Interface Templates

An interface template provides a mechanism to configure multiple commands at the same time and associate it with a target such as an interface. An interface template is a container of configurations or policies that can be applied to specific ports.

- Finding Feature Information, on page 1
- Restrictions for Interface Templates, on page 1
- Information About Interface Templates, on page 2
- How to Configure Interface Templates, on page 5
- Configuration Examples for Interface Templates, on page 15
- Additional References for Interface Templates, on page 16
- Feature Information for Interface Templates, on page 16

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Restrictions for Interface Templates

- Interface templates are not applicable for wireless sessions.
- Remote storing and downloading of templates is not supported.
- Port channel configuration through template is not supported on Cisco Catalyst 6500 Series Switches.
Information About Interface Templates

About Interface Templates

An interface template is a container of configurations or policies that can be applied to specific ports. When an interface template is applied to an access port, it impacts all traffic that is exchanged on the port.

There are two types of interface templates; user and builtin templates. Builtin templates are created by the system.

You can modify builtin templates. If you delete a modified builtin template the system restores the original definition of the template.

The following are the available builtin templates:

- AP_INTERFACE_TEMPLATE (Access Point)
- DMP_INTERFACE_TEMPLATE (Digital Media Player)
- IP_CAMERA_INTERFACE_TEMPLATE
- IP_PHONE_INTERFACE_TEMPLATE
- LAP_INTERFACE_TEMPLATE (Lightweight Access Point)
- MSP_CAMERA_INTERFACE_TEMPLATE
- MSP_VC_INTERFACE_TEMPLATE (Video Conferencing)
- PRINTER_INTERFACE_TEMPLATE
- ROUTER_INTERFACE_TEMPLATE
- SWITCH_INTERFACE_Template
- TP_INTERFACE_TEMPLATE (TelePresence)

Following is an example of a builtin interface template:

```
Template Name : IP_CAMERA_INTERFACE_TEMPLATE
Modified : No
Template Definition :
spanning-tree portfast
spanning-tree bpduguard enable
switchport mode access
switchport block unicast
switchport port-security
mls qos trust dscp
arr-queue bandwidth share 1 30 35 5
priority-queue out
```

You can also create specific user templates with the commands that you want to include.

**Note**

The template name must not contain spaces.

You can create an interface template using the `template` command in global configuration mode. In template configuration mode, enter the required commands. The following commands can be entered in template configuration mode:
<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>access-session</td>
<td>Configures access session specific interface commands.</td>
</tr>
<tr>
<td>authentication</td>
<td>Configures authentication manager Interface Configuration commands.</td>
</tr>
<tr>
<td>carrier-delay</td>
<td>Configures delay for interface transitions.</td>
</tr>
<tr>
<td>dampening</td>
<td>Enables event dampening.</td>
</tr>
<tr>
<td>default</td>
<td>Sets a command to its defaults.</td>
</tr>
<tr>
<td>description</td>
<td>Configures interface-specific description.</td>
</tr>
<tr>
<td>dot1x</td>
<td>Configures interface configuration commands for IEEE 802.1X.</td>
</tr>
<tr>
<td>hold-queue</td>
<td>Sets hold queue depth.</td>
</tr>
<tr>
<td>ip</td>
<td>Configures IP template.</td>
</tr>
<tr>
<td>keepalive</td>
<td>Enables keepalive.</td>
</tr>
<tr>
<td>load-interval</td>
<td>Specifies interval for load calculation for an interface.</td>
</tr>
<tr>
<td>mab</td>
<td>Configures MAC authentication bypass Interface.</td>
</tr>
<tr>
<td>mls</td>
<td>Enables multilayer switching configurations. This command is available on</td>
</tr>
<tr>
<td></td>
<td>the following devices in template configuration mode:</td>
</tr>
<tr>
<td></td>
<td>• Cisco Catalyst 2960-S Series Switches</td>
</tr>
<tr>
<td></td>
<td>• Cisco Catalyst 2960-X Series Switches</td>
</tr>
<tr>
<td></td>
<td>• Cisco Industrial Ethernet 3000 Series Switches</td>
</tr>
<tr>
<td>peer</td>
<td>Configures peer parameters for point to point interfaces.</td>
</tr>
<tr>
<td>priority-queue</td>
<td>To set the priority-queue size for a template. This command is available</td>
</tr>
<tr>
<td></td>
<td>on the following devices in template configuration mode:</td>
</tr>
<tr>
<td></td>
<td>• Cisco Catalyst 2960-S Series Switches</td>
</tr>
<tr>
<td></td>
<td>• Cisco Catalyst 2960-X Series Switches</td>
</tr>
<tr>
<td></td>
<td>• Cisco Industrial Ethernet 3000 Series Switches</td>
</tr>
</tbody>
</table>
## Interface Templates

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>queue-set</td>
<td>Configures the QoS queue set on a template. This command is available on the following devices in template configuration mode:</td>
</tr>
<tr>
<td></td>
<td>• Cisco Catalyst 2960-S Series Switches</td>
</tr>
<tr>
<td></td>
<td>• Cisco Catalyst 2960-X Series Switches</td>
</tr>
<tr>
<td></td>
<td>• Cisco Industrial Ethernet 3000 Series Switches</td>
</tr>
<tr>
<td>radius-server</td>
<td>Enables RADIUS server configurations. This command is available on the following devices in template configuration mode:</td>
</tr>
<tr>
<td></td>
<td>• Catalyst 4500E Supervisor Engine 7-E</td>
</tr>
<tr>
<td></td>
<td>• Catalyst 4500E Supervisor Engine 7L-E</td>
</tr>
<tr>
<td></td>
<td>• Catalyst 4500E Supervisor Engine 8-E</td>
</tr>
<tr>
<td></td>
<td>• Catalyst 4500-X Series Switches</td>
</tr>
<tr>
<td>service-policy</td>
<td>Configures CPL service policy.</td>
</tr>
<tr>
<td>source</td>
<td>Gets configurations from another source.</td>
</tr>
<tr>
<td>spanning-tree</td>
<td>Configures spanning tree subsystem</td>
</tr>
<tr>
<td>storm-control</td>
<td>Configures storm control.</td>
</tr>
<tr>
<td>subscriber</td>
<td>Configures subscriber inactivity timeout value.</td>
</tr>
<tr>
<td>switchport</td>
<td>Sets switching mode configurations</td>
</tr>
<tr>
<td>trust</td>
<td>Sets trust value for the interface.</td>
</tr>
</tbody>
</table>

### Note

System builtin templates are not displayed in the running configuration. These templates show up in the running configuration only if you edit them.

### Binding an Interface Template to a Target

Each template can be bound to a target. Template binding or sourcing can be either static or dynamic. Static binding of a template involves binding the template to a target, like an interface. Only one template can be bound at a time using static binding. Static binding of another template to the same target will unbind the previously bound template. To configure static binding, use the `source template` command in interface configuration mode.

Any number of templates can be bound dynamically to a target. To configure dynamic binding using builtin policy maps and parameter maps, enable the autoconf feature using the `autoconf enable` command.
You can have statically and dynamically bind templates on the same interface at a time.

**Priority for Configurations Using Interface Templates**

Configuration applied through dynamically-bound templates has the highest priority, followed by configuration applied directly on the interface, and then configuration applied through statically-bound templates. When similar commands are present at different priority levels, the one at the highest priority is applied. If a configuration at a higher priority level is not applied, then the configuration with the next highest priority is applied to the target.

Multiple templates can be dynamically bound to a target. When multiple templates are dynamically bound, the template that is applied last has the highest priority.

To delete a template, you must remove the binding to all targets. If you bind a template that does not exist, a new template is created with no configurations.

**How to Configure Interface Templates**

**Configuring Interface Templates**

Perform the following task to create user interface templates:

### SUMMARY STEPS

1. enable
2. configure terminal
3. template *name*
4. load-interval *interval*
5. description *description*
6. keepalive *number*
7. end

### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1**

   enable

   Example:

   Device> enable

   - Enables privileged EXEC mode.
   - Enter your password if prompted.

   **Step 2**

   configure terminal

   Example:

   Device# configure terminal

   - Enters global configuration mode.
<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 3</td>
<td><code>template name</code></td>
<td>Creates a user template and enters template configuration mode.</td>
</tr>
<tr>
<td></td>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Device(config)# template user-template1</td>
<td></td>
</tr>
<tr>
<td>Step 4</td>
<td><code>load-interval interval</code></td>
<td>Configures the sampling interval for statistics collections on the template.</td>
</tr>
<tr>
<td></td>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Device(config-template)# load-interval 60</td>
<td></td>
</tr>
<tr>
<td>Step 5</td>
<td><code>description description</code></td>
<td>Configures the description for the template.</td>
</tr>
<tr>
<td></td>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Device(config-template)# description This is a user template</td>
<td></td>
</tr>
<tr>
<td>Step 6</td>
<td><code>keepalive number</code></td>
<td>Configures the keepalive timer.</td>
</tr>
<tr>
<td></td>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Device(config-template)# Keepalive 60</td>
<td></td>
</tr>
<tr>
<td>Step 7</td>
<td><code>end</code></td>
<td>Exits global configuration mode and returns to privileged EXEC mode.</td>
</tr>
<tr>
<td></td>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Device(config)# end</td>
<td></td>
</tr>
</tbody>
</table>

**Configuring Static Binding for Interface Templates**

**SUMMARY STEPS**

1. `enable`
2. `configure terminal`
3. `interface type number`
4. `source template name`
5. `end`

**DETAILED STEPS**

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td><code>enable</code></td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td></td>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Device&gt; enable</td>
<td></td>
</tr>
<tr>
<td>Step</td>
<td>Command or Action</td>
<td>Purpose</td>
</tr>
<tr>
<td>------</td>
<td>------------------</td>
<td>---------</td>
</tr>
<tr>
<td>2</td>
<td>configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td></td>
<td>Example: Device# configure terminal</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>interface type number</td>
<td>Specifies the interface type and number and enters interface configuration mode.</td>
</tr>
<tr>
<td></td>
<td>Example: Device(config)# interface GigabitEthernet 1/0/12</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>source template name</td>
<td>Statically applies an interface template to a target.</td>
</tr>
<tr>
<td></td>
<td>Example: Device(config-if)# source template user-template1</td>
<td></td>
</tr>
<tr>
<td>5</td>
<td>end</td>
<td>Exits interface configuration mode and returns to privileged EXEC mode.</td>
</tr>
<tr>
<td></td>
<td>Example: Device(config-if)# end</td>
<td></td>
</tr>
</tbody>
</table>

**Example**

To verify static binding use the `show running-config interface int-name` and the `show derived-config interface int-name` commands.

```
Device# show running-config interface GigabitEthernet 1/0/12
Building configuration...

Current configuration : 71 bytes
!
interface GigabitEthernet1/0/12
source template user-template1
end
```

```
Device# show derived-config interface GigabitEthernet 1/0/12
Building configuration...

Derived configuration : 108 bytes
!
interface GigabitEthernet1/0/12
description This is a user template
load-interval 60
keepalive 60
end
```
Configuring Dynamic Binding of Interface Templates

SUMMARY STEPS

1. enable
2. configure terminal
3. interface type number
4. service-policy type control subscriber policymap-name
5. end

DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>

<td>Device(config)# interface GigabitEthernet 4/0/1</td>
<td></td>
</tr>
<tr>
<td><strong>Step 4</strong> service-policy type control subscriber policymap-name</td>
<td>Dynamically applies an interface template to a target.</td>
</tr>
<tr>
<td><strong>Example:</strong></td>
<td></td>
</tr>
<tr>
<td>Device(config-if)# service-policy type control subscriber POLICY-Gi1/0/12</td>
<td></td>
</tr>
<tr>
<td><strong>Step 5</strong> end</td>
<td>Exits interface configuration mode and</td>
</tr>
<tr>
<td><strong>Example:</strong></td>
<td>returns to privileged EXEC mode.</td>
</tr>
<tr>
<td>Device(config-if)# end</td>
<td></td>
</tr>
</tbody>
</table>

Verifying an Interface Template

Use one or more of the commands listed below to verify the interface template configuration.

SUMMARY STEPS

1. enable
2. show template interface all {all | binding {temp-name | all | target int-name} | brief }

3. show template interface source {built-in [original] | user} {temp-name | all}

4. show template service {all | binding target int-name | brief | source {aaa | built-in | user {temp-name | all}}

DETAILED STEPS

Step 1  enable

Example:

Device> enable
Enables privileged EXEC mode.

• Enter your password if prompted.

Step 2  show template interface all {all | binding {temp-name | all | target int-name} | brief }
Shows all interface template configurations.

Step 3  show template interface source {built-in [original] | user} {temp-name | all}
Shows interface template source configurations.

Step 4  show template service {all | binding target int-name | brief | source {aaa | built-in | user {temp-name | all}}
Shows all interface template service configurations.

Configuration Examples for Interface Templates

Example: Configuring User Interface Templates

Example: Configuring User Templates

Device# enable
Device (config)# configure terminal
Device(config)# template user-template1
Device(config-template)# load-interval 60
Device(config-template)# description This is a user template
Device(config-template)# Keepalive 60
Device(config)# end

Example: Sourcing Interface Templates

Device> enable
Device# configure terminal
Device(config)# interface fastethernet 4/0/0
Device(config-if)# source template user-template1
Device(config-if)# end
Example: Dynamically Binding Interface Templates

Device> enable
Device# configure terminal
Device(config)# interface GigabitEthernet 4/0/1
Device(config-if)# service-policy type control subscriber POLICY_Gi1/0/1
Device(config-if)# end

Feature Information for Interface Templates

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.
Table 1: Feature Information for Interface Templates
