CHAPTER 6

Configuring Firewall Load Balancing

This chapter describes how to configure firewall load balancing on your ACE. Firewall load balancing allows you to scale firewall protection by distributing traffic across multiple firewalls on a per-connection basis. All packets belonging to a particular connection must go through the same firewall. The firewall then allows or denies transmission of individual packets across its interfaces.

This chapter contains the following major sections:

- Firewall Overview
- Configuring Standard Firewall Load Balancing
- Configuring Stealth Firewall Load Balancing
- Displaying FWLB Configurations
- Firewall Load-Balancing Configuration Examples
- Where to Go Next

Firewall Overview

A firewall forms a physical barrier between two parts of a network, for example, the Internet and an intranet. When a firewall accepts a packet from one side (the Internet), it sends the packet through to the other side (the intranet). A firewall can modify a packet before passing it through or send it through unaltered. When a firewall rejects a packet, it typically discards the packet and logs the discarded packet as an event.
After a session is established and a flow of packets begins, a firewall can monitor each packet in the flow or allow the flow to continue unmonitored, depending on the policies that you configure on that firewall.

This section contains the following topics:
- Firewall Types
- How the ACE Distributes Traffic to Firewalls
- Supported Firewall Configurations

**Firewall Types**

The two basic types of firewalls are as follows:
- Standard firewalls
- Stealth firewalls

Standard firewalls have a presence on the network. You assign IP addresses to the firewalls, which allows other devices on the network to see and address them as devices. Each firewall has an IP address on the VLANs configured on both sides of the firewall.

Stealth firewalls have no presence on the network. You do not assign IP addresses to the firewalls, which prevents other devices on the network from seeing or addressing them. Instead, you configure alias IP addresses on the VLANs on both sides of the firewall. To the network, a stealth firewall is part of the wire.

Both firewall types do the following tasks:
- Examine traffic moving in both directions (between the protected and the unprotected sides of the network)
- Accept or reject packets based on user-defined policies
How the ACE Distributes Traffic to Firewalls

The ACE load balances traffic to devices configured in server farms. These devices can be firewalls, caches, servers, or any IP-addressable object, including an alias IP address. For more information about server farms, see the “Configuring a Server Farm” section in Chapter 2, Configuring Real Servers and Server Farms. When the ACE load balances traffic to firewalls, it performs the same function that it performs when it load balances Layer 3 traffic to real servers in a server farm.

The ACE uses load-balancing algorithms or predictors to determine how to balance the traffic among the devices configured in the server farms, independent of the device type. For FWLB, we recommend that you use only the hash address source and the hash address destination predictors. Using any other predictor with FWLB may fail and block traffic, especially for applications that have separate control and data channels, for example, FTP.

For more information about load-balancing predictor methods, see the “Configuring the Server Farm Predictor Method” section in Chapter 2, Configuring Real Servers and Server Farms.

Supported Firewall Configurations

The ACE can load balance traffic to both standard and stealth firewalls.

For standard firewalls, a single ACE or a pair of ACEs in two different Catalyst 6500 series switches or two different Cisco 7600 series routers load balances traffic among firewalls that contain unique IP addresses in a manner similar to how the ACE load balances traffic among servers in a server farm (see Figure 6-1).

In Figure 6-1, traffic moves through the firewalls and the firewalls filter the traffic in both directions. For traffic that originates on the Internet, ACE A load balances the traffic to the firewalls in the SF_INSEC server farm. For traffic that originates on the intranet, ACE B load balances the traffic to the firewalls in server farm SF_SEC. You configure the firewalls so that the return traffic flows through the same firewall as the original traffic.
For stealth firewalls, an ACE load balances traffic among interfaces with unique alias IP addresses in different ACEs that provides paths through the firewalls (see Figure 6-2). You configure a stealth firewall so that all traffic moving in both directions across a particular VLAN moves through the same firewall.
In Figure 6-2, traffic flows through the firewalls and the firewalls filter the traffic in both directions. On the path to the intranet, ACE A balances traffic across VLANs 101, 102, and 103 through the firewalls to ACE B. On the path to the Internet, ACE B balances traffic across VLANs 201, 202, and 203 through the firewalls to ACE A. Each ACE uses the alias IP addresses configured on the other ACE as targets for the load-balancing process.

Configuring Standard Firewall Load Balancing

This section describes how to configure firewall load balancing for standard firewalls. It contains the following topics:

- Standard FWLB Configuration Overview
- Standard FWLB Configuration Quick Starts
Standard FWLB Configuration Overview

In this standard FWLB configuration example (see Figure 6-1), you configure three firewalls (FW1, FW2, and FW3) between two ACEs (ACE A and ACE B). (You can also configure standard FWLB using a single ACE.) Traffic enters and exits the firewalls through shared VLANs on either side of the firewalls (VLAN 101 on the insecure side and VLAN 201 on the secure side). You assign unique IP addresses to each firewall configured as a real server in a server farm on each shared VLAN.

Other VLANs provide connectivity to the following:

- Internet (VLAN 100)
- Internal network (VLAN 200)
- Internal server farm (VLAN 20)

Standard FWLB Configuration Quick Starts

This section provides quick start tables that include step-by-step instructions for configuring standard FWLB on two ACEs in separate Catalyst 6500 series switches. You can also configure standard FWLB on a single ACE. This section includes the following topics:

- Standard FWLB Configuration Quick Start for ACE A
- Standard FWLB Configuration Quick Start for ACE B

Standard FWLB Configuration Quick Start for ACE A

Table 6-1 provides a quick overview of the steps required to configure standard FWLB on ACE A (see Figure 6-1). Each step includes the CLI command required to complete the task.
### Table 6-1  Standard FWLB Configuration Quick Start for ACE A

<table>
<thead>
<tr>
<th>Task and Command Example</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1.</strong> If you are operating in multiple contexts, observe the CLI prompt to verify that you are operating in the desired context. If necessary, change to, or directly log in to, the correct context.</td>
</tr>
</tbody>
</table>
| host1/Admin# **change to C1**  
host1/C1# |
| The rest of the examples in this table use the Admin context, unless otherwise specified. For details on creating contexts, see the Cisco Application Control Engine Module Administration Guide. |
| **2.** Enter configuration mode. |
| host1/Admin# **config**  
Enter configuration commands, one per line. End with CNTL/Z  
host1/Admin(config)# |
| **3.** Configure an access control list (ACL) to allow traffic. You can modify the ACL to suit your application needs. For more information about configuring ACLs, see the Cisco Application Control Engine Module Security Configuration Guide. |
| host1/Admin(config)# **access-list ACL1 line 10 extended permit ip any any**  
host1/Admin(config-acl)# **exit** |
| **4.** Configure three real servers to represent the insecure side of the firewalls on VLAN 101. For more information about configuring real servers, see Chapter 2, Configuring Real Servers and Server Farms. |
| host1/Admin(config)# **rserver FW_INSEC_1**  
host1/Admin(config-rserver-host)# **ip address 100.101.1.1**  
host1/Admin(config-rserver-host)# **inservice**  
host1/Admin(config-rserver-host)# **exit** |
| host1/Admin(config)# **rserver FW_INSEC_2**  
host1/Admin(config-rserver-host)# **ip address 100.101.1.2**  
host1/Admin(config-rserver-host)# **inservice**  
host1/Admin(config-rserver-host)# **exit** |
| host1/Admin(config)# **rserver FW_INSEC_3**  
host1/Admin(config-rserver-host)# **ip address 100.101.1.3**  
host1/Admin(config-rserver-host)# **inservice**  
host1/Admin(config-rserver-host)# **exit** |
5. Configure a server farm to handle connections originating from the insecure side of the firewalls (Internet). The ACE selects a firewall based on source IP address using the hash address source predictor. For more information about configuring server farms, see Chapter 2, Configuring Real Servers and Server Farms.

```
host1/Admin(config)# serverfarm SF_INSEC
host1/Admin(config-sfarm-host)# transparent
host1/Admin(config-sfarm-host)# predictor hash address source 255.255.255.255
host1/Admin(config-sfarm-host)# rserver FW_INSEC_1
host1/Admin(config-sfarm-host-rs)# inservice
host1/Admin(config-sfarm-host-rs)# exit
host1/Admin(config-sfarm-host)# rserver FW_INSEC_2
host1/Admin(config-sfarm-host-rs)# inservice
host1/Admin(config-sfarm-host-rs)# exit
host1/Admin(config-sfarm-host)# rserver FW_INSEC_3
host1/Admin(config-sfarm-host-rs)# inservice
host1/Admin(config-sfarm-host-rs)# exit
host1/Admin(config-sfarm-host)# exit
```

6. Configure a Layer 7 load-balancing policy map to balance requests to server farm SF-INSEC. Associate the default class map and the SF-INSEC server farm with the policy map. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

```
host1/Admin(config)# policy-map type loadbalance first-match LB_FW_INSEC
host1/Admin(config-pmap-lb)# class class-default
host1/Admin(config-pmap-lb-c)# serverfarm SF_INSEC
host1/Admin(config-pmap-lb-c)# exit
host1/Admin(config-pmap-lb)# exit
```

7. Configure a Layer 3 class map to classify traffic from the Internet that matches VIP address 200.1.1.1 on VLAN 100 on the insecure side of the firewalls. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

```
host1/Admin(config)# class-map match-any FW_VIP
host1/Admin(config-cmap)# match virtual-address 200.1.1.1
host1/Admin(config-cmap)# exit
```
8. Configure a Layer 3 policy map and associate the Layer 3 class map and the Layer 7 policy map with it to complete the traffic policy configuration. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

```plaintext
host1/Admin(config)# policy-map multi-match POL_INSEC
host1/Admin(config-pmap)# class FW_VIP
host1/Admin(config-pmap-c)# loadbalance vip inservice
host1/Admin(config-pmap-c)# loadbalance policy LB_FW_INSEC
host1/Admin(config-pmap-c)# exit
host1/Admin(config-pmap)# exit
```

9. Configure an interface that the ACE uses to receive traffic from the Internet and to send traffic that originates from the intranet to the Internet. Apply the ACL (ACL1) and the Layer 3 policy (POL_INSEC) to the interface. For more information about configuring interfaces, see the Cisco Application Control Engine Module Routing and Bridging Configuration Guide.

```plaintext
host1/Admin(config)# interface vlan 100
host1/Admin(config-if)# ip address 100.100.1.100 255.255.0.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# service-policy input POL_INSEC
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# exit
```

10. Configure an interface on the insecure side of the firewalls. The ACE uses this interface to load balance traffic to the firewalls and to receive traffic that originates from the intranet. For more information about configuring interfaces, see the Cisco Application Control Engine Module Routing and Bridging Configuration Guide.

```plaintext
host1/Admin(config)# interface vlan 101
host1/Admin(config-if)# ip address 100.101.1.101 255.255.0.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# mac-sticky enable
host1/Admin(config-if)# service-policy input POL_INSEC
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# Ctrl-z
```

Standard FWLB Configuration Quick Start for ACE B

Table 6-2 provides a quick overview of the steps required to configure standard FWLB on ACE B (see Figure 6-1). Each step includes the CLI command and a reference to the procedure required to complete the task.

Table 6-2  Standard FWLB Configuration Quick Start for ACE B

<table>
<thead>
<tr>
<th>Task and Command Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. If you are operating in multiple contexts, observe the CLI prompt to verify that you are operating in the desired context. If necessary, change to, or directly log in to, the correct context.</td>
</tr>
<tr>
<td>host1/Admin# <code>chargeto C1</code></td>
</tr>
<tr>
<td>host1/C1#</td>
</tr>
<tr>
<td>The rest of the examples in this table use the Admin context, unless otherwise specified. For details on creating contexts, see the Cisco Application Control Engine Module Administration Guide.</td>
</tr>
<tr>
<td>2. Enter configuration mode.</td>
</tr>
<tr>
<td>host1/Admin# <code>config</code></td>
</tr>
<tr>
<td>Enter configuration commands, one per line. End with CNTL/Z</td>
</tr>
<tr>
<td>host1/Admin(config)#</td>
</tr>
</tbody>
</table>
Configuring Standard Firewall Load Balancing

3. Configure an ACL to allow traffic. You can modify the ACL to suit your application needs. For more information about configuring ACLs, see the Cisco Application Control Engine Module Security Configuration Guide.

   host1/Admin(config)# access-list ACL1 line 10 extended permit ip any any
   host1/Admin(config-acl)# exit

4. Configure three real servers to represent the secure side of the firewalls on VLAN 201. For more information about configuring real servers, see Chapter 2, Configuring Real Servers and Server Farms.

   host1/Admin(config)# rserver FW_SEC_1
   host1/Admin(config-rserver-host)# ip address 100.201.1.1
   host1/Admin(config-rserver-host)# inservice
   host1/Admin(config-rserver-host)# exit

   host1/Admin(config)# rserver FW_SEC_2
   host1/Admin(config-rserver-host)# ip address 100.201.1.2
   host1/Admin(config-rserver-host)# inservice
   host1/Admin(config-rserver-host)# exit

   host1/Admin(config)# rserver FW_SEC_3
   host1/Admin(config-rserver-host)# ip address 100.201.1.3
   host1/Admin(config-rserver-host)# inservice
   host1/Admin(config-rserver-host)# exit
5. Configure a server farm to handle connections that originate from the secure side of the firewall (intranet). In this case, the ACE selects a firewall based on the destination IP address using the hash address destination predictor. This predictor allows the ACE to select the same firewall for return flows and buddy connections. For example, you want both the FTP control and data channels to pass through the same firewall. For more information about configuring server farms, see Chapter 2, Configuring Real Servers and Server Farms.

    host1/Admin(config)# serverfarm SF_SEC
    host1/Admin(config-sfarm-host)# transparent
    host1/Admin(config-sfarm-host)# predictor hash address destination 255.255.255.255
    host1/Admin(config-sfarm-host)# rserver FW_SEC_1
    host1/Admin(config-sfarm-host-rs)# inservice
    host1/Admin(config-sfarm-host-rs)# exit
    host1/Admin(config-sfarm-host)# rserver FW_SEC_2
    host1/Admin(config-sfarm-host-rs)# inservice
    host1/Admin(config-sfarm-host-rs)# exit
    host1/Admin(config-sfarm-host)# rserver FW_SEC_3
    host1/Admin(config-sfarm-host-rs)# inservice
    host1/Admin(config-sfarm-host)# exit

6. Configure two real servers to load balance content on VLAN 20 on the secure side of the firewall. For more information about configuring server farms, see Chapter 2, Configuring Real Servers and Server Farms.

    host1/Admin(config)# rserver REAL1
    host1/Admin(config-rserver-host)# ip address 20.1.1.1
    host1/Admin(config-rserver-host)# inservice
    host1/Admin(config-rserver-host)# exit

    host1/Admin(config)# rserver REAL2
    host1/Admin(config-rserver-host)# ip address 20.1.1.2
    host1/Admin(config-rserver-host)# inservice
    host1/Admin(config-rserver-host)# exit

    host1/Admin(config)# rserver REAL3
    host1/Admin(config-rserver-host)# ip address 20.1.1.3
    host1/Admin(config-rserver-host)# inservice
    host1/Admin(config-rserver-host)# exit
Chapter 6  Configuring Firewall Load Balancing

Configuring Standard Firewall Load Balancing

Table 6-2  Standard FWLB Configuration Quick Start for ACE B

<table>
<thead>
<tr>
<th>Task and Command Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>7. Configure a standard server farm of HTTP servers. For more information about configuring server farms, see Chapter 2, Configuring Real Servers and Server Farms.</td>
</tr>
</tbody>
</table>

```bash
host1/Admin(config)# serverfarm SEC_20_SF
host1/Admin(config-sfarm-host)# rserver REAL1
host1/Admin(config-sfarm-host-rs)# inservice
host1/Admin(config-sfarm-host-rs)# exit
host1/Admin(config-sfarm-host)# rserver REAL2
host1/Admin(config-sfarm-host-rs)# inservice
host1/Admin(config-sfarm-host-rs)# exit
host1/Admin(config-sfarm-host)# rserver REAL3
host1/Admin(config-sfarm-host-rs)# inservice
host1/Admin(config-sfarm-host-rs)# exit
host1/Admin(config-sfarm-host)# exit
```

| 8. Configure a Layer 7 policy map that load balances traffic to the HTTP server farm on VLAN 20 using the default class map. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing. |

```bash
host1/Admin(config)# policy-map type loadbalance first-match SEC_20_LB
host1/Admin(config-pmap-lb)# class class-default
host1/Admin(config-pmap-lb-c)# serverfarm SEC_20_SF
host1/Admin(config-pmap-lb-c)# exit
host1/Admin(config-pmap-lb)# exit
```

| 9. Configure a Layer 3 class map to classify traffic destined to the virtual IP address 200.1.1.1 configured on VLAN 201. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing. |

```bash
host1/Admin(config)# class-map match-any SEC_20_VS
host1/Admin(config-cmap)# match virtual-address 200.1.1.1 255.255.0.0 any
host1/Admin(config-cmap)# exit
```
Table 6-2  Standard FWLB Configuration Quick Start for ACE B

Task and Command Example

10. Configure a Layer 3 policy map and associate the Layer 3 class map (SEC_20_VS) and the Layer 7 policy map (SEC_20_LB) with it. This step completes the policy that load balances traffic to the HTTP servers on VLAN 20. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

   host1/Admin(config)# policy-map multi-match POL_SEC_20
   host1/Admin(config-pmap)# class SEC_20_VS
   host1/Admin(config-pmap-c)# loadbalance vip inservice
   host1/Admin(config-pmap-c)# loadbalance policy SEC_20_LB

11. Configure a Layer 7 policy map to load balance traffic that originates from either VLAN 200 or VLAN 20 and is destined for the Internet to the secure side of the firewalls on VLAN 201. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

   host1/Admin(config)# policy-map type loadbalance first-match LB_FW_SEC
   host1/Admin(config-pmap-lb)# class class-default
   host1/Admin(config-pmap-lb-c)# serverfarm SF_SEC
   host1/Admin(config-pmap-lb-c)# exit
   host1/Admin(config-pmap-lb)# exit

12. Configure a Layer 3 class map to classify all traffic that originates on the secure side of the firewalls and is destined for the Internet. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

   host1/Admin(config)# class-map match-any FW_SEC_VIP
   host1/Admin(config-cmap)# match virtual-address 0.0.0.0 0.0.0.0
   host1/Admin(config-cmap)# exit
Chapter 6  Configuring Firewall Load Balancing

Configuring Standard Firewall Load Balancing

13. Configure a Layer 3 policy map and associate the Layer 7 policy map (LB_FW_SEC) and the Layer 3 class map (FW_SEC_VIP) with it. Enable the VIP for load balancing. This step completes the policy that load balances any request that originates on the secure side of the firewalls and is destined for the Internet. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

```
host1/Admin(config)# policy-map multi-match POL_SEC
host1/Admin(config-pmap)# class FW_SEC_VIP
host1/Admin(config-pmap-c)# loadbalance vip inservice
host1/Admin(config-pmap-c)# loadbalance LB_FW_SEC
host1/Admin(config-pmap-c)# exit
host1/Admin(config-pmap)# exit
```

14. Configure an interface on the secure side of the firewalls for traffic that originates from the Internet and is passing through the firewalls. The ACE uses this interface to catch traffic from the firewalls, load balance it to the HTTP server farm, and route it to the remote host. For more information about configuring interfaces, see the Cisco Application Control Engine Module Routing and Bridging Configuration Guide.

```
host1/Admin(config)# interface vlan 201
host1/Admin(config-if)# ip address 100.201.1.201 255.255.0.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# mac-sticky enable
host1/Admin(config-if)# service-policy input POL_SEC_20
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# exit
```

15. Configure an interface on the secure side of the firewalls for traffic that originates from the HTTP server farm on VLAN 20. For more information about configuring interfaces, see the Cisco Application Control Engine Module Routing and Bridging Configuration Guide.

```
host1/Admin(config)# interface vlan 20
host1/Admin(config-if)# ip address 20.1.1.20 255.255.255.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# service-policy input POL_SEC
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# exit
```

<tr>
<td>host1/Admin(config-if)# exit</td>
</tr>
</tbody>
</table>
16. Configure an interface on the secure side of the firewalls for traffic that originates from the remote host on VLAN 200. For more information about configuring interfaces, see the *Cisco Application Control Engine Module Routing and Bridging Configuration Guide*.

```
host1/Admin(config)# interface vlan 200
host1/Admin(config-if)# ip address 200.1.1.200 255.255.255.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# service-policy input POL_SEC
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# Ctrl-z
```

17. Use the following `show` commands to verify your FWLB configuration:

```
host1/Admin# show running-config access-list
host1/Admin# show running-config class-map
host1/Admin# show running-config interface
host1/Admin# show running-config policy-map
host1/Admin# show running-config rserver
host1/Admin# show running-config serverfarm
```

18. (Optional) Save your configuration changes to flash memory.

```
host1/Admin# copy running-config startup-config
```
Configuring Stealth Firewall Load Balancing

This section describes how to configure stealth FWLB. It contains the following topics:

- Stealth Firewall Load-Balancing Configuration Overview
- Stealth Firewall Load-Balancing Configuration Quick Starts

**Note**
For information about configuring the firewall devices in your network, refer to the documentation included with your firewall product.

Stealth Firewall Load-Balancing Configuration Overview

**Note**
In a stealth FWLB configuration, you must configure two ACEs, each in a separate Catalyst 6500 series switch or each in a separate Cisco 7600 series router.

In this stealth FWLB configuration example (see Figure 6-2), ACE A and ACE B load balance traffic through three firewalls. Each firewall configured as a real server in a server farm connects to two different VLANs, one on the insecure side and one on the secure side of the firewall. Stealth firewalls do not have IP addresses on VLANs. Instead, you configure alias IP addresses on each ACE interface to which a firewall connects. The ACEs use the alias IP addresses to direct traffic to the correct firewall.

On the path from the Internet to the intranet, traffic enters the insecure side of the firewalls through separate VLANs (VLAN 101, VLAN 102, and VLAN 103) and exits the secure side of the firewalls through separate VLANs (VLAN 201, VLAN 202, and VLAN 203). On the path from the intranet to the Internet, the flow is reversed. Other VLANs provide connectivity to the following locations:

- Internet (VLAN 100)
- Remote host (VLAN 200)
- Intranet server farm (VLAN 20)
Stealth Firewall Load-Balancing Configuration Quick Starts

This section provides quick start tables that include step-by-step instructions about how to configure stealth FWLB on two separate ACE modules. This section includes the following topics:

- Stealth FWLB Configuration Quick Start for ACE A
- Stealth FWLB Configuration Quick Start for ACE B

Stealth FWLB Configuration Quick Start for ACE A

Table 6-3 provides a quick overview of the steps required to configure stealth FWLB on ACE A (insecure side). Each step includes the CLI command required to complete the task.

Table 6-3  Stealth FWLB Configuration Quick Start for ACE A

<table>
<thead>
<tr>
<th>Task and Command Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. If you are operating in multiple contexts, observe the CLI prompt to verify that you are operating in the desired context. If necessary, change to, or directly log in to, the correct context.</td>
</tr>
</tbody>
</table>
|   host1/Admin# changeto C1  
   host1/C1# |
| The rest of the examples in this table use the Admin context, unless otherwise specified. For details on creating contexts, see the Cisco Application Control Engine Module Administration Guide. |
| 2. Enter configuration mode. |
|   host1/Admin# config  
   Enter configuration commands, one per line. End with CNTL/Z  
   host1/Admin(config)# |
| 3. Configure an ACL to allow traffic to the ACE. You can modify the ACL to suit your application needs. For more information about configuring ACLs, see the Cisco Application Control Engine Module Security Configuration Guide |
| host1/Admin(config)# access-list ACL1 line 10 extended permit ip any any  
   host1/Admin(config-acl)# exit |
4. Configure three real servers to represent the insecure side of the firewalls on VLANs 101, 102, and 103. For more information about configuring real servers, see Chapter 2, Configuring Real Servers and Server Farms.

    host1/Admin(config)# rserver FW_INSEC_1
    host1/Admin(config-rserver-host)# ip address 101.0.201.100
    host1/Admin(config-rserver-host)# inservice
    host1/Admin(config-rserver-host)# exit

    host1/Admin(config)# rserver FW_INSEC_2
    host1/Admin(config-rserver-host)# ip address 101.0.202.100
    host1/Admin(config-rserver-host)# inservice
    host1/Admin(config-rserver-host)# exit

    host1/Admin(config)# rserver FW_INSEC_3
    host1/Admin(config-rserver-host)# ip address 101.0.203.100
    host1/Admin(config-rserver-host)# inservice
    host1/Admin(config-rserver-host)# exit

5. Configure a server farm to handle connections originating from the insecure side of the firewalls (Internet). The ACE selects a firewall based on source IP address using the hash address source predictor. For more information about configuring server farms, see Chapter 2, Configuring Real Servers and Server Farms.

    host1/Admin(config)# serverfarm SF_INSEC
    host1/Admin(config-sfarm-host)# transparent
    host1/Admin(config-sfarm-host)# predictor hash address source 255.255.255.255
    host1/Admin(config-sfarm-host)# rserver FW_INSEC_1
    host1/Admin(config-sfarm-host-rs)# inservice
    host1/Admin(config-sfarm-host-rs)# exit
    host1/Admin(config-sfarm-host)# rserver FW_INSEC_2
    host1/Admin(config-sfarm-host-rs)# inservice
    host1/Admin(config-sfarm-host-rs)# exit
    host1/Admin(config-sfarm-host)# rserver FW_INSEC_3
    host1/Admin(config-sfarm-host-rs)# inservice
    host1/Admin(config-sfarm-host-rs)# exit
    host1/Admin(config-sfarm-host)# exit

---

Task and Command Example

6. Configure a Layer 7 load-balancing policy map to forward packets received from the firewall to the Internet. Associate the default class map with the policy map. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

   host1/Admin(config)# policy-map type loadbalance first-match FORWARD_FW_INSEC
   host1/Admin(config-pmap-lb)# class class-default
   host1/Admin(config-pmap-lb-c)# forward
   host1/Admin(config-pmap-lb-c)# exit
   host1/Admin(config-pmap-lb)# exit

7. Configure a Layer 3 class map to classify traffic from the firewalls that matches any VIP address, netmask, and protocol on VLANs 101, 102, and 103 on the insecure side of the firewalls.

   host1/Admin(config)# class-map match-any FORWARD_VIP
   host1/Admin(config-cmap)# match virtual-address 0.0.0.0 0.0.0.0
   host1/Admin(config-cmap)# exit

8. Configure a Layer 3 policy map and associate the Layer 3 forwarding class map (FORWARD_VIP) and the Layer 7 forwarding policy map (FORWARD_FW_INSEC) with it to complete the forwarding policy configuration.

   host1/Admin(config)# policy-map multi-match FORWARD_INSEC
   host1/Admin(config-pmap)# class FORWARD_VIP
   host1/Admin(config-pmap-c)# loadbalance vip inservice
   host1/Admin(config-pmap-c)# loadbalance policy FORWARD_FW_INSEC
   host1/Admin(config-pmap-c)# exit
   host1/Admin(config-pmap)# exit

9. Configure a Layer 7 load-balancing policy map to balance requests from the Internet to server farm SF-INSEC. Associate the default class map and the SF-INSEC server farm with the policy map.

   host1/Admin(config)# policy-map type loadbalance first-match LB-FW-INSEC
   host1/Admin(config-pmap-lb)# class class-default
   host1/Admin(config-pmap-lb-c)# serverfarm SF_INSEC
   host1/Admin(config-pmap-lb-c)# exit
   host1/Admin(config-pmap-lb)# exit
### Table 6-3  Stealth FWLB Configuration Quick Start for ACE A (continued)

**Task and Command Example**

10. Configure a Layer 3 class map to classify traffic from the Internet that matches VIP address 200.1.1.1, netmask 255.255.0.0, and any protocol on VLAN 100 on the insecure side of the firewalls.

```plaintext
host1/Admin(config)# class-map match-any FW_VIP
host1/Admin(config-cmap)# match virtual-address 200.1.1.1 255.255.0.0 any
host1/Admin(config-cmap)# exit
```

11. Configure a Layer 3 policy map and associate the Layer 3 class map (FW-VIP) and the Layer 7 policy map (LB_FW_INSEC) with it to complete the load-balancing policy configuration.

```plaintext
host1/Admin(config)# policy-map multi-match POL_INSEC
host1/Admin(config-pmap)# class FW_VIP
host1/Admin(config-pmap-c)# loadbalance vip inservice
host1/Admin(config-pmap-c)# loadbalance policy LB_FW_INSEC
host1/Admin(config-pmap-c)# exit
host1/Admin(config-pmap)# exit
```

12. Configure an interface that the ACE uses to receive traffic from the Internet and load balance the traffic to the insecure side of the firewall. Apply the ACL (ACL1) and the Layer 3 policy (POL_INSEC) to the interface. For more information about configuring interfaces, see the *Cisco Application Control Engine Module Routing and Bridging Configuration Guide*.

```plaintext
host1/Admin(config)# interface vlan 100
host1/Admin(config-if)# ip address 100.100.1.100 255.255.0.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# service-policy input POL_INSEC
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# exit
```
13. Configure an interface on the insecure side of the firewalls that ACE A uses to load balance traffic to FW1 and to receive traffic that originates from the intranet. For more information about configuring interfaces, see the Cisco Application Control Engine Module Routing and Bridging Configuration Guide.

```plaintext
host1/Admin(config)# interface vlan 101
host1/Admin(config-if)# ip address 101.0.101.10 255.255.255.0
host1/Admin(config-if)# alias 101.0.101.100 255.255.255.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# mac-sticky enable
host1/Admin(config-if)# service-policy input FORWARD_INSEC
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# exit
```

14. Configure an interface on the insecure side of the firewalls that ACE A uses to load balance traffic to FW2 and to receive traffic that originates from the intranet. For more information about configuring interfaces, see the Cisco Application Control Engine Module Routing and Bridging Configuration Guide.

```plaintext
host1/Admin(config)# interface vlan 102
host1/Admin(config-if)# ip address 101.0.102.20 255.255.255.0
host1/Admin(config-if)# alias 101.0.102.100 255.255.255.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# mac-sticky enable
host1/Admin(config-if)# service-policy input FORWARD_INSEC
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# exit
```

15. Configure an interface on the insecure side of the firewalls that ACE A uses to load balance traffic to the FW3 and to receive traffic that originates from the intranet. For more information about configuring interfaces, see the Cisco Application Control Engine Module Routing and Bridging Configuration Guide.

```plaintext
host1/Admin(config)# interface vlan 103
host1/Admin(config-if)# ip address 101.0.103.30 255.255.255.0
host1/Admin(config-if)# alias 101.0.103.100 255.255.255.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# mac-sticky enable
host1/Admin(config-if)# service-policy input FORWARD_INSEC
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# Ctrl-z
```
Stealth FWLB Configuration Quick Start for ACE A (continued)

<table>
<thead>
<tr>
<th>Task and Command Example</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>16.</strong> Use the following <code>show</code> commands to verify your FWLB configuration:</td>
</tr>
<tr>
<td>host1/Admin# <code>show running-config access-list</code></td>
</tr>
<tr>
<td>host1/Admin# <code>show running-config class-map</code></td>
</tr>
<tr>
<td>host1/Admin# <code>show running-config interface</code></td>
</tr>
<tr>
<td>host1/Admin# <code>show running-config policy-map</code></td>
</tr>

| 17. (Optional) Save your configuration changes to flash memory. |
| host1/Admin# `copy running-config startup-config` |

Stealth FWLB Configuration Quick Start for ACE B

Table 6-4 provides a quick overview of the steps required to configure stealth FWLB on ACE B (secure side). Each step includes the CLI command required to complete the task.

Stealth FWLB Configuration Quick Start for ACE B

<table>
<thead>
<tr>
<th>Task and Command Example</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1.</strong> If you are operating in multiple contexts, observe the CLI prompt to verify that you are operating in the desired context. If necessary, change to, or directly log in to, the correct context.</td>
</tr>
<tr>
<td>host1/Admin# <code>changeto C1</code></td>
</tr>
<tr>
<td>host1/C1#</td>
</tr>
</tbody>
</table>

The rest of the examples in this table use the Admin context, unless otherwise specified. For details on creating contexts, see the *Cisco Application Control Engine Module Administration Guide*.

| 2. Enter configuration mode. |
| host1/Admin# `config` |
| Enter configuration commands, one per line. End with CNTL/Z |
| host1/Admin(config)# |
3. Configure an ACL to allow traffic to the ACE. You can modify the ACL to suit your application needs. For more information about configuring ACLs, see the *Cisco Application Control Engine Module Security Configuration Guide*.

```bash
host1/Admin(config)# access-list ACL1 line 10 extended permit ip any any
host1/Admin(config-acl)# exit
```

4. Configure three real servers to represent the secure side of the firewalls on VLANs 201, 202, and 203. For more information about configuring real servers, see Chapter 2, Configuring Real Servers and Server Farms.

```bash
host1/Admin(config)# rserver FW_SEC_1
host1/Admin(config-rserver-host)# ip address 101.0.101.100
host1/Admin(config-rserver-host)# inservice
host1/Admin(config-rserver-host)# exit

host1/Admin(config)# rserver FW_SEC_2
host1/Admin(config-rserver-host)# ip address 101.0.102.100
host1/Admin(config-rserver-host)# inservice
host1/Admin(config-rserver-host)# exit

host1/Admin(config)# rserver FW_SEC_3
host1/Admin(config-rserver-host)# ip address 101.0.103.100
host1/Admin(config-rserver-host)# inservice
host1/Admin(config-rserver-host)# exit
```
Cisco Application Control Engine Module Server Load-Balancing Configuration Guide

Chapter 6      Configuring Firewall Load Balancing

Configuring Stealth Firewall Load Balancing

Table 6-4    Stealth FWLB Configuration Quick Start for ACE B (continued)

<table>
<thead>
<tr>
<th>Task and Command Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>5. Configure a server farm to handle connections that originate from the secure side of the firewall (intranet). In this case, the ACE selects a firewall based on the destination IP address using the hash address destination predictor. This predictor allows the ACE to select the same firewall for return flows and buddy connections. For example, you want both the FTP control and data channels to pass through the same firewall. For more information about configuring server farms, see Chapter 2, Configuring Real Servers and Server Farms.</td>
</tr>
<tr>
<td>host1/Admin(config)# serverfarm SF_SEC</td>
</tr>
<tr>
<td>host1/Admin(config-sfarm-host)# transparent</td>
</tr>
<tr>
<td>host1/Admin(config-sfarm-host)# predictor hash address destination 255.255.255.255</td>
</tr>
<tr>
<td>host1/Admin(config-sfarm-host)# rserver FW_SEC_1</td>
</tr>
<tr>
<td>host1/Admin(config-sfarm-host)# inservice</td>
</tr>
<tr>
<td>host1/Admin(config-sfarm-host)# rserver FW_SEC_2</td>
</tr>
<tr>
<td>host1/Admin(config-sfarm-host)# inservice</td>
</tr>
<tr>
<td>host1/Admin(config-sfarm-host)# rserver FW_SEC_3</td>
</tr>
<tr>
<td>host1/Admin(config-sfarm-host)# inservice</td>
</tr>
<tr>
<td>host1/Admin(config-sfarm-host)# exit</td>
</tr>
<tr>
<td>6. Configure three real servers to load balance the content on VLAN 20 on the secure side of the firewall. For more information about configuring real servers, see Chapter 2, Configuring Real Servers and Server Farms.</td>
</tr>
<tr>
<td>host1/Admin(config)# rserver REAL1</td>
</tr>
<tr>
<td>host1/Admin(config-rserver-host)# ip address 20.1.1.1</td>
</tr>
<tr>
<td>host1/Admin(config-rserver-host)# inservice</td>
</tr>
<tr>
<td>host1/Admin(config-rserver-host)# exit</td>
</tr>
<tr>
<td>host1/Admin(config)# rserver REAL2</td>
</tr>
<tr>
<td>host1/Admin(config-rserver-host)# ip address 20.1.1.2</td>
</tr>
<tr>
<td>host1/Admin(config-rserver-host)# inservice</td>
</tr>
<tr>
<td>host1/Admin(config-rserver-host)# exit</td>
</tr>
<tr>
<td>host1/Admin(config)# rserver REAL3</td>
</tr>
<tr>
<td>host1/Admin(config-rserver-host)# ip address 20.1.1.3</td>
</tr>
<tr>
<td>host1/Admin(config-rserver-host)# inservice</td>
</tr>
<tr>
<td>host1/Admin(config-rserver-host)# exit</td>
</tr>
</tbody>
</table>
7. Configure a standard server farm of HTTP servers to load balance requests to the HTTP servers on VLAN 20. For more information about configuring server farms, see Chapter 2, Configuring Real Servers and Server Farms.

```
host1/Admin(config)# serverfarm SEC_20_SF
host1/Admin(config-sfarm-host)# rserver REAL1
host1/Admin(config-sfarm-host-rs)# inservice
host1/Admin(config-sfarm-host-rs)# exit
host1/Admin(config-sfarm-host)# rserver REAL2
host1/Admin(config-sfarm-host-rs)# inservice
host1/Admin(config-sfarm-host-rs)# exit
host1/Admin(config-sfarm-host)# rserver REAL3
host1/Admin(config-sfarm-host-rs)# inservice
host1/Admin(config-sfarm-host-rs)# exit
host1/Admin(config-sfarm-host)# exit
```

8. Configure a Layer 7 policy map that load balances traffic to the HTTP server farm on VLAN 20 using the default class map. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

```
host1/Admin(config)# policy-map type loadbalance first-match SEC_20_LB
host1/Admin(config-pmap-lb)# class class-default
host1/Admin(config-pmap-lb-c)# serverfarm SEC_20_SF
host1/Admin(config-pmap-lb-c)# exit
host1/Admin(config-pmap-lb)# exit
```

9. Configure a Layer 3 class map to classify traffic destined to the virtual IP address 200.1.1.1 on VLANs 201, 202, and 203. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

```
host1/Admin(config)# class-map match-any SEC_20_VS
host1/Admin(config-cmap)# match virtual-address 200.1.1.1 255.255.0.0 any
host1/Admin(config-cmap)# exit
```
10. Configure a Layer 3 policy map and associate the Layer 3 class map (SEC_20_VS) and the Layer 7 policy map (SEC_20_LB) with it. This step completes the policy that load balances traffic to the HTTP servers on VLAN 20. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

```
host1/Admin(config)# policy-map multi-match POL_SEC_20
host1/Admin(config-pmap)# class SEC_20_VS
host1/Admin(config-pmap-c)# loadbalance vip inservice
host1/Admin(config-pmap-c)# loadbalance policy SEC_20_LB
host1/Admin(config-pmap-c)# exit
host1/Admin(config-pmap)# exit
```

11. Configure a Layer 7 policy map to load balance requests that originate from either VLAN 200 or VLAN 20 and are destined for the Internet to the secure side of the firewalls on VLAN 201. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

```
host1/Admin(config)# policy-map type loadbalance first-match LB_FW_SEC
host1/Admin(config-pmap-lb)# class class-default
host1/Admin(config-pmap-lb-c)# serverfarm SF_SEC
host1/Admin(config-pmap-lb-c)# exit
host1/Admin(config-pmap-lb)# exit
```

12. Configure a Layer 3 class map to classify all traffic with any IP address, netmask, and protocol originating on the secure side of the firewalls. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

```
host1/Admin(config)# class-map match-any FW_SEC_VIP
host1/Admin(config-cmap)# match virtual-address 0.0.0.0 0.0.0.0
host1/Admin(config-cmap)# exit
```
Configure a Layer 3 policy map and associate the Layer 7 policy map (LB_FW_SEC) and the Layer 3 class map (FW_SEC_VIP) with it. Enable the VIP for load balancing. This step completes the policy that load balances any request that originates on the secure side of the firewalls and destined for the Internet. For more information about configuring traffic policies for SLB, see Chapter 3, Configuring Traffic Policies for Server Load Balancing.

```
host1/Admin(config)# policy-map multi-match POL_SEC
host1/Admin(config-pmap)# class FW_SEC_VIP
host1/Admin(config-pmap-c)# loadbalance vip inservice
host1/Admin(config-pmap-c)# loadbalance policy LB_FW_SEC
host1/Admin(config-pmap-c)# exit
host1/Admin(config-pmap)# exit
```

14. Configure an interface on the secure side of the firewalls that the ACE uses to send traffic to FW1 from the intranet and to receive traffic that originates from the Internet and passing through the firewall. For more information about configuring interfaces, see the Cisco Application Control Engine Module Routing and Bridging Configuration Guide.

```
host1/Admin(config)# interface vlan 201
host1/Admin(config-if)# ip address 101.0.201.10 255.255.255.0
host1/Admin(config-if)# alias 101.0.201.100 255.255.255.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# mac-sticky enable
host1/Admin(config-if)# service-policy input POL_SEC_20
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# exit
```
### Table 6-4  Stealth FWLB Configuration Quick Start for ACE B (continued)

#### Task and Command Example

15. Configure an interface on the secure side of the firewalls that the ACE uses to send traffic to FW2 from the intranet and to receive traffic that originates from the Internet and is passing through the firewall. For more information about configuring interfaces, see the *Cisco Application Control Engine Module Routing and Bridging Configuration Guide*.

```
host1/Admin(config)# interface vlan 202
host1/Admin(config-if)# ip address 101.0.202.20 255.255.255.0
host1/Admin(config-if)# alias 101.0.202.100 255.255.255.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# mac-sticky enable
host1/Admin(config-if)# service-policy input POL_SEC_20
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# exit
```

16. Configure an interface on the insecure side of the firewall that the ACE uses to send traffic to FW3 from the intranet and to receive traffic that originates from the Internet and is passing through the firewall. For more information about configuring interfaces, see the *Cisco Application Control Engine Module Routing and Bridging Configuration Guide*.

```
host1/Admin(config)# interface vlan 203
host1/Admin(config-if)# ip address 101.0.203.30 255.255.255.0
host1/Admin(config-if)# alias 101.0.203.100 255.255.255.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# mac-sticky enable
host1/Admin(config-if)# service-policy input POL_SEC_20
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# exit
```

17. Configure an interface that the ACE uses to receive traffic that originates from the remote host on VLAN 200 and is destined to the Internet. Apply the ACL (ACL1) and the Layer 3 policy map (POL_SEC) to the interface. For more information about configuring interfaces, see the *Cisco Application Control Engine Module Routing and Bridging Configuration Guide*.

```
host1/Admin(config)# interface vlan 200
host1/Admin(config-if)# ip address 200.1.1.200 255.255.255.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# service-policy input POL_SEC
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# exit
```
18. Configure an interface that the ACE uses to receive traffic that originates from the HTTP server farm on VLAN 20 and is destined to the Internet. Apply the ACL (ACL1) and the Layer 3 policy map (POL_SEC) to the interface. For more information about configuring interfaces, see the Cisco Application Control Engine Module Routing and Bridging Configuration Guide.

```
host1/Admin(config)# interface vlan 20
host1/Admin(config-if)# ip address 20.100.1.100 255.255.0.0
host1/Admin(config-if)# access-group input ACL1
host1/Admin(config-if)# service-policy input POL_SEC
host1/Admin(config-if)# no shutdown
host1/Admin(config-if)# Ctrl-z
```

19. Use the following `show` commands to verify your FWLB configuration:

```
host1/Admin# show running-config access-list
host1/Admin# show running-config class-map
host1/Admin# show running-config interface
host1/Admin# show running-config policy-map
host1/Admin# show running-config rserver
host1/Admin# show running-config serverfarm
```

20. (Optional) Save your configuration changes to flash memory.

```
host1/Admin# copy running-config startup-config
```
Displaying FWLB Configurations

You can display your entire running configuration by using the `show running-config` command in Exec mode. The syntax of this command is as follows:

```
show running-config
```

To display sections of the running-config that pertain to FWLB, use the following commands in Exec mode:

- `show running-config access-list`
- `show running-config class-map`
- `show running-config interface`
- `show running-config policy-map`
- `show running-config rserver`
- `show running-config serverfarm`

Firewall Load-Balancing Configuration Examples

This section provides examples of standard and stealth FWLB configurations. It contains the following topics:

- Example of a Standard Firewall Load-Balancing Configuration
- Example of a Stealth Firewall Configuration

Example of a Standard Firewall Load-Balancing Configuration

The following example shows those portions of the running configuration that pertain to standard FWLB. The configuration is based on two ACE modules each in a separate Catalyst 6500 series switch with the firewalls situated between them (see Figure 6-1). You can also configure standard FWLB using a single ACE.

ACE A Configuration—Standard Firewall Load Balancing

```
access-list ACL1 line 10 extended permit ip any any
```
rserver host FW_INSEC_1
  ip address 100.101.1.1
  inservice
rserver host FW_INSEC_2
  ip address 100.101.1.2
  inservice
rserver host FW_INSEC_3
  ip address 100.101.1.3
  inservice
serverfarm INSEC_SF
  transparent
  predictor hash address source 255.255.255.255
rserver FW_INSEC_1
  inservice
rserver FW_INSEC_2
  inservice
rserver FW_INSEC_3
  inservice

  service-policy input POL_SEC
  no shutdown
Example of a Stealth Firewall Configuration

The following example shows those portions of the running configuration that pertain to stealth FWLB. This configuration requires two ACE modules each residing in a different Catalyst 6500 series switch.

ACE A Configuration—Stealth Firewall Load Balancing

access-list ACL1 line 10 extended permit ip any any

rserver FW_INSEC_1
  ip address 101.0.201.100
  inservice
rserver FW_INSEC_2
  ip address 101.0.202.100
  inservice
rserver FW_INSEC_3
  ip address 101.0.203.100
  inservice

serverfarm INSEC_SF
  transparent
  predictor hash address source 255.255.255.255
rserver FW_INSEC_1
  inservice
rserver FW_INSEC_2
  inservice
rserver FW_INSEC_3
  inservice

class-map match-any FORWARD-VIP
  10 match virtual-address 0.0.0.0 0.0.0.0 any
class-map match-any FW_VIP
  10 match virtual-address 200.1.1.1 255.255.0.0 any
policy-map type loadbalance first-match FORWARD_FW_INSEC
  class class-default
    forward
policy-map type loadbalance first-match LB_FW_INSEC
  class class-default
    serverfarm INSEC_SF
policy-map multi-match FORWARD_INSEC
  class FORWARD_VIP
    loadbalance vip inservice
    loadbalance policy FORWARD_FW_INSEC
ACE B Configuration—Stealth Firewall Load Balancing

Where to Go Next

If you want to use toolkit command language (TCL) scripts with the ACE, see Appendix A, Using TCL Scripts with the ACE.
