

Configuring IP SLAs FTP Operations

Last Updated: March 22, 2011

This module describes how to configure an IP Service Level Agreements (SLAs) File Transfer Protocol (FTP) operation to measure the response time between a Cisco device and a FTP server to retrieve a file. The IP SLAs FTP operation supports an FTP GET request only. This module also demonstrates how the results of the FTP operation can be displayed and analyzed to determine the capacity of your network. The FTP operation can be used also for troubleshooting FTP server performance.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the Feature Information Table at the end of this document.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn>. An account on Cisco.com is not required.

Restrictions for IP SLAs FTP Operations

The IP SLAs FTP operation only supports FTP GET (download) requests.

Information About IP SLAs FTP Operations

- [FTP Operation, page 2](#)

FTP Operation

The FTP operation measures the round-trip time (RTT) between a Cisco device and an FTP server to retrieve a file. FTP is an application protocol, part of the Transmission Control Protocol (TCP)/IP protocol stack, used for transferring files between network nodes.

In the figure below Router B is configured as the source IP SLAs device and an FTP operation is configured with the FTP server as the destination device.

Figure 1: FTP Operation

Connection response time is computed by measuring the time taken to download a file to Router B from the remote FTP server using FTP over TCP. This operation does not use the IP SLAs Responder.

Note

To test the response time to connect to an FTP port (Port 21), use the IP SLAs TCP Connect operation.

Both active and passive FTP transfer modes are supported. The passive mode is enabled by default. Only the FTP GET (download) operation type is supported. The URL specified for the FTP GET operation must be in one of the following formats:

- ftp://username:password@host/filename
- ftp://host/filename

If the username and password are not specified, the defaults are anonymous and test, respectively.

FTP carries a significant amount of data traffic and can affect the performance of your network. The results of an IP SLAs FTP operation to retrieve a large file can be used to determine the capacity of the network but retrieve large files with caution because the FTP operation will consume more bandwidth. The FTP operation also measures your FTP server performance levels by determining the RTT taken to retrieve a file.

How to Configure IP SLAs FTP Operations

- [Configuring an FTP Operation on a Source Device, page 3](#)
- [Scheduling IP SLAs Operations, page 7](#)

Configuring an FTP Operation on a Source Device

Note

There is no need to configure an IP SLAs responder on the destination device.

Perform one of the following tasks:

- [Configuring a Basic FTP Operation on the Source Device, page 3](#)
- [Configuring an FTP Operation with Optional Parameters on the Source Device, page 4](#)

Configuring a Basic FTP Operation on the Source Device

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **ip sla operation-number**
4. **ftp get url [source-ip {ip-address | hostname}] [mode {passive | active}]**
5. **frequency seconds**
6. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	configure terminal Example: Router# configure terminal	Enters global configuration mode.

	Command or Action	Purpose
Step 3	<p>ip sla <i>operation-number</i></p> <p>Example:</p> <pre>Router(config)# ip sla 10</pre>	Begins configuration for an IP SLAs operation and enters IP SLA configuration mode.
Step 4	<p>ftp get url [source-ip {<i>ip-address</i> <i>hostname</i>}] [mode {passive active}]</p> <p>Example:</p> <pre>Router(config-ip-sla)# ftp get ftp:// username:password@hostip/test.cap</pre>	Defines an FTP operation and enters IP SLA FTP configuration mode.
Step 5	<p>frequency <i>seconds</i></p> <p>Example:</p> <pre>Router(config-ip-sla-ftp)# frequency 30</pre>	(Optional) Sets the rate at which a specified IP SLAs operation repeats.
Step 6	<p>end</p> <p>Example:</p> <pre>Router(config-ip-sla-ftp)# exit</pre>	Exits to privileged EXEC mode.

Configuring an FTP Operation with Optional Parameters on the Source Device

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **ip sla *operation-number***
4. **ftp get url [source-ip {*ip-address* | *hostname*}] [mode {**passive** | **active**}**
5. **history buckets-kept *size***
6. **history distributions-of-statistics-kept *size***
7. **history enhanced [interval *seconds*] [buckets *number-of-buckets*]**
8. **history filter {**none** | **all** | **overThreshold** | **failures**}**
9. **frequency *seconds***
10. **history hours-of-statistics-kept *hours***
11. **history lives-kept *lives***
12. **owner *owner-id***
13. **history statistics-distribution-interval *milliseconds***
14. **tag *text***
15. **threshold *milliseconds***
16. **timeout *milliseconds***
17. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	configure terminal Example: Router# configure terminal	Enters global configuration mode.
Step 3	ip sla <i>operation-number</i> Example: Router(config)# ip sla 10	Begins configuration for an IP SLAs operation and enters IP SLA configuration mode.
Step 4	ftp get url [source-ip {<i>ip-address</i> <i>hostname</i>}] [mode {passive active} Example: Router(config-ip-sla)# ftp get ftp:// username:password@hostip/filename	Defines an FTP operation and enters IP SLA FTP configuration mode.

	Command or Action	Purpose
Step 5	history buckets-kept <i>size</i> Example: Router(config-ip-sla-ftp)# history buckets-kept 25	(Optional) Sets the number of history buckets that are kept during the lifetime of an IP SLAs operation.
Step 6	history distributions-of-statistics-kept <i>size</i> Example: Router(config-ip-sla-ftp)# history distributions-of-statistics-kept 5	(Optional) Sets the number of statistics distributions kept per hop during an IP SLAs operation.
Step 7	history enhanced [<i>interval seconds</i>] [<i>buckets number-of-buckets</i>] Example: Router(config-ip-sla-ftp)# history enhanced interval 900 buckets 100	(Optional) Enables enhanced history gathering for an IP SLAs operation.
Step 8	history filter { <i>none</i> <i>all</i> <i>overThreshold</i> <i>failures</i> } Example: Router(config-ip-sla-ftp)# history filter failures	(Optional) Defines the type of information kept in the history table for an IP SLAs operation.
Step 9	frequency <i>seconds</i> Example: Router(config-ip-sla-ftp)# frequency 30	(Optional) Sets the rate at which a specified IP SLAs operation repeats.
Step 10	history hours-of-statistics-kept <i>hours</i> Example: Router(config-ip-sla-ftp)# history hours-of-statistics-kept 4	(Optional) Sets the number of hours for which statistics are maintained for an IP SLAs operation.
Step 11	history lives-kept <i>lives</i> Example: Router(config-ip-sla-ftp)# history lives-kept 5	(Optional) Sets the number of lives maintained in the history table for an IP SLAs operation.
Step 12	owner <i>owner-id</i> Example: Router(config-ip-sla-ftp)# owner admin	(Optional) Configures the Simple Network Management Protocol (SNMP) owner of an IP SLAs operation.
Step 13	history statistics-distribution-interval <i>milliseconds</i>	(Optional) Sets the time interval for each statistics distribution kept for an IP SLAs operation.

	Command or Action	Purpose
	<p>Example:</p> <pre>Router(config-ip-sla-ftp)# history statistics- distribution-interval 10</pre>	
Step 14	<p>tag <i>text</i></p> <p>Example:</p> <pre>Router(config-ip-sla-ftp)# tag TelnetPollServer1</pre>	(Optional) Creates a user-specified identifier for an IP SLAs operation.
Step 15	<p>threshold <i>milliseconds</i></p> <p>Example:</p> <pre>Router(config-ip-sla-ftp)# threshold 10000</pre>	(Optional) Sets the upper threshold value for calculating network monitoring statistics created by an IP SLAs operation.
Step 16	<p>timeout <i>milliseconds</i></p> <p>Example:</p> <pre>Router(config-ip-sla-ftp)# timeout 10000</pre>	(Optional) Sets the amount of time an IP SLAs operation waits for a response from its request packet.
Step 17	<p>end</p> <p>Example:</p> <pre>Router(config-ip-sla-ftp)# end</pre>	Exits to privileged EXEC mode.

Scheduling IP SLAs Operations

Note

- All IP SLAs operations to be scheduled must be already configured.
- The frequency of all operations scheduled in a multioperation group must be the same.
- List of one or more operation ID numbers to be added to a multioperation group is limited to a maximum of 125 characters, including commas (,).

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. Do one of the following:
 - **ip sla schedule** *operation-number* [**life** {**forever** | *seconds*}] [**start-time** {*hh : mm[: ss]* [*month day* | *day month*] | **pending** | **now** | **after** *hh : mm : ss*}] [**ageout** *seconds*] [**recurring**]
 - **ip sla group schedule** *group-operation-number operation-id-numbers schedule-period schedule-period-range* [**ageout** *seconds*] [**frequency** *group-operation-frequency*] [**life**{**forever** | *seconds*}] [**start-time**{*hh:mm[:ss]* [*month day* | *day month*] | **pending** | **now** | **after** *hh:mm:ss*}]
4. **exit**
5. **show ip sla group schedule**
6. **show ip sla configuration**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	configure terminal Example: Router# configure terminal	Enters global configuration mode.
Step 3	Do one of the following: <ul style="list-style-type: none"> • ip sla schedule <i>operation-number</i> [life {forever <i>seconds</i>}] [start-time {<i>hh : mm[: ss]</i> [<i>month day</i> <i>day month</i>] pending now after <i>hh : mm : ss</i>}] [ageout <i>seconds</i>] [recurring] • ip sla group schedule <i>group-operation-number operation-id-numbers schedule-period schedule-period-range</i> [ageout <i>seconds</i>] [frequency <i>group-operation-frequency</i>] [life{forever <i>seconds</i>}] [start-time{<i>hh:mm[:ss]</i> [<i>month day</i> <i>day month</i>] pending now after <i>hh:mm:ss</i>}] Example: Router(config)# ip sla schedule 10 start-time now life forever Example: Router(config)# ip sla group schedule 1 3,4,6-9	For individual IP SLAs operations only: Configures the scheduling parameters for an individual IP SLAs operation. or For multioperation scheduler only: Specifies an IP SLAs operation group number and the range of operation numbers to be scheduled in global configuration mode.
Step 4	exit	Exits to privileged EXEC mode.

	Command or Action	Purpose
	Example: Router(config)# exit	
Step 5	show ip sla group schedule Example: Router# show ip sla group schedule	(Optional) Displays the IP SLAs group schedule details.
Step 6	show ip sla configuration Example: Router# show ip sla configuration	(Optional) Displays the IP SLAs configuration details.

- [Troubleshooting Tips, page 9](#)
- [What to Do Next, page 9](#)

Troubleshooting Tips

- If the IP SLAs operation is not running and generating statistics, add the **verify-data** command to the configuration of the operation (while configuring in IP SLA configuration mode) to enable data verification. When enabled, each operation response is checked for corruption. Use the **verify-data** command with caution during normal operations because it generates unnecessary overhead.
- Use the **debugipsla trace** and **debug ip sla error** commands to help troubleshoot issues with an IP SLAs operation.

What to Do Next

To add proactive threshold conditions and reactive triggering for generating traps, or for starting another operation, to an IP SLAs operation, see the "Configuring Proactive Threshold Monitoring" section.

To view and interpret the results of an IP SLAs operation use the **show ip sla statistics** command. Checking the output for fields that correspond to criteria in your service level agreement will help you determine whether the service metrics are acceptable.

Configuration Examples for IP SLAs FTP Operations

- [Example Configuring an FTP Operation, page 9](#)

Example Configuring an FTP Operation

The following example shows how to configure an FTP operation from Router B to the FTP server as shown in the "FTP Operation" figure in the "Information About IP SLAs FTP Operation" section. The

operation is scheduled to start every day at 1:30 a.m. In this example, the file named test.cap is to be retrieved from the host, cisco.com, with a password of abc using FTP in active mode.

Router B Configuration

```
ip sla 10
 ftp get ftp://user1:abc@test.cisco.com/test.cap mode active
 frequency 20
 tos 128
 timeout 40000
 tag FLL-FTP
 ip sla schedule 10 start-time 01:30:00 recurring
```

Feature Information for IP SLAs FTP Operations

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn>. An account on Cisco.com is not required.
