Using Flexible NetFlow Top N Talkers to Analyze Network Traffic

Last Updated: November 23, 2012

This document contains information about and instructions for using the Flexible NetFlow—Top N Talkers Support feature. The Flexible NetFlow—Top N Talkers Support feature helps you analyze the large amount of data that Flexible NetFlow captures from the traffic in your network by providing the ability to filter, aggregate, and sort the data in the Flexible NetFlow cache as you display it. When you are sorting and displaying the data in the cache, you can limit the display output to a specific number of entries with the highest values (Top N Talkers) for traffic volume, packet counters, and so on. The Flexible NetFlow—Top N Talkers Support feature facilitates real-time traffic analysis by requiring only the use of show commands, which can be entered in many different variations using the available keywords and arguments to meet your traffic data analysis requirements.

NetFlow is a Cisco technology that provides statistics on packets flowing through the router. NetFlow is the standard for acquiring IP operational data from IP networks. NetFlow provides data to support network and security monitoring, network planning, traffic analysis, and IP accounting.

Flexible NetFlow improves on original NetFlow by adding the capability to customize the traffic analysis parameters for your specific requirements. Flexible NetFlow facilitates the creation of more complex configurations for traffic analysis and data export through the use of reusable configuration components.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.
Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for Flexible NetFlow Top N Talkers

- The networking device is running a Cisco release that supports the Flexible NetFlow—Top N Talkers Support feature.

No configuration tasks are associated with the Flexible NetFlow—Top N Talkers Support feature. Therefore, in order for you to use the Flexible NetFlow—Top N Talkers Support feature, traffic analysis with Flexible NetFlow must already be configured about the networking device.

Information About Flexible NetFlow Top N Talkers

- Flexible NetFlow Data Flow Filtering, page 2
- Flexible NetFlow Data Flow Aggregation, page 2
- Flow Sorting and Top N Talkers, page 2
- Documented Flexible NetFlow Top N Talkers Command Names and Actual Syntax, page 3
- Combined Use of Flow Filtering and Flow Aggregation and Flow Sorting with Top N Talkers, page 3
- Memory and Performance Impact of Top N Talkers, page 4

Flexible NetFlow Data Flow Filtering

The flow filtering function of the Flexible NetFlow—Top N Talkers Support feature filters the flow data in a flow monitor cache based on the criteria that you specify, and displays the data.

The flow filtering function of the Flexible NetFlow—Top N Talkers Support feature is provided by the `show flow monitor cache filter` command. For more information on the `show flow monitor cache filter` command, refer to the Cisco IOS Flexible NetFlow Command Reference.

Flexible NetFlow Data Flow Aggregation

Flow aggregation using the `show flow monitor cache aggregate` command allows you to dynamically view the flow information in a cache using a different flow record than the cache was originally created from. Only the fields in the cache will be available for the aggregated flows.

The flow aggregation function of the Flexible NetFlow—Top N Talkers Support feature is provided by the `show flow monitor cache aggregate` command. For more information on the `show flow monitor cache aggregate` command, refer to the Cisco IOS Flexible NetFlow Command Reference.

Flow Sorting and Top N Talkers

The flow sorting function of the Flexible NetFlow—Top N Talkers Support feature sorts flow data from the Flexible NetFlow cache based on the criteria that you specify and displays the data. You can also use the flow sorting function of the Flexible NetFlow—Top N Talkers Support feature to limit the display output to a specific number of entries (top n talkers, where n is the number or talkers to display) by using the `top` keyword.
The flow sorting and Top N Talkers function of the Flexible NetFlow—Top N Talkers Support feature is provided by the `show flow monitor cache sort` command. For more information on the `show flow monitor cache sort` command, refer to the Cisco IOS Flexible NetFlow Command Reference.

### Documented Flexible NetFlow Top N Talkers Command Names and Actual Syntax

The three commands that make up the Flexible NetFlow—Top N Talkers Support feature are documented using the Cisco documentation convention of using the initial words in the CLI syntax, omitting a subsequent words in the CLI syntax, and using a word in the CLI syntax that follows the omitted words. Therefore the syntax that you use for entering the commands is different from the actual documented command name. The table below shows the documented commands names and the actual command CLI syntax. The `monitor-name` argument is the name of a flow monitor that was previously configured.

#### Table 1  Documented Command Names and Actual Command Syntax

<table>
<thead>
<tr>
<th>Documented Command Name</th>
<th>Actual CLI Syntax for Using the Command</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>show flow monitor cache filter</code></td>
<td><code>show flow monitor monitor-name cache filter</code></td>
</tr>
<tr>
<td><code>show flow monitor cache aggregation</code></td>
<td><code>show flow monitor monitor-name cache aggregation</code></td>
</tr>
<tr>
<td><code>show flow monitor cache sort</code></td>
<td><code>show flow monitor monitor-name cache sort</code></td>
</tr>
</tbody>
</table>

#### Note

The arguments and keywords that you can use after `filter`, `aggregation`, and `sort` are not included in the table below. For more information on the arguments and keywords that you can use after `filter`, `aggregation`, and `sort`, refer to the Cisco IOS Flexible NetFlow Command Reference.

### Combined Use of Flow Filtering and Flow Aggregation and Flow Sorting with Top N Talkers

Although each of the `show` commands that make up the Flexible NetFlow—Top N Talkers Support feature can be used individually for traffic analysis, they provide much greater analytical capabilities when they are used together. When you use any combination of the three `show` commands, you enter only the common prefix of `show flow monitor monitor-name cache` followed by `filter`, `aggregation`, `sort`, and the arguments and keywords available for `filter`, `aggregation`, `sort`, as required. For example,

```plaintext
show flow monitor
monitor-name
  cache filter
  options
    aggregation
    options
    sort
    options
```

where `options` is any permissible combination of arguments and keywords. See the Configuration Examples for Flexible NetFlow Top N Talkers, page 9 for more information.
Memory and Performance Impact of Top N Talkers

The Flexible NetFlow—Top N Talkers Support feature can use a large number of CPU cycles and possibly also system memory for a short time. However, because the Flexible NetFlow—Top N Talkers Support feature uses only show commands, the CPU usage should be run at a low priority because no real-time data processing is involved. The memory usage can be mitigated by using a larger granularity of aggregation, or no aggregation at all.

How to Analyze Network Traffic Using Flexible NetFlow Top N Talkers

- Filtering Flow Data from the Flexible NetFlow Cache, page 4
- Aggregating Flow Data from the Flexible NetFlow Cache, page 5
- Sorting Flow Data from the Flexible NetFlow Cache, page 6
- Displaying the Top N Talkers with Sorted Flow Data, page 8

Filtering Flow Data from the Flexible NetFlow Cache

This task shows you how to use the show flow monitor cache filter command with a regular expression to filter the flow monitor cache data, and display the results. For more information on regular expressions and the show flow monitor cache filter command, refer to the Cisco IOS Flexible NetFlow Command Reference.

To filter the flow monitor cache data using a regular expression and display the results, perform the following task.

SUMMARY STEPS

1. enable
2. show flow monitor [name] monitor-name cache filter options [regexp regexp] [...options [regexp regexp]] [format {csv | record | table}]

DETAILED STEPS

Step 1  enable
        Enters privileged EXEC mode.

Example:

Device> enable

Step 2  show flow monitor [name] monitor-name cache filter options [regexp regexp] [...options [regexp regexp]] [format {csv | record | table}]
        Filters the flow monitor cache data on the IPv4 type of service (ToS) value.
Example:

```
Device# show flow monitor FLOW-MONITOR-3 cache filter ipv4 tos regexp 0x(C0|50)
Cache type: Normal
  Cache size: 4096
  Current entries: 19
  High Watermark: 38
  Flows added: 3516
  Flows aged: 3497
    - Active timeout (1800 secs) 52
    - Inactive timeout (15 secs) 3445
    - Event aged 0
    - Watermark aged 0
    - Emergency aged 0
  IPV4 SOURCE ADDRESS: 10.1.1.1
  IPV4 DESTINATION ADDRESS: 255.255.255.255
  TRNS SOURCE PORT: 520
  TRNS DESTINATION PORT: 520
  INTERFACE INPUT: Et0/0
  FLOW SAMPLER ID: 0
  IP TOS: 0xC0
  IP PROTOCOL: 17
  ip source as: 0
  ip destination as: 0
  ipv4 next hop address: 0.0.0.0
  ipv4 source mask: /24
  ipv4 destination mask: /0
  tcp flags: 0x00
  interface output: Null
  counter bytes: 52
  counter packets: 1
  timestamp first: 18:59:46.199
  timestamp last: 18:59:46.199
Matched 1 flow
```

---

**Aggregating Flow Data from the Flexible NetFlow Cache**

This task shows you how to use the `show flow monitor cache aggregate` command to aggregate the flow monitor cache data with a different record than the cache was created with, and display the results. For more information on the `show flow monitor cache aggregate` command, refer to the *Cisco IOS Flexible NetFlow Command Reference*.

To aggregate the flow monitor cache data and display the results, perform the following task.

**SUMMARY STEPS**

1. `enable`
2. `show flow monitor [name] monitor-name cache aggregate [options [...options]] [collect options [...options]] [record record-name] [format {csv | record | table}]`

**DETAILED STEPS**

**Step 1** `enable`

Enters privileged EXEC mode.
Example:

Device> enable

Step 2  
show flow monitor [name] monitor-name cache aggregate {options [...options] [collect options [...options]] | record record-name} [format {csv | record | table}]

Aggregates the flow monitor cache data on the IPv4 destination address and displays the cache data for the IPv4 protocol type and input interface nonkey fields:

Example:

Device# show flow monitor
FLOW-MONITOR-3 cache aggregate ipv4 destination address collect ipv4 protocol interface input
Processed 17 flows
Aggregated to 7 flows

<table>

Sorting Flow Data from the Flexible NetFlow Cache

This task shows you how to use the show flow monitor cache sort command to sort the flow monitor cache data, and display the results. For more information on the show flow monitor cache sort command, refer to the Cisco IOS Flexible NetFlow Command Reference.

To sort the flow monitor cache data and display the results, perform the following task.

**SUMMARY STEPS**

1. enable
2. show flow monitor [name] monitor-name cache sort options [top [number]][format {csv | record | table}]

**DETAILED STEPS**

Step 1  
enable
Enters privileged EXEC mode.

Example:

Device> enable

Step 2  
show flow monitor [name] monitor-name cache sort options [top [number]][format {csv | record | table}]

Displays the cache data sorted on the number of packets from highest to lowest.
Note When the top keyword is not used, the default number of sorted flows shown is 20.

Example:

```
Device# show flow monitor FLOW-MONITOR-1 cache sort highest counter packets
Processed 26 flows
Aggregated to 26 flows
Showing the top 20 flows
IPV4 SOURCE ADDRESS: 10.1.1.3

interface output: Et1/0.1
counter bytes: 15848
counter packets: 344
timestamp first: 19:42:36.852
timestamp last: 19:57:27.836
```
Displaying the Top N Talkers with Sorted Flow Data

This task shows you how to use the `show flow monitor cache sort` command to sort the flow monitor cache data, and to limit the display results to a specific number of high volume flows. For more information on the `show flow monitor cache sort` command, refer to the Cisco IOS Flexible NetFlow Command Reference.

To sort the flow monitor cache data and limit the display output using to a specific number of high volume flows, perform the following task.

**SUMMARY STEPS**

1. `enable`
2. `show flow monitor [name] monitor-name cache sort options [top [number]][format {csv | record | table}]`

**DETAILED STEPS**

**Step 1**

`enable`

Enters privileged EXEC mode.

**Example:**

```
Device> enable
```

**Step 2**

`show flow monitor [name] monitor-name cache sort options [top [number]][format {csv | record | table}]`

Displays the cache data sorted on the number of packets from highest to lowest and limits the output to the three highest volume flows:

**Example:**

```
Device# show flow monitor FLOW-MONITOR-1 cache sort highest counter packets top 3
```
Configuration Examples for Flexible NetFlow Top N Talkers

Processed 25 flows
Aggregated to 25 flows

**Feature Information for Flexible NetFlow—Top N Talkers**

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.
