Manually Configured IPv6 over IPv4 Tunnels

This feature provides support for manually configured IPv6 over IPv4 tunnels. A manually configured tunnel is equivalent to a permanent link between two IPv6 domains over an IPv4 backbone.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Information About Manually Configured IPv6 over IPv4 Tunnels

Overlay Tunnels for IPv6

Overlay tunneling encapsulates IPv6 packets in IPv4 packets for delivery across an IPv4 infrastructure (a core network or the figure below). By using overlay tunnels, you can communicate with isolated IPv6 networks without upgrading the IPv4 infrastructure between them. Overlay tunnels can be configured between border devices or between a border device and a host; however, both tunnel endpoints must support both the IPv4 and IPv6 protocol stacks. IPv6 supports the following types of overlay tunneling mechanisms:
Overlay tunnels reduce the maximum transmission unit (MTU) of an interface by 20 octets (assuming that the basic IPv4 packet header does not contain optional fields). A network that uses overlay tunnels is difficult to troubleshoot. Therefore, overlay tunnels that connect isolated IPv6 networks should not be considered a final IPv6 network architecture. The use of overlay tunnels should be considered as a transition technique toward a network that supports both the IPv4 and IPv6 protocol stacks or just the IPv6 protocol stack.

Use the table below to help you determine which type of tunnel that you want to configure to carry IPv6 packets over an IPv4 network.

<table>
<thead>
<tr>
<th>Tunneling Type</th>
<th>Suggested Usage</th>
<th>Usage Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Manual</td>
<td>Simple point-to-point tunnels that can be used within a site or between sites.</td>
<td>Can carry IPv6 packets only.</td>
</tr>
<tr>
<td>GRE- and IPv4-compatible</td>
<td>Simple point-to-point tunnels that can be used within a site or between sites.</td>
<td>Can carry IPv6, Connectionless Network Service (CLNS), and many other types of packets.</td>
</tr>
<tr>
<td>IPv4-compatible</td>
<td>Point-to-multipoint tunnels.</td>
<td>Uses the ::/96 prefix. We do not recommend using this tunnel type.</td>

<td>Sites can use any IPv6 unicast addresses.</td>
</tr>
</tbody>
</table>

Individual tunnel types are discussed in detail in this document. We recommend that you review and understand the information about the specific tunnel type that you want to implement. When you are familiar with the type of tunnel you need, see the table below for a summary of the tunnel configuration parameters that you may find useful.

**IPv6 Manually Configured Tunnels**

A manually configured tunnel is equivalent to a permanent link between two IPv6 domains over an IPv4 backbone. The primary use is for stable connections that require regular secure communication between two edge devices or between an end system and an edge device, or for connection to remote IPv6 networks.

An IPv6 address is manually configured on a tunnel interface, and manually configured IPv4 addresses are assigned to the tunnel source and the tunnel destination. The host or device at each end of a configured tunnel must support both the IPv4 and IPv6 protocol stacks. Manually configured tunnels can be configured between border devices or between a border device and a host. Cisco Express Forwarding switching can be used for IPv6 manually configured tunnels, or Cisco Express Forwarding switching can be disabled if process switching is needed.
How to Enable Manually Configured IPv6 over IPv4 Tunnels

Configuring Manual IPv6 Tunnels

Before You Begin
With manually configured IPv6 tunnels, an IPv6 address is configured on a tunnel interface, and manually configured IPv4 addresses are assigned to the tunnel source and the tunnel destination. The host or device at each end of a configured tunnel must support both the IPv4 and IPv6 protocol stacks.

SUMMARY STEPS

1. enable
2. configure terminal
3. interface tunnel tunnel-number
4. Enter one of the following commands:
   • ipv6 address {ipv6-address/prefix-length | prefix-name sub-bits/prefix-length}
   • ipv6 address ipv6-prefix/prefix-length [eui-64]
5. tunnel source {ip-address | interface-type interface-number}
6. tunnel destination ip-address
7. tunnel mode ipv6ip
8. end

DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>enable</td>
</tr>
<tr>
<td><strong>Example:</strong></td>
<td>Device&gt; enable</td>
</tr>
<tr>
<td></td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td></td>
<td>• Enter your password if prompted.</td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td>configure terminal</td>
</tr>
<tr>
<td><strong>Example:</strong></td>
<td>Device# configure terminal</td>
</tr>
<tr>
<td></td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td><strong>Step 3</strong></td>
<td>interface tunnel tunnel-number</td>
</tr>
<tr>
<td><strong>Example:</strong></td>
<td>Device(config)# interface tunnel 0</td>
</tr>
<tr>
<td></td>
<td>Specifies a tunnel interface and number, and enters interface configuration mode.</td>
</tr>
</tbody>
</table>
### Configuring Manual IPv6 Tunnels

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 4</strong></td>
<td>Enter one of the following commands:</td>
</tr>
<tr>
<td>• `ipv6 address {ipv6-address</td>
<td>prefix-length</td>
</tr>
<tr>
<td>• <code>ipv6 address ipv6-prefix/prefix-length [eui-64]</code></td>
<td>• If you specify the <code>eui-64</code> keyword, the software configures an IPv6 address for an interface and enables IPv6 processing on the interface using an EUI-64 interface ID in the low-order 64 bits of the address.</td>
</tr>
<tr>
<td><strong>Example:</strong></td>
<td>See the &quot;Implementing IPv6 Addressing and Basic Connectivity&quot; module for more information on configuring IPv6 addresses.</td>
</tr>
</tbody>
</table>

**Step 5**

- `tunnel source {ip-address | interface-type interface-number}`
  - Specifies the source IPv4 address or the source interface type and number for the tunnel interface.
  - If an interface is specified, the interface must be configured with an IPv4 address.

**Example:**

Device(config-if)# tunnel source gigabitethernet 0/0/0

**Step 6**

- `tunnel destination ip-address`
  - Specifies the destination IPv4 address or hostname for the tunnel interface.

**Example:**

Device(config-if)# tunnel destination 192.168.30.1

**Step 7**

- `tunnel mode ipv6ip`
  - Specifies a manual IPv6 tunnel.
  - The `tunnel mode ipv6ip` command specifies IPv6 as the passenger protocol and IPv4 as both the encapsulation and transport protocol for the manual IPv6 tunnel.

**Example:**

Device(config-if)# tunnel mode ipv6ip

**Step 8**

- `end`
  - Returns to privileged EXEC mode.

**Example:**

Device(config-if)# end
Configuration Examples for Manually Configured IPv6 over IPv4 Tunnels

Example: Configuring Manual IPv6 Tunnels

The following example configures a manual IPv6 tunnel between router A and router B. In the example, tunnel interface 0 for both router A and router B is manually configured with a global IPv6 address. The tunnel source and destination addresses are also manually configured.

**Router A Configuration**

```conf
interface ethernet 0
  ip address 192.168.99.1 255.255.255.0
interface tunnel 0
  ipv6 address 3ffe:b00:c18:1::3/127
  tunnel source ethernet 0
  tunnel destination 192.168.30.1
  tunnel mode ipv6ip
```

**Router B Configuration**

```conf
interface ethernet 0
  ip address 192.168.30.1 255.255.255.0
interface tunnel 0
  ipv6 address 3ffe:b00:c18:1::2/127
  tunnel source ethernet 0
  tunnel destination 192.168.99.1
  tunnel mode ipv6ip
```

Example: IPv6 over GRE IPv4 Tunnel

**Example: Configuring CE1**

```conf
ipv6 unicast-routing
ipv6 cef
!
interface Ethernet0/0
  no ip address
  ipv6 address 2001:DB8:2:1::1/64
  no shutdown
  exit
!
ipv6 route 2001:DB8:2:2::/64 2001:DB8:2:1::2
ipv6 route 2001:DB8:2:4::/64 2001:DB8:2:1::2
```

**Example: Configuring PE1**

```conf
ipv6 unicast-routing
ipv6 cef
!
Example: Configuring PE2

```
ipv6 unicast-routing
ipv6 cef

interface Tunnel0
  no ipv6 address
  ipv6 address 2001:DB8:2:4::1/64
tunnel source 10.22.22.22
tunnel destination 10.44.44.44
exit

interface Ethernet0/0
  no ip address
  ipv6 address 2001:DB8:2:1::2/64
  no shutdown
exit

interface Ethernet1/1
  no ip address
  ip address 10.22.22.22 255.255.255.0
  no shutdown
exit

ip route 10.44.44.0 255.255.255.0 10.22.22.23
ipv6 route 2001:DB8:2:2::/64 Tunnel0 2001:DB8:2:4::2
```

Example: Configuring CE2

```
ipv6 unicast-routing
ipv6 cef

interface Ethernet0/0
  no ipv6 address
  ipv6 address 2001:DB8:2:2::2/64
no shutdown
exit

ipv6 route 2001:DB8:2:1::/64 2001:DB8:2:2::1
ipv6 route 2001:DB8:2:4::/64 2001:DB8:2:2::1
```
Example: Configuring Device X

```
! interface Ethernet1/0
   no ip address
   ip address 10.44.44.43 255.255.255.0
   no shutdown
   exit
!
interface Ethernet1/1
   no ip address
   ip address 10.22.22.23 255.255.255.0
   no shutdown
   exit
!
```

Example: Verifying the Tunnel Configuration

From CE1

```
Device# ping ipv6 2001:db8:2:2::2
Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 2001:DB8:2:2::2, timeout is 2 seconds:
!!!
Success rate is 100 percent (5/5), round-trip min/avg/max = 1/9/43 ms
```

```
Device# ping ipv6 2001:db8:2:2::2 source 2001:db8:2:1::1
Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 2001:DB8:2:2::2, timeout is 2 seconds:
Packet sent with a source address of 2001:DB8:2:1::1
!!!
Success rate is 100 percent (5/5), round-trip min/avg/max = 1/1/1 ms
```

From PE1

```
Device# show tunnel interface
```

```
Tunnel0
  Mode:GRE/IP, Destination 10.44.44.44, Source 10.22.22.22
  IP transport: output interface Ethernet1/1 next hop 10.22.22.23
  Application ID 1: unspecified
  Linestate - current up
  Internal linestate - current up, evaluated up
  Tunnel Source Flags: Local
  Transport IPv4 Header DF bit cleared
  OCE: IP tunnel decap
  Provider: interface Tu0, prot 47
  Performs protocol check [47]
  Protocol Handler: GRE: opt 0x0
    ptype: ipv4 [ipv4 dispatcher: punt]
    ptype: ipv6 [ipv6 dispatcher: from if Tu0]
    ptype: mpls [mpls dispatcher: drop]
    ptype: otv [mpls dispatcher: drop]
    ptype: generic [mpls dispatcher: drop]
  There are 0 tunnels running over the EON IP protocol
  There are 0 tunnels running over the IPv6 in IP protocol
  There are 0 tunnels running over the NOSIP protocol
  There are 0 tunnels running over the IPv6 in IP protocol
  There are 0 tunnels running over the RBSCP/IP protocol
```

```
Device# show ip route 10.44.44.44
```
Routing entry for 10.44.44.0/24
   Known via "static", distance 1, metric 0
Routing Descriptor Blocks:
   * 10.22.22.23
       Route metric is 0, traffic share count is 1

Device# debug ipv6 icmp

   ICMP Packet debugging is on
   *Jan 1 10:57:37.882: ICMPv6: Sent R-Advert, Src=FE80::A8BB:CCFF:FE00:5200, Dst=FF02::1
   *Jan 1 11:00:18.634: ICMPv6: Received R-Advert, Src=FE80::A8BB:CCFF:FE00:5200, Dst=FF02::1

Feature Information for Manually Configured IPv6 over IPv4 Tunnels

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.
