# **Finding Feature Information**

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see **Bug Search Tool** and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

# Information About Loose Checking Option for TCP Window Scaling in Zone-Based Policy Firewall

#### Loose Checking Option for TCP Window Scaling Overview

TCP provides various TCP extensions to improve performance over high-bandwidth and high-speed data paths. One such extension is the TCP window-scaling option. The loose-checking option for TCP window-scaling turns off strict checking of the window-scaling option described in RFC 1323.

A larger window size is recommended to improve TCP performance in network paths with large bandwidth-delay product characteristics that are called Long Fat Networks (LFNs). TCP window scaling expands the definition of the TCP window to 32 bits and then uses a scale factor to carry this 32-bit value in the 16-bit window field of the TCP header. The window size can increase to a scale factor of 14. Typical applications use a scale factor of 3 when deployed in LFNs.

A firewall implementation enforces strict checking of the TCP window-scaling option. A firewall drops SYN/ACK packets that have the TCP window-scaling option if it was not offered in the initial synchronization (SYN) packet for the TCP three-way handshake. The window-scale option is sent only in a SYN segment, which is a segment with the SYN bit on. Therefore, the window scale is fixed in each direction when a connection is opened.

Use the **tcp window-scale-enforcement loose** command to disable the strict checking of the TCP window-scaling option in TCP SYN segments.

# How to Configure Loose Checking Option for TCP Window Scaling in Zone-Based Policy Firewall

## **Configuring the TCP Window-Scaling Option for a Firewall**

#### **SUMMARY STEPS**

1.	enable
2.	configure terminal
3.	<pre>parameter-map type inspect {parameter-map-name   global   default}</pre>
4.	tcp window-scale-enforcement loose
5.	exit
6.	<pre>class-map type inspect {match-any   match-all} class-map-name</pre>
7.	match protocol [parameter-map] [signature]
8.	exit
9.	policy-map type inspect policy-map-name
10.	class type inspect class-map-name
11.	inspect [parameter-map-name]
12.	exit
13.	class name
14.	end

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	

DETAILED STEPS

	Command or Action	Purpose
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	parameter-map type inspect {parameter-map-name         global   default}	Configures an inspect parameter map and enters profile configuration mode.
	Example:	
	Device(config) # parameter-map type inspect pmap-fw	,
Step 4	tcp window-scale-enforcement loose	Disables the strict checking of the TCP window-scaling
	Example:	option in a firewall.
	<pre>Device(config-profile)# tcp window-scale-enforcement loose</pre>	
Step 5	exit	Exits profile configuration mode and returns to global
	Example:	configuration mode.
	Device(config-profile)# exit	
Step 6	<b>class-map type inspect</b> { <b>match-any</b>   <b>match-all</b> } <i>class-map-name</i>	Creates an inspect-type class map and enters QoS class-map configuration mode.
	Example:	
	<pre>Device(config)# class-map type inspect match-any internet-traffic-class</pre>	
Step 7	match protocol [parameter-map] [signature]	Configures a match criteria for a class map on the basis of
	Example:	the specified protocol.
	Device(config-cmap)# match protocol tcp	
Step 8	exit	Exits the QoS class-map configuration mode and returns
	Example:	to global configuration mode.
	Device(config-cmap)# exit	
Step 9	policy-map type inspect policy-map-name	Creates an inspect-type policy map and enters QoS
	Example:	policy-map configuration mode.
	<pre>Device(config)# policy-map type inspect private-internet-policy</pre>	
Step 10	class type inspect class-map-name	Specifies the traffic class on which an action is to be
	Example:	performed and enters policy-map class configuration mode.
	<pre>Device(config-pmap)# class type inspect internet-traffic-class</pre>	
Step 11	inspect [parameter-map-name]	Enables stateful packet inspection.
	Example:	
	<pre>Device(config-pmap-c)# inspect pmap-fw</pre>	

I

	Command or Action	Purpose
Step 12	exit	Exits QoS policy-map class configuration mode and returns
	Example: to QoS policy-ma	to QoS policy-map configuration mode.
<pre>Device(config-pmap-c)# exit</pre>		
Step 13	class name	Associates the map class with a specified data-link
Example:	Example:	connection identifier (DLCI).
	<pre>Device(config-pmap)# class class-default</pre>	
Step 14	end	Exits QoS policy-map configuration mode and returns
	Example:	privileged EXEC mode.
	Device(config-pmap)# end	

## **Configuring a Zone and Zone Pair for a TCP Window Scaling**

#### **SUMMARY STEPS**

1.	enable
2.	configure terminal
3.	interface type number
4.	ip address ip-address
5.	zone-member security security-zone-name
6.	exit
7.	interface type number
8.	ip address ip-address
9.	zone-member security security-zone-name
10.	end

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	interface type number	Specifies an interface and enters interface configuration
	Example:	mode.
	Device(config)# interface GigabitEthernet 0/1/5	

	Command or Action	Purpose	
Step 4	ip address ip-address	Assigns an interface IP address.	
	Example:		
	Device(config-if)# ip address 10.1.1.1 255.255.255.0		
Step 5	zone-member security security-zone-name	Configures the interface as a zone member.	
	Example:		
	<pre>Device(config-if)# zone-member security private</pre>		
Step 6	exit	Exits interface configuration mode and returns to global	
	Example:	configuration mode.	
	<pre>Device(config-if) # exit</pre>		
Step 7	interface type number	Specifies an interface and enters interface configuration	
	Example:	mode.	
	<pre>Device(config)# interface GigabitEthernet 0/1/6</pre>		
Step 8	ip address ip-address	Assigns an IP address to an interface.	
	Example:		
	Device(config-if)# ip address 209.165.200.225 255.255.255.0		
Step 9	zone-member security security-zone-name	Configures an interface as a zone member.	
	Example:		
	Device(config-if) # zone-member security internet		
Step 10	end	Exits interface configuration mode and returns to privileged	
	Example:	EXEC mode.	
	Device(config-if)# end		

# **Configuration Examples for TCP Window-Scaling**

### **Example: Configuring the TCP Window-Scaling Option for a Firewall**

```
Device> enable
Device# configure terminal
Device(config)# parameter-map type inspect pmap-fw
Device(config-profile)# tcp window-scale-enforcement loose
Device(config-profile)# exit
Device(config)# class-map type inspect match-any internet-traffic-class
Device(config-cmap)# match protocol tcp
Device(config-cmap)# exit
Device(config)# policy-map type inspect private-internet-policy
Device(config-pmap)# class type inspect internet-traffic-class
Device(config-pmap)# class type inspect internet-traffic-class
```

```
Device(config-pmap-c)#exit
Device(config-pmap)# class class-default
Device(config-pmap)#end
```

#### **Example: Configuring a Zone and Zone Pair for TCP Window Scaling**

```
Device# enable
Device# configure terminal
Device(config)# interface GigabitEthernet 0/1/5
Device(config-if)# ip address 10.1.1.1 255.255.255.0
Device(config-if)# zone-member security private
Device(config-if)# exit
Device(config)# interface GigabitEthernet 0/1/6
Device(config-if)# ip address 209.165.200.225 255.255.255.0
Device(config-if)# zone-member security internet
Device(config-if)# end
```

# Feature Information for Loose Checking Option for TCP Window Scaling in Zone-Based Policy Firewall

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Feature Name	Releases	Feature Information
Loose Checking Option for TCP Window Scaling in Zone-Based Policy Firewall	Cisco IOS XE Release 3.10S	Loose Checking Option for TCP Window Scaling in Zone-Based Policy Firewall feature disables the strict checking of the TCP Window Scaling option in an IOS-XE firewall. The following command was introduced or modified: <b>tcp window-scale-enforcement loose</b> . In Cisco IOS XE Release 3.10S, support was added for the Cisco CSR 1000V Series Routers.

Table 1: Feature Information for Loose Checking Option for TCP Window Scaling in Zone-Based Policy Firewall
