Troubleshooting the Installation

This chapter describes how to troubleshoot the installation of SIPs and SPAs on the Catalyst 6500 Series switch. This chapter contains the following sections:

- Troubleshooting, page 7-1
- Using debug Commands, page 7-2
- Interpreting Console Error Messages, page 7-3
- Packing a SPA for Shipment, page 7-3
- Packing a SIP for Shipment, page 7-4

Troubleshooting

This section describes troubleshooting the installation of the SIPs and SPAs. Possible problems, observations and comments, and solutions are indicated for the following troubleshooting symptoms:

- SIP transitions repeatedly from on to off
- SIP is deactivated
- SPA is down and the line protocol is down

<table>
<thead>
<tr>
<th>SIP Transitions Repeatedly From On to Off</th>
<th>Observations and Comments</th>
<th>Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Possible Problem</td>
<td></td>
<td></td>
</tr>
<tr>
<td>SIP is booting up; this is normal operation</td>
<td>SIP STATUS LED alternates green, amber, or off</td>
<td>Wait 30 seconds until the boot process completes and the STATUS LED stays on.</td>
</tr>
<tr>
<td>SIP does not go beyond the bootup stage</td>
<td>SIP STATUS LED transitions continue and alternates green, amber, or off</td>
<td>Follow the recommended action for the displayed error message.</td>
</tr>
<tr>
<td>SIP FPGA is not up to date</td>
<td>During SIP unitization, the need to update the FPGA is automatically detected</td>
<td>Follow the system prompts to update the FPGA image. If the SIP is cycling because of an FPD problem, the most likely cause is a FPD failure or that the FPD package file is not present. For more information about performing FPD upgrades, refer to the “Upgrading Field-Programmable Devices” chapter in the Catalyst 6500 Series Switch SIP, SSC, and SPA Software Configuration Guide.</td>

## Using debug Commands

Along with the other `debug` commands supported on the Catalyst 6500 Series switch, you can obtain specific debug information for modules and carrier cards using the `debug hw-module` privileged EXEC command. For more information about the `debug hw-module` command and other `debug` commands specific to the Cisco IOS software release 12.2SX, see the *Cisco IOS Master Command List, Release 12.2SX* at this URL:

The `debug hw-module` command is intended for use by Cisco Systems technical support personnel.
Because debugging output is assigned high priority in the CPU process, it can render the system unusable. For this reason, use `debug` commands only to troubleshoot specific problems or during troubleshooting sessions with Cisco technical support personnel. Moreover, it is best to use `debug` commands during periods of lower network traffic and fewer users. Debugging during these periods decreases the likelihood that increased `debug` command processing overhead will affect system use.

For more information about other `debug` commands that can be used on a Catalyst 6500 Series switch, see the *Cisco IOS Debug Command Reference, Release 12.2* at this URL:

**Interpreting Console Error Messages**

To view the explanations and recommended actions for Catalyst 6500 Series switch error messages, including messages related to SIPs, SSCs, and SPAs, see the following documents:

- *Cisco IOS Release 12.2SX System Message Guide* at this URL:
- *System Messages for 12.2S* (for error messages in Release 12.2S) at this URL:

**Packing a SPA for Shipment**

This section provides step-by-step instructions for packing a SPA and the cable-management brackets for shipment. Before beginning this procedure, you should have the following original Cisco Systems packaging materials:

- Thermoform container (transparent plastic-molded clamshell)
- Carton

**Caution**

The Cisco Systems original packaging is to be used for the shipment of all SPAs and cable-management brackets. Failure to properly use Cisco Systems packaging can result in damage or loss of product.

**Warning**

During this procedure, wear grounding wrist straps to avoid ESD damage to the card. Do not directly touch the backplane with your hand or any metal tool, or you could shock yourself.

**Note**

These instructions assume that the SPA and cable-management brackets have been removed from the router according to the recommended procedures specified in this guide.

To pack a SPA and the cable-management brackets for shipment, perform the following steps:

**Step 1**

Open the Thermoform container and place the SPA and each of the cable-management brackets into the appropriate cavities.
Packing a SIP for Shipment

This section provides step-by-step instructions for packing a SIP for shipment. Before beginning this procedure, you should have the following original Cisco Systems packaging materials:

- Static shielding bag
- Smaller inner carton
- Larger exterior carton
- Two foam packing cushions

Caution
Always handle the SPA by the carrier edges and handle; never touch the SPA components or connector pins.

Step 2
Close the Thermoform container. Be sure to lock the snaps securely.

Step 3
Check that the Thermoform container is fully closed. Apply tape or a label closure over the opening to ensure the container stays closed during shipping.

Step 4
Place the Thermoform container into the carton.

Step 5
Close the carton.

Step 6
Apply tape over the carton flap to ensure the carton stays closed during shipping.

Caution
The Cisco Systems original packaging is to be used for the shipment of all SIPs. Failure to properly use Cisco Systems packaging can result in damage or loss of product.

Warning
During this procedure, wear grounding wrist straps to avoid ESD damage to the card. Do not directly touch the backplane with your hand or any metal tool, or you could shock yourself.

Note
These instructions assume that the SIP has been removed from the router according to the recommended procedures specified in this guide.

To pack a SIP for shipment, perform the following steps:

Step 1
Insert the SIP into the static shielding bag.

Step 2
Insert the bagged SIP into the smaller inner carton. Be careful to position the SIP so that the bottom motherboard lip is held by the packaging cutout.

Step 3
Close the smaller inner carton and tape the sides closed.

Step 4
Place the sealed smaller inner carton containing the SIP into the two foam packing cushions (they only fit one way).
Step 5  Place the sealed smaller inner carton and packing cushions into the larger exterior carton, and seal the larger exterior carton with tape for shipment.
