Pseudowire Group Switchover

The Pseudowire Group Switchover feature allows all pseudowires in a group to be quickly switched over to backup pseudowires. This group switchover is triggered by a single “group down” status message received from a remote peer.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for Pseudowire Group Switchover

- Label Distribution Protocol (LDP) must be implemented on the network.
- Each xconnect must have a backup pseudowire configured.
Restrictions for Pseudowire Group Switchover

The Pseudowire Group Switchover feature is supported on Cisco IOS XE Release 3.10S and later releases. This feature is supported on Cisco ASR 903 Series routers on the following attachment circuits:

- Ethernet VLAN
- Asynchronous Transfer Mode (ATM)
- Circuit Emulation over MPLS (CEM)

Information About Pseudowire Group Switchover

Introduction to Pseudowire Group Switchover

The Pseudowire Group Switchover feature allows you to reduce the switchover time from main pseudowires to backup pseudowires when a fault is encountered. The reduced switchover time is achieved by grouping Label Distribution Protocol (LDP) status messages and internal interprocess communication (IPC) messages.

When the remote peer detects an attachment circuit failure, it sends an LDP status message. When this status message is received, the designated backup pseudowires take over. Packets are then routed through the backup pseudowires.

Pseudowires can be grouped together by assigning a group ID. When an LDP status message is received by a pseudowire group, the entire group switches over, thus reducing switchover time.

Note

The Pseudowire Group Switchover feature is enabled by default and cannot be disabled.

Figure 1: Primary and Backup Pseudowire Groups
How to Configure Predictive Switchover

Predictive switchover allows switchovers from a main pseudowire to a backup pseudowire with a remote "standby" status, without waiting for an “up” status from the remote peer.

Predictive switchover is configured by enabling redundancy predictive mode in global configuration mode or xconnect configuration mode.

Configuring Predictive Switchover (Global Configuration Mode)

**SUMMARY STEPS**

1. enable
2. configure terminal
3. l2vpn
4. redundancy predictive enabled
5. end

**DETAILED STEPS**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td>Example: Device&gt; enable</td>
<td>• Enter your password if prompted.</td>
</tr>
<tr>
<td><strong>Step 2</strong> configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td>Example: Device# configure terminal</td>
<td></td>
</tr>
<tr>
<td><strong>Step 3</strong> l2vpn</td>
<td>Enters l2vpn configuration mode.</td>
</tr>
<tr>
<td>Example: Device(config)# l2vpn</td>
<td></td>
</tr>
<tr>
<td><strong>Step 4</strong> redundancy predictive enabled</td>
<td>Enables redundancy predictive mode.</td>
</tr>
<tr>
<td>Example: Device(config-l2vpn)# redundancy predictive enabled</td>
<td>• By default, redundancy predictive mode is disabled.</td>
</tr>
<tr>
<td><strong>Step 5</strong> end</td>
<td>Exits l2vpn configuration mode and returns to privileged EXEC mode.</td>
</tr>
<tr>
<td>Example: Device(config-l2vpn)# end</td>
<td></td>
</tr>
</tbody>
</table>
Configuring Predictive Switchover (Xconnect Configuration Mode)

SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `l2vpn xconnect context context-name`
4. `redundancy predictive enabled`
5. `end`

DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td><code>enable</code></td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td>Example: <code>Device&gt; enable</code></td>
<td>• Enter your password if prompted.</td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td><code>configure terminal</code></td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td>Example: <code>Device# configure terminal</code></td>
<td></td>
</tr>
<tr>
<td><strong>Step 3</strong></td>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td><code>l2vpn xconnect context context-name</code></td>
<td>Creates an L2VPN cross-connect context and enters xconnect configuration mode.</td>
</tr>
<tr>
<td>Example: <code>Device(config)# l2vpn xconnect context con1</code></td>
<td></td>
</tr>
<tr>
<td><strong>Step 4</strong></td>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td><code>redundancy predictive enabled</code></td>
<td>Enables redundancy predictive mode.</td>
</tr>
<tr>
<td>Example: <code>Device(config-xconnect)# redundancy predictive enabled</code></td>
<td></td>
</tr>
<tr>
<td><strong>Step 5</strong></td>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td><code>end</code></td>
<td>Exits xconnect configuration mode and returns to privileged EXEC mode.</td>
</tr>
<tr>
<td>Example: <code>Device(config-xconnect)# end</code></td>
<td></td>
</tr>
</tbody>
</table>

Verifying a Pseudowire Group Switchover Configuration

You can use `show` commands to view information about a pseudowire group switchover configuration.

The following example shows how to display information about Any Transport over MPLS (AToM) virtual circuits (VCs):

Device# `show l2vpn atom vc destination 2.1.1.2 group remote 6`

<table>
<thead>
<tr>
<th>Interface</th>
<th>Dest Address</th>
<th>VC ID</th>
<th>Type</th>
<th>Name</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>pw100001</td>
<td>2.1.1.2</td>
<td>1234000</td>
<td>p2p</td>
<td>Et1/0.1-1001</td>
<td>UP</td>
</tr>
</tbody>
</table>
The following example shows how to display the status of the pseudowire switching point:

```
Device# show l2vpn atom vc destination 2.1.1.2 group remote 6 detail

pseudowire100001 is up, VC status is up PW type: Ethernet
Create time: 5d20h, last status change time: 5d20h
  Last label FSM state change time: 5d20h
Destination address: 2.1.1.2 VC ID: 1234000
  Output interface: Et0/0, imposed label stack {2001}
Preferred path: not configured
Default path: active
Next hop: 20.0.0.2
Member of xconnect service Et1/0.1-1001, group right
Associated member Et1/0.1 is up, status is up
Interworking type is Ethernet
Service id: 0x6d000002
Signaling protocol: LDP, peer 2.1.1.2:0 up
  Targeted Hello: 1.1.1.1(LDP Id) -> 2.1.1.2, LDP is UP
Graceful restart: not configured and not enabled
Non stop routing: not configured and not enabled
PWid FEC (128), VC ID: 1234000
Status TLV support (local/remote) : enabled/supported
  LDP route watch : enabled
Label/status state machine : established, LruRru
Local dataplane status received : No fault
BFD dataplane status received : Not sent
BFD peer monitor status received : No fault
Status received from access circuit : No fault
Status sent to access circuit : No fault
Status received from pseudowire i/f : No fault
Status sent to network peer : No fault
Status received from network peer : No fault
Adjacency status of remote peer : No fault
Sequencing: receive disabled, send disabled
```

### Bindings

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Local</th>
<th>Remote</th>
</tr>
</thead>
<tbody>
<tr>
<td>Label</td>
<td>2007</td>
<td>2001</td>
</tr>
<tr>
<td>Group ID</td>
<td>0</td>
<td>6</td>
</tr>
<tr>
<td>Interface</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MTU</td>
<td>1500</td>
<td>1500</td>
</tr>
<tr>
<td>Control word</td>
<td>on (configured: autosense)</td>
<td>on</td>
</tr>
<tr>
<td>PW type</td>
<td>Ethernet</td>
<td>Ethernet</td>
</tr>
<tr>
<td>VCCV CV type</td>
<td>0x12</td>
<td>LSPV [2], BFD/Raw [5]</td>
</tr>
<tr>
<td>VCCV CC type</td>
<td>0x07</td>
<td>CW [1], RA [2], TTL [3]</td>
</tr>
<tr>
<td>Status TLV</td>
<td>enabled</td>

</tr>
</tbody>
</table>

**Dataplane:**
- SSM segment/switch IDs: 12309/4115 (used), PWID: 1
- Rx Counters: 106563 input transit packets, 9803650 bytes
  - 0 drops, 0 seq err
- Tx Counters: 0 output transit packets, 0 bytes
  - 0 drops

The following example lists the active and standby segment pairs associated with each peer IP address and group identifier:

```
Device# show ssm group

Active  Standby
IP Address  Group ID  Segment/Switch  Segment/Switch
```
The following example displays the number of active and standby segment pairs associated with each peer IP address and group identifier:

Device# show ssm group 2.1.1.2 6 summary

IP Address Group ID Group Members
2.1.1.2 6 1

The following example displays the number of pseudowires programmed in the hardware, with grouping information:

Device# show platform hardware pp active pw eompls group brief

Brief L2VPN EoMPLS Pseudo Wire Group Info
IP address Group ID Count
0x47474747 100695488 90

Troubleshooting a Pseudowire Group Switchover Configuration

Use the `debug platform software atom brief` command to view information about the following configurations:

- Add Group
- Delete From Group
- Group Switchovers

**Note**
We recommend that you use the `debug platform software atom brief` command only under Cisco Technical Assistance Center (TAC) supervision.

Configuration Examples for Predictive Switchover

**Example: Configuring Predictive Switchover (Global Configuration Mode)**

Device> enable
Device# configure terminal
Device(config)# l2vpn
Device(config-l2vpn)# redundancy predictive enabled
Device(config-l2vpn)# end

**Example: Configuring Predictive Switchover (Xconnect Configuration Mode)**

Device> enable
Device# configure terminal
Device(config)# l2vpn xconnect context con1

Feature Information for Pseudowire Group Switchover

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.
