SPANTREE-3-BAD_PORT_NUM_SIZE	3-Error	Rejected an attempt to set the port number field size to [dec] bits valid range is [dec] to [dec] bits.	The spanning tree port identifier is a 16 bit wide field that is by default divided evenly between port priority and port number each sub field being 8 bits wide. This allows the port number field to represent port numbers between 1 and 255. However on systems with greater than 255 ports the size of port number portion of the port id must be increased to support the greater number of ports. This is done by the STP subsystem at system init time since the maximum number of ports on a particular platform will not change. This error would only occur due to an error in the platform specific code which caused it to request more or less	stp	"show version"
SPANTREE-3-ERR_NOUNIDIR_EDGE	3-Error	[chars]: Portfast disabled reverting to bidirectional mode	Because UCP is for edge ports only portfast must be configured. This messageis typically seen when spanning-tree portfast is enabled on a port thenauthentication control-direction is set to inbound unidirectional and then	stp	"Re-enable portfast on the edge port.
