Configuring BFD Debug Enhancement

The Bidirectional Forwarding Detection (BFD) Debug Enhancement feature enables logging of debugging information for critical BFD events, normal BFD events, and BFD packets. This feature enables BFD event traces and BFD event logs. This feature allows network engineers and operators to easily identify and analyze issues with BFD sessions.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for BFD Debug Enhancement

Bidirectional Forwarding Detection (BFD) feature must be running on the device.

Restrictions for BFD Debug Enhancement

The Bidirectional Forwarding Detection (BFD) event trace logs cannot store more than 65536 elements in a BFD instance. Once the log elements reach this limit, new log entries replace the old log entries.

RSP3 do not support the Bidirectional Forwarding Detection (BFD) debug enhancement.
Information About BFD Debug Enhancement

Overview of BFD Debug Enhancement

The Bidirectional Forwarding Detection (BFD) Debug Enhancement feature enables logging of debugging information for critical BFD events, normal BFD events, and BFD packets. This feature enables BFD event traces and BFD event logs.

BFD Debug Enhancement - Event Tracer subsystem

The Event Tracer subsystem in the BFD Debug Enhancement feature helps network engineers trace BFD events. This subsystem generates debugging information that can be extracted and analyzed. You can optionally store the traced data in a file for further analysis.

BFD Debug Enhancement - Event Log Architecture

The Event Log Architecture in the BFD Debug Enhancement feature is classified into three types:

- BFD Critical—Logs debugging information about all critical BFD event traces, whenever the BFD session attains the DOWN state.

- BFD Event—Logs debugging information about all BFD events that can be logged using the `debug bfd event` command.

- BFD Packet—Logs debugging information about all BFD packets that can be logged using the `debug bfd packet` command.

How to Configure BFD Debug Enhancement

Configuring BFD Debug Enhancement

**SUMMARY STEPS**

1. `enable`
2. `configure terminal`
3. `interface gigabitethernet number`
4. `bfd interval milliseconds min_rx milliseconds multiplier interval-multiplier`
5. `end`
6. `debug bfd event`
7. `debug bfd packet`
8. `monitor event-trace bfd event enable`
9. `monitor event-trace bfd event all enable`
10. `monitor event-trace bfd packet enable`
11. `monitor event-trace bfd packet all enable`
12. `show monitor event-trace bfd`
## DETAILED STEPS

<table>
<thead>
<tr>
<th>Step</th>
<th>Command or Action</th>
<th>Purpose</th>

<td></td>
</tr>
<tr>
<td></td>
<td>Device# monitor event-trace bfd packet enable</td>
<td></td>
</tr>
</tbody>
</table>
### Command or Action

<table>
<thead>
<tr>
<th>Step 11</th>
<th><code>monitor event-trace bfd packet all enable</code></th>
</tr>
</thead>
<tbody>
<tr>
<td>Example:</td>
<td>Device# <code>monitor event-trace bfd packet all enable</code></td>
</tr>
</tbody>
</table>

#### Purpose

Enables the event trace filters for BFD packet events.

<table>
<thead>
<tr>
<th>Step 12</th>
<th><code>show monitor event-trace bfd</code></th>
</tr>
</thead>
<tbody>
<tr>
<td>Example:</td>
<td>Device# <code>show monitor event-trace bfd</code></td>
</tr>
</tbody>
</table>

#### Purpose

Displays event trace messages for BFD events. Use the `critical`, `event`, and `packet` keywords to display event trace messages for critical BFD events, normal BFD events, and BFD packet events, respectively.

---

### Configuration Examples for BFD Debug Enhancement

#### Example: Configuring BFD Debug Enhancement

```plaintext
Device> enable
Device# configure terminal
Device(config)# interface GigabitEthernet 0/0/0
Device(config-if)# bfd interval 50 min_rx 50 multiplier 5
Device(config-if)# end
Device# debug bfd event
Device# debug bfd packet
Device# monitor event-trace bfd event enable
Device# monitor event-trace bfd event all enable
Device# monitor event-trace bfd packet enable
Device# monitor event-trace bfd packet all enable
Device# show monitor event-trace bfd critical all
Device# show monitor event-trace bfd event all
Device# show monitor event-trace bfd packet all
```

The following is sample output from the `show monitor event-trace bfd` command for a critical BFD event:

```plaintext
Device# show monitor event-trace bfd critical latest
Oct 2 10:57:25.173: BFD-DEBUG CRITICAL: V1 FSM ld:1 handle:1
Event:DETECT TIMER EXPIRED state:UP Rx Count:123 Tx Count: 120
Echo Rx:[-][-][-]
Echo Tx:[-][-][-]
Oct 2 10:57:25.173: BFD-DEBUG CRITICAL: V1 FSM ld:1 handle:1
Event:ECHO FAILURE state:UP Rx Count:123 Tx Count: 120
```

The following is sample output from the `show monitor event-trace bfd` command for a normal BFD event:

```plaintext
Device# show monitor event-trace bfd event all
Oct 2 10:57:25.173: BFD-DEBUG CRITICAL: V1 FSM ld:1 handle:1
Event:DETECT TIMER EXPIRED state:UP Rx Count:123 Tx Count: 120
Echo Rx:[-][-][-]
Echo Tx:[-][-][-]
```

The following is sample output from the `show monitor event-trace bfd` command for a normal BFD event:
Logs all events that are logged using the `debug bfd event` command.

```
Device# show monitor event-trace bfd event latest

```

The following is sample output from the `show monitor event-trace bfd` command for a BFD packet event:

```
Device# show monitor event-trace bfd packet latest

```

**Feature Information for BFD Debug Enhancement**

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.
