

Configuring Bud Node

This chapter contains these sections:

- [VXLAN Bud Node Over vPC Overview, on page 1](#)
- [VXLAN Bud Node Over vPC Topology Example, on page 2](#)

VXLAN Bud Node Over vPC Overview

Figure 1: Underlay Network Based on PIM-SM and OSPF

Note For bud-node topologies, the source IP of the VTEP behind vPC must be in the same subnet as the infra VLAN. This SVI should have proxy ARP enabled. For example:

```
Interface Vlan2
ip proxy-arp
```

Note The **system nve infra-vlans** command specifies VLANs used for all SVI interfaces, for uplink interfaces with respect to bud-node topologies, and vPC peer-links in VXLAN as infra-VLANs. You must not configure certain combinations of infra-VLANs. For example, 2 and 514, 10 and 522, which are 512 apart.

For Cisco Nexus 9200, 9300-EX, and 9300-FX/FX2/FX3 and 9300-GX platform switches, use the **system nve infra-vlans** command to configure any VLANs that are used as infra-VLANs.

VXLAN Bud Node Over vPC Topology Example

- Enable the required features:

```
feature ospf
feature pim
feature interface-vlan
feature vn-segment-vlan-based
feature hsrp
feature lacp
feature vpc
feature nv overlay
```

- Configuration for PIM anycast RP.

In this example, 1.1.1.1 is the anycast RP address.

```
ip pim rp-address 1.1.1.1 group-list 225.0.0.0/8
```

- VLAN configuration

In this example, tenant VLANs 101-103 are mapped to vn-segments.

```
vlan 1-4,101-103,2000
vlan 101
    vn-segment 10001
vlan 102
    vn-segment 10002
vlan 103
    vn-segment 10003
```

- vPC configuration

```
vpc domain 1
 peer-switch
 peer-keepalive destination 172.31.144.213
 delay restore 180
 peer-gateway
 ipv6 nd synchronize
 ip arp synchronize
```

- Infra VLAN SVI configuration

```
interface Vlan2
 no shutdown
 no ip redirects
 ip proxy-arp
 ip address 10.200.1.252/24
 no ipv6 redirects
 ip router ospf 1 area 0.0.0.0
 ip pim sparse-mode
 ip igmp static-oif route-map match-mcast-groups
 hsrp version 2
 hsrp 1
 ip 10.200.1.254
```

- Route-maps for matching multicast groups

Each VXLAN multicast group needs to have a static OIF on the backup SVI MCT.

```
route-map match-mcast-groups permit 1
 match ip multicast group 225.1.1.1/32
```

- Backup SVI over MCT configuration

- Configuration Option 1:

```
interface Vlan2000
 no shutdown
 ip address 20.20.20.1/24
 ip router ospf 1 area 0.0.0.0
 ip pim sparse-mode
```

- Configuration Option 2:

```
interface Vlan2000
 no shutdown
 ip address 20.20.20.1/24
 ip router ospf 1 area 0.0.0.0
 ip pim sparse-mode
```

- vPC interface configuration that carries the infra VLAN

```
interface port-channel1
  switchport mode trunk
  switchport trunk allowed vlan 2
  vpc 1
```

- MCT configuration

```
interface port-channel100
  switchport mode trunk
  spanning-tree port type network
  vpc peer-link
```

Note You can choose either of the following two command procedures for creating the NVE interfaces. Use the first one for a small number of VNIs. Use the second procedure to configure a large number of VNIs.

NVE configuration

Option 1

```
interface nve1
  no shutdown
  source-interface loopback0
  member vni 10001 mcast-group 225.1.1.1
  member vni 10002 mcast-group 225.1.1.1
  member vni 10003 mcast-group 225.1.1.1
```

Option 2

```
interface nve1
  no shutdown
  source-interface loopback0
  global mcast-group 225.1.1.1
  member vni 10001
  member vni 10002
  member vni 10003
```

- Loopback interface configuration

```
interface loopback0
  ip address 101.101.101.101/32
  ip address 99.99.99.99/32 secondary
  ip router ospf 1 area 0.0.0.0
  ip pim sparse-mode
```

- Show commands

```

tor1# sh nve vni
Codes: CP - Control Plane      DP - Data Plane
      UC - Unconfigured        SA - Suppress ARP
