BGP FlowSpec Route-reflector Support

The BGP (Border Gateway Protocol) Flowspec (Flow Specification) Route Reflector feature enables service providers to control traffic flows in their network. This helps in filtering traffic and helps in taking action against distributed denial of service (DDoS) mitigation by dropping the DDoS traffic or diverting it to an analyzer.

BGP flow specification provides a mechanism to encode flow specification rules for traffic flows that can be distributed as BGP Network Layer Reachability Information (NLRI).

- Finding Feature Information, on page 1

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Restrictions for BGP FlowSpec Route-reflector Support

- In Cisco IOS 15.5(S) release, BGP flow specification is supported only on a route reflector.
- Mixing of address family matches and actions is not supported in flow spec rules. For example, IPv4 matches cannot be combined with IPv6 actions and vice versa.
Information About BGP FlowSpec Route-reflector Support

Overview of Flowspec

Flowspec specifies procedures for the distribution of flow specification rules as Border Gateway Protocol Network Layer Reachability Information (BGP NLRI) that can be used in any application. It also defines application for the purpose of packet filtering in order to mitigate distributed denial of service attacks.

A flow specification rule consists of a matching part encoded in the BGP NLRI field and an action part encoded as BGP extended community as defined in the RFC 5575. A flow specification rule is a set of data (represented in an n-tuple) consisting of several matching criteria that can be applied to IP packet data. BGP flow specification rules are internally converted to equivalent Cisco Common Classification Policy Language (C3PL) representing corresponding match and action parameters.

In Cisco IOS 15.5(S) release, Flowspec supports following functions for the BGP route reflector:

- Flowspec rules defined in RFC 5575
- IPv6 extensions
- Redirect IP extensions
- BGP flowspec validation

Matching Criteria

The following table lists the various Flowspec tuples that are supported for BGP.

<table>
<thead>
<tr>
<th>BGP Flowspec NLRI Type</th>
<th>QoS Matching Field (IPv6)</th>
<th>QoS Matching Field (IPv4)</th>
<th>Input Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type 1</td>
<td>IPv6 destination address</td>
<td>IPv4 destination address</td>
<td>Prefix length</td>
</tr>
<tr>
<td>Type 2</td>
<td>IPv6 source address</td>
<td>IPv4 source address</td>
<td>Prefix length</td>
</tr>
<tr>
<td>Type 3</td>
<td>IPv6 next header</td>
<td>IPv4 protocol</td>
<td>Multi-value range</td>
</tr>
<tr>
<td>Type 4</td>
<td>IPv6 source or destination port</td>
<td>IPv4 source or destination port</td>

</tbody>
</table>
How to Configure BGP FlowSpec Route-reflector Support

Configuring BGP FlowSpec Route-reflector Support

Perform this task to configure BGP FlowSpec on a route reflector. This task specifies only the IPv4 address family but, other address families are also supported for BGP flow specifications.

Before you begin
Configure a BGP route reflector.

SUMMARY STEPS

1. enable
2. configure terminal
3. router bgp autonomous-system-number
4. neighbor ip-address remote-as autonomous-system-number
5. address-family {ipv4 | ipv6 | vpnv4 | vpnv6} flowspec
6. neighbor ip-address activate
7. neighbor ip-address route-reflector-client
8. end

DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td>Example: Device&gt; enable</td>
<td></td>
</tr>
<tr>
<td><strong>Step 2</strong> configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td>Example: Device# configure terminal</td>
<td></td>
</tr>
<tr>
<td><strong>Step 3</strong> router bgp autonomous-system-number</td>
<td>Enters router configuration mode for the BGP routing process.</td>
</tr>
<tr>
<td>Example: Device(config)# router bgp 1</td>
<td></td>
</tr>
</tbody>
</table>

### Table: BGP Flowspec NLRI Type

<table>
<thead>
<tr>
<th>BGP Flowspec NLRI Type</th>
<th>QoS Matching Field (IPv4)</th>
<th>QoS Matching Field (IPv6)</th>
<th>Input Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type 12</td>
<td>Reserved</td>
<td>IPv4 fragment bits</td>
<td>Bit mask</td>
</tr>
<tr>
<td>Type 13</td>
<td>IPv6 flow label</td>
<td>—</td>
<td>Multi-value range</td>
</tr>
<tr>
<td>Step 4</td>
<td>neighbor ip-address remote-as autonomous-system-number</td>
<td>Adds an entry to the BGP or multiprotocol BGP neighbor table.</td>
<td></td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td>---</td>
<td></td>
</tr>
<tr>
<td>Example:</td>
<td>Device(config-router)# neighbor 10.1.1.1 remote-as 1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Step 5</td>
<td>address-family {ipv4</td>
<td>ipv6</td>
<td>vpnv4</td>
</tr>
<tr>
<td>Example:</td>
<td>Device(config-router)# address-family ipv4 flowspec</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Step 6</td>
<td>neighbor ip-address activate</td>
<td>Enables the exchange of information with a BGP neighbor.</td>
<td></td>
</tr>
<tr>
<td>Example:</td>
<td>Device(config-router-af)# neighbor 10.1.1.1 activate</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Step 7</td>
<td>neighbor ip-address route-reflector-client</td>
<td>Configures the router as a BGP route reflector and configures the specified neighbor as its client.</td>
<td></td>
</tr>
<tr>
<td>Example:</td>
<td>Device(config-router-af)# neighbor 10.1.1.1 route-reflector-client</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Step 8</td>
<td>end</td>
<td>(Optional) Exits address family configuration mode and returns to privileged EXEC mode.</td>
<td></td>
</tr>
<tr>
<td>Example:</td>
<td>Device(config-router-af)# end</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Disabling BGP FlowSpec Validation**

Perform this task if you want to disable the BGP flow specification validations for eBGP peers. The validations are enabled by default.

To know more about BGP flow specification validations, see RFC 5575 (draft-ietf-idr-bgp-flowspec-oid-01-Revised Validation Procedure for BGP Flow Specifications).

**SUMMARY STEPS**

1. enable
2. configure terminal
3. router bgp autonomous-system-number
4. address-family {ipv4 | ipv6 | vpnv4 | vpnv6} flowspec
5. neighbor ip-address validation off

**DETAILED STEPS**

| Step 1 | enable | Enables privileged EXEC mode. |
### Command or Action

**Example:**

Device> enable

- Enter your password if prompted.

**Step 2**

**configure terminal**

**Example:**

Device# configure terminal

Enters global configuration mode.

**Step 3**

**router bgp autonomous-system-number**

**Example:**

Device(config)# router bgp 1

Enters router configuration mode for the BGP routing process.

**Step 4**

**address-family {ipv4 | ipv6 | vpnv4 | vpnv6} flowspec**

**Example:**

Device(config-router)# address-family ipv4 flowspec

Specifies the address family and enters address family configuration mode.

- Flowspec is supported on IPv4, IPv6, VPNv4 and VPNv6 address families.

**Step 5**

**neighbor ip-address validation off**

**Example:**

Device(config-router-af)# neighbor 10.1.1.1 validation off

Disables validation of flow specification for eBGP peers.

---

## Verifying BGP FlowSpec Route-reflector Support

The **show** commands can be entered in any order.

### Before you begin

Configure BGP FlowSec on a route reflector.

### SUMMARY STEPS

1. show bgp ipv4 flowspec
2. show bgp ipv4 flowspec detail
3. show bgp ipv4 flowspec summary
4. show bgp ipv6 flowspec
5. show bgp ipv6 flowspec detail
6. show bgp ipv6 flowspec summary
7. show bgp vpnv4 flowspec
8. show bgp vpnv4 flowspec all detail
9. show bgp vpnv6 flowspec
10. show bgp vpnv6 flowspec all detail
DETAILED STEPS

Step 1  
**show bgp ipv4 flowspec**

This command displays the IPv4 flowspec routes.

**Example:**

Device# show bgp ipv4 flowspec

BGP table version is 3, local router ID is 10.10.10.2 Status codes: s suppressed, d damped, h history, * valid, > best, i - internal, r RIB-failure, S Stale, m multipath, b backup-path, f RT-Filter, best-external, a additional-path, c RIB-compressed, Origin codes: i - IGP, e - EGP, ? - incomplete RPKI validation codes: V valid, I invalid, N Not found

<table>
<thead>
<tr>
<th>Network</th>
<th>Next Hop</th>
<th>Metric</th>
<th>LocPrf</th>
<th>Weight</th>
<th>Path</th>
</tr>
</thead>
<tbody>
<tr>
<td>*&gt;i Dest:2.2.2.0/24 10.0.101.1 100 0 i</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>*&gt;i Dest:3.3.3.0/24 10.0.101.1 100 0 i</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Step 2  
**show bgp ipv4 flowspec detail**

This command displays the detailed information about IPv4 flowspec routes.

**Example:**

Device# show bgp ipv4 flowspec detail

BGP routing table entry for Dest:2.2.2.0/24, version 2

Paths: (1 available, best #1, table IPv4-Flowspec-BGP-Table)

Advertised to update-groups:

1

Refresh Epoch 1

Local, (Received from a RR-client)

10.0.101.1 from 10.0.101.1 (10.0.101.1)
Origin IGP, localpref 100, valid, internal, best
Extended Community: FLOWSPEC Redirect-IP:0x000000000001
rx pathid: 0, tx pathid: 0x0

BGP routing table entry for Dest:3.3.3.0/24, version 3

Paths: (1 available, best #1, table IPv4-Flowspec-BGP-Table)

Advertised to update-groups:

1

Refresh Epoch 1

Local, (Received from a RR-client)

10.0.101.1 from 10.0.101.1 (10.0.101.1)
Origin IGP, localpref 100, valid, internal, best
rx pathid: 0, tx pathid: 0x0

Step 3  
**show bgp ipv4 flowspec summary**

This command displays the IPv4 flowspec neighbors.

**Example:**

Device# show bgp ipv4 flowspec summary

BGP router identifier 10.10.10.2, local AS number 239 BGP table version is 3, main routing table version 3

2 network entries using 16608 bytes of memory
2 path entries using 152 bytes of memory
2/2 BGP path/bestpath attribute entries using 304 bytes of memory
1 BGP AS-PATH entries using 24 bytes of memory
2 BGP extended community entries using 48 bytes of memory
0 BGP route-map cache entries using 0 bytes of memory
0 BGP filter-list cache entries using 0 bytes of memory
BGP using 17136 total bytes of memory
BGP activity 18/0
prefixes, 18/0 paths, scan interval 15 secs

Neighbor V AS MsgRcvd MsgSent TblVer InQ OutQ Up/Down State/PfxRcd
10.0.101.1 4 239 70 24 3 0 0 00:10:58
2
10.0.101.2 4 239 0 0 1 0 0 never
Idle
10.0.101.3 4 240 0 0 1 0 0 never
Idle
10.10.10.1 4 239 19 23 3 0 0 00:10:53

Step 4  show bgp ipv6 flowspec
This command displays the IPv6 flowspec routes.

Example:
Device# show bgp ipv6 flowspec

BGP table version is 2, local router ID is 10.10.10.2 Status codes: s suppressed, d damped, h history,
* valid, > best, i - internal, r RIB-failure, S Stale, m multipath, b backup-path, f RT-Filter, x best-external, a additional-path, c RIB-compressed, Origin codes: i - IGP, e - EGP, ? - incomplete RPKI validation codes: V valid, I invalid, N Not found

Network Next Hop Metric LocPrf Weight Path
*>1 Dest:3::/0-24,Source:4::/0-24
FEC0::1001 100 0 1

Step 5  show bgp ipv6 flowspec detail
This command displays the detailed information about IPv6 flowspec routes.

Example:
Device# show bgp ipv6 flowspec detail

BGP routing table entry for Dest:3::/0-24,Source:4::/0-24, version 2
Paths: (1 available, best #1, table Global-Flowspecv6-Table)
Advertised to update-groups: 2
Refresh Epoch 1
Local
   FEC0::1001 from FEC0::1001 (10.0.101.2)
      Origin IGP, localpref 100, valid, internal, best
      rx pathid: 0, tx pathid: 0x0

Step 6  show bgp ipv6 flowspec summary
This command displays the IPv6 flowspec neighbors.

Example:
Device# show bgp ipv6 flowspec summary

BGP router identifier 10.10.10.2, local AS number 239 BGP table version is 3, main routing table version 3
2 network entries using 16608 bytes of memory
2 path entries using 152 bytes of memory
2/2 BGP path/bestpath attribute entries using 304 bytes of memory
1 BGP AS-PATH entries using 24 bytes of memory
2 BGP extended community entries using 48 bytes of memory
0 BGP route-map cache entries using 0 bytes of memory
0 BGP filter-list cache entries using 0 bytes of memory
BGP using 17136 total bytes of memory
BGP activity 18/0
prefixes, 18/0 paths, scan interval 15 secs

Neighbor State/PfxRcd V AS MsgRcvd MsgSent TblVer InQ OutQ Up/Down
10.0.101.1 4 239 70 24 3 0 00:10:58
10.0.101.2 4 239 0 0 1 0 0 never
10.0.101.3 4 240 0 0 1 0 0 never
10.10.10.1 4 239 19 23 3 0 00:10:53

Step 7
show bgp vpnv4 flowspec
This command displays the VPNv4 flowspec neighbors.

Example:
Device# show bgp vpnv4 flowspec

BGP table version is 2, local router ID is 10.10.10.2 Status codes: s suppressed, d damped, h history,
* valid, > best, i - internal,r RIB-failure, S Stale, m multipath, b backup-path, f RT-Filter,
> best-external, a additional-path, c RIB-compressed, Origin codes: i - IGP, e - EGP,
> - incomplete RPKI validation codes: V valid, I invalid, N Not found

Network Next Hop Metric LocPrf Weight Path
Route Distinguisher: 200:200
*>i Dest:10.0.1.0/24 10.0.101.1 100 0 i

Step 8
show bgp vpnv4 flowspec all detail
This command displays the VPNv4 flowspec details.

Example:
Device# show bgp vpnv4 flowspec all detail

Route Distinguisher: 200:200
BGP routing table entry for 200:200:Dest:10.0.1.0/24, version 2
Paths: (1 available, best #1, table VPNv4-Flowspec-BGP-Table)
Advertised to update-groups:
3
Refresh Epoch 1
Local
10.0.101.1 (via default) from 10.0.101.1 (10.0.101.1)
Origin IGP, localpref 100, valid, internal, best
Extended Community: RT:100:100
rx pathid: 0, tx pathid: 0x0
Step 9  
**show bgp vpnv6 flowspec**

This command displays the VPNv6 flowspec neighbors.

**Example:**

```
Device# show bgp vpnv6 flowspec
```

BGP table version is 2, local router ID is 10.10.10.2 Status codes: s suppressed, d damped, h history, * valid, > best, i - internal, 
  r RIB-failure, S Stale, m multipath, b backup-path, f RT-Filter, 
  x best-external, a additional-path, c RIB-compressed, Origin codes: i - IGP, e - EGP, 
  ? - incomplete RPKI validation codes: V valid, I invalid, N Not found

<table>
<thead>
<tr>
<th>Network</th>
<th>Next Hop</th>
<th>Metric</th>
<th>LocPrf</th>
<th>Weight</th>
<th>Path</th>

<tr>
<td>Route Distinguisher: 200:200</td>
<td>FEC0::1001</td>
<td>100</td>
<td>0</td>
<td>i</td>
<td></td>
</tr>
</tbody>
</table>

Step 10  
**show bgp vpnv6 flowspec all detail**

This command displays the VPNv6 flowspec details.

**Example:**

```
Device# show bgp vpnv6 flowspec all detail
```

Route Distinguisher: 200:200
BGP routing table entry for 200:200:SPort:=20640, version 2
Paths: (1 available, best #1, table VPNv6-Flowspec-BGP-Table)
Advertised to update-groups:
  3
  Refresh Epoch 1
Local
  FEC0::1001 (via default) from FEC0::1001 (10.0.101.2)
  Origin IGP, localpref 100, valid, internal, best
  Extended Community: RT:100:100
  rx pathid: 0, tx pathid: 0x0

---

**Configuration Examples for BGP FlowSpec Route-reflector Support**

**Example: BGP FlowSpec Route-reflector Support**

**Example: Configuring BGP FlowSpec on Route Reflector**

Configure BGP route reflector and inject flowspec in the route reflector.
Configure the topology

Configure the interfaces on RR

```plaintext
RR> enable
RR# configure terminal
RR(config)# interface E0/0
RR(config-if)# ip address 10.0.0.1 255.224.0.0
RR(config-if)# no shutdown
RR(config-if)# exit
RR(config)# interface S2/0
RR(config-if)# ip address 10.32.0.1 255.224.0.0
RR(config-if)# no shutdown
RR(config-if)# exit
RR(config)# interface S3/0
RR(config-if)# ip address 10.64.0.1 255.224.0.0
RR(config-if)# no shutdown

Configure RR as the route reflector with S2/0 (R1) and S2/0 (R2) as the neighbors

RR(config)# router bgp 333
RR(config-router)# no synchronization
RR(config-router)# network 10.0.0.0 mask 255.224.0.0
RR(config-router)# network 10.64.0.0 mask 255.224.0.0
RR(config-router)# network 10.32.0.0 mask 255.224.0.0
RR(config-router)# neighbor 10.64.0.2 remote-as 333
RR(config-router)# neighbor 10.64.0.2 remote-as 333

Configure flowspec on route reflector

RR(config-router)# address-family ipv4 flowspec
RR(config-router-af)# neighbor 10.64.0.2 activate
RR(config-router)# neighbor 10.32.0.2 route-reflect-client
RR(config-router-af)# neighbor 10.32.0.2 activate
RR(config-router)# neighbor 10.32.0.2 route-reflect-client

Verify the configuration

RR> show bgp ipv4 flowspec
```
