

IPv6 Static Route Support for Object Tracking

The IPv6 Static Route Support for Object Tracking feature allows an IPv6 Static Route to be associated with a tracked-object.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see [Bug Search Tool](#) and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Information About IPv6 Static Route Support for Object Tracking

IPv6 Static Route Support for Object Tracking

The `ipv6 route` command will allow an IPv6 static route to be associated with a tracked-object.

Routing Table Insertion

An IPv6 static route associated with a tracked-object is inserted into the IPv6 routing table if the state of the tracked-object is up and if all other routing-table-insertion criteria are met.

Routing Table Insertion Criteria

An IPv6 static route may be inserted into the IPv6 routing table if the following insertion criteria are met:

- 1 Interface is up.
- 2 Next-hop address is not the device's own address.
- 3 Next-hop address is in scope.
- 4 Next-hop address is resolved.
- 5 Bidirectional Forwarding Detection (BFD) session is up, if the BFD tracking is configured.

Note

An IPv6 static route may be associated with both a tracked object and a BFD session. Both tracked object and BFD session state must be up before the IPv6 static route is inserted in the routing table.

- 6 Tracked object state is up.

An IPv6 static route resident in the routing table is removed if any of the insertion criteria becomes false.

How to Configure IPv6 Static Route Support for Object Tracking

Configuring the IPv6 Static Routing Support for Object Tracking

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **ipv6 route** {vrf *table-name-id* *ipv6-prefix* *interface interface number* [*admin-distance object-number* | *ipv6-address object-number* | *multicast object-number* | *name object-number* | *nexthop-vrf object-number* | *tag object-number* | *track object-number* | *unicastobject-number*]}
4. **end**
5. **show track object-number**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.

	Command or Action	Purpose
	<p>Example:</p> <pre>Device> enable</pre>	<ul style="list-style-type: none"> Enter your password if prompted.
Step 2	<p>configure terminal</p> <p>Example:</p> <pre>Device# configure terminal</pre>	Enters global configuration mode.
Step 3	<p>ipv6 route {vrf table-name-id ipv6-prefix interface interface number [admin-distance object-number ipv6-adress object-number multicast object-number name object-number nexthop-vrf object-number tag object-number track object-number unicastobject-number]}</p> <p>Example:</p> <pre>Device(config)# ipv6 route vrf 0x0 2001:DB8:1:2::/64 fastEthernet0/0 2001:DB8:3:4::1 track 42</pre>	IPv6 static route object tracking is configured by adding the <i>track object-number</i> to the static route configuration.
Step 4	<p>end</p> <p>Example:</p> <pre>Device(config)# end</pre>	Exits to privileged EXEC mode.
Step 5	<p>show track object-number</p> <p>Example:</p> <pre>Device(config)# show track 42</pre>	<p>(Optional) Displays tracking information.</p> <ul style="list-style-type: none"> Use this command to verify the configuration. <p>Note The status of a static route associated with a tracked-object can be obtained by issuing the command show ipv6 static [vrf id] detail. This command shows whether the static route has been installed in the routing-table and the reasons if the static route has not been installed.</p>

Configuration Examples for IPv6 Static Route Support for Object Tracking

Example: IPv6 Static Route Object Tracking

The following example shows how to configure tracking for IPv6 static route for object tracking:

```
Device> enable
Device# configure terminal
Device(config)# ipv6 route vrf 0x0 2001:DB8:1:2::/64 fastEthernet0/0 2001:DB8:3:4::1 track
42
Device(config)# end
```

Feature Information for IPv6 Static Route Support for Object Tracking

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Table 1: Feature Information for IPv6 Static Route Support for Object Tracking

Feature Name	Releases	Feature Information
IPv6 Static Route Support for Object Tracking	Cisco IOS Release 15.2(2)E	<p>This feature expands Enhanced Object Tracking (EOT) functionality to allow the object tracking for IPv6 static routes.</p> <ol style="list-style-type: none"> 1 Catalyst 4500E Supervisor Engine 6-E 2 Catalyst 4500E Supervisor Engine 7L-E 3 Catalyst 4500- XE Series Switches 4 Catalyst 3850 Series Switches 5 Catalyst 3650 Series Switches 6 Cisco 5700 Series Wireless Controllers <p>In Cisco IOS 15.2(2)E, this feature is supported on the following platforms:</p> <ol style="list-style-type: none"> 1 Cisco Catalyst 2960 Series Switches 2 Cisco Catalyst 2960-X Series Switches 3 Cisco Catalyst 3750 Series Switches
