MPLS VPN 6VPE per VRF Label

Last Updated: December 15, 2011

The MPLS VPN 6VPE per VRF Label feature allows you to configure a single Virtual Private Network (VPN) label for all local routes in the entire IPv6 VPN routing and forwarding (VRF) domain on Cisco 7600 routers. This MPLS VPN 6VPE per VRF Label feature incorporates a single (per VRF) VPN label for *all* local IPv6 routes in the VRF table.

You can enable (or disable) the MPLS VPN 6VPE per VRF Label feature in global configuration mode. This feature is available for the Cisco 7600 router only.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the Feature Information Table at the end of this document.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for the MPLS VPN 6VPE per VRF Label feature

- If your VRF domain has the external/internal Border Gateway Protocol (EIBGP) multipath feature or the Carrier Supporting Carrier (CSC) feature enabled, disable those features before you configure the MPLS VPN 6VPE per VRF Label feature.

- Before configuring Multiprotocol Label Switching (MPLS) Layer 3 VPNs, you must have MPLS, Label Distribution Protocol (LDP), and Cisco Express Forwarding installed in your network. All routers in the core, including the provider edge (PE) routers, must be able to support Cisco Express Forwarding and MPLS forwarding.
- Before configuring a 6VPE per VRF label, be sure that the IPv6 address family is configured on that VRF.

Restrictions for the MPLS VPN 6VPE per VRF Label feature

- Enabling the MPLS VPN 6VPE per VRF Label feature causes BGP reconvergence, which can result in data loss for traffic coming from the MPLS VPN core.

Note You can minimize network disruption by enabling this feature during a scheduled MPLS maintenance window. Also, if possible, avoid enabling this feature on a live router.

- Per-prefix MPLS counters for VPN prefixes are lost when you enable the MPLS VPN 6VPE per VRF Label feature.
- You cannot use this feature with CSC and EIBGP multipath features.

Information About the MPLS VPN 6VPE per VRF Label feature

- MPLS VPN 6VPE per VRF Label Functionality, page 2

MPLS VPN 6VPE per VRF Label Functionality

The PE router stores both local and remote routes and includes a label entry for each route. For distributed platforms, the multiplicity of per-prefix labels consume memory. When there are many VRFs and routes, the amount of memory that the per-prefix labels consume can cause performance degradation on some platform devices. To avoid this issue, the MPLS VPN 6VPE per VRF Label feature allows the advertisement of a single VPN label for local routes throughout the entire VRF. The router uses a new VPN label for the VRF decoding and IP-based lookup to learn where to forward packets for the PE or customer edge (CE) interfaces.

The following conditions apply when you configure the MPLS VPN 6VPE per VRF Label feature:

- The VRF uses one label for all local routes.
- When you enable the MPLS VPN 6VPE per VRF Label feature, any existing per VRF aggregate label is used. If no per VRF aggregate label is present, the software creates a new 6VPE per VRF label.
- When you enable the MPLS VPN 6VPE per VRF Label feature, the CE router's learned local routes will experience some data loss.

The CE does not lose data when you disable the MPLS VPN 6VPE per VRF Label feature because the configuration reverts to the default labeling configuration of the Cisco 7600 platform, which uses the Per VRF Aggregate label from the local nonCE-sourced routes.

- When you disable the MPLS VPN 6VPE per VRF Label feature, the configuration reverts to the default configuration of the Cisco 7600 routers.

- A 6VPE Per VRF Label forwarding entry is deleted only if the VRF, the IPv6 VRF address family, or the BGP configuration is removed.

See the Implementing IPv6 VPN over MPLS (6VPE) configuration guide for detailed information about IPv6 VPN services and 6VPE.

Summarization of Label Allocation Modes

The table below defines the label allocations used with various route types.

Table 1   Label Allocation Modes

Route Types	Label Mode: Cisco 7600 Default	Label Mode: MPLS VPN 6VPE per VRF Label feature
Local to the PE (connected, static route to NULL0, BGP aggregates), redistributed to BGP	Per VRF Aggregate label	6VPE Per VRF Label
Locally learned from CE (through external BGP or other PE or CE protocols)	Per Prefix label	6VPE Per VRF Label

How to Configure the MPLS VPN 6VPE per VRF Label Feature

Configuring the MPLS VPN 6VPE per VRF Label Feature

To configure a single (per VRF) VPN label for all local IPv6 routes in the VRF table, perform the following task.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **mpls label mode** {**vrf** *vrf-name* | **all-vrfs**} **protocol** {**bgp-vpnv6** | **all-afs**} {**per-prefix** | **per-vrf**}
4. **end**
5. **show vrf detail** *vrf-name*

DETAILED STEPS

	Command or Action	Purpose
Step 1	**enable** **Example:** Router> enable	Enables privileged EXEC mode. • Enter your password if prompted.
Step 2	**configure terminal** **Example:** Router# configure terminal	Enters global configuration mode.
Step 3	**mpls label mode** {**vrf** *vrf-name*	**all-vrfs**} **protocol** {**bgp-vpnv6**	**all-afs**} {**per-prefix**	**per-vrf**} **Example:** Router(config)# mpls label mode all-vrfs protocol bgp-vpnv6 per-vrf	Configures a single (per VRF) VPN label for all local IPv6 routes in the VRF table.
Step 4	**end** **Example:** Router(config)# end	Returns to privileged EXEC mode.
Step 5	**show vrf detail** *vrf-name* **Example:** Router# show vrf detail vpn1	Displays the VRF label mode for the specified VRF.

Examples

The following example shows how to verify the 6VPE per VRF label configuration.

In this example output, the **bold** text indicates the 6VPE per VRF label mode for VPN1.

```
Router# show vrf detail vpn1
VRF vpn1 (VRF Id = 1); default RD 1:1; default VPNID <not set>
  Interfaces:
    GE4/1                    Lo1
Address family ipv4 (Table ID = 1 (0x1)):
  Connected addresses are not in global routing table
  Export VPN route-target communities
```

```
        RT:1:1
  Import VPN route-target communities
    RT:1:1                    RT:2:2
  No import route-map
  No export route-map
  VRF label distribution protocol: not configured
  VRF label allocation mode: per-prefix
     vrf-conn-aggr for connected and BGP aggregates (Label 17)
Address family ipv6 (Table ID = 503316481 (0x1E000001)):
  Connected addresses are not in global routing table
  Export VPN route-target communities
    RT:1:1
  Import VPN route-target communities
    RT:1:1
  No import route-map
  No export route-map
  VRF label distribution protocol: not configured
  VRF label allocation mode: per-vrf (Label 18)

Router# show bgp vpnv6 unicast vrf vpn1 label
   Network          Next Hop      In label/Out label
Route Distinguisher: 1:1 (vpn1)
   2001:DB8:1:2::/96
                    2001:DB8:1:2::1 IPv6 VRF Aggr:18/nolabel
                    ::              IPv6 VRF Aggr:18/nolabel(vpn1)
   2001:DB8:4:5::/96
                    ::FFFF:127.0.0.4
                                    nolabel/17
   2001:DB8:2::1/128
                    ::              IPv6 VRF Aggr:18/nolabel(vpn1)
   2001:DB8:4::1/128
                    ::FFFF:127.0.0.4
                                    nolabel/18
   2001:DB8:CE2::1/128
                    ::FFFF:127.0.0.4
                                    nolabel/19
   2001:DB8:CE1::1/128
                    2001:DB8:1:2::1 IPv6 VRF Aggr:18/nolabel

Router# show mpls forwarding
Local  Outgoing     Prefix         Bytes Label   Outgoing    Next Hop
Label  Label or VC  or Tunnel Id   Switched      interface
16     Pop Label    127.0.0.4/32   0             AT3/0/0.1   point2point
17     Pop Label    IPv4 VRF[V]    0             aggregate/vpn1
18     Pop Label    IPv6 VRF[V]    0             aggregate/vpn1
```

Troubleshooting Tips

The **debug ip bgp vpnv6 unicast** command can help troubleshoot the 6VPE per VRF label configuration.

Configuration Examples for MPLS VPN 6VPE per VRF Label

6VPE No Label Mode for Cisco 7600 Router Default Example

The following example shows the 6VPE default label mode configuration (no label mode) for the Cisco 7600 router.

In this example output, the **bold** text indicates the default label mode for VPN1.

```
Router# show vrf detail vpn1
VRF vpn1 (VRF Id = 1); default RD 1:1; default VPNID <not set>
  Interfaces:
```

```
      GE4/1                     Lo1
Address family ipv4 (Table ID = 1 (0x1)):
  Connected addresses are not in global routing table
  Export VPN route-target communities
    RT:1:1
  Import VPN route-target communities
    RT:1:1                 RT:2:2
  No import route-map
  No export route-map
  VRF label distribution protocol: not configured
  VRF label allocation mode: per-prefix
    vrf-conn-aggr for connected and BGP aggregates (Label 17)
Address family ipv6 (Table ID = 503316481 (0x1E000001)):
  Connected addresses are not in global routing table
  Export VPN route-target communities
    RT:1:1
  Import VPN route-target communities
    RT:1:1
  No import route-map
  No export route-map
  VRF label distribution protocol: not configured
  VRF label allocation mode: per-prefix
    vrf-conn-aggr for connected and BGP aggregates (Label 18)

Router# show bgp vpnv6 unicast vrf vpn1 label
   Network          Next Hop       In label/Out label
Route Distinguisher: 1:1 (vpn1)
   2001:DB8:1:2::/96
                    2001:DB8:1:2::1 IPv6 VRF Aggr:18/nolabel
                    ::             IPv6 VRF Aggr:18/nolabel(vpn1)
   2001:DB8:4:5::/96
                    ::FFFF:127.0.0.4
                                   nolabel/17
   2001:DB8:2::1/128
                    ::             IPv6 VRF Aggr:18/nolabel(vpn1)
   2001:DB8:4::1/128
                    ::FFFF:127.0.0.4
                                   nolabel/18
   2001:DB8:CE2::1/128
                    ::FFFF:127.0.0.4
                                   nolabel/19
   2001:DB8:CE1::1/128
                    2001:DB8:1:2::1 19/nolabel
Router# show mpls forwarding
Local  Outgoing     Prefix          Bytes Label   Outgoing    Next Hop
Label  Label or VC  or Tunnel Id    Switched      interface
16     Pop Label    127.0.0.4/32    0             AT3/0/0.1  point2point
17     Pop Label    IPv4 VRF[V]     0             aggregate/vpn1
18     Pop Label    IPv6 VRF[V]     0             aggregate/vpn1
19     No Label     2001:DB8:CE1::1/128[V]
                                    0             GE4/1      FE80::20C:CFFF:FEAD:A00A
```

Feature Information for MPLS VPN 6VPE per VRF Label

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Table 2   *Feature Information for MPLS VPN 6VPE per VRF Label*

Feature Name	Releases	Feature Information
MPLS VPN 6VPE per VRF Label	12.2(33)SRD	This feature allows a user to configure a single VPN label for all local routes in the entire IPv6 VPN routing and forwarding (VRF) domain on Cisco 7600 routers. The feature incorporates a single (per VRF) VPN label for all local IPv6 routes in the VRF table. You can enable (or disable) the MPLS VPN 6VPE per VRF Label feature in global configuration mode. This feature is available for the Cisco 7600 only. In Release 12.2(33)SRD, this feature was introduced on the Cisco 7600 router. The following commands were introduced: **debug ip bgp vpnv6 unicast** and **mpls lavel mode** (6VPE).
