IPv6 RA Guard

The IPv6 RA Guard feature provides support for allowing the network administrator to block or reject unwanted or rogue router advertisement (RA) guard messages that arrive at the network device platform.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Restrictions for IPv6 RA Guard

- The IPv6 RA Guard feature does not offer protection in environments where IPv6 traffic is tunneled.
- This feature is supported only in hardware when the ternary content addressable memory (TCAM) is programmed.
- This feature can be configured on a switch port interface in the ingress direction.
- This feature supports host mode and router mode.
- This feature is supported only in the ingress direction; it is not supported in the egress direction.
• This feature is not supported on EtherChannel and EtherChannel port members.
• This feature is not supported on trunk ports with merge mode.
• This feature is supported on auxiliary VLANs and private VLANs (PVLANs). In the case of PVLANs, primary VLAN features are inherited and merged with port features.
• Packets dropped by the IPv6 RA Guard feature can be spanned.
• If the platform ipv6 acl icmp optimize neighbor-discovery command is configured, the IPv6 RA Guard feature cannot be configured and an error message will be displayed. This command adds default global Internet Control Message Protocol (ICMP) entries that will override the RA guard ICMP entries.

Information About IPv6 RA Guard

IPv6 Global Policies

IPv6 global policies provide storage and access policy database services. IPv6 ND inspection and IPv6 RA guard are IPv6 global policies features. Every time an ND inspection or RA guard is configured globally, the policy attributes are stored in the software policy database. The policy is then applied to an interface, and the software policy database entry is updated to include this interface to which the policy is applied.

IPv6 RA Guard

The IPv6 RA Guard feature provides support for allowing the network administrator to block or reject unwanted or rogue RA guard messages that arrive at the network device platform. RAs are used by devices to announce themselves on the link. The IPv6 RA Guard feature analyzes these RAs and filters out RAs that are sent by unauthorized devices. In host mode, all RA and router redirect messages are disallowed on the port. The RA guard feature compares configuration information on the Layer 2 (L2) device with the information found in the received RA frame. Once the L2 device has validated the content of the RA frame and router redirect frame against the configuration, it forwards the RA to its unicast or multicast destination. If the RA frame content is not validated, the RA is dropped.
How to Configure IPv6 RA Guard

Configuring the IPv6 RA Guard Policy on the Device

SUMMARY STEPS

1. enable
2. configure
terminal
3. ipv6 nd raguard policy policy-name
4. device-role {host | router}
5. hop-limit {maximum | minimum limit}
6. managed-config-flag {on | off}
7. match ipv6 access-list ipv6-access-list-name
8. match ra prefix-list ipv6-prefix-list-name
9. other-config-flag {on | off}
10. router-preference maximum {high | low | medium}
11. trusted-port
12. exit

DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td><strong>Example:</strong></td>
<td></td>
</tr>
<tr>
<td>Device&gt; enable</td>
<td></td>
</tr>
</tbody>
</table>
| **Step 2** configure
terminal                     | Enters global configuration mode.                                                                                                    |
| **Example:**                             |                                                                                                                                 |
| Device# configure terminal               |                                                                                                                                 |
| **Step 3** ipv6 nd raguard policy
policy-name | Defines the RA guard policy name and enters RA guard policy configuration mode.                                                      |
| **Example:**                             |                                                                                                                                 |
| Device(config)# ipv6 nd raguard policy   |                                                                                                                                 |
| policy1                                  |                                                                                                                                 |
### Command or Action

**Step 4**

```
device-role {host | router}
```

**Example:**
```
Device(config-ra-guard)# device-role router
```

**Purpose:** Specifies the role of the device attached to the port.

**Step 5**

```
hop-limit {maximum | minimum limit}
```

**Example:**
```
Device(config-ra-guard)# hop-limit minimum 3
```

**Purpose:** (Optional) Enables verification of the advertised hop count limit.
- If not configured, this check will be bypassed.

**Step 6**

```
managed-config-flag {on | off}
```

**Example:**
```
Device(config-ra-guard)# managed-config-flag on
```

**Purpose:** (Optional) Enables verification that the advertised managed address configuration flag is on.
- If not configured, this check will be bypassed.

**Step 7**

```
match ipv6 access-list ipv6-access-list-name
```

**Example:**
```
Device(config-ra-guard)# match ipv6 access-list list1
```

**Purpose:** (Optional) Enables verification of the sender's IPv6 address in inspected messages from the configured authorized device source access list.
- If not configured, this check will be bypassed.

**Step 8**

```
match ra prefix-list ipv6-prefix-list-name
```

**Example:**
```
Device(config-ra-guard)# match ra prefix-list listname1
```

**Purpose:** (Optional) Enables verification of the advertised prefixes in inspected messages from the configured authorized prefix list.
- If not configured, this check will be bypassed.

**Step 9**

```
other-config-flag {on | off}
```

**Example:**
```
Device(config-ra-guard)# other-config-flag on
```

**Purpose:** (Optional) Enables verification of the advertised "other" configuration parameter.

**Step 10**

```
router-preference maximum {high | low | medium}
```

**Example:**
```
Device(config-ra-guard)# router-preference maximum high
```

**Purpose:** (Optional) Enables verification that the advertised default router preference parameter value is lower than or equal to a specified limit.

**Step 11**

```
trusted-port
```

**Example:**
```
Device(config-ra-guard)# trusted-port
```

**Purpose:** (Optional) Specifies that this policy is being applied to trusted ports.
- All RA guard policing will be disabled.

**Step 12**

```
exit
```

**Example:**
```
Device(config-ra-guard)# exit
```

**Purpose:** Exits RA guard policy configuration mode and returns to global configuration mode.
Configuring IPv6 RA Guard on an Interface

**SUMMARY STEPS**

1. enable
2. configure terminal
3. interface type number
4. ipv6 nd raguard attach-policy [policy-name [vlan {add | except | none | remove | all} vlan [vlan1, vlan2, vlan3...]]]
5. exit
6. show ipv6 nd raguard policy [policy-name]
7. debug ipv6 snooping raguard [filter | interface | vlanid]

<td></td>
</tr>
</tbody>
</table>

### Configuration Examples for IPv6 RA Guard

#### Example: IPv6 RA Guard Configuration

```
Device(config)# interface fastethernet 3/13
Device(config-if)# ipv6 nd raguard attach-policy
```

```
Device# show running-config interface fastethernet 3/13
Building configuration...
Current configuration : 129 bytes
!
interface FastEthernet3/13
  switchport
  switchport access vlan 222
  switchport mode access
  access-group mode prefer port
  ipv6 nd raguard
end
```

#### Example: Configuring IPv6 ND Inspection and RA Guard

This example provides information about an interface on which both the Neighbor Discovery Inspection and RA Guard features are configured:

```
Device# show ipv6 snooping capture-policy interface ethernet 0/0
```

Feature Information for IPv6 RA Guard

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.
