### Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

### Information About OSPFv3 for BFD

The Bidirectional Forwarding Detection (BFD) protocol supports Open Shortest Path First version 3 (OSPFv3).

### How to Configure OSPFv3 for BFD

#### Configuring BFD Support for OSPFv3

This section describes the procedures for configuring BFD support for OSPFv3, so that OSPFv3 is a registered protocol with BFD and will receive forwarding path detection failure messages from BFD. You can either configure BFD support for OSPFv3 globally on all interfaces or configure it selectively on one or more interfaces.

There are two methods for enabling BFD support for OSPFv3:
• You can enable BFD for all of the interfaces for which OSPFv3 is routing by using the `bfd all-interfaces` command in router configuration mode. You can disable BFD support on individual interfaces using the `ipv6 ospf bfd disable` command in interface configuration mode.

• You can enable BFD for a subset of the interfaces for which OSPFv3 is routing by using the `ipv6 ospf bfd` command in interface configuration mode.

---

**Note**

OSPF will only initiate BFD sessions for OSPF neighbors that are in the FULL state.

---

### Configuring Baseline BFD Session Parameters on the Interface

Repeat this task for each interface over which you want to run BFD sessions to BFD neighbors.

#### SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `interface type number`
4. `bfd interval milliseconds min_rx milliseconds multiplier interval-multiplier`

#### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> <code>enable</code></td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td>Example: <code>Device&gt; enable</code></td>
<td>• Enter your password if prompted.</td>
</tr>
<tr>
<td><strong>Step 2</strong> <code>configure terminal</code></td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td>Example: <code>Device# configure terminal</code></td>
<td></td>
</tr>
<tr>
<td><strong>Step 3</strong> <code>interface type number</code></td>
<td>Specifies an interface type and number, and places the device in interface configuration mode.</td>
</tr>
<tr>
<td>Example: <code>Device(config)# interface GigabitEthernet 0/0/0</code></td>
<td></td>
</tr>
<tr>
<td><strong>Step 4</strong> <code>bfd interval milliseconds min_rx milliseconds multiplier interval-multiplier</code></td>
<td>Enables BFD on the interface.</td>
</tr>
<tr>
<td>Example: <code>Device(config-if)# bfd interval 50 min_rx 50 multiplier 5</code></td>
<td></td>
</tr>
</tbody>
</table>
Configuring BFD Support for OSPFv3 for All Interfaces

Before you begin

OSPFv3 must be running on all participating devices. The baseline parameters for BFD sessions on the interfaces over which you want to run BFD sessions to BFD neighbors must be configured.

SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `ipv6 router ospf process-id [vrf vpn-name]`
4. `bfd all-interfaces`
5. `exit`
6. `show bfd neighbors [vrf vrf-name] [client {bgp | eigrp | isis | ospf | rsvp | te-frr}] [ip-address | ipv6 ipv6-address] [details]`
7. `show ipv6 ospf [process-id] [area-id] [rate-limit]`

DETAILED STEPS

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| 1    | `enable`         | Enables privileged EXEC mode.  
|      | Example: `Device> enable` |  
|      |                  | • Enter your password if prompted. |
| 2    | `configure terminal` | Enters global configuration mode.  
|      | Example: `Device# configure terminal` |  |
| 3    | `ipv6 router ospf process-id [vrf vpn-name]` | Configures an OSPFv3 routing process.  
|      | Example: `Device(config)# ipv6 router ospf 2` |  |
| 4    | `bfd all-interfaces` | Enables BFD for all interfaces participating in the routing process.  
|      | Example: `Device(config-router)# bfd all-interfaces` |  |
| 5    | `exit` | Enter this command twice to go to privileged EXEC mode.  
|      | Example: `Device(config-router)# exit` |  |
| 6    | `show bfd neighbors [vrf vrf-name] [client {bgp | eigrp | isis | ospf | rsvp | te-frr}] [ip-address | ipv6 ipv6-address] [details]` | (Optional) Displays a line-by-line listing of existing BFD adjacencies.  
|      | | |
Configuring OSPF Support for BFD over IPv4 for One or More Interfaces

To configure BFD on one or more OSPF interfaces, perform the steps in this section.

SUMMARY STEPS
1. enable
2. configure terminal
3. interface type number
4. ip ospf bfd [disable]
5. end
6. show bfd neighbors [details]
7. show ip ospf

DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td>Example: Device&gt; enable</td>
<td></td>
</tr>
<tr>
<td><strong>Step 2</strong> configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td>Example: Device# configure terminal</td>
<td></td>
</tr>
<tr>
<td><strong>Step 3</strong> interface type number</td>
<td>Enters interface configuration mode.</td>
</tr>
<tr>
<td>Example: Device(config)# interface fastethernet 6/0</td>
<td></td>
</tr>
<tr>
<td><strong>Step 4</strong> ip ospf bfd [disable]</td>
<td>Enables or disables BFD on a per-interface basis for one or more interfaces associated with the OSPF routing process.</td>
</tr>
<tr>
<td>Example: Device(config-if)# ip ospf bfd</td>
<td><strong>Note</strong> Use the disable keyword only if you enable BFD on all of the interfaces that OSPF is associated with using the bfd all-interfaces command in router configuration mode.</td>
</tr>
</tbody>
</table>
Purpose
Command or Action

Step 5
end
Example:
Device(config-if)# end

Exits interface configuration mode and returns the device to privileged EXEC mode.

Step 6
show bfd neighbors [details]
Example:
Device# show bfd neighbors details

(Optional) Displays information that can help verify if the BFD neighbor is active and displays the routing protocols that BFD has registered.

Note
If hardware-offloaded BFD sessions are configured with Tx and Rx intervals that are not multiples of 50 ms, the hardware intervals are changed. However, output from the show bfd neighbors details command displays only the configured intervals, not the interval values that change.

Step 7
show ip ospf
Example:
Device# show ip ospf

(Optional) Displays information that can help verify if BFD support for OSPF has been enabled.

Retrieving BFDv6 Information for Monitoring and Troubleshooting

SUMMARY STEPS

1. enable
2. monitor event ipv6 static [enable | disable]
3. show ipv6 static [ipv6-address | ipv6-prefix/prefix-length] [interface type number | recursive] [vrf vrf-name] [bfd] [detail]
4. show ipv6 static [ipv6-address | ipv6-prefix/prefix-length] [interface type number | recursive] [vrf vrf-name] [bfd] [detail]
5. debug ipv6 static

DETAILED STEPS

Command or Action

Step 1
enable
Example:
Device> enable

Enables privileged EXEC mode.

• Enter your password if prompted.

Step 2
monitor event ipv6 static [enable | disable]
Example:
Device# monitor event ipv6 static enable

Enables the use of event trace to monitor the operation of the IPv6 static and IPv6 static BFDv6 neighbors.
### Configuration Examples for OSPFv3 for BFD

#### Example: Displaying OSPF Interface Information about BFD

The following display shows that the OSPF interface is enabled for BFD:

```
Device# show ipv6 ospf interface

Serial10/0 is up, line protocol is up
  Link Local Address FE80::A8BB:CCFF:FE00:6500, Interface ID 42
  Area 1, Process ID 1, Instance ID 0, Router ID 10.0.0.1
  Network Type POINT_TO_POINT, Cost: 64
  Transmit Delay is 1 sec, State POINT_TO_POINT, BFD enabled
  Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
  Hello due in 00:00:07
  Index 1/1/1, flood queue length 0
  Next 0x0(0)/0x0(0)/0x0(0)
  Last flood scan length is 1, maximum is 1
  Last flood scan time is 0 msec, maximum is 0 msec
  Neighbor Count is 1, Adjacent neighbor count is 1
  Adjacent with neighbor 10.1.0.1
  Suppress hello for 0 neighbor(s)
```

Feature Information for OSPFv3 for BFD

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.
