This message is displayed in standby console when attempting to bootup or restart or reload a WMA SPA without installing a subpackage in the standby RP although the SPA is or will be operational due to prior wma spa package installation in active RP. If switchover takes place the WMA SPA will still be operational. But any subsequent soft or hard oir of the SPA will fail due to missing sub package required to boot up the SPA. Hence it is recommended to complete the wma spa package installation in standby also before switchover or immidiately after switchover.	-	"Download the sub-package required for the " "affected SPA from the Cisco CCO software download site and install " "the same for the standby RP as is done on active RP. Please refer " "to the Cisco ASR platform documentation for obtaining and installing " "sub-packages."

IPCOIR-6-LCWAITINFO	6-Information	CLC [dec]/[dec]> [chars]	The NPE OIR handler received a console error message from a distributed line card while in the crashwait state. The handler enters this state when it detects a Keepalive timeout on a distributed line card. During the crash wait period the LC is expected to collect and store crash information. At the end of the wait period the NPE will reload the LC. During this time it's possible that the LC will try to send error messages to it's console. Normally these would be sent to the NPE via the logger. However during the wait period the IPC link between the NPE and the LC is down so the OIR debug code provides a rudimentary method of collecting and displaying these messages	ubr7200-sw	"Report the problem to Cisco. Include the log messages along with the " "output of the show tech command and crashinfo file from the LC."

Because the sender of these messages is a line card that is crashing it is not completely unbelievable that this might happen. The source of the crash on the line card is more interesting. If this occurs without a line card crashing it is due to a stray/errant BPE message that should be persued. This could also be due to a dropped BPE message.	ubr10k-sw	"Find the source of the crash on the line card if one was crashing " "when the message occurred. LUA_VM-2-INITIALIZATION	2-Critical	Cannot initialize the Lua Virtual Machine	The Lua Virtual Machine is a critical component of the shell-manager process. MLS6-MLS_MODE_CHANGE	6-Information	MMLS: Replication Mode Changed to [chars] mode [chars]	When auto detection of replication mode is enabled the system will transition to ingress mode when an egress incapable linecard is inserted. The system will transition back to egress mode when the last egress incapable linecard is removed	cat6000	"Transition between ingress and egress mode will cause temporary loss of traffic to prevent this use the command mls ip replication-mode ingress"
MLS6-MLS_EGRESS_LOCAL_NOT_APPLICABLE	6-Information	MMLS: Egress Local feature is NOT applicable in Ingress mode	When the system transistions from Egress replication mode to ingress the Egress Local feature will become non-applicable even if the Egress Local feature is enabled.	cat6000	"This is only to inform the user that Egress Local feature is not applicable in Ingress mode. If the Egress Local feature is required actions need to be taken to restore the system replication mode to egress"

MLSM-6-VLAN_INSTALL_FAILURE	6-Information	Unable to locate secondary-vlan for [inet][inet][dec]	This message happens when RP was not able to determine the secondary vlan for the source in secondary vlan. After finite retries RP gives up installing the shortcut in hardware. This can happen when a new flow is installed or when there is a RPF change. In such situations flow will be software switched.	cat6000-mmls	"Make sure ARP table is populated for sources in secondary vlan by explicity 'ping'ing the source and the ARP table should contain the primary as well as secondary vlan information. To enable creation of hardware shortcut do a 'clear ip mroute <group> <source>' for the specific flow."

MLSM-6-SCP_ERROR	6-Information	MMLS: SCP failure detected between RP and SP	This can happen when EOBC channel is too busy or NMP is too busy so that draco side does not get response even after few retries by ICC layer.	cat6000	"Under some stressful condition when communication between RP and SP side can not be maintained this message will be printed. MMLS will keep trying to recover from situation by sending message to SP. The restart message to SP has exponential back off upto 160 second"
MLSM-6-SM_INSTALL_FAILURE	6-Information	interface/mask entry installation failed on [inet]/[dec] vlan[dec]	This message happens when Interface/mask entry to punt directly connected sources to the router could not be installed in HW-CEF table. This happens system is running out of available CEF entries. In this situation there might be blackholing of traffic for the directly connected sources on this interface	cat6000-mmls	"Modify the network config such that hardware resource limitation is not hit and ensure that interface/mask entry is installed."

			The ACL specified in the message text associates the key chain specified\n\ in the message text with a set of RSVP neighbors. RSVP uses the specified\n\ key chain to authenticate each RSVP message exchanged with that set of\n\ RSVP neighbors after the association is configured. Subsequently the\n\ specified ACL has been reconfigured such that the key chain association\n\ is no longer valid for one or more RSVP neighbors in the set. This causes\n\ RSVP to search the configuration for another suitable key chain to use\n\ with those neighbors. If no such key chain is found RSVP will no longer\n\ be able to provide authentication for messages exchanged with those RSVP\n\ neighbors. This causes RSVP to discard RSVP messages from that set of\n\ neighbors. Because this may ultimately lead to loss of RSVP functionality\n\ with those neighbors RSVP generates this system message. This system\n\ message may also be generated if the ACL is subsequently changed so that\n\ it re-associates RSVP neighbors with the specified key chain. If RSVP is\n\ not using another key chain for the set of RSVP neighbors specified by\n\ the ACL RSVP will begin using the
