | (Optional)                                  |
| TABLE_verinfo       | (Optional)                                  |
| <i>ver_module</i>   | (Optional)                                  |
| <i>ver_type</i>     | (Optional)                                  |
| <i>epld_name</i>    | (Optional)                                  |
| <i>run_ver</i>      | (Optional)                                  |
| <i>new_ver</i>      | (Optional)                                  |
| <i>upg_req</i>      | (Optional)                                  |
| TABLE_compat        | (Optional)                                  |
| <i>module</i>       | (Optional)                                  |
| <i>type</i>         | (Optional)                                  |
| <i>upgradable</i>   | (Optional)                                  |
| <i>impact</i>       | (Optional)                                  |
| <i>reason</i>       | (Optional)                                  |

## Command Mode

- /exec

# show install all progress

show install all progress

## Syntax Description

|          |  |
|----------|--|
| show     | Show running system information          |
| install  | Show the software install progress       |
| all      | show install all information             |
| progress | show progress of the current install all |

## Command Mode

- /exec

## show install all status

```
show install all status [ __readonly__ { [ <no_install_status> ] [ TABLE_installstage <rownum> <moduleid>
<starttime> <stage> <stagesstatus> <endtime> ] [ TABLE_installcompatibility <compat_module_id> <bootable>
<impact> <install_type> [ <reason> ] ] [ TABLE_installversion <entryid> <version_module_id> <image>
<running_version> <new_version> <upg_required> ] [ TABLE_installadditionalinfo <add_info> ] } ]
```

### Syntax Description

|                            |   |
|----------------------------|---|
| show                       | Show running system information                     |
| install                    | Show the software install impact between two images |
| all                        | show install all information                        |
| status                     | show status of the current or last install all      |
| <i>__readonly__</i>        | (Optional)  |
| TABLE_installstage         | (Optional) install preupgrade stage table           |
| TABLE_installcompatibility | (Optional) Compatibility table                      |
| <i>no_install_status</i>   | (Optional) no recent install output                 |
| <i>rownum</i>              | (Optional) row number of this stage in table        |
| <i>moduleid</i>            | (Optional) module id                                |
| <i>starttime</i>           | (Optional) install step start time                  |
| <i>stage</i>               | (Optional) install stage                            |
| <i>stagesstatus</i>        | (Optional) success or failure of stage              |
| <i>endtime</i>             | (Optional) install stage end time                   |
| <i>compat_module_id</i>    | (Optional) compat_module_id                         |
| <i>bootable</i>            | (Optional) module bootable, yes or no               |
| <i>impact</i>              | (Optional) impact, disruptive or nondisruptive      |
| <i>install_type</i>        | (Optional) type of install, reset or none           |
| <i>reason</i>              | (Optional) reason                                   |
| TABLE_installversion       | (Optional) module new version information           |
| <i>entryid</i>             | (Optional)  |
| <i>version_module_id</i>   | (Optional)  |
| <i>image</i>               | (Optional)  |

|                             |                                   |
|-----------------------------|-----------------------------------|
| <i>running_version</i>      | (Optional)                        |
| <i>new_version</i>          | (Optional)                        |
| <i>upg_required</i>         | (Optional)                        |
| TABLE_installadditionalinfo | (Optional) additional info        |
| <i>add_info</i>             | (Optional) additional info string |

**Command Mode**

- /exec

# show install all time-stats

show install all time-stats [ detail | handshake ]

## Syntax Description

|            |   |
|------------|---|
| show       | Show running system information   |
| install    | Show the software install impact between two images   |
| all        | show install all information  |
| time-stats | show overall time statistics of the last install all  |
| detail     | (Optional) show detailed time statistics of the last install all                              |
| handshake  | (Optional) show handshake time statistics for sysmgr and lc processes of the last install all |

## Command Mode

- /exec

## show install epld status

```
show install epld status [ __readonly__ [ { TABLE_data <entry_num> [ <header_info> ] <module_num>
<time> [ <epld_install_name> ] [ <reason> ] [ <status> ] [ TABLE_epld [ <epld_name> ] [ <curr_ver> ] [
<old_ver> ] ] } ] ] ]
```

### Syntax Description

|                          |                                       |
|--------------------------|---------------------------------------|
| show                     | Show running system information       |
| install                  | Show the software install status      |
| epld                     | Show EPLD install information         |
| status                   | Show status of previous EPLD upgrades |
| <i>__readonly__</i>      | (Optional)                            |
| <i>TABLE_data</i>        | (Optional)                            |
| <i>entry_num</i>         | (Optional)                            |
| <i>header_info</i>       | (Optional)                            |

### Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information                       |
| interface              | Show interface status and information                 |
| <i>ifid_brief1</i>     | Enter interface type and number in module/slot format |
| brief                  | (Optional) Show brief info of interface               |
| __readonly__           | (Optional) Read Only                                  |
| <i>interface_vfc</i>   | (Optional) Interface index                            |
| TABLE_interface_vfc    | (Optional) show interface                             |
| <i>vsan_brief</i>      | (Optional) vsan for brief                             |
| <i>oper_port_state</i> | (Optional) oper port state                            |
| <i>port_state</i>      | (Optional) port state                                 |
| <i>bound_interface</i> | (Optional) bound interface                            |
| <i>port_desc</i>       | (Optional) port description                           |
| <i>port_des</i>        | (Optional) port description                           |
| <i>mgmt_hw_desc1</i>   | (Optional) HW description                             |

|                         |                                     |
|-------------------------|-------------------------------------|
| <i>mgmt_hw_addr1</i>    | (Optional) HW address               |
| <i>port_name</i>        | (Optional) port description         |
| <i>hardware</i>         | (Optional) Hardware is              |
| <i>sfp</i>              | (Optional) sfp                      |
| <i>port_wwn</i>         | (Optional) port wwn                 |
| <i>peer_port_wwn</i>    | (Optional) peer port wwn            |
| <i>admin_mode</i>       | (Optional) admin mode               |
| <i>admin_trunk_mode</i> | (Optional) admin trunk mode         |
| <i>snmp_trap</i>        | (Optional) snmp trap                |
| <i>status</i>           | (Optional) Status                   |
| <i>state_rsn1</i>       | (Optional) state reason             |
| <i>fcot_info</i>        | (Optional) fcot info                |
| <i>bind_info</i>        | (Optional) bind interface           |
| <i>bind_mac</i>         | (Optional) bind mac                 |
| <i>bind_type</i>        | (Optional) bind type                |
| <i>port_mode</i>        | (Optional) port mode                |
| <i>fcid</i>             | (Optional) fcid                     |
| <i>cfg_port_vsan</i>    | (Optional) config port vsan         |
| <i>vsan</i>             | (Optional) vsan for brief           |
| <i>port_rate_mode</i>   | (Optional) operation port rate mode |
| <i>oper_speed</i>       | (Optional) speed                    |
| <i>admin_speed</i>      | (Optional) admin speed              |
| <i>port_channel</i>     | (Optional) port channel             |
| <i>ip_addr1</i>         | (Optional) Ip address               |
| <i>oper_txbbcredit</i>  | (Optional) oper tx bbcredit         |
| <i>oper_rxbbcredit</i>  | (Optional) oper rx bbcredit         |
| <i>port_bb_scn</i>      | (Optional) port bb scn              |
| <i>admin_rxbufsize</i>  | (Optional) admin rx bufsize         |
| <i>admin_port_encap</i> | (Optional) admin port encap         |

|                                |                                    |
|--------------------------------|------------------------------------|
| <i>admin_beacon_mode</i>       | (Optional) admin beacon mode       |
| <i>admin_fec_state</i>         | (Optional) admin fec state         |
| <i>oper_fec_state</i>          | (Optional) oper fec state          |
| <i>bundle_if_index</i>         | (Optional) bundle if index         |
| <i>trkd_if_index</i>           | (Optional) Trunk interfaces        |
| <i>trk_cfg_vsans</i>           | (Optional) Trunk vsans             |
| <i>trkd_port_state</i>         | (Optional) trunk port state        |
| <i>num_ports</i>               | (Optional) number of ports         |
| TABLE_trk_intf                 | (Optional) trunk interfaces        |
| <i>trk_intf</i>                | (Optional) track interface         |
| <i>info_type_num</i>           | (Optional) info type num           |
| <i>info_model_num</i>          | (Optional) info model num          |
| <i>info_manufacturer</i>       | (Optional) info manufacturer       |
| <i>info_port_id</i>            | (Optional) info port id            |
| <i>active_vsan</i>             | (Optional) allowed and active vsan |
| <i>trunk_vsan_up</i>           | (Optional) trunk vsan up           |
| <i>trunk_vsan_isolated</i>     | (Optional) trunk vsan isolated     |
| <i>trunk_vsan_initializing</i> | (Optional) trunk vsan initializing |
| <i>in_bps</i>                  | (Optional) input bits/sec          |
| <i>in_byps</i>                 | (Optional) input bytes/sec         |
| <i>in_fps</i>                  | (Optional) input frames/sec        |
| <i>out_bps</i>                 | (Optional) output bits/sec         |
| <i>out_byps</i>                | (Optional) output bytes/sec        |
| <i>out_fps</i>                 | (Optional) output frames/sec       |
| <i>total_in_frames</i>         | (Optional) total in frames         |
| <i>total_in_bytes</i>          | (Optional) total in bytes          |
| <i>total_in_discards</i>       | (Optional) total in discards       |
| <i>total_in_errors</i>         | (Optional) total in errors         |
| <i>invalid_crc</i>             | (Optional) invalid crc             |

|                               |  |
|-------------------------------|--|
| <i>unknown_class_frames</i>   | (Optional) unknown class frames                    |
| <i>frames_too_long</i>        | (Optional) frames too long                         |
| <i>frames_too_short</i>       | (Optional) frames too short                        |
| <i>total_out_frames</i>       | (Optional) total out frames                        |
| <i>total_out_bytes</i>        | (Optional) total out bytes                         |
| <i>total_out_discards</i>     | (Optional) total out discards                      |
| <i>total_out_errors</i>       | (Optional) total out errors                        |
| <i>in_ols</i>                 | (Optional) input OLS                               |
| <i>in_lrr</i>                 | (Optional) input LRR                               |
| <i>in_nos</i>                 | (Optional) input NOS                               |
| <i>in_loop_inits</i>          | (Optional) input loop inits                        |
| <i>out_ols</i>                | (Optional) output OLS                              |
| <i>out_lrr</i>                | (Optional) ouput LRR                               |
| <i>out_nos</i>                | (Optional) output NOS                              |
| <i>out_loop_inits</i>         | (Optional) output loop inits                       |
| <i>rx_b2b_perf_buff</i>       | (Optional) rx b2b performance buff                 |
| <i>rx_b2b_credit</i>          | (Optional) rx b2b credit                           |
| <i>tx_b2b_credit</i>          | (Optional) tx b2b credit                           |
| <i>tx_b2b_low_pri_cre</i>     | (Optional) tx b2b low pri credit                   |
| <i>fcoe_in_pkts</i>           | (Optional) fcoe in pkts                            |
| <i>fcoe_in_octets</i>         | (Optional) fcoe in octets                          |
| <i>fcoe_out_pkts</i>          | (Optional) fcoe out pkts                           |
| <i>fcoe_out_octets</i>        | (Optional) fcoe out octets                         |
| TABLE_members                 | (Optional) table for port-channel member interface |
| <i>port_channel_member</i>    | (Optional) port-channel member interface           |
| <i>interface_last_changed</i> | (Optional) interface last changed                  |
| <i>time_last_cleared</i>      | (Optional) counters last cleared                   |
| TABLE_interface_brief_vfc     | (Optional) show interface brief table              |
| <i>interface_vfc</i>          | (Optional) Interface index                         |

|                         |                                |
|-------------------------|--------------------------------|
| <i>vsan_brief</i>       | (Optional) vsan brief          |
| <i>admin_mode</i>       | (Optional) admin mode          |
| <i>admin_trunk_mode</i> | (Optional) admin trunk mode    |
| <i>status</i>           | (Optional) status              |
| <i>fcot_info</i>        | (Optional) fcot info           |
| <i>bind_info</i>        | (Optional) bind interface      |
| <i>bind_type</i>        | (Optional) bind type           |
| <i>bind_mac</i>         | (Optional) bind mac address    |
| <i>port_rate_mode</i>   | (Optional) rate mode           |
| <i>oper_speed</i>       | (Optional) speed               |
| <i>port_channel</i>     | (Optional) port channel number |
| <i>ip_addr</i>          | (Optional) IP address          |

**Command Mode**

- /exec

## show interface

```

### Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information                       |
| interface              | Show interface status and information                 |
| <i>ifid</i>            | Enter interface type and number in module/slot format |
| quick                  | (Optional) Show info of interface skipping stats      |
| __readonly__           | (Optional) Read Only                                  |
| TABLE_interface        | (Optional) show interface                             |
| <i>interface</i>       | (Optional) Interface index                            |
| <i>desc</i>            | (Optional) Interface description                      |
| <i>svi_if_index</i>    | (Optional) Interface                                  |
| <i>svi_admin_state</i> | (Optional)  |
| <i>oper_state</i>      | (Optional)  |
| <i>svi_rsn_desc</i>    | (Optional) Interface state reason detailed            |
| <i>svi_line_proto</i>  | (Optional)  |
| <i>svi_hw</i>          | (Optional) Hardware                                   |
| <i>svi_mac</i>         | (Optional) Address                                    |
| <i>svi_desc</i>        | (Optional) Interface Description                      |
| <i>svi_ip_addr</i>     | (Optional) IP Address                                 |
| <i>svi_ip_mask</i>     | (Optional) IP address mask                            |
| <i>svi_mtu</i>         | (Optional) MTU size in bytes                          |
| <i>svi_bw</i>          | (Optional) Bandwidth in kilobits                      |
| <i>svi_delay</i>       | (Optional) Throughput delay (tens of microseconds)    |
| <i>vlan_id</i>         | (Optional) Vlan                                       |
| <i>type</i>            | (Optional) type                                       |
| <i>svi_tx_load</i>     | (Optional) Tx Load                                    |

|                                  |   |
|----------------------------------|---|
| <i>svi_rx_load</i>               | (Optional) Rx Load                              |
| <i>svi_carrier_delay_sec</i>     | (Optional) carrier delay value in seconds       |
| <i>svi_carrier_delay_msec</i>    | (Optional) carrier delay value in milli-seconds |
| <i>svi_arp_type</i>              | (Optional) ARP type                             |
| <i>svi_arp_timeout</i>           | (Optional) ARP timeout value                    |
| <i>svi_time_last_cleared</i>     | (Optional) Time last cleared                    |
| TABLE_sec_vlan                   | (Optional) secondary vlans                      |
| <i>sec_vlan</i>                  | (Optional) vlan id                              |
| <i>sec_vlan_type</i>             | (Optional) secondary vlan type                  |
| <i>eth_load_interval1_rx</i>     | (Optional) interval 1 timer value in sec        |
| <i>eth_inrate1_bits</i>          | (Optional) interval 1 input rate bits/sec       |
| <i>eth_inrate1_pkts</i>          | (Optional) interval 1 input rate pkts/sec       |
| <i>eth_load_interval1_tx</i>     | (Optional) interval 1 timer value in sec        |
| <i>eth_outrate1_bits</i>         | (Optional) interval 1 output rate bits/sec      |
| <i>eth_outrate1_pkts</i>         | (Optional) interval 1 output rate pkts/sec      |
| <i>eth_inrate1_summary_bits</i>  | (Optional) interval 1 input rate bit summary    |
| <i>eth_inrate1_summary_pkts</i>  | (Optional) interval 1 input rate pkt summary    |
| <i>eth_outrate1_summary_bits</i> | (Optional) interval 1 output rate bit summary   |
| <i>eth_outrate1_summary_pkts</i> | (Optional) interval 1 output rate pkt summary   |
| <i>eth_load_interval2_rx</i>     | (Optional) interval 2 timer value in sec        |
| <i>eth_inrate2_bits</i>          | (Optional) interval 2 input rate bits/sec       |
| <i>eth_inrate2_pkts</i>          | (Optional) interval 2 input rate pkts/sec       |
| <i>eth_load_interval2_tx</i>     | (Optional) interval 2 timer value in sec        |
| <i>eth_outrate2_bits</i>         | (Optional) interval 2 output rate bits/sec      |
| <i>eth_outrate2_pkts</i>         | (Optional) interval 2 output rate pkts/sec      |
| <i>eth_inrate2_summary_bits</i>  | (Optional) interval 2 input rate bit summary    |
| <i>eth_inrate2_summary_pkts</i>  | (Optional) interval 2 input rate pkt summary    |
| <i>eth_outrate2_summary_bits</i> | (Optional) interval 2 output rate bit summary   |
| <i>eth_outrate2_summary_pkts</i> | (Optional) interval 2 output rate pkt summary   |

|                                  |   |
|----------------------------------|---|
| <i>eth_load_interval3_rx</i>     | (Optional) interval 3 timer value in sec      |
| <i>eth_inrate3_bits</i>          | (Optional) interval 3 input rate bits/sec     |
| <i>eth_inrate3_pkts</i>          | (Optional) interval 3 input rate pkts/sec     |
| <i>eth_load_interval3_tx</i>     | (Optional) interval 3 timer value in sec      |
| <i>eth_outrate3_bits</i>         | (Optional) interval 3 output rate bits/sec    |
| <i>eth_outrate3_pkts</i>         | (Optional) interval 3 output rate pkts/sec    |
| <i>eth_inrate3_summary_bits</i>  | (Optional) interval 3 input rate bit summary  |
| <i>eth_inrate3_summary_pkts</i>  | (Optional) interval 3 input rate pkt summary  |
| <i>eth_outrate3_summary_bits</i> | (Optional) interval 3 output rate bit summary |
| <i>eth_outrate3_summary_pkts</i> | (Optional) interval 3 output rate pkt summary |
| <i>eth_l2_ucastpkts</i>          | (Optional) L2 switched ucast pkts             |
| <i>eth_l2_ucastbytes</i>         | (Optional) L2 switched ucast bytes            |
| <i>eth_l2_mcastpkts</i>          | (Optional) L2 switched mcast pkts             |
| <i>eth_l2_mcastbytes</i>         | (Optional) L2 switched mcast bytes            |
| <i>eth_l2_bcastpkts</i>          | (Optional) L2 switched bcast pkts             |
| <i>eth_l2_bcastbytes</i>         | (Optional) L2 switched bcast bytes            |
| <i>eth_l3in_ucastpkts</i>        | (Optional) IPv4 L3 in switched ucast pkts     |
| <i>eth_l3in_ucastbytes</i>       | (Optional) IPv4 L3 in switched ucast bytes    |
| <i>eth_l3in_mcastpkts</i>        | (Optional) IPv4 L3 in switched mcast pkts     |
| <i>eth_l3in_mcastbytes</i>       | (Optional) IPv4 L3 in switched mcast bytes    |
| <i>eth_l3in_bcastpkts</i>        | (Optional) L3 in switched bcast pkts          |
| <i>eth_l3in_bcastbytes</i>       | (Optional) L3 in switched bcast bytes         |
| <i>eth_l3out_ucastpkts</i>       | (Optional) IPv4 L3 out switched ucast pkts    |
| <i>eth_l3out_ucastbytes</i>      | (Optional) IPv4 L3 out switched ucast bytes   |
| <i>eth_l3out_mcastpkts</i>       | (Optional) IPv4 L3 out switched mcast pkts    |
| <i>eth_l3out_mcastbytes</i>      | (Optional) IPv4 L3 out switched mcast bytes   |
| <i>eth_l3out_bcastpkts</i>       | (Optional) L3 out switched bcast pkts         |
| <i>eth_l3out_bcastbytes</i>      | (Optional) L3 out switched bcast bytes        |
| <i>eth_l3in_routed_pkts</i>      | (Optional) L3 in routed pkts                  |

|                               |  |
|-------------------------------|--|
| <i>eth_l3in_routed_bytes</i>  | (Optional) L3 in routed bytes                            |
| <i>eth_l3out_routed_pkts</i>  | (Optional) L3 out routed pkts                            |
| <i>eth_l3out_routed_bytes</i> | (Optional) L3 out routed bytes                           |
| <i>eth_l3avg1_inbytes</i>     | (Optional) Load interval 1 L3 average in switched bytes  |
| <i>eth_l3avg1_inpkts</i>      | (Optional) Load interval 1 L3 average in switched pkts   |
| <i>eth_l3avg1_outbytes</i>    | (Optional) Load interval 1 L3 average out switched bytes |
| <i>eth_l3avg1_outpkts</i>     | (Optional) Load interval 1 L3 average out switched pkts  |
| <i>eth_l3avg2_inbytes</i>     | (Optional) Load interval 2 L3 average in switched bytes  |
| <i>eth_l3avg2_inpkts</i>      | (Optional) Load interval 2 L3 average in switched pkts   |
| <i>eth_l3avg2_outbytes</i>    | (Optional) Load interval 2 L3 average out switched bytes |
| <i>eth_l3avg2_outpkts</i>     | (Optional) Load interval 2 L3 average out switched pkts  |
| <i>eth_l3avg3_inbytes</i>     | (Optional) Load interval 3 L3 average in switched bytes  |
| <i>eth_l3avg3_inpkts</i>      | (Optional) Load interval 3 L3 average in switched pkts   |
| <i>eth_l3avg3_outbytes</i>    | (Optional) Load interval 3 L3 average out switched bytes |
| <i>eth_l3avg3_outpkts</i>     | (Optional) Load interval 3 L3 average out switched pkts  |
| <i>eth_inpkts</i>             | (Optional) Packets input                                 |
| <i>eth_inbytes</i>            | (Optional) Bytes input                                   |
| <i>eth_nobuf</i>              | (Optional) No buffer received                            |
| <i>eth_inbcast</i>            | (Optional) Broadcasts                                    |
| <i>eth_inmcast</i>            | (Optional) Multicasts                                    |
| <i>eth_inucast</i>            | (Optional) Unicasts                                      |
| <i>eth_ingiants</i>           | (Optional) giants  |
| <i>eth_ipmcast</i>            | (Optional) IP multicast                                  |
| <i>eth_inhw_switched</i>      | (Optional) Input H/W Switched                            |
| <i>eth_insw_switched</i>      | (Optional) Input S/W Switched                            |
| <i>eth_runts</i>              | (Optional) runts   |
| <i>eth_storm_supp</i>         | (Optional) storm suppression                             |
| <i>eth_throtles</i>           | (Optional) throttles                                     |
| <i>eth_inerr</i>              | (Optional) input errors                                  |

|                            |   |
|----------------------------|---|
| <i>eth_crc</i>             | (Optional) CRC                                  |
| <i>eth_ecc</i>             | (Optional) ECC                                  |
| <i>eth_frame</i>           | (Optional) frame                                |
| <i>eth_overrun</i>         | (Optional) overrun                              |
| <i>eth_ignored</i>         | (Optional) ignored                              |
| <i>eth_watchdog</i>        | (Optional) watchdog                             |
| <i>eth_outbcast</i>        | (Optional) Broadcasts                           |
| <i>eth_outmcast</i>        | (Optional) Multicasts                           |
| <i>eth_outucast</i>        | (Optional) Unicasts                             |
| <i>eth_outgiants</i>       | (Optional) giants                               |
| <i>eth_inpause</i>         | (Optional) pause input                          |
| <i>eth_dribble</i>         | (Optional) input packets with dribble condition |
| <i>eth_in_ifdown_drops</i> | (Optional) Input if-down drops                  |
| <i>eth_bad_eth</i>         | (Optional) bad ether type drop                  |
| <i>eth_bad_proto</i>       | (Optional) bad protocol drops                   |
| <i>eth_outpkts</i>         | (Optional) packets output                       |
| <i>eth_outbytes</i>        | (Optional) bytes output                         |
| <i>eth_underrun</i>        | (Optional) underruns                            |
| <i>eth_outhw_switched</i>  | (Optional) Out H/W Switched                     |
| <i>eth_outsw_switched</i>  | (Optional) Out S/W Switched                     |
| <i>eth_outerr</i>          | (Optional) output errors                        |
| <i>eth_coll</i>            | (Optional) collisions                           |
| <i>eth_resets</i>          | (Optional) interface resets                     |
| <i>eth_babbles</i>         | (Optional) babbles                              |
| <i>eth_latecoll</i>        | (Optional) late collision                       |
| <i>eth_deferred</i>        | (Optional) deferred                             |
| <i>eth_lostcarrier</i>     | (Optional) lost carrier                         |
| <i>eth_nocarrier</i>       | (Optional) no carrier                           |
| <i>eth_outpause</i>        | (Optional) PAUSE output                         |

|                             |  |
|-----------------------------|--|
| <i>eth_buffail</i>          | (Optional) output buffer failures                  |
| <i>eth_bufswapped</i>       | (Optional) output buffers swapped out              |
| <i>eth_arpdrops</i>         | (Optional) arp drops                               |
| <i>eth_out_ifdown_drops</i> | (Optional) Output if-down drops                    |
| <i>eth_single_coll</i>      | (Optional) single collisions                       |
| <i>eth_multi_coll</i>       | (Optional) multi collisions                        |
| <i>eth_excess_coll</i>      | (Optional) excessive collisions                    |
| <i>eth_jabbers</i>          | (Optional) jabbers                                 |
| <i>eth_shortframe</i>       | (Optional) short frames                            |
| <i>eth_indiscard</i>        | (Optional) discards                                |
| <i>eth_bad_encap</i>        | (Optional) bad encapsulation                       |
| <i>eth_outcrc</i>           | (Optional) Output CRC                              |
| <i>eth_symbol</i>           | (Optional) symbol errors                           |
| <i>eth_out_drops</i>        | (Optional) output drops                            |
| <i>eth_sqetest</i>          | (Optional) SQE test                                |
| <i>eth_inb64</i>            | (Optional) input pkts between 0 and 64 bytes       |
| <i>eth_inb65_127</i>        | (Optional) input pkts between 65 and 127 bytes     |
| <i>eth_inb128_255</i>       | (Optional) input pkts between 128 and 255 bytes    |
| <i>eth_inb256_511</i>       | (Optional) input pkts between 256 and 511 bytes    |
| <i>eth_inb512_1023</i>      | (Optional) input pkts between 512 and 1023 bytes   |
| <i>eth_inb1024_1518</i>     | (Optional) input pkts between 1024 and 1518 bytes  |
| <i>eth_inb1519_1548</i>     | (Optional) input pkts between 1519 and 1548 bytes  |
| <i>eth_intrunk</i>          | (Optional) input trunk pkts                        |
| <i>eth_outb64</i>           | (Optional) output pkts between 0 and 64 bytes      |
| <i>eth_outb65_127</i>       | (Optional) output pkts between 65 and 127 bytes    |
| <i>eth_outb128_255</i>      | (Optional) output pkts between 128 and 255 bytes   |
| <i>eth_outb256_511</i>      | (Optional) output pkts between 256 and 511 bytes   |
| <i>eth_outb512_1023</i>     | (Optional) output pkts between 512 and 1023 bytes  |
| <i>eth_outb1024_1518</i>    | (Optional) output pkts between 1024 and 1518 bytes |

### Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information                       |
| interface              | Show interface status and information                 |
| <i>ifmgmt</i>          | Enter interface type and number in module/slot format |
| <u>__readonly__</u>    | (Optional) Read Only                                  |
| <u>TABLE_interface</u> | (Optional) show interface                             |
| <i>interface</i>       | (Optional) Interface index                            |
| <i>state</i>           | (Optional) Interface state                            |
| <i>state_rsn_desc</i>  | (Optional) Interface state reason detailed            |
| <i>state_rsn</i>       | (Optional) Interface state reason                     |
| <i>eth_rsn_fac</i>     | (Optional) State reason facility                      |
| <i>eth_rsn_code</i>    | (Optional) State reason code                          |
| <i>admin_state</i>     | (Optional) Interface admin state                      |
| <i>share_state</i>     | (Optional) Interface ownership                        |
| <i>eth_bundle</i>      | (Optional) Belongs to bundle                          |
| <i>eth_dce_mode</i>    | (Optional) DCE mode description                       |
| <i>vpc_status</i>      | (Optional) VPC status                                 |

|                         |                                  |
|-------------------------|----------------------------------|
| <i>eth_hw_desc</i>      | (Optional) HW description        |
| <i>eth_hw_addr</i>      | (Optional) HW address            |
| <i>eth_bia_addr</i>     | (Optional) bia address           |
| <i>desc</i>             | (Optional) Interface description |
| <i>eth_ip_addr</i>      | (Optional) IP Address            |
| <i>eth_ip_mask</i>      | (Optional) IP address mask       |
| <i>eth_ip_prefix</i>    | (Optional) IP address prefix     |
| <i>eth_mtu</i>          | (Optional) MTU                   |
| <i>eth_bw</i>           | (Optional) Bandwidth             |
| <i>eth_encap_vlan</i>   | (Optional) Encapsulation Vlan    |
| <i>eth_dly</i>          | (Optional) Delay                 |
| <i>eth_reliability</i>  | (Optional) Reliability           |
| <i>eth_txload</i>       | (Optional) Tx load               |
| <i>eth_rxload</i>       | (Optional) Rx load               |
| <i>encapsulation</i>    | (Optional) Encapsulation         |
| <i>medium</i>           | (Optional) medium type           |
| <i>eth_loopback</i>     | (Optional) Loopback              |
| <i>eth_keepalive</i>    | (Optional) Keepalive             |
| <i>eth_duplex</i>       | (Optional) Duplex                |
| <i>eth_speed</i>        | (Optional) Speed                 |
| <i>eth_mode</i>         | (Optional) Port mode             |
| <i>eth_ratemode</i>     | (Optional) Rate mode             |
| <i>eth_autoneg</i>      | (Optional) Autonegotiation       |
| <i>eth_beacon</i>       | (Optional) Beacon                |
| <i>eth_media</i>        | (Optional) Media type            |
| <i>eth_in_flowctrl</i>  | (Optional) Input flowcontrol     |
| <i>eth_out_flowctrl</i> | (Optional) Output flowcontrol    |
| <i>eth_mdix</i>         | (Optional) Mdx                   |
| <i>eth_sw_t_monitor</i> | (Optional) Switchport Monitor    |

|                             |   |
|-----------------------------|---|
| <i>eth_etherType</i>        | (Optional) EtherType                                |
| <i>eth_members</i>          | (Optional) Members in this channel                  |
| <i>eth_clk_mode</i>         | (Optional) Clock mode                               |
| <i>eth_arp_type</i>         | (Optional) ARP type                                 |
| <i>eth_arp_timeout</i>      | (Optional) ARP timeout                              |
| <i>eth_last_in</i>          | (Optional) Last input                               |
| <i>eth_last_out</i>         | (Optional) Last output                              |
| <i>eth_out_hang</i>         | (Optional) Last output hang                         |
| <i>eth_clear_counters</i>   | (Optional) Last clearing of show interface counters |
| <i>eth_link_flapped</i>     | (Optional) Last link flapped                        |
| <i>eth_inq_size</i>         | (Optional) Input queue size                         |
| <i>eth_inq_max</i>          | (Optional) Input queue max                          |
| <i>eth_inq_drops</i>        | (Optional) Input queue drops                        |
| <i>eth_inq_flush</i>        | (Optional) Input queue flushes                      |
| <i>eth_out_drop</i>         | (Optional) Output drops                             |
| <i>eth_q_strategy</i>       | (Optional) Queuing strategy                         |
| <i>eth_outq_size</i>        | (Optional) Output queue size                        |
| <i>eth_outq_max</i>         | (Optional) Output queue max                         |
| <i>eth_reset_cntr</i>       | (Optional) Interface resets                         |
| <i>mgmt_hw_desc</i>         | (Optional) HW description                           |
| <i>mgmt_hw_addr</i>         | (Optional) HW address                               |
| <i>mgmt_ip_addr</i>         | (Optional) IP address                               |
| <i>mgmt_ip_mask</i>         | (Optional) IP address mask                          |
| <i>mgmt_mtu</i>             | (Optional) MTU                                      |
| <i>mgmt_speed</i>           | (Optional) Speed                                    |
| <i>mgmt_duplex</i>          | (Optional) Duplex                                   |
| <i>vdc_lvl_in_avg_bits</i>  | (Optional) VDC level average input bits             |
| <i>vdc_lvl_in_avg_pkts</i>  | (Optional) VDC level average input packets          |
| <i>vdc_lvl_out_avg_bits</i> | (Optional) VDC level average output bits            |

|                             |  |
|-----------------------------|--|
| <i>vdc_lvl_out_avg_pkts</i> | (Optional) VDC level average output packets    |
| <i>vdc_lvl_in_pkts</i>      | (Optional) VDC level input packets             |
| <i>vdc_lvl_in_ucast</i>     | (Optional) VDC level input unicast packets     |
| <i>vdc_lvl_in_mcast</i>     | (Optional) VDC level input multicast packets   |
| <i>vdc_lvl_in_bcast</i>     | (Optional) VDC level input broadcast packets   |
| <i>vdc_lvl_in_bytes</i>     | (Optional) VDC level input bytes               |
| <i>vdc_lvl_in_bps</i>       | (Optional) VDC level input bytes per second    |
| <i>vdc_lvl_in_pps</i>       | (Optional) VDC level input packets per second  |
| <i>vdc_lvl_out_pkts</i>     | (Optional) VDC level output packets            |
| <i>vdc_lvl_out_ucast</i>    | (Optional) VDC level output unicast packets    |
| <i>vdc_lvl_out_mcast</i>    | (Optional) VDC level output multicast packets  |
| <i>vdc_lvl_out_bcast</i>    | (Optional) VDC level output broadcast packets  |
| <i>vdc_lvl_out_bytes</i>    | (Optional) VDC level output bytes              |
| <i>vdc_lvl_out_bps</i>      | (Optional) VDC level output bytes per second   |
| <i>vdc_lvl_out_pps</i>      | (Optional) VDC level output packets per second |

### Syntax Description

|                        |  |
|------------------------|--|
| show                   | Show running system information                  |
| interface              | Show interface status and information            |
| controller             | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED        |
| quick                  | (Optional) Show info of interface skipping stats |
| __readonly__           | (Optional) Read Only                             |
| <i>interface</i>       | (Optional) Interface index                       |
| TABLE_interface        | (Optional) show interface                        |
| <i>state</i>           | (Optional) Interface state                       |
| <i>state_rsn</i>       | (Optional) Interface state reason                |
| <i>state_rsn_desc</i>  | (Optional) Interface state reason detailed       |
| <i>vsan_brief</i>      | (Optional) vsan for brief                        |
| <i>oper_port_state</i> | (Optional) oper port state                       |
| <i>port_state</i>      | (Optional) port state                            |
| <i>bound_interface</i> | (Optional) bound interface                       |
| <i>port_desc</i>       | (Optional) port description                      |

|                         |                                     |
|-------------------------|-------------------------------------|
| <i>port_des</i>         | (Optional) port description         |
| <i>mgmt_hw_desc1</i>    | (Optional) HW description           |
| <i>mgmt_hw_addr1</i>    | (Optional) HW address               |
| <i>port_name</i>        | (Optional) port description         |
| <i>hardware</i>         | (Optional) Hardware is              |
| <i>sfp</i>              | (Optional) sfp                      |
| <i>port_wwn</i>         | (Optional) port wwn                 |
| <i>peer_port_wwn</i>    | (Optional) peer port wwn            |
| <i>admin_mode</i>       | (Optional) admin mode               |
| <i>admin_trunk_mode</i> | (Optional) admin trunk mode         |
| <i>snmp_trap</i>        | (Optional) snmp trap                |
| <i>status</i>           | (Optional) Status                   |
| <i>state_rsn1</i>       | (Optional) state reason             |
| <i>fcot_info</i>        | (Optional) fcot info                |
| <i>bind_info</i>        | (Optional) bind interface           |
| <i>bind_mac</i>         | (Optional) bind mac                 |
| <i>bind_type</i>        | (Optional) bind type                |
| <i>port_mode</i>        | (Optional) port mode                |
| <i>fcid</i>             | (Optional) fcid                     |
| <i>cfg_port_vsan</i>    | (Optional) config port vsan         |
| <i>vsan</i>             | (Optional) vsan for brief           |
| <i>port_rate_mode</i>   | (Optional) operation port rate mode |
| <i>oper_speed</i>       | (Optional) speed                    |
| <i>admin_speed</i>      | (Optional) admin speed              |
| <i>port_channel</i>     | (Optional) port channel             |
| <i>ip_addr1</i>         | (Optional) Ip address               |
| <i>oper_txbbcredit</i>  | (Optional) oper tx bbcredit         |
| <i>oper_rxbbcredit</i>  | (Optional) oper rx bbcredit         |
| <i>port_bb_scn</i>      | (Optional) port bb scn              |

|                                |                                    |
|--------------------------------|------------------------------------|
| <i>admin_rxbufsize</i>         | (Optional) admin rx bufsize        |
| <i>admin_port_encap</i>        | (Optional) admin port encap        |
| <i>admin_beacon_mode</i>       | (Optional) admin beacon mode       |
| <i>admin_fec_state</i>         | (Optional) admin fec state         |
| <i>oper_fec_state</i>          | (Optional) oper fec state          |
| <i>bundle_if_index</i>         | (Optional) bundle if index         |
| <i>trkd_if_index</i>           | (Optional) Trunk interfaces        |
| <i>trk_cfg_vsans</i>           | (Optional) Trunk vsans             |
| <i>trkd_port_state</i>         | (Optional) trunk port state        |
| <i>num_ports</i>               | (Optional) number of ports         |
| TABLE_trk_intf                 | (Optional) trunk interfaces        |
| <i>trk_intf</i>                | (Optional) track interface         |
| <i>info_type_num</i>           | (Optional) info type num           |
| <i>info_model_num</i>          | (Optional) info model num          |
| <i>info_manufacturer</i>       | (Optional) info manufacturer       |
| <i>info_port_id</i>            | (Optional) info port id            |
| <i>active_vsan</i>             | (Optional) allowed and active vsan |
| <i>trunk_vsan_up</i>           | (Optional) trunk vsan up           |
| <i>trunk_vsan_isolated</i>     | (Optional) trunk vsan isolated     |
| <i>trunk_vsan_initializing</i> | (Optional) trunk vsan initializing |
| <i>in_bps</i>                  | (Optional) input bits/sec          |
| <i>in_byps</i>                 | (Optional) input bytes/sec         |
| <i>in_fps</i>                  | (Optional) input frames/sec        |
| <i>out_bps</i>                 | (Optional) output bits/sec         |
| <i>out_byps</i>                | (Optional) output bytes/sec        |
| <i>out_fps</i>                 | (Optional) output frames/sec       |
| <i>total_in_frames</i>         | (Optional) total in frames         |
| <i>total_in_bytes</i>          | (Optional) total in bytes          |
| <i>total_in_discards</i>       | (Optional) total in discards       |

|                               |  |
|-------------------------------|--|
| <i>total_in_errors</i>        | (Optional) total in errors                         |
| <i>invalid_crc</i>            | (Optional) invalid crc                             |
| <i>unknown_class_frames</i>   | (Optional) unknown class frames                    |
| <i>frames_too_long</i>        | (Optional) frames too long                         |
| <i>frames_too_short</i>       | (Optional) frames too short                        |
| <i>total_out_frames</i>       | (Optional) total out frames                        |

| <i>eth_l3out_ucastbytes</i>   | (Optional) L3 out switched ucast bytes                   |
| <i>eth_l3out_mcastpkts</i>    | (Optional) L3 out switched mcast pkts                    |
| <i>eth_l3out_mcastbytes</i>   | (Optional) L3 out switched mcast bytes                   |
| <i>eth_l3out_bcastpkts</i>    | (Optional) L3 out switched bcast pkts                    |
| <i>eth_l3out_bcastbytes</i>   | (Optional) L3 out switched bcast bytes                   |
| <i>eth_l3in_routed_pkts</i>   | (Optional) L3 in routed pkts                             |
| <i>eth_l3in_routed_bytes</i>  | (Optional) L3 in routed bytes                            |
| <i>eth_l3out_routed_pkts</i>  | (Optional) L3 out routed pkts                            |
| <i>eth_l3out_routed_bytes</i> | (Optional) L3 out routed bytes                           |
| <i>eth_l3avg1_inbytes</i>     | (Optional) Load interval 1 L3 average in switched bytes  |
| <i>eth_l3avg1_inpkts</i>      | (Optional) Load interval 1 L3 average in switched pkts   |
| <i>eth_l3avg1_outbytes</i>    | (Optional) Load interval 1 L3 average out switched bytes |
| <i>eth_l3avg1_outpkts</i>     | (Optional) Load interval 1 L3 average out switched pkts  |
| <i>eth_inucast</i>            | (Optional) Unicasts                                      |
| <i>eth_inmcast</i>            | (Optional) Multicasts                                    |
| <i>eth_inbcast</i>            | (Optional) Broadcasts                                    |
| <i>eth_inpkts</i>             | (Optional) Packets input                                 |
| <i>eth_inbytes</i>            | (Optional) Bytes input                                   |
| <i>eth_jumbo_inpkts</i>       | (Optional) Incoming jumbo pkts                           |
| <i>eth_storm_supp</i>         | (Optional) storm suppression                             |
| <i>eth_runts</i>              | (Optional) runts   |
| <i>eth_giants</i>             | (Optional) giants  |
| <i>eth_crc</i>                | (Optional) CRC   |
| <i>eth_nobuf</i>              | (Optional) No buffer received                            |

|                            |   |
|----------------------------|---|
| <i>eth_inerr</i>           | (Optional) input errors                         |
| <i>eth_frame</i>           | (Optional) frame                                |
| <i>eth_overrun</i>         | (Optional) overrun                              |
| <i>eth_underrun</i>        | (Optional) underruns                            |
| <i>eth_ignored</i>         | (Optional) ignored                              |
| <i>eth_watchdog</i>        | (Optional) watchdog                             |
| <i>eth_bad_eth</i>         | (Optional) bad ether type drop                  |
| <i>eth_bad_proto</i>       | (Optional) bad protocol drops                   |
| <i>eth_in_ifdown_drops</i> | (Optional) Input if-down drops                  |
| <i>eth_dribble</i>         | (Optional) input packets with dribble condition |
| <i>eth_indiscard</i>       | (Optional) discards                             |
| <i>eth_inpause</i>         | (Optional) pause input                          |
| <i>eth_stomped_crc</i>     | (Optional) Stomped CRC                          |
| <i>eth_outucast</i>        | (Optional) Unicasts                             |
| <i>eth_outmcast</i>        | (Optional) Multicasts                           |
| <i>eth_outbcast</i>        | (Optional) Broadcasts                           |
| <i>eth_outpkts</i>         | (Optional) packets output                       |
| <i>eth_outbytes</i>        | (Optional) bytes output                         |
| <i>eth_jumbo_outpkts</i>   | (Optional) Outgoing jumbo pkts                  |
| <i>eth_outerr</i>          | (Optional) output errors                        |
| <i>eth_coll</i>            | (Optional) collisions                           |
| <i>eth_deferred</i>        | (Optional) deferred                             |
| <i>eth_latecoll</i>        | (Optional) late collision                       |
| <i>eth_lostcarrier</i>     | (Optional) lost carrier                         |
| <i>eth_nocarrier</i>       | (Optional) no carrier                           |
| <i>eth_babbles</i>         | (Optional) babbles                              |
| <i>eth_outdiscard</i>      | (Optional) output discard                       |
| <i>eth_outpause</i>        | (Optional) PAUSE output                         |
| <i>mgmt_hw_desc</i>        | (Optional) HW description                       |

|                             |  |
|-----------------------------|--|
| <i>mgmt_hw_addr</i>         | (Optional) HW address                          |
| <i>mgmt_ip_addr</i>         | (Optional) IP address                          |
| <i>mgmt_ip_mask</i>         | (Optional) IP address mask                     |
| <i>mgmt_mtu</i>             | (Optional) MTU                                 |
| <i>mgmt_speed</i>           | (Optional) Speed                               |
| <i>mgmt_duplex</i>          | (Optional) Duplex                              |
| <i>vdc_lvl_in_avg_bits</i>  | (Optional) VDC level average input bits        |
| <i>vdc_lvl_in_avg_pkts</i>  | (Optional) VDC level average input packets     |
| <i>vdc_lvl_out_avg_bits</i> | (Optional) VDC level average output bits       |
| <i>vdc_lvl_out_avg_pkts</i> | (Optional) VDC level average output packets    |
| <i>vdc_lvl_in_pkts</i>      | (Optional) VDC level input packets             |
| <i>vdc_lvl_in_ucast</i>     | (Optional) VDC level input unicast packets     |
| <i>vdc_lvl_in_mcast</i>     | (Optional) VDC level input multicast packets   |
| <i>vdc_lvl_in_bcast</i>     | (Optional) VDC level input broadcast packets   |
| <i>vdc_lvl_in_bytes</i>     | (Optional) VDC level input bytes               |
| <i>vdc_lvl_in_bps</i>       | (Optional) VDC level input bytes per second    |
| <i>vdc_lvl_in_pps</i>       | (Optional) VDC level input packets per second  |
| <i>vdc_lvl_out_pkts</i>     | (Optional) VDC level output packets            |
| <i>vdc_lvl_out_ucast</i>    | (Optional) VDC level output unicast packets    |
| <i>vdc_lvl_out_mcast</i>    | (Optional) VDC level output multicast packets  |
| <i>vdc_lvl_out_bcast</i>    | (Optional) VDC level output broadcast packets  |
| <i>vdc_lvl_out_bytes</i>    | (Optional) VDC level output bytes              |
| <i>vdc_lvl_out_bps</i>      | (Optional) VDC level output bytes per second   |
| <i>vdc_lvl_out_pps</i>      | (Optional) VDC level output packets per second |
| <i>mgmt_in_pkts</i>         | (Optional) Input packets                       |
| <i>mgmt_in_bytes</i>        | (Optional) Input bytes                         |
| <i>mgmt_in_mcast</i>        | (Optional) Input multicast frames              |
| <i>mgmt_in_compressed</i>   | (Optional) Input compressed                    |
| <i>mgmt_in_errors</i>       | (Optional) Input errors                        |

|                            |                                  |
|----------------------------|----------------------------------|
| <i>mgmt_in_frame</i>       | (Optional) Input frame errors    |
| <i>mgmt_in_overrun</i>     | (Optional) Input overrun         |
| <i>mgmt_in_fifo</i>        | (Optional) Input fifo            |
| <i>mgmt_out_pkts</i>       | (Optional) Output packets        |
| <i>mgmt_out_bytes</i>      | (Optional) Output bytes          |
| <i>mgmt_out_underruns</i>  | (Optional) Output overruns       |
| <i>mgmt_out_errors</i>     | (Optional) Output errors         |
| <i>mgmt_out_collisions</i> | (Optional) Output collisions     |
| <i>mgmt_out_fifo</i>       | (Optional) Output fifo           |
| <i>mgmt_out_carrier</i>    | (Optional) Output carrier errors |
| <i>mgmt_align_err</i>      | (Optional) Align error           |
| <i>mgmt_fcs_err</i>        | (Optional) FCS error             |
| <i>mgmt_xmit_err</i>       | (Optional) Transmit error        |
| <i>mgmt_rcv_err</i>        | (Optional) Receive error         |
| <i>mgmt_undersize</i>      | (Optional) Undersize             |
| <i>mgmt_outdisc</i>        | (Optional) Out discard           |
| <i>mgmt_single_col</i>     | (Optional) Single collision      |
| <i>mgmt_multi_col</i>      | (Optional) Multiple collision    |
| <i>mgmt_late_col</i>       | (Optional) Late collision        |
| <i>mgmt_excess_col</i>     | (Optional) Excess collision      |
| <i>mgmt_carri_sen</i>      | (Optional) Carrier sense         |
| <i>mgmt_runts</i>          | (Optional) Runts                 |
| <i>mgmt_giants</i>         | (Optional) Giants                |
| <i>mgmt_sqetest_err</i>    | (Optional) SQETest error         |
| <i>mgmt_deferred_tx</i>    | (Optional) Deferred tx           |
| <i>mgmt_inmactx_err</i>    | (Optional) In MAC tx             |
| <i>mgmt_inmacrx_err</i>    | (Optional) In MAC rx             |
| <i>mgmt_symbol_err</i>     | (Optional) Symbol error          |
| <i>loop_in_pkts</i>        | (Optional) Input packets         |

|                            |  |
|----------------------------|--|
| <i>loop_in_bytes</i>       | (Optional) Input bytes                             |
| <i>loop_in_mcast</i>       | (Optional) Input multicast                         |
| <i>loop_in_compressed</i>  | (Optional) Input compressed                        |
| <i>loop_in_errors</i>      | (Optional) Input errors                            |
| <i>loop_in_frame</i>       | (Optional) Input frame errors                      |
| <i>loop_in_overrun</i>     | (Optional) Input overrun                           |
| <i>loop_in_fifo</i>        | (Optional) Input fifo                              |
| <i>loop_out_pkts</i>       | (Optional) Output packets                          |
| <i>loop_out_bytes</i>      | (Optional) Output bytes                            |
| <i>loop_out_underruns</i>  | (Optional) Output underruns                        |
| <i>loop_out_errors</i>     | (Optional) Output errors                           |
| <i>loop_out_collisions</i> | (Optional) Output collisions                       |

| <i>svi_admin_state</i>     | (Optional)   |
| <i>oper_state</i>          | (Optional)   |
| <i>svi_rsn_desc</i>        | (Optional) Interface state reason detailed         |
| <i>svi_line_proto</i>      | (Optional)   |
| <i>svi_hw</i>              | (Optional) Hardware                                |
| <i>svi_mac</i>             | (Optional) Address                                 |
| <i>svi_desc</i>            | (Optional) Interface Description                   |
| <i>svi_ip_addr</i>         | (Optional) IP Address                              |
| <i>svi_ip_mask</i>         | (Optional) IP address mask                         |
| <i>svi_mtu</i>             | (Optional) MTU size in bytes                       |
| <i>svi_bw</i>              | (Optional) Bandwidth in kilobits                   |
| <i>svi_delay</i>           | (Optional) Throughput delay (tens of microseconds) |
| <i>vlan_id</i>             | (Optional) Vlan                                    |
| <i>type</i>                | (Optional) type                                    |

|                               |   |
|-------------------------------|---|
| <i>svi_tx_load</i>            | (Optional) Tx Load                              |
| <i>svi_rx_load</i>            | (Optional) Rx Load                              |
| <i>svi_carrier_delay_sec</i>  | (Optional) carrier delay value in seconds       |
| <i>svi_carrier_delay_msec</i> | (Optional) carrier delay value in milli-seconds |
| <i>svi_arp_type</i>           | (Optional) ARP type                             |
| <i>svi_arp_timeout</i>        | (Optional) ARP timeout value                    |
| <i>svi_time_last_cleared</i>  | (Optional) Time last cleared                    |
| TABLE_sec_vlan                | (Optional) secondary vlans                      |
| <i>sec_vlan</i>               | (Optional) vlan id                              |
| <i>sec_vlan_type</i>          | (Optional) secondary vlan type                  |
| <i>svi_reliability</i>        | (Optional) Reliability                          |
| <i>veth_hw_desc</i>           | (Optional) HW description                       |
| <i>veth_hw_addr</i>           | (Optional) HW address                           |
| <i>veth_bia_addr</i>          | (Optional) bia address                          |
| <i>veth_conn_name</i>         | (Optional) Connectee name                       |
| <i>veth_conn_dev_name</i>     | (Optional) Connectee device name                |
| <i>veth_vem_num</i>           | (Optional) VEM the veth is active on            |
| <i>veth_vmware_dyport_num</i> | (Optional) VMware DVPort number                 |
| <i>veth_port_profile</i>      | (Optional) Port Profile name                    |
| <i>veth_mode</i>              | (Optional) Port mode                            |
| <i>veth_inrate_bits</i>       | (Optional) input rate bits/sec                  |
| <i>veth_inrate_pkts</i>       | (Optional) input rate pkts/sec                  |
| <i>veth_outrate_bits</i>      | (Optional) output rate bits/sec                 |
| <i>veth_outrate_pkts</i>      | (Optional) output rate pkts/sec                 |
| <i>veth_inpkts</i>            | (Optional) Packets input                        |
| <i>veth_inucast</i>           | (Optional) Unicasts input                       |
| <i>veth_inmcast</i>           | (Optional) Multicasts input                     |
| <i>veth_inbcast</i>           | (Optional) Broadcasts input                     |
| <i>veth_inbytes</i>           | (Optional) Bytes input                          |

|                              |  |
|------------------------------|--|
| <i>veth_outpkts</i>          | (Optional) Packets output                      |
| <i>veth_outucast</i>         | (Optional) Unicasts output                     |
| <i>veth_outmcast</i>         | (Optional) Multicasts output                   |
| <i>veth_outbcast</i>         | (Optional) Broadcasts output                   |
| <i>veth_outfloods</i>        | (Optional) Flood packets output                |
| <i>veth_outbytes</i>         | (Optional) Bytes output                        |
| <i>veth_inpktdrops</i>       | (Optional) Packet drops input                  |
| <i>veth_outpktdrops</i>      | (Optional) Packet drops output                 |
| <i>admin-state</i>           | (Optional)                                     |
| <i>tunnel-ipv4</i>           | (Optional) interface IPv4 address              |
| <i>mtu</i>                   | (Optional) interface Maximum Transmission Unit |
| <i>bandwidth</i>             | (Optional) interface Bandwidth in kilobits     |
| <i>encap-type</i>            | (Optional)                                     |
| <i>keepalive-period</i>      | (Optional) keealive period                     |
| <i>keepalive-retries</i>     | (Optional) number of retries                   |
| <i>src-ipv4</i>              | (Optional) tunnel source IPv4 address          |
| <i>src-intf</i>              | (Optional) tunnel source interface             |
| <i>dest-ipv4</i>             | (Optional) tunnel destination IPv4 address     |
| <i>dest-hostname</i>         | (Optional) tunnel destination hostname         |
| <i>vrf_name</i>              | (Optional) transport VRF name                  |
| <i>tunnel_vrf_name</i>       | (Optional) tunnel VRF name                     |
| <i>wccp_header</i>           | (Optional) wccp header                         |
| <i>ttl_val</i>               | (Optional) tunnel time to live value           |
| <i>tunnel_pmtud_age_time</i> | (Optional) tunnel path MTU discovery age time  |
| <i>tunnel_pmtud_min_mtu</i>  | (Optional) tunnel path MTU discovery min mtu   |
| <i>tunnel_pmtud</i>          | (Optional) tunnel path MTU discovered          |
| <i>tunnel_pgm_mtu</i>        | (Optional) tunnel actual programmed MTU        |
| <i>tunnel_rx_pkt_count</i>   | (Optional) total number of packets received    |
| <i>tunnel_rx_byte_count</i>  | (Optional) total number of bytes received      |

|                               |   |
|-------------------------------|---|
| <i>tunnel_rx_rate</i>         | (Optional) packets input rate per 5 minutes         |
| <i>tunnel_tx_pkt_count</i>    | (Optional) total number of packets transmitted      |
| <i>tunnel_tx_byte_count</i>   | (Optional) total number of bytes transmitted        |
| <i>tunnel_tx_rate</i>         | (Optional) packets transmitted per 5 minutes        |
| <i>tunnel_clear_counter</i>   | (Optional) Last clearing of show interface counters |
| <i>overlay_addr</i>           | (Optional) Overlay address                          |
| <i>overlay_addr_mask</i>      | (Optional) Overlay address mask                     |
| <i>overlay_mtu</i>            | (Optional) MTU                                      |
| <i>overlay_bandwidth</i>      | (Optional) Bandwidth                                |
| <i>overlay_encap_str</i>      | (Optional) Encap type                               |
| <i>overlay_vrf</i>            | (Optional) VRF                                      |
| <i>overlay_src_addr</i>       | (Optional) Source address                           |
| <i>overlay_dst_addr</i>       | (Optional) Destination address                      |
| <i>overlay_last_link_flap</i> | (Optional) Last link flap                           |
| <i>overlay_clear_counters</i> | (Optional) Last clearing of show interface counters |
| <i>overlay_load_interval</i>  | (Optional) Load interval                            |
| <i>overlay_rx_ucastpkts</i>   | (Optional) Received ucast pkts                      |
| <i>overlay_rx_ucastbytes</i>  | (Optional) Received ucast bytes                     |
| <i>overlay_rx_mcastpkts</i>   | (Optional) Received mcast pkts                      |
| <i>overlay_rx_mcastbytes</i>  | (Optional) Received mcast bytes                     |
| <i>overlay_rx_bcastpkts</i>   | (Optional) Received bcast pkts                      |
| <i>overlay_rx_bcastbytes</i>  | (Optional) Received bcast bytes                     |
| <i>overlay_rx_pkts</i>        | (Optional) Total received pkts                      |
| <i>overlay_rx_bytes</i>       | (Optional) Total received bytes                     |
| <i>overlay_rx_bitrate</i>     | (Optional) Receive bit rate                         |
| <i>overlay_rx_pktrate</i>     | (Optional) Receive pkt rate                         |
| <i>overlay_tx_ucastpkts</i>   | (Optional) Trasnmitted ucast pkts                   |
| <i>overlay_tx_ucastbytes</i>  | (Optional) Trasnmitted ucast bytes                  |
| <i>overlay_tx_mcastpkts</i>   | (Optional) Trasnmitted mcast pkts                   |

|                              |                                    |
|------------------------------|------------------------------------|
| <i>overlay_tx_mcastbytes</i> | (Optional) Trasnmitted mcast bytes |
| <i>overlay_tx_bcastpkts</i>  | (Optional) Trasnmitted bcast pkts  |
| <i>overlay_tx_bcastbytes</i> | (Optional) Trasnmitted bcast bytes |
| <i>overlay_tx_pkts</i>       | (Optional) Total transmitted pkts  |
| <i>overlay_tx_bytes</i>      | (Optional) Total transmitted bytes |
| <i>overlay_tx_bitrate</i>    | (Optional) Transmit bit rate       |
| <i>overlay_tx_pktrate</i>    | (Optional) Transmit pkt rate       |
| <i>switchport</i>            | (Optional) Switchport enabled      |

**Command Mode**

- /exec

# show interface

```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                       |
| interface             | Show interface status and information                 |
| <i>ifloop</i>         | Enter interface type and number in module/slot format |
| <i>__readonly__</i>   | (Optional) Read Only                                  |
| <i>interface</i>      | (Optional) Interface index                            |
| TABLE_interface       | (Optional) show interface                             |
| <i>state</i>          | (Optional) Interface state                            |
| <i>admin_state</i>    | (Optional) Interface admin state                      |
| <i>share_state</i>    | (Optional) Interface ownership                        |
| <i>state_rsn</i>      | (Optional) Interface state reason                     |
| <i>state_rsn_desc</i> | (Optional) Interface state reason detailed            |
| <i>desc</i>           | (Optional) Interface description                      |
| <i>mgmt_sfp</i>       | (Optional) mgmt sfp                                   |
| <i>mgmt_type</i>      | (Optional) mgmt type                                  |
| <i>eth_bundle</i>     | (Optional) Belongs to bundle                          |
| <i>eth_eee_state</i>  | (Optional) EEE state                                  |

|                         |                                  |
|-------------------------|----------------------------------|
| <i>eth_dce_mode</i>     | (Optional) DCE mode description  |
| <i>vpc_status</i>       | (Optional) VPC status            |
| <i>eth_rsn_fac</i>      | (Optional) State reason facility |
| <i>eth_rsn_code</i>     | (Optional) State reason code     |
| <i>eth_hw_desc</i>      | (Optional) HW description        |
| <i>eth_hw_addr</i>      | (Optional) HW address            |
| <i>eth_bia_addr</i>     | (Optional) bia address           |
| <i>eth_ip_addr</i>      | (Optional) IP Address            |
| <i>eth_ip_mask</i>      | (Optional) IP address mask       |
| <i>eth_ip_prefix</i>    | (Optional) IP Prefix             |
| <i>eth_mtu</i>          | (Optional) MTU                   |
| <i>eth_bw</i>           | (Optional) Bandwidth             |
| <i>eth_encap_vlan</i>   | (Optional) Encapsulation Vlan    |
| <i>encapsulation</i>    | (Optional) Encapsulation         |
| <i>eth_dly</i>          | (Optional) Delay                 |
| <i>eth_reliability</i>  | (Optional) Reliability           |
| <i>eth_txload</i>       | (Optional) Tx load               |
| <i>eth_rxload</i>       | (Optional) Rx load               |
| <i>eth_loopback</i>     | (Optional) Loopback              |
| <i>eth_keepalive</i>    | (Optional) Keepalive             |
| <i>eth_duplex</i>       | (Optional) Duplex                |
| <i>eth_speed</i>        | (Optional) Speed                 |
| <i>eth_mode</i>         | (Optional) Port mode             |
| <i>eth_ratemode</i>     | (Optional) Rate mode             |
| <i>eth_autoneg</i>      | (Optional) Autonegotiation       |
| <i>eth_beacon</i>       | (Optional) Beacon                |
| <i>eth_media</i>        | (Optional) Media type            |
| <i>eth_in_flowctrl</i>  | (Optional) Input flowcontrol     |
| <i>eth_out_flowctrl</i> | (Optional) Output flowcontrol    |

|                                  |   |
|----------------------------------|---|
| <i>eth_mdix</i>                  | (Optional) Mdx                                      |
| <i>eth_swt_monitor</i>           | (Optional) Switchport Monitor                       |
| <i>eth_ethertype</i>             | (Optional) EtherType                                |
| <i>eth_members</i>               | (Optional) Members in this channel                  |
| <i>eth_clk_mode</i>              | (Optional) Clock mode                               |
| <i>eth_arp_type</i>              | (Optional) ARP type                                 |
| <i>eth_arp_timeout</i>           | (Optional) ARP timeout                              |
| <i>eth_last_in</i>               | (Optional) Last input                               |
| <i>eth_last_out</i>              | (Optional) Last output                              |
| <i>eth_out_hang</i>              | (Optional) Last output hang                         |
| <i>eth_clear_counters</i>        | (Optional) Last clearing of show interface counters |
| <i>eth_link_flapped</i>          | (Optional) Last link flapped                        |
| <i>eth_inq_size</i>              | (Optional) Input queue size                         |
| <i>eth_inq_max</i>               | (Optional) Input queue max                          |
| <i>eth_inq_drops</i>             | (Optional) Input queue drops                        |
| <i>eth_inq_flush</i>             | (Optional) Input queue flushes                      |
| <i>eth_out_drop</i>              | (Optional) Output drops                             |
| <i>eth_q_strategy</i>            | (Optional) Queuing strategy                         |
| <i>eth_outq_size</i>             | (Optional) Output queue size                        |
| <i>eth_outq_max</i>              | (Optional) Output queue max                         |
| <i>eth_reset_cntr</i>            | (Optional) Interface resets                         |
| <i>eth_tx_frm_error</i>          | (Optional) tx frame error                           |
| <i>eth_rx_toolong</i>            | (Optional) rx toolong error                         |
| <i>eth_rx_undersize</i>          | (Optional) rx undersize                             |
| <i>eth_rx_fragment</i>           | (Optional) rx fragment                              |
| <i>eth_rx_crcerr_not_stomped</i> | (Optional) rx crcerr not stomped                    |
| <i>eth_rx_crcerr_stomped</i>     | (Optional) rx crcerr stomped                        |
| <i>eth_rx_inrangeerr</i>         | (Optional) rx inrange error                         |
| <i>loop_in_pkts</i>              | (Optional) Input packets                            |

|                            |                                  |
|----------------------------|----------------------------------|
| <i>loop_in_bytes</i>       | (Optional) Input bytes           |
| <i>loop_in_mcast</i>       | (Optional) Input multicast       |
| <i>loop_in_compressed</i>  | (Optional) Input compressed      |
| <i>loop_in_errors</i>      | (Optional) Input errors          |
| <i>loop_in_frame</i>       | (Optional) Input frame errors    |
| <i>loop_in_overrun</i>     | (Optional) Input overrun         |
| <i>loop_in_fifo</i>        | (Optional) Input fifo            |
| <i>loop_out_pkts</i>       | (Optional) Output packets        |
| <i>loop_out_bytes</i>      | (Optional) Output bytes          |
| <i>loop_out_underruns</i>  | (Optional) Output underruns      |
| <i>loop_out_errors</i>     | (Optional) Output errors         |
| <i>loop_out_collisions</i> | (Optional) Output collisions     |
| <i>loop_out_fifo</i>       | (Optional) Output fifo           |
| <i>loop_out_carriers</i>   | (Optional) Output carrier errors |

#### Command Mode

- /exec

# show interface

```
show interface <iftun_desc> [ __readonly__ TABLE_interface <interface> <state> [ <state_rsn_desc> ] [
<desc> ] [ <admin-state> ] [ { <tunnel-ipv4> | <tunnel-ipv6> } ] [ <mtu> ] [ <bandwidth> ] [ <encap-type>
] [ <keepalive-period> ] [ <keepalive-retries> ] [ { <src-ipv4> | <src-ipv6> } ] [ <src-intf> ] [ { <dest-ipv4>
| <dest-ipv6> } ] [ <dest-hostname> ] [ <vrf_name> ] [ <tunnel_vrf_name> ] [ <wccp_header> ] [ <ttl_val>
] [ <tunnel_pmtud_age_time> ] [ <tunnel_pmtud_min_mtu> ] [ <tunnel_pmtud> ] [ <tunnel_pgm_mtu> ] [
<tunnel_clear_counter> ] [ <tunnel_tx_pkt_count> ] [ <tunnel_tx_byte_count> ] [ <tunnel_tx_rate> ] [
<tunnel_rx_pkt_count> ] [ <tunnel_rx_byte_count> ] [ <tunnel_rx_rate> ] ]
```

## Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information                |
| interface                | Show interface status and information          |
| <i>iftun_desc</i>        | Enter tunnel interface number                  |
| <i>__readonly__</i>      | (Optional) Read Only                           |
| <i>interface</i>         | (Optional) Interface index                     |
| TABLE_interface          | (Optional) show interface                      |
| <i>state</i>             | (Optional) Interface state                     |
| <i>state_rsn_desc</i>    | (Optional) Interface state reason detailed     |
| <i>desc</i>              | (Optional) Interface description               |
| <i>admin-state</i>       | (Optional)                                     |
| <i>tunnel-ipv4</i>       | (Optional) interface IPv4 address              |
| <i>mtu</i>               | (Optional) interface Maximum Transmission Unit |
| <i>bandwidth</i>         | (Optional) interface Bandwidth in kilobits     |
| <i>encap-type</i>        | (Optional)                                     |
| <i>keepalive-period</i>  | (Optional) keealive period                     |
| <i>keepalive-retries</i> | (Optional) number of retries                   |
| <i>src-ipv4</i>          | (Optional) tunnel source IPv4 address          |
| <i>src-intf</i>          | (Optional) tunnel source interface             |
| <i>dest-ipv4</i>         | (Optional) tunnel destination IPv4 address     |
| <i>dest-hostname</i>     | (Optional) tunnel destination hostname         |
| <i>vrf_name</i>          | (Optional) transport VRF name                  |
| <i>tunnel_vrf_name</i>   | (Optional) tunnel VRF name                     |

|                              |   |
|------------------------------|---|
| <i>wccp_header</i>           | (Optional) wccp header                              |
| <i>ttl_val</i>               | (Optional) tunnel time to live value                |
| <i>tunnel_pmtud_age_time</i> | (Optional) tunnel path MTU discovery age time       |
| <i>tunnel_pmtud_min_mtu</i>  | (Optional) tunnel path MTU discovery min mtu        |
| <i>tunnel_pmtud</i>          | (Optional) tunnel path MTU discovered               |
| <i>tunnel_pgm_mtu</i>        | (Optional) tunnel actual programmed MTU             |
| <i>tunnel_rx_pkt_count</i>   | (Optional) total number of packets received         |
| <i>tunnel_rx_byte_count</i>  | (Optional) total number of bytes received           |
| <i>tunnel_rx_rate</i>        | (Optional) packets input rate per 5 minutes         |
| <i>tunnel_tx_pkt_count</i>   | (Optional) total number of packets transmitted      |
| <i>tunnel_tx_byte_count</i>  | (Optional) total number of bytes transmitted        |
| <i>tunnel_tx_rate</i>        | (Optional) packets transmitted per 5 minutes        |
| <i>tunnel_clear_counter</i>  | (Optional) Last clearing of show interface counters |

**Command Mode**

- /exec

## show interface

### Syntax Description

|                  |   |
|------------------|---|
| show             | Show running system information                       |
| interface        | Show interface status and information                 |
| <i>ifeth</i>     | Enter interface type and number in module/slot format |
| quick            | (Optional) Show info of interface skipping stats      |
| __readonly__     | (Optional) Read Only                                  |
| <i>interface</i> | (Optional) Interface index                            |
| TABLE_interface  | (Optional) show interface                             |
| <i>state</i>     | (Optional) Interface state                            |

|                         |  |
|-------------------------|--|
| <i>state_rsn_desc</i>   | (Optional) Interface state reason detailed |
| <i>state_rsn</i>        | (Optional) Interface state reason          |
| <i>eth_rsn_fac</i>      | (Optional) State reason facility           |
| <i>eth_rsn_code</i>     | (Optional) State reason code               |
| <i>admin_state</i>      | (Optional) admin state                     |
| <i>share_state</i>      | (Optional) Interface ownership             |
| <i>parent_interface</i> | (Optional) parent interface                |
| <i>vpc_status</i>       | (Optional) VPC status                      |
| <i>eth_bundle</i>       | (Optional) Belongs to bundle               |
| <i>eth_hw_desc</i>      | (Optional) HW description                  |
| <i>eth_hw_addr</i>      | (Optional) HW address                      |
| <i>eth_bia_addr</i>     | (Optional) bia address                     |
| <i>desc</i>             | (Optional) Interface description           |
| <i>eth_ip_addr</i>      | (Optional) IP Address                      |
| <i>eth_ip_mask</i>      | (Optional) IP address mask                 |
| <i>eth_ip_prefix</i>    | (Optional) IP address prefix               |
| <i>eth_mtu</i>          | (Optional) MTU                             |
| <i>eth_bw</i>           | (Optional) Bandwidth                       |
| <i>eth_bw_str</i>       | (Optional) Bandwidth                       |
| <i>eth_dly</i>          | (Optional) Delay                           |
| <i>eth_reliability</i>  | (Optional) Reliability                     |
| <i>eth_txload</i>       | (Optional) Tx load                         |
| <i>eth_rxload</i>       | (Optional) Rx load                         |
| <i>eth_encap_vlan</i>   | (Optional) Encapsulation Vlan              |
| <i>encapsulation</i>    | (Optional) Encapsulation                   |
| <i>medium</i>           | (Optional) medium type                     |
| <i>eth_mode</i>         | (Optional) Port mode                       |
| <i>eth_duplex</i>       | (Optional) Duplex                          |
| <i>eth_speed</i>        | (Optional) Speed                           |

|                                  |   |
|----------------------------------|---|
| <i>eth_media</i>                 | (Optional) Media type                               |
| <i>eth_beacon</i>                | (Optional) Beacon                                   |
| <i>eth_autoneg</i>               | (Optional) Autonegotiation                          |
| <i>eth_in_flowctrl</i>           | (Optional) Input flowcontrol                        |
| <i>eth_out_flowctrl</i>          | (Optional) Output flowcontrol                       |
| <i>eth_mdix</i>                  | (Optional) Mdx                                      |
| <i>eth_ratemode</i>              | (Optional) Rate mode                                |
| <i>eth_swt_monitor</i>           | (Optional) Switchport Monitor                       |
| <i>eth_ethertype</i>             | (Optional) EtherType                                |
| <i>eth_eee_state</i>             | (Optional) EEE state                                |
| <i>eth_admin_fec_state</i>       | (Optional) Admin FEC state                          |
| <i>eth_oper_fec_state</i>        | (Optional) Oper FEC state                           |
| <i>eth_members</i>               | (Optional) Members in this channel                  |
| <i>eth_link_flapped</i>          | (Optional) Last link flapped                        |
| <i>eth_clear_counters</i>        | (Optional) Last clearing of show interface counters |
| <i>eth_reset_cnr</i>             | (Optional) Interface resets                         |
| <i>eth_load_interval1_rx</i>     | (Optional) interval 1 timer value in sec            |
| <i>eth_inrate1_bits</i>          | (Optional) interval 1 input rate bits/sec           |
| <i>eth_inrate1_pkts</i>          | (Optional) interval 1 input rate pkts/sec           |
| <i>eth_load_interval1_tx</i>     | (Optional) interval 1 timer value in sec            |
| <i>eth_outrate1_bits</i>         | (Optional) interval 1 output rate bits/sec          |
| <i>eth_outrate1_pkts</i>         | (Optional) interval 1 output rate pkts/sec          |
| <i>eth_inrate1_summary_bits</i>  | (Optional) interval 1 input rate bit summary        |
| <i>eth_inrate1_summary_pkts</i>  | (Optional) interval 1 input rate pkt summary        |
| <i>eth_outrate1_summary_bits</i> | (Optional) interval 1 output rate bit summary       |
| <i>eth_outrate1_summary_pkts</i> | (Optional) interval 1 output rate pkt summary       |
| <i>eth_load_interval2_rx</i>     | (Optional) interval 2 timer value in sec            |
| <i>eth_inrate2_bits</i>          | (Optional) interval 2 input rate bits/sec           |
| <i>eth_inrate2_pkts</i>          | (Optional) interval 2 input rate pkts/sec           |

|                                  |   |
|----------------------------------|---|
| <i>eth_load_interval2_tx</i>     | (Optional) interval 2 timer value in sec      |
| <i>eth_outrate2_bits</i>         | (Optional) interval 2 output rate bits/sec    |
| <i>eth_outrate2_pkts</i>         | (Optional) interval 2 output rate pkts/sec    |
| <i>eth_inrate2_summary_bits</i>  | (Optional) interval 2 input rate bit summary  |
| <i>eth_inrate2_summary_pkts</i>  | (Optional) interval 2 input rate pkt summary  |
| <i>eth_outrate2_summary_bits</i> | (Optional) interval 2 output rate bit summary |
| <i>eth_outrate2_summary_pkts</i> | (Optional) interval 2 output rate pkt summary |
| <i>eth_load_interval3_rx</i>     | (Optional) interval 3 timer value in sec      |
| <i>eth_inrate3_bits</i>          | (Optional) interval 3 input rate bits/sec     |
| <i>eth_inrate3_pkts</i>          | (Optional) interval 3 input rate pkts/sec     |
| <i>eth_load_interval3_tx</i>     | (Optional) interval 3 timer value in sec      |
| <i>eth_outrate3_bits</i>         | (Optional) interval 3 output rate bits/sec    |
| <i>eth_outrate3_pkts</i>         | (Optional) interval 3 output rate pkts/sec    |
| <i>eth_inrate3_summary_bits</i>  | (Optional) interval 3 input rate bit summary  |
| <i>eth_inrate3_summary_pkts</i>  | (Optional) interval 3 input rate pkt summary  |
| <i>eth_outrate3_summary_bits</i> | (Optional) interval 3 output rate bit summary |
| <i>eth_outrate3_summary_pkts</i> | (Optional) interval 3 output rate pkt summary |
| <i>eth_l2_ucastpkts</i>          | (Optional) L2 switched ucast pkts             |
| <i>eth_l2_ucastbytes</i>         | (Optional) L2 switched ucast bytes            |

| <i>eth_l3out_routed_bytes</i> | (Optional) L3 out routed bytes                           |
| <i>eth_l3avg1_inbytes</i>     | (Optional) Load interval 1 L3 average in switched bytes  |
| <i>eth_l3avg1_inpkts</i>      | (Optional) Load interval 1 L3 average in switched pkts   |
| <i>eth_l3avg1_outbytes</i>    | (Optional) Load interval 1 L3 average out switched bytes |
| <i>eth_l3avg1_outpkts</i>     | (Optional) Load interval 1 L3 average out switched pkts  |
| <i>eth_inucast</i>            | (Optional) Unicasts                                      |
| <i>eth_inmcast</i>            | (Optional) Multicasts                                    |
| <i>eth_inbcast</i>            | (Optional) Broadcasts                                    |
| <i>eth_inpkts</i>             | (Optional) Packets input                                 |
| <i>eth_inbytes</i>            | (Optional) Bytes input                                   |
| <i>eth_jumbo_inpkts</i>       | (Optional) Incoming jumbo pkts                           |
| <i>eth_storm_supp</i>         | (Optional) storm suppression                             |
| <i>eth_runts</i>              | (Optional) runts   |
| <i>eth_giants</i>             | (Optional) giants  |
| <i>eth_crc</i>                | (Optional) CRC   |
| <i>eth_nobuf</i>              | (Optional) No buffer received                            |
| <i>eth_inerr</i>              | (Optional) input errors                                  |
| <i>eth_frame</i>              | (Optional) frame   |
| <i>eth_overrun</i>            | (Optional) overrun                                       |
| <i>eth_underrun</i>           | (Optional) underruns                                     |

|                            |   |
|----------------------------|---|
| <i>eth_ignored</i>         | (Optional) ignored                              |
| <i>eth_watchdog</i>        | (Optional) watchdog                             |
| <i>eth_bad_eth</i>         | (Optional) bad ether type drop                  |
| <i>eth_bad_proto</i>       | (Optional) bad protocol drops                   |
| <i>eth_in_ifdown_drops</i> | (Optional) Input if-down drops                  |
| <i>eth_dribble</i>         | (Optional) input packets with dribble condition |
| <i>eth_indiscard</i>       | (Optional) discards                             |
| <i>eth_inpause</i>         | (Optional) pause input                          |
| <i>eth_stomped_crc</i>     | (Optional) Stomped CRC                          |
| <i>eth_outucast</i>        | (Optional) Unicasts                             |
| <i>eth_outmcast</i>        | (Optional) Multicasts                           |
| <i>eth_outbcast</i>        | (Optional) Broadcasts                           |
| <i>eth_outpkts</i>         | (Optional) packets output                       |
| <i>eth_outbytes</i>        | (Optional) bytes output                         |
| <i>eth_jumbo_outpkts</i>   | (Optional) Outgoing jumbo pkts                  |
| <i>eth_outerr</i>          | (Optional) output errors                        |
| <i>eth_coll</i>            | (Optional) collisions                           |
| <i>eth_deferred</i>        | (Optional) deferred                             |
| <i>eth_latecoll</i>        | (Optional) late collision                       |
| <i>eth_lostcarrier</i>     | (Optional) lost carrier                         |
| <i>eth_nocarrier</i>       | (Optional) no carrier                           |
| <i>eth_babbles</i>         | (Optional) babbles                              |
| <i>eth_outdiscard</i>      | (Optional) output discard                       |
| <i>eth_outpause</i>        | (Optional) PAUSE output                         |
| <i>switchport</i>          | (Optional) Switchport enabled                   |

### Command Mode

- /exec

# show interface

```
show interface <ifveth> [ __readonly__ TABLE_interface <interface> <state> [ <state_rsn> ] <state_rsn_desc>

| <i>eth_mode</i>           | (Optional) Port mode                                |
| <i>eth_duplex</i>         | (Optional) Duplex                                   |
| <i>eth_speed</i>          | (Optional) Speed                                    |
| <i>eth_media</i>          | (Optional) Media type                               |
| <i>eth_beacon</i>         | (Optional) Beacon                                   |
| <i>eth_autoneg</i>        | (Optional) Autonegotiation                          |
| <i>eth_in_flowctrl</i>    | (Optional) Input flowcontrol                        |
| <i>eth_out_flowctrl</i>   | (Optional) Output flowcontrol                       |
| <i>eth_mdix</i>           | (Optional) Mdix                                     |
| <i>eth_ratemode</i>       | (Optional) Rate mode                                |
| <i>eth_swt_monitor</i>    | (Optional) Switchport Monitor                       |
| <i>eth_etherstype</i>     | (Optional) EtherType                                |
| <i>eth_members</i>        | (Optional) Members in this channel                  |
| <i>eth_link_flapped</i>   | (Optional) Last link flapped                        |
| <i>eth_clear_counters</i> | (Optional) Last clearing of show interface counters |
| <i>eth_reset_cntr</i>     | (Optional) Interface resets                         |
| <i>nve_addr</i>           | (Optional) Peer address                             |

|                           |   |
|---------------------------|---|
| <i>nve_addr_mask</i>      | (Optional) Peer address mask                        |
| <i>nve_vcid</i>           | (Optional) VCID                                     |
| <i>nve_mtu</i>            | (Optional) MTU                                      |
| <i>nve_bandwidth</i>      | (Optional) Bandwidth                                |
| <i>nve_encap_str</i>      | (Optional) Encap type                               |
| <i>nve_vrf</i>            | (Optional) VRF                                      |
| <i>nve_src_addr</i>       | (Optional) Source address                           |
| <i>nve_dst_addr</i>       | (Optional) Destination address                      |
| <i>nve_last_link_flap</i> | (Optional) Last link flap                           |
| <i>nve_clear_counters</i> | (Optional) Last clearing of show interface counters |
| <i>nve_load_interval</i>  | (Optional) Load interval                            |
| <i>nve_rx_ucastpkts</i>   | (Optional) Received ucast pkts                      |
| <i>nve_rx_ucastbytes</i>  | (Optional) Received ucast bytes                     |
| <i>nve_rx_mcastpkts</i>   | (Optional) Received mcast pkts                      |
| <i>nve_rx_mcastbytes</i>  | (Optional) Received mcast bytes                     |
| <i>nve_rx_bcastpkts</i>   | (Optional) Received bcast pkts                      |
| <i>nve_rx_bcastbytes</i>  | (Optional) Received bcast bytes                     |
| <i>nve_rx_pkts</i>        | (Optional) Total received pkts                      |
| <i>nve_rx_bytes</i>       | (Optional) Total received bytes                     |
| <i>nve_rx_bitrate</i>     | (Optional) Receive bit rate                         |
| <i>nve_rx_pktrate</i>     | (Optional) Receive pkt rate                         |
| <i>nve_tx_ucastpkts</i>   | (Optional) Trasnmitted ucast pkts                   |
| <i>nve_tx_ucastbytes</i>  | (Optional) Trasnmitted ucast bytes                  |
| <i>nve_tx_mcastpkts</i>   | (Optional) Trasnmitted mcast pkts                   |
| <i>nve_tx_mcastbytes</i>  | (Optional) Trasnmitted mcast bytes                  |
| <i>nve_tx_bcastpkts</i>   | (Optional) Trasnmitted bcast pkts                   |
| <i>nve_tx_bcastbytes</i>  | (Optional) Trasnmitted bcast bytes                  |
| <i>nve_tx_pkts</i>        | (Optional) Total transmitted pkts                   |
| <i>nve_tx_bytes</i>       | (Optional) Total transmitted bytes                  |

|                       |                              |
|-----------------------|------------------------------|
| <i>nve_tx_bitrate</i> | (Optional) Transmit bit rate |
| <i>nve_tx_pktrate</i> | (Optional) Transmit pkt rate |

| <i>eth_inrate1_summary_pkts</i>  | (Optional) interval 1 input rate pkt summary    |
| <i>eth_outrate1_summary_bits</i> | (Optional) interval 1 output rate bit summary   |
| <i>eth_outrate1_summary_pkts</i> | (Optional) interval 1 output rate pkt summary   |
| <i>eth_load_interval2_rx</i>     | (Optional) interval 2 timer value in sec        |
| <i>eth_inrate2_bits</i>          | (Optional) interval 2 input rate bits/sec       |
| <i>eth_inrate2_pkts</i>          | (Optional) interval 2 input rate pkts/sec       |
| <i>eth_load_interval2_tx</i>     | (Optional) interval 2 timer value in sec        |
| <i>eth_outrate2_bits</i>         | (Optional) interval 2 output rate bits/sec      |
| <i>eth_outrate2_pkts</i>         | (Optional) interval 2 output rate pkts/sec      |
| <i>eth_inrate2_summary_bits</i>  | (Optional) interval 2 input rate bit summary    |
| <i>eth_inrate2_summary_pkts</i>  | (Optional) interval 2 input rate pkt summary    |
| <i>eth_outrate2_summary_bits</i> | (Optional) interval 2 output rate bit summary   |
| <i>eth_outrate2_summary_pkts</i> | (Optional) interval 2 output rate pkt summary   |

|                                  |   |
|----------------------------------|---|
| <i>eth_load_interval3_rx</i>     | (Optional) interval 3 timer value in sec      |
| <i>eth_inrate3_bits</i>          | (Optional) interval 3 input rate bits/sec     |
| <i>eth_inrate3_pkts</i>          | (Optional) interval 3 input rate pkts/sec     |
| <i>eth_load_interval3_tx</i>     | (Optional) interval 3 timer value in sec      |
| <i>eth_outrate3_bits</i>         | (Optional) interval 3 output rate bits/sec    |
| <i>eth_outrate3_pkts</i>         | (Optional) interval 3 output rate pkts/sec    |
| <i>eth_inrate3_summary_bits</i>  | (Optional) interval 3 input rate bit summary  |
| <i>eth_inrate3_summary_pkts</i>  | (Optional) interval 3 input rate pkt summary  |
| <i>eth_outrate3_summary_bits</i> | (Optional) interval 3 output rate bit summary |
| <i>eth_outrate3_summary_pkts</i> | (Optional) interval 3 output rate pkt summary |
| <i>eth_l2_ucastpkts</i>          | (Optional) L2 switched ucast pkts             |
| <i>eth_l2_ucastbytes</i>         | (Optional) L2 switched ucast bytes            |
| <i>eth_l2_mcastpkts</i>          | (Optional) L2 switched mcast pkts             |
| <i>eth_l2_mcastbytes</i>         | (Optional) L2 switched mcast bytes            |
| <i>eth_l2_bcastpkts</i>          | (Optional) L2 switched bcast pkts             |
| <i>eth_l2_bcastbytes</i>         | (Optional) L2 switched bcast bytes            |
| <i>eth_l3in_ucastpkts</i>        | (Optional) IPv4 L3 in switched ucast pkts     |
| <i>eth_l3in_ucastbytes</i>       | (Optional) IPv4 L3 in switched ucast bytes    |
| <i>eth_l3in_mcastpkts</i>        | (Optional) IPv4 L3 in switched mcast pkts     |
| <i>eth_l3in_mcastbytes</i>       | (Optional) IPv4 L3 in switched mcast bytes    |
| <i>eth_l3in_bcastpkts</i>        | (Optional) L3 in switched bcast pkts          |
| <i>eth_l3in_bcastbytes</i>       | (Optional) L3 in switched bcast bytes         |
| <i>eth_l3out_ucastpkts</i>       | (Optional) IPv4 L3 out switched ucast pkts    |
| <i>eth_l3out_ucastbytes</i>      | (Optional) IPv4 L3 out switched ucast bytes   |
| <i>eth_l3out_mcastpkts</i>       | (Optional) IPv4 L3 out switched mcast pkts    |
| <i>eth_l3out_mcastbytes</i>      | (Optional) IPv4 L3 out switched mcast bytes   |
| <i>eth_l3out_bcastpkts</i>       | (Optional) L3 out switched bcast pkts         |
| <i>eth_l3out_bcastbytes</i>      | (Optional) L3 out switched bcast bytes        |
| <i>eth_l3in_routed_pkts</i>      | (Optional) L3 in routed pkts                  |

|                               |  |
|-------------------------------|--|
| <i>eth_l3in_routed_bytes</i>  | (Optional) L3 in routed bytes                            |
| <i>eth_l3out_routed_pkts</i>  | (Optional) L3 out routed pkts                            |
| <i>eth_l3out_routed_bytes</i> | (Optional) L3 out routed bytes                           |
| <i>eth_l3avg1_inbytes</i>     | (Optional) Load interval 1 L3 average in switched bytes  |
| <i>eth_l3avg1_inpkts</i>      | (Optional) Load interval 1 L3 average in switched pkts   |
| <i>eth_l3avg1_outbytes</i>    | (Optional) Load interval 1 L3 average out switched bytes |
| <i>eth_l3avg1_outpkts</i>     | (Optional) Load interval 1 L3 average out switched pkts  |
| <i>eth_l3avg2_inbytes</i>     | (Optional) Load interval 2 L3 average in switched bytes  |
| <i>eth_l3avg2_inpkts</i>      | (Optional) Load interval 2 L3 average in switched pkts   |
| <i>eth_l3avg2_outbytes</i>    | (Optional) Load interval 2 L3 average out switched bytes |
| <i>eth_l3avg2_outpkts</i>     | (Optional) Load interval 2 L3 average out switched pkts  |
| <i>eth_l3avg3_inbytes</i>     | (Optional) Load interval 3 L3 average in switched bytes  |
| <i>eth_l3avg3_inpkts</i>      | (Optional) Load interval 3 L3 average in switched pkts   |
| <i>eth_l3avg3_outbytes</i>    | (Optional) Load interval 3 L3 average out switched bytes |
| <i>eth_l3avg3_outpkts</i>     | (Optional) Load interval 3 L3 average out switched pkts  |
| <i>eth_inpkts</i>             | (Optional) Packets input                                 |
| <i>eth_inbytes</i>            | (Optional) Bytes input                                   |
| <i>eth_nobuf</i>              | (Optional) No buffer received                            |
| <i>eth_inbcast</i>            | (Optional) Broadcasts                                    |
| <i>eth_inmcast</i>            | (Optional) Multicasts                                    |
| <i>eth_inucast</i>            | (Optional) Unicasts                                      |
| <i>eth_ingiants</i>           | (Optional) giants  |
| <i>eth_ipmcast</i>            | (Optional) IP multicast                                  |
| <i>eth_inhw_switched</i>      | (Optional) Input H/W Switched                            |
| <i>eth_insw_switched</i>      | (Optional) Input S/W Switched                            |
| <i>eth_runts</i>              | (Optional) runts   |
| <i>eth_storm_supp</i>         | (Optional) storm suppression                             |
| <i>eth_throtles</i>           | (Optional) throttles                                     |
| <i>eth_inerr</i>              | (Optional) input errors                                  |

|                            |   |
|----------------------------|---|
| <i>eth_crc</i>             | (Optional) CRC                                  |
| <i>eth_ecc</i>             | (Optional) ECC                                  |
| <i>eth_frame</i>           | (Optional) frame                                |
| <i>eth_overrun</i>         | (Optional) overrun                              |
| <i>eth_ignored</i>         | (Optional) ignored                              |
| <i>eth_watchdog</i>        | (Optional) watchdog                             |
| <i>eth_outbcast</i>        | (Optional) Broadcasts                           |
| <i>eth_outmcast</i>        | (Optional) Multicasts                           |
| <i>eth_outucast</i>        | (Optional) Unicasts                             |
| <i>eth_outgiants</i>       | (Optional) giants                               |
| <i>eth_inpause</i>         | (Optional) pause input                          |
| <i>eth_dribble</i>         | (Optional) input packets with dribble condition |
| <i>eth_in_ifdown_drops</i> | (Optional) Input if-down drops                  |
| <i>eth_bad_eth</i>         | (Optional) bad ether type drop                  |
| <i>eth_bad_proto</i>       | (Optional) bad protocol drops                   |
| <i>eth_outpkts</i>         | (Optional) packets output                       |
| <i>eth_outbytes</i>        | (Optional) bytes output                         |
| <i>eth_underrun</i>        | (Optional) underruns                            |
| <i>eth_outhw_switched</i>  | (Optional) Out H/W Switched                     |
| <i>eth_outsw_switched</i>  | (Optional) Out S/W Switched                     |
| <i>eth_outerr</i>          | (Optional) output errors                        |
| <i>eth_coll</i>            | (Optional) collisions                           |
| <i>eth_resets</i>          | (Optional) interface resets                     |
| <i>eth_babbles</i>         | (Optional) babbles                              |
| <i>eth_latecoll</i>        | (Optional) late collision                       |
| <i>eth_deferred</i>        | (Optional) deferred                             |
| <i>eth_lostcarrier</i>     | (Optional) lost carrier                         |
| <i>eth_nocarrier</i>       | (Optional) no carrier                           |
| <i>eth_outpause</i>        | (Optional) PAUSE output                         |

|                             |  |
|-----------------------------|--|
| <i>eth_buffail</i>          | (Optional) output buffer failures                  |
| <i>eth_bufswapped</i>       | (Optional) output buffers swapped out              |
| <i>eth_arpdrops</i>         | (Optional) arp drops                               |
| <i>eth_out_ifdown_drops</i> | (Optional) Output if-down drops                    |
| <i>eth_single_coll</i>      | (Optional) single collisions                       |
| <i>eth_multi_coll</i>       | (Optional) multi collisions                        |
| <i>eth_excess_coll</i>      | (Optional) excessive collisions                    |
| <i>eth_jabbers</i>          | (Optional) jabbers                                 |
| <i>eth_shortframe</i>       | (Optional) short frames                            |
| <i>eth_indiscard</i>        | (Optional) discards                                |
| <i>eth_bad_encap</i>        | (Optional) bad encapsulation                       |
| <i>eth_outcrc</i>           | (Optional) Output CRC                              |
| <i>eth_symbol</i>           | (Optional) symbol errors                           |
| <i>eth_out_drops</i>        | (Optional) output drops                            |
| <i>eth_sqetest</i>          | (Optional) SQE test                                |
| <i>eth_inb64</i>            | (Optional) input pkts between 0 and 64 bytes       |
| <i>eth_inb65_127</i>        | (Optional) input pkts between 65 and 127 bytes     |
| <i>eth_inb128_255</i>       | (Optional) input pkts between 128 and 255 bytes    |
| <i>eth_inb256_511</i>       | (Optional) input pkts between 256 and 511 bytes    |
| <i>eth_inb512_1023</i>      | (Optional) input pkts between 512 and 1023 bytes   |
| <i>eth_inb1024_1518</i>     | (Optional) input pkts between 1024 and 1518 bytes  |
| <i>eth_inb1519_1548</i>     | (Optional) input pkts between 1519 and 1548 bytes  |
| <i>eth_intrunk</i>          | (Optional) input trunk pkts                        |
| <i>eth_outb64</i>           | (Optional) output pkts between 0 and 64 bytes      |
| <i>eth_outb65_127</i>       | (Optional) output pkts between 65 and 127 bytes    |
| <i>eth_outb128_255</i>      | (Optional) output pkts between 128 and 255 bytes   |
| <i>eth_outb256_511</i>      | (Optional) output pkts between 256 and 511 bytes   |
| <i>eth_outb512_1023</i>     | (Optional) output pkts between 512 and 1023 bytes  |
| <i>eth_outb1024_1518</i>    | (Optional) output pkts between 1024 and 1518 bytes |

|                                     |  |
|-------------------------------------|--|
| <i>eth_outb1519_1548</i>            | (Optional) output pkts between 1519 and 1548 bytes |
| <i>eth_outtrunk</i>                 | (Optional) output trunk pkts                       |
| <i>eth_bpdu_outlost</i>             | (Optional) BPDU output lost                        |
| <i>eth_cos0_outlost</i>             | (Optional) output pkts                             |
| <i>eth_cos1_outlost</i>             | (Optional) output pkts                             |
| <i>eth_cos2_outlost</i>             | (Optional) output pkts                             |
| <i>eth_cos3_outlost</i>             | (Optional) output pkts                             |
| <i>eth_cos4_outlost</i>             | (Optional) output pkts                             |
| <i>eth_cos5_outlost</i>             | (Optional) output pkts                             |
| <i>eth_cos6_outlost</i>             | (Optional) output pkts                             |
| <i>eth_cos7_outlost</i>             | (Optional) output pkts                             |
| <i>eth_fcoe_in_pkts</i>             | (Optional) fcoe in pkts                            |
| <i>eth_fcoe_in_octets</i>           | (Optional) fcoe in octets                          |
| <i>eth_fcoe_out_pkts</i>            | (Optional) fcoe out pkts                           |
| <i>eth_fcoe_out_octets</i>          | (Optional) fcoe out octets                         |
| <i>eth_nfcoe_in_pkts</i>            | (Optional) nfcoe in pkts                           |
| <i>eth_nfcoe_in_octets</i>          | (Optional) nfcoe in octets                         |
| <i>eth_nfcoe_out_pkts</i>           | (Optional) nfcoe out pkts                          |
| <i>eth_nfcoe_out_octets</i>         | (Optional) nfcoe out octets                        |
| <i>eth_eee_atx_lpi_msec</i>         | (Optional) Tx Lpi usec                             |
| <i>eth_eee_arcv_lpi_msec</i>        | (Optional) Rx Lpi usec                             |
| <i>eth_eee_atx_lpi_transitions</i>  | (Optional) Tx Lpi requests                         |
| <i>eth_eee_arcv_lpi_transitions</i> | (Optional) Rx Lpi indications                      |
| <i>eth_phy_ber_count</i>            | (Optional) Bit error rate counter                  |
| <i>eth_phy_errblks_count</i>        | (Optional) Errored blocks counter                  |
| <i>eth_tx_frm_error</i>             | (Optional) tx frame error                          |
| <i>eth_rx_toolong</i>               | (Optional) rx toolong error                        |
| <i>eth_rx_undersize</i>             | (Optional) rx undersize                            |
| <i>eth_rx_fragment</i>              | (Optional) rx fragment                             |

|                                  |                                  |
|----------------------------------|----------------------------------|
| <i>eth_rx_crcerr_not_stomped</i> | (Optional) rx crcerr not stomped |
| <i>eth_rx_crcerr_stomped</i>     | (Optional) rx crcerr stomped     |
| <i>eth_rx_inrangeerr</i>         | (Optional) rx inrange error      |
| <i>svi_reliability</i>           | (Optional) Reliability           |
| <i>switchport</i>                | (Optional) Switchport enabled    |

**Command Mode**

- /exec

## show interface brief

```
show interface <ifpch_brf> brief [ __readonly__ TABLE_interface <interface> [ <vlan> ] <type> <portmode>
<state> <state_rsn_desc> <speed> <ratemode> [ <proto> ] ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                       |
| interface             | Show interface status and information                 |
| <i>ifpch_brf</i>      | Enter interface type and number in module/slot format |
| brief                 | Show brief info of interface                          |

| <i>TABLE_secondary_vlan</i> | (Optional) Secondary vlan                  |
| <i>sec_vlan</i>             | (Optional) Secondary vlan ID               |
| <i>sec_vlan_type</i>        | (Optional) Secondary vlan type             |
| <i>svi_admin_state</i>      | (Optional) svi admin state                 |
| <i>svi_rsn_desc</i>         | (Optional) Interface state reason detailed |

### Command Mode

- /exec

# show interface brief

show interface <ifloop\_brf> brief [ \_\_readonly\_\_ TABLE\_interface <interface> <state> [ <desc> ] ]

## Syntax Description

|                   |   |
|-------------------|---|
| show              | Show running system information                       |
| interface         | Show interface status and information                 |
| <i>ifloop_brf</i> | Enter interface type and number in module/slot format |
| brief             | Show brief info of interface                          |
| __readonly__      | (Optional) Read Only                                  |
| <i>interface</i>  | (Optional) Interface index                            |
| TABLE_interface   | (Optional) show interface                             |
| <i>state</i>      | (Optional) Interface state                            |
| <i>desc</i>       | (Optional) Interface description                      |

## Command Mode

- /exec

## show interface brief

```
show interface <iftunnel_brf> brief [ __readonly__ TABLE_interface <interface> <state> [ <admin-state> ]
[ { <tunnel-ipv4> | <tunnel-ipv6> } ] [ <bandwidth> ] [ <encap-type> ] [ <mtu> ] [ <keepalive-period> ] [
<keepalive-retries> ] [ { <src-ipv4> | <src-ipv6> } ] [ <src-intf> ] [ { <dest-ipv4> | <dest-ipv6> } ] [
<dest-hostname> ] [ <vrf_name> ] [ <tunnel_vrf_name> ] [ <wccp_header> ] [ <ttl_val> ] [
<tunnel_pmtud_age_time> ] [ <tunnel_pmtud_min_mtu> ] [ <tunnel_pmtud> ] [ <tunnel_pgm_mtu> ] [
<tunnel_clear_counter> ] [ <tunnel_tx_pkt_count> ] [ <tunnel_tx_byte_count> ] [ <tunnel_tx_rate> ] [
<tunnel_rx_pkt_count> ] [ <tunnel_rx_byte_count> ] [ <tunnel_rx_rate> ] ]
```

### Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information                       |
| interface                | Show interface status and information                 |
| <i>iftunnel_brf</i>      | Enter interface type and number in module/slot format |
| brief                    | Show brief info of interface                          |
| <i>__readonly__</i>      | (Optional) Read Only                                  |
| <i>interface</i>         | (Optional) Interface index                            |
| TABLE_interface          | (Optional) show interface                             |
| <i>state</i>             | (Optional) Interface state                            |
| <i>admin-state</i>       | (Optional)  |
| <i>tunnel-ipv4</i>       | (Optional) interface IPv4 address                     |
| <i>mtu</i>               | (Optional) interface Maximum Transmission Unit        |
| <i>bandwidth</i>         | (Optional) interface Bandwidth in kilobits            |
| <i>encap-type</i>        | (Optional)  |
| <i>keepalive-period</i>  | (Optional) keealive period                            |
| <i>keepalive-retries</i> | (Optional) number of retries                          |
| <i>src-ipv4</i>          | (Optional) tunnel source IPv4 address                 |
| <i>src-intf</i>          | (Optional) tunnel source interface                    |
| <i>dest-ipv4</i>         | (Optional) tunnel destination IPv4 address            |
| <i>dest-hostname</i>     | (Optional) tunnel destination hostname                |
| <i>vrf_name</i>          | (Optional) transport VRF name                         |
| <i>tunnel_vrf_name</i>   | (Optional) tunnel VRF name                            |
| <i>wccp_header</i>       | (Optional) wccp header                                |

|                              |   |
|------------------------------|---|
| <i>ttl_val</i>               | (Optional) tunnel time to live value                |
| <i>tunnel_pmtud_age_time</i> | (Optional) tunnel path MTU discovery age time       |
| <i>tunnel_pmtud_min_mtu</i>  | (Optional) tunnel path MTU discovery min mtu        |
| <i>tunnel_pmtud</i>          | (Optional) tunnel path MTU discovered               |
| <i>tunnel_pgm_mtu</i>        | (Optional) tunnel actual programmed MTU             |
| <i>tunnel_rx_pkt_count</i>   | (Optional) total number of packets received         |
| <i>tunnel_rx_byte_count</i>  | (Optional) total number of bytes received           |
| <i>tunnel_rx_rate</i>        | (Optional) packets input rate per 5 minutes         |
| <i>tunnel_tx_pkt_count</i>   | (Optional) total number of packets transmitted      |
| <i>tunnel_tx_byte_count</i>  | (Optional) total number of bytes transmitted        |
| <i>tunnel_tx_rate</i>        | (Optional) packets transmitted per 5 minutes        |
| <i>tunnel_clear_counter</i>  | (Optional) Last clearing of show interface counters |

**Command Mode**

- /exec

# show interface brief

```
show interface <ifmgmt_brf> brief [ __readonly__ TABLE_interface <interface> [ <vrf> ] <state> [
<ipv6_addr> ] [ <ip_addr> ] <mtu> <speed> [ <duplex> ] ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                       |
| interface           | Show interface status and information                 |
| <i>ifmgmt_brf</i>   | Enter interface type and number in module/slot format |
| brief               | Show brief info of interface                          |
| <i>__readonly__</i> | (Optional) Read Only                                  |
| <i>interface</i>    | (Optional) Interface index                            |
| TABLE_interface     | (Optional) show interface                             |
| <i>vrf</i>          | (Optional) Vrf membership                             |
| <i>state</i>        | (Optional) Interface state                            |
| <i>ip_addr</i>      | (Optional) IP address                                 |
| <i>mtu</i>          | (Optional) MTU  |
| <i>speed</i>        | (Optional) Speed                                      |
| <i>duplex</i>       | (Optional) Duplex                                     |

## Command Mode

- /exec

## show interface brief

```
show interface <ifeth_brf> brief [ __readonly__ TABLE_interface <interface> [ <vlan> ] <type> <portmode>
<state> <state_rsn_desc> <speed> <ratemode> [ <portchan> ] ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                       |
| interface             | Show interface status and information                 |
| <i>ifeth_brf</i>      | Enter interface type and number in module/slot format |
| brief                 | Show brief info of interface                          |
| <i>__readonly__</i>   | (Optional) Read Only                                  |

### Syntax Description

|                  |  |
|------------------|--|
| show             | Show running system information              |
| interface        | Show interface status and information        |
| counters         | Show interface counters                      |
| detailed         | Show only non-zero counters                  |
| snmp             | (Optional) Show SNMP MIB values              |
| __readonly__     | (Optional) Read Only                         |
| TABLE_interface  | (Optional) show interface                    |
| interface        | (Optional) Interface index                   |
| vdc_lvl_in_pkts  | (Optional) VDC level input packets           |
| vdc_lvl_in_bytes | (Optional) VDC level input bytes             |
| vdc_lvl_in_ucast | (Optional) VDC level input unicast packets   |
| vdc_lvl_in_mcast | (Optional) VDC level input multicast packets |

|                              |  |
|------------------------------|--|
| <i>vdc_lvl_in_bcast</i>      | (Optional) VDC level input broadcast packets   |
| <i>vdc_lvl_in_bps</i>        | (Optional) VDC level input bytes per second    |
| <i>vdc_lvl_in_pps</i>        | (Optional) VDC level input packets per second  |
| <i>vdc_lvl_in_avg_pkts</i>   | (Optional) VDC level average input packets     |
| <i>vdc_lvl_in_avg_bytes</i>  | (Optional) VDC level average input bytes       |
| <i>vdc_lvl_out_pkts</i>      | (Optional) VDC level output packets            |
| <i>vdc_lvl_out_bytes</i>     | (Optional) VDC level output bytes              |
| <i>vdc_lvl_out_ucast</i>     | (Optional) VDC level output unicast packets    |
| <i>vdc_lvl_out_mcast</i>     | (Optional) VDC level output multicast packets  |
| <i>vdc_lvl_out_bcast</i>     | (Optional) VDC level output broadcast packets  |
| <i>vdc_lvl_out_bps</i>       | (Optional) VDC level output bytes per second   |
| <i>vdc_lvl_out_pps</i>       | (Optional) VDC level output packets per second |
| <i>vdc_lvl_out_avg_pkts</i>  | (Optional) VDC level average output packets    |
| <i>vdc_lvl_out_avg_bytes</i> | (Optional) VDC level average output bytes      |
| <i>mgmt_in_pkts</i>          | (Optional) Input packets                       |
| <i>mgmt_in_bytes</i>         | (Optional) Input bytes                         |
| <i>mgmt_in_mcast</i>         | (Optional) Input multicast frames              |
| <i>mgmt_in_compressed</i>    | (Optional) Input compressed                    |
| <i>mgmt_in_errors</i>        | (Optional) Input errors                        |
| <i>mgmt_in_frame</i>         | (Optional) Input frame errors                  |
| <i>mgmt_in_overnrun</i>      | (Optional) Input overrun                       |
| <i>mgmt_in_fifo</i>          | (Optional) Input fifo                          |
| <i>mgmt_out_pkts</i>         | (Optional) Output packets                      |
| <i>mgmt_out_bytes</i>        | (Optional) Output bytes                        |
| <i>mgmt_out_underruns</i>    | (Optional) Output overruns                     |
| <i>mgmt_out_errors</i>       | (Optional) Output errors                       |
| <i>mgmt_out_collisions</i>   | (Optional) Output collisions                   |
| <i>mgmt_out_fifo</i>         | (Optional) Output fifo                         |
| <i>mgmt_out_carrier</i>      | (Optional) Output carrier errors               |

|                           |                               |
|---------------------------|-------------------------------|
| <i>mgmt_align_err</i>     | (Optional) Align error        |
| <i>mgmt_fcs_err</i>       | (Optional) FCS error          |
| <i>mgmt_xmit_err</i>      | (Optional) Transmit error     |
| <i>mgmt_rcv_err</i>       | (Optional) Receive error      |
| <i>mgmt_undersize</i>     | (Optional) Undersize          |
| <i>mgmt_outdisc</i>       | (Optional) Out discard        |
| <i>mgmt_single_col</i>    | (Optional) Single collision   |
| <i>mgmt_multi_col</i>     | (Optional) Multiple collision |
| <i>mgmt_late_col</i>      | (Optional) Late collision     |
| <i>mgmt_excess_col</i>    | (Optional) Excess collision   |
| <i>mgmt_carri_sen</i>     | (Optional) Carrier sense      |
| <i>mgmt_runts</i>         | (Optional) Runts              |
| <i>mgmt_giants</i>        | (Optional) Giants             |
| <i>mgmt_sqetest_err</i>   | (Optional) SQETest error      |
| <i>mgmt_deferred_tx</i>   | (Optional) Deferred tx        |
| <i>mgmt_inmactx_err</i>   | (Optional) In MAC tx          |
| <i>mgmt_inmacrx_err</i>   | (Optional) In MAC rx          |
| <i>mgmt_symbol_err</i>    | (Optional) Symbol error       |
| <i>loop_in_pkts</i>       | (Optional) Input packets      |
| <i>loop_in_bytes</i>      | (Optional) Input bytes        |
| <i>loop_in_mcast</i>      | (Optional) Input multicast    |
| <i>loop_in_compressed</i> | (Optional) Input compressed   |
| <i>loop_in_errors</i>     | (Optional) Input errors       |
| <i>loop_in_frame</i>      | (Optional) Input frame errors |
| <i>loop_in_overrun</i>    | (Optional) Input overrun      |
| <i>loop_in_fifo</i>       | (Optional) Input fifo         |
| <i>loop_out_pkts</i>      | (Optional) Output packets     |
| <i>loop_out_bytes</i>     | (Optional) Output bytes       |
| <i>loop_out_underruns</i> | (Optional) Output underruns   |

|                                  |   |
|----------------------------------|---|
| <i>loop_out_errors</i>           | (Optional) Output errors                      |
| <i>loop_out_collisions</i>       | (Optional) Output collisions                  |
| <i>loop_out_fifo</i>             | (Optional) Output fifo                        |
| <i>loop_out_carriers</i>         | (Optional) Output carrier errors              |
| <i>eth_load_interval1_rx</i>     | (Optional) interval 1 timer value in sec      |
| <i>eth_inrate1_bits</i>          | (Optional) interval 1 input rate bits/sec     |
| <i>eth_inrate1_pkts</i>          | (Optional) interval 1 input rate pkts/sec     |
| <i>eth_load_interval1_tx</i>     | (Optional) interval 1 timer value in sec      |
| <i>eth_outrate1_bits</i>         | (Optional) interval 1 output rate bits/sec    |
| <i>eth_outrate1_pkts</i>         | (Optional) interval 1 output rate pkts/sec    |
| <i>eth_inrate1_summary_bits</i>  | (Optional) interval 1 input rate bit summary  |
| <i>eth_inrate1_summary_pkts</i>  | (Optional) interval 1 input rate pkt summary  |
| <i>eth_outrate1_summary_bits</i> | (Optional) interval 1 output rate bit summary |
| <i>eth_outrate1_summary_pkts</i> | (Optional) interval 1 output rate pkt summary |
| <i>eth_load_interval2_rx</i>     | (Optional) interval 2 timer value in sec      |
| <i>eth_inrate2_bits</i>          | (Optional) interval 2 input rate bits/sec     |
| <i>eth_inrate2_pkts</i>          | (Optional) interval 2 input rate pkts/sec     |
| <i>eth_load_interval2_tx</i>     | (Optional) interval 2 timer value in sec      |
| <i>eth_outrate2_bits</i>         | (Optional) interval 2 output rate bits/sec    |
| <i>eth_outrate2_pkts</i>         | (Optional) interval 2 output rate pkts/sec    |
| <i>eth_inrate2_summary_bits</i>  | (Optional) interval 2 input rate bit summary  |
| <i>eth_inrate2_summary_pkts</i>  | (Optional) interval 2 input rate pkt summary  |
| <i>eth_outrate2_summary_bits</i> | (Optional) interval 2 output rate bit summary |
| <i>eth_outrate2_summary_pkts</i> | (Optional) interval 2 output rate pkt summary |
| <i>eth_load_interval3_rx</i>     | (Optional) interval 3 timer value in sec      |
| <i>eth_inrate3_bits</i>          | (Optional) interval 3 input rate bits/sec     |
| <i>eth_inrate3_pkts</i>          | (Optional) interval 3 input rate pkts/sec     |
| <i>eth_load_interval3_tx</i>     | (Optional) interval 3 timer value in sec      |
| <i>eth_outrate3_bits</i>         | (Optional) interval 3 output rate bits/sec    |

|                                  |   |
|----------------------------------|---|
| <i>eth_outrate3_pkts</i>         | (Optional) interval 3 output rate pkts/sec        |
| <i>eth_inrate3_summary_bits</i>  | (Optional) interval 3 input rate bit summary      |
| <i>eth_inrate3_summary_pkts</i>  | (Optional) interval 3 input rate pkt summary      |
| <i>eth_outrate3_summary_bits</i> | (Optional) interval 3 output rate bit summary     |
| <i>eth_outrate3_summary_pkts</i> | (Optional) interval 3 output rate pkt summary     |
| <i>eth_inpkts</i>                | (Optional) Packets input                          |
| <i>eth_inucast</i>               | (Optional) Unicasts                               |
| <i>eth_inmcast</i>               | (Optional) Multicasts                             |
| <i>eth_inbcast</i>               | (Optional) Broadcasts                             |
| <i>eth_ingiants</i>              | (Optional) giants                                 |
| <i>eth_inbytes</i>               | (Optional) Bytes input                            |
| <i>eth_storm_supp</i>            | (Optional) storm suppression                      |
| <i>eth_inb64</i>                 | (Optional) input pkts between 0 and 64 bytes      |
| <i>eth_inb65_127</i>             | (Optional) input pkts between 65 and 127 bytes    |
| <i>eth_inb128_255</i>            | (Optional) input pkts between 128 and 255 bytes   |
| <i>eth_inb256_511</i>            | (Optional) input pkts between 256 and 511 bytes   |
| <i>eth_inb512_1023</i>           | (Optional) input pkts between 512 and 1023 bytes  |
| <i>eth_inb1024_1518</i>          | (Optional) input pkts between 1024 and 1518 bytes |
| <i>eth_inb1519_1548</i>          | (Optional) input pkts between 1519 and 1548 bytes |
| <i>eth_intrunk</i>               | (Optional) input trunk pkts                       |
| <i>eth_outpkts</i>               | (Optional) packets output                         |
| <i>eth_outucast</i>              | (Optional) Unicasts                               |
| <i>eth_outmcast</i>              | (Optional) Multicasts                             |
| <i>eth_outbcast</i>              | (Optional) Broadcasts                             |
| <i>eth_outgiants</i>             | (Optional) giants                                 |
| <i>eth_outbytes</i>              | (Optional) bytes output                           |
| <i>eth_outb64</i>                | (Optional) output pkts between 0 and 64 bytes     |
| <i>eth_outb65_127</i>            | (Optional) output pkts between 65 and 127 bytes   |
| <i>eth_outb128_255</i>           | (Optional) output pkts between 128 and 255 bytes  |

|                            |  |
|----------------------------|--|
| <i>eth_outb256_511</i>     | (Optional) output pkts between 256 and 511 bytes   |
| <i>eth_outb512_1023</i>    | (Optional) output pkts between 512 and 1023 bytes  |
| <i>eth_outb1024_1518</i>   | (Optional) output pkts between 1024 and 1518 bytes |
| <i>eth_outb1519_1548</i>   | (Optional) output pkts between 1519 and 1548 bytes |
| <i>eth_outtrunk</i>        | (Optional) output trunk pkts                       |
| <i>eth_nobuf</i>           | (Optional) No buffer received                      |
| <i>eth_runts</i>           | (Optional) runts                                   |
| <i>eth_crc</i>             | (Optional) CRC                                     |
| <i>eth_ecc</i>             | (Optional) ECC                                     |
| <i>eth_overrun</i>         | (Optional) overrun                                 |
| <i>eth_underrun</i>        | (Optional) underruns                               |
| <i>eth_ignored</i>         | (Optional) ignored                                 |
| <i>eth_bad_eth</i>         | (Optional) bad ether type drop                     |
| <i>eth_bad_proto</i>       | (Optional) bad protocol drops                      |
| <i>eth_in_ifdown_drops</i> | (Optional) Input if-down drops                     |
| <i>eth_coll</i>            | (Optional) collisions                              |
| <i>eth_latecoll</i>        | (Optional) late collision                          |
| <i>eth_lostcarrier</i>     | (Optional) lost carrier                            |
| <i>eth_nocarrier</i>       | (Optional) no carrier                              |
| <i>eth_babbles</i>         | (Optional) babbles                                 |
| <i>eth_watchdog</i>        | (Optional) watchdog                                |
| <i>eth_dribble</i>         | (Optional) input packets with dribble condition    |
| <i>eth_inerr</i>           | (Optional) input errors                            |
| <i>eth_outerr</i>          | (Optional) output errors                           |
| <i>eth_deferred</i>        | (Optional) deferred                                |
| <i>eth_jabbers</i>         | (Optional) jabbers                                 |
| <i>eth_shortframe</i>      | (Optional) short frames                            |
| <i>eth_single_coll</i>     | (Optional) single collisions                       |
| <i>eth_multi_coll</i>      | (Optional) multi collisions                        |

|                            |                                       |
|----------------------------|---------------------------------------|
| <i>eth_excess_coll</i>     | (Optional) excessive collisions       |
| <i>eth_indiscard</i>       | (Optional) discards                   |
| <i>eth_bad_encap</i>       | (Optional) bad encapsulation          |
| <i>eth_outcrc</i>          | (Optional) Output CRC                 |
| <i>eth_symbol</i>          | (Optional) symbol errors              |
| <i>eth_out_drops</i>       | (Optional) output drops               |
| <i>eth_bpdu_outlost</i>    | (Optional) BPDU output lost           |
| <i>eth_cos0_outlost</i>    | (Optional) output pkts                |
| <i>eth_cos1_outlost</i>    | (Optional) output pkts                |
| <i>eth_cos2_outlost</i>    | (Optional) output pkts                |
| <i>eth_cos3_outlost</i>    | (Optional) output pkts                |
| <i>eth_cos4_outlost</i>    | (Optional) output pkts                |
| <i>eth_cos5_outlost</i>    | (Optional) output pkts                |
| <i>eth_cos6_outlost</i>    | (Optional) output pkts                |
| <i>eth_cos7_outlost</i>    | (Optional) output pkts                |
| <i>eth_inpause</i>         | (Optional) pause input                |
| <i>eth_outpause</i>        | (Optional) PAUSE output               |
| <i>eth_resets</i>          | (Optional) interface resets           |
| <i>eth_sqetest</i>         | (Optional) SQE test                   |
| <i>eth_l2_ucastpkts</i>    | (Optional) L2 switched ucast pkts     |
| <i>eth_l2_ucastbytes</i>   | (Optional) L2 switched ucast bytes    |

### Syntax Description

|                             |   |
|-----------------------------|---|
| show                        | Show running system information                       |
| interface                   | Show interface status and information                 |
| <i>ifmgmt_ctr_dtl</i>       | Enter interface type and number in module/slot format |
| counters                    | Show interface counters                               |
| detailed                    | Show only non-zero counters                           |
| <u>__readonly__</u>         | (Optional) Read Only                                  |
| <i>interface</i>            | (Optional) Interface index                            |
| TABLE_interface             | (Optional) show interface                             |
| <i>vdc_lvl_in_pkts</i>      | (Optional) VDC level input packets                    |
| <i>vdc_lvl_in_bytes</i>     | (Optional) VDC level input bytes                      |
| <i>vdc_lvl_in_ucast</i>     | (Optional) VDC level input unicast packets            |
| <i>vdc_lvl_in_mcast</i>     | (Optional) VDC level input multicast packets          |
| <i>vdc_lvl_in_bcast</i>     | (Optional) VDC level input broadcast packets          |
| <i>vdc_lvl_in_bps</i>       | (Optional) VDC level input bytes per second           |
| <i>vdc_lvl_in_pps</i>       | (Optional) VDC level input packets per second         |
| <i>vdc_lvl_in_avg_pkts</i>  | (Optional) VDC level average input packets            |
| <i>vdc_lvl_in_avg_bytes</i> | (Optional) VDC level average input bytes              |
| <i>vdc_lvl_out_pkts</i>     | (Optional) VDC level output packets                   |

|                              |  |
|------------------------------|--|
| <i>vdc_lvl_out_bytes</i>     | (Optional) VDC level output bytes              |

### Syntax Description

|                                  |   |
|----------------------------------|---|
| show                             | Show running system information                       |
| interface                        | Show interface status and information                 |
| <i>ifeth_ctr_dtl_all</i>         | Enter interface type and number in module/slot format |
| counters                         | Show interface counters                               |
| detailed                         | Show only non-zero counters                           |
| all                              | everything  |
| snmp                             | (Optional) Show SNMP MIB values                       |
| <u>__readonly__</u>              | (Optional) Read Only                                  |
| <i>interface</i>                 | (Optional) Interface index                            |
| TABLE_interface                  | (Optional) show interface                             |
| <i>rx_total_pkts</i>             | (Optional) total input packets                        |
| <i>tx_total_pkts</i>             | (Optional) total output packets                       |
| <i>rx_ucast_pkts</i>             | (Optional) input unicasts                             |
| <i>rx_mcast_pkts</i>             | (Optional) input multicasts                           |
| <i>rx_bcast_pkts</i>             | (Optional) input broadcasts                           |
| <i>rx_octets</i>                 | (Optional) input bytes                                |
| <i>tx_ucast_pkts</i>             | (Optional) output unicasts                            |
| <i>tx_mcast_pkts</i>             | (Optional) output multicasts                          |
| <i>tx_bcast_pkts</i>             | (Optional) output broadcasts                          |
| <i>tx_octets</i>                 | (Optional) output bytes                               |
| <i>rxtx_pkts_64octets</i>        | (Optional) all pkts between 0 and 64 bytes            |
| <i>rxtx_pkts_65_127octets</i>    | (Optional) all pkts between 65 and 127 bytes          |
| <i>rxtx_pkts_128_255octets</i>   | (Optional) all pkts between 128 and 255 bytes         |
| <i>rxtx_pkts_256_511octets</i>   | (Optional) all pkts between 256 and 511 bytes         |
| <i>rxtx_pkts_512_1023octets</i>  | (Optional) all pkts between 512 and 1023 bytes        |
| <i>rxtx_pkts_1024_1518octets</i> | (Optional) all pkts between 1024 and 1518 bytes       |
| <i>rxtx_pkts_1519_1548octets</i> | (Optional) all pkts between 1519 and 1548 bytes       |
| <i>rx_trunk_frames</i>           | (Optional) input trunk pkts                           |
| <i>tx_trunk_frames</i>           | (Optional) output trunk pkts                          |

## show interface counters detailed all

|                                  |   |
|----------------------------------|---|
| <i>rx_drop_events</i>            | (Optional) dropped pkts                       |
| <i>rxtx_giants</i>               | (Optional) giants                             |
| <i>eth_load_interval1_rx</i>     | (Optional) interval 1 timer value in sec      |
| <i>eth_inrate1_bits</i>          | (Optional) interval 1 input rate bits/sec     |
| <i>eth_inrate1_pkts</i>          | (Optional) interval 1 input rate pkts/sec     |
| <i>eth_load_interval1_tx</i>     | (Optional) interval 1 timer value in sec      |
| <i>eth_outrate1_bits</i>         | (Optional) interval 1 output rate bits/sec    |
| <i>eth_outrate1_pkts</i>         | (Optional) interval 1 output rate pkts/sec    |
| <i>eth_inrate1_summary_bits</i>  | (Optional) interval 1 input rate bit summary  |
| <i>eth_inrate1_summary_pkts</i>  | (Optional) interval 1 input rate pkt summary  |
| <i>eth_outrate1_summary_bits</i> | (Optional) interval 1 output rate bit summary |
| <i>eth_outrate1_summary_pkts</i> | (Optional) interval 1 output rate pkt summary |
| <i>eth_load_interval2_rx</i>     | (Optional) interval 2 timer value in sec      |
| <i>eth_inrate2_bits</i>          | (Optional) interval 2 input rate bits/sec     |
| <i>eth_inrate2_pkts</i>          | (Optional) interval 2 input rate pkts/sec     |
| <i>eth_load_interval2_tx</i>     | (Optional) interval 2 timer value in sec      |
| <i>eth_outrate2_bits</i>         | (Optional) interval 2 output rate bits/sec    |
| <i>eth_outrate2_pkts</i>         | (Optional) interval 2 output rate pkts/sec    |
| <i>eth_inrate2_summary_bits</i>  | (Optional) interval 2 input rate bit summary  |
| <i>eth_inrate2_summary_pkts</i>  | (Optional) interval 2 input rate pkt summary  |
| <i>eth_outrate2_summary_bits</i> | (Optional) interval 2 output rate bit summary |
| <i>eth_outrate2_summary_pkts</i> | (Optional) interval 2 output rate pkt summary |
| <i>eth_load_interval3_rx</i>     | (Optional) interval 3 timer value in sec      |
| <i>eth_inrate3_bits</i>          | (Optional) interval 3 input rate bits/sec     |
| <i>eth_inrate3_pkts</i>          | (Optional) interval 3 input rate pkts/sec     |
| <i>eth_load_interval3_tx</i>     | (Optional) interval 3 timer value in sec      |
| <i>eth_outrate3_bits</i>         | (Optional) interval 3 output rate bits/sec    |
| <i>eth_outrate3_pkts</i>         | (Optional) interval 3 output rate pkts/sec    |
| <i>eth_inrate3_summary_bits</i>  | (Optional) interval 3 input rate bit summary  |

|                                  |  |
|----------------------------------|--|

| <i>eth_ecc</i>             | (Optional) ECC   |
| <i>eth_frame</i>           | (Optional) frame   |
| <i>eth_overrun</i>         | (Optional) overrun                                       |
| <i>eth_ignored</i>         | (Optional) ignored                                       |
| <i>eth_watchdog</i>        | (Optional) watchdog                                      |
| <i>eth_outbcast</i>        | (Optional) Broadcasts                                    |

|                             |   |
|-----------------------------|---|
| <i>eth_outmcast</i>         | (Optional) Multicasts                           |
| <i>eth_outucast</i>         | (Optional) Unicasts                             |
| <i>eth_outgiants</i>        | (Optional) giants                               |
| <i>eth_inpause</i>          | (Optional) pause input                          |
| <i>eth_dribble</i>          | (Optional) input packets with dribble condition |
| <i>eth_in_ifdown_drops</i>  | (Optional) Input if-down drops                  |
| <i>eth_bad_eth</i>          | (Optional) bad ether type drop                  |
| <i>eth_bad_proto</i>        | (Optional) bad protocol drops                   |
| <i>eth_outpkts</i>          | (Optional) packets output                       |
| <i>eth_outbytes</i>         | (Optional) bytes output                         |
| <i>eth_underrun</i>         | (Optional) underruns                            |
| <i>eth_outhw_switched</i>   | (Optional) Out H/W Switched                     |
| <i>eth_outsw_switched</i>   | (Optional) Out S/W Switched                     |
| <i>eth_outerr</i>           | (Optional) output errors                        |
| <i>eth_coll</i>             | (Optional) collisions                           |
| <i>eth_resets</i>           | (Optional) interface resets                     |
| <i>eth_babbles</i>          | (Optional) babbles                              |
| <i>eth_latecoll</i>         | (Optional) late collision                       |
| <i>eth_deferred</i>         | (Optional) deferred                             |
| <i>eth_lostcarrier</i>      | (Optional) lost carrier                         |
| <i>eth_nocarrier</i>        | (Optional) no carrier                           |
| <i>eth_outpause</i>         | (Optional) PAUSE output                         |
| <i>eth_buffail</i>          | (Optional) output buffer failures               |
| <i>eth_bufswapped</i>       | (Optional) output buffers swapped out           |
| <i>eth_arpdrops</i>         | (Optional) arp drops                            |
| <i>eth_out_ifdown_drops</i> | (Optional) Output if-down drops                 |
| <i>eth_single_coll</i>      | (Optional) single collisions                    |
| <i>eth_multi_coll</i>       | (Optional) multi collisions                     |
| <i>eth_excess_coll</i>      | (Optional) excessive collisions                 |

|                          |  |
|--------------------------|--|
| <i>eth_jabbers</i>       | (Optional) jabbers                                 |
| <i>eth_shortframe</i>    | (Optional) short frames                            |
| <i>eth_indiscard</i>     | (Optional) discards                                |
| <i>eth_bad_encap</i>     | (Optional) bad encapsulation                       |
| <i>eth_outcrc</i>        | (Optional) Output CRC                              |
| <i>eth_symbol</i>        | (Optional) symbol errors                           |
| <i>eth_out_drops</i>     | (Optional) output drops                            |
| <i>eth_sqetest</i>       | (Optional) SQE test                                |
| <i>eth_inb64</i>         | (Optional) input pkts between 0 and 64 bytes       |
| <i>eth_inb65_127</i>     | (Optional) input pkts between 65 and 127 bytes     |
| <i>eth_inb128_255</i>    | (Optional) input pkts between 128 and 255 bytes    |
| <i>eth_inb256_511</i>    | (Optional) input pkts between 256 and 511 bytes    |
| <i>eth_inb512_1023</i>   | (Optional) input pkts between 512 and 1023 bytes   |
| <i>eth_inb1024_1518</i>  | (Optional) input pkts between 1024 and 1518 bytes  |
| <i>eth_inb1519_1548</i>  | (Optional) input pkts between 1519 and 1548 bytes  |
| <i>eth_intrunk</i>       | (Optional) input trunk pkts                        |
| <i>eth_outb64</i>        | (Optional) output pkts between 0 and 64 bytes      |
| <i>eth_outb65_127</i>    | (Optional) output pkts between 65 and 127 bytes    |
| <i>eth_outb128_255</i>   | (Optional) output pkts between 128 and 255 bytes   |
| <i>eth_outb256_511</i>   | (Optional) output pkts between 256 and 511 bytes   |
| <i>eth_outb512_1023</i>  | (Optional) output pkts between 512 and 1023 bytes  |
| <i>eth_outb1024_1518</i> | (Optional) output pkts between 1024 and 1518 bytes |
| <i>eth_outb1519_1548</i> | (Optional) output pkts between 1519 and 1548 bytes |
| <i>eth_outtrunk</i>      | (Optional) output trunk pkts                       |
| <i>eth_bpdu_outlost</i>  | (Optional) BPDU output lost                        |
| <i>eth_cos0_outlost</i>  | (Optional) output pkts                             |
| <i>eth_cos1_outlost</i>  | (Optional) output pkts                             |
| <i>eth_cos2_outlost</i>  | (Optional) output pkts                             |
| <i>eth_cos3_outlost</i>  | (Optional) output pkts                             |

|                                     |                                   |
|-------------------------------------|-----------------------------------|
| <i>eth_cos4_outlost</i>             | (Optional) output pkts            |
| <i>eth_cos5_outlost</i>             | (Optional) output pkts            |
| <i>eth_cos6_outlost</i>             | (Optional) output pkts            |
| <i>eth_cos7_outlost</i>             | (Optional) output pkts            |
| <i>eth_fcoe_in_pkts</i>             | (Optional) fcoe in pkts           |
| <i>eth_fcoe_in_octets</i>           | (Optional) fcoe in octets         |
| <i>eth_fcoe_out_pkts</i>            | (Optional) fcoe out pkts          |
| <i>eth_fcoe_out_octets</i>          | (Optional) fcoe out octets        |
| <i>eth_nfcoe_in_pkts</i>            | (Optional) nfcoe in pkts          |
| <i>eth_nfcoe_in_octets</i>          | (Optional) nfcoe in octets        |
| <i>eth_nfcoe_out_pkts</i>           | (Optional) nfcoe out pkts         |
| <i>eth_nfcoe_out_octets</i>         | (Optional) nfcoe out octets       |
| <i>eth_eee_atx_lpi_msec</i>         | (Optional) Tx Lpi usec            |
| <i>eth_eee_arcv_lpi_msec</i>        | (Optional) Rx Lpi usec            |
| <i>eth_eee_atx_lpi_transitions</i>  | (Optional) Tx Lpi requests        |
| <i>eth_eee_arcv_lpi_transitions</i> | (Optional) Rx Lpi indications     |
| <i>eth_phy_ber_count</i>            | (Optional) Bit error rate counter |
| <i>eth_phy_errblks_count</i>        | (Optional) Errored blocks counter |
| <i>eth_tx_frm_error</i>             | (Optional) tx frame error         |
| <i>eth_rx_toolong</i>               | (Optional) rx toolong error       |
| <i>eth_rx_undersize</i>             | (Optional) rx undersize           |
| <i>eth_rx_fragment</i>              | (Optional) rx fragment            |
| <i>eth_rx_crcerr_not_stomped</i>    | (Optional) rx crcerr not stomped  |
| <i>eth_rx_crcerr_stomped</i>        | (Optional) rx crcerr stomped      |
| <i>eth_rx_inrangeerr</i>            | (Optional) rx inrange error       |

### Command Mode

- /exec

## show interface counters detailed cached

### Syntax Description

|                                  |   |
|----------------------------------|---|
| show                             | Show running system information                       |
| interface                        | Show interface status and information                 |
| <i>ifeth_ctr_dtl_all</i>         | Enter interface type and number in module/slot format |
| counters                         | Show interface counters                               |
| detailed                         | Show only non-zero counters                           |
| cached                           | everything cached                                     |
| <i>__readonly__</i>              | (Optional) Read Only                                  |
| <i>interface</i>                 | (Optional) Interface index                            |
| TABLE_interface                  | (Optional) show interface                             |
| <i>rx_total_pkts</i>             | (Optional) total input packets                        |
| <i>tx_total_pkts</i>             | (Optional) total output packets                       |
| <i>rx_ucast_pkts</i>             | (Optional) input unicasts                             |
| <i>rx_mcast_pkts</i>             | (Optional) input multicasts                           |
| <i>rx_bcast_pkts</i>             | (Optional) input broadcasts                           |
| <i>rx_octets</i>                 | (Optional) input bytes                                |
| <i>tx_ucast_pkts</i>             | (Optional) output unicasts                            |
| <i>tx_mcast_pkts</i>             | (Optional) output multicasts                          |
| <i>tx_bcast_pkts</i>             | (Optional) output broadcasts                          |
| <i>tx_octets</i>                 | (Optional) output bytes                               |
| <i>rctx_pkts_64octets</i>        | (Optional) all pkts between 0 and 64 bytes            |
| <i>rctx_pkts_65_127octets</i>    | (Optional) all pkts between 65 and 127 bytes          |
| <i>rctx_pkts_128_255octets</i>   | (Optional) all pkts between 128 and 255 bytes         |
| <i>rctx_pkts_256_511octets</i>   | (Optional) all pkts between 256 and 511 bytes         |
| <i>rctx_pkts_512_1023octets</i>  | (Optional) all pkts between 512 and 1023 bytes        |
| <i>rctx_pkts_1024_1518octets</i> | (Optional) all pkts between 1024 and 1518 bytes       |
| <i>rctx_pkts_1519_1548octets</i> | (Optional) all pkts between 1519 and 1548 bytes       |
| <i>rx_trunk_frames</i>           | (Optional) input trunk pkts                           |
| <i>tx_trunk_frames</i>           | (Optional) output trunk pkts                          |
| <i>rx_drop_events</i>            | (Optional) dropped pkts                               |

|                                  |   |
|----------------------------------|---|
| <i>rxtx_giants</i>               | (Optional) giants                             |
| <i>eth_load_interval1_rx</i>     | (Optional) interval 1 timer value in sec      |
| <i>eth_inrate1_bits</i>          | (Optional) interval 1 input rate bits/sec     |

| <i>signal_loss</i>          | (Optional) Signal Loss                        |
| <i>prm_seq_pro_err</i>      | (Optional) primitive sequence protocol errors |

|                                  |   |
|----------------------------------|---|
| <i>inv_trans_err</i>             | (Optional) invalid transmission errors  |
| <i>inv_crc</i>                   | (Optional) Invalid crc  |
| <i>delim_err</i>                 | (Optional) Delimiter Errors   |
| <i>addr_iden_err</i>             | (Optional) Address Identification errors  |
| <i>link_reset_rcvd</i>           | (Optional) link reset received  |
| <i>link_reset_trans</i>          | (Optional) link reset transmitted   |
| <i>off_seq_err_rcvd</i>          | (Optional) Offline sequence error received  |
| <i>off_seq_err_trans</i>         | (Optional) Offline sequence Error transmitted   |
| <i>frames_rcvd_short</i>         | (Optional) frames received that are shorter than the minimum allowable frame length regardless of the CRC/FCS error |
| <i>frames_rcvd_long</i>          | (Optional) frames received that are longer than the minimum allowable frame length regardless of the CRC/FCS error  |
| <i>txwait</i>                    | (Optional) TXwait   |
| <i>frames_rcvd_greater</i>       | (Optional) frames received with length greater than what was agreed to in FLOGI/PLOGI                               |
| <i>frame_rcvd_short_header</i>   | (Optional) frames received with length less than the minimum indicated by the frame header                          |
| <i>link_reset_resp_rcvd</i>      | (Optional) Link reset responses received  |
| <i>link_reset_resp_trans</i>     | (Optional) Link reset responses transmitted   |
| <i>non_oper_seq_rcvd</i>         | (Optional) Non operational sequence received  |
| <i>non_oper_seq_trans</i>        | (Optional) Non operational sequence transmitted   |
| <i>frag_frames_rcvd</i>          | (Optional) fragmented frames received   |
| <i>frames_eof_abort</i>          | (Optional) frames EOF abort   |
| <i>unknown_class_frames_rcvd</i> | (Optional) unknown class frames received  |
| <i>8b10b_disparity_err</i>       | (Optional) 8b10b disparity errors   |
| <i>frames_discard</i>            | (Optional) frames discard   |
| <i>ex_link_param_sw_fab</i>      | (Optional) external link parameters switch fabric   |
| <i>in_link_ser_req_faliures</i>  | (Optional) internal link serial request faliures  |
| <i>b2b_credits_transmit</i>      | (Optional) B2B credits transmit   |
| <i>b2b_credits_receive</i>       | (Optional) B2B credits receive  |

|                                  |   |
|----------------------------------|---|
| <i>eisl_frames</i>               | (Optional) EISL frames                        |
| <i>framing_err</i>               | (Optional) Framing Error                      |
| <i>f8_lip_seq_err_rcvd</i>       | (Optional) f8 LIP sequence error received     |
| <i>f8_lip_seq_err_issued</i>     | (Optional) f8 LIP sequence error issued       |
| <i>non_f8_lip_seq_err_rcvd</i>   | (Optional) non f8 LIP sequence error received |
| <i>non_f8_lip_seq_err_issued</i> | (Optional) non f8 LIP sequence error issued   |
| <i>fec_corrected</i>             | (Optional) fec corrected blocks               |
| <i>fec_uncorrected</i>           | (Optional) fec uncorrected blocks             |

**Command Mode**

- /exec

## show interface counters details

```
show interface <ifid_ctr_det> counters details [ __readonly__ TABLE_interface <interface> [ <fcoe_in_pkts>
] [ <fcoe_in_octets> ] [ <fcoe_out_pkts> ] [ <fcoe_out_octets> ] ]
```

### Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information                       |
| interface              | Show interface status and information                 |
| <i>ifid_ctr_det</i>    | Enter interface type and number in module/slot format |
| counters               | Show interface counters                               |
| details                | Show interface counters in detail                     |
| <u>__readonly__</u>    | (Optional) Read Only                                  |
| <i>interface</i>       | (Optional) Interface index                            |
| TABLE_interface        | (Optional) show interface                             |
| <i>fcoe_in_pkts</i>    | (Optional) fcoe in pkts                               |
| <i>fcoe_in_octets</i>  | (Optional) fcoe in octets                             |
| <i>fcoe_out_pkts</i>   | (Optional) fcoe out pkts                              |
| <i>fcoe_out_octets</i> | (Optional) fcoe out octets                            |

### Command Mode

- /exec

# show interface counters errors

show interface <loop\_ctr\_errs> counters errors

## Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information                       |
| interface            | Show interface status and information                 |
| <i>loop_ctr_errs</i> | Enter interface type and number in module/slot format |
| counters             | Show interface counters                               |
| errors               | Show interface error counters                         |

## Command Mode

- /exec

## show interface counters errors

```
show interface <ifeth_ctr_errs> counters errors [ snmp ] [ __readonly__ TABLE_interface <interface> [
<eth_align_err> ] [ <eth_fcs_err> ] [ <eth_xmit_err> ] [ <eth_rcv_err> ] [ <eth_undersize> ] [ <eth_outdisc>
] [ <eth_single_col> ] [ <eth_multi_col> ] [ <eth_late_col> ] [ <eth_excess_col> ] [ <eth_carri_sen> ] [

**Command Mode**

- /exec

## show interface fcoe

```
show interface <ifeth_fcoe> fcoe [ __readonly__ TABLE_interface <interface> [ <state> ] [ <vfc> ] [ <vfc_bound> ] ]
```

### Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information                       |
| interface              | Show interface status and information                 |
| <i>ifeth_fcoe</i>      | Enter interface type and number in module/slot format |
| fcoe                   | Show interface fcoe information                       |
| <i>__readonly__</i>    | (Optional) Read Only                                  |
| <i>TABLE_interface</i> | (Optional) show interface                             |
| <i>interface</i>       | (Optional) Interface index                            |
| <i>state</i>           | (Optional) State of interface                         |
| <i>vfc</i>             | (Optional) VFC  |
| <i>vfc_bound</i>       | (Optional) Binding information                        |

### Command Mode

- /exec

# show interface fec

```
show interface fec [ __readonly__ TABLE_interface <interface> [ <ifindex-hex> ] [ <admin_port_fec> ] [ <oper_port_fec> ] [ <state> ] [ <speed> ] [ <type> ] ]
```

## Syntax Description

|                        |                                       |
|------------------------|---------------------------------------|
| <i>show</i>            | Show running system information       |
| <i>interface</i>       | Show interface status and information |
| <i>fec</i>             | Show interface fec list               |
| <i>__readonly__</i>    | (Optional) Read Only                  |
| <i>interface</i>       | (Optional) Interface index            |
| <i>TABLE_interface</i> | (Optional) show interface             |
| <i>ifindex-hex</i>     | (Optional) If Index in Hex            |
| <i>admin_port_fec</i>  | (Optional) Admin port fec state       |
| <i>oper_port_fec</i>   | (Optional) Oper port fec state        |
| <i>state</i>           | (Optional) Interface state            |
| <i>speed</i>           | (Optional) Speed                      |
| <i>type</i>            | (Optional) Type                       |

## Command Mode

- /exec

# show interface flowcontrol

```
show interface <ifeth_fl_ctrl> flowcontrol [ __readonly__ TABLE_interface <interface> <send_admin>
<send_oper> <recv_admin> <recv_oper> <rxpause> <txpause> ]
```

## Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information                       |
| interface            | Show interface status and information                 |
| <i>ifeth_fl_ctrl</i> | Enter interface type and number in module/slot format |
| flowcontrol          | Show interface flowcontrol information                |
| <i>__readonly__</i>  | (Optional) Read Only                                  |
| <i>interface</i>     | (Optional) Interface index                            |
| TABLE_interface      | (Optional) show interface                             |
| <i>send_admin</i>    | (Optional) Send flowcontrol admin                     |
| <i>send_oper</i>     | (Optional) Send flowcontrol oper                      |
| <i>recv_admin</i>    | (Optional) Receive flowcontrol admin                  |
| <i>recv_oper</i>     | (Optional) Receive flowcontrol oper                   |
| <i>rxpause</i>       | (Optional) RxPause                                    |
| <i>txpause</i>       | (Optional) TxPause                                    |

## Command Mode

- /exec

## show interface flowcontrol

```
show interface flowcontrol [ module <module> ] [ __readonly__ TABLE_interface <interface> <send_admin>
<send_oper> <recv_admin> <recv_oper> <rxpause> <txpause> ]
```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                  |
| interface           | Show interface status and information            |
| flowcontrol         | Show interface flowcontrol information           |
| module              | (Optional) Limit display to interfaces on module |
| <i>module</i>       | (Optional) Enter module number                   |
| <i>__readonly__</i> | (Optional) Read Only                             |
| <i>interface</i>    | (Optional) Interface index                       |
| TABLE_interface     | (Optional) show interface                        |
| <i>send_admin</i>   | (Optional) Send flowcontrol admin                |
| <i>send_oper</i>    | (Optional) Send flowcontrol oper                 |
| <i>recv_admin</i>   | (Optional) Receive flowcontrol admin             |
| <i>recv_oper</i>    | (Optional) Receive flowcontrol oper              |
| <i>rxpause</i>      | (Optional) RxPause                               |
| <i>txpause</i>      | (Optional) TxPause                               |

### Command Mode

- /exec

# show interface hardware-mappings

show interface hardware-mappings [ json ]

## Syntax Description

|                   |   |
|-------------------|---|
| show              | Show running system information                               |
| interface         | Interface   |
| hardware-mappings | Show hardware port number and unit information for interfaces |
| json              | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED                     |

## Command Mode

- /exec

## show interface mac-address

```
show interface <ifid_macaddr> mac-address [ __readonly__ TABLE_interface <interface> <address>
<bia_address> ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                       |
| interface           | Show interface status and information                 |
| <i>ifid_macaddr</i> | Enter interface type and number in module/slot format |
| mac-address         | Show interface MAC address                            |
| __readonly__        | (Optional) Read Only                                  |
| TABLE_interface     | (Optional) show interface                             |
| <i>interface</i>    | (Optional) Interface index                            |
| <i>address</i>      | (Optional) MAC Address                                |
| <i>bia_address</i>  | (Optional) Burn-In MAC Address                        |

### Command Mode

- /exec

# show interface mac-address

```
show interface mac-address [ __readonly__ TABLE_interface <interface> <address> <bia_address> ]
```

## Syntax Description

|                    |                                       |
|--------------------|---------------------------------------|
| show               | Show running system information       |
| interface          | Show interface status and information |
| mac-address        | Show interface MAC address            |
| __readonly__       | (Optional) Read Only                  |
| TABLE_interface    | (Optional) show interface             |
| <i>interface</i>   | (Optional) Interface index            |
| <i>address</i>     | (Optional) MAC Address                |
| <i>bia_address</i> | (Optional) Burn-In MAC Address        |

## Command Mode

- /exec

## show interface priority-flow-control

```
show interface [ <if_list> ] priority-flow-control [ detail ] [ module <module> ] [ __readonly__ [
TABLE_pfc_interface <if_name_str> <admin> <oper> [ <oper_vl_bmap> ] [ <cos-list> ] <rx-stats> <tx-stats>
[ <rx_ppp_cos_0> ] [ <rx_ppp_cos_1> ] [ <rx_ppp_cos_2> ] [ <rx_ppp_cos_3> ] [ <rx_ppp_cos_4> ] [
<rx_ppp_cos_5> ] [ <rx_ppp_cos_6> ] [ <rx_ppp_cos_7> ] [ <tx_ppp_cos_0> ] [ <tx_ppp_cos_1> ] [
<tx_ppp_cos_2> ] [ <tx_ppp_cos_3> ] [ <tx_ppp_cos_4> ] [ <tx_ppp_cos_5> ] [ <tx_ppp_cos_6> ] [
<tx_ppp_cos_7> ] ] ] ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | commands to display  |
| interface             | Interface for displaying pfc information                   |
| <i>if_list</i>        | (Optional) List of interfaces                              |
| module                | (Optional) Slot/module                                     |
| <i>module</i>         | (Optional) Slot/module number                              |
| priority-flow-control | Show interface PFC information                             |
| detail                | (Optional) Show detailed per priority Tx/Rx PFC statistics |
| __readonly__          | (Optional)   |
| <i>if_name_str</i>    | (Optional) interface name                                  |
| TABLE_pfc_interface   | (Optional) PFC information of an interface                 |
| <i>admin</i>          | (Optional) PFC admin                                       |
| <i>oper</i>           | (Optional) PFC oper  |
| <i>oper_vl_bmap</i>   | (Optional) vl bitmap value                                 |
| <i>cos-list</i>       | (Optional) List of class-of-service values                 |

### Command Mode

- /exec

## show interface private-vlan mapping

```
show interface [ <if> ] private-vlan mapping [ __readonly__ [ <output-filtered> ] [ { TABLE_interf_mapp
<interface-id> [ <secondary-vlan> + ] [ <pvlan-type> } } ] ]
```

### Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information                     |
| interface              | Show interface status and information               |
| <i>if</i>              | (Optional) Vlan Interface number                    |
| private-vlan           | Show interface private vlan information             |
| mapping                | Show interface private vlan information             |
| <i>__readonly__</i>    | (Optional) Read Only                                |
| <i>output-filtered</i> | (Optional) the output is filtered for specified ifs |
| TABLE_interf_mapp      | (Optional) Pvlan interface mapping table            |
| <i>interface-id</i>    | (Optional) Interface                                |
| <i>secondary-vlan</i>  | (Optional) Secondary Vlan                           |
| <i>pvlan-type</i>      | (Optional) PVLAN Type                               |

### Command Mode

- /exec

## show interface pruning

```
show interface pruning [ __readonly__ <start> { TABLE_interface_pruning1 <if_index1> <rx_join> } {
TABLE_interface_pruning2 <if_index2> <cur_join> } ]
```

### Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information                          |
| interface                | Show interface status and information                    |
| pruning                  | Show interface trunk VTP pruning information             |
| __readonly__             | (Optional) Read Only                                     |
| start                    | (Optional) Start   |
| TABLE_interface_pruning1 | (Optional) Interface pruning information in table format |
| if_index1                | (Optional) Trunk   |
| rx_join                  | (Optional) Vlans pruned for lack of request by neighbor  |
| TABLE_interface_pruning2 | (Optional) Interface pruning information in table format |
| if_index2                | (Optional) Trunk   |
| cur_join                 | (Optional) Vlan traffic requested of neighbor            |

### Command Mode

- /exec

# show interface queuing-drop history brief

```
show interface [ <ifindex> ] queuing-drop history brief <type> [ __readonly__
<show-interface-queuing-drop-history-brief-start> <show-hdr> <show-timestamp> <tbl-data> <show-cr>
<show-end> ]
```

## Syntax Description

|  |  |
|--|--|
| show   | Show running system information                                  |
| interface  | Show interface interface   |
| <i>ifindex</i>   | (Optional) Enter interface type and number in module/slot format |
| queuing-drop   | Show interface queuing-drop                                      |
| history  | Show interface queuing-drop history                              |
| brief  | Show interface queuing-drop history brief                        |
| <i>type</i>  | Show interface queuing-drop history detail type                  |
| <i>__readonly__</i>                                    | (Optional) Read Only   |
| <i>show-interface-queuing-drop-history-brief-start</i> | (Optional) show interface queuing-drop hist brief                |
| <i>show-hdr</i>  | (Optional) Show header   |
| <i>show-timestamp</i>                                  | (Optional) Show timestamp  |
| <i>tbl-data</i>  | (Optional) Show table data                                       |
| <i>show-cr</i>   | (Optional) Show carriage return                                  |
| <i>show-end</i>  | (Optional) Show end marker                                       |

## Command Mode

- /exec

## show interface queuing-drop history detail

```
show interface <ifindex> queuing-drop history detail <type> [ __readonly__
<show-interface-queuing-drop-history-detail-start> <show-hdr> <show-timestamp> <show-portnum> <tbl-data>
<show-cr> <show-end> ]
```

### Syntax Description

|   |   |
|---|---|
| show  | Show running system information                       |
| interface   | Show interface interface                              |
| <i>ifindex</i>  | Enter interface type and number in module/slot format |
| queuing-drop  | Show interface queuing-drop                           |
| history   | Show interface queuing-drop history                   |
| detail  | Show interface queuing-drop history detail            |
| <i>type</i>   | Show interface queuing-drop history detail type       |
| <i>__readonly__</i>                                     | (Optional) Read Only                                  |
| <i>show-interface-queuing-drop-history-detail-start</i> | (Optional) show interface queuing-drop hist detail    |
| <i>show-hdr</i>   | (Optional) Show header                                |
| <i>show-timestamp</i>                                   | (Optional) Show timestamp                             |
| <i>show-portnum</i>                                     | (Optional) Show portnum                               |
| <i>tbl-data</i>   | (Optional) Show table data                            |
| <i>show-cr</i>  | (Optional) Show carriage return                       |
| <i>show-end</i>   | (Optional) Show end marker                            |

### Command Mode

- /exec

## show interface server-info interface

```
show interface server-info interface { all | <ifname> } [ __readonly__ TABLE_server_info <server_type>
<port> ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information           |
| interface           | Show interface status and information     |
| server-info         | Show all SERVER ports                     |
| interface           | interface                                 |
| all                 | all interfaces                            |
| <i>ifname</i>       | Interface name                            |
| <i>__readonly__</i> | (Optional) Read Only                      |
| TABLE_server_info   | (Optional) Discovered server fabric ports |
| <i>server_type</i>  | (Optional) Server Type                    |
| <i>port</i>         | (Optional) Port                           |

### Command Mode

- /exec

# show interface snmp-ifindex

```
show interface snmp-ifindex [ __readonly__ TABLE_interface <interface> <snmp-ifindex> [ <ifindex-hex> ] ]
```

## Syntax Description

|                     |                                       |
|---------------------|---------------------------------------|
| show                | Show running system information       |
| interface           | Show interface status and information |
| snmp-ifindex        | Show snmp ifindex list                |
| __readonly__        | (Optional) Read Only                  |
| <i>interface</i>    | (Optional) Interface index            |
| TABLE_interface     | (Optional) show interface             |
| <i>ifindex-hex</i>  | (Optional) If Index in Hex            |
| <i>snmp-ifindex</i> | (Optional) If Index in Dec            |

## Command Mode

- /exec

# show interface status

```
show interface <ifid_status> status [ __readonly__ TABLE_interface <interface> [ <name> ] [ <state> ] [ <vlan> ] [ <duplex> ] [ <speed> ] [ <type> ] ]
```

## Syntax Description

|                              |   |
|------------------------------|---|
| <code>show</code>            | Show running system information                       |
| <code>interface</code>       | Show interface status and information                 |
| <i>ifid_status</i>           | Enter interface type and number in module/slot format |
| <code>status</code>          | Show interface line status                            |
| <code>__readonly__</code>    | (Optional) Read Only                                  |
| <i>interface</i>             | (Optional) Interface index                            |
| <code>TABLE_interface</code> | (Optional) show interface                             |
| <i>name</i>                  | (Optional) Name                                       |
| <i>state</i>                 | (Optional) Interface state                            |
| <i>vlan</i>                  | (Optional) Vlan                                       |
| <i>duplex</i>                | (Optional) Duplex                                     |
| <i>speed</i>                 | (Optional) Speed                                      |
| <i>type</i>                  | (Optional) Type                                       |

## Command Mode

- /exec

# show interface status

show interface <ifid> status [ \_\_readonly\_\_ <start> <if\_index> <admin-state> <line-proto> ]

## Syntax Description

|                    |   |
|--------------------|---|
| show               | Show running system information                 |
| interface          | Show interface status and information           |
| <i>ifid</i>        | VLAN ID 1-4094 or range(s): 1-5, 10 or 2-5,7-19 |
| status             | Interface status                                |
| __readonly__       | (Optional) Read Only                            |
| <i>start</i>       | (Optional) Start                                |
| <i>if_index</i>    | (Optional) Interface                            |
| <i>admin-state</i> | (Optional)                                      |
| <i>line-proto</i>  | (Optional)                                      |

## Command Mode

- /exec

## show interface status

```
show interface status [ down | inactive | module <module> | up | auto-column ] [ __readonly__ TABLE_interface
<interface> [ <name> ] [ <state> ] [ <state_san> ] [ <state_reason> ] [ <vlan> ] [ <duplex> ] [ <speed> ] [
<type> ] [ <admin_mode> ] [ <vsan> ] [ <bind_info> ] [ <bind_type> ] [ <bind_mac> ] [ <oper_speed> ] ]
```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                  |
| interface           | Show interface status and information            |
| status              | Show interface line status                       |
| down                | (Optional) Show interface down state             |
| inactive            | (Optional) Show interface inactive state         |
| auto-column         | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED        |
| module              | (Optional) Limit display to interfaces on module |
| <i>module</i>       | (Optional) Enter module number                   |
| up                  | (Optional) Show interface up state               |
| __readonly__        | (Optional) Read Only                             |
| <i>interface</i>    | (Optional) Interface index                       |
| TABLE_interface     | (Optional) show interface                        |
| <i>name</i>         | (Optional) Name                                  |
| <i>state</i>        | (Optional) Interface state                       |
| <i>state_san</i>    | (Optional) SAN Port State                        |
| <i>vlan</i>         | (Optional) Vlan                                  |
| <i>vsan</i>         | (Optional) Vsan                                  |
| <i>duplex</i>       | (Optional) Duplex                                |
| <i>speed</i>        | (Optional) Speed                                 |
| <i>type</i>         | (Optional) Type                                  |
| <i>state_reason</i> | (Optional) Interface state reason                |
| <i>bind_info</i>    | (Optional) bind interface                        |
| <i>bind_type</i>    | (Optional) bind type                             |
| <i>bind_mac</i>     | (Optional) bind mac                              |

|                   |                       |
|-------------------|-----------------------|
| <i>oper_speed</i> | (Optional) speed      |
| <i>admin_mode</i> | (Optional) admin mode |

**Command Mode**

- /exec

# show interface status

```
show interface <ifeth_status> status [ __readonly__ TABLE_interface <interface> [ <name> ] [ <state> ] [
<vlan> ] <duplex> <speed> [ <type> ] ]
```

## Syntax Description

|                              |   |
|------------------------------|---|
| <code>show</code>            | Show running system information                       |
| <code>interface</code>       | Show interface status and information                 |
| <i>ifeth_status</i>          | Enter interface type and number in module/slot format |
| <code>status</code>          | Show interface line status                            |
| <code>__readonly__</code>    | (Optional) Read Only                                  |
| <i>interface</i>             | (Optional) Interface index                            |
| <code>TABLE_interface</code> | (Optional) show interface                             |
| <i>name</i>                  | (Optional) Name                                       |
| <i>state</i>                 | (Optional) Interface state                            |
| <i>vlan</i>                  | (Optional) Vlan                                       |
| <i>duplex</i>                | (Optional) Duplex                                     |
| <i>speed</i>                 | (Optional) Speed                                      |
| <i>type</i>                  | (Optional) Type                                       |

## Command Mode

- /exec

## show interface status

```
show interface <iftun_status> status [ err-disabled ] [ __readonly__ TABLE_interface <interface> <name>
<state> <state_rsn> <state_rsn_desc> ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                |
| interface             | Show interface status and information          |
| <i>iftun_status</i>   | Enter tunnel interface number                  |
| status                | Show interface line status                     |
| err-disabled          | (Optional) Show interface error disabled state |
| __readonly__          | (Optional) Read Only                           |
| <i>interface</i>      | (Optional) Interface index                     |
| TABLE_interface       | (Optional) show interface                      |
| <i>name</i>           | (Optional) Name                                |
| <i>state</i>          | (Optional) Interface state                     |
| <i>state_rsn</i>      | (Optional) Interface state reason              |
| <i>state_rsn_desc</i> | (Optional) Interface state reason detailed     |

### Command Mode

- /exec

# show interface status

```
show interface <ifrange> status [ err-disabled ] [ __readonly__ TABLE_interface <interface> <name> <state>
[ <state_rsn> ] [ <state_rsn_desc> ] ]
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                |
| interface             | Show interface status and information          |
| <i>ifrange</i>        | Enter tunnel interface number                  |
| status                | Show interface line status                     |
| err-disabled          | (Optional) Show interface error disabled state |
| __readonly__          | (Optional) Read Only                           |
| <i>interface</i>      | (Optional) Interface index                     |
| TABLE_interface       | (Optional) show interface                      |
| <i>name</i>           | (Optional) Name                                |
| <i>state</i>          | (Optional) Interface state                     |
| <i>state_rsn</i>      | (Optional) Interface state reason              |
| <i>state_rsn_desc</i> | (Optional) Interface state reason detailed     |

## Command Mode

- /exec

## show interface status

```
show interface <ifrange> status [ err-disabled ] [ __readonly__ TABLE_interface <interface> <name> <state>
<state_rsn> <state_rsn_desc> <admin_state> ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information                |
| interface             | Show interface status and information          |
| <i>ifrange</i>        | Enter tunnel interface number                  |
| status                | Show interface line status                     |
| err-disabled          | (Optional) Show interface error disabled state |
| __readonly__          | (Optional) Read Only                           |
| <i>interface</i>      | (Optional) Interface index                     |
| TABLE_interface       | (Optional) show interface                      |
| <i>name</i>           | (Optional) Name                                |
| <i>state</i>          | (Optional) Interface state                     |
| <i>state_rsn</i>      | (Optional) Interface state reason              |
| <i>state_rsn_desc</i> | (Optional) Interface state reason detailed     |
| <i>admin_state</i>    | (Optional) admin state                         |

### Command Mode

- /exec

# show interface status err-disabled

```
show interface <ifeth_errdis> status err-disabled [ __readonly__ TABLE_interface <interface> [ <name> ]
<state> [ <state_rsn> ] [ <state_rsn_desc> ] ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                       |
| interface             | Show interface status and information                 |
| status                | Show interface line status                            |
| <i>ifeth_errdis</i>   | Enter interface type and number in module/slot format |
| err-disabled          | Show interface error disabled state                   |
| <i>__readonly__</i>   | (Optional) Read Only                                  |
| <i>interface</i>      | (Optional) Interface index                            |
| TABLE_interface       | (Optional) show interface                             |
| <i>name</i>           | (Optional) Name                                       |
| <i>state</i>          | (Optional) Interface state                            |
| <i>state_rsn</i>      | (Optional) Interface state reason                     |
| <i>state_rsn_desc</i> | (Optional) Interface state reason detailed            |

## Command Mode

- /exec

## show interface status err-disabled

```
show interface status err-disabled [ __readonly__ TABLE_interface <interface> [ <name> ] <state> [
<state_rsn> ] [ <state_rsn_desc> ] ]
```

### Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information            |
| interface             | Show interface status and information      |
| status                | Show interface line status                 |
| err-disabled          | Show interface error disabled state        |
| <i>__readonly__</i>   | (Optional) Read Only                       |
| <i>interface</i>      | (Optional) Interface index                 |
| TABLE_interface       | (Optional) show interface                  |
| <i>name</i>           | (Optional) Name                            |
| <i>state</i>          | (Optional) Interface state                 |
| <i>state_rsn</i>      | (Optional) Interface state reason          |
| <i>state_rsn_desc</i> | (Optional) Interface state reason detailed |

### Command Mode

- /exec

## show interface status err-vlans

```
show interface <ifeth_errvlans> status err-vlans [ __readonly__ TABLE_interface <interface> [ <name> ] [
{ TABLE_vlan [ <err_vlan> ] [ <err_vlan_status> ] [ <err_vlan_syserr> ] } ] ]
```

### Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information                       |
| interface              | Show interface status and information                 |
| <i>ifeth_errvlans</i>  | Enter interface type and number in module/slot format |
| status                 | Show interface line status                            |
| err-vlans              | Show errored vlans                                    |
| <u>__readonly__</u>    | (Optional) Read Only                                  |
| <i>interface</i>       | (Optional) Interface index                            |
| TABLE_interface        | (Optional) show interface                             |
| <i>name</i>            | (Optional) Name                                       |
| TABLE_vlan             | (Optional) show vlan                                  |
| <i>err_vlan</i>        | (Optional) Errored vlan                               |
| <i>err_vlan_status</i> | (Optional) Errored vlan status                        |
| <i>err_vlan_syserr</i> | (Optional) Errored vlan syserr name                   |

### Command Mode

- /exec

## show interface status err-vlans

```
show interface status err-vlans [ __readonly__ TABLE_interface <interface> [ <name> ] { TABLE_vlan
<err_vlan> <err_vlan_status> <err_vlan_syserr> } ]
```

### Syntax Description

|                        |                                       |
|------------------------|---------------------------------------|
| show                   | Show running system information       |
| interface              | Show interface status and information |
| status                 | Show interface line status            |
| err-vlans              | Show errored vlans                    |
| <i>__readonly__</i>    | (Optional) Read Only                  |
| <i>interface</i>       | (Optional) Interface index            |
| TABLE_interface        | (Optional) show interface             |
| <i>name</i>            | (Optional) Name                       |
| TABLE_vlan             | (Optional) show vlan                  |
| <i>err_vlan</i>        | (Optional) Errored vlan               |
| <i>err_vlan_status</i> | (Optional) Errored vlan status        |
| <i>err_vlan_syserr</i> | (Optional) Errored vlan syserr name   |

### Command Mode

- /exec

## show interface storm-control multi-threshold

```
show interface storm-control multi-threshold [ __readonly__ TABLE_interface <interface> <eth_ucast_level1>
<eth_ucast_level2> <eth_mcast_level1> <eth_mcast_level2> <eth_bcast_level1> <eth_bcast_level2>
<supp_action1> <supp_action2> ]
```

### Syntax Description

|                         |  |
|-------------------------|--|
| show                    | Show running system information                      |
| interface               | Show interface status and information                |
| storm-control           | Show interface storm-control counters                |
| multi-threshold         | multi-level storm control                            |
| __readonly__            | (Optional) Read Only                                 |
| <i>interface</i>        | (Optional) Interface index                           |
| TABLE_interface         | (Optional) show interface                            |
| <i>eth_ucast_level1</i> | (Optional) Unicast suppression percentage level 1    |
| <i>eth_ucast_level2</i> | (Optional) Unicast suppression percentage level 2    |
| <i>eth_mcast_level1</i> | (Optional) Multicast suppression percentage level 1  |
| <i>eth_mcast_level2</i> | (Optional) Multicast suppression percentage level 2  |
| <i>eth_bcast_level1</i> | (Optional) Broadcast suppression percentage level 1  |
| <i>eth_bcast_level2</i> | (Optional) Broadcast suppression percentage level 2  |
| <i>supp_action1</i>     | (Optional) Action to be taken on suppression level 1 |
| <i>supp_action2</i>     | (Optional) Action to be taken on suppression level 2 |

### Command Mode

- /exec

## show interface switchport

```
show interface <ifeth_swth> switchport [ __readonly__ TABLE_interface <interface> <switchport> [

| <i>provider_vlan</i>             | (Optional) L2 sub-interface provider VLAN                         |

**Command Mode**

- /exec

## show interface switchport backup

```
show interface switchport backup [ detail ][ __readonly__ { TABLE_pair <ai_name> <bi_name> <ai_state>
<bi_state> <ai_prefer> <bi_prefer> <preempt_mode> <delay_value> <delay_default> <delay_scheduled>
<mcast_fast> <ai_bw> <ai_bw_name> <bi_bw> <bi_bw_name> <mmu_primary> } ]
```

### Syntax Description

|                 |  |
|-----------------|--|
| show            | Show running system information                |
| interface       | Show interface status and information          |
| switchport      | Show interface switchport information          |
| backup          | Show interface backup                          |
| detail          | (Optional) Backup interface info in detail     |
| __readonly__    | (Optional) Read Only                           |
| TABLE_pair      | (Optional) Show interface backup               |
| ai_name         | (Optional) Active Interface name               |
| bi_name         | (Optional) Backup Interface name               |
| ai_state        | (Optional) Active Interface state              |
| bi_state        | (Optional) Backup Interface state              |
| ai_prefer       | (Optional) Active Interface prefer VLANs       |
| bi_prefer       | (Optional) Backup Interface prefer VLANs       |
| preempt_mode    | (Optional) Preempt mode                        |
| delay_value     | (Optional) Preempt delay                       |
| delay_default   | (Optional) Preempt delay value is default      |
| delay_scheduled | (Optional) Preemption has been scheduled       |
| mcast_fast      | (Optional) Multicast Fast-Convergence          |
| ai_bw           | (Optional) Active Interface bandwidth          |
| ai_bw_name      | (Optional) Active Interface name for bandwidth |
| bi_bw           | (Optional) Backup Interface bandwidth          |
| bi_bw_name      | (Optional) Backup Interface name for bandwidth |
| mmu_primary     | (Optional) MAC Move Update primary VLAN        |

### Command Mode

- /exec

## show interface transceiver

| <i>rx_pwr_0_fc</i>         | (Optional) Rx power 0               |
| <i>temperature_fc</i>      | (Optional) Temperature              |
| <i>temp_flag_fc</i>        | (Optional) Temperature Flag         |
| <i>temp_alarm_hi_fc</i>    | (Optional) Temperature Alarm High   |
| <i>temp_alarm_lo_fc</i>    | (Optional) Temperature Alarm Low    |
| <i>temp_warn_hi_fc</i>     | (Optional) Temperature Warning High |
| <i>temp_warn_lo_fc</i>     | (Optional) Temperature Warning Low  |
| <i>voltage_fc</i>          | (Optional) Voltage                  |
| <i>volt_flag_fc</i>        | (Optional) Voltage Flag             |
| <i>volt_alarm_hi_fc</i>    | (Optional) Voltage Alarm High       |
| <i>volt_alarm_lo_fc</i>    | (Optional) Voltage Alarm Low        |
| <i>volt_warn_hi_fc</i>     | (Optional) Voltage Warning High     |
| <i>volt_warn_lo_fc</i>     | (Optional) Voltage Warning Low      |
| <i>current_fc</i>          | (Optional) Current                  |
| <i>current_flag_fc</i>     | (Optional) Current Flag             |
| <i>current_alarm_hi_fc</i> | (Optional) Current Alarm High       |
| <i>current_alarm_lo_fc</i> | (Optional) Current Alarm Low        |
| <i>current_warn_hi_fc</i>  | (Optional) Current Warning High     |
| <i>current_warn_lo_fc</i>  | (Optional) Current Warning Low      |
| <i>tx_pwr_fc</i>           | (Optional) Tx Power                 |
| <i>tx_pwr_flag_fc</i>      | (Optional) Tx Power Flag            |
| <i>tx_pwr_alarm_hi_fc</i>  | (Optional) Tx Power Alarm High      |
| <i>tx_pwr_alarm_lo_fc</i>  | (Optional) Tx Power Alarm Low       |
| <i>tx_pwr_warn_hi_fc</i>   | (Optional) Tx Power Warning High    |
| <i>tx_pwr_warn_lo_fc</i>   | (Optional) Tx Power Warning Low     |
| <i>rx_pwr_fc</i>           | (Optional) Rx Power                 |
| <i>rx_pwr_flag_fc</i>      | (Optional) Rx Power Flag            |
| <i>rx_pwr_alarm_hi_fc</i>  | (Optional) Rx Power Alarm High      |

|                          |  |
|--------------------------|--|
| <i>rx_pwr_alrm_lo_fc</i> | (Optional) Rx Power Alarm Low                            |
| <i>rx_pwr_warn_hi_fc</i> | (Optional) Rx Power Warning High                         |
| <i>rx_pwr_warn_lo_fc</i> | (Optional) Rx Power Warning Low                          |
| <i>xmit_faults_fc</i>    | (Optional) Transmit Fault Count                          |
| <i>sfp_calibration</i>   | (Optional) Checking whether sfp is internally calibrated |

**Command Mode**

- /exec

## show interface transceiver

### Syntax Description

|             |  |
|-------------|--|
| show        | Show running system information        |
| interface   | Show interface status and information  |
| transceiver | Show interface transceiver information |

|                         |   |
|-------------------------|---|
| <i>calibrations</i>     | (Optional) Show interface transceiver calibration information |
| <i>details</i>          | (Optional) Show interface transceiver detail information      |
| <i>__readonly__</i>     | (Optional) Read Only  |
| <i>interface</i>        | (Optional) Interface index                                    |
| TABLE_ <i>interface</i> | (Optional) show interface                                     |
| <i>sfp</i>              | (Optional) sfp  |
| <i>qsfp_or_cfp</i>      | (Optional) qsfp_or_cfp  |
| <i>type</i>             | (Optional) type   |
| <i>name</i>             | (Optional) Name   |
| <i>partnum</i>          | (Optional) part number  |
| <i>rev</i>              | (Optional) revision   |
| <i>serialnum</i>        | (Optional) serial number                                      |
| <i>nom_bitrate</i>      | (Optional) Nominal bit rate in MBits/sec                      |
| <i>len_9</i>            | (Optional) Link length supported for 9/125um fiber            |
| <i>len_50</i>           | (Optional) Link length supported for 50/125um fiber           |
| <i>len_625</i>          | (Optional) Link length supported for 62.5/125um fiber         |
| <i>len_cu</i>           | (Optional) Link length supported for copper                   |
| <i>len_50_OM3</i>       | (Optional) Link length supported for 50/125um fiber in m      |
| <i>txcvr_type</i>       | (Optional)  |
| <i>connector_type</i>   | (Optional)  |
| <i>bit_encoding</i>     | (Optional)  |
| <i>protocol_type</i>    | (Optional)  |
| <i>10gbe_code</i>       | (Optional)  |
| <i>fiber_type_byte0</i> | (Optional)  |
| <i>fiber_type_byte1</i> | (Optional)  |
| <i>tx_type</i>          | (Optional) FC Transmitter type                                |
| <i>tx_len</i>           | (Optional) FC Transmitter length                              |
| <i>tx_medium</i>        | (Optional) FC Transmitter medium                              |
| <i>tx_speeds</i>        | (Optional) Transmission speeds                                |

|                           |   |
|---------------------------|---|
| <i>tx_range</i>           | (Optional) Transmission range                     |
| <i>cable_type</i>         | (Optional)  |
| <i>ciscoid</i>            | (Optional) Cisco extended id                      |
| <i>ciscoid_1</i>          | (Optional) Cisco extended id number               |
| <i>cisco_part_number</i>  | (Optional) Cisco part number                      |
| <i>cisco_product_id</i>   | (Optional) Cisco product identifier               |
| <i>cisco_vendor_id</i>    | (Optional) Cisco vendor identifier                |
| <i>cisco_ext_id</i>       | (Optional) Cisco extended ID                      |
| <i>info_not_available</i> | (Optional) No info available for this transceiver |
| <i>temp_slope</i>         | (Optional) Temperature slope                      |
| <i>temp_offset</i>        | (Optional) Temperature offset                     |
| <i>volt_slope</i>         | (Optional) Voltage slope                          |
| <i>volt_offset</i>        | (Optional) Voltage offset                         |
| <i>curr_slope</i>         | (Optional) Current slope                          |
| <i>curr_offset</i>        | (Optional) Current offset                         |
| <i>tx_pwr_slope</i>       | (Optional) Tx power slope                         |
| <i>tx_pwr_offset</i>      | (Optional) Tx power offset                        |
| <i>rx_pwr_4</i>           | (Optional) Rx power 4                             |
| <i>rx_pwr_3</i>           | (Optional) Rx power 3                             |
| <i>rx_pwr_2</i>           | (Optional) Rx power 2                             |
| <i>rx_pwr_1</i>           | (Optional) Rx power 1                             |
| <i>rx_pwr_0</i>           | (Optional) Rx power 0                             |
| TABLE_lane                | (Optional) show lane                              |
| <i>lane_number</i>        | (Optional) Lane number                            |
| <i>temperature</i>        | (Optional) Temperature                            |
| <i>temp_flag</i>          | (Optional) Temperature Flag                       |
| <i>temp_alarm_hi</i>      | (Optional) Temperature Alarm High                 |
| <i>temp_alarm_lo</i>      | (Optional) Temperature Alarm Low                  |
| <i>temp_warn_hi</i>       | (Optional) Temperature Warning High               |

|                        |   |
|------------------------|---|
| <i>temp_warn_lo</i>    | (Optional) Temperature Warning Low        |
| <i>voltage</i>         | (Optional) Voltage                        |
| <i>volt_flag</i>       | (Optional) Voltage Flag                   |
| <i>volt_alm_hi</i>     | (Optional) Voltage Alarm High             |
| <i>volt_alm_lo</i>     | (Optional) Voltage Alarm Low              |
| <i>volt_warn_hi</i>    | (Optional) Voltage Warning High           |
| <i>volt_warn_lo</i>    | (Optional) Voltage Warning Low            |
| <i>current</i>         | (Optional) Current                        |
| <i>current_flag</i>    | (Optional) Current Flag                   |
| <i>current_alm_hi</i>  | (Optional) Current Alarm High             |
| <i>current_alm_lo</i>  | (Optional) Current Alarm Low              |
| <i>current_warn_hi</i> | (Optional) Current Warning High           |
| <i>current_warn_lo</i> | (Optional) Current Warning Low            |
| <i>tx_pwr</i>          | (Optional) Tx Power                       |
| <i>tx_pwr_flag</i>     | (Optional) Tx Power Flag                  |
| <i>tx_pwr_alm_hi</i>   | (Optional) Tx Power Alarm High            |
| <i>tx_pwr_alm_lo</i>   | (Optional) Tx Power Alarm Low             |
| <i>tx_pwr_warn_hi</i>  | (Optional) Tx Power Warning High          |
| <i>tx_pwr_warn_lo</i>  | (Optional) Tx Power Warning Low           |
| <i>rx_pwr</i>          | (Optional) Rx Power                       |
| <i>rx_pwr_flag</i>     | (Optional) Rx Power Flag                  |
| <i>rx_pwr_alm_hi</i>   | (Optional) Rx Power Alarm High            |
| <i>rx_pwr_alm_lo</i>   | (Optional) Rx Power Alarm Low             |
| <i>rx_pwr_warn_hi</i>  | (Optional) Rx Power Warning High          |
| <i>rx_pwr_warn_lo</i>  | (Optional) Rx Power Warning Low           |
| <i>xmit_faults</i>     | (Optional) Transmit Fault Count           |
| <i>snr</i>             | (Optional) RX Signal-to-Noise Ratio (SNR) |
| <i>snr_flag</i>        | (Optional) SNR Flag                       |
| <i>snr_alm_hi</i>      | (Optional) SNR Alarm High                 |

|                              |   |
|------------------------------|---|
| <i>snr_alm_lo</i>            | (Optional) SNR Alarm Low                |
| <i>snr_warn_hi</i>           | (Optional) SNR Warning High             |
| <i>snr_warn_lo</i>           | (Optional) SNR Warning Low              |
| <i>isi</i>                   | (Optional) Residual-Dispersion(ISI)     |
| <i>isi_flag</i>              | (Optional) ISI Flag                     |
| <i>isi_alm_hi</i>            | (Optional) ISI alarm high               |
| <i>isi_alm_lo</i>            | (Optional) ISI alarm low                |
| <i>isi_warn_hi</i>           | (Optional) ISI warning high             |
| <i>isi_warn_lo</i>           | (Optional) ISI warning low              |
| <i>pam</i>                   | (Optional) PAM Transition               |
| <i>pam_flag</i>              | (Optional) PAM Flag                     |
| <i>pam_alm_hi</i>            | (Optional) PAM alarm high               |
| <i>pam_alm_lo</i>            | (Optional) PAM alarm low                |
| <i>pam_warn_hi</i>           | (Optional) PAM warning high             |
| <i>pam_warn_lo</i>           | (Optional) PAM warning low              |
| <i>pre_fec_ber</i>           | (Optional) Pre-FEC BER                  |
| <i>pre_fec_ber_flag</i>      | (Optional) Pre-FEC BER flag             |
| <i>pre_fec_ber_alm_hi</i>    | (Optional) Pre-FEC BER alarm high       |
| <i>pre_fec_ber_alm_lo</i>    | (Optional) Pre-FEC BER alarm low        |
| <i>pre_fec_ber_warn_hi</i>   | (Optional) Pre-FEC BER warning high     |
| <i>pre_fec_ber_warn_lo</i>   | (Optional) Pre-FEC BER warning low      |
| <i>uncorrect_ber</i>         | (Optional) Uncorrected BER              |
| <i>uncorrect_ber_flag</i>    | (Optional) Uncorrected BER flag         |
| <i>uncorrect_ber_alm_hi</i>  | (Optional) Uncorrected BER alarm high   |
| <i>uncorrect_ber_alm_lo</i>  | (Optional) Uncorrected BER alarm low    |
| <i>uncorrect_ber_warn_hi</i> | (Optional) Uncorrected BER warning high |
| <i>uncorrect_ber_warn_lo</i> | (Optional) Uncorrected BER warning low  |
| <i>tec_current</i>           | (Optional) TEC Current                  |
| <i>tec_current_flag</i>      | (Optional) TEC Current flag             |

|                                |   |
|--------------------------------|---|
| <i>tec_current_alrm_hi</i>     | (Optional) TEC Current Alarm High         |
| <i>tec_current_alrm_lo</i>     | (Optional) TEC Current Alarm Low          |
| <i>tec_current_warn_hi</i>     | (Optional) TEC Current Warning High       |
| <i>tec_current_warn_lo</i>     | (Optional) TEC Current Warning Low        |
| <i>laser_freq</i>              | (Optional) Laser Frequency                |
| <i>laser_freq_flag</i>         | (Optional) Laser Frequency flag           |
| <i>laser_freq_alrm_hi</i>      | (Optional) Laser Frequency Alarm High     |
| <i>laser_freq_alrm_lo</i>      | (Optional) Laser Frequency Alarm Low      |
| <i>laser_freq_warn_hi</i>      | (Optional) Laser Frequency Warning High   |
| <i>laser_freq_warn_lo</i>      | (Optional) Laser Frequency Warning Low    |
| <i>laser_temp</i>              | (Optional) Laser Temperature              |
| <i>laser_temp_flag</i>         | (Optional) Laser Temperature flag         |
| <i>laser_temp_alrm_hi</i>      | (Optional) Laser Temperature Alarm High   |
| <i>laser_temp_alrm_lo</i>      | (Optional) Laser Temperature Alarm Low    |
| <i>laser_temp_warn_hi</i>      | (Optional) Laser Temperature Warning High |
| <i>laser_temp_warn_lo</i>      | (Optional) Laser Temperature Warning Low  |
| <i>pre_fec_ber_acc</i>         | (Optional) Pre-FEC BER Acc                |

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                               |
| interface               | Show interface status and information                         |
| <i>ifid_transceiver</i> | Enter interface type and number in module/slot format         |
| transceiver             | Show interface transceiver information                        |
| calibrations            | (Optional) Show interface transceiver calibration information |
| details                 | (Optional) Show interface transceiver detail information      |
| sprom                   | (Optional) Show interface transceiver sprom information       |
| <u>__readonly__</u>     | (Optional) Read Only  |
| <i>interface</i>        | (Optional) Interface index                                    |
| TABLE_interface         | (Optional) show interface                                     |
| <i>sfp</i>              | (Optional) sfp  |
| <i>qsfp_or_cfp</i>      | (Optional) qsfp_or_cfp  |
| <i>type</i>             | (Optional) type   |
| <i>name</i>             | (Optional) Name   |
| <i>partnum</i>          | (Optional) part number  |
| <i>rev</i>              | (Optional) revision   |
| <i>serialnum</i>        | (Optional) serial number                                      |
| <i>nom_bitrate</i>      | (Optional) Nominal bit rate in MBits/sec                      |
| <i>len_9</i>            | (Optional) Link length supported for 9/125um fiber in Km      |
| <i>len_9_2</i>          | (Optional) Link length supported for 9/125um fiber in m       |
| <i>len_50</i>           | (Optional) Link length supported for 50/125um fiber in m      |
| <i>len_625</i>          | (Optional) Link length supported for 62.5/125um fiber in m    |
| <i>len_cu</i>           | (Optional) Link length supported for copper sfp in m          |
| <i>len_50_OM3</i>       | (Optional) Link length supported for 50/125um fiber in m      |
| <i>txcvr_type</i>       | (Optional)  |

|   |   |
|---|---|
| <i>connector_type</i>                   | (Optional)                                  |
| <i>bit_encoding</i>                     | (Optional)                                  |
| <i>protocol_type</i>                    | (Optional)                                  |
| <i>10gbe_code</i>                       | (Optional)                                  |
| <i>fiber_type_byte0</i>                 | (Optional)                                  |
| <i>fiber_type_byte1</i>                 | (Optional)                                  |
| <i>tx_range</i>                         | (Optional)                                  |
| <i>cable_type</i>                       | (Optional)                                  |
| <i>ciscoid</i>                          | (Optional) Cisco extended id                |
| <i>ciscoid_1</i>                        | (Optional) Cisco extended id number         |
| <i>cisco_part_number</i>                | (Optional) Cisco part number                |
| <i>cisco_product_id</i>                 | (Optional) Cisco product identifier         |
| <i>cisco_version_id</i>                 | (Optional) Cisco version identifier         |
| <i>cisco_vendor_id</i>                  | (Optional) Cisco vendor identifier          |
| <i>firmware_version</i>                 | (Optional) Firmware version                 |
| <i>cmis_version</i>                     | (Optional) CMIS version                     |
| <i>identifier</i>                       | (Optional) SFP Identifier                   |
| <i>ext_identifier</i>                   | (Optional) SFP Ext Identifier               |
| <i>connector</i>                        | (Optional) SFP connector                    |
| <i>infiniband_compliance_code</i>       | (Optional) SFP Infiniband Compliance Code   |
| <i>sonet_compliance_code</i>            | (Optional) Sonet Compliance Code            |
| <i>gigabit_ethernet_compliance_code</i> | (Optional) Gigabit Ethernet Compliance Code |
| <i>fibre_chan_link_length</i>           | (Optional) Fibre Chan Link Length           |
| <i>fibre_chan_trans_technology</i>      | (Optional) Fibre Chan Trans Technology      |
| <i>fibre_chan_trans_tech_reserved</i>   | (Optional) Fibre Chan Trans Tech Reserved   |
| <i>fibre_chan_transmission_media</i>    | (Optional) Fibre Chan Transmission Media    |
| <i>fibre_chan_speed</i>                 | (Optional) Fibre Chan Speed                 |
| <i>encoding</i>                         | (Optional) Encoding                         |
| <i>br_nominal</i>                       | (Optional) BR Nominal                       |

|                                   |  |
|-----------------------------------|--|
| <i>reserved1</i>                  | (Optional) Reserved1                             |
| <i>length_smf</i>                 | (Optional) Length_SMF                            |
| <i>length_om5</i>                 | (Optional) Length_OM5                            |
| <i>length_om4</i>                 | (Optional) Length_OM4                            |
| <i>length_om3</i>                 | (Optional) Length_OM3                            |
| <i>length_om2</i>                 | (Optional) Length_OM2                            |
| <i>length_om1</i>                 | (Optional) Length_OM1                            |
| <i>length_9u_1</i>                | (Optional) Length 9u 1                           |
| <i>length_9u_2</i>                | (Optional) Length 9u 2                           |
| <i>length_50u</i>                 | (Optional) Length 50u                            |
| <i>length_60u</i>                 | (Optional) Length 60u                            |
| <i>length_copper</i>              | (Optional) Length Copper                         |
| <i>reserved3</i>                  | (Optional) Reserved3                             |

| <i>wave_len_tolerance</i>         | (Optional) Wavelength tolerance                  |
| <i>vendor_oui</i>                 | (Optional) Vendor OUI                            |
| <i>vendor_part_no</i>             | (Optional) Vendor Part No                        |
| <i>vendor_revision</i>            | (Optional) Vendor Revision                       |
| <i>reserved4</i>                  | (Optional) Reserved4                             |
| <i>check_code_id</i>              | (Optional) Check Code ID                         |
| <i>options</i>                    | (Optional) Options                               |
| <i>br_max</i>                     | (Optional) BR max                                |
| <i>br_min</i>                     | (Optional) BR min                                |
| <i>vendor_serial_no</i>           | (Optional) Vendor Serial No                      |
| <i>data_code</i>                  | (Optional) Data code                             |
| <i>diagnostic_monitoring_type</i> | (Optional) Diagnostic Monitoring Type            |
| <i>enhanced_options</i>           | (Optional) Enhanced Options                      |
| <i>sff8472compliance</i>          | (Optional) SFF8472Compliance                     |
| <i>check_code_ext</i>             | (Optional) Check code ext                        |

|                                     |   |
|-------------------------------------|---|
| <i>vendor_specific_data_id_data</i> | (Optional) Vendor Specific Data Id Data           |
| <i>date_code</i>                    | (Optional) date code and lot code                 |
| <i>clei_code</i>                    | (Optional) 10-character CLEI code                 |
| <i>power_class</i>                  | (Optional) power class                            |
| <i>max_power</i>                    | (Optional) maximum power consumption              |
| <i>cable_attenuation</i>            | (Optional) copper cable attenuation               |
| <i>near_end_lanes</i>               | (Optional) near end lane information              |
| <i>far_end_lanes</i>                | (Optional) far end lane information               |
| <i>media_interface</i>              | (Optional) media interface technology             |
| <i>adv_code</i>                     | (Optional) Module Advertising Code                |
| <i>host_elt_intf_code</i>           | (Optional) Module Host Electrical Interfaces Code |
| <i>med_intf_adv_code</i>            | (Optional) Media Interface Advertising Code       |
| <i>cable_length</i>                 | (Optional) Cable Assembly Length                  |
| <i>host_lane_count</i>              | (Optional) Host Lane Count                        |
| <i>med_lane_count</i>               | (Optional) Media Lane Count                       |
| <i>max_mod_temp</i>                 | (Optional) Maximum Module Temperature             |
| <i>min_mod_temp</i>                 | (Optional) Minimum Module Temperature             |
| <i>min_op_volt</i>                  | (Optional) Minimum Operating Voltage              |
| <i>info_not_available</i>           | (Optional) Info not available                     |
| <i>temp_slope</i>                   | (Optional) Temperature slope                      |
| <i>temp_offset</i>                  | (Optional) Temperature offset                     |
| <i>volt_slope</i>                   | (Optional) Voltage slope                          |
| <i>volt_offset</i>                  | (Optional) Voltage offset                         |
| <i>curr_slope</i>                   | (Optional) Current slope                          |
| <i>curr_offset</i>                  | (Optional) Current offset                         |
| <i>tx_pwr_slope</i>                 | (Optional) Tx power slope                         |
| <i>tx_pwr_offset</i>                | (Optional) Tx power offset                        |
| <i>rx_pwr_4</i>                     | (Optional) Rx power 4                             |
| <i>rx_pwr_3</i>                     | (Optional) Rx power 3                             |

|                         |                                     |
|-------------------------|-------------------------------------|
| <i>rx_pwr_2</i>         | (Optional) Rx power 2               |
| <i>rx_pwr_1</i>         | (Optional) Rx power 1               |
| <i>rx_pwr_0</i>         | (Optional) Rx power 0               |
| TABLE_lane              | (Optional) show lane                |
| <i>lane_number</i>      | (Optional) Lane number              |
| <i>temperature</i>      | (Optional) Temperature              |
| <i>temp_flag</i>        | (Optional) Temperature Flag         |
| <i>temp_alarm_hi</i>    | (Optional) Temperature Alarm High   |
| <i>temp_alarm_lo</i>    | (Optional) Temperature Alarm Low    |
| <i>temp_warn_hi</i>     | (Optional) Temperature Warning High |
| <i>temp_warn_lo</i>     | (Optional) Temperature Warning Low  |
| <i>voltage</i>          | (Optional) Voltage                  |
| <i>volt_flag</i>        | (Optional) Voltage Flag             |
| <i>volt_alarm_hi</i>    | (Optional) Voltage Alarm High       |
| <i>volt_alarm_lo</i>    | (Optional) Voltage Alarm Low        |
| <i>volt_warn_hi</i>     | (Optional) Voltage Warning High     |
| <i>volt_warn_lo</i>     | (Optional) Voltage Warning Low      |
| <i>current</i>          | (Optional) Current                  |
| <i>current_flag</i>     | (Optional) Current Flag             |
| <i>current_alarm_hi</i> | (Optional) Current Alarm High       |
| <i>current_alarm_lo</i> | (Optional) Current Alarm Low        |
| <i>current_warn_hi</i>  | (Optional) Current Warning High     |
| <i>current_warn_lo</i>  | (Optional) Current Warning Low      |
| <i>tx_pwr</i>           | (Optional) Tx Power                 |
| <i>tx_pwr_flag</i>      | (Optional) Tx Power Flag            |
| <i>tx_pwr_alarm_hi</i>  | (Optional) Tx Power Alarm High      |
| <i>tx_pwr_alarm_lo</i>  | (Optional) Tx Power Alarm Low       |
| <i>tx_pwr_warn_hi</i>   | (Optional) Tx Power Warning High    |
| <i>tx_pwr_warn_lo</i>   | (Optional) Tx Power Warning Low     |

|                           |   |
|---------------------------|---|
| <i>rx_pwr</i>             | (Optional) Rx Power                       |
| <i>rx_pwr_flag</i>        | (Optional) Rx Power Flag                  |
| <i>rx_pwr_alm_hi</i>      | (Optional) Rx Power Alarm High            |
| <i>rx_pwr_alm_lo</i>      | (Optional) Rx Power Alarm Low             |
| <i>rx_pwr_warn_hi</i>     | (Optional) Rx Power Warning High          |
| <i>rx_pwr_warn_lo</i>     | (Optional) Rx Power Warning Low           |
| <i>xmit_faults</i>        | (Optional) Transmit Fault Count           |
| <i>snr</i>                | (Optional) RX Signal-to-Noise Ratio (SNR) |
| <i>snr_flag</i>           | (Optional) SNR Flag                       |
| <i>snr_alm_hi</i>         | (Optional) SNR Alarm High                 |
| <i>snr_alm_lo</i>         | (Optional) SNR Alarm Low                  |
| <i>snr_warn_hi</i>        | (Optional) SNR Warning High               |
| <i>snr_warn_lo</i>        | (Optional) SNR Warning Low                |
| <i>isi</i>                | (Optional) Residual-Dispersion(ISI)       |
| <i>isi_flag</i>           | (Optional) ISI Flag                       |
| <i>isi_alm_hi</i>         | (Optional) ISI alarm high                 |
| <i>isi_alm_lo</i>         | (Optional) ISI alarm low                  |
| <i>isi_warn_hi</i>        | (Optional) ISI warning high               |
| <i>isi_warn_lo</i>        | (Optional) ISI warning low                |
| <i>pam</i>                | (Optional) PAM Transition                 |
| <i>pam_flag</i>           | (Optional) PAM Flag                       |
| <i>pam_alm_hi</i>         | (Optional) PAM alarm high                 |
| <i>pam_alm_lo</i>         | (Optional) PAM alarm low                  |
| <i>pam_warn_hi</i>        | (Optional) PAM warning high               |
| <i>pam_warn_lo</i>        | (Optional) PAM warning low                |
| <i>pre_fec_ber</i>        | (Optional) Pre-FEC BER                    |
| <i>pre_fec_ber_flag</i>   | (Optional) Pre-FEC BER flag               |
| <i>pre_fec_ber_alm_hi</i> | (Optional) Pre-FEC BER alarm high         |
| <i>pre_fec_ber_alm_lo</i> | (Optional) Pre-FEC BER alarm low          |

|                                |   |
|--------------------------------|---|
| <i>pre_fec_ber_warn_hi</i>     | (Optional) Pre-FEC BER warning high       |
| <i>pre_fec_ber_warn_lo</i>     | (Optional) Pre-FEC BER warning low        |
| <i>uncorrect_ber</i>           | (Optional) Uncorrected BER                |
| <i>uncorrect_ber_flag</i>      | (Optional) Uncorrected BER flag           |
| <i>uncorrect_ber_alrm_hi</i>   | (Optional) Uncorrected BER alarm high     |
| <i>uncorrect_ber_alrm_lo</i>   | (Optional) Uncorrected BER alarm low      |
| <i>uncorrect_ber_warn_hi</i>   | (Optional) Uncorrected BER warning high   |
| <i>uncorrect_ber_warn_lo</i>   | (Optional) Uncorrected BER warning low    |
| <i>tec_current</i>             | (Optional) TEC Current                    |
| <i>tec_current_flag</i>        | (Optional) TEC Current flag               |
| <i>tec_current_alrm_hi</i>     | (Optional) TEC Current Alarm High         |
| <i>tec_current_alrm_lo</i>     | (Optional) TEC Current Alarm Low          |
| <i>tec_current_warn_hi</i>     | (Optional) TEC Current Warning High       |
| <i>tec_current_warn_lo</i>     | (Optional) TEC Current Warning Low        |
| <i>laser_freq</i>              | (Optional) Laser Frequency                |
| <i>laser_freq_flag</i>         | (Optional) Laser Frequency flag           |
| <i>laser_freq_alrm_hi</i>      | (Optional) Laser Frequency Alarm High     |
| <i>laser_freq_alrm_lo</i>      | (Optional) Laser Frequency Alarm Low      |
| <i>laser_freq_warn_hi</i>      | (Optional) Laser Frequency Warning High   |
| <i>laser_freq_warn_lo</i>      | (Optional) Laser Frequency Warning Low    |
| <i>laser_temp</i>              | (Optional) Laser Temperature              |
| <i>laser_temp_flag</i>         | (Optional) Laser Temperature flag         |
| <i>laser_temp_alrm_hi</i>      | (Optional) Laser Temperature Alarm High   |
| <i>laser_temp_alrm_lo</i>      | (Optional) Laser Temperature Alarm Low    |
| <i>laser_temp_warn_hi</i>      | (Optional) Laser Temperature Warning High |
| <i>laser_temp_warn_lo</i>      | (Optional) Laser Temperature Warning Low  |
| <i>pre_fec_ber_acc</i>         | (Optional) Pre-FEC BER Acc                |
| <i>pre_fec_ber_acc_flag</i>    | (Optional) Pre-FEC BER Acc flag           |
| <i>pre_fec_ber_acc_alrm_hi</i> | (Optional) Pre-FEC BER Acc alarm high     |

|                                  |   |
|----------------------------------|---|
| <i>pre_fec_ber_acc_alrm_lo</i>   | (Optional) Pre-FEC BER Acc alarm low        |
| <i>pre_fec_ber_acc_warn_hi</i>   | (Optional) Pre-FEC BER Acc warning high     |
| <i>pre_fec_ber_acc_warn_lo</i>   | (Optional) Pre-FEC BER Acc warning low      |
| <i>pre_fec_ber_min</i>           | (Optional) Pre-FEC BER Min                  |
| <i>pre_fec_ber_min_flag</i>      | (Optional) Pre-FEC BER Min flag             |
| <i>pre_fec_ber_min_alrm_hi</i>   | (Optional) Pre-FEC BER Min alarm high       |
| <i>pre_fec_ber_min_alrm_lo</i>   | (Optional) Pre-FEC BER Min alarm low        |
| <i>pre_fec_ber_min_warn_hi</i>   | (Optional) Pre-FEC BER Min warning high     |
| <i>pre_fec_ber_min_warn_lo</i>   | (Optional) Pre-FEC BER Min warning low      |
| <i>pre_fec_ber_max</i>           | (Optional) Pre-FEC BER Max                  |
| <i>pre_fec_ber_max_flag</i>      | (Optional) Pre-FEC BER Max flag             |
| <i>pre_fec_ber_max_alrm_hi</i>   | (Optional) Pre-FEC BER Max alarm high       |
| <i>pre_fec_ber_max_alrm_lo</i>   | (Optional) Pre-FEC BER Max alarm low        |
| <i>pre_fec_ber_max_warn_hi</i>   | (Optional) Pre-FEC BER Max warning high     |
| <i>pre_fec_ber_max_warn_lo</i>   | (Optional) Pre-FEC BER Max warning low      |
| <i>pre_fec_ber_cur</i>           | (Optional) Pre-FEC BER Cur                  |
| <i>pre_fec_ber_cur_flag</i>      | (Optional) Pre-FEC BER Cur flag             |
| <i>pre_fec_ber_cur_alrm_hi</i>   | (Optional) Pre-FEC BER Cur alarm high       |
| <i>pre_fec_ber_cur_alrm_lo</i>   | (Optional) Pre-FEC BER Cur alarm low        |
| <i>pre_fec_ber_cur_warn_hi</i>   | (Optional) Pre-FEC BER Cur warning high     |
| <i>pre_fec_ber_cur_warn_lo</i>   | (Optional) Pre-FEC BER Cur warning low      |
| <i>uncorrect_ber_acc</i>         | (Optional) Uncorrected BER Acc              |
| <i>uncorrect_ber_acc_flag</i>    | (Optional) Uncorrected BER Acc flag         |
| <i>uncorrect_ber_acc_alrm_hi</i> | (Optional) Uncorrected BER Acc alarm high   |
| <i>uncorrect_ber_acc_alrm_lo</i> | (Optional) Uncorrected BER Acc alarm low    |
| <i>uncorrect_ber_acc_warn_hi</i> | (Optional) Uncorrected BER Acc warning high |
| <i>uncorrect_ber_acc_warn_lo</i> | (Optional) Uncorrected BER Acc warning low  |
| <i>uncorrect_ber_min</i>         | (Optional) Uncorrected BER Min              |
| <i>uncorrect_ber_min_flag</i>    | (Optional) Uncorrected BER Min flag         |

|                                  |   |
|----------------------------------|---|
| <i>uncorrect_ber_min_alm_hi</i>  | (Optional) Uncorrected BER Min alarm high   |
| <i>uncorrect_ber_min_alm_lo</i>  | (Optional) Uncorrected BER Min alarm low    |
| <i>uncorrect_ber_min_warn_hi</i> | (Optional) Uncorrected BER Min warning high |
| <i>uncorrect_ber_min_warn_lo</i> | (Optional) Uncorrected BER Min warning low  |
| <i>uncorrect_ber_max</i>         | (Optional) Uncorrected BER Max              |
| <i>uncorrect_ber_max_flag</i>    | (Optional) Uncorrected BER Max flag         |
| <i>uncorrect_ber_max_alm_hi</i>  | (Optional) Uncorrected BER Max alarm high   |
| <i>uncorrect_ber_max_alm_lo</i>  | (Optional) Uncorrected BER Max alarm low    |
| <i>uncorrect_ber_max_warn_hi</i> | (Optional) Uncorrected BER Max warning high |
| <i>uncorrect_ber_max_warn_lo</i> | (Optional) Uncorrected BER Max warning low  |
| <i>uncorrect_ber_cur</i>         | (Optional) Uncorrected BER Cur              |
| <i>uncorrect_ber_cur_flag</i>    | (Optional) Uncorrected BER Cur flag         |
| <i>uncorrect_ber_cur_alm_hi</i>  | (Optional) Uncorrected BER Cur alarm high   |
| <i>uncorrect_ber_cur_alm_lo</i>  | (Optional) Uncorrected BER Cur alarm low    |
| <i>uncorrect_ber_cur_warn_hi</i> | (Optional) Uncorrected BER Cur warning high |
| <i>uncorrect_ber_cur_warn_lo</i> | (Optional) Uncorrected BER Cur warning low  |

- /exec

## show interface transceiver fex-fabric

```
show interface <ifeth_trans> transceiver fex-fabric [ calibrations | details ] [ __readonly__ TABLE_interface
<interface> <sfp> <name> <partnum> <rev> <serialnum> <nom_bitrate> <len_50> <len_625> <ciscoid>
<ciscoid_1> [ <temp_slope> ] [ <temp_offset> ] [ <volt_slope> ] [ <volt_offset> ] [ <curr_slope> ] [
<curr_offset> ] [ <tx_pwr_slope> ] [ <tx_pwr_offset> ] [ <rx_pwr_4> ] [ <rx_pwr_3> ] [ <rx_pwr_2> ] [
<rx_pwr_1> ] [ <rx_pwr_0> ] ]
```

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                               |
| interface           | Show interface status and information                         |
| <i>ifeth_trans</i>  | Enter interface type and number in module/slot format         |
| transceiver         | Show interface transceiver information                        |
| fex-fabric          | Show FEX interface transceiver information                    |
| calibrations        | (Optional) Show interface transceiver calibration information |
| details             | (Optional) Show interface transceiver detail information      |
| <u>__readonly__</u> | (Optional) Read Only  |
| <i>interface</i>    | (Optional) Interface index                                    |
| TABLE_interface     | (Optional) show interface                                     |
| <i>sfp</i>          | (Optional) sfp  |
| <i>name</i>         | (Optional) Name   |
| <i>partnum</i>      | (Optional) part number  |
| <i>rev</i>          | (Optional) revision   |
| <i>serialnum</i>    | (Optional) serial number                                      |
| <i>nom_bitrate</i>  | (Optional) Nominal bit rate in Mbits/sec                      |
| <i>len_50</i>       | (Optional) Link length supported for 50/125mm fiber           |
| <i>len_625</i>      | (Optional) Link length supported for 62.5/125mm fiber         |
| <i>ciscoid</i>      | (Optional) Cisco extended id                                  |
| <i>ciscoid_1</i>    | (Optional) Cisco extended id number                           |
| <i>temp_slope</i>   | (Optional) Temperature slope                                  |
| <i>temp_offset</i>  | (Optional) Temperature offset                                 |
| <i>volt_slope</i>   | (Optional) Voltage slope                                      |

|                      |                            |
|----------------------|----------------------------|
| <i>volt_offset</i>   | (Optional) Voltage offset  |
| <i>curr_slope</i>    | (Optional) Current slope   |
| <i>curr_offset</i>   | (Optional) Current offset  |
| <i>tx_pwr_slope</i>  | (Optional) Tx power slope  |
| <i>tx_pwr_offset</i> | (Optional) Tx power offset |
| <i>rx_pwr_4</i>      | (Optional) Rx power 4      |
| <i>rx_pwr_3</i>      | (Optional) Rx power 3      |
| <i>rx_pwr_2</i>      | (Optional) Rx power 2      |
| <i>rx_pwr_1</i>      | (Optional) Rx power 1      |
| <i>rx_pwr_0</i>      | (Optional) Rx power 0      |

**Command Mode**

- /exec

## show interface transceiver fex-fabric

```
show interface transceiver fex-fabric [ calibrations | details ] [ __readonly__ TABLE_interface <interface> [

### Syntax Description

|              |   |
|--------------|---|
| show         | Show running system information                               |
| interface    | Show interface status and information                         |
| transceiver  | Show interface transceiver information                        |
| fex-fabric   | Show FEX interface transceiver information                    |
| calibrations | (Optional) Show interface transceiver calibration information |

|                           |  |
|---------------------------|--|
| <i>details</i>            | (Optional) Show interface transceiver detail information |
| <i>__readonly__</i>       | (Optional) Read Only                                     |
| <i>interface</i>          | (Optional) Interface index                               |
| TABLE_ <i>interface</i>   | (Optional) show interface                                |
| <i>sfp</i>                | (Optional) sfp   |
| <i>type</i>               | (Optional) type  |
| <i>name</i>               | (Optional) Name  |
| <i>partnum</i>            | (Optional) part number                                   |
| <i>rev</i>                | (Optional) revision                                      |
| <i>serialnum</i>          | (Optional) serial number                                 |
| <i>nom_bitrate</i>        | (Optional) Nominal bit rate in MBits/sec                 |
| <i>len_50</i>             | (Optional) Link length supported for 50/125mm fiber      |
| <i>len_625</i>            | (Optional) Link length supported for 62.5/125mm fiber    |
| <i>len_50_OM3</i>         | (Optional) Link length supported for 50/125um fiber in m |
| <i>ciscoid</i>            | (Optional) Cisco extended id                             |
| <i>ciscoid_1</i>          | (Optional) Cisco extended id number                      |
| <i>info_not_available</i> | (Optional) Error case if sfp info not available          |
| <i>temp_slope</i>         | (Optional) Temperature slope                             |
| <i>temp_offset</i>        | (Optional) Temperature offset                            |
| <i>volt_slope</i>         | (Optional) Voltage slope                                 |
| <i>volt_offset</i>        | (Optional) Voltage offset                                |
| <i>curr_slope</i>         | (Optional) Current slope                                 |
| <i>curr_offset</i>        | (Optional) Current offset                                |
| <i>tx_pwr_slope</i>       | (Optional) Tx power slope                                |
| <i>tx_pwr_offset</i>      | (Optional) Tx power offset                               |
| <i>rx_pwr_4</i>           | (Optional) Rx power 4                                    |
| <i>rx_pwr_3</i>           | (Optional) Rx power 3                                    |
| <i>rx_pwr_2</i>           | (Optional) Rx power 2                                    |
| <i>rx_pwr_1</i>           | (Optional) Rx power 1                                    |

|                         |                                     |
|-------------------------|-------------------------------------|
| <i>rx_pwr_0</i>         | (Optional) Rx power 0               |
| TABLE_lane              | (Optional) show lane                |
| <i>lane_number</i>      | (Optional) Lane number              |
| <i>temperature</i>      | (Optional) Temperature              |
| <i>temp_flag</i>        | (Optional) Temperature Flag         |
| <i>temp_alarm_hi</i>    | (Optional) Temperature Alarm High   |
| <i>temp_alarm_lo</i>    | (Optional) Temperature Alarm Low    |
| <i>temp_warn_hi</i>     | (Optional) Temperature Warning High |
| <i>temp_warn_lo</i>     | (Optional) Temperature Warning Low  |
| <i>voltage</i>          | (Optional) Voltage                  |
| <i>volt_flag</i>        | (Optional) Voltage Flag             |
| <i>volt_alarm_hi</i>    | (Optional) Voltage Alarm High       |
| <i>volt_alarm_lo</i>    | (Optional) Voltage Alarm Low        |
| <i>volt_warn_hi</i>     | (Optional) Voltage Warning High     |
| <i>volt_warn_lo</i>     | (Optional) Voltage Warning Low      |
| <i>current</i>          | (Optional) Current                  |
| <i>current_flag</i>     | (Optional) Current Flag             |
| <i>current_alarm_hi</i> | (Optional) Current Alarm High       |
| <i>current_alarm_lo</i> | (Optional) Current Alarm Low        |

## show interface trunk vsan

```
show interface <ifid_trnk> trunk vsan [ <vsan_id> ] [ __readonly__ { TABLE_interface_trunk [ <interface>
] [ <oper_state> ] [ <oper_state_reason> ] [ <bundle_str> ] [ TABLE_vsan_info { [ <vsan_num> ] [
<vsan_state> ] [ <vsan_state_reason> ] [ <fcid> ] } } ]
```

### Syntax Description

|                          |   |
|--------------------------|---|
| show                     | Show running system information                       |
| interface                | Show interface status and information                 |
| <i>ifid_trnk</i>         | Enter interface type and number in module/slot format |
| trunk                    | Show interface trunk information                      |
| vsan                     | Show per vsan information for trunk                   |
| <i>vsan_id</i>           | (Optional) Enter vsan range                           |
| <i>__readonly__</i>      | (Optional) Read Only                                  |
| TABLE_interface_trunk    | (Optional) interface trunk table                      |
| <i>interface</i>         | (Optional) fc interface                               |
| <i>oper_state</i>        | (Optional) the status of trunking                     |
| <i>oper_state_reason</i> | (Optional) reason for operation state                 |
| <i>bundle_str</i>        | (Optional) bundle string                              |
| TABLE_vsan_info          | (Optional) vsan information                           |
| <i>vsan_num</i>          | (Optional) the vsan ID                                |
| <i>vsan_state</i>        | (Optional) the ststus of vsan                         |
| <i>vsan_state_reason</i> | (Optional) reason for vsan state                      |
| <i>fcid</i>              | (Optional) FCID                                       |

### Command Mode

- /exec

## show interface trunk vsan

```
show interface trunk vsan [ <vsan_id> ] [ __readonly__ { TABLE_interface_trunk [ <interface> ] [ <oper_state> ] [ <oper_state_reason> ] [ <bundle_str> ] [ TABLE_vsan_info { [ <vsan_num> ] [ <vsan_state> ] [ <vsan_state_reason> ] [ <fcid> ] } } ] ]
```

### Syntax Description

|                          |                                       |
|--------------------------|---------------------------------------|
| show                     | Show running system information       |
| interface                | Show interface status and information |
| trunk                    | Show interface trunk information      |
| vsan                     | Show per vsan information for trunk   |
| <i>vsan_id</i>           | (Optional) Enter vsan range           |
| <i>__readonly__</i>      | (Optional)                            |
| TABLE_interface_trunk    | (Optional) interface trunk table      |
| <i>interface</i>         | (Optional) fc interface               |
| <i>oper_state</i>        | (Optional) the status of trunking     |
| <i>oper_state_reason</i> | (Optional) reason for operation state |
| <i>bundle_str</i>        | (Optional) bundle string              |
| TABLE_vsan_info          | (Optional) vsan information           |
| <i>vsan_num</i>          | (Optional) the vsan ID                |
| <i>vsan_state</i>        | (Optional) the status of vsan         |
| <i>vsan_state_reason</i> | (Optional) reason for vsan state      |
| <i>fcid</i>              | (Optional) FCID                       |

### Command Mode

- /exec

## show interface untagged-cos

```
show interface untagged-cos [ module <mod_num> ] [ __readonly__ TABLE_interface <interface>
<ucos-value> [ <portmode> ] ]
```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                  |
| interface           | Show interface status and information            |
| untagged-cos        | Show interface untagged CoS information          |
| module              | (Optional) Limit display to interfaces on module |
| <i>mod_num</i>      | (Optional) Enter module number                   |
| <i>__readonly__</i> | (Optional)                                       |
| <i>interface</i>    | (Optional) Interface index                       |
| TABLE_interface     | (Optional) show interface                        |
| <i>ucos-value</i>   | (Optional) COS value                             |
| <i>portmode</i>     | (Optional) Port mode                             |

### Command Mode

- /exec

## show interface vlan mapping

```
show interface <ifindex> vlan mapping [ __readonly__ <if-index-id> { TABLE_vlan_xlt <orig-vlan-id> [
<inner-vlan-id> ] <xlt-vlan-id> } <show-end> [ <true-end> ] ]
```

### Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information                       |
| interface            | Show interface status and information                 |
| <i>ifindex</i>       | Enter interface type and number in module/slot format |
| vlan                 | Show VLAN information                                 |
| mapping              | VLAN translation mapping                              |
| <i>__readonly__</i>  | (Optional) Read Only                                  |
| TABLE_vlan_xlt       | (Optional) Vlan translation table                     |
| <i>if-index-id</i>   | (Optional) Interface index id                         |
| <i>orig-vlan-id</i>  | (Optional) Original Vlan Id                           |
| <i>inner-vlan-id</i> | (Optional) Inner Vlan Id                              |
| <i>xlt-vlan-id</i>   | (Optional) Translated Vlan Id                         |
| <i>show-end</i>      | (Optional) Show vlan end marker                       |
| <i>true-end</i>      | (Optional) Show vlan end marker                       |

### Command Mode

- /exec

# show inventory

```
show inventory [ chassis | fans | power_supply | module [ <module> ] | <s0> [ <santa-cruz-range> ] | all ] [
__readonly__ TABLE_inv <name> <desc> <productid> <vendorid> <serialnum> ]
```

## Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                         |

# show ip arp

```
show ip arp [ [ [ <ip-address> | [ sync-entries | fhrp-non-active-learn ] [ detail ] | static | summary ] [ summary ] <interface> ] ] [ vrf { <vrf-name> | <vrf-known-name> | all } ] ] [ __readonly__ TABLE_vrf <vrf-name-out> [ <cnt-resolved> ] [ <cnt-incomplete> ] [ <cnt-thrtld-incomplete> ] [ <cnt-unknown> ] [ <cnt-total> ] [ TABLE_adj <intf-out> <ip-addr-out> [ <time-stamp> ] { <mac> | <unknown> | <incomplete> } ] [ <phy-intf> ] [ <flags> ] [ <adj-vrf-name> ] ] ] ]
```

## Syntax Description

|                              |   |
|------------------------------|---|
| show                         | Show running system information   |
| ip                           | Display IP information  |
| arp                          | Display ARP table and statistics  |
| summary                      | (Optional) Display ARP adjacency summary  |
| detail                       | (Optional) Display detailed information   |
| sync-entries                 | (Optional) Display ARP table learnt only due to arp table sync                      |
| fhrp-non-active-learn        | (Optional) Display ARP table learnt only due to request for non-active FHRP address |
| <i>interface</i>             | (Optional) ARP interface  |
| <i>ip-address</i>            | (Optional) IP address   |
| vrf                          | (Optional) Display per-VRF information  |
| <i>vrf-name</i>              | (Optional) VRF name   |
| <i>vrf-known-name</i>        | (Optional) Known VRF name   |
| all                          | (Optional) Display ARP entries for all vrfs   |
| static                       | (Optional) Display Static ARP entries   |
| <i>__readonly__</i>          | (Optional)  |
| TABLE_vrf                    | (Optional) Show VRF table   |
| <i>vrf-name-out</i>          | (Optional) Show VRF name  |
| <i>cnt-resolved</i>          | (Optional) Show total resolved ARP entries  |
| <i>cnt-incomplete</i>        | (Optional) Show total incomplete ARP entreis  |
| <i>cnt-thrtld-incomplete</i> | (Optional) Show total incomplete throttled entries                                  |
| <i>cnt-unknown</i>           | (Optional) Show total unknow entris   |
| <i>cnt-total</i>             | (Optional) Show total   |

|                     |                                    |
|---------------------|------------------------------------|
| <i>TABLE_adj</i>    | (Optional) Show IP ARP             |
| <i>intf-out</i>     | (Optional) Show interface          |
| <i>ip-addr-out</i>  | (Optional) Show ip address         |
| <i>time-stamp</i>   | (Optional) Show age of adjacency   |
| <i>mac</i>          | (Optional) Show mac                |
| <i>unknown</i>      | (Optional) Show unknown entry      |
| <i>incomplete</i>   | (Optional) Show incomplete entry   |
| <i>phy-intf</i>     | (Optional) Show physical interface |
| <i>flags</i>        | (Optional) Show flags              |
| <i>adj-vrf-name</i> | (Optional) Show VRF name           |

**Command Mode**

- /exec

## show ip arp anycast topo-info

```
show ip arp anycast topo-info [ <topo-id> ] [ __readonly__ { TABLE_ip_arp_anycast_topo_info [
<ip_arp_anycat_topo_id> ] [ <ip_arp_anycast_feature> ] [ <ip_arp_anycast_mode> ] } ]
```

### Syntax Description

|                                |   |
|--------------------------------|---|
| show                           | Show running system information           |
| ip                             | Configure IP features                     |
| arp                            | Configure ARP parameters                  |
| anycast                        | anycast feature info                      |
| topo-info                      | Per topology specific information         |
| <i>topo-id</i>                 | (Optional) Topology ID (VLAN-ID or BD-ID) |
| <i>__readonly__</i>            | (Optional)                                |
| TABLE_ip_arp_anycast_topo_info | (Optional) Show ip arp anycast topo-info  |
| <i>ip_arp_anycat_topo_id</i>   | (Optional) Show ARP anycast topo-id       |
| <i>ip_arp_anycast_feature</i>  | (Optional) Show ARP anycast feature       |
| <i>ip_arp_anycast_mode</i>     | (Optional) Show ARP anycast mode          |

### Command Mode

- /exec

# show ip arp client

```
show ip arp client [ __readonly__ { <arp-clients> } [ TABLE_arp_client_list { <arp-cli-uuid> <l2-client-type>

| <i>l2-cli-dbg-un-init-func</i> | (Optional) Debug Un-init function |

## Command Mode

- /exec

## show ip arp controller-statistics

```
show ip arp controller-statistics [ __readonly__ { TABLE_ip_arp_controller_statistics [
<arp_adj_controller_add_count> ] [ <arp_adj_controller_del_count> ] [ <arp_adj_controller_add_err_count>
] [ <arp_adj_controller_del_err> ] } ]
```

### Syntax Description

|   |                                       |
|---|---------------------------------------|
| show                                    | Show running system information       |
| ip                                      | Display IP information                |
| arp                                     | Display ARP table and statistics      |
| controller-statistics                   | Controller statistics                 |
| __readonly__                            | (Optional)                            |
| TABLE_ip_arp_controller_statistics      | (Optional) Show controller-statistics |
| <i>arp_adj_controller_add_count</i>     | (Optional)                            |
| <i>arp_adj_controller_del_count</i>     | (Optional)                            |
| <i>arp_adj_controller_add_err_count</i> | (Optional)                            |
| <i>arp_adj_controller_del_err</i>       | (Optional)                            |

### Command Mode

- /exec

# show ip arp esi

```
show ip arp esi [ __readonly__ { TABLE_ip_arp_esi [ <ip_arp_esi_interface> ] [ <ip_arp_esi_value> ] } ]
```

## Syntax Description

|                             |                                 |
|-----------------------------|---------------------------------|
| show                        | Show running system information |
| ip                          | Configure IP features           |
| arp                         | Configure ARP parameters        |
| esi                         | ESI information                 |
| __readonly__                | (Optional)                      |
| TABLE_ip_arp_esi            | (Optional) Show ip arp esi      |
| <i>ip_arp_esi_interface</i> | (Optional) Interface            |
| <i>ip_arp_esi_value</i>     | (Optional) Values               |

## Command Mode

- /exec

# show ip arp inspection

```
show ip arp inspection [ __readonly__ <src_mac_valid> <dest_mac_valid> <ip_addr_valid> TABLE_entry
<active_vlan_id> <is_insp_enabled> <oper_state> [ <acl_name> ] [ [ <acl_logging> ] <dhcp_logging> ] [
<req_fwded> <res_fwded> <req_dropped> <res_dropped> <dhcp_drops> [ <acl_drops> ] <dhcp_permits>
[ <acl_permits> ] <req_smac_fails> <res_smac_fails> <res_dmac_fails> <req_ip_fails> <res_ip_fails> ] ]
```

## Syntax Description

|                        |   |
|------------------------|---|
| show                   | Show running system information   |
| ip                     | Show the IP features of the system  |
| arp                    | IP ARP table  |
| inspection             | Status of ARP Inspection  |
| <i>__readonly__</i>    | (Optional) read only  |
| <i>src_mac_valid</i>   | (Optional) source ethernet address in header must be same as sender mac address in arp payload      |
| <i>dest_mac_valid</i>  | (Optional) destination ethernet address in header must be same as target mac address in arp payload |
| <i>ip_addr_valid</i>   | (Optional) validate the target ip address to filter broadcast/multicast address in arp payload      |
| TABLE_entry            | (Optional)  |
| <i>active_vlan_id</i>  | (Optional) active vlan id   |
| <i>is_insp_enabled</i> | (Optional)  |
| <i>oper_state</i>      | (Optional)  |
| <i>acl_name</i>        | (Optional)  |
| <i>acl_logging</i>     | (Optional)  |
| <i>dhcp_logging</i>    | (Optional)  |

## Command Mode

- /exec

## show ip arp inspection interfaces

```
show ip arp inspection interfaces [ <intf1> ] [ __readonly__ <intf_header> [ TABLE_intf <intf2> <trust_state> ] ]
```

### Syntax Description

|                     |                                    |
|---------------------|------------------------------------|
| show                | Show running system information    |
| ip                  | Show the IP features of the system |
| arp                 | IP ARP table                       |
| inspection          | Status of ARP Inspection           |
| interfaces          | Trust status of all interfaces     |
| <i>intf1</i>        | (Optional) interface               |
| <i>__readonly__</i> | (Optional)                         |
| TABLE_intf          | (Optional)                         |
| <i>intf_header</i>  | (Optional)                         |
| <i>intf2</i>        | (Optional)                         |
| <i>trust_state</i>  | (Optional)                         |

### Command Mode

- /exec

# show ip arp inspection log

```
show ip arp inspection log [ __readonly__ <log_buff_size> <log_rate_entries> <log_rate_interval> [
<log_frame> ] ]
```

## Syntax Description

|                          |  |
|--------------------------|--|
| show                     | Show running system information                          |
| ip                       | Show the IP features of the system                       |
| arp                      | IP ARP table   |
| inspection               | Status of ARP Inspection                                 |
| log                      | Log Buffer   |
| <i>__readonly__</i>      | (Optional)   |
| <i>log_buff_size</i>     | (Optional) number of entries per log buffer              |
| <i>log_rate_entries</i>  | (Optional) number of entries into log buffer per sec     |
| <i>log_rate_interval</i> | (Optional) time after which log buffer is updated in sec |
| <i>log_frame</i>         | (Optional) log frames in buffer                          |

## Command Mode

- /exec

## show ip arp inspection statistics

```
show ip arp inspection statistics [ vlan <vlan-range> ] [ __readonly__ TABLE_stats <vlanid> <req_fwded>
<res_fwded> <req_dropped> <res_dropped> <dhcp_drops> [ <acl_drops> ] <dhcp_permits> [ <acl_permits>
] <req_smac_fails> <res_smac_fails> <res_dmac_fails> <req_ip_fails> <res_ip_fails> ]
```

### Syntax Description

|                     |  |
|---------------------|--|
| show                | Show running system information                            |
| ip                  | Show the IP features of the system                         |
| arp                 | IP ARP table   |
| inspection          | Status of ARP Inspection                                   |
| statistics          | Status of ARP Inspection                                   |
| vlan                | (Optional) Selected vlan range                             |
| <i>vlan-range</i>   | (Optional) VLAN ID 1-4094 or range(s): 1-5, 10 or 2-5,7-19 |
| <i>__readonly__</i> | (Optional)   |
| TABLE_stats         | (Optional)   |
| <i>vlanid</i>       | (Optional) ip arp inspection vlan id                       |

### Command Mode

- /exec

## show ip arp inspection vlan

```
show ip arp inspection { vlan <vlan-range> } [ __readonly__ <src_vlan_mac_valid> <dest_vlan_mac_valid>
<ip_vlan_addr_valid> TABLE_vlan <active_vlan_id> <is_insp_enabled> <oper_state> [ <dhcp_logging> ]
[ <acl_name> ] [ <acl_logging> ] ]
```

### Syntax Description

|                            |  |
|----------------------------|--|
| show                       | Show running system information  |
| ip                         | Show the IP features of the system   |
| arp                        | IP ARP table   |
| inspection                 | Status of ARP Inspection   |
| vlan                       | Selected vlan range  |
| <i>vlan-range</i>          | VLAN ID 1-4094 or range(s): 1-5, 10 or 2-5,7-19  |
| <i>__readonly__</i>        | (Optional)   |
| <i>src_vlan_mac_valid</i>  | (Optional) validates header source mac address with sender mac address in arp payload      |
| <i>dest_vlan_mac_valid</i> | (Optional) validates header destination mac address with target mac address in arp payload |
| <i>ip_vlan_addr_valid</i>  | (Optional) filters invalid ip addresses like multicast/broadcast in arp requests/responses |
| TABLE_vlan                 | (Optional)   |
| <i>active_vlan_id</i>      | (Optional) active vlan id  |
| <i>is_insp_enabled</i>     | (Optional) ip arp inspection on vlan   |
| <i>oper_state</i>          | (Optional) operational on vlan   |
| <i>acl_name</i>            | (Optional) arp inspection access list name   |
| <i>acl_logging</i>         | (Optional) acl logging options   |
| <i>dhcp_logging</i>        | (Optional) ip arp inspection dhcp-binding logging options                                  |

### Command Mode

- /exec

## show ip arp l2 statistics interface

```
show ip arp l2 statistics interface { <interface> | all } [ __readonly__ { TABLE_ip_arp_l2_statistics
<arp-l2-port-ifname> <arp-l2-port-stats-rx-total> } ]
```

### Syntax Description

|                                   |  |
|-----------------------------------|--|
| show                              | Show running system information          |
| ip                                | Display IP information                   |
| arp                               | Display ARP table and statistics         |
| l2                                | Display ARP L2 port level info           |
| statistics                        | Display ARP statistics                   |
| interface                         | ARP interface                            |
| <i>interface</i>                  | ARP interface                            |
| all                               | Display ARP statistics for all interface |
| __readonly__                      | (Optional)                               |
| TABLE_ip_arp_l2_statistics        | (Optional) Show ip arp l2 stats          |
| <i>arp-l2-port-ifname</i>         | (Optional) Interface name                |
| <i>arp-l2-port-stats-rx-total</i> | (Optional) L2 port stats rx toal         |

### Command Mode

- /exec

## show ip arp multihoming-statistics

```
show ip arp multihoming-statistics [ <interface> ] [ interface-all ] [ vrf { <vrf-name> | <vrf-known-name> |
all } ] [ __readonly__ TABLE_vrf <vrf-name-out2> TABLE_stat <ps-recv-add-l2rib> <ps-proc-add-l2rib>

### Syntax Description

|  |   |
|--|---|
| show   | Show running system information                           |
| ip   | Configure IP features                                     |
| arp  | Configure ARP parameters                                  |
| open-flow                                    | open flow   |
| error-statistics                             | IR mode specific adjacency statistics                     |
| <i>__readonly__</i>                          | (Optional)  |
| <i>arp_ofa_total_err_cnt</i>                 | (Optional) OFA total error count                          |
| <i>arp_ofa_dp_adj_err_on_del</i>             | (Optional) Controller Deleting DP adjacency error         |
| <i>arp_ofa_cp_mac_mismatch_err_on_del</i>    | (Optional) CP adjacency MAC mismatch error while delete   |
| <i>arp_ofa_cp_null_mac_err_on_del</i>        | (Optional) CP adjacency NULL mac error while delete       |
| <i>arp_ofa_cp_no_adj_err_on_del_flag</i>     | (Optional) No adjacency found while delete                |
| <i>arp_ofa_cp_cp_nh_mismatch_err_on_del</i>  | (Optional) CP adjacency NH mismatch error while delete    |
| <i>arp_ofa_cp_adj_del_failure_err</i>        | (Optional) Other errors while deleting                    |
| <i>arp_ofa_cp_null_mac_err_on_add</i>        | (Optional) CP adjacency NULL mac error while Adding       |
| <i>arp_ofa_cp_dp_mac_mismatch_err_on_add</i> | (Optional) DP adjacency present with different mac        |
| <i>arp_ofa_cp_cp_mac_mismatch_err_on_add</i> | (Optional) CP adjacency present with different mac        |
| <i>arp_ofa_cp_added_first_err</i>            | (Optional) CP adjacency added first                       |
| <i>arp_ofa_dp_overwrite_cp_err</i>           | (Optional) Overwriting CP adjacency with DP               |
| <i>arp_ofa_dp_cp_nh_mismatch_err_on_add</i>  | (Optional) DP adjacency already present with different NH |
| <i>arp_ofa_cp_cp_nh_mismatch_err_on_add</i>  | (Optional) CP adjacency already present with different NH |

|   |   |
|---|---|
| <i>arp_ofa_cp_dp_nh_mismatch_err_on_add</i>   | (Optional) Overwriting CP adj with DP with different NH |
| <i>arp_ofa_cp_adj_add_failure_err</i>         | (Optional) Other errors while adding                    |
| <i>arp_ofa_peer_ip_lookup_rec_phy_iod_err</i> | (Optional) Peer IP lookup for received physical iod     |
| <i>arp_ofa_peer_ip_ipv6_rec_phy_iod_err</i>   | (Optional) Peer is IPv6 for received physical iod       |
| <i>arp_ofa_peer_ip_lookup_adj_phy_iod_err</i> | (Optional) Peer IP lookup for adjacency physical iod    |
| <i>arp_ofa_peer_ip_ipv6_adj_phy_iod_err</i>   | (Optional) Peer is IPv6 for adjacecny physical iod      |
| <i>arp_ofa_barrier_response_err</i>           | (Optional) Barrier responses                            |

**Command Mode**

- /exec

## show ip arp statistics

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information                     |
| ip                    | Display IP information                              |
| arp                   | Display ARP table and statistics                    |
| statistics            | Display ARP statistics                              |
| vrf                   | (Optional) Display per-VRF information              |
| <i>vrf-name</i>       | (Optional) VRF name                                 |
| <i>vrf-known-name</i> | (Optional) Known VRF name                           |
| all                   | (Optional) Display ARP statistics for all vrfs      |
| interface-all         | (Optional) Display ARP statistics for all interface |
| <i>interface</i>      | (Optional) ARP interface                            |
| <u>__readonly__</u>   | (Optional)  |
| TABLE_vrf             | (Optional) Table Vrf                                |
| <i>vrf-name-out1</i>  | (Optional) Show VRF name                            |
| TABLE_stat            | (Optional) Show IP ARP statistics                   |
| <i>tx-total</i>       | (Optional) Sent: total                              |
| <i>tx-req</i>         | (Optional) Sent: request                            |
| <i>tx-reply</i>       | (Optional) Sent: reply                              |

|   |  |
|---|--|
| <i>tx-req-l2</i>                          | (Optional) Sent: request on L2                       |
| <i>tx-reply-l2</i>                        | (Optional) Sent: replay on L2                        |
| <i>tx-grat</i>                            | (Optional) Sent: gratuitous                          |
| <i>tx-tunnel</i>                          | (Optional) Sent: tunnel packet                       |
| <i>tx-drop</i>                            | (Optional) Sent:Dropped packet                       |
| <i>tx-svrport</i>                         | (Optional) Sent from Server Port                     |
| <i>tx-fbrport</i>                         | (Optional) Sent from Fabric Port                     |
| <i>tx-fixup-core</i>                      | (Optional) Sent: fixup core                          |
| <i>tx-fixup-server</i>                    | (Optional) Sent: fixup server                        |
| <i>tx-fixup-rarp</i>                      | (Optional) Sent: fixup rarp                          |
| <i>tx-anycast-glean</i>                   | (Optional) Sent: modified anycast glean              |
| <i>tx-mbuf-fail</i>                       | (Optional) Sent:MBUF operation failed                |
| <i>tx-ctxt-not-crtd</i>                   | (Optional) Sent:Context not yet created              |
| <i>tx-bad-ctxt-id</i>                     | (Optional) Sent:Invalid context                      |
| <i>tx-invalid-ifindex</i>                 | (Optional) Sent:Invalid ifindex                      |
| <i>tx-invalid-sip</i>                     | (Optional) Sent:Invalid SRC IP                       |
| <i>tx-invalid-dip</i>                     | (Optional) Sent:Invalid DEST IP                      |
| <i>tx-own-ip</i>                          | (Optional) Sent:Destination is our own IP            |
| <i>tx-unattached-ip</i>                   | (Optional) Sent:Unattached IP                        |
| <i>tx-adj-create-fail</i>                 | (Optional) Sent:Adjacency Couldn't be added          |
| <i>tx-null-sip</i>                        | (Optional) Sent:Null Source IP                       |
| <i>tx-null-smac</i>                       | (Optional) Sent: Null Source MAC                     |
| <i>tx-client-enq-fail</i>                 | (Optional) Sent: Client Enqueue Failed               |
| <i>tx-dest-unreachable-proxy-arp</i>      | (Optional) Sent: Dest. not reachable for proxy arp   |
| <i>tx-dest-unreachable-enhanced-proxy</i> | (Optional) Sent:Dest. unreachable for enhanced proxy |
| <i>tx-dest-l2port-track</i>               | (Optional) Sent:Dest. on L2 port being tracked       |
| <i>tx-invalid-local-proxy</i>             | (Optional) Sent:Invalid Local proxy arp              |
| <i>tx-invalid-proxy</i>                   | (Optional) Sent:Invalid proxy arp                    |
| <i>tx-vip-not-active</i>                  | (Optional) Sent:VIP is not active                    |

|  |  |
|--|--|
| <i>tx-skip-refresh-over-core-and-flood-to-server</i> | (Optional) ARP refresh skipped over core and sent on server side |
| <i>rx-total</i>                                      | (Optional) Received: total                                       |
| <i>rx-req</i>  | (Optional) Received: Requests                                    |
| <i>rx-reply</i>                                      | (Optional) Received: Replies                                     |
| <i>rx-req-l2</i>                                     | (Optional) Received: Requests on L2                              |
| <i>rx-reply-l2</i>                                   | (Optional) Received: Replies on L2                               |
| <i>rx-proxy</i>                                      | (Optional) Received: Proxy arp                                   |
| <i>rx-local-proxy</i>                                | (Optional) Received: Local-Proxy arp                             |
| <i>rx-enhanced-proxy</i>                             | (Optional) Received: Enhanced Proxy arp                          |
| <i>rx-enhanced-proxy-anycast</i>                     | (Optional) Received: Anycast proxy Proxy arp                     |
| <i>rx-enhanced-proxy-l2port-track</i>                | (Optional) Received: L2 Port-track Proxy arp                     |
| <i>rx-tunnel</i>                                     | (Optional) Received: Tunneled                                    |
| <i>rx-fastpath</i>                                   | (Optional) Received: Fastpath                                    |
| <i>rx-snoop</i>                                      | (Optional) Received: Snooped                                     |
| <i>rx-drop</i>                                       | (Optional) Received: Dropped                                     |
| <i>rx-srvrport</i>                                   | (Optional) Received: on Server Port                              |
| <i>bad-if</i>  | (Optional) Appeared on a wrong interface                         |
| <i>bad-len</i>                                       | (Optional) Incorrect length                                      |
| <i>invalid-opcode</i>                                | (Optional) Invalid OPCODE packet                                 |
| <i>invalid-prot</i>                                  | (Optional) Invalid protocol packet                               |
| <i>invalid-hrd-type</i>                              | (Optional) Invalid Hardware type                                 |
| <i>invalid-ctxt</i>                                  | (Optional) Invalid context                                       |
| <i>ctxt-not-crtd</i>                                 | (Optional) Context not yet created                               |
| <i>invalid-l2</i>                                    | (Optional) Invalid layer 2 address length                        |
| <i>invalid-l3</i>                                    | (Optional) Invalid layer 3 address length                        |
| <i>invalid-sip</i>                                   | (Optional) Invalid source IP address                             |
| <i>our-sip</i>                                       | (Optional) Source IP address is our own                          |
| <i>arp-if-no-mem</i>                                 | (Optional) No mem to create per intf structure                   |
| <i>subnet-mismatch</i>                               | (Optional) Source address mismatch with subnet                   |

|                                 |  |
|---------------------------------|--|
| <i>dir-bcast</i>                | (Optional) Directed broadcast source                               |
| <i>invalid-dip</i>              | (Optional) Invalid destination IP address                          |
| <i>non-local-dst</i>            | (Optional) Non-local destination IP address                        |
| <i>non-active-fhrp</i>          | (Optional) Non-active FHRP dest IP address. Learn and drop         |
| <i>invalid-smac</i>             | (Optional) Invalid source MAC address                              |
| <i>our-smac</i>                 | (Optional) Source MAC address is our own                           |
| <i>not-init</i>                 | (Optional) Received before arp initialization                      |
| <i>l2-prxy-en</i>               | (Optional) L2 packet on proxy-arp-enabled interface                |
| <i>l2-port-untrusted</i>        | (Optional) L2 packet on untrusted L2 port                          |
| <i>stdby-fhrp-vip</i>           | (Optional) Packet with VIP on standby FHRP                         |
| <i>grat-prxy-en</i>             | (Optional) Grat arp received on proxy-arp-enabled interface        |
| <i>arp-req-ignore</i>           | (Optional) Requests came for existing entries                      |
| <i>l2-intf</i>                  | (Optional) Requests came on a L2 interface                         |
| <i>l2fm-query-fail</i>          | (Optional) L2FM query failed for a L2 Address                      |
| <i>tunnel_fail</i>              | (Optional) Dropping due to tunneling failures                      |
| <i>hsrp-active-vmac</i>         | (Optional) Dropping due to HSRP standby receiving HSRP active vmac |

### Syntax Description

|  |  |
|--|--|
| show                                     | Show running system information                                      |
| ip                                       | Display IP information   |
| arp                                      | Display ARP table and statistics                                     |
| vpc-statistics                           | Show vPC global statistics   |
| <i>__readonly__</i>                      | (Optional)   |
| <i>TABLE_arp_vpc_stats</i>               | (Optional) Arp Vpc statistics  |
| <i>arp-mcecm-ifidx-vpc-fail</i>          | (Optional) Unable to retrieve VPC id from ifidx                      |
| <i>arp-mcecm-vpc-ifidx-fail</i>          | (Optional) Unable to retrieve ifidx from VPC id                      |
| <i>arp-periodic-mcecm-ifidx-vpc-fail</i> | (Optional) Unable to retrieve ifidx from VPC id during periodic sync |
| <i>arp-sync-recv-op-add-adj</i>          | (Optional) Total adjacencies recieved from peer to add               |
| <i>arp-sync-recv-op-del-adj</i>          | (Optional) Total adjacencies received from peer to delete            |
| <i>arp-sync-push-msg-adj-cnt</i>         | (Optional) Total gross adjacencies sent periodically                 |
| <i>arp-sync-send-op-add-adj</i>          | (Optional) Total adjacencies sent to peer to add                     |
| <i>arp-sync-send-op-del-adj</i>          | (Optional) Total adjacencies sent to peer to delete                  |
| <i>arp-sync-adj-cnt</i>                  | (Optional) Total periodic sync adjacencies                           |

|  |   |
|--|---|
| <i>arp-sync-addadj-fail</i>                        | (Optional) Failure in adding adjacencies while periodic sync send       |
| <i>arp-sync-drp-svi-inv</i>                        | (Optional) Total drops during periodic sync because of invalid svi      |
| <i>arp-sync-drp-svi-dwn</i>                        | (Optional) Total drops during periodic sync because of svi down         |
| <i>arp-sync-drp-ctxt-inv</i>                       | (Optional) Total drops during periodic sync because of invalid context  |
| <i>arp-sync-null-adj</i>                           | (Optional) Total drops while processing syne of NULL Adjacencies        |
| <i>arp-sync-invalid-ip</i>                         | (Optional) Total drops while processing sync because of NULL IP         |
| <i>arp-periodic-sync-adj-l2-supp-cnt</i>           | (Optional) Total periodic sync adjacenciesadded for L2 suppression case |
| <i>arp-periodic-sync-stop-bcast-pkt-sync-count</i> | (Optional) Total Bcast packets that was stopped sync to peer            |
| <i>arp-pro-drp-pull-disable</i>                    | (Optional) Drop the received CFS pull request                           |
| <i>arp-pro-drp-push-msg-disable</i>                | (Optional) Drop the received CFS push message                           |
| <i>arp-pro-ign-snd-pull-disabe</i>                 | (Optional) Ignore to send pull request using CFSoE                      |
| <i>arp-ign-snd-push-disable</i>                    | (Optional) Ignore to send push message using CFSoE                      |
| <i>arp-drp-im-fail</i>                             | (Optional) IM api failed while processing CFS payload                   |
| <i>arp-drp-mcecm-fail</i>                          | (Optional) MCECM api failed while processing CFS payload                |
| <i>arp-drp-invalid-pc-iod</i>                      | (Optional) Invalid MCT port-channel iod                                 |
| <i>arp-drp-pt-lookup-fail</i>                      | (Optional) PT lookup failed while processing CFS payload                |
| <i>arp-drp-resp-fail-no-mct</i>                    | (Optional) Sending CFS response failed due to invalid MCT iod           |
| <i>arp-drp-resp-fail</i>                           | (Optional) Sending CFS response failed                                  |
| <i>arp-resp-sent</i>                               | (Optional) Response sent via CFSoE                                      |
| <i>arp-resp-recvd</i>                              | (Optional) Response received via CFSoE                                  |
| <i>arp-resp-recv-err</i>                           | (Optional) Response received via CFSoE with errors                      |
| <i>arp-rcvd-msg</i>                                | (Optional) Received message via CFSoE                                   |
| <i>arp-send-fail</i>                               | (Optional) Send message failed via CFSoE                                |
| <i>arp-cfs-rel-dlvry-fail</i>                      | (Optional) MCECM send api failed via CFSoE                              |
| <i>arp-cfs-rel-dnvry-suc</i>                       | (Optional) Send message succeeded via CFSoE                             |
| <i>arp-drp-pt-add-fail</i>                         | (Optional) PT add failed while processing offlist                       |
| <i>arp-drp-no-mem</i>                              | (Optional) Memory alloc failed while processing offlist databse         |
| <i>arp-drp-tmr-cre-fail</i>                        | (Optional) Timer create failed while processing offlist database        |

|  |  |
|--|--|
| <i>arp-drp-add-adj-fail</i>                          | (Optional) Adjacency addition failed while processing offlist database     |
| <i>arp-off-drp-pt-lookup-fail</i>                    | (Optional) PT lookup failed while processing offlist database              |
| <i>arp-dont-drp-vlan-mismat</i>                      | (Optional) VLAN mismatch while processing offlist database                 |
| <i>arp-drp-svi-invalid</i>                           | (Optional) SVI is invalid while processing offlist database                |
| <i>arp-dont-drop-sv-down</i>                         | (Optional) SVI is down while processing offlist database                   |
| <i>arp-drp-mct-down</i>                              | (Optional) MCT is down while processing offlist database                   |
| <i>arp-drp-ctxt-invalid</i>                          | (Optional) Ctxt_type is invalid while processing offlist database          |
| <i>arp-drp-vrf-invalid</i>                           | (Optional) VRF is invalid while processing offlist database                |
| <i>arp-drp-l3addr-invalid</i>                        | (Optional) VRF is invalid while processing offlist database                |
| <i>arp-drp-l3addr-sanity-fail</i>                    | (Optional) IP address sanity failed  |
| <i>arp-drp-mac-sanity-fail</i>                       | (Optional) MAC address sanity failed                                       |
| <i>arp-own-rtr-mac</i>                               | (Optional) Our own router mac  |
| <i>arp-drp-own-ipaddr</i>                            | (Optional) Our own ip address  |
| <i>arp-drp-own-vipaddr</i>                           | (Optional) Our own virtual ip address                                      |
| <i>arp-drp-adj-fail</i>                              | (Optional) Create adjacency failed   |
| <i>arp-drp-subnet-mismatch</i>                       | (Optional) Subnet mismatch   |
| <i>arp-drp-adj-exist</i>                             | (Optional) Entry exists  |
| <i>arp-dont-drp-ip-not-enable</i>                    | (Optional) IP not enabled on interface                                     |
| <i>arp-drp-inval-phy-iod</i>                         | (Optional) Physical interface invalid                                      |
| <i>arp-drp-total-cnt</i>                             | (Optional) Total drop count  |
| <i>arp-dont-drop-total-cnt</i>                       | (Optional) Total don't drop count  |
| <i>arp-add-adj</i>                                   | (Optional) Total adjacency additions                                       |
| <i>arp-del-adj</i>                                   | (Optional) Total adjacency deletions                                       |
| <i>arp-adj-already-exist</i>                         | (Optional) Total adjacencies ignored as already exist                      |
| <i>arp-pkt-vmct-drop-count</i>                       | (Optional) Total virtual-mct packets dropped                               |
| <i>arp-periodic-sync-vmct-stop-orphan-sync-count</i> | (Optional) Total virtual-mct orphan hosts that was stopped syncing to peer |

**Command Mode**

- /exec

# show ip as-path-access-list

```
show ip as-path-access-list [ <aspl-name> | <aspl-cfg-name> ] [ __readonly__ TABLE_aspl <name> <seq>
<action> <rule> ]
```

## Syntax Description

|                      |   |
|----------------------|---|
| show                 | Show running system information           |
| ip                   | Display IP information                    |
| as-path-access-list  | List AS path access lists                 |
| <i>aspl-name</i>     | (Optional) AS path access list name       |
| <i>aspl-cfg-name</i> | (Optional) Known as-path access-list name |
| <i>__readonly__</i>  | (Optional)                                |
| TABLE_aspl           | (Optional)                                |
| <i>name</i>          | (Optional)                                |
| <i>seq</i>           | (Optional)                                |
| <i>action</i>        | (Optional)                                |
| <i>rule</i>          | (Optional)                                |

## Command Mode

- /exec

# show ip community-list

```
show ip community-list [ <cl_name> ] [ __readonly__ TABLE_cl <name> <seq> <action> <rule> ]
```

## Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                     |
| ip                  | Display IP information                              |
| community-list      | List community-list                                 |
| <i>cl_name</i>      | (Optional) Standard or expanded community-list name |
| <i>__readonly__</i> | (Optional)  |
| <i>TABLE_cl</i>     | (Optional)  |
| <i>name</i>         | (Optional)  |
| <i>seq</i>          | (Optional)  |
| <i>action</i>       | (Optional)  |
| <i>rule</i>         | (Optional)  |

## Command Mode

- /exec

## show ip dhcp global statistics

```
show ip dhcp global statistics [ __readonly__ <pkts_processed> <pkts_rcvd_through_cfsoe> <pkts_fwded>
<pkts_cfsoe_fwded> <pkts_dropped> <pkts_dropped_from_untrusted_ports>
<pkts_dropped_src_mac_chk_fail> <pkts_dropped_opt82_ins_fail> <pkts_dropped_unknown_op_intf>
<pkts_dropped_unknown_pkt> <pkts_dropped_no_trust_inf> <pkts_dropped_relay_disable>
<pkts_dropped_no_binding_entry> <pkts_dropped_interface_error> <pkts_dropped_max_hops_exceeded>
<pkts_dropped_queue_full> ]
```

### Syntax Description

|  |  |
|--|--|
| show                                     | Show running system information                                |
| ip                                       | Show the IP features of the system                             |
| dhcp                                     | Show information about DHCP                                    |
| global                                   | DHCP global stats  |
| statistics                               | Statistics related to DHCP                                     |
| <i>__readonly__</i>                      | (Optional) Read only   |
| <i>pkts_processed</i>                    | (Optional) Packets processed                                   |
| <i>pkts_rcvd_through_cfsoe</i>           | (Optional) Packets received through cfsoe                      |
| <i>pkts_fwded</i>                        | (Optional) Packets forwarded                                   |
| <i>pkts_cfsoe_fwded</i>                  | (Optional) Packets forwarded on cfsoe                          |
| <i>pkts_dropped</i>                      | (Optional) Total packets dropped                               |
| <i>pkts_dropped_from_untrusted_ports</i> | (Optional) Packets dropped from untrusted ports                |
| <i>pkts_dropped_src_mac_chk_fail</i>     | (Optional) Packets dropped due to MAC address check failure    |
| <i>pkts_dropped_opt82_ins_fail</i>       | (Optional) Packets dropped due to Option 82 insertion failure  |
| <i>pkts_dropped_unknown_op_intf</i>      | (Optional) Packets dropped due to o/p intf unknown             |
| <i>pkts_dropped_unknown_pkt</i>          | (Optional) Packets dropped which were unknown                  |
| <i>pkts_dropped_no_trust_inf</i>         | (Optional) Packets dropped due to no trusted ports             |
| <i>pkts_dropped_relay_disable</i>        | (Optional) Packets dropped due to dhcp relay not enabled       |
| <i>pkts_dropped_no_binding_entry</i>     | (Optional) Packets dropped due to no binding entry             |
| <i>pkts_dropped_interface_error</i>      | (Optional) Packets dropped due to interface error/no interface |
| <i>pkts_dropped_max_hops_exceeded</i>    | (Optional) Packets dropped due to max hops exceeded            |
| <i>pkts_dropped_queue_full</i>           | (Optional) Packets dropped due to queue full                   |

**Command Mode**

- /exec

## show ip dhcp option82 suboption info interface

```
show ip dhcp option82 suboption info interface [ <intf> ][ __readonly__ <intf_header> { TABLE_intf_option82
<intf_name> <option82_status> [ <suboption_string> ] [ <tx_count> ] } ]
```

### Syntax Description

|                         |   |
|-------------------------|---|
| show                    | Show running system information                       |
| ip                      | Show the IP features of the system                    |
| dhcp                    | Show items in DHCP                                    |
| option82                | DHCP option82   |
| suboption               | DHCP option82 suboption                               |
| info                    | DHCP option82 suboption information                   |
| interface               | DHCP option82 suboption information of all interfaces |
| <i>intf</i>             | (Optional) interface                                  |
| <i>__readonly__</i>     | (Optional) Read only                                  |
| <i>intf_header</i>      | (Optional)  |
| TABLE_intf_option82     | (Optional)  |
| <i>intf_name</i>        | (Optional)  |
| <i>option82_status</i>  | (Optional)  |
| <i>suboption_string</i> | (Optional)  |
| <i>tx_count</i>         | (Optional)  |

### Command Mode

- /exec

## show ip dhcp relay

```
show ip dhcp relay [ __readonly__ <relay_service_enable> <relay_opt82_enable> <relay_opt82_customize>
<relay_subopt_VPN_enable> <relay_subopt_type_cisco_enable> <global_smart-relay_enable>

```

## Syntax Description

|                                   |   |
|-----------------------------------|---|
| show                              | Show running system information                               |
| ip                                | Show the IP features of the system                            |
| dhcp                              | Show items in DHCP  |
| snooping                          | DHCP snooping   |
| <i>__readonly__</i>               | (Optional) Read only  |
| <i>snoop_service_enable</i>       | (Optional)  |
| <i>snoop_gbl_enable</i>           | (Optional)  |
| <i>snoop_vlan_enable</i>          | (Optional)  |
| <i>snoop_oper_vlan_enable</i>     | (Optional)  |
| <i>snoop_opt82_enable</i>         | (Optional)  |
| <i>snoop_hwaddr_verify_enable</i> | (Optional)  |
| <i>snoop_hdr</i>                  | (Optional)  |
| TABLE_intf_entry                  | (Optional)  |
| <i>intf_entry_if_index</i>        | (Optional)  |
| <i>intf_entry_trust_dhcp</i>      | (Optional) is DHCP snooping trusted on the interface          |
| <i>intf_entry_pkt_limit</i>       | (Optional) limit for DHCP packets per second on the interface |

## Command Mode

- /exec

# show ip dhcp snooping binding

show ip dhcp snooping binding [ <ip> | <mac> | vlan <vlan-range> |

## Syntax Description

|                   |  |
|-------------------|--|
| show              | Show running system information                            |
| ip                | Show the IP features of the system                         |
| dhcp              | Show items in DHCP   |
| snooping          | DHCP snooping  |
| binding           | DHCP snooping bindings                                     |
| <i>ip</i>         | (Optional) Binding entry IP address                        |
| <i>mac</i>        | (Optional) Binding entry MAC address                       |
| vlan              | (Optional) Binding entry VLAN                              |
| <i>vlan-range</i> | (Optional) VLAN ID 1-4094 or range(s): 1-5, 10 or 2-5,7-19 |

## Command Mode

- /exec

# show ip dhcp snooping statistics

```
show ip dhcp snooping statistics [ { vlan <vlan-id> interface <intf> } |

## show ip eigrp traffic

```
show { ip | ipv6 } eigrp [ <eigrp-ptag> ] traffic [ vrf { <vrf-name> | <vrf-known-name> | all } ] [ __readonly__
TABLE_asn <asn> TABLE_vrf <vrf> <hellos_sent> <hellos_rcvd> <updates_sent> <updates_rcvd>
<queries_sent> <queries_rcvd> <replies_sent> <replies_rcvd> <acks_sent> <acks_rcvd> <max_inqueue_depth>
<inqueue_drops> <sia_queries_sent> <sia_queries_rcvd> <sia_replies_sent> <sia_replies_rcvd> ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information             |
| ip                    | Display IP information                      |
| ipv6                  | Display IPv6 information                    |
| eigrp                 | Display EIGRP status and configuration      |
| vrf                   | (Optional) Display per-VRF information      |
| <i>vrf-name</i>       | (Optional) VRF name                         |
| <i>vrf-known-name</i> | (Optional) Known VRF name                   |
| all                   | (Optional) Display information for all VRFs |
| <i>eigrp-ptag</i>     | (Optional) Process tag                      |
| traffic               | IP-EIGRP Traffic Statistics                 |
| __readonly__          | (Optional)                                  |
| TABLE_asn             | (Optional) AS number table                  |
| <i>asn</i>            | (Optional) AS number                        |
| TABLE_vrf             | (Optional) VRF table                        |
| <i>vrf</i>            | (Optional) VRF name                         |
| <i>hellos_sent</i>    | (Optional) Number of Hellos sent            |
| <i>hellos_rcvd</i>    | (Optional) Number of Hellos received        |
| <i>updates_sent</i>   | (Optional) Number of Updates sent           |
| <i>updates_rcvd</i>   | (Optional) Number of Updates received       |
| <i>queries_sent</i>   | (Optional) Number of Queries sent           |
| <i>queries_rcvd</i>   | (Optional) Number of Queries received       |
| <i>replies_sent</i>   | (Optional) Number of Replies sent           |
| <i>replies_rcvd</i>   | (Optional) Number of Replies received       |

|                          |   |
|--------------------------|---|
| <i>acks_sent</i>         | (Optional) Number of ACKs sent            |
| <i>acks_rcvd</i>         | (Optional) Number of ACKs received        |
| <i>max_inqueue_depth</i> | (Optional) Input queue high water mark    |
| <i>inqueue_drops</i>     | (Optional) Input queue drops              |
| <i>sia_queries_sent</i>  | (Optional) Number of SIA queries sent     |
| <i>sia_queries_rcvd</i>  | (Optional) Number of SIA queries received |
| <i>sia_replies_sent</i>  | (Optional) Number of SIA replies sent     |
| <i>sia_replies_rcvd</i>  | (Optional) Number of SIA replies received |

**Command Mode**

- /exec

## show ip extcommunity-list

show ip extcommunity-list [ <extcl\_name> ] [ \_\_readonly\_\_ TABLE\_extcl <name> <action> <rule> ]

### Syntax Description

|                     |   |
|---------------------|---|
| show                | Show running system information                     |
| ip                  | Display IP information                              |
| extcommunity-list   | List extcommunity-list                              |
| <i>extcl_name</i>   | (Optional) Standard or expanded community-list name |
| <i>__readonly__</i> | (Optional)  |
| TABLE_extcl         | (Optional)  |
| <i>name</i>         | (Optional)  |
| <i>action</i>       | (Optional)  |
| <i>rule</i>         | (Optional)  |

### Command Mode

- /exec

# show ip fib distribution

show ip fib distribution [ pauz | rezum ]

## Syntax Description

|              |   |
|--------------|---|
| show         |   |
| ip           | ipv4                                      |
| fib          | forwarding information                    |
| distribution | fib distribution information              |
| pauz         | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |
| rezum        | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED |

## Command Mode

- /exec

# show ip fib distribution clients

show ip fib distribution clients [ \_\_readonly\_\_ <id><pid><name><shms><shme><shmn> ]

## Syntax Description

|              |                            |
|--------------|----------------------------|
| show         |                            |
| ip           | ipv4                       |
| fib          | forwarding information     |
| distribution | fib distribution info      |
| clients      | unicast client information |
| __readonly__ | (Optional)                 |

## Command Mode

- /exec

## show ip fib distribution mroute

```
show ip fib distribution mroute [ { <group> | <gprefix> } [ <source> ] ] [ table <id> ] [ __readonly__
TABLE_vrf [ <vrf-name> ] [ <table-name> ] [ <table-id> ] [ <table-wildcard> ] [ <total-num-groups> ] [

# show ip fib distribution multicast

```
show ip fib distribution multicast [ messages ] [ __readonly__ <fibstate> <slot> <accepting_routes>
<num_accepting_routes> ]
```

## Syntax Description

|                             |  |
|-----------------------------|--|
| show                        |  |
| ip                          | IP information                                       |
| fib                         | Forwarding Information                               |
| distribution                | FIB distribution information                         |
| multicast                   | Multicast FIB distribution information               |
| messages                    | (Optional) Outstanding Message Information           |
| <i>__readonly__</i>         | (Optional)   |
| <i>fibstate</i>             | (Optional) IP Multicast FIB process state            |
| <i>slot</i>                 | (Optional) Slot                                      |
| <i>accepting_routes</i>     | (Optional) Indicates whether FIB is accepting routes |
| <i>num_accepting_routes</i> | (Optional) Number of fibs accepting routes           |

## Command Mode

- /exec

# show ip fib distribution state

```
show ip fib distribution state [ __readonly__ <slot> <state><ttc><tprc><tv4ac><tv6ac> { TABLE_fib_state
<tid><tafi><prc><pc><tname> } ]
```

## Syntax Description

|                 |                            |
|-----------------|----------------------------|
| show            |                            |
| ip              | ipv4                       |
| fib             | forwarding information     |
| distribution    | fib distribution info      |
| state           | unicast fib state info     |
| __readonly__    | (Optional)                 |
| <i>slot</i>     | (Optional) slot number     |
| TABLE_fib_state | (Optional) fib-state table |

## Command Mode

- /exec

# show ip fib mroute

```
show ip fib mroute [ { <group> | <gprefix> } [ <source> ] ] [ table <table-id> ] [ module <module> ] [
__readonly__ <table_type> <num_groups> <num_sources> <src_len> <grp_len> <df_ordinal> <rpfif>

| module              | (Optional) slot   |
| <i>module</i>       | (Optional) slot number                                    |
| <i>__readonly__</i> | (Optional)  |
| <i>table_type</i>   | (Optional) Table Type                                     |
| <i>num_groups</i>   | (Optional) Number of group entries in the table           |
| <i>num_sources</i>  | (Optional) Number of (S, G) entries for the group address |
| <i>src_len</i>      | (Optional) Source Address Mask                            |
| <i>grp_len</i>      | (Optional) Group address Mask                             |
| <i>df_ordinal</i>   | (Optional) DF ordinal                                     |
| <i>rpfif</i>        | (Optional) RPF interface                                  |
| <i>rpf_ifindex</i>  | (Optional) RPF Interface ifIndex                          |
| <i>flag</i>         | (Optional) Route type flag                                |
| <i>flag_value</i>   | (Optional) hex value of route flag                        |
| <i>route_pkts</i>   | (Optional) Route packet count                             |

|                    |                                     |
|--------------------|-------------------------------------|
| <i>route_bytes</i> | (Optional) Route bytes              |
| <i>oiflist_id</i>  | (Optional) OIF list Identifier      |
| <i>platform_id</i> | (Optional) Platform-index           |
| <i>oif_count</i>   | (Optional) Number of OIFs           |
| <i>refcount</i>    | (Optional) OIF list Reference Count |
| <i>oifname</i>     | (Optional) OIF Interface name       |
| <i>oifindex</i>    | (Optional) OIF Interface ifIndex    |
| <i>oif_pkts</i>    | (Optional) OIF packets              |
| <i>oif_bytes</i>   | (Optional) OIF bytes                |

**Command Mode**

- /exec

# show ip fib route

```
show ip fib route [ vrf { <vrf-name> | <vrf-known-name> | <vrf-all> } | table <table_id> ] [ summary | <prefix>
[ longer-prefixes ] | <address> | interface <interface> | next-hop <nh> | attached | unresolved | adjacency {
<aif> <anh> | drop | glean | punt } ] [ module <module> | vrf { <vrf-name> | <vrf-known-name> | <vrf-all>
} ] + [ __readonly__ <header> <vrfname> <tableid> <prefix-count> <pfx> { <nexthop> | <special> } <intf>
<route-count> <path-count> <mask-length> <routes-per-mask> ]
```

## Syntax Description

|                       |   |
|-----------------------|---|
| show                  |   |
| ip                    | Display IP information                              |
| fib                   | Forwarding information                              |
| route                 | display IP routing table                            |
| vrf                   | (Optional) display info per VRF                     |
| <i>vrf-name</i>       | (Optional) VRF name                                 |
| <i>vrf-known-name</i> | (Optional) Known VRF name                           |
| vrf-all               | (Optional) Display information for all VRFs         |
| table                 | THIS KEYWORD OR VARIABLE IS NOT SUPPORTED           |
| <i>table_id</i>       | (Optional) table number                             |
| summary               | (Optional) display route counts                     |
| <i>prefix</i>         | (Optional) display single exact match route         |
| longer-prefixes       | (Optional) display longer prefixes                  |
| <i>address</i>        | (Optional) display single longest match route       |
| interface             | (Optional) display routes with this output i/f only |
| <i>interface</i>      | (Optional) output interface                         |
| next-hop              | (Optional) display routes with this next-hop only   |
| <i>nh</i>             | (Optional) next hop address                         |
| attached              | (Optional) display directly connected routes        |
| unresolved            | (Optional) display unresolved routes                |
| adjacency             | (Optional) display adjacency information            |
| <i>aif</i>            | (Optional) adjacency output interface               |
| <i>anh</i>            | (Optional) adjacency next-hop address               |

|                        |   |
|------------------------|---|
| drop                   | (Optional) display routes via drop adjacency  |
| glean                  | (Optional) display routes via glean adjacency |
| punt                   | (Optional) display routes via punt adjacency  |
| module                 | (Optional) slot                               |
| <i>module</i>          | (Optional) slot number                        |
| <i>__readonly__</i>    | (Optional)                                    |
| <i>header</i>          | (Optional) header string                      |
| <i>vrfname</i>         | (Optional) VRF name                           |
| <i>tableid</i>         | (Optional) table identifier                   |
| <i>prefix-count</i>    | (Optional) total number of prefix in VRF      |
| <i>px</i>              | (Optional) ipv4 prefix                        |
| <i>nexthop</i>         | (Optional) next hop address                   |
| <i>special</i>         | (Optional) special adjacencies                |
| <i>intf</i>            | (Optional) output interface                   |
| <i>route-count</i>     | (Optional) total number of routes in VRF      |
| <i>path-count</i>      | (Optional) total number of paths in VRF       |
| <i>mask-length</i>     | (Optional) length of mask                     |
| <i>routes-per-mask</i> | (Optional)                                    |

### Command Mode

- /exec

# show ip ftp source-interface

```
show ip ftp source-interface [ vrf { <vrf-name> | <vrf-known-name> } ] [ __readonly__ [ { TABLE_ipftpvrf
<vrfname> <ifname> } ] ]
```

## Syntax Description

|                       |  |
|-----------------------|--|
| show                  | Show running system information              |
| ip                    | Display IP information                       |
| ftp                   | Display FTP client information               |
| source-interface      | Display source interface information         |
| vrf                   | (Optional) Display per-VRF information       |
| <i>vrf-name</i>       | (Optional) VRF name                          |
| <i>vrf-known-name</i> | (Optional) Known VRF name                    |
| <i>__readonly__</i>   | (Optional)                                   |
| TABLE_ipftpvrf        | (Optional) source interface of ftp given vrf |
| <i>vrfname</i>        | (Optional) vrfname                           |
| <i>ifname</i>         | (Optional) ifname                            |

## Command Mode

- /exec

## show ip ftp source-interface vrf all

```
show ip ftp source-interface vrf all [ __readonly__ [ { TABLE_ipftp <vrfname> <ifname> } ] ]
```

### Syntax Description

|                  |                                      |
|------------------|--------------------------------------|
| show             | Show running system information      |
| ip               | Display IP information               |
| ftp              | Display FTP client information       |
| source-interface | Display source interface information |
| vrf              | Display per-VRF information          |
| all              | Display entries for all vrfs         |
| __readonly__     | (Optional)                           |
| TABLE_ipftp      | (Optional) source interface of ftp   |
| <i>vrfname</i>   | (Optional) vrfname                   |
| <i>ifname</i>    | (Optional) ifname                    |

### Command Mode

- /exec

## show ip http source-interface

```
show ip http source-interface [ vrf { <vrf-name> | <vrf-known-name> } ] [ __readonly__ [ { TABLE_iphttpvrf
<vrfname> <ifname> } ] ]
```

### Syntax Description

|                       |   |
|-----------------------|---|
| show                  | Show running system information               |
| ip                    | Display IP information                        |
| http                  | Display HTTP client information               |
| source-interface      | Display source interface information          |
| vrf                   | (Optional) Display per-VRF information        |
| <i>vrf-name</i>       | (Optional) VRF name                           |
| <i>vrf-known-name</i> | (Optional) Known VRF name                     |
| <i>__readonly__</i>   | (Optional)                                    |
| TABLE_iphttpvrf       | (Optional) source interface of http given vrf |
| <i>vrfname</i>        | (Optional) vrfname                            |
| <i>ifname</i>         | (Optional) ifname                             |

### Command Mode

- /exec

# show ip http source-interface vrf all

```
show ip http source-interface vrf all [ __readonly__ [ { TABLE_iphttp <vrfname> <ifname> } ] ]
```

## Syntax Description

|                  |                                      |
|------------------|--------------------------------------|
| show             | Show running system information      |
