

## Ethernet Performance Monitoring on Untagged EFPs

The Ethernet Performance Monitoring on untagged EFPs feature enables sessions to run on untagged Ethernet flow points (EFPs).

- Information about Ethernet Performance Monitoring on Untagged EFPs, on page 1
- How to Configure Ethernet Performance Monitoring on Untagged EFPs, on page 2
- Example for Configuring Ethernet Performance Monitoring on Untagged EFPs, on page 4
- Additional References for Ethernet Performance Monitoring on Untagged EFPs, on page 5
- Feature Information for Ethernet Performance Monitoring on Untagged EFPs, on page 5

### Information about Ethernet Performance Monitoring on Untagged EFPs

### **Untagged EFPs**

The Ethernet Performance Monitoring on untagged EFPs feature enables sessions to run on untagged Ethernet flow points (EFPs). If an EFP is configured as untagged, then the EFP handles any frames without a dot1q tag, that it receives. Any frames sent using this EFP do not have a dot1q tag.

The dot1q tag contains class of service (CoS) bits, which are used by EPM to test delay or loss of packets with a specific CoS. This support is unavailable when using EPM over untagged EFPs but all other performance monitoring functionality is supported.

## How to Configure Ethernet Performance Monitoring on Untagged EFPs

### **Configuring Ethernet Performance Monitoring on Untagged EFPs**

#### **SUMMARY STEPS**

- 1. enable
- 2. configure terminal
- **3. interface** *type/number*
- 4. service instance ID ethernetevc-id
- 5. encapsulation untagged
- end
- 7. configure terminal
- 8. ip sla operation-number
- **9. ethernet** y1731 {**delay** | **loss**} type **domain** domain-name {**evc** evc-id | **vlan** vlan-id} {**mpid** target-mp-id | mac-address target-address} **cos** cos-value {**source** {**mpid** source-mp-id | mac-address tsource-address}}
- **10**. exit
- 11. ip sla schedule operation-number start-time time life life
- **12**. end

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	interface type/number	Configures an interface and enters interface configuration mode.
	Example:	
	Device(config)# interface GigabitEthernet0/0	
Step 4	service instance ID ethernetevc-id	Configures a service instance and enters service instance onfiguration mode.
	Example:	
	Device(config-if)# service instance 1 ethernet 50	

	Command or Action	Purpose	
Step 5	encapsulation untagged	Sets the encapsulation as untagged.	
	Example:		
	Device(config-if-srv)# encapsulation untagged		
Step 6	end	Returns to privileged EXEC mode.	
	Example:		
	Device(config-if-srv)# end		
Step 7	configure terminal	Enters global configuration mode.	
	Example:		
	Device# configure terminal		
Step 8	ip sla operation-number	Configures a Cisco IOS IP Service Level Agreements	
	Example:	(SLAs) operation and enter IP SLA configuration mode.	
	Device(config)# ip sla 501		
Step 9	ethernet y1731 {delay   loss} type domain domain-name {evc evc-id   vlan vlan-id} {mpid	Begins configuring the receiver on the responder and enters IP SLA Y.1731 delay configuration mode.	
	target-mp-id   mac-address target-address   cos	The source-mp-id or source-address configured by	
	<pre>cos-value {source {mpid source-mp-id   mac-address tsource-address}}</pre>	this command corresponds to that of the MEP being	
	Example:	configured.	
		Note The type argument in the above command	
	Device (config-ip-sla)# ethernet y1731 delay DMM domain domain1 evc evc1 mpid 101 cos 0 source mpid 100	syntax takes the following values: DMM, SLM.	
Step 10	exit	Exits IP SLA configuration mode and returns to privileged	
	Example:	EXEC mode.	
	Device (config-ip-sla) # exit		
Step 11	ip sla schedule operation-number start-time time life life	Begins a probe with a specified operation number starting at the specified timestamp (or 'now' for immediately) for	
	Example:	the specified lifetime in seconds (or 'forever' to run until the configuration is removed).	
	Device(config-sla-y1731-delay)# ip sla schedule 501 start-time now life forever	the configuration is removed).	
Step 12	end	Returns to privileged EXEC mode.	
	Example:		
	Device(config-sla-y1731-delay)# end		

### **Verifying Ethernet Performance Monitoring on Untagged EFPs**

Perform the following task to verify the Ethernet Performance Monitoring on Untagged EFPs

#### **SUMMARY STEPS**

1. Enter the show ip sla statistics to display performance monitoring sessions with untagged EFPs.

#### **DETAILED STEPS**

Enter the **show ip sla statistics** to display performance monitoring sessions with untagged EFPs.

#### Example:

```
Device# show ip sla statistics

IPSLAs Latest Operation Statistics

IPSLA operation id: 5
Loss Statistics for Y1731 Operation 5
Type of operation: Y1731 Loss Measurement
Latest operation start time: *09:08:29.825 PST Wed Jun 11 2014
Latest operation return code: OK
Distribution Statistics:

Interval
Start time: *09:08:29.825 PST Wed Jun 11 2014
Elapsed time: 9 seconds
Number of measurements initiated: 8
Number of measurements completed: 8
Flag: OK
```

## **Example for Configuring Ethernet Performance Monitoring on Untagged EFPs**

### **Example: Example for Configuring EPM Untagged EFPs**

```
Device> enable

Device# configure terminal

Device(config)# interface GigabitEthernet0/0

Device(config-if)# service instance 1 ethernet

Device(config-if-srv)# encapsulation untagged

Device(config-if-srv)# end

Device# configure terminal

Device(config)# ip sla 501

Device(config-ip-sla)# ethernet y1731 delay DMM domain domain1 evc evc1 mpid 101 cos 0

source mpid 100

Device(config-sla-y1731-delay)# exit

Device(config)# ip sla schedule 501 start-time now life forever
```

Device(config) # end

# Feature Information for Ethernet Performance Monitoring on Untagged EFPs

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to <a href="https://www.cisco.com/go/cfn">www.cisco.com/go/cfn</a>. An account on Cisco.com is not required.

Table 1: Feature Information for Ethernet Performance Monitoring on Untagged EFPs

Feature Name	Releases	Feature Information
Ethernet Performance Monitoring on Untagged EFPs	Cisco IOS Release15.5(2)S	The Ethernet Performance Monitoring on untagged EFPs feature enables sessions to run on untagged Ethernet flow points (EFPs).
		This feature is enabled on Cisco Aggregation Services ASR 903 Series Routers.  No commands were introduced or modified.
