Per-Tunnel QoS for DMVPN

Last Updated: October 14, 2011

The Per-Tunnel QoS for DMVPN feature introduces per-tunnel quality of service (QoS) support for Dynamic Multipoint VPN (DMVPN) tunnel interfaces and increases QoS performance for IP Security (IPSec) Virtual Tunnel Interfaces (VTIs).

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the Feature Information Table at the end of this document.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for Per-Tunnel QoS for DMVPN

Before you can configure per-tunnel QoS for DMVPN, you must configure Cisco Express Forwarding (CEF) switching.

Restrictions for Per-Tunnel QoS for DMVPN
• You cannot configure a per-tunnel QoS policy on a tunnel interface and a separate QoS policy on the outbound physical interface at the same time.
• You can attach a per-tunnel QoS policy on the tunnel only in the egress direction.

Information About Per-Tunnel QoS for DMVPN

This feature lets you apply a QoS policy on a DMVPN hub on a per-tunnel-instance (per-spoke) basis in the egress direction for DMVPN hub-to-spoke tunnels. This lets you shape the tunnel traffic to individual spokes (a parent policy) and differentiate individual data flows going through the tunnel for policing (a child policy). The QoS policy that the hub uses for a specific spoke is selected according to the specific Next Hop Resolution Protocol (NHRP) group into which that spoke is configured. Although you can configure many spokes into the same NHRP group, the tunnel traffic for each spoke is measured individually for shaping and policing.

For IPSec VTIs, per-tunnel QoS support existed before this feature was introduced. But this feature does improve performance (because HQF performs the queuing at the egress physical interface instead of in the switching path).

You can use this feature with DMVPN with or without IPSec.

With Per-Tunnel QoS for DMVPN, the queuing and shaping is performed at the outbound physical interface for the GRE/IPsec tunnel packets. This means that the GRE header, the IPsec header and the L2 (for the physical interface) header are included in the packet-size calculations for shaping and bandwidth queuing of packets under QoS.

To configure the Per-Tunnel QoS for DMVPN feature, you should understand the following concepts:

- Benefits of Per-Tunnel QoS for DMVPN, page 2
- NHRP QoS Provisioning for DMVPN, page 2

Benefits of Per-Tunnel QoS for DMVPN

Without this feature, QoS on a DMVPN hub could only be configured to either measure outbound traffic in the aggregate (over all spokes) or (with extensive manual configuration) the DMVPN hub could measure outbound traffic on a per-spoke basis.

Per-Tunnel QoS for DMVPN provides the following benefits:

• The QoS policy is attached to the DMVPN hub, and criteria for matching the tunnel traffic are set up automatically as each spoke registers with the hub (which means that extensive manual configuration is not needed).
• Traffic can be regulated from the hub to spokes on a per-spoke basis.
• The hub cannot send excessive traffic to (and overrun) a small spoke.
• The amount of outbound hub bandwidth that a “greedy” spoke can consume can be limited, and therefore it cannot monopolize a hub's resources and starve other spokes.

NHRP QoS Provisioning for DMVPN

NHRP performs the provisioning for Per-Tunnel QoS for DMVPN by using NHRP groups.

An NHRP group, which is the new concept introduced by this feature, is the group identity information signaled by a DMVPN node (a spoke) to the DMVPN hub. The hub uses this information to select a locally-defined QoS policy instance for the remote node.
You configure the NHRP group name on the spoke router on the DMVPN GRE tunnel interface. The NHRP group name is communicated to the hub in each of the periodic NHRP registration requests sent from the spoke to the hub. A new Cisco vendor-private NHRP extension nhrp-group is defined to carry the NHRP group string in the NHRP registration request.

The NHRP-group-to-QoS-policy mappings are configured on the hub DMVPN GRE tunnel interface. The NHRP group string received from a spoke is mapped to a QoS policy, which is applied for that hub-to-spoke tunnel in the egress direction.

When the NHRP group is configured on the spoke, the group is not immediately sent to the hub, but is sent in the next periodic registration request. The spoke can be in only one NHRP group per GRE tunnel interface. If a spoke is configured as a part of two or more DMVPN networks (multiple GRE tunnel interfaces), then the spoke can have a different NHRP group name on each of the GRE tunnel interfaces. If an NHRP group is not received from the spoke, then a QoS policy is not applied, and any existing QoS policy applied for that spoke is removed. If an NHRP group is received from the spoke when previous NHRP registrations did not have an NHRP group, then the corresponding QoS policy is applied. If the same NHRP group name is received from a spoke as was received in the previous NHRP registration request, then no action is taken (because a QoS policy would have already been applied for that spoke). If a different NHRP group is received from the spoke than what was received in the previous NHRP registration request, any applied QoS policy is removed, and the QoS policy corresponding to the new NHRP group is applied.

### How to Configure Per-Tunnel QoS for DMVPN

To configure the Per-Tunnel QoS for DMVPN feature, you define an NHRP group on the spokes and then map the NHRP group to a QoS policy on the hub.

- Configuring an NHRP Group on a Spoke, page 3
- Mapping an NHRP Group to a QoS Policy on the Hub, page 4
- Verifying Per-Tunnel QoS for DMVPN, page 5

### Configuring an NHRP Group on a Spoke

To configure an NHRP group on a spoke, perform the steps in this section.

The spoke and the hub must already be configured for DMVPN without the Per-Tunnel QoS feature.

**SUMMARY STEPS**

1. enable
2. configure {terminal | memory | network}
3. interface tunnel number
4. ip nhrp group group-name
5. end
### Detailed Steps

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1** enable | Enables higher privilege levels (such as privileged EXEC mode).  
  - Enter your password if prompted. |
| Example: | Router> enable |
| **Step 2** configure {terminal | memory | network} | Enters global configuration mode. |
| Example: | Router# configure terminal |
| **Step 3** interface tunnel *number* | Configures a tunnel interface and enters interface configuration mode.  
  - The *number* argument specifies the number of the tunnel interface that you want to create or configure.  
  - There is no limit on the number of tunnel interfaces that you can create. |
| Example: | Router(config)# interface tunnel 1 |
| **Step 4** ip nhrp group *group-name* | Configures an NHRP group on the spoke. |
| Example: | Router(config-if)# ip nhrp group spoke_group1 |
| **Step 5** end | Returns to privileged EXEC mode. |
| Example: | Router(config-if)# end |

### Mapping an NHRP Group to a QoS Policy on the Hub

To configure an NHRP-group-to-QoS-policy mapping on a hub, perform the steps in this section.

**Note**

The `qos pre-classify` command is not required with this feature, because classification is performed before encapsulation.

The spoke and the hub must already be configured for DMVPN without the Per-Tunnel QoS feature.
### SUMMARY STEPS

1. enable
2. configure \{terminal | memory | network\}
3. interface tunnel *number*
4. ip nhrp map group *group-name* service-policy output *qos-policy-map-name*
5. end

### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1** enable | Enables higher privilege levels (such as privileged EXEC mode).  
  • Enter your password if prompted. |
| **Example:** Router> enable |
| **Step 2** configure \{terminal | memory | network\} | Enters global configuration mode. |
| **Example:** Router# configure terminal |
| **Step 3** interface tunnel *number* | Configures a tunnel interface and enters interface configuration mode.  
  • The *number* argument specifies the number of the tunnel interface that you want to create or configure.  
  • There is no limit on the number of tunnel interfaces that you can create. |
| **Example:** Router(config)# interface tunnel 1 |
| **Step 4** ip nhrp map group *group-name* service-policy output *qos-policy-map-name* | Adds the NHRP group to the QoS policy mapping on the hub. |
| **Example:** Router(config-if)# ip nhrp map group spoke_group1 service-policy output group1_parent |
| **Step 5** end | Returns to privileged EXEC mode. |
| **Example:** Router(config-if)# end |

### Verifying Per-Tunnel QoS for DMVPN

To verify the configuration of Per-Tunnel QoS for DMVPN, perform the steps in this section.
### SUMMARY STEPS

1. enable  
2. show dmvpn detail  
3. show ip nhrp  
4. show ip nhrp group-map [group-name]  
5. show policy-map multipoint [tunnel tunnel-interface-number]  
6. show tunnel endpoints

### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1** enable | Enables higher privilege levels (such as privileged EXEC mode).  
- Enter your password if prompted. |
| **Example:** | 
Router> enable |
| **Step 2** show dmvpn detail | Displays detailed DMVPN information for each session, including the Next Hop Server (NHS) and NHS status, crypto session information, and socket details. Also displays the NHRP group received from the spoke and the QoS policy applied to the spoke tunnel. |
| **Example:** | 
Router# show dmvpn detail |
| **Step 3** show ip nhrp | Displays the NHRP cache and the NHRP group received from the spoke. |
| **Example:** | 
Router# show ip nhrp |
| **Step 4** show ip nhrp group-map [group-name] | Displays the group-to-policy maps configured on the hub. Also displays the tunnels on which the QoS policy is applied. |
| **Example:** | 
Router# show ip nhrp group-map |
| **Example:** | 
Router# show ip nhrp group-map group1-parent |
Step 5 show policy-map multipoint [tunnel tunnel-interface-number]

Example:

Router# show policy-map multipoint

Example:

Router# show policy-map multipoint tunnel 1

Step 6 show tunnel endpoints

Example:

Router# show tunnel endpoints

Displays QoS policy details applied to multipoint tunnels.

Displays information about the source and destination endpoints for multipoint tunnels. Also displays the QoS policy applied on the spoke tunnel.

Configuration Examples for Per-Tunnel QoS for DMVPN

- Configuring an NHRP Group on a Spoke Example, page 7
- Mapping an NHRP Group to a QoS Policy on the Hub Example, page 8
- Verifying Per-Tunnel QoS for DMVPN Examples, page 9

Configuring an NHRP Group on a Spoke Example

The following example shows how to configure two NHRP groups on three spokes.

Configuring the First Spoke

interface Tunnel 1
ip address 20.1.1.2 255.255.255.0
no ip redirects
ip mtu 1400
ip nhrp authentication testing
ip nhrp group spoke_group1
ip nhrp map 20.1.1.1 200.0.0.1
ip nhrp map multicast 200.0.0.1
ip nhrp network-id 172176366
ip nhrp holdtime 300
ip tcp adjust-mss 1360
ip nhrp nh 20.1.1.1
tunnel source Ethernet 0/0
tunnel mode gre multipoint
tunnel protection ipsec profile DMVPN
interface Ethernet 0/0
ip address 200.0.0.2 255.255.255.0
Configuring the Second Spoke

interface Tunnel 1  
ip address 20.1.1.3 255.255.255.0  
no ip redirects  
ip mtu 1400  
ip nhrp authentication testing  
ip nhrp group spoke_group1  
ip nhrp map 20.1.1.1 200.0.0.1  
ip nhrp map multicast 200.0.0.1  
ip nhrp network-id 172176366  
ip nhrp holdtime 300  
ip tcp adjust-mss 1360  
ip nhrp nhs 20.1.1.1  
tunnel source Ethernet 0/0  
tunnel mode gre multipoint  
tunnel protection ipsec profile DMVPN  
interface Ethernet 0/0  
ip address 200.0.0.3 255.255.255.0

Configuring the Third Spoke

interface Tunnel 1  
ip address 20.1.1.4 255.255.255.0  
no ip redirects  
ip mtu 1400  
ip nhrp authentication testing  
ip nhrp group spoke_group2  
ip nhrp map 20.1.1.1 200.0.0.1  
ip nhrp map multicast 200.0.0.1  
ip nhrp network-id 172176366  
ip nhrp holdtime 300  
ip tcp adjust-mss 1360  
ip nhrp nhs 20.1.1.1  
tunnel source Ethernet 0/0  
tunnel mode gre multipoint  
tunnel protection ipsec profile DMVPN  
interface Ethernet 0/0  
ip address 200.0.0.4 255.255.255.0

Mapping an NHRP Group to a QoS Policy on the Hub Example

The following example shows how to map NHRP groups to a QoS policy on the hub. The example shows a hierarchical QoS policy (parent: group1_parent/group2_parent, child: group1/group2) that will be used for Per-Tunnel QoS for DMVPN. The example also shows how to map the NHRP group spoke_group1 to the QoS policy group1_parent and map the NHRP group spoke_group2 to the QoS policy group2_parent on the hub:

class-map match-all group1_Routing  
match ip precedence 6  
class-map match-all group2_Routing  
match ip precedence 6  
class-map match-all group2_voice  
match access-group 100  
class-map match-all group1_voice  
match access-group 100  
policy-map group1  
class group1_voice  
priority 1000  
class group1_Routing  
bw percent 20  
policy-map group1_parent  
class class-default  
shape average 3000000  
service-policy group1  
policy-map group2  
class group2_voice
Verifying Per-Tunnel QoS for DMVPN Examples

The following example shows how to display the information about NHRP groups received from the spokes as well as the QoS policy that is applied to each spoke tunnel. You enter this command on the hub:

```
Router# show dmvpn detail
```

```
Legend: Attrb --> S - Static, D - Dynamic, I - Incomplete
N - NATed, L - Local, X - No Socket
# Ent --> Number of NHRP entries with same NBMA peer
NHS Status: E --> Expecting Replies, R --> Responding
UpDn Time --> Up or Down Time for a Tunnel

Interface Tunnel1 is up/up, Addr. is 20.1.1.1, VRF ""
Tunnel Src./Dest. addr: 200.0.0.1/MGRE, Tunnel VRF ""
Protocol/Transport: "multi-GRE/IP", Protect "DMVPN"
Type:Hub, Total NBMA Peers (v4/v6): 3

# Ent Peer NBMA Addr Peer Tunnel Add State UpDn Tm Attrb Target Network
----- --------------- --------------- ----- -------- ----- ----------------- ----------------- ----------------------------------
1 200.0.0.2 20.1.1.2 UP 00:19:20 D 20.1.1.2/32
NHRP group: spoke_group1
Output QoS service-policy applied: group1_parent
1 200.0.0.3 20.1.1.3 UP 00:19:20 D 20.1.1.3/32
NHRP group: spoke_group1
Output QoS service-policy applied: group1_parent
1 200.0.0.4 20.1.1.4 UP 00:19:23 D 20.1.1.4/32
NHRP group: spoke_group2
Output QoS service-policy applied: group2_parent
```

**Crypto Session Details:**

```
Interface: Tunnel1
Session: [0x04AC1D00]
IKE SA: local 200.0.0.1/500 remote 200.0.0.2/500 Active
Crypto Session Status: UP-ACTIVE
fvrf: (none), Phase1_id: 200.0.0.2
IPSEC FLOW: permit 47 host 200.0.0.1 host 200.0.0.2
Active SAs: 2, origin: crypto map
Outbound SPI : 0x9B264329, transform : ah-md5-hmac
Socket State: Open

Interface: Tunnel1
Session: [0x04AC1C08]
IKE SA: local 200.0.0.1/500 remote 200.0.0.3/500 Active
Crypto Session Status: UP-ACTIVE
fvrf: (none), Phase1_id: 200.0.0.3
IPSEC FLOW: permit 47 host 200.0.0.1 host 200.0.0.3
Active SAs: 2, origin: crypto map
Outbound SPI : 0x36F956E2, transform : ah-md5-hmac
Socket State: Open
```
The following example shows how to display information about the NHRP groups that are received from the spokes. You enter this command on the hub:

Router# show ip nhrp
20.1.1.2/32 via 20.1.1.2
   Tunnel1 created 00:22:49, expire 00:01:40
   Type: dynamic, Flags: registered
   NBMA address: 200.0.0.2
   Group: spoke_group1
20.1.1.3/32 via 20.1.1.3
   Tunnel1 created 00:22:48, expire 00:01:41
   Type: dynamic, Flags: registered
   NBMA address: 200.0.0.3
   Group: spoke_group1
20.1.1.4/32 via 20.1.1.4
   Tunnel1 created 00:22:52, expire 00:03:27
   Type: dynamic, Flags: registered
   NBMA address: 200.0.0.4
   Group: spoke_group2

The following example shows how to display the details of NHRP group mappings on a hub and the list of tunnels using each of the NHRP groups defined in the mappings. You enter this command on the hub:

Router# show ip nhrp group-map
Interface: Tunnel1
NHRP group: spoke_group1
QoS policy: group1_parent
Tunnels using the QoS policy:
   Tunnel destination overlay/transport address
   20.1.1.2/200.0.0.2
   20.1.1.3/200.0.0.3
NHRP group: spoke_group2
QoS policy: group2_parent
Tunnels using the QoS policy:
   Tunnel destination overlay/transport address
   20.1.1.4/200.0.0.4

The following example shows how to display statistics about a specific QoS policy as it is applied to a tunnel endpoint. You enter this command on the hub:

Router# show policy-map multipoint
Interface Tunnel1 <--> 200.0.0.2
Service-policy output: group1_parent
   Class-map: class-default (match-any)
   29 packets, 4988 bytes
   5 minute offered rate 0 bps, drop rate 0 bps
   Match: any
   Queueing
   queue limit 750 packets
   (queue depth/total drops/no-buffer drops) 0/0/0
   (pkts output/bytes output) 0/0
   shape (average) cir 3000000, bc 12000, be 12000
   target shape rate 3000000
   Service-policy : group1
   queue stats for all priority classes:
      queue limit 250 packets
      (queue depth/total drops/no-buffer drops) 0/0/0
      (pkts output/bytes output) 0/0
      Class-map: group1_voice (match-all)
      0 packets, 0 bytes
Verifying Per-Tunnel QoS for DMVPN Examples

Feature Information for Per-Tunnel QoS for DMVPN

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.
