OSPF Support for BFD over IPv4

The OSPF Support for BFD over IPv4 feature enables Open Shortest Path First (OSPF), which is a dynamic routing protocol, to register with Bidirectional Forwarding Detection (BFD) to receive forwarding path detection failure messages from BFD.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for OSPF Support for BFD over IPv4

- OSPF must be running on all participating routers.
- The baseline parameters for BFD sessions on the interfaces over which you want to run BFD sessions to BFD neighbors must be configured.
Information About OSPF Support for BFD over IPv4

Overview of OSPF Support for BFD over IPv4

The OSPF Support for BFD over IPv4 feature enables Open Shortest Path First (OSPF), which is a dynamic routing protocol, to register with Bidirectional Forwarding Detection (BFD) to receive forwarding path detection failure messages from BFD. Use the `bfd interface milliseconds min_rx milliseconds multiplier interval-multiplier` command to set the baseline BFD session parameters on an interface. You can either configure BFD Support for OSPF globally on all interfaces or configure it selectively on one or more interfaces.

There are two methods to enable OSPF Support for BFD:

- Enable BFD for all interfaces for which OSPF is routing by using the `bfd all-interfaces` command in router configuration mode.

  **Note** Disable BFD support on individual interfaces using the `ip ospf bfd [disable]` command in interface configuration mode.

- Enable BFD for a subset of interfaces for which OSPF is routing by using the `ip ospf bfd` command in interface configuration mode.

How to Configure OSPF Support for BFD over IPv4

Configuring OSPF Support for BFD over IPv4 for All Interfaces

To configure BFD for all OSPF interfaces, perform the steps in this section.

If you do not want to configure BFD on all OSPF interfaces and would rather configure BFD support specifically for one or more interfaces, see the Configuring OSPF Support for BFD over IPv4 for One or More Interfaces section.
### SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `router ospf process-id`
4. `bfd all-interfaces`
5. `exit`
6. `interface type number`
7. `ip ospf bfd [disable]`
8. `end`
9. `show bfd neighbors [details]`
10. `show ip ospf`

### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td>Example: Device&gt; enable</td>
<td>• Enter your password if prompted.</td>
</tr>
<tr>
<td><strong>Step 2</strong> configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td>Example: Device# configure terminal</td>
<td></td>
</tr>
<tr>
<td><strong>Step 3</strong> router ospf process-id</td>
<td>Specifies an OSPF process and enters router configuration mode.</td>
</tr>
<tr>
<td>Example: Device(config)# router ospf 4</td>
<td></td>
</tr>
<tr>
<td><strong>Step 4</strong> bfd all-interfaces</td>
<td>Enables BFD globally on all interfaces associated with the OSPF routing process.</td>
</tr>
<tr>
<td>Example: Device(config-router)# bfd all-interfaces</td>
<td></td>
</tr>
<tr>
<td><strong>Step 5</strong> exit</td>
<td>(Optional) Returns the router to global configuration mode. Enter this command only if you want to perform Step 7 to disable BFD for one or more interfaces.</td>
</tr>
<tr>
<td>Example: Device(config-router)# exit</td>
<td></td>
</tr>
</tbody>
</table>
### Purpose

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 6**

*interface type number*

**Example:**

```
Device(config)# interface fastethernet 6/0
```

(Optional) Enters interface configuration mode. Enter this command only if you want to perform Step 7 to disable BFD for one or more interfaces.

| **Step 7**

*ip ospf bfd [disable]*

**Example:**

```
Device(config-if)# ip ospf bfd disable
```

(Optional) Disables BFD on a per-interface basis for one or more interfaces associated with the OSPF routing process.

**Note** Use the `disable` keyword only if you enabled BFD on all of the interfaces that OSPF is associated with using the `bfd all-interfaces` command in router configuration mode.

| **Step 8**

*end*

**Example:**

```
Device(config-if)# end
```

Exits interface configuration mode and returns the device to privileged EXEC mode.

| **Step 9**

*show bfd neighbors [details]*

**Example:**

```
Device# show bfd neighbors detail
```

(Optional) Displays information that can help verify if the BFD neighbor is active and displays the routing protocols that BFD has registered.

| **Step 10**

*show ip ospf*

**Example:**

```
Device# show ip ospf
```

(Optional) Displays information that can help verify if BFD for OSPF has been enabled.

**Configuration Examples for OSPF Support for BFD over IPv4**

**Example: Configuring OSPF Support for BFD over IPv4**

The following example shows how to configure BFD in an OSPF network. In the following example, a simple OSPF network consists of Device A and Device B. Fast Ethernet interface 0/1 on Device A is connected to the same network as Fast Ethernet interface 6/0 in Device B. The example, starting in global configuration mode, shows the configuration of BFD. For both Devices A and B, BFD is configured globally for all interfaces associated with the OSPF process.

**Configuration for Device A**

```plaintext
!  interface Fast Ethernet 0/1
  ip address 172.16.10.1 255.255.255.0
```
bfd interval 50 min_rx 50 multiplier 3
! interface Fast Ethernet 3/0.1
  ip address 172.17.0.1 255.255.255.0
! router ospf 123
  log-adjacency-changes detail
  network 172.16.0.0 0.0.0.255 area 0
  network 172.17.0.0 0.0.0.255 area 0
  bfd all-interfaces

Configuration for Device B

! interface Fast Ethernet 6/0
  ip address 172.16.10.2 255.255.255.0
  bfd interval 50 min_rx 50 multiplier 3
! interface Fast Ethernet 6/1
  ip address 172.18.0.1 255.255.255.0
! router ospf 123
  log-adjacency-changes detail
  network 172.16.0.0 0.0.0.255 area 0
  network 172.18.0.0 0.0.0.255 area 0
  bfd all-interfaces

The output from the `show bfd neighbors details` command verifies that a BFD session has been created and that OSPF is registered for BFD support.

Device A

DeviceA# show bfd neighbors details

<table>
<thead>
<tr>
<th>OurAddr</th>
<th>NeighAddr</th>
<th>LD/RD</th>
<th>RH</th>
<th>Holdown (mult)</th>
<th>State</th>
<th>Int</th>
</tr>
</thead>
<tbody>
<tr>
<td>172.16.10.1</td>
<td>172.16.10.2</td>
<td>1/2</td>
<td>1</td>
<td>532 (3)</td>
<td>Up</td>
<td>Fa0/1</td>
</tr>
</tbody>
</table>

Local Diag: 0, Demand mode: 0, Poll bit: 0
MinTxInt: 200000, MinRxInt: 200000, Multiplier: 5
Received MinRxInt: 1000, Received Multiplier: 3
Holdown (hits): 600(22), Hello (hits): 200(8453)
Rx Count: 49824, Rx Interval (ms) min/max/avg: 208/440/332 last: 68 ms ago
Tx Count: 84488, Tx Interval (ms) min/max/avg: 152/248/196 last: 192 ms ago
Registered protocols: OSPF

Uptime: 02:18:49
Last packet: Version: 0
- Diagnostic: 0
  I Hear You bit: 1 - Demand bit: 0
  Poll bit: 0 - Final bit: 0
  Multiplier: 3 - Length: 24
  My Discr.: 2 - Your Discr.: 1
  Min tx interval: 50000 - Min rx interval: 1000
  Min Echo interval: 0

The output from the `show bfd neighbors details` command from Device B verifies that a BFD session has been created:

Device B

DeviceB# attach 6
Entering Console for 8 Port Fast Ethernet in Slot: 6
Type "exit" to end this session
Press RETURN to get started!

DeviceB> show bfd neighbors details

Cleanup timer hits: 0
<table>
<thead>
<tr>
<th>OurAddr</th>
<th>NeighAddr</th>
<th>LD/RD</th>
<th>RH</th>
<th>Holdown (mult)</th>
<th>State</th>

</thead>
<tbody>
<tr>
<td>172.16.10.2</td>
<td>172.16.10.1</td>
<td>8/1</td>
<td>1</td>
<td>1000 (5)</td>
<td>Up</td>
<td>Fa6/0</td>
</tr>
</tbody>
</table>
The output from the `show ip ospf` command verifies that BFD has been enabled for OSPF.

**Device A**

```
DeviceA# show ip ospf
Routing Process "ospf 123" with ID 172.16.10.1
Supports only single TOS(TOS0) routes
Supports opaque LSA
Supports Link-local Signaling (LLS)
Initial SPF schedule delay 5000 msecs
Minimum hold time between two consecutive SPFs 10000 msecs
Maximum wait time between two consecutive SPFs 10000 msecs
Incremental-SPF disabled
Minimum LSA interval 5 secs
Minimum LSA arrival 1000 msecs
LSA group pacing timer 240 secs
Interface flood pacing timer 33 msecs
Retransmission pacing timer 66 msecs
Number of external LSA 0. Checksum Sum 0x000000
Number of opaque AS LSA 0. Checksum Sum 0x000000
Number of DCbitless external and opaque AS LSA 0
Number of DoNotAge external and opaque AS LSA 0
Number of areas in this router is 1. 1 normal 0 stub 0 nssa
External flood list length 0
BFD is enabled
Area BACKBONE(0)
  Number of interfaces in this area is 2 (1 loopback)
  Area has no authentication
  SPF algorithm last executed 00:00:08.828 ago
  SPF algorithm executed 9 times
  Area ranges are
  Number of LSA 3. Checksum Sum 0x028417
  Number of opaque link LSA 0. Checksum Sum 0x000000
  Number of DCbitless LSA 0
  Number of indication LSA 0
  Number of DoNotAge LSA 0
  Flood list length 0
```

**Device B**

```
DeviceB# show ip ospf
Routing Process "ospf 123" with ID 172.18.0.1
Supports only single TOS(TOS0) routes
Supports opaque LSA
Supports Link-local Signaling (LLS)
Supports area transit capability
```

OSPF Support for BFD over IPv4

Example: Configuring OSPF Support for BFD over IPv4

IP Routing BFD Configuration Guide, Cisco IOS Release 15E

8
Initial SPF schedule delay 5000 msecs
Minimum hold time between two consecutive SPPs 10000 msecs
Maximum wait time between two consecutive SPPs 10000 msecs
Incremental-SPF disabled
Minimum LSA interval 5 secs
Minimum LSA arrival 1000 msecs
LSA group pacing timer 240 secs
Interface flood pacing timer 33 msecs
Retransmission pacing timer 66 msecs
Number of external LSA 0. Checksum Sum 0x0
Number of opaque AS LSA 0. Checksum Sum 0x0
Number of DCbitless external and opaque AS LSA 0
Number of DoNotAge external and opaque AS LSA 0
Number of areas in this router is 1. 1 normal 0 stub 0 nssa
Number of areas transit capable is 0
External flood list length 0
BFD is enabled

Area BACKBONE(0)
Number of interfaces in this area is 2 (1 loopback)
Area has no authentication
SPF algorithm last executed 02:07:30.932 ago
SPF algorithm executed 7 times
Area ranges are
Number of LSA 3. Checksum Sum 0x28417
Number of opaque link LSA 0. Checksum Sum 0x0
Number of DCbitless LSA 0
Number of indication LSA 0
Number of DoNotAge LSA 0
Flood list length 0

The output from the show ip ospf interface command verifies that BFD has been enabled for OSPF on the interfaces connecting Device A and Device B.

Device A

DeviceA# show ip ospf interface Fast Ethernet 0/1

show ip ospf interface Fast Ethernet 0/1
Fast Ethernet0/1 is up, line protocol is up
Internet Address 172.16.10.1/24, Area 0
Process ID 123, Router ID 172.16.10.1, Network Type BROADCAST, Cost: 1
Transmit Delay is 1 sec, State BDR, Priority 1, BFD enabled
Designated Router (ID) 172.18.0.1, Interface address 172.16.10.2
Backup Designated router (ID) 172.16.10.1, Interface address 172.18.0.1
Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
oob-resync timeout 40
Hello due in 00:00:03
Supports Link-local Signaling (LLS)
Index 1/1, flood queue length 0
Next 0x0(0)/0x0(0)
Last flood scan length is 1, maximum is 1
Last flood scan time is 0 msec, maximum is 0 msec
Neighbor Count is 1, Adjacent neighbor count is 1
Adjacent with neighbor 172.18.0.1 (Designated Router)
Suppress hello for 0 neighbor(s)

Device B

DeviceB# show ip ospf interface Fast Ethernet 6/1

Fast Ethernet6/1 is up, line protocol is up
Internet Address 172.18.0.1/24, Area 0
Process ID 123, Router ID 172.18.0.1, Network Type BROADCAST, Cost: 1
Transmit Delay is 1 sec, State DR, Priority 1, BFD enabled
Designated Router (ID) 172.18.0.1, Interface address 172.18.0.1
No backup designated router on this network
Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
oob-resync timeout 40
Hello due in 00:00:01
Supports Link-local Signaling (LLS)
Index 1/1, flood queue length 0
Next 0x0(0)/0x0(0)
Last flood scan length is 0, maximum is 0
Last flood scan time is 0 msec, maximum is 0 msec
Neighbor Count is 0, Adjacent neighbor count is 0
Suppress hello for 0 neighbor(s)

Feature Information for OSPF Support for BFD over IPv4

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.
