

Feature History

The following table lists the new and modified features supported in the IP Routing: Protocol-Independent Configuration Guide in Cisco IOS XE 17 releases.

Feature	Description
Cisco IOS XE Bengaluru 17.4.1	
On-Change Notifications for IS-IS State	This feature allows you to externalize the internal state of the router for the operational data and thus enables you to access the internal state of the router. It helps in sending on-change notifications to the receiver for any change of state, for example, when the adjacency goes up or down.
