

# **Enabling Bidirectional SXP Support**

The Bidirectional SXP Support feature enhances the functionality of Cisco TrustSec with SXP version 4 by adding support for Security Group Tag (SGT) Exchange Protocol (SXP) bindings that can be propagated in both directions between a speaker and a listener over a single connection.

## **Finding Feature Information**

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to <a href="https://www.cisco.com/go/cfn">www.cisco.com/go/cfn</a>. An account on Cisco.com is not required.

## Prerequisites for Bidirectional SXP Support

- Ensure that Cisco TrustSec is configured on the device. For more information, see the "Cisco TrustSec Support for IOS" chapter in the *Cisco TrustSec Configuration Guide*.
- To use the Cisco TrustSec functionality on your existing device, ensure that you have purchased one of the following security licenses:
  - IP Base License
  - LAN Base License

Note

The LAN Base License is available from Cisco IOS XE Everest 16.5.1.

- IP Services License
- Connectivity must exist in all network devices.
- Cisco TrustSec SXP software must run on all network devices.

# **Restrictions for Bidirectional SXP Support**

• The peers at each end of the connection must be configured as a bidirectional connection using the **both** keyword. It is a wrong configuration to have one end configured as a bidirectional connection using the **both** keyword and the other end configured as a speaker or listener (unidirectional connection).

## **Information About Bidirectional SXP Support**

### **Bidirectional SXP Support Overview**

Cisco TrustSec builds secure networks by establishing domains of trusted network devices. Each device in the domain is authenticated by its peers. The peer that produces data is the speaker and the corresponding peer is the listener.

With the support for bidirectional Security Group Tag (SGT) Exchange Protocol (SXP) configuration, a peer can act as both a speaker and a listener and propagate SXP bindings in both directions using a single connection.

The bidirectional SXP configuration is managed with one pair of IP addresses. On either end, only the listener initiates the SXP connection and the speaker accepts the incoming connection.

Figure 1: Bidirectional SXP Connection

In addition, SXP version 4 (SXPv4) continues to support the loop detection mechanism (to prevent stale binding in the network).

# **How to Enable Bidirectional SXP Support**

### **Configuring Bidirectional SXP Support**

#### **SUMMARY STEPS**

- 1. enable
- 2. configure terminal
- 3. cts sxp enable
- 4. cts sxp default password
- 5. cts sxp default source-ip
- 6. cts sxp connection peer *ipv4-address* {source | password} {default | none} mode {local | peer} both [vrf vrf-name]
- 7. cts sxp speaker hold-time minimum-period
- **8.** cts sxp listener hold-time minimum-period maximum-period
- 9. exit

#### **DETAILED STEPS**

	Command or Action	Purpose	
Step 1	enable	Enables privileged EXEC mode.	
	Example:	Enter your password if prompted.	
	Device> enable		
Step 2	configure terminal	Enters global configuration mode.	
	Example:		
	Device# configure terminal		
Step 3	cts sxp enable	Enables the Cisco TrustSec Security Group Tag (SGT) Exchange Protocol version 4 (SXPv4) on a network device	
	Example:		
	Device(config)# cts sxp enable		
Step 4	cts sxp default password	(Optional) Specifies the Cisco TrustSec SGT SXP default password.	
	Example:		
	Device(config)# cts sxp default password Cisco123		
Step 5	cts sxp default source-ip	(Optional) Configures the Cisco TrustSec SGT SXP source	
	Example:	IPv4 address.	
	Device(config) # cts sxp default source-ip 10.20.2.2		

	Command or Action	Purpose	
Step 6	cts sxp connection peer ipv4-address {source   password} {default   none} mode {local   peer} both [vrf vrf-name] Example:	Configures the Cisco TrustSec SXP peer address connection for a bidirectional SXP configuration. The <b>both</b> keyword configures the bidirectional SXP configuration.	
	·	The <b>source</b> keyword specifies the IPv4 address of the source device. If no address is specified, the connection uses the default source address, if configured, or the address of the port.  The <b>password</b> keyword specifies the password that Cisco TrustSec SXP uses for the connection using the following options:	
		default—Use the default Cisco TrustSec SXP password you configured using the cts sxp default password command.	
		• none—A password is not used.	
		The <b>mode</b> keyword specifies the role of the remote peer device:	
		• local—The specified mode refers to the local device.	
		• peer—The specified mode refers to the peer device.	
		• both—Specifies that the device is both the speaker and the listener in the bidirectional SXP connection.	
		The optional <b>vrf</b> keyword specifies the VRF to the peer. The default is the default VRF.	
Step 7	cts sxp speaker hold-time minimum-period	(Optional) Configures the global hold time (in seconds) of	
	Example:	a speaker network device for Cisco TrustSec SGT SXPv4. The valid range is from 1 to 65534. The default is 120.	
	Device(config)# cts sxp speaker hold-time 950		
Step 8	cts sxp listener hold-time minimum-period maximum-period	(Optional) Configures the global hold time (in seconds) a listener network device for Cisco TrustSec SGT SXPv	
	Example:	The valid range is from 1 to 65534. The default is 90 to 180.	
	Device(config)# cts sxp listener hold-time 750 1500	<b>Note</b> The <i>maximum-period</i> value must be greater than or equal to the <i>minimum-period</i> value.	
Step 9	exit	Exits global configuration mode.	
	Example:		
	Device(config)# exit		

### **Verifying Bidirectional SXP Support Configuration**

#### **SUMMARY STEPS**

- 1. enable
- 2. show cts sxp {connections | sgt-map} [brief | vrf vrf-name]

#### **DETAILED STEPS**

#### Step 1 enable

Enables privileged EXEC mode.

• Enter your password if prompted.

#### **Example:**

```
Device> enable
```

#### Step 2 show cts sxp {connections | sgt-map} [brief | vrf vrf-name]

Displays Cisco TrustSec Exchange Protocol (SXP) status and connections.

#### **Example:**

```
Device# show cts sxp connections
SXP : Enabled
Highest Version Supported: 4
Default Password : Set
Default Source IP: Not Set
Connection retry open period: 120 secs
Reconcile period: 120 secs
Retry open timer is running
Peer IP : 2.0.0.2
Source IP: 1.0.0.2
Conn status : On (Speaker) :: On (Listener)
Conn version : 4
Local mode : Both
Connection inst# : 1
TCP conn fd : 1(Speaker) 3(Listener)
TCP conn password: default SXP password
Duration since last state change: 1:03:38:03 (dd:hr:mm:sec) :: 0:00:00:46 (dd:hr:mm:sec)
Device# show cts sxp connection brief
SXP : Enabled
Highest Version Supported: 4
Default Password : Set
Default Source IP: Not Set
Connection retry open period: 120 secs
Reconcile period: 120 secs
Retry open timer is running
______
Peer_IP Source_IP Conn Status Duration
```

```
2.0.0.2 1.0.0.2 On(Speaker)::On(Listener) 0:00:37:17 (dd:hr:mm:sec)::0:00:37:19 (dd:hr:mm:sec)
```

The following table describes the various scenarios for the connection status output.

Table 1: Connection Status Output Scenarios

Node1	Node2	Node1 CLI Output for Connection Status	Node2 CLI Output for Connection Status
Both	Both	On (Speaker)	On (Speaker)
		On (Listener)	On (Listener)
Speaker	Listener	On	On
Listener	Speaker	On	On

## **Configuration Examples for Bidirectional SXP Support**

### **Example: Configuring Bidirectional SXP Support**

The following example shows how to enable bidirectional CTS-SXP and configure the SXP peer connection on Device\_A to connect to Device\_B:

```
Device_A> enable
Device_A# configure terminal
Device_A(config) # cts sxp enable
Device_A(config) # cts sxp default password Cisco123
Device_A(config) # cts sxp default source-ip 10.10.1.1
Device_A(config) # cts sxp connection peer 10.20.2.2 password default mode local both
Device_A(config) # exit
```

The following example shows how to configure the bidirectional CTS-SXP peer connection on Device B to connect to Device A:

```
Device_B> enable
Device_B# configure terminal
Device_B(config) # cts sxp enable
Device_B(config) # cts sxp default password Password123
Device_B(config) # cts sxp default source-ip 10.20.2.2
Device_B(config) # cts sxp connection peer 10.10.1.1 password default mode local both
Device_B(config) # exit
```

# **Feature Information for Bidirectional SXP Support**

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to <a href="https://www.cisco.com/go/cfn">www.cisco.com/go/cfn</a>. An account on Cisco.com is not required.

Table 2: Feature Information for Bidirectional SXP Support

Feature Name	Releases	Feature Information
Bidirectional SXP Support		The Bidirectional SXP Support feature enhances the functionality of Cisco TrustSec with SXP version 4 by adding support for Security Group Tag (SGT) Exchange Protocol (SXP) bindings that can be propagated in both directions between a speaker and a listener over a single connection.  The following command was introduced or modified: cts sxp connection peer.
