

# MPLS Traffic Engineering Automatic Bandwidth Adjustment for TE Tunnels

The MPLS Traffic Engineering (TE) Automatic Bandwidth Adjustment for TE Tunnels feature provides the means to automatically adjust the bandwidth allocation for traffic engineering tunnels based on their measured traffic load. The configured bandwidth in the running configuration is changed due to the automatic bandwidth behavior.

## **Finding Feature Information**

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see **Bug Search** Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

# **Prerequisites for MPLS TE Automatic Bandwidth Adjustment for TE Tunnels**

Your network must support the following:

- Multiprotocol Label Switching (MPLS) traffic engineering (TE) tunnels
- Cisco Express Forwarding
- Intermediate System-to-Intermediate System (IS-IS) or Open Shortest Path First (OSPF)

MPLS TE must be configured on the interface and on the tunnels.

# Restrictions for MPLS TE Automatic Bandwidth Adjustment for TE Tunnels

- The automatic bandwidth adjustment feature treats each tunnel for which it has been enabled independently. That is, it adjusts the bandwidth for each such tunnel according to the adjustment frequency configured for the tunnel and the sampled output rate for the tunnel since the last adjustment without regard for any adjustments previously made or pending for other tunnels.
- If a tunnel is brought down to calculate a new label switched path (LSP) because the LSP is not operational, the configured bandwidth is not saved. If the router is reloaded, the last saved automatic bandwidth value is used.
- You cannot configure MPLS TE over the logical generic routing encapsulation (GRE) tunnel interface.
- MPLS traffic engineering supports only a single IGP process/instance. Multiple IGP processes/instances are not supported and MPLS traffic engineering should not be configured in more than one IGP process/instance.

# Information About MPLS TE Automatic Bandwidth Adjustment for TE Tunnels

## MPLS TE Automatic Bandwidth Adjustment for TE Tunnels Overview

Traffic engineering autobandwidth samples the average output rate for each tunnel marked for automatic bandwidth adjustment. For each marked tunnel, the feature periodically (for example, once per day) adjusts the tunnel's allocated bandwidth to be the largest sample for the tunnel since the last adjustment.

The frequency with which tunnel bandwidth is adjusted and the allowable range of adjustments is configurable on a per-tunnel basis. In addition, the sampling interval and the interval over which to average tunnel traffic to obtain the average output rate is user-configurable on a per-tunnel basis.

## **MPLS TE Automatic Bandwidth Adjustment for TE Tunnels Benefits**

The automatic bandwidth feature allows you to configure and monitor the bandwidth for MPLS TE tunnels. If automatic bandwidth is configured for a tunnel, TE automatically adjusts the tunnel's bandwidth.

# How to Configure MPLS TE Automatic Bandwidth Adjustment for TE Tunnels

## **Configuring a Device to Support Traffic Engineering Tunnels**

#### **SUMMARY STEPS**

- 1. enable
- 2. configure terminal
- 3. ip cef distributed
- 4. mpls traffic-eng tunnels
- 5. exit

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Router> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Router# configure terminal	
Step 3	ip cef distributed	Enables distributed Cisco Express Forwarding operation.
	Example:	
	Router(config)# ip cef distributed	
Step 4	mpls traffic-eng tunnels	Enables the MPLS traffic engineering tunnel feature on a device.
	Example:	
	Router(config)# mpls traffic-eng tunnels	

	Command or Action	Purpose
Step 5	exit	Exits to privileged EXEC mode.
	Example:	
	Router(config) # exit	

## **Configuring IS-IS or OSPF for MPLS Traffic Engineering**

Perform one of the follow tasks to configure IS-IS or OSPF for MPLS TE:

#### **Configuring IS-IS for MPLS Traffic Engineering**

#### **SUMMARY STEPS**

- 1. enable
- 2. configure terminal
- 3. router isis
- 4. mpls traffic-eng level-1
- 5. mpls traffic-eng router-id loopback0
- 6. metric-style wide
- 7. exit
- 8. exit

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Router> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Router# configure terminal	

	Command or Action	Purpose
Step 3	router isis	Enables IS-IS routing and specifies an IS-IS process for IP, and enters router configuration mode.
	Example:	
	Router(config)# router isis	
Step 4	mpls traffic-eng level-1	Turns on MPLS TE for IS-IS level 1.
	Example:	
	Router(config-router)# mpls traffic-eng level-1	
Step 5	mpls traffic-eng router-id loopback0	Specifies that the TE router identifier for the node is the IP address associated with interface loopback0.
	Example:	
	Router(config-router)# mpls traffic-eng router-id loopback0	
Step 6	metric-style wide	Configures a router to generate and accept only new-style type, length, value objects (TLVs).
	Example:	
	Router(config-router)# metric-style wide	
Step 7	exit	Exits to global configuration mode.
	Example:	
	Router(config-router)# exit	
Step 8	exit	Exits to privileged EXEC mode.
	Example:	
	Router(config)# exit	
		1

### **Configuring OSPF for MPLS Traffic Engineering**

#### **SUMMARY STEPS**

- 1. enable
- 2. configure terminal
- **3.** router ospf process-id
- 4. mpls traffic-eng area number
- 5. mpls traffic-eng router-id loopback0
- 6. exit
- 7. exit

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Router> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Router# configure terminal	
Step 3	router ospf process-id	Configures an OSPF routing process for IP and enters router configuration mode.
	Example:	• The value for the <i>process-id</i> argument is an internally used
	Router(config)# router ospf 200	identification parameter for an OSPF routing process. It is locally assigned and can be any positive integer. Assign a unique value for each OSPF routing process.
Step 4	mpls traffic-eng area number	Turns on MPLS TE for the indicated OSPF area.
	Example:	
	Router(config-router)# mpls traffic-eng area 0	
Step 5	mpls traffic-eng router-id loopback0	Specifies that the TE router identifier for the node is the IP address associated with interface loopback0.
	Example:	
	Router(config-router)# mpls traffic-eng router-id loopback0	

	Command or Action	Purpose
Step 6	exit	Exits to global configuration mode.
	Example:	
	Router(config-router)# exit	
Step 7	exit	Exits to privileged EXEC mode.
	Example:	
	Router(config)# exit	

## **Configuring Bandwidth on Each Link That a Tunnel Crosses**

#### **SUMMARY STEPS**

- 1. enable
- 2. configure terminal
- **3.** interface *type number*
- 4. mpls traffic-eng tunnels
- **5. ip rsvp bandwidth** [*interface-kbps*] [*single-flow-kbps*] [**sub-pool** *kbps*]
- 6. exit
- 7. exit

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Router> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Router# configure terminal	

	Command or Action	Purpose
Step 3	interface type number	Configures an interface type and enters interface configuration mode.
	Example:	
	Router(config)# interface FastEthernet 0/0/0	
Step 4	mpls traffic-eng tunnels	Enables MPLS TE tunnels on an interface.
	Example:	
	Router(config-if) # mpls traffic-eng tunnels	
Step 5	<b>ip rsvp bandwidth</b> [ <i>interface-kbps</i> ] [ <i>single-flow-kbps</i> ] [ <b>sub-pool</b> <i>kbps</i> ]	Enables Resource Reservation Protocol (RSVP) for IP on an interface.
	<b>Example:</b> Router(config-if)# ip rsvp bandwidth 1000	• The <i>interface-kbps</i> argument specifies the maximum amount of bandwidth (in kbps) that may be allocated by RSVP flows. The range is from 1 to 10000000.
	100	• The <i>single-flow-kbps</i> argument is the maximum amount of bandwidth, in kbps, that may be allocated to a single flow. The range is from 1 to 10000000.
Step 6	exit	Exits to global configuration mode.
	Example:	
	Router(config-if)# exit	
Step 7	exit	Exits to privileged EXEC mode.
	Example:	
	Router(config)# exit	

## **Configuring an MPLS Traffic Engineering Tunnel**

To configure an MPLS TE tunnel, perform the following task. The MPLS TE tunnel has two path setup options: a preferred explicit path and a backup dynamic path.

The configuration applies only to the TE head-end node. The configuration applies to all nodes and interfaces in the network.

#### **SUMMARY STEPS**

- 1. enable
- 2. configure terminal
- 3. interface tunnel number
- 4. ip unnumbered interface-type interface-number
- 5. tunnel destination *ip-address*
- 6. tunnel mode mpls traffic-eng
- 7. tunnel mpls traffic-eng bandwidth bandwidth
- 8. tunnel mpls traffic-eng path-option [protect] preference-number{dynamic | explicit | {name path-name | path-number}} [lockdown]
- 9. exit
- 10. exit

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Router> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Router# configure terminal	
Step 3	interface tunnel number	Configures a tunnel interface and enters interface configuration mode.
	Example:	
	Router(config)# interface tunnel 1	
Step 4	<b>ip unnumbered</b> <i>interface-type interface-number</i>	Gives the tunnel interface an IP address that is the same as that of interface Loopback0.
	Example:	• An MPLS TE tunnel interface should be unnumbered because it represents a unidirectional link.
	Router(config-if)# ip unnumbered loopback 0	<b>Note</b> This command is not effective until Lookback0 has been configured with an IP address.
Step 5	tunnel destination <i>ip-address</i>	Specifies the destination for a tunnel.

	Command or Action	Purpose
	<b>Example:</b> Router(config-if)# tunnel destination 10.3.3.3	• The destination must be the MPLS TE router ID of the destination device.
Step 6	tunnel mode mpls traffic-eng	Sets the encapsulation mode of the tunnel to MPLS TE.
	<b>Example:</b> Router(config-if)# tunnel mode mpls traffic-eng	
Step 7	tunnel mpls traffic-eng bandwidth bandwidth	Configures the bandwidth for the MPLS TE tunnel.
Step 8	Example: Router(config-if)# tunnel mpls traffic-eng bandwidth 250 tunnel mpls traffic-eng path-option [protect] preference-number{dynamic   explicit   {name path-name   path-number}} [lockdown]	dynamically calculated from the TE topology database.
	Example: Router(config-if)# tunnel mpls traffic-eng path-option 10 explicit avoid-protected-link	• A dynamic path is used if an explicit path is currently unavailable.
Step 9	exit	Exits to global configuration mode.
	Example:	
	Router(config-if)# exit	
Step 10	exit	Exits to privileged EXEC mode.
	<b>Example:</b> Router(config)# exit	

#### **Troubleshooting Tips**

Each **tunnel mpls traffic-eng auto-bw** command supersedes the previous one. Therefore, if you want to specify multiple options for a tunnel, you must specify them all in a single **tunnel mpls traffic-eng auto-bw** command.

## **Enabling Automatic Bandwidth Adjustment on a Platform**

To enable automatic bandwidth adjustment on a platform and initiate sampling the output rate for tunnels configured for bandwidth adjustment, perform the following task.

Note

This task is applicable only to the TE head-end router. The configuration applies to all locally-configured TE head-end interfaces.

#### **SUMMARY STEPS**

- 1. enable
- 2. configure terminal
- 3. mpls traffic-eng auto-bw timers [frequency seconds]
- 4. no mpls traffic-eng auto-bw timers
- 5. exit

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Router> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Router# configure terminal	

	Command or Action	Purpose
Step 3	<pre>mpls traffic-eng auto-bw timers [frequency seconds] Example: Router(config) # mpls traffic-eng auto-bw timers frequency 300</pre>	<ul> <li>Enables automatic bandwidth adjustment on a platform and begins sampling the output rate for tunnels that have been configured for automatic bandwidth adjustment.</li> <li>The <b>frequency</b> keyword specifies the interval, in seconds, for sampling the output rate of each tunnel configured for automatic bandwidth. The range is 1 through 604800. The recommended value is 300.</li> </ul>
Step 4	no mpls traffic-eng auto-bw timers	(Optional) Disables automatic bandwidth adjustment on a platform.
	<pre>Example: Router(config)# no mpls traffic-eng auto-bw timers</pre>	<ul> <li>Use the no version of the command, whichterminates output rate sampling and bandwidth adjustment for tunnels. In addition, the no form of the command restores the configured bandwidth for each tunnel where the configured bandwidth is determined as follows:</li> <li>If the tunnel bandwidth was explicitly configured via the tunnel mpls traffic-eng bandwidth command after the running configuration was written to the startup configuration, the configured bandwidth is the bandwidth specified by that command.</li> <li>Otherwise, the configured bandwidth is the bandwidth specified for the tunnel in the startup configuration.</li> </ul>
Step 5	exit	Exits to privileged EXEC mode.
	<b>Example:</b> Router(config)# exit	

## **Enabling Automatic Bandwidth Adjustment for a Tunnel**

#### **SUMMARY STEPS**

- 1. enable
- 2. configure terminal
- 3. interface tunnel number
- 4. tunnel mpls traffic-eng auto-bw [collect-bw] [frequency seconds] [adjustment-threshold percent] [overflow-limit number overflow-threshold percent] [max-bw kbps] [min-bw kbps]

- 5. exit
- 6. exit

#### **DETAILED STEPS**

ſ

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Router> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Router# configure terminal	
Step 3	interface tunnel number	Configures a tunnel interface and enters interface configuration mode.
	Example:	
	Router(config)# interface tunnel 1	
Step 4	tunnel mpls traffic-eng auto-bw [collect-bw] [frequency seconds ] [adjustment-threshold percent] [overflow-limit number overflow-threshold percent] [max-bw kbps] [min-bw kbps]	Enables automatic bandwidth adjustment for the tunnel and controls the manner in which the bandwidth for a tunnel is adjusted.
	Example:	
	Router(config-if)# tunnel mpls traffic-eng auto-bw max-bw 2000 min-bw 1000	
Step 5	exit	Exits to global configuration mode.
	Example:	
	Router(config-if)# exit	
Step 6	exit	Exits to privileged EXEC mode.
	Example:	
	Router(config)# exit	

1

## **Configuring the Interval for Computing the Tunnel Average Output Rate**

#### **SUMMARY STEPS**

- 1. enable
- 2. configure terminal
- 3. interface tunnel number
- 4. load-interval seconds
- 5. exit
- 6. exit

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Router> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Router# configure terminal	
Step 3	interface tunnel number	Configures a tunnel interface and enters interface configuration mode.
	Example:	
	Router(config)# interface tunnel 1	
Step 4	load-interval seconds	Configures the interval over which the input and output rates for the interface are averaged.
	Example:	• The <i>seconds</i> argument is the length of time for which data
	Router(config-if)# load-interval 90	is used to compute load statistics. The value is a multiple of 30, from 30 to 600 (30, 60, 90, 120, and so on). The default is 300.
Step 5	exit	Exits to global configuration mode.
	Example:	
	Router(config-if)# exit	

	Command or Action	Purpose
Step 6	exit	Exits to privileged EXEC mode.
	Example:	
	Router(config)# exit	

## Verifying Automatic Bandwidth Configuration

#### **SUMMARY STEPS**

- 1. show mpls traffic-eng tunnels
- 2. show running-config

#### **DETAILED STEPS**

#### **Step 1** show mpls traffic-eng tunnels

Use this command to display information about tunnels, including automatic bandwidth information for tunnels that have the feature enabled. For example:

#### **Example:**

```
Router# show mpls traffic-eng tunnels
Name:tagsw4500-9 t1 (Tunnel1) Destination:10.0.0.4
Status:
Admin:up Oper:up Path:valid Signalling:connected
path option 1, type explicit pbr_south (Basis for Setup, path weight 30)
path option 2, type dynamic
Config Parameters:
Bandwidth:13 kbps (Global) Priority:7 7 Affinity:0x0/0xFFFF
AutoRoute: disabled LockDown: disabled Loadshare: 13 bw-based
auto-bw: (300/265) 53 Bandwidth Requested: 13
  Adjustment threshold: 5%
  Overflow Limit: 4 Overflow Threshold: 25%
  Overflow Threshold Crossed: 1
  Sample Missed: 1 Samples Collected: 1
Active Path Option Parameters:
  State: dynamic path option 1 is active
  BandwidthOverride: disabled LockDown: disabled Verbatim: disabled
 InLabel :
 OutLabel : Serial3/0, 18
 RSVP Signalling Info:
  Src 10.0.0.1, Dst 10.0.0.4, Tun Id 2, Tun Instance 2
  RSVP Path Info:
  My Address: 10.105.0.1
  Explicit Route: 10.105.0.2 104.105.0.1 10.0.0.4
  Record Route:
                   NONE
  Tspec: ave rate=13 kbits, burst=1000 bytes, peak rate=13 kbits
 Record Route: NONE
  Tspec: ave rate=13 kbits, burst=1000 bytes, peak rate=13 kbits
  RSVP Resv Info:
  Record Route:
                    NONE
```

```
Fspec: ave rate=13 kbits, burst=1000 bytes, peak rate=13 kbits
  Shortest Unconstrained Path Info:
  Path Weight: 128 (TE)
  Explicit Route: 10.105.0.2 104.105.0.1 10.0.0.4
  History:
  Tunnel:
   Time since created: 7 minutes, 56 seconds
    Time since path change: 7 minutes, 18 seconds
    Number of LSP IDs (Tun Instances) used: 2
    Number of Auto-bw Adjustment resize requests: 1
    Time since last Auto-bw Adjustment resize request: 1 minutes, 7 seconds
    Number of Auto-bw Overflow resize requests: 1
     Time since last Auto-bw Overflow resize request: 52 seconds
     Current LSP:
     Uptime: 52 seconds
     Selection: reoptimization
   Prior LSP:
ID: path option 1 [1]
 Removal Trigger: configuration changed
```

#### In the command output:

- The auto-bw line indicates that automatic bandwidth adjustment is enabled for the tunnel.
- 300 is the time, in seconds, between bandwidth adjustments.
- 265 is the time, in seconds, remaining until the next bandwidth adjustment.
- 53 is the largest bandwidth sample since the last bandwidth adjustment.
- 13 is the last bandwidth adjustment and the bandwidth currently requested for the tunnel.
- The adjustment threshold is 5 percent.
- The overflow limit is 4.
- The overflow threshold is 25 percent.
- The overflow crossed is 1.

#### **Example:**

#### Step 2 show running-config

Use this command to verify that the **tunnel mpls traffic-eng auto bw** command is as you expected. For example:

#### **Example:**

tunnel mpls traffic-eng auto bw max-bw 2000 min-bw 1000 !Enable automatic bandwidth

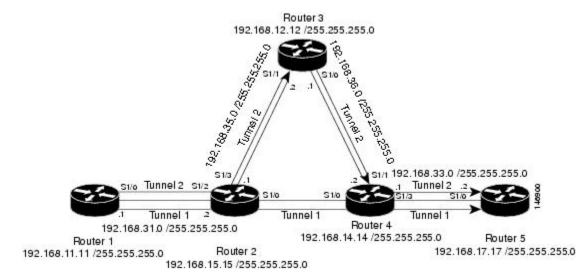

**Example:** 

The sample output from the **show running-config** command shows that the value 1500, in the **tunnel mpls traffic-eng bandwidth 1500** command, changes after an adjustment is made.

**Example:** 

# **Configuration Examples for MPLS TE Automatic Bandwidth Adjustments for TE Tunnels**

The figure below illustrates a sample MPLS topology. The following sections contain sample configuration examples to configure automatic bandwidth adjustment for MPLS TE tunnels originating on Router 1 and to enable automatic bandwidth adjustment for Tunnel 1.

#### Figure 1: Sample MPLS Traffic Engineering Tunnel Configuration

The examples omit some configuration required for MPLS TE, such as the required RSVP and Interior Gateway Protocol (IGP) (IS-IS or OSPF) configuration, because the purpose of these examples is to illustrate the configuration for automatic bandwidth adjustment.

## Example: Configuring MPLS Traffic Engineering Automatic Bandwidth

The following example shows how to use the **mpls traffic-eng auto-bw timers** command to enable automatic bandwidth adjustment for Router 1. The command specifies that the output rate is to be sampled every 10 minutes for tunnels configured for automatic bandwidth adjustment.

```
configure terminal
!
ip cef distributed
mpls traffic-eng tunnels
mpls traffic-eng auto-bw timers frequency 600 !Enable automatic bandwidth adjustment
interface loopback 0
ip address 192.168.11.11 255.255.255.0
```

## **Example: Tunnel Configuration for Automatic Bandwidth**

The following example shows how to use the **tunnel mpls traffic-eng auto-bw** command to enable automatic bandwidth adjustment for Tunnel 1. The command specifies a maximum allowable bandwidth of 2000 kbps, a minimum allowable bandwidth of 1000 kbps, and that the default automatic bandwidth adjustment frequency of once a day be used.

```
interface tunnel1
  ip unnumbered loopback 0
  tunnel destination 192.168.17.17
  tunnel mode mpls traffic-eng
  tunnel mpls traffic-eng bandwidth 1500
  tunnel mpls traffic-eng priority 1 1
  tunnel mpls traffic-eng path-option 1 dynamic
  tunnel mpls traffic-eng auto-bw max-bw 2000 min-bw 1000 !E
```

!Enable automatic bandwidth
!adjustment for Tunnel1

# Feature Information for MPLS TE Automatic Bandwidth Adjustment for TE Tunnels

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Feature Name	Releases	Feature Information
Automatic Bandwidth Adjustment for TE Tunnels	12.2(33)SRE Cisco IOS XE Release 3.8S Cisco IOS XE Release 3.9S	The MPLS Traffic Engineering Automatic Bandwidth Adjustment for TE Tunnels feature provides the means to automatically adjust the bandwidth allocation for traffic engineering tunnels based on their measured traffic load. The configured bandwidth in the running configuration is changed due to the automatic bandwidth behavior. In Cisco IOS Release 12.2(33)SRE, this feature was introduced. In Cisco IOS XE Release 3.8S, support was added for the Cisco ISR 4400 Series Routers. In Cisco IOS XE Release 3.9S, support was added for the Cisco CSR 1000V. The following commands were introduced or modified to support automatic bandwidth adjustment threshold and overflow threshold: <b>mpls traffic-eng lsp attributes, show mpls traffic-eng auto-bw</b> .

Table 1: Feature Information for MPLS TE Automatic Bandwidth Adjustment for TE Tunnels
