OSPFv3 NSR

The OSPFv3 NSR feature allows a router with redundant Route Processors (RPs) to maintain its Open Shortest Path First (OSPF) state and adjacencies across planned and unplanned RP switchovers. It does this by checkpointing state information from OSPFv3 on the active RP to the standby RP. Later, following a switchover to the standby RP, OSPFv3 can use this checkpointed information to continue operation without interruption.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Information About OSPFv3 NSR

OSPFv3 NSR Functionality

Although OSPFv3 NSR serves a similar function to the OSPFv3 graceful restart feature, it works differently. With graceful restart, OSPFv3 on the newly active standby RP initially has no state information, so it uses extensions to the OSPFv3 protocol to recover its state from neighboring OSPFv3 devices. For this to work,
the neighbors must support the graceful restart protocol extensions and be able to act as helpers to the restarting device. They must also continue forwarding data traffic to the restarting device while this recovery is taking place.

With NSR, by contrast, the device performing the switchover preserves its state internally, and in most cases the neighbors are unaware that anything has happened. Because no assistance is needed from neighboring devices, NSR can be used in situations where graceful restart cannot; for example, graceful restart is unreliable in networks where not all the neighbors implement the graceful restart protocol extensions or where the network topology changes during the recovery.

**Note**

When NSR is enabled, the responsiveness and scalability of OSPF is degraded. The performance degradation happens because OSPF uses cpu and memory to checkpoint data to the standby Route Processor (RP).

---

### How to Configure OSPFv3 NSR

#### Configuring OSPFv3 NSR

Perform this task to configure OSPFv3 NSR.

**Note**

Devices that do not support NSR will not accept the `nsr` (OSPFv3) command.

#### SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `router ospfv3 process-id`
4. `nsr`
5. `end`
6. `show ospfv3 [process-id] [address-family] nsr`

#### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device&gt; enable</td>
<td>• Enter your password if prompted.</td>
</tr>
</tbody>
</table>
### Purpose

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 2</strong> configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device# configure terminal</td>
<td></td>
</tr>
<tr>
<td><strong>Step 3</strong> router ospfv3 process-id</td>
<td>Places the device in router configuration mode and configures an OSPFv3 routing process.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(config)# router ospfv3 109</td>
<td></td>
</tr>
<tr>
<td><strong>Step 4</strong> nsr</td>
<td>Configures NSR.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(config-router)# nsr</td>
<td></td>
</tr>
<tr>
<td><strong>Step 5</strong> end</td>
<td>Exits router configuration mode and returns to privileged EXEC mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(config-router)# end</td>
<td></td>
</tr>
<tr>
<td><strong>Step 6</strong> show ospfv3 [process-id] [address-family] nsr</td>
<td>Displays OSPFv3 NSR status information.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device# show ospfv3 109 nsr</td>
<td></td>
</tr>
</tbody>
</table>

### Configuring OSPFv3 NSR for an Address Family

In address family configuration mode you can configure NSR for a particular address family. Perform this task to enable OSPFv3 NSR for an address family.

**Note**

Devices that do not support NSR will not accept the `nsr` (OSPFv3) command.

### SUMMARY STEPS

1. `router ospfv3 process-id`  
2. `address-family {ipv4 | ipv6} unicast [vrf vrf-name]`  
3. `nsr [disable]`
DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>router ospfv3 <em>process-id</em></td>
</tr>
<tr>
<td>Example:</td>
<td>Device(config)# router ospfv3 109</td>
</tr>
</tbody>
</table>

| **Step 2** | address-family *(ipv4 | ipv6)* unicast [vrf *vrf-name*] | Enters IPv4 or IPv6 address family configuration mode for OSPFv3 router configuration mode. |
| Example: | Device(config-router)# address-family ipv4 unicast |

| **Step 3** | nsr [disable] | Enables NSR for the address family that is configured. |
| Example: | Device(config-router-af)# nsr |

Disabling OSPFv3 NSR for an Address Family

In address family configuration mode the optional *disable* keyword is available for the *nsr* command. Perform this task to disable OSPFv3 NSR for an address family.

SUMMARY STEPS

1. router ospfv3 *process-id*
2. address-family *(ipv4 | ipv6)* unicast [vrf *vrf-name*]
3. nsr [disable]

DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td>router ospfv3 <em>process-id</em></td>
</tr>
<tr>

<td></td>
<td>Device(config-router)# address-family ipv6 unicast</td>
</tr>
<tr>
<td>Step 3</td>
<td>nsr [disable]</td>
</tr>
<tr>
<td></td>
<td>Example:</td>
</tr>
<tr>
<td></td>
<td>Device(config-router-af)# nsr disable</td>
</tr>
</tbody>
</table>

**Troubleshooting Tips**

OSPFv3 NSR can increase the amount of memory used by the OSPFv3 device process. To determine how much memory OSPFv3 is currently using without NSR, you can use the `show processes` and `show processes memory` commands:

```
Device# show processes
| include OSPFv3
276 Mwe 133BE14 1900 1792 1060 8904/12000 0 OSPFv3-1 Router
296 Mwe 133A824 10 971 10 8640/12000 0 OSPFv3-1 Hello
```

Process 276 is the OSPFv3 device process that is to be checked. The `show processes memory` command is used to display its current memory use:

```
Device# show processes memory 276
Process ID: 276
Process Name: OSPFv3-1 Router
Total Memory Held: 4454800 bytes
```

In this case OSPFv3 is using 4,454,800 bytes or approximately 4.5 megabytes (MB). OSPFv3 NSR could double this for brief periods, so you should make sure the device has at least 5 MB of free memory before enabling OSPFv3 NSR.

**Configuration Examples for OSPFv3 NSR**

**Example Configuring OSPFv3 NSR**

The following example shows how to configure OSPFv3 NSR and verify that it is enabled:

```
Device(config)# router ospfv3 1
Device(config-router)# nsr
Device(config-router)# end
Device# show ospfv3 1
OSPFv3 1 address-family ipv4
Router ID 10.0.0.1
Supports NSSA (compatible with RFC 3101)
```
Event-log enabled, Maximum number of events: 1000, Mode: cyclic
It is an area border and autonomous system boundary router
Redistributing External Routes from,
Router is not originating router-LSAs with maximum metric
Initial SPF schedule delay 5000 msecs
Minimum hold time between two consecutive SPPFs 10000 msecs
Maximum wait time between two consecutive SPPFs 10000 msecs
Minimum LSA interval 5 secs
Minimum LSA arrival 1000 msecs
LSA group pacing timer 240 secs
Interface flood pacing timer 33 msecs
Retransmission pacing timer 66 msecs
Retransmission limit dc 24 non-dc 24
Number of external LSA 0. Checksum Sum 0x000000
Number of areas in this router is 3. 2 normal 0 stub 1 nssa
Non-Stop Routing enabled
Graceful restart helper support enabled
Reference bandwidth unit is 100 mbps
RFC1583 compatibility enabled
Area BACKBONE(0) (Inactive)
  Number of interfaces in this area is 1
  SPF algorithm executed 3 times
  Number of LSA 6. Checksum Sum 0x03C938
  Number of DCbitless LSA 0
  Number of indication LSA 0
  Number of DoNotAge LSA 0
  Flood list length 0
Area 1
  Number of interfaces in this area is 3
  SPF algorithm executed 3 times
  Number of LSA 6. Checksum Sum 0x024041
  Number of DCbitless LSA 0
  Number of indication LSA 0
  Number of DoNotAge LSA 0
  Flood list length 0
Area 3
  Number of interfaces in this area is 1
  It is a NSSA area
  Perform type-7/type-5 LSA translation
  SPF algorithm executed 4 times
  Number of LSA 5. Checksum Sum 0x024910
  Number of DCbitless LSA 0
  Number of indication LSA 0
  Number of DoNotAge LSA 0
  Flood list length 0
OSPFV3 1 address-family ipv6
Router ID 10.0.0.1
Supports NSSA (compatible with RFC 3101)
Event-log enabled, Maximum number of events: 1000, Mode: cyclic
It is an area border and autonomous system boundary router
Redistributing External Routes from,
  ospf 2
Router is not originating router-LSAs with maximum metric
Initial SPF schedule delay 5000 msecs
Minimum hold time between two consecutive SPPFs 10000 msecs
Maximum wait time between two consecutive SPPFs 10000 msecs
Minimum LSA interval 5 secs
Minimum LSA arrival 1000 msecs
LSA group pacing timer 240 secs
Interface flood pacing timer 33 msecs
Retransmission pacing timer 66 msecs
Retransmission limit dc 24 non-dc 24
Number of external LSA 0. Checksum Sum 0x000000
Number of areas in this router is 3. 2 normal 0 stub 1 nssa
Non-Stop Routing enabled
Graceful restart helper support enabled
Reference bandwidth unit is 100 mbps
RFC1583 compatibility enabled
Area BACKBONE(0) (Inactive)
  Number of interfaces in this area is 2
  SPF algorithm executed 2 times
  Number of LSA 6. Checksum Sum 0x02BABA7
The output shows that OSPFv3 NSR is configured.

**Example Verifying OSPFv3 NSR**

The following example shows how to verify OSPFv3 NSR status:

```
Device# show ospfv3 1 nsr
Active RP
  Operating in duplex mode
  Redundancy state: ACTIVE
  Peer redundancy state: STANDBY HOT
  Checkpoint peer ready
  Checkpoint messages enabled
  ISSU negotiation complete
  ISSU versions compatible

  OSPFv3 1 address-family ipv4 (router-id 10.0.0.1)
    NSR configured
    Checkpoint message sequence number: 29
    Standby synchronization state: synchronized
    Bulk sync operations: 1
    Next sync check time: 12:00:14.956 PDT Wed Jun 6 2012
    LSA Count: 17, Checksum Sum 0x00085289

  OSPFv3 1 address-family ipv6 (router-id 10.0.0.1)
    NSR configured
    Checkpoint message sequence number: 32
    Standby synchronization state: synchronized
    Bulk sync operations: 1
    Next sync check time: 12:00:48.537 PDT Wed Jun 6 2012
    LSA Count: 18, Checksum Sum 0x0008CA05
```

The output shows that OSPFv3 NSR is configured and that OSPFv3 on the standby RP is fully synchronized and ready to continue operation if the active RP fails or if a manual switchover is performed.

Feature Information for OSPFv3 NSR

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.
