

Flexible NetFlow—IPv4 Unicast Flows

The Flexible Netflow—IPv4 Unicast Flows feature enables Flexible NetFlow to monitor IPv4 traffic.

- Finding Feature Information, on page 1
- Information About Flexible NetFlow IPv4 Unicast Flows, on page 1
- How to Configure Flexible NetFlow IPv4 Unicast Flows, on page 1
- Configuration Examples for Flexible NetFlow IPv4 Unicast Flows, on page 12

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Information About Flexible NetFlow IPv4 Unicast Flows

Flexible NetFlow—IPv4 Unicast Flows Overview

This feature enables Flexible NetFlow to monitor IPv4 traffic.

How to Configure Flexible NetFlow IPv4 Unicast Flows

Creating a Flow Record

Perform this task to configure a customized flow record.

Customized flow records are used to analyze traffic data for a specific purpose. A customized flow record must have at least one **match** criterion for use as the key field and typically has at least one **collect** criterion for use as a nonkey field.

There are hundreds of possible permutations of customized flow records. This task shows the steps that are used to create one of the possible permutations. Modify the steps in this task as appropriate to create a customized flow record for your requirements.

SUMMARY STEPS

- 1. enable
- 2. configure terminal
- **3. flow record** *record-name*
- 4. description description
- 5. match {ip | ipv6} {destination | source} address
- **6.** Repeat Step 5 as required to configure additional key fields for the record.
- 7. match flow cts {source | destination} group-tag
- 8.
- **9.** Repeat the above step as required to configure additional nonkey fields for the record.
- **10**. end
- 11. show flow record record-name
- 12. show running-config flow record record-name

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	flow record record-name	Creates a flow record and enters Flexible NetFlow flow
	Example:	record configuration mode.
	Device(config)# flow record FLOW-RECORD-1	This command also allows you to modify an existing flow record.
Step 4	description description	(Optional) Creates a description for the flow record.
	Example:	
	Device(config-flow-record)# description Used for basic traffic analysis	

	Command or Action	Purpose	
Step 5	<pre>match {ip ipv6} {destination source} address Example: Device(config-flow-record) # match ipv4 destination address</pre>	Note	This example configures the IPv4 destination address as a key field for the record. For information about the other key fields available for the match ipv4 command, and the other match commands that are available to configure key fields.
Step 6	Repeat Step 5 as required to configure additional key fields for the record.	_	
Step 7	<pre>match flow cts {source destination} group-tag Example: Device(config-flow-record) # match flow cts source group-tag Device(config-flow-record) # match flow cts</pre>	Note	This example configures the CTS source group tag and destination group tag as a key field for the record. For information about the other key fields available for the match ipv4/ipv6 command, and the other match commands that are available to configure key fields.
	destination group-tag	Note	 Ingress: In an incoming packet, if a header is present, SGT will reflect the same value as the header. If no value is present, it will show zero. The DGT value will not depend on the ingress port SGACL configuration. Egress: If either propagate SGT or CTS is disabled on the egress interface, then SGT will be zero. In an outgoing packet, if SGACL configuration that corresponds to the (SGT, DGT) exists, DGT will be non-zero. If SGACL is disabled on the egress port/VLAN or if global SGACL enforcement is disabled, then DGT will be zero
Step 8	Example:	Configure record.	es the input interface as a nonkey field for the This example configures the input interface as a nonkey field for the record.

	Command or Action	Purpose
Step 9	Repeat the above step as required to configure additional nonkey fields for the record.	_
Step 10	end Example:	Exits Flexible NetFlow flow record configuration mode and returns to privileged EXEC mode.
	Device(config-flow-record)# end	
Step 11	show flow record record-name Example:	(Optional) Displays the current status of the specified flow record.
	Device# show flow record FLOW_RECORD-1	
Step 12	show running-config flow record record-name Example:	(Optional) Displays the configuration of the specified flow record.
	Device# show running-config flow record FLOW_RECORD-1	

Configuring the Flow Exporter

Perform this required task to configure the flow exporter.

Note

Each flow exporter supports only one destination.

You can export to a destination using either an IPv4 or IPv6 address.

SUMMARY STEPS

- 1. enable
- 2. configure terminal
- **3. flow exporter** *exporter-name*
- 4. description description
- **5. destination** {*ip-address* | *hostname*} [**vrf** *vrf-name*]
- 6. dscp dscp
- **7. source** *interface-type interface-number*
- 8. output-features
- 9. template data timeout seconds
- 10. transport udp udp-port
- 11. ttl seconds
- **12**. end
- **13. show flow exporter** *exporter-name*
- 14. show running-config flow exporter exporter-name

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	flow exporter exporter-name	Creates the flow exporter and enters Flexible NetFlow
	Example:	flow exporter configuration mode.
	Device(config)# flow exporter EXPORTER-1	This command also allows you to modify an existing flow exporter.
Step 4	description description	(Optional) Configures a description to the exporter that
	Example:	will appear in the configuration and the display of the show flow exporter command.
	Device(config-flow-exporter)# description Exports to the datacenter	
Step 5	destination {ip-address hostname} [vrf vrf-name]	Specifies the IP address or hostname of the destination
	Example:	system for the exporter.
	Device(config-flow-exporter)# destination 172.16.10.2	Note You can export to a destination using either an IPv4 or IPv6 address.
Step 6	dscp dscp	(Optional) Configures differentiated services code p
	Example:	(DSCP) parameters for datagrams sent by the exporter.
	Device(config-flow-exporter)# dscp 63	• The range for the <i>dscp</i> argument is from 0 to 63. Default: 0.
Step 7	source interface-type interface-number	(Optional) Specifies the local interface from which the
	Example:	exporter will use the IP address as the source IP address for exported datagrams.
	Device(config-flow-exporter)# source ethernet 0/0	
Step 8	output-features	(Optional) Enables sending export packets using quality
	Example:	of service (QoS) and encryption.
	Device(config-flow-exporter)# output-features	
Step 9	template data timeout seconds	(Optional) Configures resending of templates based on a
	Example:	timeout.

	Command or Action	Purpose
	Device(config-flow-exporter)# template data timeout 120	• The range for the <i>seconds</i> argument is 1 to 86400 (86400 seconds = 24 hours).
Step 10	<pre>transport udp udp-port Example: Device(config-flow-exporter) # transport udp 650</pre>	Specifies the UDP port on which the destination system is listening for exported datagrams. • The range for the <i>udp-port</i> argument is from 1 to 65536.
Step 11	<pre>ttl seconds Example: Device(config-flow-exporter)# ttl 15</pre>	(Optional) Configures the time-to-live (TTL) value for datagrams sent by the exporter. • The range for the <i>seconds</i> argument is from 1 to 255.
Step 12	<pre>end Example: Device(config-flow-exporter)# end</pre>	Exits flow exporter configuration mode and returns to privileged EXEC mode.
Step 13	<pre>show flow exporter exporter-name Example: Device# show flow exporter FLOW_EXPORTER-1</pre>	(Optional) Displays the current status of the specified flow exporter.
Step 14	<pre>show running-config flow exporter exporter-name Example: Device# show running-config flow exporter FLOW_EXPORTER-1</pre>	(Optional) Displays the configuration of the specified flow exporter.

Creating a Customized Flow Monitor

Perform this required task to create a customized flow monitor.

Each flow monitor has a separate cache assigned to it. Each flow monitor requires a record to define the contents and layout of its cache entries. These record formats can be one of the predefined formats or a user-defined format. An advanced user can create a customized format using the **flow record** command.

Before you begin

If you want to use a customized record instead of using one of the Flexible NetFlow predefined records, you must create the customized record before you can perform this task. If you want to add a flow exporter to the flow monitor for data export, you must create the exporter before you can complete this task.

Note

You must use the **no ip flow monitor** command to remove a flow monitor from all of the interfaces to which you have applied it before you can modify the parameters for the **record** command on the flow monitor.

SUMMARY STEPS

- 1. enable
- 2. configure terminal
- **3. flow monitor** *monitor-name*
- 4. description description
- **5. record** {*record-name*}
- **6.** cache {timeout {active} seconds | { normal }
- **7.** Repeat Step 6 as required to finish modifying the cache parameters for this flow monitor.
- **8. exporter** *exporter-name*
- 9. end
- **10.** show flow monitor [[name] monitor-name [cache [format {csv | record | table}]]]
- 11. show running-config flow monitor monitor-name

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	flow monitor monitor-name	Creates a flow monitor and enters Flexible NetFlow flow
	Example:	monitor configuration mode.
		This command also allows you to modify an existing flow monitor.
	Device(config)# flow monitor FLOW-MONITOR-1	now monitor.
Step 4	description description	(Optional) Creates a description for the flow monitor.
	Example:	
	Device(config-flow-monitor)# description Used for basic ipv4 traffic analysis	
Step 5	record {record-name}	Specifies the record for the flow monitor.
	Example:	

	Command or Action	Purpose
	Device(config-flow-monitor)# record FLOW-RECORD-1	
Step 6	cache {timeout {active} seconds { normal }	
	Example:	
Step 7	Repeat Step 6 as required to finish modifying the cache parameters for this flow monitor.	
Step 8	exporter exporter-name	(Optional) Specifies the name of an exporter that was
	Example:	created previously.
	Device(config-flow-monitor)# exporter EXPORTER-1	
Step 9	end	Exits Flexible NetFlow flow monitor configuration mode
	Example:	and returns to privileged EXEC mode.
	Device(config-flow-monitor)# end	
Step 10	show flow monitor [[name] monitor-name [cache [format {csv record table}]]]	(Optional) Displays the status for a Flexible NetFlow flow monitor.
	Example:	
	Device# show flow monitor FLOW-MONITOR-2 cache	
Step 11	show running-config flow monitor monitor-name	(Optional) Displays the configuration of the specified flow
	Example:	monitor.
	Device# show running-config flow monitor FLOW_MONITOR-1	

Applying a Flow Monitor to an Interface

Before it can be activated, a flow monitor must be applied to at least one interface. Perform this required task to activate a flow monitor.

While running the **ip flow monitor** command for the first interface to enable FNF monitor, you may see the following warning message displaying a GLOBAL memory allocation failure. This log is triggered by enabling FNF monitoring with a large cache size.

```
Jul 4 01:45:00.255: %CPPEXMEM-3-NOMEM: F0/0: cpp_cp_svr: QFP: 0, GLOBAL memory allocation of 90120448 bytes by FNF failed

Jul 4 01:45:00.258: %CPPEXMEM-3-TOPUSER: F0/0: cpp_cp_svr: QFP: 0, Top User: CPR STILE

EXMEM GRAPH, Allocations: 877, Type: GLOBAL

Jul 4 01:45:00.258: %CPPEXMEM-3-TOPUSER: F0/0: cpp_cp_svr: QFP: 0, Top User: SBC, Bytes

Allocated: 53850112, Type: GLOBAL
```

The warning message does not necessarily indicate a flow monitor application failure. The warning message can indicate internal steps that FNF uses for applying memory from the EXMEM infrastructure.

To ensure that the FNF monitor is enabled successfully, use the **show flow monitor** *monitor-name* command to check **Status** (**allocated** or **not allocated**) of a flow monitor. For more information, see Displaying the Current Status of a Flow Monitor.

SUMMARY STEPS

- 1. enable
- 2. configure terminal
- **3. interface** *type number*
- **4.** {ip | ipv6} flow monitor monitor-name {input | output}
- **5.** Repeat Steps 3 and 4 to activate a flow monitor on any other interfaces in the device over which you want to monitor traffic.
- 6. end
- **7. show flow interface** *type number*
- 8. show flow monitor name monitor-name cache format record

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	interface type number	Specifies an interface and enters interface configuration
	Example:	mode.
	Device(config)# interface GigabitEthernet 0/0/0	
Step 4	{ip ipv6} flow monitor monitor-name {input output}	Activates a flow monitor that was created previously b
	Example:	assigning it to the interface to analyze traffic.
	Device(config-if)# ip flow monitor FLOW-MONITOR-1 input	
Step 5	Repeat Steps 3 and 4 to activate a flow monitor on any other interfaces in the device over which you want to monitor traffic.	_
Step 6	end	Exits interface configuration mode and returns to privileged
-	Example:	EXEC mode.

	Command or Action	Purpose
	Device(config-if)# end	
Step 7	show flow interface type number Example:	Displays the status of Flexible NetFlow (enabled or disabled) on the specified interface.
	Device# show flow interface GigabitEthernet 0/0/0	
Step 8	show flow monitor name monitor-name cache format record	Displays the status, statistics, and flow data in the cache for the specified flow monitor.
	Example:	
	Device# show flow monitor name FLOW_MONITOR-1 cache format record	

Configuring and Enabling Flexible NetFlow with Data Export

You must create a flow monitor to configure the types of traffic for which you want to export the cache data. You must enable the flow monitor by applying it to at least one interface to start exporting data. To configure and enable Flexible NetFlow with data export, perform this required task.

Each flow monitor has a separate cache assigned to it. Each flow monitor requires a record to define the contents and layout of its cache entries. The record format can be one of the predefined record formats, or an advanced user may create his or her own record format using the **collect** and **match**commands in Flexible NetFlow flow record configuration mode.

Note

You must remove a flow monitor from all of the interfaces to which you have applied it before you can modify the **record** format of the flow monitor.

SUMMARY STEPS

- 1. enable
- 2. configure terminal
- **3. flow monitor** *monitor-name*
- 4. record {record-name | netflow-original | netflow {ipv4 | ipv6 record [peer] }]
- **5. exporter** *exporter-name*
- 6. exit
- **7. interface** *type number*
- **8.** {ip | ipv6} flow monitor monitor-name {input | output}
- **9**. end
- 10. show flow monitor [[name] monitor-name [cache [format {csv | record | table}]][statistics]]

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	flow monitor monitor-name	Creates a flow monitor and enters Flexible NetFlow flow
	Example:	monitor configuration mode.
	Device(config)# flow monitor FLOW-MONITOR-1	This command also allows you to modify an existing flow monitor.
Step 4	record {record-name netflow-original netflow {ipv4 ipv6 record [peer] }]	Specifies the record for the flow monitor.
	Example:	
	Device(config-flow-monitor)# record netflow ipv4 original-input	
Step 5	exporter exporter-name	Specifies the name of an exporter that you created
	Example:	previously.
	Device(config-flow-monitor)# exporter EXPORTER-1	
Step 6	exit	Exits Flexible NetFlow flow monitor configuration mode
	Example:	and returns to global configuration mode.
	Device(config-flow-monitor)# exit	
Step 7	interface type number	Specifies an interface and enters interface configuration
	Example:	mode.
	Device(config)# interface GigabitEthernet 0/0/0	
Step 8	{ip ipv6} flow monitor monitor-name {input output}	Activates the flow monitor that you created previously by
	Example:	assigning it to the interface to analyze traffic.
	Device(config-if)# ip flow monitor FLOW-MONITOR-1 input	L
Step 9	end	Exits interface configuration mode and returns to privileged
	Example:	EXEC mode.

	Command or Action	Purpose
	Device(config-if)# end	
Step 10	show flow monitor [[name] monitor-name [cache [format {csv record table}]][statistics]] Example:	(Optional) Displays the status and statistics for a Flexible NetFlow flow monitor. This will verify data export is enabled for the flow monitor cache.
	Device# show flow monitor FLOW-MONITOR-2 cache	

Configuration Examples for Flexible NetFlow IPv4 Unicast Flows

Example: Configuring Multiple Export Destinations

The following example shows how to configure multiple export destinations for Flexible NetFlow for IPv4 or IPv6 traffic.

This sample starts in global configuration mode:

```
flow exporter EXPORTER-1
 destination 172.16.10.2
 transport udp 90
flow exporter EXPORTER-2
destination 172.16.10.3
 transport udp 90
 exit
flow record v4_r1
match ipv4 tos
match ipv4 protocol
match ipv4 source address
match ipv4 destination address
match transport source-port
match transport destination-port
collect counter bytes long
collect counter packets long
flow record v6 r1
match ipv6 traffic-class
match ipv6 protocol
match ipv6 source address
match ipv6 destination address
match transport source-port
match transport destination-port
collect counter bytes long
collect counter packets long
flow monitor FLOW-MONITOR-1
record v4 r1
 exporter EXPORTER-2
 exporter EXPORTER-1
```

```
!
flow monitor FLOW-MONITOR-2
record v6_r1
exporter EXPORTER-2
exporter EXPORTER-1
!
ip cef
!
interface GigabitEthernet1/0/0
ip address 172.16.6.2 255.255.255.0
ipv6 address 2001:DB8:2:ABCD::2/48
ip flow monitor FLOW-MONITOR-1 input
ipv6 flow monitor FLOW-MONITOR-2 input
```

The following display output shows that the flow monitor is exporting data to the two exporters:

```
Device# show flow monitor FLOW-MONITOR-1
Flow Monitor FLOW-MONITOR-1:
 Description: User defined
  Flow Record:
                   v4 r1
                  EXPORTER-1
 Flow Exporter:
                  EXPORTER-2
  Cache:
   Type:
                    normal (Platform cache)
                   allocated
   Status:
                     4096 entries / 311316 bytes
   Inactive Timeout: 15 secs
   Active Timeout: 1800 secs
   Update Timeout: 1800 secs
```

Example: Configuring Flexible NetFlow Egress Accounting for IPv4 and IPv6 Traffic

The following example shows how to configure Flexible NetFlow egress accounting for IPv4 and IPv6 traffic.

This example starts in global configuration mode.

```
flow record v4 r1
match ipv4 tos
match ipv4 protocol
match ipv4 source address
match ipv4 destination address
match transport source-port
match transport destination-port
collect counter bytes long
collect counter packets long
flow record v6 r1
match ipv6 traffic-class
match ipv6 protocol
match ipv6 source address
match ipv6 destination address
match transport source-port
match transport destination-port
collect counter bytes long
collect counter packets long
```

```
flow monitor FLOW-MONITOR-1
record v4_r1
exit
!
!
flow monitor FLOW-MONITOR-2
record v6_r1
exit
!
ip cef
ipv6 cef
!
interface GigabitEthernet0/0/0
ip address 172.16.6.2 255.255.255.0
ipv6 address 2001:DB8:2:ABCD::2/48
ip flow monitor FLOW-MONITOR-1 output
ipv6 flow monitor FLOW-MONITOR-2 output
```
