IS-IS IPv6 Multi-Process Support

The IS-IS IPv6 Multi-Process Support feature enables support for mutual redistribution of IPv6 routes between multiple IS-IS IPv6 instances and allows the IS-IS IPv6 instances to install routes in non-default virtual routing and forwarding (VRF) instances.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for IS-IS IPv6 Multi-Process Support

- You must enable IPv6 unicast routing before ISIS IPv6 configuration.
- You must enable IPv6 on an interface, by assigning an IPv6 address to the interface or by using the `ipv6 enable` command, before associating the interface with an ISIS IPv6 instance.
- You must define a virtual routing and forwarding (VRF) and enable an IPv6 address family in the VRF before associating an ISIS IPv6 instance with that VRF.
Information About IS-IS IPv6 Multi-Process Support

IS-IS IPv6 Multi-Process Support Overview

The IS-IS IPv6 Multi-Process Support feature allows you to create up to 28 IPv6-enabled IS-IS instances and enables these IPv6 instances to be associated with any VRF and not only the default VRF. The device can redistribute IPv6 routes between multiple IPv6 IS-IS instances in the same VRF including the default VRF. The device can also redistribute routes between an IS-IS instance and other routing protocols such as RIP and OSPFv3 operating in the same VRF, including routing protocols in the default VRF.

How to Configure IS-IS IPv6 Multi-Process Support

Configuring IS-IS IPv6 Multi-Process Support

SUMMARY STEPS

1. enable
2. configure terminal
3. vrf definition vrf-name
4. address-family ipv6 [unicast]
5. exit
6. exit
7. interface type number
8. (Optional) vrf forwarding vrf-name
9. ipv6 address ipv6-prefix/prefix-length
10. ipv6 router isis process-tag
11. exit
12. Repeat Step 7 to Step 11 to configure IS-IS routing process and VRFs for IPv6 on different interfaces.
13. router isis process-tag
14. (Optional) vrf vrf-name
15. net network-entity-title
16. is-type [level-1 | level-1-2 | level-2-only]
17. log-adjacency-changes
18. address-family ipv6 [unicast]
19. redistribute source-protocol [process-id] [route-map map-tag]
20. redistribute isis [process-id] {level-1 | level-2} into {level-1 | level-2} distribute-list list-name
21. exit
22. exit
23. route-map map-tag [permit | deny] [sequence-number]
24. match route-type {level-1 | level-2}
25. set metric metric-value
26. set level {level-1 | level-2 | level-1-2}
### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device&gt; enable</td>
<td>Enters your password if prompted.</td>
</tr>
<tr>
<td><strong>Step 2</strong> configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device# configure terminal</td>
<td></td>
</tr>
<tr>
<td><strong>Step 3</strong> vrf definition vrf-name</td>
<td>Configure a VRF routing table instance and enters VRF configuration mode</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(config)# vrf definition v1</td>
<td></td>
</tr>
<tr>
<td><strong>Step 4</strong> address-family ipv6 [unicast]</td>
<td>Specifies the IPv6 address family, and enters family configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(config-vrf)# address-family ipv6</td>
<td>* Note: The unicast keyword specifies the unicast IPv6 unicast address family. By default, the device is placed in configuration mode for the unicast IPv6 address family if the unicast keyword is not specified with the address-family ipv6 command.</td>
</tr>
<tr>
<td><strong>Step 5</strong> exit</td>
<td>Exits the address family configuration mode and enters VRF configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(config-vrf#af)# exit</td>
<td></td>
</tr>
<tr>
<td><strong>Step 6</strong> exit</td>
<td>Exits the VRF configuration mode and enters global configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(config-vrf)# exit</td>
<td></td>
</tr>
<tr>
<td><strong>Step 7</strong> interface type number</td>
<td>Configures an interface type and enters interface configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(config)# interface FastEthernet 0/2</td>
<td></td>
</tr>
<tr>
<td><strong>Step 8</strong> (Optional) vrf forwarding vrf-name</td>
<td>Associates a Virtual Routing and Forwarding (VRF) or a virtual network with an interface or subinterface</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(config-if)# vrf forwarding v1</td>
<td></td>
</tr>
<tr>
<td>Command or Action</td>
<td>Purpose</td>
</tr>
<tr>
<td>-------------------</td>
<td>---------</td>
</tr>
<tr>
<td><strong>Step 9</strong></td>
<td>Sets an IPv6 address for an interface.</td>
</tr>
<tr>
<td>ipv6 address ipv6-prefix/prefix-length</td>
<td></td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Device(config-if)# ipv6 address 2001:DB8:/:32</td>
<td></td>
</tr>
<tr>
<td><strong>Step 10</strong></td>
<td>Configures an IS-IS routing process for IPv6 on an interface and attaches a tag to the routing process.</td>
</tr>
<tr>
<td>ipv6 router isis process-tag</td>
<td></td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Device(config-if)# ipv6 router isis v1a</td>
<td></td>
</tr>
<tr>
<td><strong>Step 11</strong></td>
<td>Exits the interface configuration mode and enters global configuration mode.</td>
</tr>
<tr>
<td>exit</td>
<td></td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Device(config-if)# exit</td>
<td></td>
</tr>
<tr>
<td><strong>Step 12</strong></td>
<td>Repeat Step 7 to Step 11 to configure IS-IS routing process and VRFs for IPv6 on different interfaces.</td>
</tr>
<tr>
<td>--</td>
<td></td>
</tr>
<tr>
<td><strong>Step 13</strong></td>
<td>Enables IS-IS for the specified IS-IS routing process, and enters router configuration mode.</td>
</tr>
<tr>
<td>router isis process-tag</td>
<td></td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Device(config)# router isis v1a</td>
<td></td>
</tr>
<tr>
<td><strong>Step 14</strong></td>
<td>Associates a Virtual Routing and Forwarding (VRF) instance or a virtual network with an interface or subinterface</td>
</tr>
<tr>
<td>(Optional) vrf vrf-name</td>
<td></td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Device(config-if)# vrf v1</td>
<td></td>
</tr>
<tr>
<td><strong>Step 15</strong></td>
<td>Configures IS-IS network entity title (NET) for a CLNS routing process.</td>
</tr>
<tr>
<td>net network-entity-title</td>
<td></td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Device(config-router)# net 49.000b.0000.0001.0002.00</td>
<td></td>
</tr>
<tr>
<td><strong>Step 16</strong></td>
<td>Configures the routing level for an instance of the IS-IS routing process.</td>
</tr>
<tr>
<td>is-type [level-1</td>
<td>level-1-2</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Device(config-router)# is-type level-1</td>
<td></td>
</tr>
<tr>
<td>Command or Action</td>
<td>Purpose</td>
</tr>
<tr>
<td>------------------</td>
<td>---------</td>
</tr>
<tr>
<td><strong>Step 17</strong> log-adjacency-changes</td>
<td>Configure the device to send a syslog message when an Open Shortest Path First (OSPF) neighbor goes up or down.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(config-router)# log-adjacency-changes</td>
<td></td>
</tr>
</tbody>
</table>

| **Step 18** address-family ipv6 [unicast] | Specifies the IPv6 address family, and enters address family configuration mode. |
| **Example:** Device(config-router)# address-family ipv6 |
| **Note** | The **unicast** keyword specifies the unicast IPv6 unicast address family. By default, the device is placed in configuration mode for the unicast IPv6 address family if the unicast keyword is not specified with the **address-family ipv6** command. |

| **Step 19** redistribute source-protocol [process-id] [route-map map-tag] | Specifies the route map that should be checked to filter the importation of routes from this source routing protocol to the current routing protocol. |
| **Example:** Device(config-router-af)# redistribute isis via route-map abc |

| **Step 20** redistribute isis [process-id] {level-1 | level-2} into {level-1 | level-2} distribute-list list-name | Redistributes IPv6 routes from one IS-IS level into another IS-IS level. By default, the routes learned by Level 1 instances are redistributed by the Level 2 instance. |
| **Example:** Device(config-router-af)# redistribute isis level-1 into level-2 distribute-list xyz |

| **Step 21** exit | Exits the address family configuration mode and enters router configuration mode. |
| **Example:** Device(config-router-af)# exit |

| **Step 22** exit | Exits the router configuration mode and enters global configuration mode. |
| **Example:** Device(config-router)# exit |

| **Step 23** route-map map-tag [permit | deny] [sequence-number] | Defines the conditions for redistributing routes from one routing protocol into another or from one IS-IS level to another and enters route-map configuration mode. |
| **Example:** Device(config)# route-map abc permit 10 |

<p>| <strong>Step 24</strong> match route-type {level-1 | level-2} | Defines the route-type match criterion. |
| <strong>Example:</strong> Device(config-route-map)# match route-type level-1 |</p>
<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 25</strong> set metric <em>metric-value</em></td>
<td>Configures the metric value used to redistribute routes.</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Device(config-route-map)# set metric 56</td>
<td></td>
</tr>
<tr>
<td><strong>Step 26</strong> set level {level-1</td>
<td>level-2</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Device(config-route-map)# set level level-2</td>
<td></td>
</tr>
<tr>
<td><strong>Step 27</strong> end</td>
<td>Exits the route-map configuration mode and enters privileged EXEC mode.</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Device(config-route-map)# end</td>
<td></td>
</tr>
</tbody>
</table>

### Configuration Examples for IS-IS IPv6 Multi-Process Support

**Example: IS-IS IPv6 Multi-Process Support Configuration**

```
Device> enable
Device# configure terminal
Device(config)# vrf definition v1
Device(config-vrf)# address-family ipv6
Device(config-router-af)# exit
Device(config)# interface FastEthernet 0/2
Device(config-if)# ipv6 address 2001:DB8::/32
Device(config-if)# vrf forwarding v1
Device(config-if)# ipv6 router isis v1a
Device(config-if)# exit
Device(config)# interface FastEthernet 0/3
Device(config-if)# ipv6 address 2001:DB8::/48
Device(config-if)# vrf forwarding v1
Device(config-if)# ipv6 router isis v1b
Device(config-if)# exit
Device(config)# router isis v1a
Device(config-router)# vrf v1
Device(config-router)# net 49.000b.0000.0001.0002.00
Device(config-router)# is-type level-1
Device(config-router)# log-adjacency-changes
Device(config-router)# address-family ipv6
Device(config-router-af)# redistribute isis v1b route-map abc
Device(config-router-af)# redistribute isis level-1 into level-2 distribute-list xyz
Device(config-router-af)# exit
Device(config-router)# exit
Device(config)# router isis v1b
Device(config-router)# vrf v1
Device(config-router)# net 49.000b.0000.000a.0001.00
Device(config-router)# log-adjacency-changes
Device(config-router)# address-family ipv6
Device(config-router-af)# redistribute isis v1a route-map abc
```
Device(config-router-af)# exit
Device(config-router)# exit
Device(config)# route-map abc permit 10
Device(config-route-map)# match route-type level-1
Device(config-route-map)# set metric 56
Device(config-route-map)# set level level-2

Feature Information for IS-IS IPv6 Multi-Process Support

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.
