Cluster Expansion—Converged Nodes

Before you begin

- Converged nodes can be added after cluster creation.
- This procedure includes Windows Operating System installation.
- Prior to cluster expansion, ensure that the Windows ISO file is available.
- For Hyper-V clusters running on releases earlier than 3.5(2a), cluster expansion is supported for **converged nodes** only.
- **Step 1** Launch the Cisco HX Data Platform Installer.
- **Step 2** In the login page, enter the following credentials:

Username: root

Password (Default): Cisco123

Note Systems ship w

Systems ship with a default password of Ciscol23 that must be changed during installation. You cannot continue installation unless you specify a new user supplied password.

- Step 3 Check the I accept the terms and conditions checkbox, and click Login.
- Step 4 On the Select a Workflow page, select Cluster Expansion.
- **Step 5** On the **Cluster** page, complete the following fields and click **Continue**.

| Field | Description |
|-----------------------------|--------------------------------------------------------|
| Cluster Management Hostname | The hostname for the existing cluster. |
| User Name | Administrator username for the existing cluster. |
| Password | Password for the administrator user of the HX cluster. |

Step 6 On the **Credentials** page, complete the following fields and click **Continue**.

| Field | Description | |
|------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| UCS Manager Credentials | | |
| UCS Manager Hostname | Cisco UCS Manager FQDN or IP address | |
| UCS Manager User Name | Administrator user or a user with Cisco UCS Manager administrator privileges. | |
| Password | The password for UCS Manager. | |
| Domain Information | | |
| HX Service Account | The HX Service account associated with the existing cluster. | |
| Password | The password for the HX Service account. | |
| Constrained Delegation | | |
| Configure Constrained Delegation | Select one of the checkboxes. | |
| now(recommended) or Configure Constrained Delegation later | Constrained Delegation is required for VM Live Migration. To configure Constrained Delegation later, use the procedure described in Configuring a Static IP Address for Live Migration and VM Network. | |
| HX Service Account Password | Required for Constrained Delegation. | |
| Use HX Service Account | Click the checkbox if HX service account is provided. | |
| | If checked, the HX service account will be used for Constrained Delegation. The user must be a domain administrator. | |
| Username | Enter a domain level username. | |
| Password | Enter a domain level password. | |
| Hypervisor Credentials | , | |
| Local Administrator Account | Local administrator username for the Hyper-V hosts. | |
| Password | Password for the local administrator account. | |

Step 7 On the Node Selection page, view all the associated and unassociated servers under the Associated and Unassociated tabs respectively.

Under the **Unassociated** tab, you can choose to add any nodes to the existing cluster.

Under the **Associated** tab, you can choose to unassociate servers from the existing cluster.

- Step 8 On the UCSM Configuration page, view or modify the auto-populated details for the VLAN configuration and MAC Pool information for the existing cluster. Then, click Continue.
- **Step 9** On the **Hypervisor Configuration** page, complete the following fields:

| Field | Description |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Install Hypervisor (Hyper-V) | By default, this checkbox is selected. |
| | Leave the checkbox selected to enable OS installation and network configuration. Click Browse to select and upload the ISO file. Alternatively, drag and drop the ISO file into the area. |
| | From Select the Operating System you wish to install choose one of the following |
| | Windows Server 2016 Datacenter (Desktop Experience) |
| | Windows Server 2016 Datacenter (Core) |
| | Windows Server 2019 Datacenter (Desktop Experience) |

Click Continue.

- **Step 10** On the **Node Configuration** page, click **Add Converged Server** to add the servers to your existing cluster.
- **Step 11** Click **Start** to begin the expansion. The **Progress** page displays the progress of the configuration tasks
- **Step 12** Perform the following post installation steps:
 - Configuring a Static IP Address for Live Migration and VM Network
 - (Optional) Post Installation Constrained Delegation
 - Configure Local Default Paths
 - Checking the Windows Version on the Hyper-V Host
