

Punt Policing and Monitoring

Punt policing protects the Route Processor (RP) from having to process noncritical traffic, which increases the CPU bandwidth available to critical traffic. Traffic is placed into different CPU queues based on various criteria. The Punt Policing and Monitoring feature allows you to police the punt rate on a per-queue basis.

Information About Punt Policing and Monitoring

Overview of Punt Policing and Monitoring

Packets received on an interface are punted to the Router Processor (RP) for various reasons. Some examples of these various reasons include, unicast and multicast control plane traffic that are destined for a routing protocol process running on the RP, and IP packets that generate Internet Control Message Protocol (ICMP) exceptions such as a Time to live (TTL) expiration. The RP has a limited capacity to process the punted packets, and while some of them are critical for the router operation and should not be dropped, some can be dropped without impacting the router operation.

Punt policing frees the RP from having to process noncritical traffic. Traffic is placed in queues based on various criteria, and you can configure the maximum punt rate for each queue which allows you to configure the system so that packets are less likely to be dropped from queues that contain critical traffic.

Note

Traffic on certain CPU queues could still be dropped, regardless of the configured punt rate, based on other criteria such as the queue priority, queue size, and traffic punt rate.

Per-Interface Per-Cause Punt Policer

Per-interface per-cause (PIPC) punt policing is an enhancement to the Punt Policing and Monitoring feature that allows you to control and limit traffic per interface. From Cisco IOS XE Release 17.5.1, you can set the PIPC rate for all the control plane-punted traffic. When you set the PIPC rate, any traffic beyond the set limit is dropped, thereby enabling you to control the traffic during conditions such as L2 storming.

The PIPC punt policer configuration is supported for the following interfaces:

- Main interface
- Subinterface
- Port channel
- · Port channel subinterface
- Tunnels
- PPPoE interface

Limitation of Punt Policing and Monitoring

• Most of the packets destined to the router get punted to CPU via HOST Queue. If any particular protocol packets are getting punted to CPU in excess, other protocols might suffer although the CPU is protected by the overall punt rate configured for the queue.

How to Configure Punt Policing and Monitoring

Configuring Punt Policing

Note

Traffic on a specific CPU queue may be dropped irrespective of the configured maximum punt rate, based on the queue priority, queue size, and the configured traffic punt rate.

Perform this task to specify the maximum punt rate on the specified queue.

Procedure

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode. Enter your password, if prompted.
Step 2	configure terminal	Enters the global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	platform qos-policer queue queue-id cir bc	Enables punt policing on a queue, and specifies
	Example:	the maximum punt rate on a per-queue basis
	Device(config)# platform qos-policer queue 20 384000 8000	<i>cir</i> — Indicates Committed Information Rate (CIR). The range is 384000-20000000 bps.

	Command or Action	Purpose
		<i>bc</i> — Indicates Committed Burts (BC). The range is 8000-16000000 bps.
Step 4	end	(Optional) Returns to privileged EXEC mode.
	Example:	
	Device(config)# end	

Verifying Punt Policing

Verifying Punt Policing Statistics

Use the **show platform hardware pp active infrastructure pi npd rx policer** command to display the punt policing statistics for all queues.

Note

This command is not applicable on the Cisco RSP3 Module.

Ring	Queue Name	Pun	t rate	Burst rate
0	SW FORWARDING Q	•	500	1000
1	ROUTING PROTOCOL Q			1000
2	ICMP Q		500	1000
3	HOST Q		1000	2000
4	ACL LOGGING Q		500	1000

Use the **show platform hardware pp active feature qos policer cpu all 1** command to clear the statistics of all the CPU queues.

Use the **show platform hardware pp active feature qos policer cpu all 0** command to clear the statistics of a particular CPU queue.

Use show platform hardware pp active feature qos policer cpu 3 0 to display the queue specific statistics.

Use the **show platform hardware pp active feature qos policer cpu all 0** to display the output after adding the drop cause. Following commands are applicable only for RSP3 module:

```
######### Stats for CPU queue 0 #########
Internal Qnum: 8000CPU
Port num: 0
Policer conform: 0 (packets) 0 (bytes)
Policer exceed: 0 (packets) 0 (bytes)
Policer commit rate is: 500000 bps, Policer burst commit is 16000 bytes
######### Stats for CPU queue 1 ########
Internal Qnum: 8008CPU
Port num: 0
Policer conform: 0 (packets) 0 (bytes)
Policer exceed: 0 (packets) 0 (bytes)
Policer commit rate is: 1000000 bps, Policer burst commit is 100000 bytes
######### Stats for CPU queue 2 #########
Internal Onum: 8016CPU
Port num: 0
Policer conform: 0 (packets) 0 (bytes)
Policer exceed: 0 (packets) 0 (bytes)
Policer commit rate is: 1000000 bps, Policer burst commit is 100000 bytes
```

Configuration Examples for Punt Policing and Monitoring

Example: Configuring Punt Policing

The following example shows how to enable punt-policing:

```
Router# enable
Router# configure terminal
Router(config)# platform qos-policer queue 3 384000 8000
```
