

Flexible Netflow Export to an IPv6 Address

The Export to an IPv6 Address feature enables Flexible NetFlow to export data to a destination using an IPv6 address.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to https://cfnng.cisco.com/. An account on Cisco.com is not required.

Information About Flexible Netflow Export to an IPv6 Address

Flexible Netflow Export to an IPv6 Address Overview

This feature enables Flexible NetFlow to export data to a destination using an IPv6 address.

How to Configure Flexible Netflow Export to an IPv6 Address

Configuring the Flow Exporter

Perform this required task to configure the flow exporter.

Note

Each flow exporter supports only one destination.

You can export to a destination using either an IPv4 or IPv6 address.

SUMMARY STEPS

- 1. enable
- 2. configure terminal
- 3. flow exporter exporter-name
- **4. description** *description*
- **5. destination** {*ip-address* | *hostname*} [**vrf** *vrf-name*]
- 6. dscp dscp
- **7. source** *interface-type interface-number*
- 8. output-features
- 9. template data timeout seconds
- **10.** transport udp udp-port
- 11. ttl seconds
- **12**. end
- **13. show flow exporter** *exporter-name*
- 14. show running-config flow exporter exporter-name

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	flow exporter exporter-name	Creates the flow exporter and enters Flexible NetFlow
	Example:	flow exporter configuration mode.
	Device(config)# flow exporter EXPORTER-1	This command also allows you to modify an existing flow exporter.
Step 4	description description	(Optional) Configures a description to the exporter that
	Example:	will appear in the configuration and the display of the show flow exporter command.
	Device(config-flow-exporter)# description Exports to the datacenter	

	Command or Action	Purpose
Step 5	destination {ip-address hostname} [vrf vrf-name] Example:	Specifies the IP address or hostname of the destination system for the exporter.
	Device(config-flow-exporter)# destination 172.16.10.2	Note You can export to a destination using either an IPv4 or IPv6 address.
Step 6	dscp dscp Example:	(Optional) Configures differentiated services code point (DSCP) parameters for datagrams sent by the exporter.
	Device(config-flow-exporter)# dscp 63	• The range for the <i>dscp</i> argument is from 0 to 63. Default: 0.
Step 7	<pre>source interface-type interface-number Example: Device(config-flow-exporter) # source ethernet 0/0</pre>	(Optional) Specifies the local interface from which the exporter will use the IP address as the source IP address for exported datagrams.
Step 8	output-features Example:	(Optional) Enables sending export packets using quality of service (QoS) and encryption.
	Device(config-flow-exporter)# output-features	
Step 9	<pre>template data timeout seconds Example: Device(config-flow-exporter) # template data timeout 120</pre>	(Optional) Configures resending of templates based on a timeout. • The range for the <i>seconds</i> argument is 1 to 86400 (86400 seconds = 24 hours).
Step 10	<pre>transport udp udp-port Example: Device(config-flow-exporter)# transport udp 650</pre>	Specifies the UDP port on which the destination system is listening for exported datagrams. • The range for the <i>udp-port</i> argument is from 1 to 65536.
Step 11	<pre>ttl seconds Example: Device(config-flow-exporter)# ttl 15</pre>	(Optional) Configures the time-to-live (TTL) value for datagrams sent by the exporter. • The range for the <i>seconds</i> argument is from 1 to 255.
Step 12	end Example:	Exits flow exporter configuration mode and returns to privileged EXEC mode.
Step 13	<pre>Device(config-flow-exporter) # end show flow exporter exporter-name Example: Device# show flow exporter FLOW EXPORTER-1</pre>	(Optional) Displays the current status of the specified flow exporter.

	Command or Action	Purpose
Step 14	show running-config flow exporter exporter-name	(Optional) Displays the configuration of the specified flow
	Example:	exporter.
	Device# show running-config flow exporter FLOW_EXPORTER-1	

Configuration Examples for Flexible Netflow Export to an IPv6 Address

Example: Configuring Multiple Export Destinations

The following example shows how to configure multiple export destinations for Flexible NetFlow for IPv4 or IPv6 traffic. This sample starts in global configuration mode:

The following example shows how to configure multiple export destinations for Flexible NetFlow for IPv4:

```
flow exporter EXPORTER-1
destination 172.16.10.2
transport udp 90
flow exporter EXPORTER-2
destination 172.16.10.3
transport udp 90
exit
flow record v4 r1
match ipv4 tos
match ipv4 protocol
match ipv4 source address
match ipv4 destination address
match transport source-port
match transport destination-port
collect counter bytes long
collect counter packets long
flow monitor FLOW-MONITOR-1
record v4 r1
exporter EXPORTER-2
exporter EXPORTER-1
ip cef
interface GigabitEthernet1/0/0
ip address 172.16.6.2 255.255.255.0
ip flow monitor FLOW-MONITOR-1 input
```

The following example shows how to configure multiple export destinations for Flexible NetFlow for IPv6:

```
flow exporter EXPORTER-1
destination 172.16.10.2
 transport udp 90
 exit
flow exporter EXPORTER-2
destination 172.16.10.3
transport udp 90
 exit
flow record v6 r1
match ipv6 traffic-class
match ipv6 protocol
match ipv6 source address
match ipv6 destination address
match transport source-port
match transport destination-port
collect counter bytes long
collect counter packets long
1
flow monitor FLOW-MONITOR-2
record v6 r1
 exporter EXPORTER-2
exporter EXPORTER-1
!
ip cef
interface GigabitEthernet1/0/0
ipv6 address 2001:DB8:2:ABCD::2/48
 ipv6 flow monitor FLOW-MONITOR-2 input
```

The following display output shows that the flow monitor is exporting data to the two exporters:

Device# show flow monitor FLOW-MONITOR-1

```
Flow Monitor FLOW-MONITOR-1:

Description: User defined

Flow Record: v4_r1

Flow Exporter: EXPORTER-1

EXPORTER-2

Cache:

Type: normal (Platform cache)

Status: allocated

Size: 4096 entries / 311316 bytes

Inactive Timeout: 15 secs

Active Timeout: 1800 secs

Update Timeout: 1800 secs
```
